Acquisitions Are Confidential

At GitLab, we treat all acquisition discussions as confidential and share any information internally on a need-to-know basis. We apply compartmentalization) for the various topics coming up during the acquisition process in order to maintain confidentiality and reduce unnecessary exposure.

To ensure confidentiality during the acquisition process, we assign code names to each potential transaction once we enter the Early Diligence stage. Project name themes are defined by GitLab Legal, Corporate Development's theme is Movie / TV Show characters.

To maintain confidentiality, we follow the following guidelines:

1. When creating a new acquisition slack channel:

1. Set the channel topic to: "This channel is confidential. Please confirm with Corporate Development Champion or Deal Process Manager name here before inviting people to the channel or related docs."

1. Set the channel description to: "Please review our acquisition handbook and process to familiarize yourself with our approach to acquisitions. Please review the confidentiality section of the process and our guidelines".

1. We strive to keep the number of people involved in an acquisition as small as possible to reduce legal exposure and maintain a low potential risk of deal and information disclosure. If more members are required to be brought into the acquisition for a discussion limited to a specific topic, and do not need to be involved with the wider engagement, we create dedicated, single-topic channel, and add the relevant parties to it.

1. If you're part of an acquisition Slack channel, Google Doc, or other internal GitLab discussion and would like to invite another GitLab team member to one of those, please confirm with the Corporate Development Champion or Deal Process Manager before doing so.

1. We collect all notes on an acquisition in the main acquisition doc shared on the topic of the acquisition's slack channel. If you must create a new document, make sure it is set to invite-only and add the relevant people manually. That document needs to be kept inside the acquisition G-Drive folder on the Corporate Development Shared Drive.

1. Everyone involved in the project should use the code name in place of the actual company name in all communication about the deal until it is publicly announced.

Shared Slack Channels with Targets

If and when our team and the target's would like to open a shared Slack channel for streamlined

communication, please engage Corporate Development for that purpose so that we can ensure we have persistent process visibility.

Social Media

As an operating principal, all team members are advised not to accept social media invites or follow requests (LinkedIn, Facebook) from individuals at companies with which we are actively engaged in acquisition discussions. Third-parties can view these connections and deduce that GitLab is having, or has had, discussions relating to M&A or investments.

If you have an existing connection, or a regular cadence of interaction, with a company that then becomes engaged in M&A discussion with GitLab you do not need to disassociate. The spirit of this guidance is intended to keep the status-quo and not create the perception of change in relationship between GitLab and the company being evaluated.

Prioritizing Acquisition Opportunities

Each quarter the Corporate Development team defines a set of three categories which are prioritized for that quarter for outbound activity. We commonly refer to them as Quarterly Focus Areas. While this is true especially for our outbound efforts, these categories will be at the center of our overall efforts and focus for that quarter, taking into account inbound prospects as well.

Although we have our quarterly focus areas, we are open to discussing and potentially pursuing an opportunity outside of those focus areas. For us to look into an opportunity outside of our quarterly focus areas, it needs to satisfy one, or more, of the following criteria:

1. Present an outsized revenue potential
1. Serve as a strategic move (market dynamics etc.)

Every opportunity we explore is constantly evaluated against our prioritization as well as our bandwidth (including active engagements).

If you wish to propose an opportunity you believe we should pursue and is outside of our quarterly focus areas, please contact the Corp Dev team with the rationale behind that specific opportunity.

 1. Adjust company name from code name to real name in all materials (all DRIs for respective materials)
 1. Push blog post live (content team)
 1. Notify Nasdaq of upcoming press release (comms team)
 1. Submit release to GlobeNewswire; press release crosses wire with blog post linked within (comms team)
 1. Post press release on GitLab's IR site (comms team)
 1. Post press release on GitLab's newsroom (comms team)
 1. Post internal Slack message to company-fyi Slack channel (corporate development / people team)
 1. Publish social posts from GitLab and acquired company's handles (social team + acquired company leadership)
 1. Issue field communications to team via Slack and upload to HighSpot (field communications team)

1. Pitch media if outbound media relations are planned (communications team)
1. Push banner live on acquired company's website (DEX in partnership with acquired company)
1. Flag/post GitLab e-group social media commentary (social team + e-group members)
1. Host AMA for EMEA and US East Coast team members (people team in partnership with corporate development and product)
1. Host second AMA for APJ time zones (people team in partnership with corporate development and product)
1. Share media coverage recap with stakeholders, including in acquisition working group and e-group channels (comms team)
1. Reach out to relevant analysts, if appropriate (analyst relations)
1. Either port to GitLab or deactivate acquired company's social channels, depending on volume of followers (social team)
1. Retro of announcement and process (corporate development team)

4. Acquisition Leaks and Rumors

1. If news of a potential acquisition leaks, the GitLab Communications team will direct and own the response.
 1. If any GitLab team member is contacted regarding a leaked acquisition or rumor, GitLab Communications directs the person to follow the media mentions, incoming media requests and interviews process handbook direction.
 1. The Corporate Development Deal Process Manager will inform the target company representatives of the GitLab Communications response and process.
 1. The Communications Team will own the response and establish their decision on how to respond, or not respond, based on factors such as time to close, source of leak, and coverage of leak, among others.
 1. This applies to both internal and external communications.
 1. Should a decision be made to comment on, or affirm a leak, GitLab Legal, Finance, and Accounting will be involved to ensure compliance with regulatory reporting standards.

SECTION: acquisitions/acquisition-process/integration.md

This is a detailed view of our acquisition integration process. For more information about our acquisitions approach visit our acquisitions process.

Overview

Integration planning begins well before a transaction closes. At the appropriate time during the deal process, the Sr. Dir. Corporate Development, the DRI for the integration stage, will help facilitate the integration between the relevant divisions and functions involved. To accomplish that, an integration working group (IWG) will be established with representatives from divisions across GitLab (e.g., Finance, Legal, Product, Engineering, People, etc.).

Importantly, each integration will have an executive sponsor from the E-Group as well as two additional DRIs:

1. Roadmap DRI - the Product Champion for the acquisition, will be responsible the direction, impact, scope, and alignment of the integration

1. Engagement DRI - the Engineering Champion for the acquisition, will be responsible for the implementation of the technical integration milestones and retention of the acquired team members within GitLab.

We use the deal documents, findings from diligence and other data and information to establish a written Day 1 Plan and Long-Term Plan. The former documents what exactly needs to occur or needs to be in place on Day 1 following the closing of the transaction. The Long-Term Plan includes key milestones developed as part of the Acquisition Process. Each of the subject matter experts on the IWG identifies what needs to be done in advance of, and on, Day 1 and for the period during which the Long-Term Plan is effective until integration is complete.

The IWG will meet regularly (cadence will be determined on a deal by deal basis) and the IWG members will use that time to discuss issues or other items that could impact integration. Integration is iterative, as such the IWG revises the integration plan as necessary while making sure all stakeholders are aware of the revisions and updates, as appropriate.

Examples of areas and tasks, some of which are determined by deal structure and deal documents, that may be part of the post-closing integration process include:

Communications

1. It is important that the new team members know who to contact with questions and it is also important for there to be "one voice" communicating with the new team members. Pre-closing, that "one voice" is the deal lead, and post-closing it is a team comprised of the applicable team members who are the subject matter experts or leads. Using the "one voice" approach helps ensure all communications are coordinated, and the messages are consistent and timely. In the case of pre-closing and closing matters, the deal lead works, as appropriate and permissible, with the target company's CEO and other senior management in communicating with the target company employees as part of the deal announcement.

1. The deal lead is responsible for working with the target company in connection with coordinating (as appropriate and permissible) communications and messages to the target company's customers. The timing and nature of the communications depends on the structure of the transaction and the terms related to customer communications set forth in the deal documents.

1. See the Acquisition Process Communications Handbook Page for further direction.

Strategic Objectives and Performance Tracking

1. Alignment on objectives and goals:

1. Incorporate the integration plan into GitLab's roadmap

1. Introduce Deal Milestones into respective departmental OKRs

1. Create or update product vision in case a new product area is added to GitLab

1. Performance tracking:

1. Identify and continuously revisit business performance metrics to track the deal's added value and ROI over time

1. Delivery against product plans and OKRs

Finance, Accounting & Tax

1. Open, close or transfer bank accounts, as necessary, and update signing authority if

appropriate.

1. Change/update remittance on invoices, if necessary.
1. Reconcile accounts payable and accounts receivable and transition the same to GitLab's systems, if appropriate.
1. Notify target company vendors, as necessary, and by any required deadline.
1. Work with the People team to onboard new team members to the GitLab payroll system.
1. Log any deal-specific payroll and other considerations into our systems

Legal

1. Track and manage all post-closing deadlines, deliverables, escrow release, post-closing notices required by customers and/or vendors, etc.
1. Work with appropriate team members to address issues and items identified during diligence and the deal process.
1. Operational shutdown of target company if, as and when appropriate or as specified in the deal documentation.
1. Organize and obtain the closing binder related to the acquisition and upload to ContractWorks.
1. Work with target company's counsel for a smooth transition, as appropriate and permissible, of legal matters from target company's counsel to GitLab legal.

Technical integration

1. Each delivery milestone which is defined in the acquisition agreement or ancillary deal documents will be converted to a confidential issue by the PM leading the integration efforts, once the acquisition announcement has been made public. These issues will be the SSOT to track progress on a delivery milestone. Once an issue is completed, it will serve as a confirmation of a successful delivery of that milestone. Signoff for completion of a milestones is required by:
 1. Product champion
 1. Engineering champion
 1. Corp. Dev. champion
1. Once a milestone has been signed-off, the Corp. Dev. champion will notify the accounting team if there is a consideration payment which needs to be processed
1. Check-in calls (cadence (e.g., weekly, bi-weekly, monthly, etc.) will be determined on a deal by deal basis) will be scheduled by the PM leading the integration efforts with the following team members:
 1. Product and engineering champions
 1. Corp. Dev. champion
 1. Main engineer leading the integration efforts from the acquired company
 1. Legal
1. Changes to milestones - integration milestones are subject to changes as we work towards accomplishing them. As these milestones may have contractual obligations and impact wider product vision ambitions, any and all changes to milestone language have to be approved by the three deal champions: corp dev, product and engineering. Changes to milestones may require amending the acquisition agreement, in which case, the appropriate team members and contacts for the target company will be included in such discussions, as necessary. Changes that do not require approval and/or amending the acquisition agreement may be addressed async but in general it is preferred to discuss changes during the regular check-in call noted above.

Fastboot

To facilitate an effective, efficient and positive onboarding for the team, a fastboot should be planned within the first month of the team's onboarding to GitLab:

- Purpose:
 - Build a social connection between both teams
 - Align both respective teams on the technologies in place, both from GitLab as well as the target
 - Fully develop the work plan for the integration
- Budget: will need to be structured as part of the acquisition process prior to the Closing of the deal
- Format for the fastboot can be found here (GitLab internal-access only)

People Integration

1. Onboarding of target team members (as specified in the deal documents) using the GitLab onboarding issue.
1. Ensure all new team members are on the GitLab payroll system as of Day 1, which will require contacting the payroll provider well in advance of Day 1.
1. Confirm with target company that the target company's employee benefits vendors are aware of the pending closing and ensure all target team members (as specified in the deal documents) timely receive information regarding benefits. All such benefits to be provided post-closing must comply with any relevant terms set forth in the acquisition agreement.
1. Identify any particular training courses (in addition to those in the GitLab onboarding issue) needed for the new team members.
1. Address any change of control issues present in any employment agreement and which have an impact post-closing; unless otherwise specified in the acquisition agreement, the target company is generally responsible for such issues, subject to the terms of the applicable employment agreement.
1. During the first 12 months after the team members join GitLab, the People Ops team will administer two pulse surveys to assess integration. The first Acquisition Integration Survey will be released on or about the three month anniversary of closing and the second pulse Acquisition Integration Survey will be released on or about the nine month anniversary of the closing.
1. Internal Transfers - For any internal team members that wish to transition to/apply for roles on acquired teams, hiring managers should be particularly diligent about reviewing context and information pertaining to the acquisition details, charter, milestones, goals, etc. Acquired teams, particularly in early stages, can operate differently than a typical team at GitLab in that the first 6-12 months (or more) of work given that the milestones and directions are pre-defined as part of the acquisition agreement. We want to ensure full transparency is maintained with team members who transition in an effort to set them up for success.

Field enablement

Sales and Marketing Messaging

Sales and marketing of the target company product(s) covers three different areas, which are:

1. Messaging

The GitLab Field and Marketing organizations have aligned on a go-to-market approach based on a standard and consistent customer value-based messaging framework. As such, the Acquisition Integration team should partner with Product Marketing and document the following:

1. What customer value driver(s) does this acquisition augment and how?
1. How does this acquisition augment GitLab's differentiators and/or introduce new ones?
1. How does this acquisition augment our existing customer use cases?

2. Role-based learning objectives

After the value-based messaging has been completed, partner with the Field Enablement team to define role-based learning objectives. To get started, the team should answer the below questions for Sales Development Reps and each field role (e.g. Account Executive / Strategic Account Executive, Channel Sales Manager, Solution Architect, Customer Success Manager, Professional Services Engineer) as it relates to the acquisition:

1. Knowledge gaps: What does that role need to KNOW that they may not know today?
1. Behavior gaps: What does that role need to be able to DO, ARTICULATE, and/or SHOW that they may not be able to today?

3. Enablement Development

Once the above is completed, the team proceeds to enablement development and execution. Below is our standard enablement assets for acquisitions. The acquisition team should evaluate the list below and any changes or additions to it specific to the acquisition at hand.

1. Snapshot video - Ahead of the announcement, the Product champion will record a short video (up to 10 minutes) which will be included as part of the PR for the acquisition as well as a resource for enablement for the GitLab team. The video should cover the following points:
 1. An overview of the categories the acquisition is relevant for
 1. Why these categories are important to GitLab's users and how they fit
 1. What value will the completed integration of the acquisition deliver to our users
 1. The impact the integration can have on our users
1. Prospect FAQ - A prospect FAQ document will be created answering questions which are likely to come up from our customers
1. Overview webcast - A webcast for our field teams will be scheduled 1-2 months from announcement providing a more in-depth overview of the acquisition and its impact for our product, customers and prospects.
1. Technical webcast - Scheduled around the delivery of the MVC of the integration efforts, a technical webcast for our field teams will be scheduled to provide a demo of the new functionality and new product workflows.
1. Field Communication Plan - Field Communications will work with the Product DRI to create a communications plan using the Field Communication Playbook that disseminates key resources and information to field team members.

4. Digital Experience (DEX) Ownership of Acquired Company Website

The Digital Experience Team is responsible for the updated website banner of the acquired company announcing the acquisition if the communication plan is to publicly announce the deal. See the Communications Acquisition Process for additional detail. At deal close, DEX will also

coordinate with GitLab Communications and Corporate Development to align on the acquired company's website takeover and ownership. An issue will be opened and owned by the Corporate Development Deal Process Manager to address and coordinate the website takeover and ownership by DEX. In addition to ensuring DEX has secured the necessary website credentials from the acquired company, example matters to consider and track will include:

1. Do we wish to deprecate the acquired company's website?
 1. If yes, on what date?
1. Do we want certain pages of the acquired company's website to redirect?
 1. If yes, to where? And on what date?

Document Management Process

- Pre-closing documents will be stored on Google Drive and made accessible to those involved with the prospective acquisition process.
- Upon closing, a member of the Legal & Corporate Affairs team will be responsible for organizing and obtaining the closing binder related to the acquisition.
- Once received, the Legal Operations team will upload the binder as well as the rest of the documents in the original Google Drive folder into a new folder in ContractWorks.
- Each month a Reconciliation Issue will be created for the previous month, included in this Issue will be an obligation from Corporate Counsel to confirm either, (i) there are no Agreements for the previous month, or (ii) all executed Agreements have been provided to the Legal Operations Team Member(s) for upload.

SECTION: alliances/_index.md

We invite organizations interested in becoming a GitLab Partner to APPLY NOW.

Alliance Mission

"To go fast, go alone. To go far, go together." - Proverb

At GitLab, we collaborate with well-respected, industry-leading cloud, platform and technology providers across all major industries to deliver the best curated modern devops platform. Our partners are a critical element of GitLab's mission: to enable our customers with modern software-driven experiences, and to ensure "Everyone Can Contribute" through a robust and thriving partner ecosystem that cultivates innovation and stimulates transformation. Together, we can help enterprises lead the digital transformation necessary to compete effectively in the market today.

The commitment to helping customers and partners succeed - how we contribute our time, technology and know-how to improve the communities where we work and live and grow our business - is a journey that is transparent, ethical and honorable. We demand high performance and high standards from ourselves and our partners.

We look forward to working with you - to build and deliver the solutions that delight customers.

<i>GitLab Team Members: Please visit the internal Alliance Handbook Page</i> for additional information.

Alliance Partner Program

We are firm believers that partnership is the foundation from which collaboration and innovation is built upon. As a GitLab Alliance Partner, you'll have access to the resources, tools, and support you need to accelerate business growth providing greater customer value through solution offerings that are integrated and interoperable with GitLab.

We recognize that not all partners have the same needs or goals, and as such, our program is designed with three Alliance Partner types in mind.

| Cloud Partners | Platform Partners | Technology Partners |

| ----- | ----- | ----- |

| Partners that provide public cloud computing services and software marketplaces where customers can procure and deploy GitLab | Partners that provide modern cloud / cloud-native application platforms which increase the modularity and extensibility of GitLab across enterprises and architectures | Independent Software Vendors (ISV) Partners with complementary technologies that seamlessly integrate / interoperate with GitLab for more complete customer solutions |

Pillars for Successful Partnerships

Mutually beneficial value exchange drives mutual partner success. We believe these pillars ensure a more sustainable future.

- Exposure - Partnerships that generate exposure to new markets, segments, and users.
- Product Knowledge - Partnerships that have product familiarity provide greater advocacy.
- Adoption - Partnerships, both upstream and downstream, that increase feature adoption and product/platform utilization.
- Revenue - Partnerships that have a material effect on revenue growth.
- Results - Partnerships that align on objectives and outcomes.
- Collaboration - Partnerships that are committed to building reciprocal relationships between organizations and teams.

Engagement Models

There are a variety of ways to partner together to develop solutions. Partner type, solution and/or services offering, and route to market are all considerations when determining the best option, resale or co-sell. Below are a few examples of how GitLab works with Alliance Partners to deliver consumable customer solutions.

- Marketplace (resale)

Solution listings sold through partner software marketplaces and other digital storefronts

- OEM/Embedded (resale)

Integrated or bundled solution offerings sold through direct and indirect channels

- ISV (co-sell)

Collaborative selling motions that stimulate sales of our respective products, independently

Program Benefits

GitLab Alliance Partners are a key part of GitLab's commitment to the DevOps community. Alliance Partnerships help customers get more value by uniting the capabilities of our products and technologies to provide end-to-end customer solutions. The GitLab Alliance Partner Program provides partners with the following program benefits:

Brand Recognition

- Partner logo displayed on GitLab Alliance Partner Program webpage. Partners benefit from the association and increased exposure to the rapidly DevOps community
- GitLab brand use. Leverage for marketing purposes on websites, social media channels, and marketing and sales collateral

Solution Validation

- Resources to enable our partners to develop partner solutions that integrate/interoperate with GitLab. GitLab validated solutions help build confidence and trust with customers and channel partners by providing assurance of solution readiness.

Sales & Marketing

- Sales awareness and engagement. Promoting partners and solutions to stimulate sales
- Go To Market assets and collateral. Equipping partners with resources designed to market and sell our joint solutions to prospects and customers.

Additional Resources

Alliance Partner Onboarding

If you are interested in becoming a GitLab Alliance Partner, you can learn more on our Alliance Partner Onboarding page.

License Requests

Alliance Partners may be eligible for NFR (not for resale) licenses to develop and test integrations with GitLab. You can learn more about the NFR program [here](#).

Acquisitions

If you are a Partner interested in inquiring about a potential acquisition of your company please visit our acquisition handbook.

SECTION: alliances/integration-instructions.md

Instructions for getting listed as a GitLab Technology Partner

Once these steps along with the product integration have been completed, the last step is to

submit a Merge Request to get listed on our Technology Partners page. To add your app, you will need:

- A URL page with details on the integration
- A link to the technical documentation on the steps required to set it up. A Screencast / video walk through is highly preferred.
- A short description of the integration (up to 314 characters)
- Listed name for the integration on the applications page
- Your logo
 - > Picture Requirements
 - >
 - > - Crop your image to a perfect square or rectangle.
 - > - Keep maximum dimensions under 800 by 800 pixels.
 - > - Use the JPEG (.jpg) or PNG (.png) format.
 - > - Name file companynameinlowercase and add the appropriate file extension.

Adding your app to our Partners Page

Once you have the above items, follow these steps to add yourself to the Partners page:

1. Sign into gitlab.com and navigate to the home project of www.gitlab.com found here. Click on the 'Fork' button at the top right to make a copy of the repository within your account.
1. Next, click on the 'Web IDE' button to make changes to specific YAML files.
1. Navigate to the '/content' directory in the left pane and you will see the apps.yml file within the folder. Click on the file to open it within the WebIDE. Add the following fields to the correct category of the file and enter the following application information into each of the blank fields:

yaml

- title: Company Name
- content: Description
- links:
 - url: Company URL
 - title: Company Name
 - url: Technical documentation URL
 - title: Company Name for GitLab

Choose the app's category accordingly. The code block is to be added to the end of the category list it belongs to.

Notes:

- Write in sentence case, using capital letters for the beginning of the sentences, product names, method names, and feature names.
- Always write GitLab with a capital G and L.
- Respect the YAML file's indentation.
- Avoid special characters, particularly colons and quotes, otherwise they may need to be manually escaped to not break the YAML syntax.

1. After updating apps.yml, use the file browser on the left side of the screen to navigate to static/nuxt-images/applications/apps/.

1. Click the  icon next to the apps directory, select upload file, and upload your company logo. Be sure to follow the picture requirements listed above and confirm that the file name matches your picture entry in apps.yml.

> Note: The image name should match the application title exactly. For example, if your app is titled 'GitLab Inc' then the image name being uploaded would be 'gitlabinc.png' and it will then map to your app listing when the site is generated.

1. Once you have finished this, click the Commit button in the bottom left. It should say something like 2 unstaged and 0 staged changes. This will bring up a sidebar with an Unstaged and Staged area.

1. Check the files to ensure your updates are what you expect. If they are, click the check mark next to the filename to "stage" these changes.

1. Once you have verified all of the edits, enter a short commit message including what you've changed. Choose Create a new branch. Name the branch in the format of CompanyName-partners-page or similar. Tick the Start a new merge request checkbox. Then click Commit once more.

1. A new merge request will then initiate and you will be able to fill out a description and details around the MR. Select the 'Applications' template and fill out the information accordingly.

1. When you have filled out the merge request details. Please ensure you tick the box to Allow commits from members who can merge to target branch as detailed on the Allow collaboration on merge requests across forks page in our docs.

> Make sure when submitting the MR, the source is the branch that was just created from the MR and the destination/target is the /gitlab-com/marketing/digital-experience/buyer-experience/.

1. Once the MR is created, use the Application template and complete the instructions.

If you'd like to do further development

Open an issue in the Alliance project requesting a joint private project in the Alliance group.

- Review the checklist items on what needs to be done
- Share your GitLab username and your SEs as well. You will both be able to create sandbox projects for anyone wanting to get technical and hands-on experience.

This gives our partners a home base for testing integrations, workflows and a place to create any public-facing demos. Initially, it will be set to private, but once there is content in the projects, we can always switch the project to public.

We will need a list of the email addresses that were used to create a GitLab.com account. Within your group you'll be able to create projects and repositories for any development/testing.

Questions?

We are here to help. The Alliance team works from issues and issue boards. If you are needing our assistance with any project, please open an issue and we'll get back to you as soon as we can! If it's technical assistance you're looking for, please see below for troubleshooting.

Troubleshooting

We're always here to help you through your efforts of integration. If there's a missing API call from our current API, or you ran into other difficulties in your development please feel free to create a new issue on the GitLab issue tracker and apply the devops::ecosystem label.

SECTION: board-meetings/_index.md

This page is intended to capture GitLab Board practices, but we evolve these over time and the page may not capture all changes. The source of truth for Board details is GitLab's Investor Relations site.

Board and Committee Composition

Board of Directors

1. Current members of the Board of Directors
1. Board of Directors Job Description

Audit Committee

> Audit Committee Charter

Meeting Process

The Staff EBA to the CFO is the DRI of scheduling the quarterly Audit Committee meeting in conjunction with the Chairperson, Management DRI and their Sr. EBA

1. Timing: 2-3 weeks prior to the formal Board of Directors Meeting
1. Duration: 110min (Q1-Q3) 140min (Q4)
1. Agenda document to include links to all material being reviewed during the meeting

All Audit Committee materials being reviewed during the meeting will be uploaded into Boardvantage 5 business days prior to the Committee meeting by the Corporate Paralegal. Committee members will be notified of such by the Management DRI.

Audit Committee meetings are attended by:

- The Chairperson of the Audit Committee, Audit Committee Members, CLO, CFO and Finance Leadership are all required attendees
- Other Team Members may be invited if needed or requested, depending on subject matter
- External Auditors and Outside Counsel
- All Board Members including the CEO are invited to all Committee meetings as optional attendees

Compensation and Leadership Development Committee

> Compensation and Leadership Development Committee Charter

Meeting Process

The Legal and People Group EBAs are the DRIs of scheduling the quarterly Compensation and Leadership Development Committee meeting in conjunction with the Chairperson, Management DRI and their Sr. EBA

1. Timing: 2-3 weeks prior to the formal Board of Directors Meeting and aligned with Audit Committee

1. Duration: 80min

1. Agenda document to include links to all material being reviewed during the meeting

All Compensation and Leadership Development Committee materials being reviewed during the meeting will be uploaded into Boardvantage 5 business days prior to the Committee meeting by the Corporate Paralegal. Committee members will be notified of such by the Management DRI.

Compensation and Leadership Development Committee meetings are attended by:

- The Chairperson of the Compensation and Leadership Development Committee, Compensation and Leadership Development Committee Members, CPO, CFO and CLO are all required attendees
- Certain members of the People Group or other Team Members may be invited if needed or requested, depending on subject matter
- Outside Compensation Consultant and Outside Counsel
- All Board Members including the CEO are invited to all Committee meetings as optional attendees

Nominating and Corporate Governance Committee

> Nominating and Corporate Governance Committee Charter

Meeting Process

The Staff EBA to the CEO is the DRI of scheduling the quarterly Nominating & Corporate Governance Committee meeting in conjunction with the Chairperson, Management DRI and their Sr. EBA

1. Timing: Twice yearly in March and September. Ideally 3-5 days in advance of the formal Board of Directors meeting

1. Duration: 50min

1. Agenda document to include links to all material being reviewed during the meeting

All Nominating & Corporate Governance Committee materials being reviewed during the meeting will be uploaded into Boardvantage 5 business days prior to the Committee meeting by the Corporate Paralegal. Committee members will be notified of such by the Management DRI.

Nominating and Corporate Governance Committee meetings are attended by:

- The Chairperson of the Nominating and Corporate Governance Committee, Nominating and Corporate Governance Committee Members and CLO are all required attendees
- Director of Legal, Corporate or Team Members may be invited if needed or requested, depending on subject matter
- Outside Counsel
- All Board Members are invited to all Committee meetings as optional attendees

Mergers and Acquisitions Committee

- Chairperson:
- Members: Merline Saintil, Godfrey Sullivan and Sundeep Bedi
- Management DRI: Chief Product Officer

> Mergers and Acquisitions Committee Charter

Meeting Process

The Staff EBA to the CEO is the DRI of scheduling the Mergers and Acquisitions Committee meeting in conjunction with the Chairperson, Management DRI and their Sr. EBA

1. Timing: As needed
1. Duration: 50min
1. Agenda document to include links to all material being reviewed during the meeting

All Mergers and Acquisitions Committee materials being reviewed during the meeting will be uploaded into Boardvantage 5 business days prior to the Committee meeting by the Corporate Paralegal. Committee members will be notified of such by the Management DRI.

Mergers and Acquisitions Committee meetings are attended by:

- The Chairperson of the Mergers and Acquisitions Committee, Mergers and Acquisitions Committee, CPO, CFO and CLO are all required attendees
- Team Members may be invited if needed or requested, depending on subject matter
- Outside Counsel
- All Board Members are invited to all Committee meetings as optional attendees

Revenue non-committee

- Internal Management Members: Chief Financial Officer (DRI), Chief Executive Officer, Chief Revenue Officer (model, guidance, plan, target)

Location

Board meetings can happen remotely or in-person. We establish the meeting calendar in advance of the coming fiscal year. During this time, we agree on meeting locations.

Board Meeting Schedule

1. Board of Directors meetings are held quarterly.
1. Meetings are scheduled on/around the Thursday 6 weeks after the end of the quarter, assuming availability of the Directors.

The Staff EBA to the CEO shall ensure that there are separate calendar invites for all attendees within each session, all including exact session start and end times, the appropriate Zoom link, and links to the agenda document. Any supplemental materials are required to be linked in the agenda document for each session. This is the outline of a past agenda, but we adapt agenda based on what is important to discuss:

- Session 1: Closed Session (Part 1)
 - Duration: 15 minutes
 - Attendees: GitLab Board of Directors
- Session 2: Administration Session
 - Duration: 30 minutes
 - Attendees: GitLab Board of Directors, GitLab CFO, CPO and CLO, outside legal firm, Board observers
- Session 3: Board of Directors Meeting - General Session
 - Duration: 75 minutes
 - Attendees: GitLab Board of Directors, E-Group, CoS to the CEO, Staff EBA, outside legal firm representatives, Board observers
- Session 4: Closed Session (Part 3) (optional, if needed)
 - Duration: 20 minutes
 - Attendees: GitLab Board of Directors
- Session 5: Board Only (without GitLab CEO)
 - Duration: 20 minutes
 - Attendees: GitLab Board of Directors (without the GitLab CEO)

Board Meeting Process

Timeline

1. The Staff EBA to the CEO is the DRI for scheduling the Board meetings
1. The CFO is the DRI for assembling the deck. Four weeks in advance of the Board meeting, the CFO sends the templates for the materials to be created to the E-Group and EBA team.
1. 7 weeks before the Board meeting, the Lead Independent Director will reach out to the Board via email to discuss agenda topics.
1. 6 weeks before the Board meeting, the Lead Independent Director, CEO, and CFO will have a meeting to discuss and finalize the agenda. Once finalized, the CFO will share the agenda with E-Group.
1. The CFO sends a reminder to the E-Group 3 weeks in advance of the meeting.
1. The E-Group has the complete presentation materials ready 10 business days prior to the meeting. All materials are submitted to the CLO and CFO for review within 48 hours of receipt.
1. Once approved by the CLO and the CFO, the CFO authorizes the Corporate Paralegal to upload the materials into Nasdaq Boardvantage (NBV) and attach them to the corresponding NBV Meeting. All presentations and content should be finalized at this time with no further changes. The Corporate Paralegal is responsible for ensuring parity between the NBV Meeting and calendar invite. The Staff EBA to the CFO is responsible for the sharing settings on all materials. Materials should be shared with the E-Group, the Board (not via the @board alias), Board Observers, and the outside legal firm. Any exceptions must be confirmed by the CLO and relayed to the Corporate Paralegal before shipping. The deadline for the document upload is 2p PT 7 days before the Board meeting.
1. The Staff EBA to the CFO is responsible for linking all materials in the agendas for each session of the board meeting. Materials should always be linked in the agenda and shared with the appropriate attendees.
1. 7 days before the meeting, the CFO emails the Board notifying them that the materials are ready for review in NBV and includes any highlights or asks within the email.
1. The CFO is the DRI for the Administrative deck and will share this with the CLO, the Corporate Paralegal, the Staff EBA to CFO, and the Staff EBA to the CEO at least 1 week before the Board meeting. The Corporate Paralegal will upload the materials into NBV and then the CFO

will notify the Board of their availability for review in NBV 4 business days prior to the Board meeting.

1. The day before the Board meeting, the Staff EBA to the CFO ensures that the Introduction section of the agenda is up to date with the latest attendees and ensures that the agenda document is up to date. Questions from the Board are verbalized during the meeting.

1. The CFO is responsible for ensuring that the Board meeting runs according to the time allotted.

1. The CLO is responsible for maintaining the Minutes of the meeting and submitting for Board approval.

1. The CLO ensures that PDF versions of the materials including presentations, exhibits, approved Minutes, and Administrative materials are securely stored in NBV and on Google Drive labeled with the date of the meeting.

1. The Staff EBA to the CFO updates the Next Meeting's Timeline section of this page.

1. The E-Group debriefs in the first E-Group Meeting after the Board Meeting.

Next Meeting's Timeline

This section is updated after every Board Meeting by the Staff EBA to the CFO for the next Board Meeting.

1. Meeting is scheduled for 2025-06-27.

1. 2025-05-05 - The Lead Independent Director will reach out to the Board to discuss agenda items.

1. 2025-05-12 - The Lead Independent Director, CEO, and CFO finalize the agenda. [At least 6 weeks before BoD Meeting] TBD pending Godfrey's availability

1. 2025-06-04 - The CFO adds another reminder to the E-Group. [A week before pencils down]

1. 2025-06-11 - The E-Group has completed all materials by 12pm Pacific time for review by the CLO and CFO. [A week before BoD Meeting materials distribution]

1. 2025-06-18 - Once approved by the CLO, CFO and CEO, the CFO authorizes the Corporate Paralegal to upload the materials into NBV and attach them to the corresponding NBV Meeting. The CFO then notifies the Board via email that materials are ready for review in NBV 7 days before the meeting. The Staff EBA to the CFO is responsible for sharing settings on all materials linked in the Google doc BOD Agenda. Materials should be shared with the E-Group, the board members, and the outside legal firm. Any exceptions must be confirmed by the CLO and relayed to the Corporate Paralegal before shipping.

1. 2025-06-18 - The Staff EBA to the CFO is responsible for linking all materials in the Google document agendas for each session of the board meeting. Materials should always be linked in the agenda and shared with the appropriate attendees.

1. 2025-06-18 - The Staff EBA to the CFO ensures that the Introduction and Materials section of the agenda is up to date with the latest attendees.

1. 2025-06-27 - Board of Directors Meeting; CFO ensures the meeting runs according to the time allotted.

1. 2025-06-30 - The CLO ensures that PDF versions of the materials including presentations, exhibits, approved Minutes, and Administrative materials are securely stored in NBV and on Google Drive labeled with the date of the meeting.

1. 2025-06-30 - The Staff EBA to the CFO updates this section of the Handbook page with the timeline for the next Board meeting in April 2025.

1. 2025-07-01 - The E-Group debriefs in the first E-Group Meeting after the Board Meeting.

Board Materials

GitLab uses Nasdaq's Boardvantage (NBV) portal for the electronic dissemination and storage of materials relating to GitLab's Board Meetings.

For a more detailed overview of navigating the NBV portal, please [click here](#) to view the Internal Reference Guide.

Agenda Details

1. Key Board material is presented during Board Meeting sessions. This includes:

- E-Group and CEO memos

- Each E-Group member has a memo with up to four pages with four additional exhibits.

- Each discussion topic has a memo with unlimited exhibits.

- Finance has unlimited exhibits in the memo.

- Annual Operating Plan can be a memo or slide deck.

- The Administration Session for Board Committee readouts by the Committee Chairperson updating the Board as to the Committee's activities and highlighting the items requiring Board approval, if any.

1. Questions can be asked throughout the meeting. 30 minutes are reserved at the end of the General Session for Q&A / Discussion.

1. At the conclusion of the General Session the E-Group, Observers, CoS to the CEO, Staff EBA, CEO Shadows depart the zoom meeting and the full Board shall meet for a Closed Session.

Board Dinner

We usually have a Board Dinner on the evening before a Board Meeting. The EBA to the CEO is responsible for coordinating this dinner. Board Members, Local E-Group members, and the CoS to the CEO are all optional attendees. Bios for attendees of the Board Dinner should be sent by the EBA to the CEO 3 business days in advance of the Board Dinner.

Each quarter, E-Group can choose to invite an additional team member as a Key Talent Guest. If this is desired in a specific quarter, at least a month before the dinner, the CoS to the CEO will gather nominations and ensure that E-Group has identified an invitee. Criteria for consideration includes:

1. Key Talent

1. High performance

1. Clear results

1. Function (should have representation across functions throughout the year)

1. Diversity (participation from members in GitLab Team Member Resource Groups)

Once the Key Talent Guest has been identified, it is the relevant E-Group team member's responsibility to ensure that managers of this person are aware of the invite. The EBA to the CEO will then confirm that the guest is able to join. If not, the invite will go to the runner up. Once a Key Talent Guest is confirmed, the EBA to the CEO should enter their name in the Key Talent Board Dinner Guests.

GitLab will cover this person's travel expenses. A person's location will not be considered in the selection criteria though the person's travel must be allowed under GitLab's travel policies and guidelines.

As part of joining the dinner, the Key Talent Guest should come prepared to discuss:

1. Their background (both at GitLab and before joining)
1. What they have accomplished thus far at GitLab
1. What their plans are both now and in the future and what they see as a future for themselves at GitLab

Though no formal presentation is required, the Key Talent Guest should advise on how they want to discuss these topics with the Board and E-Group and coordinate with the EBA to the CEO. The EBA to the CEO will ensure that the Key Talent Guest has dedicated time at the dinner.

Key Talent Board Dinner Guests

Past and future Key Talent Dinner Guests are listed below.

Date	Key Talent Guest
-----	-----
2021-09-29	David DeSanto
2021-12-13	Sherrod Patching
2022-03-21	Christine Lee
2022-12-12	Sherida McMullan

Quarterly AMA with the Board

Board Selection Process

Roles and Responsibilities

- Nominating and Corporate Governance Committee - Collaborate on Board evolution. Provide recommendations for potential new GitLab BoD members; meet and vet potential new board members; provide feedback on candidates.
- CEO and Selected Members of E-Group also meet and vet potential new Board members; provide feedback on candidates.
- CLO - Nominating and Corporate Governance Committee DRI.
- CEO's Staff Executive Business Administrator - DRI for Board and Committee scheduling.
- Executive Recruiter - Responsible for drafting communication to potential Board members as well as drafting email communication with Nominating and Corporate Governance Committee when questions arise.

Board Onboarding Process

GitLab New Director Checklist

Board member onboarding from an internal processes checklist perspective:

CLO DRI

To be completed prior to onboarding:

1. Resume for our files (can be a printout of LinkedIn)

1. Outside counsel to run background check
1. D&O questionnaire
1. Executed offer letter
1. Indemnification agreement
1. If applicable, UWC to increase Board size
1. Inform External Communications and Investor Relations

External Comms DRI

1. Press release

CEO DRI

1. Inform E-Group
1. Inform Team Members via Slack announcement

GitLab New Director Onboarding Checklist

Board member onboarding from a GitLab orientation perspective:

CLO DRI

New Director will be provided with:

1. Links to relevant Handbook pages, including:
 - Committee Membership
 - Committee Charters
 - Code of Conduct
 - Related Party Transactions Policy
 - Bylaws
1. Certificate of Incorporation
1. Access to the Legal Board Drive
1. Org chart
1. Summary of Director and Officer Liability Insurance
1. Executed Indemnification Agreement

Staff EBA to the CEO Responsibilities

1. Update Board distribution list with Board Member and support staff
1. Send calendar invites to Board member and support staff for:
 - Board meetings as well as a Board calendar covering meetings for next fiscal year
 - Board dinners
 - Board Committee Meetings (as needed)
 - Commit
 - Contribute
 - Sales Kickoff
 - President's Club

1. Update Board Member contact information list and circulate to Board and support staff
1. Schedule AMA with New Board member
1. Schedule Functional Reviews within the first month:
 1. Corporate Strategy (CEO) - 50 mins

- Materials for meeting: Most recent Board of Directors meeting presentation, Key Review slides, current quarter OKRs. Please do not generate new content. The Staff EBA to the CEO sends material to the new Director at least 72 hours in advance. The meeting is centered around the new Director's questions

- GitLab Strategy
- 3 year strategy
- Company KPI's
- Quarterly OKRs
- Mitigating Concerns

1. Finance (CFO) - 80 minutes suggested

- Financing profile, liquidity, creditworthiness, credit ratings
- Current issues, Board oversight issues
- Risk assessment
- Disclosure controls, internal controls
- Information systems
- Internal audits
- Role of independent auditor
- Current topics, Board oversight
- Discuss separate meeting with Auditors
- Audit Committee Overview

1. Legal, Compliance, Regulatory, Governance (CLO) - 50 minutes suggested

- Legal matters, if any
- Compliance and regulatory, generally
- Current topics, Board oversight
- Nominating Corporate Governance Overview

1. People Group (CPO) - 50 minutes suggested

- Compensation philosophy
- Benefits structure
- Equity plans
- Executive compensation structure and policy
- DIB overview
- Compensation Committee Overview

1. Sales (CRO) - 80 minutes suggested

- The Staff EBA to the CRO sends material to the new Director at least 72 hours in advance.
- Materials and key topics include: Sales Key Review slides, Sales KPI dashboard, most recent CRO Board Appendix slides and Sales section of the BOD deck, market definition, current organization design, current sales motion, customer motion, sales philosophy and current CRO priorities.

1. Marketing (CMO) - 50 minutes suggested

1. Product Overview (EVP, Product, EVP, Engineering, CEO) - 80 minutes suggested

- Product review
- Roadmap

- Security
1. Investor Relations (Sr. Director of IR) - Optional 50 minutes suggested
 - IR strategy, shareholder base, external perceptions
 - Overview of large investors
 - If available/applicable:
 - Share analyst reports from any new banks
 - Share copies of recent investor presentations

<i class="fas fa-users" id="biz-tech-icons"></i> About Us

The IT Enterprise Applications oversees the business technology architecture and systems that power GitLab as a business entity. We ensure that the systems are fit-for-purpose, available, reliable, integrated and secure.

We continue to build business aligned technology to run operations, layering integration and automations to support remote work, enhance team member and customer experience, and generate value.

<i class="fas fa-bullseye" id="biz-tech-icons"></i> Our Vision

Be a trusted business partner providing world-class solutions and value.

<i class="fas fa-bullseye" id="biz-tech-icons"></i> Our Mission

Provide a stable, secure, compliant and highly integrated solutions ecosystem to empower business with technology and services that enables productivity to fuel growth of GitLab.

<i class="fas fa-rocket" id="biz-tech-icons"></i> Strategic Objectives & Operating Principles

1. Breakdown Silos: As a centralized team we talk to every part of the business. Business partners effectively connect the dots and bring people together to solve business problems.
2. Architect & Iterate: Know where you are going and then work toward the goal in small parts. This is true for finance, analytics or engineering work.
3. Be The Solution: Be empowered to drive change within our team and the company. We want to solve the most interesting problems. This leads to one of the best career experiences of our lives.
4. Lead With Data: Our teams have tier 1 metrics to define success. Create strong business processes and systems that capture data. Use the data to drive optimal business decisions across GitLab.
5. GitLab for GitLab: We keep to our core values and the belief that everyone can contribute, we are committed to dogfooding, actively use, give feedback and contribute to the development of the GitLab our product.

<i class="fas fa-users" id="biz-tech-icons"></i> Our Functional Structure

IT PMO	Architecture, Integrations & Automation	G&A Systems & CRM Systems	Services & Operations

SECTION: business-technology/tech-stack-applications.md

Definition and Access

> Note: Use the Tech Stack Index to browse Tech Stack Apps.

The Tech Stack is a list of all the technology that GitLab currently uses to support the business. The Tech Stack lists systems/applications/tools/data used by all departments and details the business purpose/description, the owners, the provisioners, the teams that access the tool and other details.

- The Tech Stack single source of truth is the Tech Stack YAML file.
- The browsable Tech Stack Index is built from the YAML file.
- Many applications have a Tech Stack Guide to help you understand how the app is used and implemented.
- This Jupyter Notebook view of the Tech Stack enables filtering and copying CSV/JSON/Markdown versions of the Tech Stack.

The historical spreadsheets (deprecated on 2020-10-16 and 2021-03-03) can be found here. Both are protected in case they are needed in future audits. Only Editors of the file (currently the BSAs and Team Member Enablement team) can unhide and unprotect the spreadsheets in case it is needed.

Roles and Responsibilities

Role	Responsibilities
Business and Technical Owners of Systems	Accountable for completeness and accuracy of Tech Stack data; Process Tech Stack upd
