

reation or modification.

There are 3 issue templates in this directory that the Business Sponsor can choose from to help log their SKU request.

{{% panel header="Common Use Cases" header-bg="success" %}}

1. To create or update a Professional Services SKU:
 - Open an issue in this directory using the CM: AddNewPSSKU template
 - Follow the steps from the How to Create New or Update a SKU section of this handbook page
 2. To create or update a Non-Professional Services SKU:
 - Open an issue in this directory using the CM: AddNewSKU template
 - Follow the steps from the How to Create New or Update a SKU section of this handbook page.
 3. To retire an existing SKU:
 - Open an issue in this directory using the CM: RetireSKU template
 - Follow the steps from the How to Retire a SKU section of this handbook page
- {{% /panel %}}

How to Create New or Update a SKU

It is the Business Sponsor's responsibility to provide information and obtain required approvals for the SKU changes being requested. Steps 1-4 of the SKU issue template must be completed and have required approvals obtained before the SKU can be configured. Please assign the SKU Request issue to yourself by clicking on the Edit button on the right-hand panel of the issue.

Generally, it takes 6-8 weeks for a new SKU to be created. This timing includes 4 major steps. This flow outlines the steps to create the SKU in our Enterprise Applications (Salesforce, Zuora) & CDOt (webstore). This does not include the time it takes to provision customer access to features in GitLab.

1. SKU requirements gathering and cross-functional approvals
2. Enterprise Apps SKU build & test data generation
3. User acceptance testing and cross-functional approvals
4. SKU deployment

{{% alert color="warning" %}}

To reduce the overall time required to get a new SKU reviewed and approved, consider making an accompanying slack channel similar to this one.

{{% /alert %}}

Step 1. SKU Requirements Gathering & Cross Functional Approvals

Owner: Business Sponsor or TPM if assigned

Expected Timing: 2-3 weeks

Step 1a. Product Information

This section covers business and technical requirements for product offerings. Most of these

questions will have been answered if all steps of the Product Launch Process were completed. Please answer these to the best of your ability in the SKU issue.

General Overview/Business Requirements

1. Overview of Product/Service

- Provide a general overview of the SKU and the value provided to the Customer.

2. Desired Go-Live Date

- Provide a specific date of when the new SKU is expected to be used.
- Please note the date helps with intake and prioritization of the request and does not necessarily mean the SKU will be ready for sale by this date
- Remember that from requirements to deployment, a SKU takes 6-8 weeks to create.

3. Product/Service Type for Quoting

- Identify whether the SKU is a base product (i.e. Premium, Ultimate, Dedicated, etc.) or an add-on product (i.e. Storage, Professional Services, etc.)

4. How will the SKU be sold to Customers?

- Identify whether customers can purchase the SKU without assistance from the sales team or will customers purchase with assistance from a sales rep
- Cross-functional Approval from Fulfillment required for Self-serve
- If required, the SKU can be sold both Self-serve and Sales-assisted

5. What GitLab product features should this SKU enable?

- Identify which GitLab product feature(s) need to be enabled for this SKU
- Cross-functional Approval from Fulfillment required for any product features

6. What type of GitLab instance will this SKU support? Please check any applicable boxes below:

- Identify which GitLab instance(s) can purchase this SKU.
- If required, multiple options can be selected

7. Will we have restrictions on the type of subscriptions (i.e. SaaS, Self-Managed, Premium, Ultimate, etc.) this product offering can be added to?

- Identify whether only specific types of customers can purchase this SKU
- Cross-functional Approval from SalesOps required for any restrictions
- Please note this will increase time for a SKU to be available for quoting as additional development work outside of configuring the SKU will be required

8. Are there restrictions to the minimum or maximum quantity of this SKU?

- Identify whether customers can only purchase this SKU if they meet a minimum or maximum requirement (i.e. number of seats, storage, licenses, etc.)
- Cross-functional Approval from SalesOps required for any restrictions
- Please note this will increase time for a SKU to be available for quoting as additional development work outside of configuring the SKU will be required

9. Will renewals be handled via the webstore (self-service) or only by a sales rep (sales-assisted)?

- This only applies to recurring products as subscriptions renew with recurring SKUs if it is not removed prior to renewal
- Identify whether customers can renew their subscription without assistance from the sales team or if the customer must go through a sales rep
- If required, both options can be selected

10. Should we allow customers to automatically renew with this SKU?

- This only applies to recurring products as subscriptions renew with recurring SKUs if it is not removed prior to renewal
- Identify whether customers should be allowed to automatically renew their subscription with this SKU

11. Will this SKU replace any of GitLab's current product offerings?

- Identify whether this SKU will be replacing a current SKU being sold to customers
- If this new SKU replaces a current SKU, please follow open an issue in this directory to retire the current SKU using the CM: RetireSKU template (see How to Retire a SKU)

SKU Configuration Requirements

{{% alert color="warning" %}}

In the issue template, three asterisks are considered a "non-standard" configuration request and will require additional Cross-functional approvals from Fulfillment and Sales Operations.

{{% /alert %}}

1. Rate Plan Name

- This is the customer facing name of the SKU. The Rate Plan Name should be in the format of Deployment type - Name. Some examples:

1. Self Managed - Ultimate

1. SaaS - Ultimate

1. Dedicated - Ultimate

1. Rate Plan Charge Description

- For webstore checkout, this is a short description displayed to customers
- For sales-assisted, this is a short description of the product displayed when quoting
- A URL to the service description is typically included here for professional services

SKUs

1. Charge Type:

- There are 3 charge types. Select the correct one for your use case based on the explanation below:

- Recurring Charges: a charge that is billed on a regular basis until removed from a Subscription.

- One-Time Charges: a charge that is only billed once.

- Usage Charges: a charge that is billed in arrears based on consumption.

- Please note that if Usage is selected, fill out the Any Included Units? section to identify if there will be any units included in the charge, for example: phone plan with 1000 included minutes with overage fees after.

1. Charge Model:

- There are 4 charge models. Select the correct one for your use case based on the explanation below:

- With Per Unit Pricing the product/service is priced per unit of measure (UOM).

- With Flat Fee the product/service is a single fixed price per purchase.

- With Tiered the product/service is progressively priced as volume changes.

- With Volume the product/service is priced based on the volume purchased.

1. Unit of Measure (UOM):

- Select an existing UOM to be used for this SKU; the most common unit of measure is Seat

- Select Other if your need is related to a different UOM and name it

- If your product will be a Flat Fee Charge Model, this section is not applicable

1. Charge Timing: How is the Customer expected to pay?

- Select how the Customer is expected to pay for this SKU

1. List Price:

- Add the dollar amount price of the SKU. If a unit of measure is associated to this SKU, explain the dollar amount per UOM (Example: \$250/seat/quarter)

Revenue Recognition Requirements

- Assign Makesh Subramanian @msubramanian for input on the Invoicing, Revenue, and Custom Fields sections
- This is required to configure the SKU and properly recognize revenue

Taxation Requirements

- Assign Sally Tian @stian13 for input on the Taxation section and include a service description to help them identify the correct tax code to use
- This is required to configure the SKU and properly collect sales tax

Data Requirements

- Assign Israel Weeks @iweeks for input on the Product Tier, Delivery, and Deployment fields for this offering based on the definitions in the GitLab Handbook
- This is required to configure the SKU and ensure data integrity

Step 1b. Cross-functional Approval For Pricing and Non-Standard Requests

{{% alert color="warning" %}}

Pricing approval is always required. Additional approvals from Fulfillment and Sales Operations may be required based on the requirements requested in the prior step.

{{% /alert %}}

Pricing approval ALWAYS required:

- Provide a link to the Cost of Goods Sold (COGS) spreadsheet (Make a copy of this template)
- Provide a justification if project margins are below 55% for internally delivered services
- Obtain approval from @justinfarris in the SKU issue

Fulfillment approval required if:

- Proposed SKU (meant to be) sold to Customers: Self-serve
- Subscription with the proposed SKU (meant to) have specific behavior for self-service subscription modifications (for example, no self-service renewal)
- Any non-standard () Charge Type, Charge Model, Charge Timing requests
- Proposed SKU (meant to) provision specific product features to the customer (SaaS or SM)
- Obtain approval from the Fulfillment Product Managers

Sales Operations approval required if:

- If SKU has limited quoting availability (only available to sell by certain groups)
- Any non-standard () Charge Type, Charge Model, Charge Timing requests
- Obtain approval from the Senior Manager of Deal Desk

Step 1c. Finance

Finance Approval is required for any non-standard revenue recognition approach. The Business Sponsor should communicate with the directly responsible individual (DRI) for input in Step 3.

Step 1d. Management Approvals

Assign the Issue to the management approvers in Step 4. It is the Business Sponsor's responsibility to ensure all prior requirements and approvals are obtained before progressing to Step 5.

{{% alert color="warning" %}}

The required approvals will differ depending on whether it is a Professional Services SKU or a Non-Professional Services SKU request and how to reach each approver can be found in the applicable SKU issue template.

{{% /alert %}}

{{% panel header="Next Steps" header-bg="success" %}}

- After all above steps are complete and required approval have been obtained, remove the ~"SKU
 - Gathering Requirements" label and tag @gitlab-com/business-technology/enterprise-apps/financeops for intake and prioritization of the SKU request so that it can be configured in the Zuora Billing product catalog and made quotable in Salesforce. Please note that all changes must follow the Business Technology Change Management for SOX/Audit purposes.
 - If the SKU will be sold through the channel, assign the issue to the Sales Operations Analyst listed in Step 6 to add the SKU to the quarterly update issue, the upcoming Pricebook and any other necessary information
 - If the SKU requires a service description, it is the Business Sponsor's responsibility to complete step 7
- {{% /panel %}}

Step 2: SKU Build & Test Generation Data

Owner: Enterprise Applications

Expected Timing: 2-3 weeks

Enterprise Applications and systems team build the SKU in test1 staging.

Enterprise Applications generates test data to be utilized during user acceptance testing based on the approved test cases.

Step 3: User Acceptance Testing & Cross Functional Approvals

Owner: Business Sponsor or TPM if assigned

Expected Timing: 1 week for test case generation and approvals (can be done in parallel with SKU Build). 2 weeks for testing and sign-off

Step 3a. Create the UAT issue

There is a UAT issue template in this directory. Open an issue in and use the SKU UAT template.

UAT Type: This section is to determine whether this user acceptance testing is for an existing SKU or a new SKU.

Pre-Testing Checklist:

- Stakeholder & Timeline Alignment
 - This section is used to outline the [timeline] for UAT testing
- Test Case Readiness
 - This section is used to:
 - Create a copy of the master spreadsheet and link this spreadsheet in this section of the issue
 - Check that all DRIs have approved the test cases
- System Readiness
 - This section to be completed by Enterprise Apps & Fulfillment

Testing DRIs

These teams are typically involved in SKU testing:

- Deal Desk
- Billing & AR
- Fulfillment
- Data
- Revenue
- Finance

Each team will need to confirm:

- The expected DRI for that team's testing
- The team can test during the testing availability dates for that team established in the timeline alignment above
- That they approve the test cases to be tested

Test Scenarios

 Use this section to link to the test cases

Bugs Identified

 This section will be used to track bugs during the user acceptance testing.

Final Testing Sign Off

 This section will be used to receive final sign off across the cross-functional teams involved in testing

Step 3b: Estimate the UAT Timeline

Several key dates and timing need to be established and approved by the [Testing DRIs]:

- Date when Ent Apps will complete their SKU build in staging/test environment
- Date when UAT test cases should be finalized and approved by all Testing DRIs
- Date when Ent Apps will have test data generated
- Date when Cross-functional Testing DRIs will conduct their testing
 - 2-3 biz days: Q2C & Deal Desk
 - 2-3 biz days: Billing & AR

- 2-3 biz days: Fulfillment, Data, Revenue, FP&A
- Date when User acceptance final sign off/approval

Outline the estimated dates above and then ensure that these teams approve the timeline:

- All [Testing DRIs]
- Caroline Swanson from Enterprise Applications

Step 3c: Create Draft of UAT Test Cases

- Create a copy of the master spreadsheet
- Populate columns A through J in the spreadsheet
- Column A: test case . Use this format for test case numbering:
 - TC (test case)
 - Short-hand for the SKU. For example Duo Enterprise would be DE
 - 01 (test case number)
 - So for Duo Enterprise test case 1 would be: TC-DE-01
- Column B: Purchase method
 - This would be either sales-assisted or self-service
- Column C: Deal Type
 - This would be new, upgrade, downgrade, renewal, cancellation
- Column D: Purchase Path:
 - This would be either Direct or Partnership
- Column E: Term
 - Term is the length of the contract (12 months, 24 months, 36 months)
- Column F: Ramp?
 - This would be Yes or No whether the price ramps over multi-year terms
- Column G: Ramp Segments
- Column H: Product Type
 - This is the instance type: SaaS, Self-Managed, or Dedicated
- Column I: Product Tier
 - This is the product tier: Free, Premium, Ultimate
- Column J: Use Case Summary
 - Describe what this test case is trying to test
- Columns K through AN will be populated during testing by the Testing DRIs

Test cases will vary depending on the SKU. However, most test cases will likely include scenarios such as:

- New deals that include a product
- Deals that have multi-year terms and need to ramp
- Deals that are an upgrade or downgrade from one product to another
- Deals renewals or cancellations
- Contract terms that need to be tested: Examples might include: ensuring minimums or maximums are tested, ensuring mandatory attach rules are tested

Not every single transaction scenario needs to be tested. Jesse Rabbits can help validate and add initial test cases.

Step 3d: Assign Business Ownership and Get Timing & Test Case Approval

Assign the folks outlined in the [Testing DRIs] section of the issue

Each team will need to confirm:

- The expected DRI for that team's testing
- The team can test during the testing availability dates for that team established in the timeline alignment above
- That they approve the test cases to be tested

Step 3e: Conduct UAT and Track Bugs/Issues

On the approved timing dates, the outlined [Testing DRIs] will conduct the test cases from the approved test cases

Testing DRIs will use the UAT issue to report any bugs or issues identified. Those bugs & issues will be tracked in the [Bugs Identified] section of the issue

Most bug resolution will be executed between the Testing DRI and Enterprise Applications.

Step 3f: Complete UAT and Cross Functional Approvals

All [Testing DRIs] need to give their final sign-off and approval in the issue.

Once completed, UAT is can be considered done

Step 4: SKU Deployment to Enterprise Applications

Owner: Enterprise Applications

Expected Timing: 2-3 days

Enterprise Applications will deploy the SKU to production Enterprise Applications

SKUs are always deployed on Wednesdays

[Add deployment schedules]

Post Go Live SKU Modifications

This section outlines what information can or cannot be modified after the SKU has been configured in Zuora Billing.

Modifiable Information

1. Price
2. Name (Product, Product Rate Plan, Product Rate Plan Charge)
3. Revenue recognition rules: can be modified in conjunction with the Revenue Team
4. Zuora Revenue fields
5. Unit Of Measure
6. Tax Code

Information that Cannot Be Modified

1. Zuora IDs (used by Fulfillment and Data)
2. Charge Type (One-Time, Recurring, Usage)
3. Charge Model (Flat Fee, Per Unit)

Information Advised Not to Change

1. The number of charges per Rate Plan.
 - For example, if we have 2 charges per rate plan (license and service), we would not advise adding an additional charge (for storage, for example) to this Rate Plan
 - Existing customers would not receive the additional "charge", although all customers on a go-forward basis would

How to Retire a SKU

{{% alert color="warning" %}}

It is the Business Sponsor's responsibility to provide information and obtain required approvals are obtained for each Step prior to progressing forward in the SKU retirement process. Any missing or incomplete fields will result in a delay to the review and/or approval of your SKU retirement request. Please assign the SKU Request issue to yourself by clicking on the Edit button on the right-hand panel of the issue.

{{% /alert %}}

Step 1. Product Information

Identify Rate Plans to be retired

- In this section, list all the rate plan IDs that need to be retired.

When is the SKU expected to be retired

- Provide a specific date of when the new SKU is expected to be retired.
- Please note that helps with intake and prioritization of the request and does not necessarily mean the SKU will be ready for sale by this date.

Step 2. Stakeholder Approval for SKU Retiring

{{% alert color="warning" %}}

The required approvals will differ depending on whether it is a Professional Services SKU or a Non-Professional Services SKU request and how to reach each approver can be found in the applicable SKU issue template.

{{% /alert %}}

Approval Required Based on Request Type

- If retiring Professional Services SKUs, tag the Senior Director of Education Services or Director of Professional Services
- If retiring Non-Professional Services SKUs, tag the Fulfillment Product Managers @gitlab-org/fulfillment/product-managers

Approval Required for ALL SKU Retirement Requests

- For Sales, tag the Senior Director of Sales Operations
- For Sales Operations, tag the Senior Manager of Deal Desk
- For Finance, tag the Senior Director of Revenue Accounting

Step 3. Business Technology to Retire SKU in Zuora & Salesforce

Once all of the above steps are complete and required approval are obtained, please remove the ~"SKU - Gathering Requirements" label and tag @gitlab-com/business-technology/enterprise-apps/financeops for intake and prioritization of the SKU retirement request so that it can be deprecated in the Zuora Billing product catalog and no longer quotable in Salesforce.

{{% alert color="warning" %}}

Please note that all changes must follow the Business Technology Change Management for SOX/Audit purposes.

{{% /alert %}}

FAQ

1. How long does it take to create a SKU?

- Several factors influence the length of time for a SKU to be created and made quotable
- Unclear business requirements will significantly increase the length of time and why all steps of the Product Launch Process needs to be completed prior to requesting a new or updated SKU issue.
- The complexity of the SKU (the charge type, how it is sold, guided selling rules/restrictions, etc.), the Business Sponsor's ability to obtain approvals from stakeholders, and any other development work required to support the SKU are additional influences on the delivery time.

2. What are Non-Standard Requests?

- They are SKU configurations that GitLab typically does not support/has not supported in the past and are marked by three asterisks (*) in Step 1 Product Information of the SKU process.

3. Who is responsible for obtaining approvals for my new SKU request?

- It is the Business Sponsor's responsibility to ensure all required information and appropriate approvals are obtained for each Step prior in the SKU process.

4. Where can I find the issue templates described in this handbook page?

- There are 3 issue templates in this directory that the user can choose from to help log their request.

5. What information can be changed after the SKU goes live?

- Please refer to Post Go Live SKU Modifications section of this handbook page

6. Can we just configure the SKU in production and skip the sandbox?

- Unfortunately, no. For SOX/audit purposes, all changes to the Zuora Billing product catalog must be properly tested, adhering to Business Technology Change Management policies and the Software Development Lifecycle Process for Finance Systems.

7. I only want to update the name/description of an existing SKU, do I need to go through this entire process?

- If you are not changing the charge type, unit of measure, charge model, charge timing or list price then you can simply submit an issue in this directory using the template CM: Configuration Change [Generic] and fill out the Requestor section.

How to Login To The Salesforce Mobile App

Below you can find instructions on how to login to the Salesforce mobile app via Okta. If you run into any issues attempting to login, please reach out via ithelp channel in Slack.

Prerequisites

Download and Install the following Apps

- Salesforce Mobile

 - Google Play

 - Apple App Store

- Okta Verify

 - Google Play

 - Apple App Store

- Salesforce permission enabling access for Android and/or iOS access

 - Only users in the Sales organization are allowed to access Salesforce on mobile.

If you are not part of the Sales organization and would like to request access, open an Access Request and provide business justification and the team will help process the request.

Instructions

Android

Recommended Method

1. Open the Salesforce app.
2. On the Login page, select Use Custom Domain in the bottom right-hand corner.
3. In the "Custom Domain" field enter gitlab, select Continue.
4. On the login page, select Log in with Okta.
5. Enter your Okta username and password, select Verify.
6. You'll be presented with options to verify your identity, select Use Okta FastPass.
 1. Warning: Selecting Security Key or Biometric Authentication may cause an error and be unable to login.
7. Verify your identity in Okta Verify and complete any additional login prompts. Biometric is required.
8. You'll be redirected back to the Salesforce App and the authentication process is complete.
 1. If this is your first time logging in, you may need to select Allow on the "Allow Access?" page.
9. You have logged into the Salesforce app .

Alternative Method

1. Open the Salesforce app.
2. On the Log In page, select the menu (three-dots) in the top right-hand corner.
3. Select Change Server.
4. Select Add Connection.
5. Give the new connection a name (e.g. GitLab)
6. Enter https://gitlab.my.salesforce.com for the URL, then select Apply.

7. Select the newly created connection.
8. Select the <- arrow to return to the Login page.
9. On the login page, select Log in with Okta.
10. Enter your Okta username and password, select Verify.
11. You'll be presented with options to verify your identity, select
 1. Use Okta FastPass to login via Okta Verify.
 2. Verify your identity in Okta Verify and complete any additional login prompts. Biometric is required.
12. You'll be redirected back to the Salesforce App and the authentication process is complete.
 1. If this is your first time logging in, you may need to select Allow on the "Allow Access?" page.
13. You have logged into the Salesforce app .

iOS

Recommended Method

1. Open the Salesforce app.
2. on the Login page, select Use Custom Domain in the bottom right-hand corner.
3. In the "Custom Domain" field enter gitlab, select Continue.
4. On the login page, select Log in with Okta.
5. Enter your Okta username and password, select Verify.
6. You'll be presented with options to verify your identity, select Use Okta FastPass.
 1. Warning: Selecting Security Key or Biometric Authentication may cause an error and be unable to login.
7. Verify your identity in Okta Verify and complete any additional login prompts. Biometric is required.
8. You'll be redirected back to the Salesforce App and the authentication process is complete.
 1. If this is your first time logging in, you may need to select Allow on the "Allow Access?" page.
9. You have logged into the Salesforce app .

Alternative Method

1. Open the Salesforce app.
2. On the Log In page, select the . icon.
3. Select . to add a login host.
4. Give the new host a label (e.g. GitLab).
5. Enter gitlab.my.salesforce.com for the host name, then select Done.
6. Select the newly created host.
7. On the login page, select Log in with Okta.
8. Enter your Okta username and password, select Verify.
9. You'll be presented with options to verify your identity, select
 1. Use Okta FastPass to login via Okta Verify.
 2. Verify your identity in Okta Verify and complete any additional login prompts. Biometric is required.
10. You'll be redirected back to the Salesforce App and the authentication process is complete.
 1. If this is your first time logging in, you may need to select Allow on the "Allow Access?" page.
11. You have logged into the Salesforce app .

FAQ

What requirements must my phone meet in order to be able to login to the Salesforce app?

Your phone must meet the following device posture requirements

A minimum OS version

Screen Lock

Biometrics (including touch ID, Face ID, or other supported biometrics method)

Device is encrypted

Not jailbroken or rooted

OAuth client error on Alternative Method login. Screen won't load. How to fix this login issue?

If you receive an error and cannot load the login screen, select the settings option and select Clear Cookies. Then close the app completely and reload it.

I do not wish to use biometric login with Okta Verify, can I login with a different method?

You may be able to login using the Alternative Method with a security key or passkey that is configured with your Okta account. Not all yubikeys, security keys, or passkeys may be supported though.

Can I login to multiple different Salesforce instances like Sandbox?

Yes. To login to multiple different salesforce instances you will need to add a New Connector or New Host for each different Salesforce instance.

SECTION: business-technology/enterprise-applications/guides/zuora-collect.md

<link rel="stylesheet" type="text/css" href="/stylesheets/biztech.css" />

Business Need

The business had identified the need to optimize the cash collection process in order to reduce the Order to Cash cycle, thereby reducing our Days Sales Outstanding (DSO), increasing cash efficiency for the business and scaling for future growth since the current collections process was partly automated with automated dunning notices remitted in a cadence of 7, 20, and 30 days past due. From there, a manual collections process would begin.

The Billing team was spending an average 31.5 hours per month/per person on accounts receivable activities totaling 157.5 hours per month for the team:

- Average 2.5 Hours per week on Accounts Receivable Aging.
- Average 2.5 Hours per week on Cases.
- Average 2 Hours per week on Zendesk.

Business Solution

Since Zuora was already an application from our Tech Stack and used across different teams and departments, the business decided to move forward with the implementation of the Zuora Collect module in order to support collection activities automation. The implementation would allow the Billing team to create a more organized Collections team by moving into a single use collection platform.

What is Zuora Collect

Zuora Collect is a complete solution for optimizing recurring collections in the Subscription Economy. As main benefits, it can track unpaid invoices and delinquent accounts, manage automated business processes and intelligent retry logic, and customize payment runs.

How to access Zuora Collect

As a first iteration, the following features have been configured in our Zuora Production environment:

- Collections Window
- Notes

To access these features:

1. Login to your Zuora account (via Okta).
1. On the left-bar, expand the Marketplace section.
 - Both Collections Window and Notes features should be listed.

```
<figure class="videocontainer">  
  <iframe src="https://www.youtube.com/embed/x4MdJW4xNXg" frameborder="0"  
allowfullscreen="true"> </iframe>  
</figure>
```

See below for more information on how to use each feature.

How to use Zuora Collect

Collections Window

The main user interface of the Collections Window consists of the following tabs:

Dashboard

This is the default tab when you start the Collections Window and contains three sections:

- Status of Accounts: Pie chart that shows the distribution of accounts in different statuses (in good standing vs. in collections).
 - Drill down the data in the pie chart by clicking the part for In Collections. It will display a new pie chart that shows the distribution of accounts in collections by age.
 - Customize the time periods used in the pie chart by clicking Edit Parameters on the top

right. Both the time period names (Bucket Name) and the numbers of days are customizable.

- After modifying the parameters, the user will need to refresh the page to see the changes in the pie charts.

```
<figure class="videocontainer">
  <iframe src="https://www.youtube.com/embed/zLDY4C87eA" frameborder="0"
allowfullscreen="true"> </iframe>
</figure>
```

- Collection Accounts Sorted by Age and Balance: Scatter plot that shows the age and balance distribution of accounts.

- A dot in the plot represents an account: Blue dots are accounts that are assigned to the current user.

- Hover over a dot to see details including the account name, total invoice balance and assigned agent.

- Click on a dot to open the details page of the corresponding account.

```
<figure class="videocontainer">
  <iframe src="https://www.youtube.com/embed/uzPGDHJfKPk" frameborder="0"
allowfullscreen="true"> </iframe>
</figure>
```

- Agents: Displays all agents and the details about the accounts they are responsible for, including the total number of accounts, total accounts balance and numbers of accounts in different statuses.

- Click on the name of an agent to open a new page:

- The Accounts tab displays the list of accounts that the agent is assigned to.

- The Metrics tab includes a pie chart for account balance distribution, a bar chart for account statuses and a bar chart for total balance by accounts.

```
<figure class="videocontainer">
  <iframe src="https://www.youtube.com/embed/INmCq7SeDmU" frameborder="0"
allowfullscreen="true"> </iframe>
</figure>
```

Accounts

The Accounts tab displays the accounts in collections based on the system condition and the conditions defined by the user.

> Filter the accounts by: All Accounts, My Accounts or Unassigned Accounts, by Agent or by Account Status.

Edit conditions:

- Click Edit Conditions on the top right.

- In the pop up, modify the number of days overdue and the total invoice amount.

- The balance is in the home currency.

> For an account to be considered "in Collections" and populated in the Accounts tab, the total

invoice balance must be a positive value greater than the specified number and the days overdue must be greater than the specified number. If either of the two conditions is not met, the account is not considered "In Collections".

```
<figure class="videocontainer">
  <iframe src="https://www.youtube.com/embed/SUczlKIHs8g" frameborder="0"
allowfullscreen="true"> </iframe>
</figure>
```

Manage accounts in collections

Click on an account name to view the details of the account (Account information is visible to all agents).

On this page, the user can perform the following operations:

1. Assign collections agents to accounts:
 - > The collections agent for the account is displayed on the top left of the account details page.

 - > If no agents have been assigned to this account, Unassigned will be shown.

 1. On the account details page, click the agent name or Unassigned.
 1. On the page that opens, click the arrow to display the list of agents.
 1. Select an agent and then click Update to save the settings.
1. View contact details of the account.
 - Click View Contact Details on the top right to view the contact details.
1. Update the collection status of this account.
 - In the Account Statuses section, select a status that best represents the current status of the account. Click Update when you are done.
1. View invoice details, payments, or retry status of this account.
 - For each invoice, the user can click the action icon and select Show or Show in Zuora to view the details of the invoice in Collections Window and Zuora UI respectively.

```
<figure class="videocontainer">
  <iframe src="https://www.youtube.com/embed/1dvwqmOF-io" frameborder="0"
allowfullscreen="true"> </iframe>
</figure>
```

1. Enter comments regarding the particular account to keep other agents informed of account transactions.

> The user can add or reply to comments, or mention a particular user in comments.

> Comments cannot be edited or deleted by design.

```
<figure class="videocontainer">
  <iframe src="https://www.youtube.com/embed/--ljeeigSjg" frameborder="0"
allowfullscreen="true"> </iframe>

```

Invoices

The Invoice tab display critical invoices based on the conditions the business define.

Manage invoices

On this page, the user can perform the following operations:

1. View the critical invoices sorted by age and balance in the plot below the invoice list.
 - A dot in the plot represents an invoice.
 - Clicking a dot will open the details page of the corresponding invoice.
1. Edit Conditions.
 - Click Edit Conditions on the top-right to edit the conditions for critical invoices.
 - Click Update to save the conditions.
 - Click on the refresh button above the table to refresh the results.
1. For each invoice, click the action button (3 dots) and select Show or Show in Zuora to view the details of the invoice in Collections Window and Zuora UI respectively.

```
<figure class="videocontainer">
  <iframe src="https://www.youtube.com/embed/eOaj4vJeqF4" frameborder="0"
allowfullscreen="true"> </iframe>
</figure>
```

1. Enter comments regarding the particular invoice to keep other agents informed of invoice transactions.

- > The user can add or reply to comments, or mention a particular user in comments.
- > Comments cannot be edited or deleted by design.

```
<figure class="videocontainer">
  <iframe src="https://www.youtube.com/embed/0YjRbhRur60" frameborder="0"
allowfullscreen="true"> </iframe>
</figure>
```

Tasks

Collection tasks are managed in the Tasks tab from the Collections Window. It is possible to manually create collections tasks in Collections Windows to follow up on a particular payment or account.

- > Collection tasks of this type (referred to as follow-up tasks) are not tied to workflows.

To create a follow-up task:

1. Open the Tasks tab from the Collections Window.
1. Click TASKS BETA in the top-right corner of the page.
1. Click on the plus sign icon to create a new task.
1. In the new task pop up:
 - Add the task name to the Task field: Specify a name to identify the task.
 - Select a Status:
 - Pending: The task is active and has not been completed.
 - Completed: The task has been completed.

- Closed: The task has not been completed but is no longer relevant.
- Add a Description: Specify a brief description of the task.
 - It is recommended to include the account, invoice, or payment that's related to the task.
- Select the assignee from Assign To: Type at least two letters in a username or email address to trigger the automatic completion feature.
- Add a Due date: The date when the task is due.
 - On the due date, the owner and the assignee of this task will get a notification.
- Add a Reminder date: The date when you want the assignee to get notification about the task.
- Add an Auto Escalation: If this option is selected, on the due date of the task, the task will be reassigned to the escalation point of the agent.
 - Escalation points are configured in Notes.

1. Click Create.

1. The task is created and displayed in the list of follow-up tasks.

```
<figure class="videocontainer">
  <iframe src="https://www.youtube.com/embed/zoxbseZeUqs" frameborder="0"
allowfullscreen="true"> </iframe>
</figure>
```

Settings

The user can configure schedules, system integration and collection statuses in this tab.

Notes

The Notes feature adds commenting functionality to the Collections Window feature of Collect. With this feature, it is possible to add or reply to comments, mention other users or upload files in comments, and export notes.

The UI of Notes consists of four tabs:

- Users: View all users (collection agents) in the organization, edit the active status of a user, or set the escalation point for a user.
- Groups: Manage user groups in this tab.
- Export: Export notes that are made in the Collections Window feature.
- Settings: Get the Notes API-token and use it to integrate with Collections Window.

Manage users

In the Users tab, you can view and manage all users (collection agents) in your organization:

- Change the active status of a user (from active to deactivated or vice versa).
 - To deactivate the user, deselect Active. To reactivate the user, select Active.
- Edit the user escalation point by clicking on the menu icon (3 dots on the left) and select Edit.
 - To assign an escalation point for the user, click the drop-down list and type two or more characters from the user name of the intended escalation point.

- > - When a user is deactivated, it cannot be mentioned in a note section or assigned a follow-up task in Collections Window.

- > - Comments by the user or follow-up tasks that were already assigned to the user are not affected.

- > - A deactivated user is not removed from the list of users but the name of a deactivated user is grayed out.

Export notes

In Notes, the user can export notes that were added in the Collections Window.

To export notes in the Notes feature:

1. Navigate to the Export tab of Notes.
1. Select a data source to export notes from.
 - Accounts: This data source contains notes that are added to customer accounts in Collections Window.
 - Invoices: This data source contains notes that are added to invoices in Collections Window.
1. Optional: Filter the notes by attribute values.
 - For the Accounts data source, you can export notes for all accounts (default), or filter notes by account ID or account number.
 - For the Invoices data source, you can export notes for all invoices (default), or filter notes by invoice ID or invoice number.
1. Optional: Select the time zone for the export operation.
 - This time zone selection will be used to arrange the notes based on the same time zone. In the exported file, timestamps of the notes will be converted to the configured time zone. It does not affect the date and time when a note was added. If no time zone is selected, the UTC time zone (default) will be used.
1. Optional: Select the start date and end date of the period within which the notes will be exported. If you do not specify these fields, all notes will be exported.
1. Click Export. The notes will be saved into a CSV file.
 - Exported files will be available for download for seven days.

FAQ

How to assign Agents to an account?

>

> For a video tutorial, click [here](#).

1. Open the Collections Window and click on the Accounts tab.
1. Search for the account that needs to be assigned and open it (by clicking on the account name).
 - The collections agent for the account is displayed on the top left of the account details page.

1. Click the agent name or Unassigned.
1. Select an agent from the dropdown list.
1. Click Update to save the settings.
 - Refresh the page to see the changes.

How to view the contact details of a particular account?

>

> For a video tutorial, click [here](#).

1. Open the Collections Window and click on the Accounts tab.

1. Search for the account that you are looking for and open it (by clicking on the account name).

1. The View Contact Details button is on the top right corner of the page.

How to update the collection status of a particular account?

>

> For a video tutorial, click [here](#).

1. Open the Collections Window and click on the Accounts tab.

1. Search for the account that you are looking for and open it (by clicking on the account name).

1. In the Account Statuses section, select a status that best represents the current status of the account.

1. Click Update when you are done.

How to search for a specific account?

>

> For a video tutorial, click [here](#).

1. Open the Collections Window and click on the Accounts tab.

1. Find the magnifying glass on the top right and type the account name.

- The list will automatically refresh with the results.

How to view the invoice details and payments a particular account in the Collect window?

There are two ways to view invoice details:

> For a video tutorial, click [here](#).

1. Open the Collections Window and click on the Accounts tab.

1. Search for the account that you are looking for and open it (by clicking on the account name).

1. In the Invoices tab, click on the action icon (the 3 dots on the left) and select Show to view the details of the invoice in the Collections window.

> For a video tutorial, click [here](#).

1. Open the Collections Window and click on the Invoices tab.

1. Search for the invoice that you are looking for.

1. In the Critical Invoices section, click on the invoice number OR on the action icon (the 3 dots on the left) and select Show to view the details of the invoice in the Collections window.

How to open an invoice in Zuora Billing?

There are two ways to view invoices:

> For a video tutorial, click here.

1. Open the Collections Window and click on the Accounts tab.

1. Search for the account that you are looking for and open it (by clicking on the account name).

1. In the Invoices tab, click on the action icon (the 3 dots on the left) and select Show in Billing to open the Zuora Billing UI in a new tab.

> For a video tutorial, click here.

1. Open the Collections Window and click on the Invoices tab.

1. Search for the invoice that you are looking for.

1. In the Critical Invoices section, click on the action icon (the 3 dots on the left) and select Show in Billing to open the Zuora Billing UI in a new tab.

How to add comments to an account?

>

> For a video tutorial, click here.

1. Open the Collections Window and click on the Accounts tab.

1. Search for the account that you are looking for and open it (by clicking on the account name).

1. Scroll down to the Customer Account Notes section and click on the plus icon on the right.

1. In your note you can format the text, attach documents, add a hyperlink and mention a particular user if needed, by adding @before the user name.

- When a user is tagged in a comment, they receive an email informing that they have been mentioned in a comment.

1. When finished, click on Submit.

- Comments cannot be edited or deleted by design.

How to reply to comments on an account?

>

> For a video tutorial, click here.

1. Open the Collections Window and click on the Accounts tab.

1. Search for the account that you are looking for and open it (by clicking on the account name).

1. Scroll down to the Customer Account Notes section and find the comment that needs a reply.

1. Click on the reply button on the right.

1. In your note you can format the text, attach documents, add a hyperlink and mention a particular user if needed, by adding @before the user name.

- When a user is tagged in a comment, they receive an email informing that they have been mentioned in a comment.

1. When finished, click on Submit.

- Comments cannot be edited or deleted by design.

How to add comments to an invoice?

>

> For a video tutorial, click here.

1. Open the Collections Window and click on the Invoice tab.
1. Search for the invoice that you are looking for and open it (by clicking on the invoice number).
1. Scroll down to the Invoice Notes section and click on the plus icon on the right.
1. In your note you can format the text, attach documents, add a hyperlink and mention a particular user if needed, by adding @before the user name.
1. When finished, click on Submit.
 - Comments cannot be edited or deleted by design.

How to reply to comments on an invoice?

>

> For a video tutorial, click [here](#).

1. Open the Collections Window and click on the Invoice tab.
1. Search for the invoice that you are looking for and open it (by clicking on the invoice number).
1. Scroll down to the Invoice Notes section and find the comment that needs a reply.
1. Click on the reply button on the right.
1. In your note you can format the text, attach documents, add a hyperlink and mention a particular user if needed, by adding @before the user name.
 - When a user is tagged in a comment, they receive an email informing that they have been mentioned in a comment.
1. When finished, click on Submit.
 - Comments cannot be edited or deleted by design.

How to delete a comment?

- Comments cannot be edited or deleted by design.

How to edit a comment?

- Comments cannot be edited or deleted by design.

How to create a follow-up task?

>

> For a video tutorial, click [here](#).

1. Open the Tasks tab from the Collections Window.
1. Click TASKS BETA in the top-right corner of the page.
1. Click on the plus sign icon to create a new task.
1. In the new task pop up:
 - Add the task name to the Task field: Specify a name to identify the task.
 - Select a Status:
 - Pending: The task is active and has not been completed.
 - Completed: The task has been completed.
 - Closed: The task has not been completed but is no longer relevant.
 - Add a Description: Specify a brief description of the task.
 - It is recommended to include the account, invoice, or payment that's related to the task.
 - Select the assignee from Assign To: Type at least two letters in a username or email

address to trigger the automatic completion feature.

- Add a Due date: The date when the task is due.
 - On the due date, the owner and the assignee of this task will get a notification.
- Add a Reminder date: The date when you want the assignee to get notification about the task.
 - Add an Auto Escalation: If this option is selected, on the due date of the task, the task will be reassigned to the escalation point of the agent.
 - Escalation points are configured in Notes.

1. Click Create.

1. The task is created and displayed in the list of follow-up tasks.

How to deactivate a user?

>

> For a video tutorial, click [here](#).

1. Open the Users tab from the Notes feature.

1. Search for the user (using the magnifying glass on the right)).

1. Click on the action icon (the 3 dots on the left) and select Edit.

1. Deselect Active.

1. Click on Update.

- When a user is deactivated, it cannot be mentioned in a note section or assigned a follow-up task in the Collections Window.

- Comments that were added by the user or follow-up tasks that were already assigned to the user are not affected.

- A deactivated user is not removed from the list of users but the name of a deactivated user is grayed out.

How to reactivate a user?

>

> For a video tutorial, click [here](#).

1. Open the Users tab from the Notes feature.

1. Search for the user (using the magnifying glass on the right)).

1. Click on the action icon (the 3 dots on the left) and select Edit.

1. Select Active.

1. Click on Update.

How to add an escalation point to a user?

>

> For a video tutorial, click [here](#).

1. Open the Users tab from the Notes feature.

1. Search for the user (using the magnifying glass on the right)).

1. Click on the action icon (the 3 dots on the left) and select Edit.

1. Click on the drop-down list and type two or more characters from the user name of the intended escalation point.

1. Click on Update.

How to export notes?

>

> For a video tutorial, click [here](#).

1. Open the Export tab from the Notes feature.

1. Select a data source to export notes from.

- Accounts: This data source contains notes that are added to customer accounts in Collections Window.

- Invoices: This data source contains notes that are added to invoices in Collections Window.

1. Optional: Filter the notes by attribute values.

- For the Accounts data source, you can export notes for all accounts (default), or filter notes by account ID or account number.

- For the Invoices data source, you can export notes for all invoices (default), or filter notes by invoice ID or invoice number.

1. Optional: Select the time zone for the export operation.

- This time zone selection will be used to arrange the notes based on the same time zone. In the exported file, timestamps of the notes will be converted to the configured time zone. It does not affect the date and time when a note was added. If no time zone is selected, the UTC time zone (default) will be used.

1. Optional: Select the start date and end date of the period within which the notes will be exported. If you do not specify these fields, all notes will be exported.

1. Click Export. The notes will be saved into a CSV file.

- Exported files will be available for download for seven days.

Zuora Collect Support

GitLab Internal Escalation Process

The Finance Admins should be the first point of contact in case the end-users of Zuora Collect encounter any issues or have any system-related questions.

How can I contact the Finance Admins?

Send a message to `proj-zuoracollectimplementation` with your question and add the `@here` tag to be picked up by the appropriate person.

SECTION: business-technology/enterprise-applications/guides/zuora.md

<link rel="stylesheet" type="text/css" href="/stylesheets/biztech.css" />

Zuora

Zuora is an order-to-revenue SaaS platform that supports GitLab's quoting, billing, collections, revenue recognition, and subscription metrics reporting processes and the back-office teams that support those processes. It is the central platform that integrates with other order-to-cash systems like CustomerDot, Salesforce, Stripe, Avalara, Snowflake, and NetSuite.

The following sections summarize the key components of the Zuora platform and their

relationship to the order-to-cash process.

Product Catalog

The Zuora Product Catalog represents the total list of revenue-making products and services that are sellable or have been sold by GitLab. Both self-serve and enterprise products/services are represented in the Zuora Product Catalog. It is the SSOT for the following product/service parameters:

- list price
- default quantities
- charge model
- billing timing
- recurring v one-time
- at what date a product/service can be added to a subscription
- at what date a product/service can no longer be added to a subscription
- revenue recognition parameters/logic
- tax parameters
- renewal price behavior
- currency
- display in the quoting process

Subscription Management

Zuora CPQ is installed in Salesforce and is the configure, price, quote tool that facilitates the deal-booking process. The Zuora 360 integration syncs the Zuora Product Catalog to Salesforce so that the Zuora Product Catalog can be used alongside the Zuora CPQ tool in the quoting process. Once deals go through the appropriate approvals and reviews in the deal-booking process, their related Quotes are synced to Zuora. The result is properly a configured Subscription that has the appropriate IDs and product parameters from the Zuora Product Catalog and the Salesforce (Zuora installed package) Quote. A version of the described process above also exists for the self-serve portal. Zuora Product Catalog parameters are stored on the product-side (CustomerDot). Very defined transacting options in self-serve replace the CPQ process in SFDC. The result is the same: a properly configured Subscription in Zuora). Subscriptions should be the SSOT for the committed deal parameters of a Customer's Subscription with GitLab:

- term start
- term length
- term end
- auto-renewal
- subscription name and IDs
- status
- products/services
 - billing cadence
 - known prices agreed upon
 - quantities entitled to
 - charge model
 - recurring v one-time
 - mrr (and effective dates)

- revenue/tax parameters
- renewal price behavior

Account Parameters related to Billing, Collections, and Financial Reporting

All Zuora Subscriptions must be related to a Zuora Account. Zuora Accounts are made or updated when syncing Zuora Quotes from SFDC or via the API for self-checkout Customers.

Zuora Accounts are the SSOT for:

- billing email
- billing address
- sales tax address
- tax exemption
- currency
- associated GitLab reporting entity
- Zuora Account name and IDs
- billing hierarchy
- EoA path: sales v self-serve
- credit cards to be used on future transactions (masked)
- payment terms

Billing and Payments

Zuora Invoices where Status = Posted represent the dollar value of the product/service that are owed to GitLab from Customers. They include the dollar value of the product/service sold as well as the taxes due on the transaction. Zuora is the only approved means of invoicing for GitLab tiers and professional services.

Zuora Invoices are the SSOT for:

- line item dollars owed by the customer
- line item quantities associated with the dollars owed
- line item taxes collected to be remitted to taxing authorities
- date that the due date is calculated from (invoice date)
- date the total balance is due by the Customer

Zuora-provided hosted web pages allow credit card information to be passed from Customer keyboard directly to Zuora in a PCI compliant manner. Zuora is integrated with Stripe, the gateway service that charges credit cards. All credit card transactions related to a Subscription change in Zuora should be performed via the Billing and Payment Collection processes in Zuora rather than transacting directly with Stripe. This ensures the appropriate recordkeeping activities take place with the highest visibility to the cross-functional teams working with Zuora data.

Zuora Payments are the SSOT for:

- gateway responses
- accounting parameters related to the collection of cash
- date payment was considered received
- refund status
- amount considered to be received

Revenue

Zuora Revenue is the rebrand of the RevPro product Zuora purchased to solve for new revenue recognition requirements. It is directly integrated with the main Zuora platform and currently inherits all its information from the Zuora platform.

Zuora Revenue is the SSOT for:

- the logic for how subscription changes are grouped and considered as a single deal
- the logic for how price is allocated between products on the subscription or products that are inferred to be on the subscription
- the GL parameters for ultimate recording of revenue in NetSuite

<link rel="stylesheet" type="text/css" href="/stylesheets/biztech.css" />

Business Need

The Business had identified the need to optimize the Procure to Pay process with tools that would allow the creation of Purchase Requests, Purchase Orders, 3-way invoice matching, vendor payments, and accounting protocols for SOX Compliance.

Business Solution

The Business decided to move forward with the implementation of Coupa for the procurement to payment platform and Zip for the purchase request platform. Together they provide the needed functionalities and is integrated to decrease procurement approval turn-times and reduce manual workflow delays.

{{% alert color="info" %}}

To learn more about Zip, check the Zip Handbook page.

{{% /alert %}}

What is Coupa

Coupa is a cloud-based purchasing and payment platform that will be used by GitLab as of 2021-06-01 for the US and Netherlands entities and as of 2021-12-13 for remaining entities. It has an easy-to-use interface that will improve the way suppliers connect with GitLab. All new purchase orders, invoices and communications will be managed through the Coupa Supplier Portal.

How to access Coupa

Coupa is available via Okta. To access the platform:

1. Login to your Okta home page.
1. Click on the Coupa (Prod) button.
 - A new tab should open with your user logged in.

{{% alert color="warning" %}}

Please note that every month all Coupa access will be reviewed and users who haven't been active in a period of 90 days will have their access removed. (Note that this number may vary depending on the license count for the current month)

If you need to request access again, please reopen your initial Access Request issue and tag the Finance Systems Admins team using @gitlab-com/business-technology/enterprise-apps/financeops in a comment.

{{% /alert %}}

If your job function requires you to manage budget and management approvals, purchase orders and invoice approvals in Coupa, follow the below steps:

1. Open an Access Request for Coupa using the IndividualBulkAccessRequest template.
1. In Step 2, in the Justification for this access question, please describe what budget, management approvals, purchase orders and invoices approvals you will manage.
1. After the AR is approved, you must review the tech stack and follow the instructions for provisioning (either assign to the provisioner, add the correct labels or both if not clearly stated) to avoid any provisioning delays.
1. If you require immediate Coupa access, please ping in the coupahelp Slack channel.

{{% panel header="Best Practices" header-bg="success" %}}

Due to the limited number of licenses available for Coupa, it is recommended that each department identify power users responsible for managing requisition budget and management approvals, purchase orders and invoice approvals on the team's behalf.

{{% /panel %}}

How to Use Coupa for Purchasing

Home Page Overview

1. Home Icon - This icon will bring you back to the homepage.
1. Account Name - Contains a number of personal settings related to managing your account in Coupa.
1. Cart - Links to your shopping cart, which contains any items selected but not yet submitted for approval.
1. Search Bar - Used to search or browse catalog items and create free text requests.
1. Recent Activity - Displays your 5 most recent transactions. Selecting View All will bring you to Activity to display all of your previous requisitions and other transactions.
1. To Do's - Displays a list of action items within Coupa that are assigned to you. Selecting View All will bring you to your Coupa Inbox to display all of your To Do's.
1. Additional Stores ("Punchouts") - Offers the possibility to search, select and submit purchases directly from the Supplier's portal.
1. GitLab - Important Links and Resources - Displays important information about Coupa, along with links to training material and other important documents.
1. Coupa Community - Connect or join to engage with other Coupa customers, partners, product managers, and the Coupa success team.

User Account

Account Name contains a number of options related to managing your account in Coupa:

- Activity: Displays all of your previous requisitions, related orders, receipts, and invoices.
In each transactional tab, you can perform the following:

1. View: allows you to quickly apply sets of filters to display reports such as all requisitions, requisitions requiring receipt, draft requisitions, and a number of other pre built reports, along with option of creating custom reports.
1. Report Scheduling: allows to set up recurring reports that are emailed to recipients on a regular basis (can be daily, weekly, or monthly).
1. Advanced: allows to apply a filter or set of filters to the list of requisitions.
1. Search: allows to quickly search all fields on a requisition for a match.
1. Export: allows downloading a report in CSV or Excel format based on the current filters applied to the list of requisitions.
1. Actions: the icons next to each requisition allow you to edit, copy, cancel, withdraw, and resend requisitions.

- Groups: Access to Groups setup and allows user to add members in the group he/she belongs to.
- Settings: Contains consolidated personal settings.
 - General: The General tab is where you can load a profile photo and check user forms.
 - Address Book: Allows you to view your default shipping address and change it as needed (you can also change the shipping address of a particular requisition on the requisition page).
 - Delegates: Users can delegate their receiving and approvals to another user by using the Delegates functionality (it is possible to add multiple, overlapping delegates, and enable notifications). Check the How to add a Delegate in Coupa section for more details.
 - Reports: Users can schedule a report by going to a particular report view and specifying the scheduling details (only certain users will have access to reports and report views are dependent on role).
 - Notifications: Coupa notifications can be managed under the User's Settings.

For each type of notification, the User can choose whether to receive notifications via email, Slack, or within Coupa (Online) and can select multiple platforms.

- Two-Factor Authentication (2FA): Should be enabled on user profiles to ensure that financial accounts and instruments are protected for control and use by the individual to whom they are intended. This extra authentication layer on the user profile is required before that user can be granted privileged permissions for working with payment features like creating batches for expense and invoice payments, creating accounts, and many other secured payment functions. Check the How to enable Two-Factor Authentication (2FA) section for more details.
- Inbox - Displays all current and previous notifications.
- Sign Out - to exit the application.

How to add a Delegate in Coupa

1. Go to your "Account Name" > "Settings".
1. Click on the "Delegate" subtab.
1. Click "Create" and select a delegate type approval (Receiving, Delegate) for a specified timeframe and give a reason.
1. Click "Save".

{{% alert color="info" %}}

Assigned delegates must be of an equivalent or greater management level.

For approvals as part of an approval group, the individual must be a member of that group.

{{% /alert %}}

How to Enable Two-Factor Authentication

1. Go to your "Account Name" > "Settings".
1. Click on the "Two-Factor Authentication" subtab.
1. Click the "Enable" button.
1. Use your Google Authentication app to scan the QR Code.
1. Enter the 6-digits displayed in the authentication app in the Verification Code field.
1. Click "Submit".

> Anytime you are challenged for a 2FA verification code, just launch your authenticator and enter the latest code.

How to Create a Requisition

{{% alert color="info" %}}

Effective 2023-02-01, all purchase requisitions will be created in Zip. To learn more about Zip, check the Zip Handbook page.

{{% /alert %}}

How to Review a Requisition in Coupa

REQUISITION HEADER LEVEL

- a) On Behalf Of (synced from Zip)

 - This is used to create a request on behalf of another user. The approval chain will update following the person selected as "on behalf of". This user will then have to approve the invoice once received.
- b) Description of Purchase (synced from Zip)

- c) Hide Price (optional)

 - Used by Procurement to hide Purchase Order price from the Vendor.
- d) Attachments (synced from Zip)

{{% alert color="warning" %}}

If an invoice is attached, it will also need to be emailed to ap@gitlab.com for processing.

{{% /
