

anner to return to your profile.

1. Users you have recently logged in as will appear as small contact icons along the right side of your search page, allowing you to easily toggle between your profile and other users.

- Note: Transactions submitted on behalf of others will follow that user's assigned policy (expense allotment). To review the user's expense allotment, navigate to the Policy tab on the mobile app while you are logged in as them.

Reviewing transactions on behalf of another user

1. Repeat the steps as outlined to log in as a different user. Note that they'll need to delegate you with access to their account first.

1. You will then be able to review any transactions submitted, including their teams' transactions if that user is a manager.

Managing transactions for another user

- Manual transactions: Manual transactions submitted for reimbursement will fall under one of four review categories (accessed under Transactions). If a transaction requires further action, such as requests for more information, a missing receipt, or repayment to the company for partially or fully rejected submissions, you can take action by logging in as the user as outlined in the above section.

- Navan card transactions: Transactions charged on a user's physical Navan card will be auto-approved if they are compliant with that user's assigned expense policy. Transactions that are not auto-approved may require additional action, such as providing more information, attaching a missing receipt, or repaying the company if the transaction has been partially or fully rejected. If a transaction requires further action, you can complete any required information by logging in as the user as outlined in the above section.

> Check the How do I submit or manage an expense for someone else article for more details.

How to see how much budget is left

If you want to see how much you still are allowed to expense within the policy, for example how can expense on office equipment:

1. Navigate to the Policy tab.

1. Click Benefits.

1. Under Work from home, click Show transactions.

1. On the right you see the total spent, and how much is left.

Leveraging the Navan Expense manager dashboard (available in the desktop browser only)

The Navan Expense Manager Dashboard gives managers an at-a-glance view of their direct reports' transaction activity and spend data, as well as the ability to review and approve transactions (for managers designated as expense approvers). The manager dashboard can be accessed from the Navan desktop browser by clicking on the main dropdown menu on the left, then Manager under the Expense section. The page has four main components and filters to narrow your search.

Activity

The Activity tab provides an overview of all transaction activity. Choose Navan Expense transactions to view all activity from Navan physical cards and virtual cards, or select Manual transactions to view all expenses submitted for reimbursement.

Analysis

The Analysis section of the Navan Expense Dashboard provides an overview of their company's business spend including transactions charged to a Navan Expense physical, virtual, and purchase card, as well as transactions submitted for manual reimbursement. Managers can use this information to:

- Group and visualize total spend and number of transactions.
- View a breakdown of different charge types (i.e. physical card vs. manual transaction) to see which methods are being used to submit expenses.
- Filter data across different time frames, groups, and issuing currencies.

Use the Filters at the top of the page to adjust the Spend overview. You have the ability to filter by time period, group, expense type, issuing currency, individual user, and more.

To access the dashboard, navigate to Navan Travel > Manager > Analysis. The Overview page will display your company's total spend categorized by charge type. Charge types are the different ways that employees can submit an expense in Navan Expense. You will see a breakdown of each (if applicable):

- Physical Cards: The total posted amount and number of transactions charged on Navan physical cards.
- Virtual Cards: The total posted amount and number of transactions for travel spend charged on Navan virtual cards.
- Manual Transactions: The total amount and number of approved transactions submitted manually for out-of-pocket expenses.

Users

The Users tab allow managers to view their direct reports' employee data such as their issuing currency, cost center, and more. Click on a user's name to view additional information including their transaction history and policy assignment. In addition to the Activity tab, designated approvers can review, approve, reject, and request more information for a transaction directly through a user's transaction history.

{{% alert title="Note" color="warning" %}}

Users designated as a manager on the Navan user list will have access to the Manager Dashboard. If you do not see a Manager Dashboard option available, either you do not have any assigned direct reports or your direct reports do not have any spend activity.

{{% /alert %}}

> Check the Leveraging the Navan Expense manager dashboard article for more details.

Navan Expense Frequently Asked Questions (FAQ)

What happens if I enter incorrect bank account information?

Account information is validated upon submission. However, we cannot validate that it is the correct account for you. Please ensure that you enter your bank account information correctly. Navan is not liable for money sent to the wrong account.

What if I have a bank account transacted in currency outside of those supported?

If your bank account's currency is not currently supported or you wish to not link your bank account for other reasons, you can still receive reimbursements through GitLab's payroll. For details on GitLab's payroll cycle and process, contact the Accounts Payable Team.

What if I don't want to link my personal card? How can I make repayments to my company?

If you do not link your personal card to Navan Expense and you owe GitLab a repayment for an expense that was not approved, you will need to connect with the Accounts Payable Team to determine the best method for repayment.

In what countries are direct reimbursements available?

Please check this section of the Expense handbook page for information on reimbursements and payout timelines.

How can I receive my funds if my reimbursement fails?

If your reimbursement fails, unlink, then relink your bank account from the My reimbursements tab on your mobile app or the Settings tab on the web app. Once relinked, Navan will resend the funds to your bank.

Is it required that I include participants on my transactions?

While it is not required, adding participants to your transactions will give your Admin Team a better understanding of cost per person and help provide justification for more costly expenses.

If I add colleagues to my transaction as participants, whose policy will be applied?

Adding participants to a transaction will not affect which policy is applied. Any transactions that you submit, regardless of participants entered, will be subject to the parameters set by your own assigned policies.

Is it possible to expense mileage for a round trip drive?

Yes, simply click on the + icon when entering your destinations to add a location.

Will I be able to submit for reimbursement in kilometers instead of miles?

The region assigned to you by your Navan Expense Admin Team will determine if you are able to submit in kilometers or miles. Note: If you are a US-based employee using your personal car on an international trip, you will still need to submit your reimbursement request in miles.

Can I still submit mileage for travel, without attaching it to a trip booked on Navan?

Yes, as long as your assigned expense policy allows for mileage reimbursement.

What rideshare applications can Navan connect to?

Navan offers connections with Lyft, Uber, and Grab so you can automatically share your location and destination information to access a ride while traveling.

> Check the [What rideshare applications can Navan connect to?](#) article for more details.

Can I automatically submit Lyft expenses?

Navan Expense users can connect their Lyft account to Navan Expense to automatically send receipts and submit expenses for business travel-related Lyft rides. To leverage this option, you will first need to create a Lyft business profile with the same email address you use in Navan.

> Check the [How can I automatically submit Lyft expenses?](#) article for more details.

Is there anything I can't do in the web app that I can do in the mobile app?

To view your assigned expense policies or log miles driven for reimbursement, please use the Navan app. These features are not currently available in the web app.

Should I add tax details for Navan Expense transactions?

Team members are not required to add tax details to any expense transactions.

> Check the [How do I add tax information to my transactions?](#) article for more details.

Are multiple receipts auto-approved paid in one lump sum or as separate reimbursements?

A deposit for each transaction will be made into your bank account. If you submit 5 manual expenses, you will receive 5 separate bank deposits for each individual transaction.

If my expenses are rejected, can I go back to edit and resubmit?

Expenses will need to be fully resubmitted if rejected.

Where can I see Navan Expense product releases?

Navan Expense product releases are shared in the following blog: [Navan Expense product release announcements](#)

SECTION: business-technology/enterprise-applications/guides/zip-guide/_index.md

<link rel="stylesheet" type="text/css" href="/stylesheets/biztech.css" />

What is Zip

Zip is an add-on to Coupa that will streamline the approval process to ensure we are gathering all the right information to manage the associated approvals, and get you the services you need as soon as possible. As a result, you will now have visibility into your purchase requests including the ability to see status and current stage of the approval process.

{{% alert title="Note" color="info" %}}

Check this 2 Minute Zip Overview Video to learn more about Zip and how to submit a purchase request.

{{% /alert %}}

How to access Zip

To request access to Zip:

1. Open an Access Request for Zip and Coupa using the IndividualBulkAccessRequest template. All users requesting access to Zip also need a Coupa license to manage POs and invoices

- a) In Step 2, in the Justification for this access question, please describe what budget, management approvals, purchase orders and invoices approvals you will manage.

- b) After the AR is approved, you must review the tech stack and follow the instructions for provisioning (either assign to the provisioner, add the correct labels or both if not clearly stated) to avoid any provisioning delays.

- c) If you require immediate Zip/Coupa access, please ping in the coupahelp Slack channel.

2. Once you are provisioned access, Login to your Okta home page

3. Find the Zip tile.

- Zip should open in a new tab with your user logged in.
- The Zip main page should look like the one below.

Zip - Getting Started

How to initiate a new request?

1. Login to your Okta home page.
2. Click on +New Request on the right side of the top menu.
3. Select the specific type of request needed.
4. Complete the requisition form
5. If you are the requestor, then add your name, or behalf of whom you are requesting.
6. In the What are you looking to purchase? question, is asking which commodity you are purchasing. For example: if this purchase is for the Marketing team, then please select Marketing Programs and then the appropriate subcategory that describes your purchase.
7. Select if the payment is to be made by a Coupa virtual card.

Purchase requests commodity categories and sub-categories

1. Consulting, Professional Services & Training
 - Consulting Fees
 - Professional dues, membership fees
 - Revenue Partner Payments
2. Finance & Legal

How to request a new vendor?

The process to set up a new vendor starts in Zip. Simply by creating a new purchase request you have the option to add a new vendor. Once the request has been submitted, the Procurement team would be notified and add the new vendor in Coupa.

How to do a request change?

If there is an existing purchase order (PO) that needs a change, follow the steps below to process a change request:

IMPORTANT Change Request can only be submitted if there is a released Coupa Purchase Order (PO). If you have to update a req that is running through approvals in Coupa/ZIP please contact the Procurement Team.

1. Login to your Okta home page.
2. Open ZIP
3. Click on +New Request on the right side of the top menu.
4. Select the Request a Change (amend contracts or PO change)

5. Complete the General Information form. Make sure that you enter the existing Coupa purchase order number (starts with 1000....).

6. Complete the Spend Information form:

- a) What is the new total budget you will need for this purchase:
- Provide the new final cost, which is the sum of the original purchase order (PO) amount and the additional cost

- b) Please enter the line item breakdown:
- In the 'Line item' section, specify the new final cost.

If the original PO had more than 1 line items, in the Change Order ZIP request include only line items that should be updated (copy the line item name from the original PO).

7. Attach supporting documentation from the supplier for the change. This could be a SOW, Change Request, and/or Order Form based on the purchase type.

8. Submit the Change Request. Procurement team will amend the PO in Coupa on your behalf.

{{% alert color="info" %}}

Please note that a change request will require the same approvals as a new request.

{{% /alert %}}

NOTE Change Request can NOT be submitted to update the vendor. If the vendor of PO should be updated please contact the Procurement Team in the procurement slack.

How to request a signature on a POC agreement?

If you are planning to run a POC with a new vendor and have an Agreement with no cost associated, follow the steps below:

1. Login to your Okta home page.
2. Open ZIP
3. Click on +New Request on the right side of the top menu.
4. Select the Request a Demo/Trial (\$0 Contracts)
5. Complete the requisition form.
6. Attach supporting documentation from the supplier for the POC.
7. Submit a Request.
8. After Legal and Security approvals are collected Procurement Team will proceed with signature process.

How does the virtual card process work?

Virtual card requests will go through Zip as a regular purchase request.

1. Select Yes for the question Will a virtual card be used to pay this vendor? and fill in all the relevant information.
2. Select American Express- Virtual Card in the field What's the name of the vendor?
3. Once the Zip request is approved and is integrated into Coupa, where financial and management approvals will take place, it will trigger virtual card creation in Coupa.
4. You will receive an email once the virtual card is ready, and you can also access it

directly in Coupa.

How to keep track of a request?

1. Login to your Okta home page.
2. Open ZIP
3. On the Zip home page click on Requests on the left side of the page.
 - A list of all the requests submitted appears.
 - There are multiple options to search a submitted request(Purchase name,vendor name,request ,etc).
 - Drafted request are also accessible in this page.
4. Once the specific request has been selected, the approval workflow appears at the top of the page.

```
{{% alert title="Note" color="info" %}}
```

See which approvals are complete and which have yet to be completed. Automatic notifications via Slack and email will go out as the request is approved by different parties.

```
{{% /alert %}}
```

How to check status of a new request?

1. Login to your Okta home page.
 2. Open ZIP
 3. On the Zip home page click on Requests on the left side of the page.
 4. Select a Request you want to check the status on.
- If the Request in ZIP has reached the Coupa Approval and Execute Contract node, you can check the status of a Request in Coupa:
 - Click on the "Create Purchase Requisition" icon on the top left corner of the approval flow
 - Then, click on "View in Coupa"
 - You will be redirected to Coupa, where you can check the approval flow and the current approver.

How to check signature status of documents?

1. Login to your Okta home page.
2. Open ZIP
3. On the Zip home page click on Requests on the left side of the page and find your Request.
4. On the Request page scroll down to the Documents section.

If the contract's title contains the term "Executable," this indicates that it has been reviewed and stamped by the Legal team. This implies that the contract is ready to be routed for signatures if all approvals in Coupa were obtained.

- If the contract has been fully signed by all relevant parties, its status will be indicated as Final and title will contain the term Signed.

- In cases where the contract is pending signatures, the status will display a fraction such as "0/2" or "1/2," depending on the number of required signatures and the signatures that have already been obtained. For instance, if none of the required signatures have been obtained, the status could be "0/2." If one signature has been obtained out of the two required, the status could be "1/2."

Legal approval / redlines

For requests involving new vendors where no agreement on terms has been reached yet, the Legal team may provide edits or redlines to the vendor's contract to ensure compliance with our company's policies and legal requirements.

When the Legal team reviews and provides redlines to the vendor's contract, the following actions should be taken:

1. Stakeholder / Requester's Role:

The requester is responsible for sending any legal redlines to the vendor via email, unless any of the following apply:

- The Procurement team is already actively in negotiation or communication with the vendor
- The total contract value is > \$100k
- Procurement comments that they are specifically sending the redlines themselves for any reason

If the requester sends the redlines to the vendor, it is crucial to copy the Procurement approver on the email for visibility.

2. Procurement Team Support:

The Procurement team can support the stakeholder by routing the Legal notes to the vendor for requests that are actively being negotiated by Procurement or requests that are > \$100k. Procurement will leave a comment in the Zip request when redlines have been sent to the vendor and the requester will be copied on the email.

3. Title with ZIP Request Number:

When communicating with the vendor or taking any action related to the redlines, the email subject should include the ZIP request number. This will help in tracking and referencing the specific request throughout the process.

4. Comment in the ZIP Request:

Any team member who reaches out to the vendor regarding the redlines must leave a comment in the ZIP request to indicate that the note has been sent to the vendor. This ensures proper documentation and communication within the team.

How to cancel a request?

1. On the Zip home page click on the Submitted tab.

2. Find and select the purchase request you would like to cancel.
3. Once you have selected the purchase request, click on the  logo and Cancel Request.
4. Provide a short cancellation reason and click Confirm.

How to clone a request?

1. On the Zip home page click on the Submitted tab.
2. Find and select the purchase request you would like to clone.
3. Once you have selected the purchase request, click on the  logo and Clone request.
4. Click on Clone.

How to comment on a request?

Every request detail page includes a Comments tab that provides a space for communication between all users who can access the request. In addition to comments from members of the organization, this tab provides notifications when comments are left by vendors on the vendor portal.

An user can post a question or comment, and all of the stakeholders in the chain (the requester and all approvers) will be notified to view and then respond, or @ tag a specific person and only that person will get notified.

Zip - Approval Process

Some users identified by Legal, HR, Procurement, Security and Privacy have the option to approve or reject specific purchase request that are assigned to them.

How to Approve a request?

1. You will receive an email / Slack alert when a new purchase request requires your approval. Notifications will highlight key information regarding the request, you can approve or reject the request from the notification directly.
2. From the notification, click on the View Request link to learn more and to view the request in Zip
3. Review the relevant information needed for the approval.
4. Click on your approval node in the review chain to view due dates, completed dates, any sub-tasks and integration information built-in.

5. Click on the section tabs to jump to the section of the page needed.

{{% alert title="Note" color="info" %}}

You can set your approval notification preferences (Email and/or Slack) by logging into Zip, clicking:

Settings -> Personal Settings -> Notifications.

{{% /alert %}}

How to see all the requests that need my approval?

If you are the default assignee for your queue, you can view all pending requests for your approval by simply clicking Dashboard in the top right, on the Home dashboard page and selecting the Needs My Approval tab.

If you are not the default assignee for your queue, you can view all requests awaiting your queue's approval by clicking Dashboard in the top right corner, selecting the Queues tab and selecting your queue. All requests in your queues will appear, you can update the Status filter if necessary to see previously approved or upcoming requests.

How to reassign approvals?

You can reassign a pending approval from your queue to yourself or another user. Next to the request, click on the pencil icon to reassign the approval.

How to see all of the documents associated with a request?

Click on the Documents tab at the top of any request, to see all the documents. You can view and manage all versions of documents associated with the purchase request.

Zip Platform Support

- The Procurement Team should be the first point of contact for all functionality related questions. Examples are:

- Why are we using Zip?
- How do I see my requests in Zip / navigate Zip?
- Which subsidiary or commodity do I select?
- Do I have to use both Zip and Coupa to manage my purchase from request to payment?
- How do I submit a virtual card request?

- Status of requests
- Where do I submit a PO Change Request?
- Do I need to submit a new supplier request?
- The Finance System Admins should be the first point of contact for any technical issues and / or questions (eg. Access Requests, problems with login, bugs, etc).

{{% alert title="Note" color="info" %}}

To contact the Procurement Team or Finance System Admins, send a message to zip-faq with your question.

<link rel="stylesheet" type="text/css" href="/stylesheets/biztech.css" />

<i class="fas fa-users" id="biz-tech-icons"></i> About Us

We are the team that designs, builds and maintains the complex ecosystem of integrations and automations that exist in our Enterprise Applications ecosystem. We do this via the use of a hybrid integrations platform. We also fill a governance role in the organization for system integrations and real-time data flow by applying standards and conventions for all of our Enterprise Application systems and integrations.

<i class="fas fa-users" id="biz-tech-icons"></i>Our Team (Org Chart)

Our Team (Org Chart)

<i class="fas fa-users" id="biz-tech-icons"></i> Our Services

- System Integrations and APIs
 - Connecting System A to System B
 - Understanding APIs and building custom connections between systems
 - Evaluating Native connectors
 - Working through the build vs. buy problem for integrations
 - Understanding compliance requirements for your systems(s)
 - Building custom APIs
 - Building automations and workflows

Highly tested and robust data mapping

We use a combination of unit and integration testing to build automated tests that provide guarantees that the data models we're mapping to and from are correct now and into the future

System decoupling

The integrations platform we use allows us to decouple event producing systems from the downstream consumers so that if and when we do decide to switch upstream systems or introduce new downstream systems, we can very quickly and easily do that without causing large amounts of

rework for ourselves or for the system owners

Scheduled automations

Through our CRON scheduling capabilities, we can build out extremely flexible time-based automations for you

Slack integration

If you require any slack integration automations and workflows we offer that through the Workato built in Slack connector. Reach out for more information on how we can help you

Built in business system connectors

Through our integration with Workato we are able to offer out of the box connectors for many standard business systems. Look through the Workato connectors list for more information on what's available. If your system isn't listed on that website please reach out to us as we also regularly build custom connectors for additional systems

Who We Are

The IT Compliance function at GitLab is here to ensure as a company we are ready to pass a SOX Audit for our IT General Controls (ITGC). IT compliance builds the processes that allow us to stay compliant over time. We are specialized around Business Technology applications and that is our area of focus.

<i class="far fa-paper-plane" id="biz-tech-icons"></i> How to reach out to us?

<div class="flex-row" markdown="0">

<div>

<h5>Issue Trackers</h5>

IT Compliance Issue Tracker

</div>

</div>

IT Compliance works collaboratively with multiple functional teams throughout the GitLab organization. We partner with Management and our Business Teams to implement solutions. Our primary focus today is related to identifying and ensuring audit readiness for in scope SOX applications, however, there is a need to continue to expand the body of work into BCP planning, IAM advisory, and assist on other security initiatives.

Our work can be tracked in the IT Compliance GitLab Group.

Our Mission

1. Identify and secure applications that are deemed to fall under SOX compliance.
1. Ensure that only current employees have access to the applications and the appropriate actions.
1. Monitor all changes to SOX systems to ensure auditability and compliance with SOX level change management.
1. Constantly iterate to simplify processes and drive automation for efficiency. Goal is to weave these processes into the fabric of work so they are not noticed.
1. Work to reduce audit scope by enhancing general controls.

How we work

Our IT Compliance board are where some of our work can be tracked. If you need help with anything or have any questions, you can add our label IT Compliance to the issue. If you are unsure of who you need to engage, IT Compliance, please tag @gitlab-com/business-technology/it-compliance and someone from IT Compliance will assist.

What we do

IT Compliance SOX program responsibilities

- Single point of contact for IT owned applications for ITGCs
- Participate in walkthroughs
- Support operating effectiveness testing by KPMG and IA
- Facilitate ITGC remediations
- Onboarding new application for ITGCs owned by IT
- Facilitate SOX UARs for systems and key reports
- Facilitate SOD reviews for key SOX financial applications

IT General Controls

IT General Controls

Most Common:

The most common ITGCs:

- Logical access controls over infrastructure, applications, and data
- System development life cycle controls
- Program change management controls
- System and data backup and recovery controls
- Computer operation controls

GitLab's IT Compliance Function will focus on the following for the next 3 months:

- Continuing to mature our access and change management programs
- System development life cycle controls

- Program change management controls
- System data backup and recovery controls

Business Continuity Plan

IT Compliance works closely with our Security Compliance team to ensure that GitLab's Business Continuity Plan is up to date. In the future, we will look to expand our capabilities to further ensure we are doing more in the area of BCP and resiliency to ensure we are meeting all requirements.

Business Technology Change Management

IT Compliance works closely with our internal business partners for all Enterprise Application Change Management. More information can be found in our Business Technology Change Management handbook page.

IT EntApps Portfolio Planning & Prioritization: A 6-Step Framework

The IT EntApps Portfolio planning & prioritization process has 6 steps:

1. Portfolio of Projects
2. Prioritization
3. T-Shirt Sizing
4. Resources & Capacity Planning
5. Project Commits
6. Alignment & OKRs

Portfolio of Projects

This section provides a quarterly inventory of all the committed and planned projects for IT Enterprise Applications. Internal team members can use the IT EntApps Portfolio: Quarter Commits to track initiatives. Each project is ranked using a Corporate Stack Rank to ensure alignment with global optimization goals.

Project Prioritization

The IT Project Prioritization tracker serves as a centralized tool to log and manage new projects and initiatives. The PMO team evaluates these entries during the IT EntApps Quarterly Portfolio Planning process.

T-Shirt Sizing

Involves identifying the project's:

- Estimated Level Of Effort (LOE)
- Duration
- Roles & Responsibilities

Resources & Capacity Planning

Achieved by:

- Identifying all resource within the team
- Estimating the capacity requirements for activities such as "Keeping the Lights On" (KTLO), administrative tasks, management, and project work.

Project Commits

All projects added to the IT EntApps Portfolio: Quarterly Commits are assigned resources based on priority and categorized under the following labels:

- Committed: Projects that are in-flight / being worked on.
- Planned: Projects that will be picked up once the resources from a committed project becomes available.
- Backlog: Projects that are in the pipeline but not yet ready to start.

Alignment & OKRs

Projects added to the IT Portfolio: Quarter Commits are part of the IT EntApps OKRs for:

- Awareness
- Accountability
- Value Generation

Release Management

The release management plan helps the IT EntApps team to:

- Establish a standardized process.
- Implement the release management strategy.
- Maintain consistency and predictability in releases.
- Communicate changes regularly and transparently.

Release Calendar

 How We Work

Governance and Program Management Methodology

Visit the Governance and IT Program Management page to understand the methodology adopted by the IT EntApps PMO team for all GitLab EntApps programs aimed at achieving the following objectives:

- Ensure robust results and efficient execution.
- Scope projects effectively, aligning with iterative values.
- Engage relevant stakeholders to foster collaboration.
- Maintain transparent and compliant documentation practices.

Project Epics & Issues

When assigned to a project, the IT PMO team is responsible for creating and maintaining the project Epic. A single parent Epic is created together with (up to) 5 child Epics, each representing a distinct phase of the System Development Lifecycle (SDLC). Issues are used as a means to collaborate on ideas, troubleshoot problems, and strategize for their tasks. By using issues, teams can share and discuss proposals internally or involve external collaborators in the process.

To maintain uniformity across all PMO-led projects, the team follows the same Epic templates.

System Development Lifecycle (SDLC)

The System Development Lifecycle outlines a structured set of activities conducted at each project stage.

Intake

The Intake process begins with the completion of a business requirements document (BRD). This phase bridges the gap between business stakeholders defining project goals and the development team responsible for implementation.

Define

The Define phase focuses on articulating the business problem and establishing the definition of done. It includes identifying use cases, affected technologies, and requirements. The primary goal is to document processes and impacted areas rather than resolve every detail. Before moving to the Design phase, approval is obtained from key stakeholders to ensure accuracy and completeness of business requirements.

Design

The Design phase establishes a roadmap for the future state of the project. The project team collaborates with stakeholders to refine requirements and design processes that align with business goals. This phase addresses outstanding details and resolves any questions from earlier stages.

Build

During the Build phase, the project team collaborates with stakeholders to develop scalable solutions that meet business requirements while adhering to best practices.

Test

In the Test phase, the project team works with stakeholders to create test scripts and oversee the User Acceptance Testing (UAT) process, ensuring solutions meet the defined requirements.

Deploy

The Deploy phase involves creating a comprehensive deployment plan in collaboration with implementation teams. Activities include finalizing launch plans, enabling users, and managing go-live communications to ensure a smooth transition.

Hypercare

Hypercare is the phase immediately following the deployment or launch of a new process in production. During this period, enhanced support is provided to ensure a seamless transition and successful adoption of the new system.

Maintenance

The Maintenance phase begins after the new process becomes fully operational. It ensures the process continues to function as designed, with repairs or upgrades performed as necessary.

Roadmap

To efficiently track program progress, each Epic is assigned a start and end date. The GitLab Roadmap serves as a timeline to visualize and manage these milestones.

Issue Boards

IT EntApps teams use GitLab issue boards to strategically plan, organize, and visualize their work. To learn more about how IT EntApps teams manage issue boards, refer to each team's respective page.

Labels

The IT EntApps teams use labels to efficiently categorize issues and epics. A well-maintained, concise label list facilitates dynamic filtering and streamlined management of work. All labels are created within the gitlab.com/gitlab-com top-level group, making them applicable across all projects.

To better organize and manage their work, the IT teams have different label categories. Click on each category to view the current labels utilized by the IT teams:

- Priority labels
- Team labels
- Status labels
- Project labels
- Catalog labels
- Service Desk labels

Project Reporting

- The IT PMO team uses the Rolly Bot, a tool created by the IT Integrations team aimed at automating the generation and distribution of weekly status updates. Every Friday, the PMO updates the Rolly section of each project Epic (that they are assigned to) to deliver consistent updates on ongoing projects.
 - A new roll up is created every Monday.
- Asynchronous updates of the program are communicated through the dedicated program Slack channel, using Geekbot.
- For larger programs, the IT PMO team prepares a Weekly Status Report for distribution among the program team, which is reviewed during weekly status meetings.

Compliance Documentation

The team has developed templates based on IT Compliance team guidelines to streamline the creation of comprehensive, well-structured documentation and facilitate efficient information gathering.

The IT PMO team collaborates with project stakeholders to create these documents and ensures that all necessary approvals are captured within them.

Enablement Plan

The IT PMO team initiates enablement discussions and collaborates with project leads to develop training materials and communication plans as needed.

IT EntApps Quarter Planning Process

There are several activities that take place to prepare for new OKRs / commits and report on the current ones:

- Project List & Priorities from Business: The PMO team reaches out to Business stakeholders to get a list of projects and priorities for the upcoming quarter.

- IT EntApps PMO & Leadership - Upcoming Quarter Priorities Review: The PMO team reviews the business projects and priorities with IT EntApps Leadership to add initiatives to the upcoming commits tracker.
- Cross Functional Meeting - Quarter Commits Review: PMO team hosts the IT EntApps Portfolio: Quarter Planning meetings to review the list of projects and priorities for the upcoming quarter with the Business stakeholders.
- IT EntApps PMO & Leadership - Quarter Commits (Adjustments): The PMO team makes all the necessary adjustments to the upcoming quarter commits following the meeting with the Business stakeholders.
- Quarter Commits - Corporate Rank: The IT EntApps Leadership works with the business leaders to rank the initiatives in order of priority for the company.
- Upcoming Quarter Commits Shared with the Business: PMO team shares the upcoming quarter commits with the Business stakeholders.
- Finalize Upcoming Quarter OKR(s): Upcoming quarter commits are completed.

FY26 Q2 Calendar

FY26 Q3 Calendar

FY26 Q4 Calendar

 Meetings

Meetings Protocol

The team follows GitLab meeting practices and standards.

- Every meeting has an agenda.
- All agendas are stored in the PMO Team Meetings shared drive.
- The IT PMO team lead all meetings related to projects.

IT EntApps Governance

IT EntApps Leadership Meeting

- Purpose: Every week the IT Leadership team has a dedicated time to sync up and discuss

current activities (urgent and important) that impacts the whole team.

- Frequency: Weekly, on Mondays
- The time of this meeting may vary to accommodate the different timezones of the IT / Business Technology team members.
- Participants: VP, IT (host), PMO, Enterprise Applications Leadership.

IT EntApps All Hands

- Purpose: Share company updates, stay connected, and receive feedback.
- Frequency: Quarterly (on the first week of the new quarter)
- Participants: VP, IT (host), all IT cross functional teams.

Stakeholder Management Meetings

Project Status Meetings

- Purpose: For each project led by the IT PMO team, a Project Status Meeting is organized to review the project's current state, address ongoing tasks, and discuss any blockers.
- Frequency: Weekly or every 2 weeks
- Participants: IT PMO (host), Business DRI(s), Project Subject Matter Experts (SMEs)

IT EntApps Portfolio Review Meetings (Lead to Cash, CRO and G&A)

- Purpose: During these meetings the IT PMO team discuss roadmap & timelines, shifts in priorities and alignment to goals.
- Frequency: Monthly (on the third week of each month)
- Participants: IT PMO (host), Business DRI(s).

IT EntApps Portfolio: Quarter Planning (Lead to Cash, CRO and G&A)

- Purpose: Discuss roadmap & timelines, shifts in priorities, alignment to goals. This is a strategic meeting to ensure that teams are aligned with their key business partners and have clarity on our shared roadmap.
- Frequency: Quarterly (on the third week of the month before quarter end)
- Participants: IT PMO (host), Business & IT EntApps Leadership.

 How To Connect With Us

IT PMO Slack Channels

- business-technology is the primary channel for all business technology related conversations. This is where GitLab team members can link to their issues, ask for help, direction, and get general feedback from members of the Business Technology team.

SECTION: business-technology/enterprise-applications/pmo/pmo-governance.md

[link rel="stylesheet" type="text/css" href="/stylesheets/biztech.css" />](/stylesheets/biztech.css)

Context

This page describes the program methodology for GitLab IT programs to ensure strong results and execution in an efficient way, proper scoping consistent with our value of iteration, correct stakeholders consistent with our value of collaboration and proper documentation for compliance consistent with our transparency value.

Criteria for programs that meet this standard

- Program is larger than two sprints (1 month)
- Program requires multiple departments for requirements and testing
- Program works on a SOX system

Non SOX projects that follow program development

- Please refer to the one time program development controls below and follow the requirements as a best practice
- Non SOX projects User Acceptance Testing (UAT) practices:
 - Obtain testing screenshots only for high/critical risk test scenarios. These should be test cases that are used to validate the security and core functionalities of the system. If a high/critical test case failed, the failure would have a significant negative impact on the operations of the system and business processes.
 - For high/critical risk test failures, testers should take screenshots of their own testing and also obtain screenshots documenting resolution.

For SOX projects please ensure all requirements are met including screenshots for all UAT test scenarios

Program governance

Every program must have a set of program governance. This includes:

- IT Program Manager
- Business Requirements Document (BRD)
- Program charter
- Steering committee
- Core team
- Operating rhythm
- Escalation process
- Program timeline
- Clear documentation for data model
- Clear documentation for compliance
- Enablement plan
 - Training materials
 - Communication plan
- Post implementation support plan

IT Program Manager

A program should have a program DRI who is responsible for building out the program governance.

Business Requirements Document (BRD)

A business requirements document (BRD) is the first document to be created by the Program DRI in partnership with the Business Lead in order to start a new program. The BRD is report that explains why the program is being undertaken and details everything the new program requires for success, providing clarity and context for stakeholders.

{{% alert color="warning" %}}

Business Requirements Document (BRD) Template

{{% /alert %}}

Program charter

When the BRD is completed, the program charter is the next document that the Program DRI needs to create and present it to all relevant stakeholders during the program kickoff. A program should have a charter that includes:

1. Program goal

Describe what is expected to be achieved by the completion of the program using SMART (specific, measurable, achievable, relevant and time-specific) goals.

2. Program scope

List the specific goals of the program, including all tasks, deliverables, costs and deadlines, plus the team that will execute the program.

3. Roles and responsibilities

Note the key stakeholders, including Project Sponsor(s), Business Lead(s), Program Management Office (PMO) team, Subject Matter Experts (SMEs).

- Project Sponsors: Final decision-makers, escalation point, ensure resource capacity, promote the project work.
- Business Lead(s): Requirements approvers, solution collaboration with project team, advocate and shape the project work.
- PMO: Coordinating with stakeholders, managing timeline, requirements gathering/Level Of Effort weighing.
- Subject Matter Experts (SME): Ensuring the facts and details are correct so that the project deliverables meet the needs of the stakeholders, legislation, policies, standards, and best practices.

4. Initial timeline

Indicate the program timeline from start to finish, including necessary resources.

5. Key milestones

All reference points that marks a significant event or a branching decision point within the program.

6. Program metrics and success criteria

Every program should have success metrics. These metrics should either demonstrate an increase in revenue or an increase in efficiency that helps reduce cost.

{{% alert color="warning" %}}

Project Kickoff Template

{{% /alert %}}

Steering committee

As part of the program charter an executive steering committee should be named. This should include an executive from the sponsoring business organization and an executive from IT. For example in our expense management program we created a steering committee that included the VP IT, VP Controller, VP FieldOps. With this steering committee we cover executives for enablement and front office, back office and then IT.

{{% alert color="warning" %}}

Steering Committee Meeting Template

{{% /alert %}}

Core team

A core team should be established and commitments should be made from these team members. This should include a program DRI from the PMO tem, business lead, SMEs for different areas, BSA (if needed) and technical resources from IT. The DRI for the program should get time commitments for requirements gathering, UAT testing and enablement/training support from the business. And sprint time for design, development and functional testing from the IT teams. In the case of expense management we named the Manager of AP as the business lead and had SMEs across accounting, sales, exec admin.

Operating rhythm including status rollup

Each program should have an operating rhythm including when the core team meets synchronously and the executive team meets synchronously. The Program Manager is responsible for providing an async structure to document completion of tasks and report status via GitLab Epics.

Status Report

For larger programs, and based on the information from Rolly, the IT Program Manager might create a Status Report to be shared across the program team and is often reviewed during the weekly program status meetings.

{{% alert color="warning" %}}

Status Report Template

{{% /alert %}}

Geekbot

The IT Program Manager will share async updates of the program in the dedicated program Slack,

using Geekbot. This report contains the below questions:

1. Week Ending
2. Report Link
 - This is the Status Report link
3. Project Status
4. Accomplished this week
5. Action Items
6. Issues/Risks
7. Key Project Dates

Escalation process

The program DRI should establish a clear escalation process so that if a program member is blocked or needs support, they can alert the program DRI or the steering committee.

Program timeline

There should be a clear program timeline with sprints defined so that we can deliver the program in smaller increments. There should be clarity around key requirement deadlines, delivery milestones, testing timelines so that everyone is clear. The program timeline should consider company holidays, enablement time and consider adding additional time for complex requirements (if needed).

{{% alert color="warning" %}}

The IT PMO team uses the GitLab Roadmap feature to track the progress of each program.

{{% /alert %}}

Clear documentation for data model

One of the deliverables of the program beyond a working technical solve is documentation on the data model of the new system or program. We use this approach.

Clear documentation for compliance

Additionally, we need clear documentation to meet change management controls and new product introduction controls. These are fully documented here.

The relevant controls that need to be documented in these programs are these three:

Change Management (will exist in perpetuity)

1. Control - PC2: Changes are tested and approved by appropriate personnel in accordance with the change management policy.
 - Process for making changes.
 - Even if owned by the vendor after request, can we request changes? Do we need to test/approve?
- In many cases we should have a process to document those changes internally and test even if the change is ultimately implemented by the vendor. We should always review the SOC 1 or 2 report to understand our responsibilities.

- While the work to execute the control can be assigned to the vendor, the ultimate responsibility for effective execution of the control lies with GitLab. (i.e. if the vendor executes the control on behalf of GitLab inadequately, GitLab may still be required to report the deficiency of the SOX control)

Program Development / Implementation of the system (1 time controls)

1. Control - PD1 - Management evaluates and defines project risks and scoping, governance structure, project requirements, and business requirements. Project status and key milestones are defined and communicated to key stakeholders.
1. Control - PD2 - Management performs adequate user acceptance testing (UAT) prior to go-live. Test cases are developed, executed and documented. Any failed test cases are formally logged, and re-tested until successful or approval is obtained to resolve post-go live.
1. Control - PD3 - Management develops an implementation/cutover plan, outlining key tasks, systems requirements for cutover, and back-out plan. Documented approvals of the implementation/cutover plan and go-live assessment are obtained from key stakeholders prior to go-live.
1. Control - PD4 - Data conversion/migration validations are performed post-go live to assess the completeness and accuracy of migrated information/data. Data validation procedures are performed and documented including steps performed, variances, and supporting files. Any variances identified are formally tracked, and re-migrated until no variances are identified or approval is obtained to go-live with a plan in place to resolve these variances post-go live.

As a result the DRI needs to:

Project Plan / SDLC

- Confirm that full scope is documented prior to go-live and reconciled with implemented functionality.
- Ensure there is documentation that UAT was complete and sign-off on the UAT by business stakeholders established in the core team. This UAT sign-off should be reviewed by the steering committee and signed off as well prior to go-live.
- Testing over key processes, reports, and ensuring business needs will be met by the system (and how).
- When known issues are identified during UAT or prior to go-live, they need to be documented and issue resolution/remediation needs to be tracked. All critical and high risk issues that impact security and functionality of the system need to be resolved before go-live. However, if there are exceptional situations, a workaround plan needs to be identified, documented, and approved by the Business, IT leads, and the steering committee before go-live. All open issues before go-live need to be documented, tracked, and resolved post go-live, and resolution documentation needs to be retained.
- Final approval for business go-live is captured. Approvals from technical owners and business owners at appropriate levels (e.g. does this warrant CFO sign-off vs. Manager sign-off).

SDLC Approvals

The sign-off process for each documentation and/or SDLC stage may vary depending on the project. While it is ideal to obtain sign-off from all relevant stakeholders, the prioritization of roles may depend on the specific circumstances and project dynamics. The PMO team adheres to the following guidelines when seeking approvals:

| Project Condition | Project Kickoff | Business Requirements Document (BRD) | User Acceptance Testing (UAT) | Deployment / Move to Production |

| ----- | ----- | ----- | ----- | ----- |

| When a project's deliverable affects the working methods of a limited audience, comprising three teams or fewer | No sign-off needed from the business | - Business Lead(s)
 - Technical Lead(s) (if part of the requirements discovery) | - Business Lead(s)
 - Technical Lead(s) (if part of the testing)
 - Testing Participants | - Business Lead(s) |

| The project's deliverable will have a significant impact on the working methods of a broad audience, consisting of four teams or more | - Project Sponsor (can be the Zip / Coupa approval) | - Business Lead(s)
 - Technical Lead(s) (if part of the requirements discovery)
 - Project Sponsor(s) | - Business Lead(s)
 - Technical Lead(s) (if part of the testing)
 - Testing Participants | - Business Lead(s)
 - Project Sponsor(s) |

Data Management/Migration

- If there is data migration, demonstrate a reconciliation that the migration was complete and accurate prior to go-live. Ideal evidence would include system evidence (e.g. reports, screenshots of how reports were generated from source & target systems, row count match) and a compare of each row/field. Any variance should be resolved prior to go-live and tie-outs should align with sign-off.
- For data that will be imported, what is the process for getting that into the system and what are the controls/checks in place to ensure the data that gets in completely and accurately.
- This can be solved through several avenues but good documentation is key. Who has access during transformation? Are there before/after checks? What are the "key" fields? Is there an acceptable level of data loss/inaccuracy?
- Evidencing data management is the most important part of this Program Development process. How can we adequately demonstrate that data in the system is complete and accurate according to our business needs?
- Show documentation of an enablement plan and that the changes were communicated effectively to the users of the changed system.

{{% alert color="warning" %}}
SOX Compliance Template
{{% /alert %}}

Enablement plan

The program should have an enablement plan. The Business Lead should be DRI for this plan. This can include creating training materials, drafting communications, running AMAs, doing demos and recording videos. Additionally there should be clear dates both pre and post go live for this activity.

Training Materials

The Program Manager should work with the Business Lead to schedule all relevant training sessions and office hours or AMAs as needed and communicate it with all relevant participants.

Communication Plan

The Program Manager should work with the Business Lead to draft the communication plan

(including the message, schedule and vehicle eg. slack, email, etc). The communication needs to be reviewed, approved and sent by one of the Program Sponsors. The GitLab Internal Communications Team can assist with this process. Please check the Working with People Communications & Engagement handbook page for details on how to engage with them.

Post implementation support

There should be a plan for post-implementation support as well given that a new system can lead to an increase in volume of questions. This should be staffed by the Subject Matter Expert (SME) teams.

SECTION: business-technology/how-we-work/rolly/index.md

<link rel="stylesheet" type="text/css" href="/stylesheets/biztech.css" />

Problem

When the team undertakes large programs of work, it becomes cumbersome to do weekly status rollups to the department heads and e-group. This is especially difficult when the program involves multiple teams and departments with totally different workflows.

How does Rolly work?

Rolly is an automated tool which extracts key status information from project/program epic descriptions, and compiles them into one issue. It runs every Monday morning at 12am PST.

But how does Rolly really work?

1. Rolly searches the group with the ID provided in the config groupId for all epics with the label label.
1. For each epic's description, Rolly extracts the markdown in between the tokens extractStatusStart and extractStatusEnd.

```
markdown
My heading
```

```
<!-- Status Start -->
This part of the epic description would be extracted to be part of the rollup issue.
The tokens that delimit this area are configurable.
<!-- Status End -->
```

This part of the description would not be included in the status rollup since it's outside of the extract tokens.

1. Rolly creates an issue in the project with ID rollupProjectId with the combined status updates in the description, plus some additional information.
1. The text from tags is appended to the bottom of the description, and the issue is labeled

with rollupLabel.

1. Rolly will find all open issues with the tag rollupLabel in the project with ID rollupProjectId and close them so that the new one is the only open status issue.

1. Any errors that occur will be reported by email to the email addresses listed in errorEmails, as well as to the BT Integrations Engineering team.

Example Rollup Issue

Where does Rolly live?

The main logic for Rolly lives in the BT Enterprise Apps Workato production instance. The configuration for Rolly lives in this project.

Can I use Rolly for my projects?

YES!! Rolly is open for use by anybody.

How do I use Rolly?

Configuring Rolly is pretty straightforward:

1. Submit an MR with your configuration added to the yaml file in rollup-bot-configuration.
2. Make sure that @btbot has at least Reporter access to all the groups that house your epics, and that it also has at least Reporter access to your status rollup project in order to create issues.

I need help configuring Rolly

For assistance with Rolly, please reach out to the BT Integrations Engineering team in the bt-integrations slack channel.

FAQs

Can I configure Rolly to run at a different time each week?

You can configure Rolly to run on any day of the week in the configuration yaml file, but it will always run at 12am PST on that day. We may add support for custom times in the future.

Can Rolly fetch status updates from issues instead of epics?

No, unfortunately Rolly only fetches status updates from epics at this time.

Can Rolly fetch status updates from multiple top-level groups in a single status rollup?

No, Rolly will only fetch epics from one parent group at the moment, if you would like to setup rollups for both gitlab-com and gitlab-org epics, you will need to create 2 separate Rolly configurations, which will generate 2 issues each week.

What happens if Rolly fails to run?

Rolly will contact the integrations engineering team when it errors during execution, and can also be configured to contact you. You can configure the error contact emails in the Rolly configuration yml file found [here](#).

Who built Rolly?

Rolly was built by @dparker and @lisvinueza from the Business Technology team at GitLab.

SECTION: business-technology/readmes/analissa-moreno.md

About Me

Hi, I'm Analissa, but you can call me Ana! I'm a Salesforce Release Engineer based in Austin, Texas with a background in Salesforce administration, process optimization, and change management. My work revolves around ensuring smooth deployments, maintaining system integrity, and continuously improving our release processes. I'm also a three-time Certified Salesforce Administrator, so safe to say I love Salesforce.

I thrive in problem-solving environments, where I can experiment, refine, and iterate to find the best solutions. I believe in balancing structure with adaptability·having a solid process while staying flexible when new challenges arise.

Outside of work, I enjoy running & cycling, spending time with my dog Rollei, and exploring creative side projects.

My GitLab Story

My journey with GitLab started when I transitioned into a Release Engineering role, bringing my experience as a Salesforce Administrator into a space where DevOps and process optimization intersect. I'm passionate about building efficient, scalable processes and ensuring that teams can deploy changes with confidence.

As someone who enjoys continuous learning, I've been deepening my knowledge of release management, DevOps methodologies, and CI/CD processes. I'm particularly interested in streamlining deployments, enhancing automation, and driving consistency across environments.

My Working Style

- Proactive over Reactive · I believe in planning ahead to anticipate challenges and mitigate risks before they become issues. The more we plan, the better the outcome and the lower the

risk.

- Hands-On & Iterative · I learn best by doing and refining as I go. I don't expect perfection on the first try, but I do aim for continuous improvement. I like to test solutions, gather feedback, and make adjustments based on what works best.
- Structured but Adaptable · I appreciate clear frameworks and processes, but recognize that flexibility is essential for growth. If something isn't working, I'm quick to pivot and adjust.
- Big-Picture Thinker with Attention to De
