

tail · I like understanding the "why" behind a process and how it fits into the larger system while ensuring the finer details are handled effectively.

- Independent but Collaborative · I'm comfortable working autonomously and taking ownership of my projects, but also value collaboration, brainstorming, and knowledge-sharing.
- Precision & Accuracy Over Vagueness · I prefer clarity in communication and execution. I value precise details over broad generalizations to ensure alignment and efficiency. The more clear your directives, the better output you will receive from me.
- Work Smarter, Not Harder · I prioritize efficiency and finding optimized solutions. If there's a way to streamline a process or reduce unnecessary complexity, I'll seek it out to improve workflows without sacrificing quality.

Communication Style

- Direct & Solution-Oriented · I appreciate clear, concise communication that focuses on solutions. If something needs to be fixed, I'd rather address it early and work toward a resolution.
- Asynchronous & Thoughtful · I prefer async communication whenever possible, giving space for deep work and thoughtful responses. If something is urgent, I appreciate a ping to bring it to my attention.
- Feedback-Friendly · I welcome feedback and see it as an opportunity for growth. If something can be improved, I'd rather know sooner than later.
- Context Matters · When discussing issues or decisions, I appreciate background information to understand the full picture. If I ask a lot of questions, it's because I want to ensure alignment and clarity.

Current Projects

- Evaluating a Salesforce-specific CI/CD solution to improve release efficiency and lower bug introductions.

SECTION: business-technology/readmes/awillis-browne.md

Introduction

Hello! My name is Arif Willis-Browne. I'm a IT Enterprise Engineer" with the IT Enterprise Applications Services division.

About me

I currently reside in UK, London with my wife and kids, and have lived here my whole life. When I am not busy, I am usually watching a Netflix show with my family or outdoors in the soft play park running around with my children. On the work front, I come from a software engineer

background and have worked for multiple organisations over the past 15+ years before having a pleasure to joining my amazing team at Gitlab.

How I work

I generally prefer an informal approach with communication as it helps me build a personal relationship with people. One common method I strongly advocate is using Slack, which is my best form of communication. There is no such thing as a 'silly' question; any questions you have, please fire away and I will do my best to assist the best I can.

What I am working on

- My primary focus is on integration, automation and system architecture within the NetSuite ERP space.
- I am a major contributor to our NetSuite ERP system, automating integrations with other 3rd party systems, as well as streamlining processes for our finance teams, improving user experiences, and collaborating on projects with other team members.

SECTION: business-technology/readmes/barbara-roncato.md

About me

I'm based in Portugal where I share a house with a human, two cats, and one dog.

My GitLab Story

I joined GitLab in January 2020 as a Business Systems Analyst (BSA) under the Enterprise Applications department. Over time, I progressed to Senior BSA and in 2023, was promoted to Manager of the Program Management Office (PMO) team.

In the past five years, I have participated in 9 different system implementations, supporting either as a BSA or Program Manager. My contributions have ranged from gathering requirements to performing user testing, developing training materials and helping with enablement and adoption.

My Communication and Work Style

I prepare my work the day before and appreciate having an agenda with context and expectations for meetings to ensure productive discussions. I'm very informal, feel free to tag me in a GitLab issue or ping me on Slack and I'll respond as soon as possible.

I keep my calendar up to date so anyone can book meetings, my availability should always be visible. I'm online most of the time. With no fixed working hours, I adjust my work schedule based on personal commitments. I may send Slack messages at different times but don't expect responses outside working hours.

What I am Working On

I manage the Enterprise Applications project portfolio, lead key company initiatives as a Program Manager (with a focus on the G&A area), facilitate Agile sessions to keep work planned and prioritized, and support my team to help them succeed.

SECTION: business-technology/readmes/bien-balaba.md

Introduction

Hello! my name is Bien Balaba. I'm a Systems Analyst - Enterprise Applications" with the IT Enterprise Applications Services division.

About me

I currently reside in Pasig City, Philippines. With over 10 years of experience in the tech industry, I've had the opportunity to take on various roles starting as IT Helpdesk Analyst, Business Process Analyst and most recently, Systems Engineer before joining GitLab.

How I work

I believe that great support starts with a positive attitude, and I strive to embody that in everything I do. While I may not always have an immediate answer to every question, I am committed to finding solutions or connecting you with the right person who can help.

What I am working on

- I handle and resolve Incident and Request Tickets raised in HelpLab for the Enterprise Applications team, GitLab Issues, and through different channels.
- Managing system configuration and development of the HelpLab Portal by ServiceNow.
- User Access Provisioning for Salesforce.

When I'm not working

- You'll likely find me at the playground with my wife and daughter, enjoying some fun on the swing set and slides!
- Channeling my inner monk by sitting in peaceful, awkward silence.

Connect with me

Feel free to reach out to me on Slack or set up a coffee chat!

About me

- Based in Denver, CO but I grew up in Southern California
- I am married with two daughters and a Goldendoodle
- Despite living in Colorado, I would prefer to be on a beach any day!

My GitLab story

I have been at GitLab since February 2023. I began as an individual contributor and got the opportunity to lead a wonderful team of Program Managers and Business Analyst in August 2024.

My Work Style

I am very collaborative, transparent and like to talk through problems to find resolutions. Creating professional and personal relationships is also very important to me.

Communication with me

Context is key with me so in a lot of circumstances, more is more when it comes to communication.

What I am working on today

At a tactical level, I project manage many of the projects within the Quote to Cash portfolio. Zooming out, I am involved in strategic and roadmap planning of the Quote to Cash portfolio.

SECTION: business-technology/readmes/chavit-casabar.md

Introduction

Hello! I'm Chavit Casabar. I'm an IT Enterprise Applications Administrator for the Enterprise Applications team.

About Me

I'm based in Manila, but I often visit my hometown in the Cordillera region. I'm a CPA in the Philippines with 6 years of experience in NetSuite, specializing in implementation and administration. Currently, I'm part of the Enterprise Applications - G&A Team, managing NetSuite, Coupa, Navan, and Zip. Outside of work, I enjoy bowling, hiking, and taking photographs, as well as watching movies and theater shows. I also love traveling - discovering new cultures and trying local cuisines.

My Communication and Work Style

I like to keep things organized with my daily tasks, but I'm also flexible and can adapt as needed. I enjoy working with others and believe collaboration and open, informal communication make everything run more smoothly. I'm very approachable and easy to work with. I also enjoy learning new systems and technologies to enhance my skills and stay efficient and I'm always

open to feedback to improve how I work.

What I'm Currently Working On

- Working on projects related to the enhancement and maintenance of NetSuite
- Providing ongoing support to finance system users for NetSuite, Coupa, Navan, and Zip

SECTION: business-technology/readmes/david-kim.md

Summary

17+ of Technology Leadership Experience in FinTech, Telco, and CRM SaaS Industries with a track record of building high performant global teams, scaling operations, and reducing cost to serve while upleveling customer experience, service availability, and service security. Active ITIL, Agile, and Scrum practitioner. Outside of work: active practitioner of the FIRE Movement.

Enneagram Type 3 with 6 Wing

·INFP: Achiever & Loyalist

Surprisingly, this is not a common pairing, although these two types can work very well as a team. On the positive side, Threes bring hard work, optimism, energy, a desire to communicate to and connect with people, and a feeling of unlimited potential both personally and in the relationship itself. Threes can bring an enormous sense of self-confidence and the hope of success that is assured that this relationship is a winning team or that this couple is the best ever! Common goals bring them together they are both practical and want to achieve tangible things in the world.

What I am Working on

- My current focus is on HelpLab by ServiceNow
- I contribute as the Product Owner, interfacing with Business DRI for Vision, Roadmap & Strategy

SECTION: business-technology/readmes/derek.isla.md

About Me

I'm Derek Isla, the Manager of IT Compliance within the Enterprise Applications team, bringing about 10 years of diverse experience to the role. My expertise spans SOC 1 and 2 certifications, ISO 27001 certification, and extensive work in Sarbanes-Oxley (SOX) compliance. My career in IT compliance has evolved from external auditing to in-house roles across various industries. I've been involved in numerous SOX audits and implementations, consistently ensuring robust compliance frameworks.

Though I grew up in New Jersey, I've spent my entire adult life in South Florida, where I've built my professional career. In my free time, I love to travel with my wife, exploring new

parts of the world. As a foodie, I'm always eager to discover and savor diverse culinary experiences during our adventures.

My GitLab Story

I joined GitLab shortly after the company went public in January 2022. I was brought on board to assist with the company's first SOX audit, focusing primarily on ensuring the implementation of ITGC (IT General Controls) over our in-scope SOX systems. My role involves advocating on behalf of management and liaising with our internal and external auditors throughout the audit lifecycle.

A significant part of my contribution at GitLab has been in enhancing our compliance processes and controls. I've been involved in various initiatives to strengthen our compliance posture, including:

- Collaborating with cross-functional teams to improve processes
- Developing and implementing robust control frameworks
- Creating and delivering training programs to enhance compliance awareness
- Establishing monitoring mechanisms to ensure ongoing compliance

These efforts have been crucial in maintaining and improving GitLab's overall compliance standards and setting a strong foundation for future audits.

My Working Style

Contrary to the perception of compliance as boring and routine, I bring energy and purpose to my work. I'm a logical and practical person who thrives on challenges and values efficiency. While I have high standards and a drive for results, I also recognize the importance of building strong relationships with all stakeholders. I focus on creating connections and fostering a collaborative environment and enjoy that part of my job, talking to people! In my approach to compliance, I always strive to make things engaging and relatable. I believe in explaining the 'why' behind compliance requirements, helping others understand their importance and impact. This approach not only ensures better adherence but also cultivates a culture of compliance throughout the organization.

Communication Style

I value clear, direct, and efficient communication. Here's what you can expect when working with me:

- I prefer straightforward, fact-based discussions
- I'm punctual and respect deadlines
- For quick discussions, I don't mind impromptu Slack huddles or Zoom calls as they can often be more efficient
- In writing, I'm concise and to the point
- I appreciate well-organized, logical presentations of information
- While I'm direct, I'm always open to input and value team collaboration and feedback

What I'm Currently Working On

- Managing ITGC controls and implementation across our SOX systems

- Overseeing day-to-day operations related to the IT SOX audit
- Assisting in the development of our CM v2 procedure
- Scoping and maintenance of the SOD/UAR (Segregation of Duties/User Access Review) program

SECTION: business-technology/readmes/louis-dwan.md

· Introduction

I'm Louis Dwan, based in Dublin, Ireland, working within the Enterprise Applications Team. My career has focused on Financial Applications, with experience in early-stage companies that have allowed me to wear many hats and take on diverse responsibilities. I've been instrumental in building out teams, driving implementations, and developing strategies.

About Me

When I'm not working, you'll find me:

- Exploring Ireland's numerous hiking trails
- Experimenting with new recipes in the kitchen
- Traveling to new destinations
- Learning new languages
- Playing golf around the many scenic courses in Ireland.

· My GitLab Story

Since January 2025, I've been serving as a Business Systems Analyst on the PMO Team within Enterprise Applications. My mission is to:

- Optimize NetSuite and its connected applications
- Identify and eliminate manual processes
- Enable team members to focus on their core strengths
- Drive efficiency through automation
- Work collaboratively to discover bottlenecks and enable growth

· Working Style

My approach to problem-solving is methodical and collaborative. I thrive on:

- Breaking complex problems into manageable components
- Working closely with team members to find solutions
- Balancing planning and technical execution
- Contributing to the PMO team's strategic objectives

· Communication Preferences

The key to effective collaboration is context. Here's what you should know:

- I value thorough understanding before tackling issues
- I'm transparent about asking for clarification when needed
- You can reach me via Slack or Zoom
- I appreciate detailed context in communications

· Current Focus

My current initiatives include:

- Implementing new System features
- Optimizing system performance
- Developing automation solutions
- Creating comprehensive logging systems
- Enhancing reporting and dashboard capabilities.

SECTION: business-technology/readmes/marc-disabatino.md

This page's intention is to give a little information about who I am and what it's like to work with me.

Marc Di Sabatino's README

Intro

Hey! I'm Marc and I'm a Manager of Enterprise Applications Services for the IT Enterprise Applications division.

About me

I grew up and currently live in Newark, Delaware (the first state). I live with my wife and four cats aka my fur children. I have been working in IT roles and in tech for ten years now. I enjoy the challenges and problem solving opportunities this field provides but what I love most is the opportunity to help people while playing with the latest and greatest tech.

My GitLab Story

I have worked for GitLab for over five years now, in my time here I....

- Was the first IT Analyst ever hired at GitLab back in 2019.
- Onboarded over a thousand employees between 2019-2022.
- Performed a hybrid role during our hyper growth period above. 'IT Help, Ops, Sec and anything else needed'
- Created weekly IT knowledge and onboarding assistance calls and was the primary for hosting said sessions.
- Maintained three roles and was promoted to Senior for two of those roles.
- Reported directly to one Manager and three Directors in my tenure.
- Onboarded and became technical owner of a large portion of our current Tech Stack.
- Later on became CODEOWNER of the same tech stack and I work to maintain its accuracy.
- Assisted our compliance teams with achieving and maintain SOC and ISO certifications.
- Provided Technical support for all first year company earnings calls.
- Spearheaded the largest bulk refresh and distribution of laptops of my entire career...all while battling covid delays. (over 400 laptops to 30 countries)
- Assisted with the groundwork for our current laptop End Point Management stack. (ABM, JAMF, etc)
- Partnered with an engineering colleague to design the IT-Help Slack Tool.
- Established a large number of our original IT vendors and providers.
- Attended one summit and three offsites.
- Worked on and helped design and develop a number of automations that improved our IT Service delivery.
- and made so many friends and connections along the way...

What its like working with me

I am very much a product of my commander personality type. I approach most work situations with a forward looking, out of the box thinking attitude. I will frequently question and challenge ideas and strategies, even if I agree with them. This is not because I am contrarian, it is because I genuinely have an interest into why you think that way and how that idea came to you. I am always looking for my next task to complete and opportunity to improve something. I hold my own personal integrity to highest standard and expect those I work with to do the same. I work best under pressure and enjoy jumping into large or urgent projects but I do need time to focus and complete smaller tasks assigned to me.

What I am working on now

Since my change of roles, I am now working on building out the Enterprise Applications Services team along with collaborating on a number of cross divisional projects and goals.

Communication with me

I am typically very informal and I like to keep conversations light and friendly. Feel free to message me on Slack, or tag me in a GitLab thread since I typically work from my "To-Do" list. Also feel free to use my Google Calendar Booking link in my Slack profile for any meetings or coffee-chats.

SECTION: business-technology/readmes/nico-sandoval.md

Introduction

Hello! I'm Nico Sandoval. I'm a Business Systems Analyst with the Enterprise Applications PMO team.

About me

- I currently reside in South Florida but I'm from Cali, Colombia.
- I'm bilingual, fluent in Spanish and English.
- I love cooking and grilling for family and friends.
- I enjoy swimming and working out.

My GitLab Story

My GitLab journey began in August 2022, where I found my niche at the intersection of finance and technology. As a System Business Analyst working closely with the Finance team, I serve as a bridge between financial challenges and technical solutions. My role involves deeply understanding financial processes and translating them into technical requirements, enabling us to build more efficient workflows. I also help lead GitLab's Robotic Process Automation (RPA) program, where we've successfully deployed multiple automation projects that have saved countless operational hours. What makes my GitLab experience unique is the opportunity to combine financial acumen with technical problem-solving, helping to streamline and modernize our financial operations. Each day brings new challenges that allow me to leverage GitLab's tools and capabilities to create practical solutions that make a real difference in how our finance team operates.

My Work Style

My working style centers on collaboration and transparency. I believe the best solutions emerge through open dialogue and exploring multiple perspectives. When faced with a challenge, I prefer to engage in thoughtful discussions with stakeholders, drawing out different viewpoints and potential approaches before settling on a path forward. I find that taking time to connect with colleagues on a personal level builds trust and strengthens our working relationships, which ultimately leads to better outcomes. By fostering an environment of open communication and mutual understanding, I can more effectively bridge the gap between technical solutions and business needs.

Communication Style

I believe in open and direct communication. While I embrace asynchronous communication for most interactions, I recognize when a quick call can prevent misunderstandings and help set clear expectations. Slack is the best way to reach me, and I typically respond very promptly. I value meetings that drive toward actionable outcomes and ensure everyone walks away with a clear understanding of next steps. Feel free to reach out anytime to discuss ideas, challenges, or just to connect. I appreciate when people share context and are open to exploring different perspectives, as this often leads to more innovative solutions. Don't hesitate to ask questions

or challenge assumptions · some of our best ideas come from these discussions.

What I'm Currently Working On

I'm currently focused on several key initiatives that drive efficiency and value across the organization:

- Leading the expansion of our Robotic Process Automation (RPA) program through new project deployments that increase organizational ROI and operational efficiency. This includes standardizing the RPA program framework to enable scaling beyond the finance team.
- Enhancing G&A systems to optimize processes across the finance organization, with a focus on streamlining workflows and improving user experience.
- Collaborating closely with compliance and audit teams to ensure proper documentation and maintain robust control frameworks across our systems and processes.
- Supporting and prioritizing daily operational activities for all financial systems to ensure seamless cross-functional workflows.

SECTION: business-technology/readmes/renz-santos.md

Introduction

Hi! I'm Renz Santos and I'm a Senior IT Enterprise Applications Administrator for the IT Enterprise Applications team.

About me

I'm based in Quezon City, Philippines and have been in the IT industry for 8 years. I have 2 male dogs - both of which can't stop fighting over the simplest things. I'm passionate about technology, I enjoy trying out new programming languages and systems that implements automation and integration. Outside of work, I enjoy playing video games/puzzles - I love single open world games and spending time with my girlfriend of 3 years.

My GitLab Story

My GitLab journey began on April 2023 where I was onboarded as a contractor and transitioned to an FTE 3 months later. I've been assigned as an IT Enterprise Applications Administrator handling multiple Finance Systems - NetSuite, Coupa, ZIP, Navan. I began with the User Administration duties across all of those systems and transitioned more into Operational Tasks for our stakeholders. I was also assigned to Projects related to the 5-days close initiative for our Finance Departments and was able to provide solutions to automate some of their manual processes and later on, assisted in onboarding/streamlining the User Administration team/process for EntApps. My current tasks involves with integration projects to our Finance Systems and Operational Tasks for our stakeholders.

My Work Style

I enjoy collaboration and open-style dialogue to exchange ideas and solve problems. I approach every problem with a positive attitude and even if I don't have a solution on top of my mind, I

strive to find solutions to it right away by either ramping up my skills/knowledge to the required systems. I treat each requests/projects with utmost importance regardless of how small/big the work is. I'm also approachable so you can engage me with any questions/feedback to work/non-work related topics.

Communication Style

I'm typically very open and approachable. I'm direct when it comes to work related topics and also very informal when it comes to non-work related topics. Feel free to send me a slack message or book a 1on1 meeting.

What I'm Currently Working On

- I'm currently focused on Projects related to integrations with our procurement tool - ZIP
- I'm supporting our stakeholders and other teams when it comes to Finance Systems - NetSuite, ZIP, Coupa, and Navan
- I'm collaborating with the EntApps User Management system to provide support when it comes to Finance Systems

SECTION: business-technology/readmes/sarah.pang.md

About me

- Based in California.
- I am bilingual, fluent in both English and Korean.
- Enjoy gardening and being a plant mom.
- Enjoy hiking and being in nature.
- Traveling is a true passion of mine and I have explored many countries so far but always eager to discover new cultures and experiences.
- I enjoy savoring a good glass of wine while relaxing with movies or binge-watching favorite shows during downtime.

My professional journey at GitLab

- Been with GitLab since 2022.
- Implemented process improvements to meet SOX compliance requirements.
- Remediated audit findings and implemented corrective actions with stakeholders.
- Implemented change management process across multiple teams.
- Proactively monitored change management process to ensure ongoing compliance.
- Prepared internal teams for external audit meetings.
- Conducted system implementation reviews to ensure implementation risks are addressed.
- Conducted lookback reviews on identified issues to confirm impact and determine root cause.
- Provided external audit support and advocate on behalf of management.
- Conducted quarterly training sessions to enhance team knowledge and compliance.
- Advanced from Senior IT Compliance Engineer to Staff IT Compliance Engineer role.
- Connect with me on LinkedIn!

My work style

I embrace a flexible work style, which allows me to adjust my approach based on the task at hand and the needs of my team. Whether working alone or collaborating with colleagues, I can

modify my methods to achieve results. Additionally, building strong professional and personal relationships with peers is important to me, as I believe that meaningful connections foster an atmosphere of trust and respect. I also believe empathy plays a key role in my interactions with others. I prioritize understanding my peer's perspectives and emotions, as this level of connection strengthens teamwork and enhances trust.

Communication with me

Establishing and communicating clear expectations is important to me, so that everyone is aligned and working towards the same objectives. I appreciate being provided with context when assigned tasks or consulted for input on making decisions, as it will help me better understand the situation to contribute effectively. Instead of rushing to conclusions, I like to take the time to analyze the details and implications of a question/request so that my contributions are meaningful and impactful.

I prefer asynchronous communication through Slack, however, I also recognize at times that synchronous meetings and calls are essential for resolving issues more quickly and efficiently.

What I am working on today

- Lead the user access review program for G&A systems.
- Facilitate the end to end SOX audit process.
- Manage quarterly activities to ensure timely completion.
- Conduct proactive change management reviews to identify and address any process gaps.

SECTION: business-technology/tech-stack-guide/index.md

What Is A Tech Stack Guide?

> Note: Use the Tech Stack Index to browse Tech Stack Apps.

Every application should have a dedicated Tech Stack Guide handbook page to help everyone understand how the app is used, administered, and integrated with other systems. The audience of the Tech Stack Guide is anyone who needs to use the app, extend it, work with it, or understand how it fits into the rest of the GitLab Tech Stack ecosystem. Creation and maintenance of each Guide is a team effort and requires collaboration between the business system owner, technical owner, and others involved in implementation and operations. Each Tech Stack Guide lives within the Business Owner's Functional section of the handbook, along with other Function-based handbook content.

Approach

The goal of this page is to describe how to document an application's Tech Stack Guide. An app's Tech Stack Guide should live with the Functional Business Owner of the technology. Our SSOT for all apps will be the Tech Stack YAML and the YAML will populate key portions of the page. However, other sections of the page can be populated that are not included in the YAML file as needed to ensure that the documentation is complete such as Data Model, Integrations, Key Reports/Dashboards.

Here's how to think about the relationship between the Tech Stack YAML and the Tech Stack Guide:

- The Tech Stack YAML is a registry of all apps GitLab owns or operates (the What)
- A Tech Stack Guide covers the business and technical workflows (the Why and How) of each Tech Stack app
- The handbooklink key/property in the YAML links to the corresponding Tech Stack Guide(s)

We also plan to have a second YAML file for our security applications called the Security Stack YAML that lives in the internal handbook. We will use the same template approach for these applications.

```
{{% alert color="warning" %}}  
Tech Stack Guide Template  
{{% /alert %}}
```

Tech Stack Application Name

The Tech Stack single source of truth is the Tech Stack YAML and contains more detail about this app.

```
markdown  
{{%/ tech-stack "Application Name" /%}}
```

Implementation

Information about how the app was implemented, including links to GitLab epics and issues to help people understand where we started and how we arrived at this solution.

System Diagram

Include some form of a diagram to illustrate how the system is deployed and what other apps it may be connected to. A Mermaid Diagram(s) is ideal, but any diagram is better than none.

Data Model

Include some form of an ER Diagram to illustrate the key data objects and their relationships with each other. You can create one with (ideally) Mermaid ER diagram, LucidChart, or any other diagramming tool.

Integrations

List the integrations between this app and other tech stack apps or systems. Include links to additional material if available, including the development project, code, diagrams, and issues.

Key Reports / Dashboards

List the important reports and dashboards used to operate the application, including links where available.

Tech Stack Guide Example 1: Thought Industries LMS Tech Stack Guide

Thought Industries LMS Tech Stack Guide

Important Notes:

1. This Tech Stack Guide lives in the GitLab Professional Education Services handbook because Professional Services are the business owners of the app
2. The handbooklink key in the Tech Stack YAML for Thought Industries Learning Management System references the Tech Stack Guide

Tech Stack Guide Example 2: Zuora Billing

Code

markdown

The Tech Stack single source of truth is the Tech Stack YAML and contains more detail about this app.

```
{{%/ tech-stack "Zuora Billing" /%}}
```

Result

The Tech Stack single source of truth is the Tech Stack YAML and contains more detail about this app.

```
{{% tech-stack "Zuora Billing" %}}
```

Implementation

Zuora consists of several app modules built on the Zuora Central Platform. Zuora Billing is one of these modules.

System Diagrams

Zuora Billing is one of several modules within the larger Zuora Central Platform.

```

Lead to Cash workflow

Zuora Billing is a key module within the Lead to Cash workflow.

Key Reports / Dashboards

For Zuora Billing, the team uses Zuora Standard Reports and the most important reports are:

- ELP Changes
- Accounts with subscriptions to be canceled in the next 30 days
- Credit memos over time

We also have a collection of Tableau dashboards that include Zuora Data. These dashboards include data from other data sources such as Salesforce.

Data Model

The Zuora Billing business object model presents how Zuora is organized internally.

Key Data Objects

Zuora is the SSOT for these objects and the data can be viewed there. In addition, key objects can be viewed in Snowflake:

- Raw Data: zuora.. Key objects include:
 - zuora.account
 - zuora.invoice
 - zuora.product
 - zuora.subscription
- Modeled Data: Bus Matrix. Key objects include:
 - dimbillingaccount
 - diminvoice
 - dimproductdetail
 - dimsubscription

Product catalog

The Zuora Enterprise App Guide contains a Product Catalog to manage all of GitLab's SKUs.

Postman Best Practices

What is Postman?

Postman is a great tool which helps developers run requests against HTTP APIs during development and testing to accelerate R&D when creating API based integrations.

Best practices for sharing API credentials

Environments and API Credential Sharing

Postman offers functionality for sharing variables using Environments.

Clearly usage of this feature comes with some risks such as credential leakage. Unfortunately there's no way to share an environment without exposing the variables to the user. Because of this, the recommended approach is to never share Postman environments that contain production credentials.

If you have to use production credentials in an environment, that's fine but keep them out of the shared workspaces. For all other non-production environments, you can share viewer access to those environments so that they can be quickly and easily used by other devs.

The Postman docs contain more guidance on how to manage environments in a team.

Why I'm at GitLab

I love software. I love developers. In my lifetime, I've seen software change every aspect of modern life. I believe we're still in the early stages of software transformation, and AI will accelerate how software changes the human experience in the coming decade. There has never been a better time in history to be in the software business and serving developers. GitLab is a strategic asset for the companies we serve because we provide the platform they use to create software experiences for their customers. As we serve developers and improve their work and lives, our positive impact is amplified through them, ultimately reaching billions of people around the world in profound ways.

I am honored to lead GitLab as CEO. It is the climax of my career after nearly 30 years of serving developers. I am committed to maximizing our impact in service of customers, shareholders, and team members. I am competitive, and I want to win. Winning begins with delivering software to our customers, creating positive results they can't get any other way, and continuing to do that in a rapidly expanding and evolving market. That means innovation. It also means driving results for customers as our first priority. It means continuing to focus on responsible growth and performing in an elite class, one of the very few who are the very best in the world for the categories we compete in.

This README is meant to help anyone who needs to work with me by providing a brief overview of what is important to me.

My Personal Values

1. Integrity: Trust is the most important thing in any relationship. Trust is knowing you can count on me to say what I mean and do what I say. I try to live my life in strict adherence to this value, and when I fall short, I try to proactively and openly acknowledge and recommit. My single biggest ·hot button· issue is when someone does not follow through on something they said they would do.

1. Curious: I try to live what many call the ·growth mindset·, which means that I'm always learning, striving to improve, and iterating to be better. I feel very imperfect and self-critical on the inside, and I constantly strive to learn as much as I can while appreciating that I can't know it all. I'm open and accept constructive feedback from anyone, anytime.

1. Results: Good ideas, hard work, and fun on the job are all important, but ultimately, our results are what matters. I care far more about outcomes than effort. I strive to do everything at a high standard of excellence, and I'm never satisfied with the status quo. I seek people who are equally committed to being world-class.

My Super Powers - how you can get the best from me

1. Passionate - I work for causes and missions and pour my heart into them. My brain is highly analytical, detail-oriented, and (usually) pretty fast, but my heart is equally important to understand me: I feel things deeply and try to help others around me both see the possibilities and feel motivated and inspired to strive toward what others may not think possible. I am passionate about my work. It is not just a job for me. It is where I find meaning, purpose, value, and how I contribute to the world.
1. Curiosity - I ask a lot of questions and like to absorb information quickly. I like being surrounded by people I can learn from and collaborate with. I often see patterns and synthesize disparate points of information to help others make sense of the work and align on a direction.
1. Work Ethic - From my early life, I have always worked very hard and enjoyed it (most of the time). I especially enjoy ·the struggle,· solving complex problems, grinding on hard issues, and rising above roadblocks. George Bernard Shaw once wrote, ·I want to be thoroughly used up when I die, for the harder I work, the more I live.·

My Weaknesses - double-edged swords are real

1. Passionate · I sometimes come across as emotionally charged, overly critical when we fall short of goals, or emotional when something touches my heart. I don't smile enough on the outside (even though I'm generally pretty happy on the inside because solving problems is fun to me!).
 1. How to help me manage this: It depends on the situation. There is a time to be serious, but it is also possible to overdo it. Try smiling to remind me that I can lighten the mood. A well-timed joke is always helpful, and feel free to ask with a smile, ·Are we having fun yet?· to make me think.
1. Curiosity - I sometimes exhaust people with my many questions and drill-in tendencies. As I'm a genuinely curious person and care about all parts of the business, I regularly do this, and it is not always an indication that something is off.
 1. How to help me manage this: Come prepared for meetings. If you don't know the answer, let me know and be clear on when you will follow up. If you have concerns about whether my drilling affects your performance, let me know so we can discuss it.
1. Work Ethic - Occasionally, people struggle to keep pace with my style of work.
 1. How to help me manage this: let me know if you are struggling so we can discuss it.

Suggestion: If I am negatively impacting you, I welcome constructive feedback and will do my best to moderate my approach.

My Expectations of Everyone (including myself)

1. Collaborate - By default, I expect everyone to actively work with their teams, peers, and leaders, as well as customers, partners, and investors (as applicable), to identify the ·absolute best· ideas, no matter where they come from. I hire and retain leaders who I believe are experts in their functions and whom I feel personally excited to work with and learn from. Still, I also believe the best leaders actively learn from and incorporate good ideas from everywhere. I expect E-Group members to have similarly high expectations for team members.
1. Accountability - By default, you are trusted to do your job, and I believe part of everyone's job is to communicate expectations, set metrics and targets, and meet them. Along the way, the single most powerful way to ensure expectations are managed and met is to discuss or ·inspect· the work regularly. This powerful tool does not represent a lack of trust or

micromanagement; when done right, it ensures the best ideas are being pursued, surprises and roadblocks are rapidly identified and removed, and outcomes are maximized. I like creating operating rhythms that enable automated inspection and collaboration opportunities for every mission-critical initiative on a regular basis.

1. Selfless · The very best leaders I know are smart and driven, and they motivate and inspire others to do their best work. Careful observation of these leaders also reveals that they check their egos at the door and focus on what is best for the company and customers first. They serve others around them and act selflessly for the greater good.

My Role

I am the CEO of GitLab. Here is what I do in 12 words or less that is unique to my role:
Lead the team that defines and drives GitLab's strategy & execution.

Communication Preferences

1. I prefer Slack to email. I try to respond to every Slack message I get every day. Keep them concise.

1. If you need me in near real-time, text or call my phone. My EBA can help to get you in touch if you don't have this information and it is urgent.

1. If you have a complex question or need a discussion on something async that will require more than a few sentences for me to reply, put it into a document and share it with me with comments. I read fast and am pretty efficient at giving feedback this way.

1. Use email when it is an external-facing communication, but don't expect me to respond in < 1 week unless you ask me to look at it sooner over Slack or it is regarding a critical external matter.

Expectations for leadership

What I need from you. What you will get from me.

1. If you tell me you will do something, I expect you to do it to the very best of your ability on time. I will, too.

1. If you fail at something, I expect you to own it and not make excuses. I will, too.

1. If you succeed at something, I expect you to give all the credit to your team. I will, too.

1. I want to be part of a world-class company that is respected for being ·excellent· and unrivaled in our category. I expect you to constantly strive to increase your team's output quality and volume through greater alignment and efficiency. I can't judge your personal or team capacity, so I will push work until you set my expectations on what is achievable and by when. I expect you to actively manage expectations and hold yourself accountable.

1. When E-Group members disagree with each other, I expect them to jointly escalate it to me in a timely fashion so I can help break the tie. I have a similar expectation for other team members. Escalation is not a failure. I want a team that is pushing passionately, and it is normal to have conflict. Disagree, commit, and advocate. Be a gracious winner. Own decisions either way 100% with your team.

Frequently asked questions from prior roles

1. Why do you ask so many questions? What are you looking for?

1. I do like to ask a lot of questions.

1. I care about the details, and I really like to learn.

1. I can tell when someone really knows the area by how easily and completely they can answer my questions.

1. When I see that someone understands their area very well and has confidence in their area, I shift from probing to generative questions and sometimes ideas with the intention of contributing.

1. When I see that someone lacks command of their area, I shift to the Socratic method to understand shared beliefs and assumptions and help guide people/teams to an answer we can align on. If this fails or isn't converging, I put forward my hypothesis/ideas as a starting point.

1. If you find meetings/discussions ending frequently with my hypothesis as the next step, that may be a sign that we aren't well aligned. If in doubt, ask me!

1. Why do you want to inspect my work so frequently? Do you not trust me?

1. I like to meet regularly (weekly) to talk about top priorities and our progress on key metrics. These meetings normally have nothing to do with trust.

1. Past experience has taught me that monthly updates are not frequent enough to ensure that most bold, ambitious, impactful initiatives are delivered as efficiently as possible, on time, and with high quality. It truly ·takes a village· to make that happen.

1. Operating meetings help me learn the realities of the work, stay in touch with real roadblocks and challenges that sometimes only I can resolve, contribute ideas, and help align functions across the company to ensure that we meet our most important goals.

1. You seem to work a lot of hours and around the clock. Do you expect the same from me?

1. No

1. I expect you to manage your own work/life balance; no one else can do it for you.

Everyone's needs are unique, so managers can't really prescribe how to achieve a balance that is right for you.

1. Managers should measure whether their reports' work meets business needs and tell them if they see misalignment. This is part of my job as manager of E-Group.

1. Work is by nature a competitive task, and there will always be someone smarter, who works harder or is more skilled than oneself. Some jobs are more complicated and demand more than others. In some periods of life, one may have more or less to give than others. Finding balance is difficult and requires constant management. My advice: Be honest with yourself about who you are and what you need, then give it your best and keep an open dialogue with your manager. Good managers care about and flex with the people they manage to find a win/win for the company and individual.

1. Can you share a bit more about your personal life? What do you do outside of work?

1. My family is my 1 priority in life, and I give extreme attention to their needs. My sons are both out of the house on their own, leaving just my wife and me at home. They support me in giving my best to GitLab.

1. I really do enjoy work. I've had the fortune to take some extended time off in my career, and every time I do, I am reminded that work is so much more than a paycheck. It is something I love and how I find purpose.

1. When I have free time, my 1 hobby is cycling with my wife. We have cycled in different parts of the world and always strive to see new places by bike.

1. I often couple my 2 hobby, photography, with my work and personal travel. I love taking photos because it encourages me to ·see· the world in non-obvious ways to create interesting photos, which is also helpful in life and business. I like the blend of science and art skills that photography demands.

CEO Scam

See CEO and executive fraud in the security practices section of the handbook.

Meeting request requirements

For scheduling a video call or meeting with me or other execs, please see the EBA handbook page.

CEO Meeting Cadence

As part of my role, I participate in a variety of meetings both internal and external.

Monthly Meetings

1. Monthly CEO AMA, agenda in Gdrive (internal).

SECTION: ceo/shadow.md

<!-- vale handbook.InclusionLanguage = NO -->

{{% alert title="Note" color="secondary" %}}

The CEO shadow program is on hold until further notice.

{{% /alert %}}

Overview

At GitLab, being a CEO Shadow is not a job title, but a temporary assignment to shadow the CEO. The shadows will be present at all meetings of the CEO during their rotation.

GitLab is an all-remote company, but the CEO has in-person meetings with external organizations.

Unless you're joining the program during one of our remote rotations, you will stay in San Francisco during the entire rotation and travel with the CEO.

Goal

The goal of the CEO Shadow Program is to give team members and eligible individuals an overview of all aspects of the company. This transparency enables CEO Shadow participants to better engage and collaborate cross-functionally, as well as better perform cross-functional optimizations.

As a CEO Shadow, you'll gain this context through the meetings you attend and while completing short-term tasks from across the company.

The program also creates opportunities for the CEO to build relationships with team members across the company and to identify challenges and opportunities earlier.

The shadows will also often connect with one another, developing new cross-functional relationships.

What it is not

The CEO Shadow Program is not a performance evaluation or the next step to a promotion. Being a CEO Shadow is not needed to get a promotion or a raise, and should not be a consideration factor for a promotion or raise, as diverse applicants have different eligibility.

Benefits for the company

Apart from creating leadership opportunities, the CEO Shadow Program:

- 1. Leaves a great impression on both investors and customers
- 1. Gives feedback immediately to the CEO
- 1. Enables the CEO to create immediate change

This is why the program is worth the extra overhead for the CEO and EBA team.

Naming of the program

This role is called a CEO Shadow to make it clear to external people why a shadow is in a meeting.

About the CEO Shadow Program

{{< youtube "ExG8bnIAMI" >}}

Reasons to participate

{{< youtube "Cg0LzETNWo" >}}

What is it like?

Considering joining the program? Hear from past shadows about their experience:

- 1. Acquisitions, growth curves, and IPO strategies: A day at Khosla Ventures
- 1. Takeaway videos and posts from alumni
- 1. AMA with the CEO Shadow Alumni on 2019-08-23
{{< youtube "TxivABJ16jE" >}}
- 1. AMA with the CEO Shadow Alumni on 2020-07-02
{{< youtube "Yey83s3zGMM" >}}

Still not sure if the CEO Shadow Program is for you? Want an authentic, honest, and unfiltered understanding of the program? You can visit the ceo-shadow-alumni channel or visit the alumni section of the handbook to find shadows who have recently completed a rotation. Send them a DM or a coffee chat invite, and they will give you an entire run down. You can ask them anything you want about the program without worrying about them judging you. They want to help you understand if it's a good fit for you and are happy to share their experiences with you!

Impact of the CEO Shadow Program

This is feedback received from some Alumni shadows and their managers.

What is the feedback from the CEO?

Hear what our CEO has to say about the CEO Shadow Program.

{{< youtube "gJWMBI64sZk" >}}

Participating in the program

Eligibility

All GitLab team members are eligible to apply for the CEO Shadow Program.

VP-Directs Shadow Opportunities

VP-Directs are encouraged to do a two week Shadow rotation--optimally within their third or fourth month at GitLab. If they cannot make a full two week rotation, they can ask to do a one week rotation. Full attendance will be required during this period. In this instance, they should work with the Staff EBA to the CEO to coordinate. We'll post the availability of a second, one-week rotation in the vp-directs Slack channel. We will preserve the broader see one/teach one program structure.

CEO Shadow rotations will be reserved for VP-Directs during the week of E-Group Offsites. An exception will be made if there is last minute availability as two VP-Directs are not available to serve in this role during this window.

Note: At this time, all shadow rotations are fully remote. Learn more about what to expect from a remote shadow rotation.

Expectations for hours of participation

The CEO generally works from 8am to 6pm Pacific. This means that shadows from Pacific, Mountain, or Central time zones can participate without dramatic shifts to their usual working hours. To the degree possible, these folks should plan to clear their schedule during the CEO's working hours.

If a person is applying from over 3 time zones from the Pacific time zones or has special considerations (for example, inflexible care duties), they can still participate. We ask that they:

1. Commit to participating at least 6 hours a day between 8am and 6pm Pacific
1. Confirm with their "See One" and "Teach One" partners that they can provide sufficient coverage during the times that the participant will not be participating

If you have questions about your individual case, please contact the EBA to the CEO.

How to apply

1. Create a merge request to add yourself to the rotation schedule, assigning yourself. (Pro tip: if you're from a less technical background, consider pairing up with someone who is which will make the note-taking process easier for both as you'll bring different areas of expertise to the table.)
1. Add your manager as a reviewer and ask them to approve (but not to merge) the merge request.
1. Once your manager approves the merge request, add your e-group leader as a reviewer and ask them to also approve (but not to merge) the merge request.
1. Once your e-group member approves, add the Staff Executive Business Admin (EBA) to CEO as a reviewer.
1. Post in the ceo-shadow channel with a link to the merge request, and @mention the Staff EBA in the message.

Please keep in mind when selecting dates that the CEO's schedule is fluid and subject to constant change, which also means that the CEO Shadow rotation is subject to constant change. The posted dates are not guaranteed. We will work with you to reschedule your rotation if a conflict arises.

Rotation rhythm

We want many people to be able to benefit from this program, therefore we rotate often. It is important that an incoming person is trained so that the management overhead can be light.

Currently, a rotation is two weeks:

1. See one, you are trained by the outgoing person.
1. Teach one, you train the incoming person.

The shadow should be available for the full two weeks.

When the CEO has a week or more of paid time off, or during Summit (Contribute), the program will pause, one shadow will "see one" before the break and "teach one" after the break. The rotations with breaks of one or more weeks without a shadow are great if you can't be away from home for more than one week at a time.

This program is not limited to long-term GitLab team members.

For new team members, this might even be the first thing they do after completing our onboarding.

Exceptional community members may be able to participate, as well.

For those with regular commitments, look for shorter weeks or timezone variations in the schedule notes. To allow flexibility for parents to participate, please see the childcare section in Travel & Expenses for guidance on how to expense childcare costs.

Rotation schedule

| Start date | End date | See one | Teach one | Schedule Notes |

| ----- | ----- | --- | ---- | ----- |
| 20YY-MM-DD | 20YY-MM-DD | Team member name | Team member name | |

If you have questions regarding the planned rotation schedule, please ping the EBA to the CEO and Chief of Staff to the CEO in the ceo-shadow Slack channel. The CoS and EBA to the CEO manage the rotation schedule. Please do not add new dates to the schedule when adding in your rotation. The CEO's schedule is subject to constant change and your rotation may need to be rescheduled.

Preparing for the Program

Important things to note

1. This is not a performance evaluation.
1. Plan to observe and ask questions.
1. Don't plan to do any of your usual work. Prepare your team as if you were on vacation. In Slack, change your status noting who will be covering for you.
1. Be ready to add a number of handbook updates during your shadow period.
1. Participating in the shadow program is a privilege where you will be exposed to confidential information, including having access to material non-public information (MNPI). Participation in the shadow program and access to such information is underpinned by trust in the shadows to honor the confidentiality of topics being discussed and information shared. The continuation of this program is entirely dependent on shadows past, present, and future honoring this trust placed in them. As stated in GitLab's Insider Trading Policy, participants in the shadow program will be considered Designated Insiders because shadows have access to MNPI. Each participant of the CEO Shadow Program or other E-Group level shadow program will be added to the Designated Insider list for the quarter in which they are program participants. Each shadow will be removed from the Designated Insider list once the window has closed for the same quarter they participate as a shadow only if that is the sole reason the participant is on the Designated Insider list. For additional information, please see the Designated Insider Pre-Clearance Process and FAQs.
1. Give feedback to and receive feedback from the CEO. Participants in the shadow program are encouraged to deliver candid feedback. Examples of this are to the CEO and to the world about the company if they make a blog post or video. Shadows maintaining confidentiality during the program is separate from shadows being able to provide candid feedback.
1. Please note that access to 1:1 docs as a CEO Shadow is limited to those where the attendee has agreed to share. If not shared, the attendee has declined to share.

What to wear

You do not need to dress formally; business casual clothes are appropriate. GitLab shirts are acceptable when there aren't any external meetings. Review the CEO's calendar to check if there are formal occasions - this may require different clothing. If unsure, please ask the CoS to the CEO in the ceo-shadow Slack channel.

Pre-Program Tasks

Create an onboarding issue

Outgoing shadows are responsible for training incoming shadows. We currently track onboarding

and offboarding in the CEO shadow onboarding project.

Make sure you do the following:

- Create an onboarding issue. The incoming shadow is responsible for creating their onboarding issue by the Friday before they start the program using the onboarding template. Assign the issue to both the incoming and outgoing shadows (the person who will be
