

policy is applicable to all attendees, speakers, exhibiting partners, partners, sponsors, volunteers, event staff, vendors, etc. You catch our drift. GitLab's goal is to cultivate an environment in which everyone feels welcomed, secure and positively engaged.

Expected behavior

All participants of GitLab events must abide by the following policy:

- Use the GitLab values to guide interactions.
- Be excellent to each other. We want events to be an excellent experience for everyone regardless of gender identity and expression, sexual orientation, disabilities, neurodiversity, physical appearance, body size, ethnicity, nationality, race, age, religion, or other protected categories.
- Treat everyone with respect. Participate while acknowledging that everyone deserves to be here -- and each of us has the right to enjoy our experience without fear of harassment, discrimination, or condescension, whether expressed or implied.
- Jokes should not demean others. Please consider what you are saying and how it would feel if it were said to or about you.
- Speak up if you see or hear something. Harassment in any form should not be tolerated, and you are empowered to politely engage when you or others are subject to potentially intimidating, hostile, offensive, or abusive behavior. The person making you feel uncomfortable may not be aware of what they are doing, and politely bringing their behavior to their attention is encouraged.
- Practice saying "Yes and" to each other. It's a theatre improv technique to build on each other's ideas. We all benefit when we create together.
- Attendees are also expected to abide by GitLab's Code of Conduct, any other corporate policy related to employee behavior, and applicable laws.

Unacceptable behavior

Harassment is not tolerated. Harassment includes, but is not limited to: verbal language that reinforces social structures of domination related to gender identity and expression, sexual orientation, disabilities, neurodiversity, physical appearance, body size, ethnicity, nationality, race, age, religion, or any other protected category; sexual imagery in public spaces; deliberate intimidation; stalking; following; harassing photography or recording; sustained intentional disruption of talks or other events; offensive verbal language; inappropriate physical contact; unwelcome sexual attention, and any other illegal activity not already covered above.

Attendees may not possess illegal substances, a weapon, or any item that can be used as a weapon. Attendees may not engage in the destruction or vandalizing of property.

Booths should not display sexualized images, activities, language, or other similar materials. Booth staff (including volunteers) should not use sexualized clothing/uniforms/costumes, or otherwise create a sexualized environment. Exhibiting partners, vendors, or sponsors disobeying this policy will be notified by GitLab event organizers and are expected to stop any offending behavior resulting in a violation of this policy immediately.

Participants are expected to comply with this policy at all stages of an event, including when communicating with event staff before an event.

Consequences of unacceptable behavior

Violating this policy includes, but is not limited to, attendees behaving in a disorderly manner or failing to comply with this policy, and the terms and conditions herein.

If a participant engages in harassing, offensive, or intimidating behavior, the event organizers may take any action they deem appropriate, ranging from issuing a verbal warning, and notifying management, to expelling the offender from the event with no refund or reimbursement towards travel expenses at their sole discretion.

Event staff reserves the right to refuse admittance to, or remove any person from, any GitLab-hosted event, at any time in their sole discretion. Participants who are found in violation of this policy are expected to comply immediately with the event staff's decision.

What to do if you witness or are subjected to unacceptable behavior

If you experience behavior which violates this policy or GitLab's Code of Business Conduct and Ethics, please contact the nearest member of event staff or the third party security staff, if on-site. If there is a life safety issue, please call emergency services (In the US, call 911.). The event staff can usually be identified by special badges/attire. We will appoint designated PeopleOps partners for internal company events who will be available to support in these possible reporting situations. Our policy means that we will look into and review every allegation of violation of our policy and respond appropriately. Event staff will help participants contact hotel/venue/event security or local law enforcement, provide escorts, or otherwise assist those experiencing discomfort or harassment to feel safe for the duration of the event. We value your attendance, and we want to ensure that all participants feel safe and comfortable.

Please note: While we take all concerns raised seriously, we will use our discretion as to determining when and how to follow up on reported incidents, and may decline to take any further action and/or may direct the participant to other resources for resolution.

Why this policy is important

Unfortunately, harassment at events and in online communities is not uncommon. Creating an official policy aims to improve this by making it clear that harassment of anyone for any reason is not acceptable within our events and communities.

By clearly defining expectations for behavior, we hope to prevent harassment, aim to provide reassurance, and encourage people who have had bad experiences at other events to participate in our events.

Media Disclaimer

Often we have a photographer or videographer capturing our events. By attending the event, you agree to be photographed or recorded, and you agree that GitLab will be the sole owner of such media. We reserve the right to use any media taken at any event hosted by GitLab without the express written permission of those included within the photo or recording, and you waive any rights therein. GitLab may use the photo or recording for any commercial or noncommercial purposes including without limitation social media, websites, publications, etc. If you would rather not be photographed or filmed, please let our photographers/videographers know.

GitLab 101s

CEO AMA with New Hires

There is a quarterly GitLab CEO 101 call with new hires and the CEO. This is a zoom call that will be recorded and uploaded to Unfiltered on YouTube. Please read the history and values links provided below and come prepared with questions added to the notes doc included in the calendar invite. Questions that are more personal in nature or around family and friends are also welcomed and encouraged (example: What is your favorite food? Where is your favorite place to travel?) The call will be driven by questions asked by new team members.

- 1. Questions about GitLab history /handbook/company/history/
- 1. Questions about our values /handbook/values/
- 1. Team structure /handbook/company/structure/ or organization chart
- 1. How we work /handbook

- Please pay special attention to the guideline about developing content and procedures in a public, transparent, handbook-first manner

1. Reinforcements to stay a startup

Note that, when thinking about what questions you'd like to ask, it's hard to be open about financials. It's easy when everything is going well but very hard when it's not. We try to be open with our team as we progress, but it will hurt being open to the outside world about this in the future.

All questions and answers during the call should be added to this page or to the relevant pages of the handbook. This is done during the call to immediately make any changes; for example we created this commit together on the call.

The calendar invite will include an agenda google doc where those participating in the meeting can add their questions and a link to this handbook page. If you have any questions please contact the CEO's Executive Business Administrator in eba-team on slack.

Frequently Asked Questions about the GitLab Culture

All previously asked questions have been integrated into our handbook.

Future questions will be added to this FAQ section.

SECTION: company/culture/internal-feedback.md

Companies will often wait to gather internal feedback until an exit interview after someone's resigned, or they'll organize an occasional survey to take a pulse on the company's engagement. We feel that a quick, quarterly check-in is more aligned to our values Collaboration and Iteration. We use Google forms to gather feedback anonymously, and the responsibility of reviewing and collating feedback stays within People Operations to maintain confidentiality for all participants. We promise to share the spirit of the feedback we collect but will paraphrase and summarize responses and share only constructive and actionable feedback. Specific or personal comments or complaints will be investigated and dealt with privately, out of respect for the recipient(s).

In 2017, we rebranded our survey as a Stay Interview because we are most interested in three things: why people join, what makes them stay, and what would make them consider leaving GitLab. Below is a summary of the responses from the 130 team members (69.5%) who participated.

Feedback from the GitLab team - October 2017

I know what is expected of me at work.

Rating	Percentage
Strongly Agree	41.27%
Agree	52.38%
Neutral	3.97%
Disagree	1.59%
Strongly Disagree	0.79%

I have the materials and equipment to do my work right.

Rating	Percentage
Strongly Agree	52.38%
Agree	39.68%
Neutral	5.56%
Disagree	1.59%
Strongly Disagree	0.79%

I have the opportunity to do what I do best every day.

Rating	Percentage
Strongly Agree	34.92%
Agree	45.24%
Neutral	16.67%
Disagree	2.39%

| Strongly Disagree | 0.79% |

In the last seven days, I have received recognition or praise for doing good work.

Rating	Percentage
-----	-----
Yes	73.02%
No	26.98%

My supervisor, or someone at work, seems to care about me as a person.

Rating	Percentage
-----	-----
Strongly Agree	53.97%
Agree	38.89%
Neutral	5.56%
Disagree	1.59%
Strongly Disagree	0.00%

There is someone at work who encourages my development.

Rating	Percentage
-----	-----
Strongly Agree	37.30%
Agree	34.13%
Neutral	22.22%
Disagree	4.76%
Strongly Disagree	1.59%

At work, my opinions seem to count.

Rating	Percentage
-----	-----
Strongly Agree	39.68%
Agree	45.24%
Neutral	11.90%
Disagree	2.38%
Strongly Disagree	0.79%

The mission/purpose of GitLab makes me feel my job is important.

Rating	Percentage
-----	-----
Strongly Agree	42.06%
Agree	44.44%
Neutral	11.11%
Disagree	2.38%
Strongly Disagree	0.00%

My fellow employees are committed to doing quality work.

Rating	Percentage
Strongly Agree	54.79%
Agree	34.13%
Neutral	8.79%
Disagree	2.38%
Strongly Disagree	0.00%

I have a best friend at work.

Rating	Percentage
Yes	34.92%
No	65.08%

In the last six months, someone at work has talked to me about my progress.

Rating	Percentage
Yes	83.33%
No	16.67%

In the last year, I have had opportunities to learn and grow.

Rating	Percentage
Strongly Agree	45.24%
Agree	35.71%
Neutral	13.49%
Disagree	5.56%
Strongly Disagree	0.00%

Actionable Items from the Survey Feedback Issue:

1. Discomfort with Iteration

- People Ops will focus on some training and information about the importance of iteration

1. Feedback Training

- Peer to Peer Feedback
- Readdress Performance Management conversations

1. Professional Development

- Update Handbook to make it clear that they should be having a conversation with their team about Experience Factors. Not optional, the job of a manager is to communicate and have a conversation about it.

Feedback from the GitLab team - February 2017

Here is a summary of the responses from 91 team members (57%) who participated.

Why did you join? (responses in no particular order)

- 1. Culture
- 1. Values
- 1. Vision
- 1. Handbook available to review
- 1. Great product, love working on developer tools
- 1. A chance to work with smart people
- 1. Positive atmosphere
- 1. Ability to help GitLab achieve the vision
- 1. Remote opportunity
- 1. All remote - "I didn't want to be the only one not in the office"
- 1. Open source community
- 1. Referred by a team member
- 1. Autonomy
- 1. Wanted to work for a start-up
- 1. Career path
- 1. GitLab is a disruptor in the industry!
- 1. Flexible work environment
- 1. Work in the Developer market
- 1. Ability to impact the market/team
- 1. Growth potential
- 1. Commitment to open source
- 1. Work on something meaningful
- 1. Stock options
- 1. People I met were cool
- 1. Learning opportunities

Why have you stayed? (responses in no particular order)

- 1. Culture
- 1. Company spirit
- 1. Values
- 1. Boss is amazing
- 1. Things are as "advertised" / discussed during interview
- 1. People / Team / Colleagues
- 1. Great product, working on developer tools
- 1. The "experience"
- 1. Flexibility
- 1. Working with people smarter than me
- 1. Feel like I am contributing
- 1. Strong leadership
- 1. Communication
- 1. Benefits
- 1. Remote opportunity
- 1. Relationships / camaraderie
- 1. Encouraged to take time off
- 1. It's not bureaucratic
- 1. Feel empowered / autonomy
- 1. Ownership / accountability
- 1. Solve challenges, never bored
- 1. Growth potential

- 1. Commitment to open source
- 1. Faith in the team steering our product
- 1. Open source community
- 1. Learning opportunities
- 1. Treated like an adult
- 1. Company encourages team members to attend conferences, travel to visit colleagues
- 1. Work is appreciated / feel valued
- 1. Everything told in interview / expectations were true
- 1. Peer mentality, even at the highest level of management
- 1. The company is flat enough to encourage true collaboration which is vital to growth

What would make you leave (what should we avoid in the future if possible)?

Full question: What would make you leave (what should we avoid in the future if possible)? If the following were to happen, I would consider leaving GitLab

- 1. Stagnation of career path, no opportunities to advance
- 1. Pay decrease, not paid appropriately, below market pay
- 1. Lack of respect
- 1. Leaders not leading, no clear direction
- 1. Too many restrictions on side projects
- 1. Changing the values or culture
- 1. The "spirit" leaves the team
- 1. Change in the atmosphere, work model
- 1. Company growth stops
- 1. Volume of work drives quantity over quality
- 1. Stop being introspective
- 1. Ego gets in the way
- 1. Lose feeling of openness (team call, transparency)
- 1. Job becomes boring / less challenges
- 1. If I am micro-managed, don't feel empowered, lose autonomy
- 1. Not feeling like I am contributing, valued
- 1. If purchased by a large corporation
- 1. A bad boss
- 1. Work / life balance deteriorates
- 1. The product begins to falter, lose value in the market
- 1. Stops being driven by vision, reactive over visionary thinking
- 1. Become burned out with no end in sight
- 1. No training, opportunities to improve skills
- 1. Compensation refuses to use market pay locally over cost of rent
- 1. Job becomes unstable
- 1. Communication no longer one of our strong points

Other Comments or Concerns (broken down by categories)

Compensation

- Global Compensation Calculator (GCC) -

- 1. Concern that pay will decrease based on the compensation calculator by location
 - Our policy on Relocation describes our current process, however, we review each case

on an individual basis. We anticipate the need to make changes as often will be reduced with the work underway to build out a simpler approach to identifying an appropriate market rate.

1. Why is the pay gap between Support Engineers and Developers significant?

- The role and responsibility is different for these two roles, therefore, the market data indicates a difference in pay scales. We will review external market data again, during the upcoming merit administration process, to confirm the accuracy of our initial benchmark data.

1. Concern about relocation causing drop in pay

- Note the answer above. This is a relatively new policy in an organization that is helping form the playbook for all-remote companies. We strive to find a balance between financially responsible decisions and what's fair to team members.

1. Concern for lower pay scale outside the US/Europe based on a lower cost of living

- The Global Compensation Calculator applies a consistent approach to paying a fair wage to all team members. It is not a perfect solution and we aim to make the model better this spring.

1. Will we use the compensation calculator for non engineering roles?

- Yes, this work will be included in the making the model better project.

- Other Compensation Topics -

1. Clarification of pay schedules for payroll, invoice processing and bonus payments

- We will post these details in the handbook by the end of April.

1. When and how will the salary review process be completed?

- We are working on the guidelines for our first annual merit administration cycle.

More details coming the week of March 27th.

Benefits

1. Looking forward to GitLab's Parental leave policy

- We are in the process of comparing country requirements to create a fair policy for our team members looking to add to their family.

1. Feeling guilty taking time off

- We encourage anyone who is concerned about taking time away from work to recharge to speak to their manager or reach out to our People Ops Generalist or People Ops Director to better understand the concern. We take our unlimited paid time off policy seriously.

Grovo

1. Why are quizzes necessary?

- Quizzes reinforce that learning has occurred. When the courses were pulled from Grovo's content library, we were conscious to minimize or even eliminate this exercise for shorter courses. Confirming you understand and can apply the concepts covered is an important step in the learning process.

1. Will we have technical training for non-engineering GitLab team-members?

- This is on the radar for 2017.

Lattice

1. Need more explanation about the purpose and OKRs

- We admit to rolling out OKRs quickly and asking people to jump on board for Q1 2017. We will spend more time exiting the quarter properly, learning from what went well and what can be improved and make every effort to improve the process for Q2.

1. Fear of "Not my OKR, not my problem" moving toward thought process of not my job instead of helping team members out when they need it.

- During a debrief on Q1, we will explore this concern further to see if it has any merit.

We have committed to setting OKRs to help us achieve bigger results by focusing on a few key deliverables each quarter, however, we can't lose sight of the fact that we are in this to win as a team.

Technical Direction

1. Need to Improve cloud and hosted solutions

- This is one of our Q1 OKRs.

Feedback from the GitLab team - November 2016

What you like about working at GitLab

Remote working environment, product development, challenge of working on the product, potential we have for

"making it big," great co-workers, the sense of a team, great culture, the feeling of being valued, personal

responsibility, willingness of GitLab team-members to teach new GitLab team-members, transparency, and team calls.

What you would like to change & what we are doing about it

1. Make the handbook easier to navigate.

- We have added an Onboarding guide for new GitLab team-members. We also added Standard Operating Procedures for different departments to make what you are looking for easier to find.

And don't forget, there is a search function at the top of the handbook that can help you find exactly what you are looking for! Update: This page has been moved to Onboarding

1. Spend more time learning the technical side of our product.

- Check out GitLab University to learn more about Git and GitLab. We will also be rolling out additional training on Git and GitLab during 2017 see issue.

1. Refine the hiring process.

- We have revamped our hiring process to be more efficient. Our global recruiters are working hard to ensure that every candidate is kept in the loop about where they stand in the hiring process, and managers are not spending too much time in Lever reviewing candidates. If you have any questions please feel free to reach out on the hiring channel on Slack.

1. Refine the compensation principles.

- Please check out our Global Compensation Framework. If you have any questions or concerns about the compensation principles, please let People Ops know!

1. Focus on differentiating CE from EE.

- We plan to build features that are interesting for enterprises and replace existing products.

1. Focus on growth of GitLab team-members within the organization.

- People Ops has instituted Grovo (individual contributor and management training), as well as Lattice (OKRs) to assist in the growth of GitLab team-members within their position at GitLab. We will continue to strive to work with managers to develop GitLab team-members at GitLab by drafting Professional Development Plans see issue.

1. More face-to-face meetings and ability to meet up with GitLab team-members close by.

- Please expense travel to visit GitLab team-members as described in Spending Company Money.

1. Adjust the team call format to include more regular functional group updates.

- The team call now has weekend updates every two weeks, a separate call for APAC GitLab team-members to give their weekend update, and functional group updates are separate events.

1. Have more employee agreements instead of contractor agreements.

- People Ops will be working to establish new entities/payrolls in more countries as we grow. Once this is completed we can transfer contractors to employees.

1. Hire in departments that need more GitLab team-members.

- We understand that there is always a lot to do at GitLab and for some departments this means that we might need to hire more GitLab team-members. If this is the case please communicate this to your manager and/or People Ops. If appropriate People Ops will open the role, and add it to the jobs page.

1. Refine onboarding to be less intense/intimidating.

- Onboarding can be overwhelming and sometimes confusing. To alleviate confusion about what you are doing and why, we created an Onboarding guide to explain each step. Update: This page has been moved to Onboarding.

1. Move unlimited vacation to a set amount so GitLab team-members take their full vacation.

- We are taking a look at what the best option is in regard to a limited or unlimited vacation. We want to urge that GitLab team-members take enough time off to recharge! Unlimited vacation/taking vacation is encourage at GitLab. For information on how these developments are going, check out the open issue

1. Less downtime on GitLab.com.

- Our Infrastructure team is always looking for new ways to improve the ownership of the things we ship. The team will look to have owners of services or features, and these services working will be the way they prove that they are actually delivering. Infrastructure has also increased uptime to 99.91% in December 2016.

1. Casual and social interaction.

- We have instituted Coffee Breaks to promote catching up with GitLab team-members.

1. Revise Lever Notifications.

- Sometimes it can be hard to manage Lever notifications. Here are some guidelines to keep your inbox low.

What are you wondering about / What we are missing

1. Are we growing too fast?

- Check out our strategy page for why we are growing faster than feels intuitive.

1. How to improve myself as a professional?

- Aside from the internal tools at GitLab, you can expense any course or training that falls in line with Spending Company Money. Questions? Just ask your manager or People Ops.

1. How are we using our series B funding?

- We have released our master plan for how we plan on growing as a company as a result of our Series B Funding. Also, check out our Strategy Page.

1. What are the plans for parental leave?

- We are currently working on this issue.

1. What are the mid to long term engineering strategies?

- Make GitLab.com fast and reliable (99% page loads < 1 s).

- Make GitLab a next-generation product.

- Make GitLab a great place for engineers to grow.

1. What does it take to move from a junior to intermediate or senior?

- Some job descriptions have what is expected of a junior, intermediate, or senior, if applicable. For specific questions about each role, please speak with your manager. As this is still a work in progress for many roles, here is the open issue.

1. Is there process for compensation reviews?

- People Ops will be working on this in 2017.

1. Will GitLab include a 401(k) match for US employees?

- At this time, GitLab does not have a 401(k) match for US employees.

1. Improve gender diversity.

- Our Global Recruiters are working to ensure that the hiring process promotes diversity.

We have also started a Slack Channel [diversityinclusion](#). Please feel free to contribute at any time!

1. Manager and 1:1 training.

- As we grow and develop our internal trainings, we will make sure to educate managers on what should be discussed in 1:1's to ensure that the team member's personal and professional development is the core theme of these conversations.

1. All meetings recorded by default.

- All meetings that happen over Zoom are recorded and placed on the Google Drive under "GitLab Videos."

1. Instructions on how to build a project on GitLab.

- Here is some documentation on how to build a project within GitLab.

We also received a many responses stating we should not change or add anything, and that GitLab is an awesome place to work. This is great that GitLab team-members feel this way, and People Ops will continue to strive to create a culture where GitLab team-members are satisfied and engaged. Want to see where most of these changes were made? Check out the issue!

Feedback from September 2016, and presentation of responses

1. Please checkout this presentation to see what responses and changes were made as a result of the September 2016 survey.

Feedback from January 2016, and responses

"What do you wish we had / What are you wondering about"

1. "Contractor or employee? Worried about job security as a contractor."

- We value all GitLab team-members equally, regardless of the legal arrangement that you have with GitLab. Due to legal restrictions and the difficulty of having people be employees outside of the US or NL (where we have a legal entity), a large portion of the team are contractors (21 out of 46). At GitLab, as everywhere else, job security relies mostly on how you are performing as a team member, and how the company performs as a whole. By the way, the contracts that we use are all viewable in our internal handbook

1. "More patience and consideration with ideas from newer people, things are sometimes quickly rejected as 'won't work' or 'not interested' without much explanation."

- It is difficult to comment on what may have been specific circumstances, but if you have felt that your idea was rejected too quickly or without explanation, then please know that this was not intended to be unkind or harsh. There are many ideas and for the sake of efficiency we give minimal reasoning in responding. This is also due to the nature of asynchronous communication where it is hard

to tell if an answer is extensive enough to satisfy the question. If you feel that an idea is being rejected rather quickly, you can and should request more explanation. This might lead to a fruitful discussion and a reconsideration.

1. "Wish we had more time"/ "Wonder if sometimes we go too fast and should go slower to focus on quality and testing more"

- Please make sure you take enough time off to recharge!

Having a rapid release cycle contributes to increasing quality over time being able to iterate faster. For

particular concerns in an individual issue, please raise your concerns in the issue. Because GitLab has gotten very popular the absolute amount of bugs might be increasing.

But to individual users it feels like we've "been squashing bugs and releasing features rapidly while also decreasing the number of regressions introduced and improving their test suit across the board".

Obviously quality is and will always be a top concern, especially code quality since that enables better testing, faster fixes, and more contributions.

1. "Better supervision in the first two months"

- Always be sure to reach out to your manager if you feel that you need more guidance. Your peers are a Slack message away.

1. "Maybe a more competitive salary"

- From the handbook: "If you are unhappy with anything (your duties, your colleague, your boss, your salary, your location, your computer) please let your boss, or the CEO, know as soon as you realize it. We want to solve problems while they are small."

1. "A step between review/QA and deployment."

- Review happens through merge requests, and QA happens as part of the release process. We can't think of anything else at the moment that would not introduce gates that cause delay and inefficiency.

1. "Off-site meetings during the year and/or team-specific summits, like a hackathon"

- We had a Summit in Oct'15, and are having one in May'16. We aim to have these every 6-9 months. We are thinking about organizing a hackathon during the Summit; please upvote if you want it to happen!

1. "We share a lot about our software 'side'; can we share more about our other 'sides' (like how marketing does marketing) in a 'team blog'? This would help in hiring awesome people!"

- We love blog posts and sharing all of GitLab's 'sides'. Please channel your inner need to write a blog post (or part of it!) on our blog repo.

1. "Additional training for dev people, maybe? Specific suggestions for topics include agile coding, code quality, and there is a suggestion for Robert "Uncle Bob " Marcin (<https://sites.google.com/site/unclebobconsultingllc/>) for code quality

- After some research within the team there was a greater interest in a "birds of a feather" gathering than formal training. We're looking to do this during our Summit trip to Austin.

1. "What features are we planning? See /direction

1. "How are we doing? How does the Board see it? Can we keep up the growth and the Sales?"

- Khosla is really happy so far. Keeping up growth depends on demand generation

1. "If we are sometimes too open and too transparent in a way that hurts us?"

- So far the only negative thing is that we suspect that competitors release their stuff early to preempt us, we think it is great that they are adjusting their schedule to ours!

1. "Creating/using a standard for interviewing candidates."

- Good idea, a lot of us use standard interview questions /handbook/hiring/interview-

questions but merge requests are welcome.

1. "More formality in development process."

- What form of formality? We welcome changes that don't reduce our productivity.

Potentially we could start using issue weights more to gauge the load.

"What do you like about working here?"

1. A lot of love for the team

- Keywords people used to describe their fellow GitLab team-members are: 'talented, caring, teamwork, approachable, honest, frank, smart, brilliant, skilled, team spirit'.

1. Great product

- Four people mentioned it specifically, and this one sums it up nicely: "Working on a product that I actually love to use". Respondents also mentioned the fast pace of development.

1. Open Source

- Respondents value being involved in Open Source, with phrases such as: 'proving that open source is awesome and working with the rest of the community, working on open source while getting paid for it is a dream job!'

1. Freedom and opportunity

- We are a remote-first company and our GitLab team-members like: 'being remote-first, working from home, having personal independence, the freedom to choose what to work on, the freedom that you don't get in a corporate office environment, flexibility to get things done, slim process, slack oriented'

- People also mentioned the opportunity to learn, and the massive opportunity that the project and the company has.

1. Team dynamic

- Several people mentioned that they really like the team dynamic, specifically: 'the support that you need is there, you have the ability to take on multiple hats and responsibilities, everyone and everything is open to constant improvement, ability to collaborate even though we're remote, we're remote but still have a great sense of "team", love the cross discipline collaboration that goes on every day'

Feedback from the GitLab team - September 2015

Summarized in this presentation about "Stuff the GitLab team likes and does not like", here is what the team said in September of 2015.

What we love about working at GitLab

Freedom, flexibility, enthusiasm, passion, great, smart, engaging, enjoy teaching, feels like a family, great dynamic, supportive, approachable execs, supportive, transparency, speed of innovation, remote working, company sponsored training, great Summit in Amsterdam.

and also

Great product, ability to create new processes, company growth, no bureaucracy, no high pressure, opportunity, our growth, the challenge of maintaining quality of people, product, brand etc,

laser focus on improving collaboration through social coding, market adoption, our work is public so we can talk about it, and our ability to create new processes.

What we wish we had or what we want to be doing & What we're doing about it

1. More GitLab team-members.
 - We're hiring
1. Bigger feature gap between CE and EE.
 - Current plan is to have one EE feature added per release, so over time the difference will grow.
1. More summits.
 - Current plan is to have a summit every 6-9 months.
1. Better onboarding.
 - We're working on this with GitLabUniversity (GLU) content, continuous improvements to documentation and the handbook
1. Customer success events, starting in the Bay Area.
 - Cool idea, start an issue and make it happen!
1. Coaching on Agile and Lean approaches for Engineering team.
 - Great idea, we'll look into it. Suggestions are welcome.
1. A scale with happiness of last work week for feedback.
 - We've working this into our feedback from in a different setting for now.
1. Global presence of Service Engineers, and dedicated trainer and training materials.
 - We're working on this through hiring. Also, we have high hopes of GLU, ongoing content creation, etc. to help out here.

What we're wondering about & the answers to our thoughts

1. Stock options: terms, conditions
 - Does the handbook answer your questions? (/handbook/total-rewards/stock-options/). Please feel free to ask Paul.
1. What the company will look like 3, 6, 12 months from now? (community-ish, enterprise-ish)
 - The community and people using GitLab will keep growing. 12 months from now we'll answer all questions from the community on all platforms (from forum to Stack Overflow), we'll have a proper swag shop and have more developer oriented content (blog posts, videos).
 - Enterprise wise we'll have double the features we have now, a twice as large sales team, and many add-ons. Feel free to ask something more specific if you need more detail. And of course try to shape it as you think it should look.
1. How committed are we to building EE features and having significant releases each month?
 - Very committed. At least one tentpole EE feature every month. Next 3 releases contain 2 or 3 each! /direction/
1. Sales team hiring plan
 - We're hiring but it is not a priority until everyone is up to speed and trained. But we expect that to happen soon, and the marketing machine will come up to speed soon, after which hiring becomes a priority.

SECTION: company/culture/songbook.md

The GitLab Songbook contains popular songs that have been adapted and arranged by GitLab team members. Many of the GitLab songs include references to our values helping to reinforce them.

Anything You Can Do

Sung to the tune of Anything You Can Do (I Can Do Better)) composed by Irving Berlin, sung by two singers (1 and 2)

Arranged for the GitLab Songbook by Sid and Karen Sijbrandij

text

1: Anything you can do we can do better

1: Two can do anything better than one

2: No We can't

1: Yes we can

2: No we can't

1: Yes we can

2: No we can't

1: Yes we can

1: Yes we can

2: Anything you can be, we can be greater

2: Sooner or later two are greater than one

1: No we're not

2: Yes we are

1: No we're not

2: Yes we are

1: No we're not

2: Yes we are

2: Yes we are

1: We make results proliferate, just watch us iterate

1: We can hire efficiently, and increase diversity

2: We like to col -la-bo-rate

1: Got time for a review?

2: Sure

1: Let's build something new!

2: Anywhere we want to go, we can work remotely

1: We can build value wherever we are

2: No, we can't

1: Yes, we can

2: No, we can't

1: Yes, we can

2: No, we can't

1: Yes, we can

1: Yes, we can

Together: Yeeeessss, weeeeeee, caaaaan

Developer's Paradise

Sung to the tune of Gangsta's Paradise written by Artis Ivey, Jr, Larry Sanders, Doug Rasheed, Stevie Wonder, sung by Coolio

text

As I code through the valley of the shadow of Release
I take a look at my lines and realize there's nothin' left
'Cause I've been patchin' and pushin' so long
That even my PM thinks that my mind is gone
But I ain't never crossed a bug that didn't deserve it
Me be treated like a .9, you know that's unheard of
You better watch how you workin' and where you breakin'
Or you and your homies might be lined in release posts
I really hate to trip, but I gotta fix
As they croak, I see myself in the retro smoke
Y'all, I'm the kinda G the little homies wanna be like
On my laptop in the night, Googlin' tutorials in the streetlight

Been spendin' most their lives
Livin' in a developer's paradise
Been spendin' most their lives
Livin' in a developer's paradise

500 Lines

Sung to the tune of I'm Gonna Be (500 Miles)) written by Charlie Reid and Craig Reid, sung by The Proclaimers

text

When I wake up, well I know I'm gonna be
I'm gonna be the one whose waking up with Zoom
When I Log in, yeah I know I'm gonna be
I'm gonna be the one who iterates with you
If I get stuck, well I know I'm gonna be
I'm gonna be the one who gets stuck next to you
And if I mess up, yeah I know I'm gonna be
I'm gonna be the one who's messing up with you

But I would code 500 lines
And I would code 500 more
Just to Be the one who codes one thousand lines
That customers adore

When I'm working, yes I know I'm gonna be
I'm gonna be the one who's working hard with you
And when the com-mits, comes in for the work I do
I'll pass almost every merge request to you

When I stay home) oh, you know I'm gonna be
I'm gonna be the one who takes the kids to school
And when they get home, well I know I'm gonna be
I'm gonna be the one who's waiting there for them

But I would code 500 lines
And I would code 500 more
Just to Be the one who codes one thousand Lines
That Customers adore

Work Remotely (Work Remotely) Work remotely (Work Remotely)
Read and write, commit, and push and merge then go
Work Remotely (Work Remotely) Work remotely (Work Remotely)
Read and write, commit, and push and merge then go

When I'm working, yes I know just where I'll be
Remote is where I'll be, not sitting next to you
I can be anywhere, just doing what I do
I'll switch to video so I can meet with you
And Where's my home? (Where's my home) anywhere that it can be
I'm going to be the one who goes around the world
And the internet, is to connect you to me
I'm gonna be the one who iterates with youu

I'm gonna be the one who iteraaaates with you

But I would code 500 lines
And I would code 500 more
Just to Be the one who codes one thousand lines
That Customers adore

Work Remotely (Work Remotely) Work remotely (Work Remotely)
Read and write, commit, and push and merge then go
Work Remotely (Work Remotely) Work remotely (Work Remotely)
Read and write, commit, and push and merge then go

Work Remotely (Work Remotely) Work remotely (Work Remotely)
Read and write, commit, and push and merge then go
Work Remotely (Work Remotely) Work remotely (Work Remotely)
Read and write, commit, and push and merge then go

But I would code 500 lines
And I would code 500 more
Just to Be the one who codes one thousand lines
That customers adooore

You're the Iteration

Sung to the tune of You're the Inspiration written by Peter Cetera and David Foster, sung by

Chicago

text

You know our code was meant to be
The kind of code that lasts forever
And I want it held for me
From each commit until the end of time
You should know,
Everywhere I code
Always stored for me
In the repo
On its disk
GitLab

You can help with all my code
You're the iteration
You bring all my code to life
You're the iteration
Wanna have you test it
I wanna have you deliver it
Never gonna need any other tool

And I know, yes I know that all can see
That we can merge our code together
And those commits to main you approve for me
Start CI and use CPU time
You should know
Everywhere I code
Always stored for me
In the repo
On its disk
GitLab

Wanna have you test it
I wanna have you deliver it
Never gonna need any other tool

You can help with all my code
You're the iteration
You bring all my code to life
You're the iteration
When you store code 'til the end of time
When commit your code
Always there for you
GitLab - trust it just like I ·
When you store code 'til the end of time
When commit your code
Always there for you
My GitLab

GitLab's Island

Sung to the tune of The Ballad of Gilligan's Isle written by Sherwood Schwartz and George Wyle
Arranged for the GitLab Songbook By REB

text

Just sit right back and you'll hear a tale,
A tale of the GitLab crew
Whose product is still open source
And released each month to you

Sid is the mighty CEO
His crew is brave and sure
They iterate through merge requests
To keep things clean and pure

The issues can start piling up
With pipelines getting tossed
If not for the scaling of their CI tool
Their deadlines would be lost. Their deadlines would be lost

The code's released on the 22nd of each and every month
With CI / CD
And code review
Code quality and web hooks
An issue board
Portfolios and metrics too
GitLab's got it all!

Revolution

To the tune of Revolution) written by Paul McCartney and John Lennon, sung by the Beatles

text

You talk about transformation, well you know
You need modern tools and processes
You talk about evolution, well you know,
A single platform helps put things at ease

But when you talk about integration, don't you know that you can count me out
Don't you know it's going to be complex,
Don't you know it's going to be complex,
Don't you know it's going to be complex
Don't you know it's going to be, on time·

You talk about real solutions, well you know,
A standard platform can make things right
When you talk about meeting deadlines, well you know

enhanced collaboration & auto dev ops can make things right

But when you talk about integration, don't you know that you can count me out
Don't you know its going to be complex,
Don't you know its going to be complex,
Don't you know its going to be complex

Verse 3·TBD

Don't you know with GitLab, its alright
Don't you know with GitLab, its on time
Don't you know its going to be, its alright·
Don't you know its going to be, on time·
Repeat and fade out
Rappers delight
Git pull, git push, check your code in
If your tests start acting up then you run them again

GitLab

Sung to the tune of Layla written by Eric Clapton and Jim Gordon, sung by Eric Clapton

Adapted for the GitLab Songbook By REB

text

What will you do when work needs testing
When your repo's got your thoughts inside?
You've been typing and coding much too long
You've got to take it for a ride

GitLab, the fine CI's a breeze
GitLab, secure me if you please, GitLab
Your tools sure do ease my worried mind

Decided to move my big project
When that old host let me down
What a great tool, I fell in love with you!
My productivity's gone speed-of-sound!

GitLab, the whole SDLC
GitLab, goes end to end for me, GitLab
It's the best toolset I could find

I wanted to increase iteration
To keep me from going insane
Now when I say, "That merge request's okay!"
The next commit's already on my mind

GitLab, productivity for me

GitLab, I'm telling my VP, GitLab
It means no more worried minds!

GitLab, It's got the best CI/CD
GitLab, scanning for security, GitLab
It means no more worried minds!

GitLab, the core edition's free!
GitLab it goes end-to-end for thee, GitLab
It means no more worried minds!

GitLab For You, GitLab For Me

To the tune of Funiculì, Funiculà written by Luigi Denza, sung by Mario Denza
Arranged for the GitLab Songbook by REB

text
Some think the way to work is in an office
But oh not I!
Some think they have to work just where the boss is
I don't know why
But I, I love to spend my time a winging
If short or long
To fly in air with engines singing

Africa

To the tune of Africa) written by David Paich and Jeff Porcaro, sung by Toto

Arranged for the GitLab Songbook by Sid and REB

text
I hear slack pinging late at night
But it ain't an announcement it's just a random conversation
Arriving on that 12:30 flight
My flight is running late I'll run from gate to gate with no hesitation
Collecting colleagues along the way
23 on my flight talking of old summit memories
Driver turned to me to say
More GitLabber's waiting there for you.

It's gonna take a lot to drag me away from you
There's nothing that three hundred of us or more could never do
I bless the rains down in Africa
Gonna take some time to do the things we never have

With my colleagues talking late at night
This night will be sleepless but I'm enjoying their company

Not many hours before it's light
I'm sure tomorrow the bus won't wait for me if I'm not ready
Hoping that I wake in time
Frightened of paying if I don't come

It's gonna take a lot to drag me away from you
There's nothing that three hundred of us or more could never do
I bless the rains down in Africa
Gonna take some time to do the things we never have

Hurry up - the bus is waiting there for you

It's gonna take a lot to drag me away from you
There's nothing that three hundred of us or more could never do
I bless the rains down in Africa
I bless the rains down in Africa
I bless the rains down in Africa
I bless the rains down in Africa
I bless the rains down in Africa

My Favorite Things

Sung to the tune of My Favorite Things) written by Richard Rodgers and Oscar Hammerstein II,
sung by Julie Andrews

Arranged for the GitLab Songbook by Kaleb Hill, Antony Saba, Alexander Tanayno

text
Comments on merges
Emojis on issues
Commit Integrations that always continue
All of the sdic in one place
GitLab is one of my favorite things

Epics and roadmaps
Containers and clusters
Code repos and CI without getting flustered
All the security shifting left brings
GitLab is one my favorite things

When the code breaks
When the merge fails
And it makes me sad
I simply remember my favorite things
That GitLab makes me so glad

Merge, Merge, Merge Your Request

Sung to the tune of Row, Row, Row Your Boat an English language nursery rhyme

Arranged for the GitLab Songbook by Suri Patel

text

Merge, merge, merge your request
Gently down the pipeline
Wearily, wearily, wearily, wearily
Passing is but a dream

Oompa Loompa Song

Sung to the tune of Oompa Loompa (Mike) from the 1971 movie, Willy Wonka and the Chocolate Factory

Music composed by Leslie Bricusse and Anthony Newly.

Arranged for the GitLab Songbook by David Astor

text

Oompa Loompa Doompa-dee-doo
I've got an special question for you

Oompa Loompa Doompa-dee-dab
Pay close attention to learn of GitLab

What do you get when you have lots of tools?
Stumbling and bumbling and looking like fools.

Why don't you try something a little more fun?
Plan and code in only one.
It's the best solution.

Oompa Loompa Doompa-dee-dee
On top of all that we've got security

You will deploy with confidence too
Like the users of GitLab Doompa-dee-doo!

Into the Unknown

Sung to the tune of Into the Unknown by Panic at the Disco

Lyrics and vocals by Phillip Knorr.

Arranged for the GitLab Songbook by Fernando Diaz

{{< youtube "Ce2KSAAnUTeA" >}}

text
Into the unknown
Into the unknowwwnnnnnn
Into the unknowwwwwnnnnnnnnnn

I can hear you
But I won't
some look for GitLab
while others don't

There's a thousand phone calls
I need to make a day
and I'd rather email
than call you anyway
oh woah oh

woahh
Our single app
for the entire SDLC
is leading in SCM
and CI, yes, CD

Everyone I've ever called
is using legacy
I'm sorry for your manual tasks
let's modernize quickly

I've had my adventure
I don't need something new
this is what they tell me
when I follow them...

Into the unknown
Into the unknowwwnnnnnn
Into the unknowwwwwnnnnnnnnnn

What do you want
'cause you've been keeping me awake
are you here to reduce tool costs
we don't have to rip and replace
or are you someone out there
who's a little bit like me
who knows deep down
GitLab is the place to be

Everyday is a little easier
as I feel our power grow
don't you know there's part of me
that longs to go...

Into the unknown
Into the unknowwwnnnnnnn
Into the unknowwwwwnnnnnnnnnnnn

wooooooah oh oh
Are you out there?
Can you feel me?
Can you show me?
wooooooah oh oh
wooooooah oh oh
wooooooah oh oh
wooooooah oh oh
wooooooah oh oh

Where are you going?
dont leave me alone
How do I
follow you?!

Into the unknowwwwwnnnnnnnnnnnn

Cheers

text
G to the T, L to the B Who's contributing remotely? That's ME!

Push It

Sung to the tune of Push It! by the hip hop group Salt-N-Pepa

Arranged for the GitLab Songbook by Mike Lockhart

text
Ah, push it
GitLab, push it

(Hit it)
Ooh, baby, baby, baby, baby
Ooh, baby, baby, ba-baby, baby
DevOps on this

GitLab, push it
GitLab, push it
GitLab, push it
(Hey) DevOps on this
(GitLab, push it)
DevOps on this
(GitLab)

Ow! Baby!

Open Source is here
Op, Op-Op, Open Source's here
Op-Op-Op-Op-Op, Open Source's here
Open Source, Open Source, Open Source's here
Op, Op, Op, Open Source's here
Now, now, now, wait a minute y'all
This dance is for everybody
Open to all the people
Yo y'all inspire others, Git on out there enhance
Enhance, I said

Open Source's here, and we're in effect
Want you to push it back
Coding by day, then at night, working up a sweat
C'mon girls, let's (code!) go show the guys that we know
How to include everyone in our hot DevOps show
Now push it
(GitLab, push it) push it good
(GitLab, push it) push it real good
(GitLab, push it) push it good
(GitLab, push it) p-push it real good

Hey!
Ow!
Push it good

Ooh, baby, baby, baby, baby
Ooh, baby, baby, ba-baby, baby
Push it good
Push it real good
(GitLab, push it)

GitLab, push it

Yo, yo, yo, yo, baby-pop
Yeah, you! Come here, gimme a diff
Better merge it fast or else it's gonna conflict
Yeah you got that pipeline workin' hard, like I knew you would
Now push it
Push it good
Push it real good
Push it good
P-push it real good
(GitLab, push it)

DevOps on this
(Uh) DevOps on this
(Uh, uh, uh) DevOps on this

(Hey) DevOps on this

(Hit it)

Deploy, you really got me going

You go me so

I know just what I'm doing

GitLab, push it

GitLab, push it

Deploy, you really got me going

You got me so

I know just what I'm doing

GitLab, push it

GitLab, push it

GitLab

GitLab, push it

Push-push-push-push it, push it

Push it

Push-push-push-push it, push it

Push it, push it

Push it, push it, push it

Push it, push it

Push it, push it, push it

SECTION: company/culture/top-team-member.md

Note: Top team member awards as of 2018 are no longer in practice.

Top Team Member

A Top Team Member (T2M) exemplifies the GitLab Values beyond of the team of people they directly work with.

You can only be nominated by a manager who you don't report to because this award recognizes cross-functional collaboration.

July 2017 Top Team Member

Brian Neel, Security Lead, is the July 2017 Top Team Member embodying collaboration!

Nomination reasons for how Brian demonstrated Collaboration:

- He has been instrumental in improving our logging so that we can better keep an eye on our infrastructure.
- He always helps with outages when possible
- His help with planning and creating the VPN allowed us to greatly increase our security of our infrastructure.
- He helped with planning of our infrastructure's network and the associated improvements in

security.

- He is always willing to jump in to help whoever possible, even if it means he'll be operating outside his comfort zone.
- He has been instrumental in several large deals from a Security standpoint. Brian is very responsive to email requests from Account Execs and makes himself available to join conference calls with prospective customers.

August 2017 Top Team Member

Victor Lopez, Senior Production Engineer, is the August 2017 Top Team Member embodying results!

Nomination reasons for how Victor demonstrated Results:

- Work on GitLab logging infrastructure. Having a solid logging platform enables us to use GitLab.com's runtime data to make decisions around benchmarking, performance analysis, debugging, root cause analyses, support, and more.
- Victor has enthusiastically picked up this task and is successfully wrangling our logging infrastructure back into shape.

September 2017 Top Team Member

Brittany Rohde People Operations Specialist, is the September 2017 Top Team Member embodying efficiency!

Nomination reasons for how Brittany demonstrated Efficiency:

- Being respectful of other's time making sure her communication was short and sweet
- Manager of one having a clear overview / todo list of what needed to be done
- Move fast by shipping the minimal valuable change making sure decisions were made instead of delayed to not pile on work for later.

October 2017 Top Team Member

Victor Wu, Product Manager Discussion, is the October 2017 Top Team Member embodying diversity!

- Victor has gone above and beyond in leading a podcast focused on Diversity and has shown a strong interest and willingness to help GitLab be an inclusive workplace.

November 2017 Top Team Member

Grzegorz Bizon, Senior Developer, is the November 2017 Top Team Member embodying the GitLab Values!

Nomination reasons for how Grzegorz demonstrated GitLab's values:

- Help setting up the Geo GitLab QA testing framework, displaying the values of Collaboration and Results
- The Geo team now has a suite of QA specs that run nightly, and can be run whenever a new Omnibus package is generated. This has already helped us to catch multiple regressions before they reached customers.

- The Geo team also has a list of scenarios to implement in the future, building on top of his excellent work.

December 2017 Top Team Member

Nadia Vatalidis, Recruiter, is the December 2017 Top Team Member embodying the GitLab Values!

Nomination reasons for how Nadia demonstrated GitLab's values:

- The energy and professionalism that Nadia brings to recruiting new talent to the company is amazing. As a first point of contact with the company for many potential recruits, she's an excellent ambassador for GitLab and personifies of our company values, particularly results and efficiency.

January 2018 Top Team Member

Brendan O'Leary, Professional Services Engineer, is the January 2018 Top Team Member embodying the GitLab Values!

Nomination reasons for how Brendan demonstrated GitLab's values:

- Collaboration and Iteration: Whether Brendan is developing content for sales and marketing, participating in the Marketing Hack Day, or recording a product demo, he is easy to collaborate with, and he keeps moving forward with discrete, concise improvements.
- Marketing hack day examples:
 - [gitlab-com/marketing-hack-day60](#)
 - [gitlab-com/marketing-hack-day21](#)
 - [gitlab-com/marketing-hack-day19](#)
- Collaborating on improving how our customers get educational content.

February 2018 Top Team Member

Andreas Brandl, Senior Database Engineer, is the February 2018 Top Team Member embodying the GitLab Values!

Nomination reasons for how Andreas demonstrated GitLab's values:

- Andreas has been very productive, incredibly helpful, manages his time/work very effectively, actively communicates the status of things, and engages with other teams to resolve issues; all that in his first month.
- Some examples of his work:
 - <https://gitlab.com/gitlab-org/gitlab-ce/mergerequests/17327>
 - <https://gitlab.com/gitlab-org/gitlab-ce/mergerequests/17454>
 - <https://gitlab.com/gitlab-org/gitlab-ce/mergerequests/17476>
 - <https://gitlab.com/gitlab-org/gitlab-ce/mergerequests/16976>
