

ow Diversity, Inclusion & Belonging is perceived by team members & outside talent.

- Organizations embracing a diverse and inclusive culture have a 22% lower turnover rate and a 22% increase in employee productivity
- 93% of respondents agreed that belonging drives organizational performance
- 55% of respondents felt that leadership only addressed racial injustice by writing or speaking about it, not by taking action

In the 2021 Edelman Trust research it shows that it may be very important to customers and investors to know where an organization stands on societal issues. 86% percent of global respondents expect CEOs to publicly speak out about societal challenges, which of course can extend to the wider E-Group.

2021 Axios-Harris Poll 100, which ranks US organizations for their reputation in the marketplace, noted that organizations "with a clear point of view and that deliver not only great products but also an impact on society" ranked at the top of the list.

This shows that the impact on being an awesome Executive Sponsor can and will drive business outcomes!

Being an effective Executive Sponsor

In the A 2021 Great Place to Work survey they measured data around Executive Sponsorship and showed:

- 100% of Executive Sponsors say company leadership encourages participation across ERGs. Only 52% of ERG leaders think that's true.
- 78% of Executive Sponsors believe involvement in ERGs support career advancement, but only 40% of ERG leaders agree.
- 91% of Executive Sponsors feel a sense of belonging at work, but only 76% of ERG leaders say the same.

We want to ensure our Executive Sponsors are the exception to this data.

- We should ensure we are using TMRGs as a great proving ground for career advancement.
- That as leaders of the business you are setting the standard for participation for the wider team.
- That TMRG leaders feel valued and that they are at the height of belonging at GitLab.

Tips and Advice on being a great Executive Sponsor

- Be an excellent listener to TMRG leads and members
- Don't just acknowledge concerns, work to understand concerns
- Listen first, understand next and act/help later
- Advocate for the TMRGs needs at throughout GitLab
- Share the TMRGs concerns with other executives
- Work to advocate for the TMRGs mission to wider audiences
- Actively evangelize new policies, programs and celebrations
- Challenge the TMRG Leads to think creatively & big
 - TMRGs should start small and build momentum but when the time is right get the TMRG to

think creatively and bigger.

- Provide a sounding board and access to support to allow this to occur.
- Become a mentor to TMRG Leads - this is a great opportunity to build our leaders of the future
- Ensure that the TMRG are aligning to DIB and Business Goals
- Provide key insights into GitLab
- Provide Feedback on Mission, Strategy and Goals
- Above all, create a Psychologically Safe space for leaders

Benefits of TMRGs and TMAGs

In general, TMRGs are an excellent support system and key to providing awareness, respect, and building diversity, inclusion and belonging within the workplace. These groups are a proven way to increase cultural competency, retention of team members, provide marketplace insights to the business, attract diverse talent, and more. The endorsement of TMRGs gives team members the opportunity to identify common interests, and decide how they can be shared with others.

GitLab Benefits of TMRGs

- Grow GitLab's business and the company from DIB branding as it's top value which will appeal to customers and attract new team members.
- Support GitLab values and business goals, including the Company's commitment to foster an inclusive work environment.
- Foster communications between GitLab and its team members.
- Provide mentoring and educational and professional development opportunities for GitLab team members

Team Member Benefits of TMRGs and TMAGs

- TMRGs introduce new and current team members to GitLab's culture and helps to build and maintain engagement.
- TMRGs offer team members togetherness, camaraderie and connections to GitLab giving them a sense of belonging.
- You will have the opportunity to develop your professional and leadership skills, build relationships across the company and regions, connect with possible mentors/mentees, raise awareness for underrepresented groups at GitLab and make a difference at work and in your communities.
- TMRGs provide team members with opportunities for development, showcasing their skills and developing their own brand within GitLab.
- Team members will also have opportunities to obtain mentoring, networking, providing positive impacts to the business, and channeling their voices to advocate for change.

Forming a TMRG or TMAG

TMRGs support our diversity, inclusion and belonging framework, maintain an open forum for the exchange of ideas, and serve as a source of educational and professional development opportunities for GitLab team members. It is expected that all GitLab supported TMRGs will participate in initiatives that focus on the following group elements:

1. Team Member Development: Activities that further the development of group members. Examples

could include:

- Developing and delivering developmental opportunities for members
 - Potential career development events and activities
 - Identifying effective mentoring opportunities
 - Building a network of development resources that are easily accessible by members
1. Outreach/Business Development: Connecting with groups beyond GitLab
 - Establishing internal and external business partnerships
 - Representing GitLab at industry events
 - Working with external communities to help GitLab achieve market presence and leadership brand
 1. Awareness and Education: Raising awareness and educating all team members.
 - Events/Initiatives that bring awareness and education of the TMRG to the company
 - Engagement of Allies and GitLab team members with the TMRG
 1. Talent Acquisition/Retention: Promoting, growing, and developing the TMRG group as a whole.
 - Establishing partnerships with universities and or STEM programs
 - Working with Talent Acquisition to identify sourcing and talent acquisition opportunities
 - Creating initiatives that attract related diversity dimension talent.

Possible events:

- Webinars
- Panel discussions
- Effective Presentations
- Effective Communications
- Virtual Lunch n Learns
- Speed Networking with Executives
- "Meet the TMRG" (informational outreach event for employees to learn more about the DIB Community)
- Volunteer activities (could be co-sponsored with other TMRGs)
- Recognition events (ex. A meeting to celebrate the TMRG annual achievements, award success of individuals)

How to suggest a new TMRG and TMAG at GitLab?

- To suggest a new TMRG or TMAG at GitLab please use the TMRG Request Issue Template.

While creating the new issue please:

- Take an opportunity to fully read the guide here provided
- Be prepared to discuss and explain the TMRG diversity dimension that you would like to start.
- Provide a detailed explanation of why GitLab should support the TMRG
- Provide a draft of a possible mission statement for the TMRG

Let's Get Started

Naming and branding for the TMRG or TMAG

All names, because they are visible externally and could compete with other projects, products and or not be a good representation of GitLab must be approved by Legal and Brand. You should work with the DIB Manager (Liam McNally lmcnally@gitlab.com) to gain a consensus on ideas.

Keep in mind that names chosen by the TMRG may not meet GitLab's naming and branding standards and may need to be changed.

Defining your TMRGs or TMAG mission statement

A mission statement is the simplest and clearest way to explain the purpose of your group and how it will achieve its goals. Keep your mission statement short, and use simple terms that everyone understands. Finally, make sure the mission is flexible enough to allow for goals and activities to change over time.

Create a project

As with all GitLab business, we want to dogfood our own product. As such, you should consider creating a GitLab project to manage discussions in issue and update the repo with mission statement, events, and the like. You should create the repo in the gitlab-com group. To see a project in action, you can check out the GitLab Pride project.

Create a Google group

Managing membership will be greatly simplified by using a Google group. The main benefit is that you can invite the group to any calendar events and users can join or leave the group on their own. In order to create a Google group, you'll need to create an access request issue requesting a new group. There is a template you can use and you can view an example issue if you'd like. Once you've got the Google group created, you can add users manually or allow them to sign up on their own at the group homepage. You can look at the pride-erg for an example of what that might look like.

TMRG and TMAG Members

Membership in an TMRG at GitLab is open to everyone, including full-time and part-time team members, interns, and contractors.

Members

A member is an active participant in the ongoing activities of an TMRG. As a global company, the ways that members participate may vary based on location, culture, and preferences. Membership is open to both team members who identify with the diversity dimension that is the community's focus and allies who wish to advocate and support the mission of the TMRG.

Allies

An ally is someone who supports, empowers, or stands for another person or a group of people. Through our research, we have found it to be a best practice for all to be inclusive of ally support. When creating an TMRG, planning activities, and engaging with members be sure to consider how allies will be involved.

An ally strives to...

- be a friend
- be a listener
- be open-minded
- have their own opinions
- be willing to talk
- recognize their personal boundaries
- join others with a common purpose
- believe that all persons regardless of age, sex, race, religion, ethnicity, sexual orientation, gender identity and gender expression should be treated with dignity and respect
- recognize when to refer an individual to additional resources
- confront their own prejudices
- recognize their mistakes, but not use them as an excuse for inaction
- be responsible for empowering their role in a community
- commit themselves to personal growth in spite of the discomfort it may sometimes cause

As important as it is to define what an ally is in a positive way, it is also helpful to understand the boundaries of an ally's role.

An ally is NOT...

- someone with ready-made answers
- necessarily a counselor or trained to deal with crisis situations
- expected to proceed with an interaction if levels of comfort or personal safety have been violated

TMRG or TMAG Leads

Selection Criteria

- The team member must be performing in their role and not part of any performance management process as confirmed by the People Group.
- Must be a full-time GitLab team member. This includes PEO and full-time contractor team members.
- At least 6-month tenure at GitLab
- Ideally already an active TMRG member if the TMRG already exists
- Approval from your direct manager, support to commit the time and to use this leadership role as a professional development opportunity
- A minimum one-year commitment in the role but understanding this may change to less and can be more.

Selection Process

- The DIB Team will announce a vacancies for TMRG leadership in the appropriate slack channels
- The nomination process will stay open for two weeks from the original slack message
- A team member will nominate themselves for a lead role by completing the TMRG Lead Nomination Issue template
- The DIB team will consult with existing TMRG members, Leads, The People Team, Executive Sponsors and Managers to decide who will take the leadership position. This is to ensure the best person for the TMRG program is selected and diversity of departments, geography and URGs are properly represented.

Qualities of a TMRG and TMAG leader

- Interest, passion and time to devote their time to the TMRG
- Possesses facilitation, team-building, and collaboration skills
- Has a desire to build a presence for the TMRG or TMAG within GitLab

TMRG and TMAG Lead Training

All TMRG Leads should either watch the video or read through the slides of this training to ensure they are fully versed in the responsibilities, accountabilities and governance of TMRG leads.

Video

Slides

Roles Within the Group

Team Member Resource Group Members

At GitLab we all contribute! Everyone has an opportunity to lead and provide feedback within the group.

Executive Sponsor

An executive GitLab team member who is responsible and accountable for strategic support of the group

- Share accountability for the success of the TMRG
- Participate as an active member of the TMRG
- Share information about the TMRG activities with other leaders
- Provide insight and guidance to the TMRG as needed
- Partner with TMRG leads on issues, concerns, and resource needs of the community
- May provide additional budget

TMRG and TMAG Lead

A GitLab team member or team members who are responsible and accountable for strategic direction and operations of the TMRG or TMAG.

Responsibilities

- Operational lead/leaders of the TMRG or TMAG
- Meets with the DIB team on a quarterly basis as a minimum
- Responsible for submitting annual strategy using the Annual Strategy Template
- Responsible for submitting a quarterly strategy using the Quarterly Strategy issue template in the DIB project for the TMRG
- Work with business leaders on the success of DIB and the TMRG at GitLab
- Facilitate TMRG meetings both async and sync ensuring inclusivity across geographical regions
- Serve as contact for any team, department, or other GitLab team member requesting partnership or education with the TMRG

Accountabilities

These accountabilities are important factors in ensuring that the TMRG maintains TMRG Status. The DIB team may: remove TMRG Leads if they are not achieving the accountabilities, remove the TMRG status or change the status of the TMRG to a TMDG

- Ensuring that the TMRG has a structured plan. Detailed quarterly and a high-level annual plan. These plans should be submitted and discussed with the DIB Team.
- Delivery on the TMRG Plan
- Managing the TMRG budget, including tracking TMRG budget spend. This will ensure we know how to allocate future budgets.
- Engaging and growing the TMRG members

TMRG Leadership Recognition Program & Key Performance Indicators

In May 2023 the DIB team did an informal recognition bonus to TMRG Leads for their contribution to the DIB Strategy. We want to formalize this process and tie this to TMRG Leadership performance in the future as outlined below.

Budget permitting the Diversity, Inclusion & Belonging Team may provide a recognition bonus to team members leading our TMRGs or DIB focused groups. This is to recognize great work being done to support the DIB Strategy, DIB Team and embedding the DIB value at GitLab. In order to recognize great performance we have set out a criteria to be eligible for the recognition bonus. This can also work as a form of job responsibilities for leaders.

In order to be eligible for the full recognition bonus you must have performed at least 80% of the requirements. To be eligible for part of the recognition bonus you must have performed at least 60% of the requirements.

TMRG Leadership Key Performance Indicators:

- Participated in completing an annual strategy for the TMRG
- Participated in completing a quarterly action plan for the TMRG for each quarter
- Taken action and delivered part or the full annual and quarterly strategies and action plan
- Effectively plan and track budget use
- Have completed TMRG events in all four of the outlined TMRG Pillars
- Maintain a regular cadence of TMRG meetings that accommodate our global demographic
- Receive an average TMRG satisfaction score from TMRG members above 7/10
- Meet with the DIB Team at least once a quarter to discuss goals and outcomes
- Developed an executive sponsor engagement plan alongside your executive sponsor
- Maintain or grow team member engagement measured through Slack Analytics, event attendance, issues participation and synchronous meeting attendance

Optional roles

While not required, we recommend establishing other leadership positions to ensure that the responsibilities of the Lead and Co-Lead remain realistic and success is achievable for the TMRG. Here are some example roles we recommend for each TMRG that reflect the 4 elements of focus listed above:

Leader of Professional Member Development: Activities that further the development of group members.

Leaders of Outreach/Business Development: Connecting with communities beyond GitLab

Leader of Awareness and Education: Raising awareness and educating all associates.

Leader of Talent Acquisition/Retention: Promoting, growing, and developing the TMRG as a whole.

Treasurer: managing the budget of the TMRG, working on necessary approvals internally and looking at the ROI of any events that take place.

TMRG Working Groups

The idea for TMRG Working Groups was born in the Women's TMRG where they had many ideas but individuals were not able to make the time commitment to becoming sub-committee leads but were able to commit short periods to individual projects.

How it works:

- The TMRG will create issues for projects they wish to complete within a quarter within the TMRG Project.
- Either via Slack, Regular Synchronous Meetings or another method of communication. Release the projects to TMRG Members inviting participants to help on the project.
- The project should elect a leader for the duration of the project. Who will act as a DRI of ensuring that it is completed in a timely fashion and assign tasks to the other members of the project.
- Once the project is done, the group will disband and are free to participate in a new working group or simply move back to being an active member of the TMRG

TMRG and TMAG leader term of service

TMRG leaders to commit at least one year to their leadership role, with the option for less if a situation arises which means they are no longer able to perform the role.

In January of each year, a selection process should be undertaken to allow other team members the opportunity to nominate themselves to lead the TMRG. If no one wishes to nominate themselves the existing leaders will automatically be invited back to lead the TMRG providing they still meet the selection criteria.

TMRG and TMAG leader succession

Leadership succession is critical to sustaining TMRGs and keeping leaders energized. Ideally, outgoing leaders will have and overlap with incoming new leaders by acting as advisors to ensure a seamless transition.

Research suggests developing the next generation of leaders for your TMRGs by looking for members who have taken smaller roles in heading up committees or organizing events; speak with them about their interests and encourage them to take on more visible roles within the TMRG.

Tools for TMRG and TMAG Leaders

These resources are here to help you effectively lead and grow an TMRG.

Communications

Communication within TMRGs keeps members aware of, involved with, and supportive of the group's direction and activities. TMRGs can use several inlets of communication tools outlined below to keep members informed about meeting times, structure, membership, and updates.

Communications resources

- Slack Channels
- Google Calendars
- Google Forms
- Email templates
- Invite templates

Asynchronous Team Member Participation

As an all remote organization, having sync meetings can be very difficult to engage all members of the TMRG. To increase participation, we should think differently about what participation looks like and what an active member looks like.

Active TMRG and TMAG Member:

A team member who provides meaningful interactions with the TMRG and TMAG through decision making, discussion participation or interactions. These need not be spoken or written but could be other avenues such as slack emoji to indicate support, participation in decisions via a poll etc.

This does not take away the need for synchronous meetings but allows everyone to contribute in the way they feel most comfortable and is inclusive of all geographies.

Guidance/Suggestions for Encouraging Participation

Use tools that work alongside sync meetings that encourage participation in the meetings.

- Standuply is great for running an async meeting, you can add video, ask bespoke questions that may have arose in the sync meeting and get wider perspectives.
- Polly is great to get decisions made asynchronously where you want wider input than those who were unable to attend sync meetings and reach a consensus and proceed to action. There are templates available in Polly which can be useful tools.
- Loom could be a great tool to provide a quick video update of meetings or activities happening within the TMRG.
- Create a thread in Slack of the key points from the meeting that can be discussed.
- Have a bias towards action BUT allow async members to participate before making the decision. Have a 24-48 hours window to reply before a decision is made.
- Have more async meetings than sync meetings. Doing this will allow team members to feel as though they are not missing out on important discussions, as the discussions happen elsewhere

more often.

Examples:

- Welcome to our mid-month slack meeting, here is a thread to discuss XYZ as voted for in Polly. Once the discussion has concluded, we will do another Polly to decide on any actions we wish to take.
- Standuply Questions: How do you feel since our last meeting? Is there anything you would like to discuss/get an opinion on related to the XYZ TMRG? Are there any actions/budget spend/sponsorships that you would like to see soon? Any news articles positive/negative that you would like to share?
- In the last synchronous meeting on xx/xx/xx some of the key things discussed were:
 - 1.
 - 1.
 - 1.

You can see full agenda notes here: (insert google doc) feel free to add any further thoughts in this slack thread.

Measure

Keep a track of engagement across the different methods so you can understand where the most engagement happens. This can be very useful in determining what is best for your particular TMRG.

You can use this template which is fairly manual or choose your own methods.

What to do if you're asked to provide your opinion on behalf of GitLab

There may be times that you are asked to comment on the state of DIB at GitLab or your TMRG. When or if that happens, please refer to the SAFE Framework

TMRG Success measurement (Capturing Data)

Measuring the success of the TMRG is important for the sustainability of the group and for ensuring the group's effectiveness.

Members of the TMRGs are encouraged to identify multiple ways the success will be tracked and measured over time. Here are some suggestions for measuring success:

- Reviews and reports on metrics should be submitted quarterly to the DIB Manager and updated to the handbook. We also encourage you to share metrics with the TMRG as a whole so there is a shared understanding of expectations, value added, and areas of improvement.
- Conduct an annual review with the DIB Manager, to discuss successes and opportunities for the upcoming year
- Consider reviewing and modifying, if needed, the TMRGs mission statement and/or goals (every year or less to move forward iterations with changes in the TMRG)
- Identify the right cadence of gathering member feedback via surveys, focus groups, or year-end review sessions. Don't wait until there is a lack of engagement, ask early and often.

Additional suggestions to measure success (may vary based on the state of the TMRG)

- Event attendance
- Number of events hosted
- Feedback from events
- Blog pages
- TMRG page etc
- Tracking TMRG membership numbers month to month
- Participation in the external community events
- Volunteer hours contributed by members of the TMRG
- Quantitative feedback from TMRG members
- Number of ally members (when appropriate to track)
- Google form list sign-ups from the handbook
- Communication methods in place (Slack, mailing list, calendar, etc)

Resources for TMRGs and TMAGs

We have provided a number of optional resources for TMRGs to use that assist in setting the strategy, roadmap, financial planning etc.

- TMRG ACTION PLAN Template: This can be used to create an action plan, execute and measure.
- New TMRG Roadmap Template: This template gives some examples of a Roadmap for new or developing TMRGs
- Established TMRG Roadmap Template: This template gives some examples of a yearly roadmap for established or mature stage TMRGs
- Budget Tracker: This is a simple budget tracker for Lead or a treasurer of a TMRG to plan and keep a track of the annual budget given to TMRGs.

TMRG and TMAG Goal Setting

Having short terms and long term goals for the TMRG is extremely important in developing and the continued success of the TMRG. Goals are vital to helping GitLab as a whole move to a more inclusive environment for your under-represented or at risk group.

Three advantages of setting goals:

- Action orientated - it is easy to get bogged down in a problems, issues or complaints. Having goals for issues will allow you to move from frustration to action
- Visibility - Goals will allow you to talk to and broadcast goals to a wider audience including executive sponsor, GitLab leadership and wider team member population
- Make GitLab more Inclusive - by setting goals for the TMRG you are ensuring that we bring in inclusive practices and move the needle for your TMRG

How to set goals for the TMRG and TMAG

- Work with the wider TMRG on the TMRGs priorities
 - Leadership should distill these down into a manageable number of goals
- Utilize a goal setting methodology such as OKRs or SMART to set the goals in a practical way
- Add these goals to your quarterly strategy issue for the TMRG
- Assign a working group or DRI/s to the goal

- Share the goals with your executive sponsor and the wider GitLab team through the Monthly Initiatives Call
- Engage with key stakeholders, i.e. Talent Acquisition if the goal relates to hiring
- Prepare for goal obstacles and push back. What are the values you are implementing with this goal?
- Importantly! Define how the goal would be beneficial for the at-risk group and GitLab as a whole. This will help gain buy in from key stakeholders

Goal Setting Activities

To help develop goals you may want to utilize goal setting activities to assist in identifying the right goals.

- Backward Goal Setting: This is where you start with a large goal or objective. Then distilling this down to smaller goals & objectives to achieve the larger goal.
- Success Goal Setting: Similar to the above, but you will define what success looks like, either with a measurable or an outlook. The set goals and objectives that will help get to that end state.

Finance & Budgets for TMRGs

Each TMRG has access to a budget on a per quarter basis to assist in the activities they wish to engage in to further develop the TMRG, Enable and Empower the members, develop activities & events or to buy merchandise.

Details on how to access to the budget are below

Expenses could include but not limited to:

- Paying a speaker to present at GitLab
- Purchasing TMRG specific Swag
- External Consultants to help problem solve on TMRG issues
- Sponsoring a partnership with a external vendor
- Making a donation to a relevant charitable organization
- Lunch & Learns
- TMRG Social Activities

Feel free to get creative with how you support and engage the TMRG utilizing the budget to do so.

Accessing TMRG Budget

Each quarter the DIB Team have a defined amount of funds accessible by the TMRG, in order to access the funds, prior to the quarter beginning the TMRG must provide a plan with a defined amount of budget they require for the quarter. Any funds not assigned or requested will be used by the DIB Team for other activities, partnerships and programming.

On a quarterly basis, each TMRG DRI is responsible for updating the TMRG Forecast Tracking Spreadsheet for expected expenses for the remainder of the year. Deadlines for updates are due the middle of the following months:

- January
- April
- July
- October

As our finance processes are a use it or lose it policy we want to ensure that if budget is not being utilized we can reassign that budgeted amount to other initiatives, TMRGs or supporting external partnerships.

Submitting/Approval of Expenses

Submit to you DIB Team Member for approval in ZIP

Swag- If the purchase is Swag, please follow the outlined process in the handbook.

Charitable Contributions- Please follow the Philanthropy Policy

Team Member Expensed- In some instances, TMRG team members will need to follow the expense reimbursement policy. If an item is purchased individually upfront (i.e. meals, books) and the item was budgeted, the team member will submit the receipt to get reimbursed. Reach out in expense-reporting-inquiries for a new expense tag prior to the event. When submitting expenses for reimbursement, please add the "TMRG" classification and the expense tag to your expense when submitting the report.

Key Milestones for TMRGs (Suggested)

Develop membership via

- DIB Monthly Call
- Slack Channels
 - whats-happening-at-gitlab
 - diversityinclusionandbelonging
 - Location specific channels such as APAC, loclondonuk etc
 - Other TMRGs channels
 - Any other channels that seem relevant

Hold your first call

Discuss the 4 Pillars of the TMRGs

Discuss the mission of the TMRG

Discuss any immediate actions the TMRG could take

Discuss the cadence of the meetings

Set up regular cadence of the calls and Async Participation Opportunities

Monthly is suggested - try to include timezones either by rotating or having more than one call

Suggestion: Assign sub-leads for each pillar

To better execute and ensure that the Leadership duties of the TMRG are not overly burdensome

on 1-2 individuals. It is suggested to add 1 or 2 leads to each pillar, the TMRG Lead or Co-lead can also co lead pillars.

Develop a 6 month strategy

Using the TMRG Strategy Template or a derivative of the template. Develop a strategy and plan for the TMRG to help take steps towards achieving the Mission and a Vision.

This would be a great opportunity to include your Executive Sponsor

Suggestion: Gain leadership sponsors

In addition to executive sponsorship, some of our TMRGs have found gaining Director+ sponsors very beneficial in the advancement of there TMRG, MIT TMRG is a great example of this.

Hold your first All GitLab event/session

A great way to gain traction and have an initial goal. Is to develop a All GitLab event. Check out the Coming Out Day session from the Pride TMRG.

Develop a working group and figure out how you want to do this. Ideas could include but not limited to:

- Roundtables
- External Speakers
- Panel Sessions

Suggested process for your event

1. Contact your DIB Partner with the idea and formulate with them on the format that you would like it to take.
1. Source and confirm speakers whether internally or externally, set the date & time, taking into account budget considerations, regions etc.
1. DIB Partner and TMRG Lead will work with the People Connect Team via HelpLab to schedule the event on the Team Meetings calendars.
1. Post the event to the appropriate Slack Channels.

Execute strategy

Re-Strategize every 6-12 months

SECTION: company/culture/inclusion/identity-data.md

GitLab Identity Data

The metrics on this page are being reviewed and adjusted. For further trending information, some of these metrics can also be viewed on the People Success Performance Indicators page.

TO BE UPDATED

SECTION: company/culture/inclusion/neurodiversity-resources.md

The purpose of Neurodiversity Resources

- Provide resources for those who identify as neurodivergent, to help them navigate remote work, management difficulties and other situations and challenges that they may face at work.
- Provide team members and managers+ resources to help provide a better team member experience for their colleagues and direct reports who identify as neurodivergent.

Resources for those who identify as neurodivergent

- GitLab's Employee Assistance Program, Modern Health, offers resources to support team members that identify as neurodivergent:
 - Digital Content: Modern Health offers digital resources that may be helpful, such as meditations for sensory mindfulness and programs that offer strategies for focus.
 - Coaching & Therapy: GitLab Team Members have access to coaching and therapy sessions. Modern Health has counselors and therapist who specialize in working with people across the spectrum of neurodiversity. Any member can write into help@joinmodernhealth.com and ask for a provider with this kind of specialization (the more specific, the better).
- Neurodiversity as a competitive advantage
- ADHD in the workplace
- Youtube channel with significant amounts of information, interviews, and personal experiences relating to ADHD
- The Autistic Life Resources Store
- Join the neurodiversity Slack Channel for support & community with other GitLab Team Members or to learn more about the experiences of others
- Join the bodydoublefriends Slack Channel to find others to participate in a "body-doubling" virtual work session that can help you begin projects or tasks with the support of another person as a "virtual-anchor" and accountability buddy. Use this channel to request a body double session with another GitLab Team Member which aligns with our value of collaboration and diversity, inclusion, and belonging.
- Join the neurodiverse-coffee-chat Slack Channel to get paired for a coffee chat with others in the neurodiverse GitLab community

Resources for managers

All of the links in Resources for those who identify as neurodivergent are useful, and in addition there are these resources available to managers:

- DIB Masterclass: Equipping People Managers to better support Neurodiverse Team Members with Dr. Samantha Hiew

Do you want to disclose or not?

mermaid
graph TD

A[Has your manager commented on traits related to your neurodiversity in relation to your performance?]

A-->|Yes| B[Have you requested work accommodations for your specific neurodiversity to mitigate performance issues?]

A-->|No| C[May not need to disclose at this time]

B-->|Yes| D[Have these claims been supported by your manager?]

B-->|No| E[Consider making a request for accommodation without disclosure if you do not feel comfortable]

D-->|Yes| F[You can stop here if your goal is to get accommodations for your Neurodiversity. Do you still want to disclose?]

D-->|No| G[Do you feel your manager would be supportive if you disclosed the reasons for your accommodations and this is reflected in GitLab's values?]

G--> |Yes| J[You should consider disclosing if you feel comfortable to get the support you need]

G--> |No| K[You can consider speaking with a People Business Partner or the DIB Team about accommodations and the best way to approach your manager]

Diverseability Resource - Disclosing your disability to your team and GitLab

Resources for Team Members and Managers+

- Modern Health provides Coaching sessions for team members and managers supporting people in the neurodiverse community. Team Members can schedule a coaching session via the modern health platform. Please reach out to the HelpLab should you need any help with scheduling a session.
- How to embed neurodiversity into your people management practices
- Autistic Advocacy Resources
- Certified Neurodiverse Workplace
- Understanding the benefits of neurodiversity in the workplace
- Neurodiversity Resources for Employers
- Neurodiver-city.org
- Useful videos for understanding ADHD from the outside, What is ADHD? and Why Do We Hold Ourselves to Neurotypical Standards?
- Specialisterne Blog
- Youtube channel with significant amounts of information, interviews, and personal experiences relating to ADHD

Team Member Profile

As a way to support all team members and ensure that neurodivergent team members who choose not to disclose or may be undiagnosed are being provided the support they need. All team members have individual needs and employing personalisation will go a long way to ensuring everyone feels included.

You can use this template to help build a simple team member profile of communication, working and feedback styles.

Reasonable Accommodations

We provide reasonable accommodations to individuals in order to remove any artificial barriers to success. Our EAP program is also always available for team members to help them identify the best reasonable accommodations for them.

Please note that all accommodations discussed below are potential accommodations that can be reviewed on a case-by-case basis, but are not guaranteed. Any accommodations and/or adjustments made are in line with the applicable laws/regulations of the jurisdiction in question.

Evaluating Performance

It is important to have a discussion with the team member regarding the best way for them to receive feedback. Although the performance standards would not be changed, the manager might need to change their approach. Reflecting on your communication style as a manager and tailoring this to best suit the individual's need can be a good place to start. There is no one size fits all approach when it comes to communication, but here are a few ideas:

- Conducting more frequent one-to-one meetings
- Delivering feedback visually structured in a way (tables, color coding) that is easier to digest
- Make all types of feedback direct and clear

Coaching

- Recorded instructions that can be reviewed later

Time Management

- Assign a mentor
- Provide to-do lists
- Assistance with prioritization
- Assistive technology (timers, apps, calendars, etc)

References for more ideas

- Attention Deficit/ Hyperactivity Disorder (AD/HD)

SECTION: company/culture/inclusion/neurodiversity-short-course.md

In this course you will read or watch content created by the Diversity, Inclusion & Belonging team, curated from experts in the field via LinkedIn Learning and hear from GitLab Team Members who are neurodivergent. I am excited for GitLab Team Members to learn more about Neurodiversity and I want you all to remember the experiences that you will read or watch are all individuals, everyone's experience is different, what works for one person may not work for another. This course will hopefully give you some methods to help appreciate people as individuals with individual needs and to be more inclusive to neurodivergent team members. This is not a certification and the learning is a continuous process.

You can access this short course in LevelUp here

Exploring Neurodiversity

Defining Neurodiversity via LinkedIn Learning, by Tiffany Jameson

{.h4}

I speak to many organizations all around the world. When I talk about neurodiversity, most have never even heard of the word, so let's start there. Neurodiversity is an umbrella term for individuals who cognitively process differently than what society considers the norm.

Neurodiversity doesn't discriminate based on color or gender, and symptoms can present at different stages in an individual's life.

Now, Judy Singer coined this term in the late '90s, and it's not a diagnosis. It can be better described as a social movement, to view cognitive diversities from a strengths-based lens. So, why is it essential to understand neurodiversity? The World Health Organization reports 15% of humanity is living with a disability, and only a small fraction of organizations, less than 12%, are including this group in their diversity programs. We all feel the world shrinking, and the challenge we face is adapting to many identities. Color, religion, gender, and neurodiversity. So let's spend some more time talking about terminology. Terminology can get a little tricky, and is always changing.

For this course, I'll refer to the group as neurodiversity, and to the individual as a neurodivergent. I'll refer to those who are not neurodivergent as neurotypical. Keep in mind, there are arguments that there is no such thing as a typical brain, but we use that term to define people that would not traditionally fall under the neurodiversity umbrella.

There isn't a predefined list of what falls under the umbrella, it is a personal decision to be recognized as neurodivergent. However, in this course, we'll focus on human resource knowledge and support of

- Autism
- ADHD
- Dyslexia
- Dysgraphia
- General learning differences.

These groups make up a large portion of the population, and have many talents to lend to an organization. As an HR professional, you can guide your organization in learning how to hire, employ, and support this population to maximize this fantastic and talented workforce. Neurodiversity creates a new landscape of hiring and supporting employees. Human resource professionals can increase their competencies to support this group and educate the workforce to ensure inclusion for all types of minds. The world is ready to embrace neurodiversity. Neurodivergent people bring unique perspectives, solutions, and innovative ideas. Starting here is a great first step to embrace this population within your organization.

Defining the spectrum of neurodiversity via LinkedIn Learning

{.h4}

Neurodiversity is an umbrella term but there are some impairments more commonly associated with neurodiversity. So let's drill down on the five areas I'll be highlighting in this course.

- First, autism spectrum. This is a broad term used to describe a group of neurodevelopmental differences. These manifest as nontraditional ways of communicating and interacting socially. Often, autistics demonstrate restricted and repetitive patterns of thought and behavior, sometimes getting stuck on a topic. An autistic's ability to learn deeply about topics and notice when there are inconsistencies brings value to any team. Almost 2/3 of autistics also have ADHD.
- ADHD, which stands for attention deficit hyperactivity disorder is one of the most common neurological disorders. So in the workplace, it presents itself as difficulties with working memory. Impulsivity, prioritizing, focusing, remembering plans, multitasking, coping with stress and also organizing. I find that this group of individuals are terrific at dynamic, creative and inventive thinking. Most of the successful salespeople I know have ADHD.
- Dyslexia and Dysgraphia and these overlap a lot. So dyslexia is characterized by difficulties with accurate or fluent word recognition and by poor spelling and decoding abilities. So outward signs include letter or number reversal, difficulty reading and spelling, difficulty with left versus right, trouble following multistep directions and slow handwriting that is difficult to read. It may take them longer to write than the average person and the person may express discomfort or stress while doing so. People commonly experience both dysgraphia and dyslexia together. Both of these groups uniquely embrace creative thinking, problem-solving, and the ability to decipher information, all skills that can add value to your team.
- And then last, we have the broad area of general learning difficulties. This refers to a condition in the brain that causes difficulties comprehending or processing information and is caused by several different factors. Individuals impacted may experience difficulty learning in a typical manner, but not the inability to learn. Keep in mind that each of these conditions lives on a spectrum, just because two people identify as autistic doesn't mean they present in the same way.

My son in his early years, had difficulty speaking, exhibited stimulatory behaviors that distracted him from learning and auditory processing that made him unable to correctly hear people talking, but we knew others who were also neurodivergent and were unable to speak. All these individuals were diagnosed with autism, yet it was impacting them differently in various aspects of their life.

It's important that your company supports the whole person, so you could include all the conditions that fall under the neurodiversity umbrella. When you think about your neurodivergent employees, consider what opportunities exist to use their special, creative and innovative talents to gain a competitive advantage.

Understanding the challenges for five groups via LinkedIn Learning
{.h4}

One of the most important reasons a professional must understand neurodiversity is to fully appreciate and acknowledge the toll working in a neurotypical world has on many neurodivergent people. It starts with recognizing the natural differences in the way the human brain interprets information. By understanding these differences, you can begin to show empathy for those that experience life differently than you.

So let's chat about some of the common challenges for neurodivergent people in the workplace, starting with executive functioning.

- Executive functioning is a set of mental skills that include working memory, flexible

thinking, and self-control. A person with strong executive functioning can multitask, is extremely organized, and has the ability to plan and prioritize tasks. These individuals work well in project management roles. Now, we use our executive functioning extensively throughout the day. When it's not working properly, it can show up as inability to focus, follow directions, handle emotions, and also, plan.

- Expressive language such as thinking on my feet, processing questions, or being able to speak at all. When in a conversation with a neurodivergent, lack of eye contact is common, often sending the wrong message of boredom or inattentiveness. Also, the use of repetitive or rigid language or even monologue about a topic of interest is common.

- Elements of communication, including nonverbal language, can also be a challenge for a neurodivergent to pick up on. Tone, facial expressions, and other non-verbal communication are parts of communication used to effectively send a message. Often, they miss these more subtle forms of communication. This creates a challenge when people are accustomed to certain reciprocal behavior from people they talk with. You won't always get that with the neurodivergent, but it doesn't mean the interaction is any less meaningful.

- Camouflage or masking. I like to explain it like this. Each morning, you wake up with a full cup of water. That's your resources for the day. Typically you lose a little water here and there throughout the day until you're pretty low. For some, that cup has a bunch of tiny holes in it, and before they can even get started with their day, their resources are being lost. Their energy switches to keeping water in the cup. Unfortunately, this activity only makes the cup drain quicker. The cup with holes is a representation of a neurodivergent's use of camouflaging or also called masking. So social camouflaging or masking is the behavior of trying to act normal, communicate normal and hide their neurodivergent traits. They social camouflage to escape the various stigmas associated with neurodivergent conditions or to escape bullying and ridicule they have experienced in the past. Think of it as post-traumatic stress and social camouflaging is their coping mechanism. This act leads to anxiety and burnout. Many neurodivergent people hide this string. Why do they feel like they have to hide this? Well, here's why. The general population doesn't understand these impairments, how they manifest and what they mean for their coworkers ability to perform work. Innocent ignorance of neurodiversity by co worker's is the number one reason an individual will tax their system by social camouflaging, but by you creating a neurodivergent-friendly environment, their energy translates into productivity and innovation for your organization, so before this group can be accepted, they must first be understood.

Neurodiversity in the Workplace at GitLab

Personalisation

Personalisation of communication & management styles

The key to becoming a workplace that is built for all team members is to ensure that how you operate with all team members is from a personal perspective. It is easy to have one way of doing things, whether that is how you communicate with colleagues, manage team members, how you deliver feedback and much more.

Unfortunately, those modes are not going to work for everyone, each person has different needs and this is especially true for neurodivergent team members. As we saw, there are several potential challenges that neurodivergent people can face. To combat those challenges we should be asking questions of all team members regardless of whether they are neurodivergent when we are working closely with them or managing them. We do this so those team members who do not

want to disclose they have a neurodivergence, people who are undiagnosed and more generally trying to make a workplace that is inclusive so all team members can thrive. Some examples could be.

1. What is your preferred work, learning & communication style?

Answers could be for example:

- Written information over verbal/video
- Structured work weeks and clear goals
- Clear agendas and no surprise meetings
- I am direct and to the point.
- I tend to talk to think and can go on tangents. I am open to being told that I am running off-topic.

2. How do you like to receive feedback on your performance both constructive and positive?

Answers could be for example:

- I like to receive feedback written and then have a discussion about it.
- I like to receive all feedback verbally first and then discuss in real-time.

You can also challenge yourself to ensure you are being clear about your intentions to ensure your intentions are not missed. Some team members may thrive in heated discussions and debates and not need assurances afterwards. Some team members could be in the exact same conversation but find it very stressful. Do not assume everyone's emotional response in a meeting or situation is the same. For example, you could assure all team members by saying something like:

- I wanted to let everyone know that we have great actions to move forward and I know that debates like this can be stressful.
- I would like to remind everyone of our operating principle to disagree, commit and disagree. We are good to move forward, thank you everyone for the discussion.

Servant leadership is very important when building an environment where neurodiversity can thrive and is described in the handbook as one of the important things in being a remote manager. It is also important when thinking about how to cultivate an inclusive environment. You will have to adjust your management style for all your team members to ensure that you set all team members up for success. Asking the questions above will allow you to apply the principles of servant leadership more effectively such as building trust, operating with empathy, growing team members and actively listening.

Bias & Perception

Challenging your bias & perceptions

If you haven't already read through our handbook page on unconscious bias and also read or taken the psychological safety short course. Everyone has bias and it is about recognising and challenging your bias which can inform your perceptions.

People who are neurodivergent can miss social cues or not provide certain social cues. This

could elevate a biased response in those interactions. You may perceive someone as disinterested, uncommunicative or lacking knowledge. Ensure that when you encounter situations that you do not perceive as normal, cloud your judgment on that person's ability to do their work. Let our results value always be the indicator of success.

Our Team Members

You will learn from team members who are neurodivergent, talking about their experience, how they work at GitLab and some of the accommodations they have made in the workplace. You will see how each individual is different and there isn't a one size fits all approach. I'd like to thank all the participants for their openness and vulnerability which will no doubt help GitLab Team Members understand the intricacies of neurodiversity.

What can you do next: Building a more inclusive environment for neurodivergent team members

- Build team member profiles or build your own team member profile and share it with your colleagues/manager. Personalisation is key, by focussing on the team members' individual working styles, communication styles and feedback loops, you will negate the need for disclosure and allow all team members to thrive. You can use this issue template.

Neurodiversity Resources Handbook Page

Reasonable Accommodations

This is covered in the Neurodiversity Resources Handbook Page but here are some articles that provide specific examples of reasonable accommodations for neurodivergent team members.

Neurodiversity Hub for Employers

Job Accommodation Network

Neurodiverse Employees may need accommodations for remote work

What can you do if someone discloses they are neurodivergent to you?

- Team Member

1. Be supportive

1. Ask how you can help them in the workplace

1. Ask if they need support in telling other members of the team

1. Point them toward the Neurodiversity Resources Handbook Page

1. Express that you are an ally and happy to be a confidant or support if needed

1. Ask how you can be an ally for them

- Manager

1. Be supportive

1. Ask what accommodations can be made to help with their accommodations. If they do not know what accommodations will help, consider a focused 1:1 to discuss what they feel is missing and how best they can accomplish their work.

1. Ask if they would like assistance in disclosing to their colleague if they intend to do so

1. Approach feedback differently and ask what can you do to help.

1. Follow through, ensure that any agreed accommodation & actions are put in place

SECTION: company/culture/inclusion/talent-acquisition-initiatives.md

At GitLab, Diversity, Inclusion & Belonging is infused into our company culture, from our values to our all-remote way of working.

The GitLab Talent Acquisition team partners closely with our Diversity, Inclusion & Belonging team to ensure we're building a diverse and inclusive workforce around the globe as the company continues to grow.

Talent Brand Initiatives

Employer Awards

One of the ways we raise awareness about life at GitLab is by applying for employer awards. These award programs are typically run by third-party organizations or media outlets.

- Awards we've won

Hiring Initiatives

Inclusive interviewing

We are building an inclusive workforce to support every demographic. One major component is ensuring our hiring team is fully equipped with the skills necessary to connect with candidates from every background. We strive to have a hiring team that is well-versed in every aspect of diversity, inclusion and cultural competence. We are helping the unconscious become conscious. Our number one priority is a comfortable and positive candidate experience. Our interviewing guide describes how you can request an adjustment to your interview process.

- To aid in our inclusive hiring practices, we've implemented Greenhouse Inclusion.

Inclusive language in Recruitment

We want all prospective candidates, including those from underrepresented groups to have a sense of belonging at GitLab. Inclusive language helps build a sense of belonging and does not alienate underrepresented groups. Written communication that does not use biased language, but is instead neutral, will help increase response rates and levels of interest in GitLab from people in underrepresented groups.

- The Talent Acquisition team is reviewing and making sure all required edits are done to GitLab's talent acquisition templates.

Speaking with TMRG members in the hiring process

During our hiring process, there's an optional step where candidates can request to meet with a team member from one of our Team Member Resource Groups (TMRGs). Candidates can request this at any time throughout the process, and we will also proactively offer this to a candidate when they reach the reference check stage. Whether or not the candidate decides to take us up on this offer will have no impact on our overall hiring decision.

When a candidate requests to meet with an TMRG team member, their Recruiter or Candidate Experience Specialist will share a message in the dedicated candidatetmrg-call Slack channel. To aide with scheduling, the message will include the name of the TMRG the candidate would like to speak with, the candidate's location, which role they are interviewing for and a request for a volunteer who would be willing to speak with this candidate for a 25-minute Zoom call. Once a volunteer has been found the Recruiter or Candidate Experience Specialist will share the TMRG members' Calendly link, LinkedIn page (optional), and request the candidate book in a 25-minute call with the GitLab team member.

If a volunteer has not been found within 24 hours the CES team member will reach out in the TMRG's dedicated group slack channel. If a volunteer has not been found within 48 hours, the CES team member will reach out to the TMRG lead(s) and request assistance with scheduling. If a volunteer has not been found within 3 business days of the request, the CES will ask the TMRG lead to take part in the conversation.

On the call, we advise you to start with a short introduction to you and your role here at GitLab. From here, we advise you to let the candidate lead the conversation as the goal is for you to answer their questions and offer insight into how we work.

These calls don't require you to submit a scorecard in Greenhouse. If a candidate mentions something that you see as a red flag (e.g. the candidate states they understand our values and demonstrate an unwillingness to adhere to them) or shares something that would help us set them up for success, we advise you to share the details of this with the hiring manager for the role they're interviewing for. It will be the responsibility of the hiring manager to review this and decide whether we need to alter the hiring, offer, or onboarding process for the candidate.

Lack of dates on your resume

If you don't have dates (employment period, graduation year, etc.) on your resume or public job profile that allow someone to determine your age, GitLab will not assume that you did not complete that task. We understand that some people are not comfortable sharing all dates, and that's ok with us here at GitLab. However, we will ask you for the dates of the last two to three employers. We also don't view it negatively if someone takes time off between jobs for personal reasons (such as to take care of friends and family) as long as they kept their skills up to date.

Return to the Main Diversity, Inclusion & Belonging Page

For a full overview of GitLab's diversity, inclusion and belonging initiatives, please return to the main page.

SECTION: company/culture/inclusion/tmag-gitlab-generational-understanding.md

Mission

The mission of the generational understanding TMAG is to ensure that team members of all ages feel they have a safe space to communicate, unite and share issues that are reflective of their experience while at GitLab, and to explicitly foster more sharing of wisdom across generations. We encourage a work culture where GitLab team members of all ages are valued, empowered, and given opportunities to develop and contribute to their full potential. This culture will be a competitive advantage for GitLab, as it helps GitLab become a thought leader on this topic. It will leverage the wisdom of all team members, as it helps identify ongoing patterns as well as best practices for mentoring.

Lead(s)

- Miles Russell - from earlier 1/3 of current workplace generations.
- Terri Chu - from middle 1/3 of current workplace generations.

Executive sponsors

- Tim Zallmann

How to Join

- Please sign up for the Generational Understanding Google Group to be added to the Generational Understanding TMAG. This will ensure you're added to upcoming TMAG calendar events. It might take up to 24 hours before the calendar events appear on your calendar. If there is an event happening within 24 hours of you joining the Google Group, please post in the generationalunderstanding Slack channel to be added manually.
- Join the generationalunderstanding Slack channel for conversation, announcements, and connecting with other TMAG members. Feel welcome to introduce yourself in the channel when you join!

Activities

Recurring Activities

- Monthly Group Meeting - Agenda

In the monthly call we'll divide our time into three parts:

1. Discussion topics: Ahead of the call, we'll identify a discussion topic focusing on challenges and opportunities arising from different generations working together. During the call, everyone is welcomed to participate in the discussion or just sit in and soak up the atmosphere. The goal here is to create a forum for team members from different generations to collaborate in a safe and welcoming space. If you have an idea for topics, please add them [here](#)!

1. Open issues: We'll take time to review new and lingering open issues related to the TMAG.

1. Questions/free form discussion: We don't want to leave any ideas or discussion on the table,

so we'll reserve time to ensure folks can share and ask questions as needed.

As Needed Activities

- Responding to recruiting requests for candidates who wish to talk about Generational Understanding at GitLab.

Past Activities

Film Discussion - Duty Free

Join our Film Discussion. In this iteration, we're watching the film "Duty Free". About the film:

> After a 75 year-old immigrant mother gets fired without cause from her lifelong job as a hotel housekeeper, her son takes her on a bucket-list adventure to reclaim her life. As she struggles to find work, he documents a journey that uncovers the economic insecurity shaping not only her future, but that of an entire generation.

Book Club - Wisdom at Work

Join our Book Club! In this iteration, we're discussing the book "Wisdom at Work: The Making of a Modern Elder" by Chip Conley. The book is self-described as:

> Part manifesto and part playbook, Wisdom@Work ignites an urgent conversation about ageism in the workplace, calling on us to treat age as we would other type of diversity. In the process, Conley liberates the term "elder" from the stigma of "elderly," and inspires us to embrace wisdom as a path to growing whole, not old. Whether you've been forced to make a mid-career change, are choosing to work past retirement age, or are struggling to keep up with the millennials rising up the ranks, Wisdom@Work will help you write your next chapter.

Our current book club discussions are running from 10/29/2020 through 12/10/2020. Add yourself to the Book Club issue linked above and join us in our Zoom meetings or contribute asynchronously through our issue discussions.

Common misperceptions about older workers:

- Poor performers and less engaged
- Resistant to change
- Less able to learn
- Shorter tenure
- More costly
- Less trusting
- Less healthy
- Work-family imbalance
- Technical skills not up-to-date
