Pillars

This TMRG is focused on 4 key areas of impact. We call them our pillars. Review the table below to read about the purpose of each pillar and results the TMRG has achieved for each.

Pillar Purpose Example Results
---- ---- ----
Awareness and Education Increase awareness of the experience of TMRG members at GitLab and educate allies.
Professional Development Increase access to opportunity for career and professional growth of TMRG members Women at GitLab Mentorship Program
Recruiting and Retention Increase the successful recruitment and retention of women at GitLab Participate in candidate TMRG calls by joining the candidatetmrg-call Slack channel
Business Influence Start and contribute to discussions that influence GitLab the business. Surface burnout data to People Leadership

Leads

- Kyla Gradin Dahl Lead
- Winnie Chan Co-Lead
- Gosia Ksionek Co-Lead

Executive Sponsors

- Robin Schulman - Chief Legal Officer and Corporate Secretary

How to Join

- Please sign up [here](#) to be added to the Women TMRG Google Group. This will ensure you're added to upcoming TMRG calendar events. It might take up to 24 hours before the calendar events appear on your calendar. If there is an event happening within 24 hours of you joining the Google Group, please post in the women Slack channel to be added manually.
- Join the women Slack channel for conversation, announcements, and connecting with other TMRG members. Please introduce yourself in the channel when you join!

Member Involvement

This section is meant to outline how team members in the Women TMRG can contribute to key initiatives each quarter. We encourage team members to contribute in any way they feel comfortable and have capacity - from meeting attendance to leading initiatives and anywhere in between!

Attend the Monthly TMRG Planning Meeting

This meeting is hosted 1x per month on Wednesdays at 2:30pm UTC and 11pm UTC. Allies are always encouraged to attend any TMRG meeting. The call structure includes:

1. 25 minutes for full group discussion of agenda topics
1. 20 minutes small breakout groups for social discussion

We'd like to add a 3rd session of our month meeting to accommodate team members in APAC timezones. If you are interested please reach out in the women Slack channel.

Call hosts will prepare our meeting agenda using the following structure:

1. Part 1: Quick Updates from TMRG leads: Leads will add updates to be shared and discussed sync/async. This will focus on the key priorities for that month and quarter
1. Part 2: Discussion projects and ideas related to our TMRG pillars: Awareness & Education, Professional Development, Recruiting & Retention, and Business Influence
1. Part 3: Social Breakout Groups: Depending on group size and time remaining, we'll break out into discussion groups. Conversation topics can vary. Some ideas include motherhood, remote work and work life balance, sustainability, dating and friendships

Attend the Monthly TMRG Social Meeting

This meeting is hosted 1x per month on Wednesdays at 3pm UTC and Thursdays at 12am UTC for 45 minutes. The call is dedicated to social connection for TMRG members and there is no agenda. Session attendees will break out into small groups based on current interests.

Use the TMRG Issue Board to Create or Contribute to a TMRG key initiative

We use our GitLab issue board to coordinate and prioritize projects on a quarterly basis. Contribute to the issue board by:

1. Open a new issue to propose an idea or project using the key-initiative-proposal issue template (please note that you don't have to be available to lead the project - opening a topic for discussion is great!)
1. Apply labels as necessary to track the TMRG focus areas. The labels are: Awareness & Education, Diversity - Inclusion and belonging, Recruiting & Retention, and Outreach & Business Development
1. Contribute to an open issue that is assigned to a quarterly milestone. These milestones outline the current focus projects of the TMRG
1. Attend or notify others of upcoming events using the Events - Womens TMRG label and consider using the event-or-conference-fyi issue template. Assign event issues to the relevant milestone based on event date.

Participate in a Candidate TMRG Call

The hiring process at GitLab includes an optional step where candidates can request to meet with a TMRG team member. As a TMRG member, you can volunteer to speak with candidates to answer questions and share your experience at GitLab.

Join the [candidatetmrg-call](#) Slack channel to participate.

Career Development Resources

Women at GitLab looking for career development resources can use this list to explore both opportunities available to the entire GitLab team for career development and helpful resources that have been shared in the women Slack channel

If you have a resource you'd like to include, please open a merge request and contribute to this page!

| Resource | Description |

| ---- | ---- |

| Women at GitLab Mentorship Program | FY22 Q2-Q3 program opportunity for mentorship at GitLab |

| WISE: Women in Sales Everywhere Memberships | In calendar year 2022, GitLab has allocated 15 licenses for women in the Sales organization to access memberships with WISE including mentorship, events, and training. Reach out to TMRG leads if you are interested in a membership |

| GitLab Internship for Learning | If your manager has coverage, you can spend a percentage of your time working (through an 'internship') with another team |

| Growth and Development benefit | This benefit is available for GitLab team members and can be used to cover professional development costs associated with external resources |

| CEO Shadow Program | The goal of the CEO Shadow Program is to give current and future directors and senior leaders at GitLab an overview of all aspects of the company |

| Women in the Workplace Study Webinar | A webinar from Lean In discussing the unique impact that COVID-19 has had on women of different races and ethnicities, working mothers, women in senior leadership and women with disabilities |

| The Harvard Gazette - Women less inclined to self-promote than men, even for a job | Study finds female workers' deep discomfort over touting skills, experience adds to gender gap in promotions, pay |

| Stanford Continuing Studies Department | Stanford offers many continuing education programs in multiple disciplines including leadership, writing, and professional/personal development |

Book Suggestions

The following are books suggested by GitLab team members in the women Slack channel. Please open an merge request to add books to this page, and consider including a short review of the book from your perspective!

Book Title and Author	Optional Book Review
WolfPack by Abby Wambach	
Radical Candor by Kim Scott	
Lean In by Sheryl Sandberg	
The Memo by Minda Harts	
Burnout - The Secret to Unlocking the Stress Cycle by Amelia Nagoski and Emily Nagoski	
Invisible Women - Data Bias in a World Designed for Men	

Past Events

Talking Confidently about your Accomplishments - Live Speaker Series with Michelle Carrizosa

{style="max-width: 50%;"}

Calling all Women TMRG Members!

- Do you have a career goal at GitLab, but not sure how to make it happen?

- Are you confused, overwhelmed, or unsure about the career development resources available to team members?

- Are you strapped for time and capacity to work on the goals you've set for yourself?
- Do you feel a bit lost in your career development and not sure where to start?
- Are you interested in learning and developing yourself and want to be part of a new challenge?

If any of these questions apply to you, then Activate your Agile Career might be for you!

Activate your Agile Career is a 5-month, career development pilot program running from October 2022 through February 2023. 50 participants will attend live training sessions, complete self-paced homework and reflection, read a book authored by the training facilitator, and collaborate with their accountability cohort.

Applications for this pilot are currently closed.

Benefits for Participants

As a participant in this program, GitLab team members will:

1. Understand how to apply the concept of career agility to their own career goals and Individual Growth Plan (IGP).
1. Complete an IGP. Share and discuss their IGP with their manager.
1. Evaluate and integrate at least one resource offered by GitLab into their agile career, including mentor program, internship for learning, growth and development benefit, CEO Shadow, etc.
1. Contribute to, and benefit from, a support and accountability network.
1. Gain clarity on how resources at GitLab can support their career goal achievement in the next 6-12 months.

{style="max-width: 50%;"}

Eligibility

All members, including allies, in the Women TMRG are welcome to participate. If you are not yet a member of the TMRG, please follow these instructions to join before applying.

The size of this cohort is limited to 50 total participants. Applications for this pilot are currently closed.

Expectations

Participants interested in Activate your Agile Career should expect and commit to the following:

1. Apply via Google Forms by 2022-10-17
1. Complete all pre and post program assessments and feedback forms
1. Attend 3 live training sessions. Recordings will be available for those who cannot attend live. If your working hours are outside these live sessions, please still consider applying. You can watch the recordings and collaborate with a cohort that meets within your timezone.
 - 2022-10-19 @ 3pm UTC - 60 minutes

- 2022-11-09 @ 4pm UTC - 90 minutes
- 2023-01-11 @ 4pm UTC - 90 minutes

1. Complete post-session self paced homework and reflections (total of 7-10 hours)
1. Read or listen to Activate Your Agile Career: How Responding to Change Will Inspire Your Life's Work. You can expense work related books.
1. Attend monthly cohort accountability sync sessions (5 total) along with participants with similar career goals - 25 minutes each
1. Complete a personal IGP and have a career development conversation with their manager

FAQ

What if I miss one of the live sessions?

Sessions will be recorded and available to participants. 45 days after the last live session 2022-01-11, access to session recordings will be removed.

What if I already have an Individual Growth Plan (IGP)?

Excellent! Bring your IGP with you to any and all live sessions. One of our goals is that this process helps you activate your IGP, so you're already one step ahead!

How will this be different than other career development opportunities at GitLab?

GitLab offers multiple career development resources. The goal of this program specifically is to provide a framework and accountability network around your career development.

The live sessions are outside my working hours. Can I still participate?

Yes! All 3 live sessions will be recorded. Cohorts will be organized across timezones, so the accountability and book reading discussions will happen in your working hours. We understand the value in attending training sessions live and hope that results from this program will allow us to expand in future quarters to provide additional live sessions.

Resources

Marti Konstant is the creator of the Agile Career Framework. Her model relates to GitLab CREDIT values, leaning into iteration as a key component of an agile career.

Below, use the infographic and list to understand what resources are available to you as a GitLab team member and how they fit into the Agile Career Framework.

{style="max-width: 50%;"}

Resource	Details	Integrate It
Individual Growth Plan (IGP)	Organize career goals in one place.	Idea Zone and Respond to Change
Growth and Development Benefit	Complete academic study, professional certification, and more.	Respond to Change

Coaching with Modern Health or Coaching Right Now (job grade 8+)	Coaching (and therapy) sessions available.	Activate your Feedback Squad
CEO Shadow (and other shadow programs)	Did you know of all the others shadow programs at GitLab: Security, CFO, CMO.	Work as a Set of Projects
Internship for Learning	Spend time during your work week on a new team, exploring and contributing to a new project.	A/B test your Career
Self-Paced Learning	Use free licenses from resources like O'Reilly Learning, and the Linux Foundation	Respond to Change
Join a TMRG	Review the handbook for active groups	Activate your Feedback Squad

SECTION: company/culture/inclusion/tmrg-gitlab-women/mentorship-program.md

The GitLab Mentorship program hosted by the Women TMRG is a 5-month career development opportunity for participants to build trust across the organization, enable pathways for internal growth and development, and increase collaboration across teams. The program is hosted in collaboration with the Women's TMRG, GitLab Learning and Development team, and the GitLab DIB team.

Questions, comments, and feedback can be posted in the women-at-gitlab-mentorship slack channel.

```

History

In 2020, the Women's TMRG partnered with the Sales Organization at GitLab to offer the Women in Sales Mentorship Program pilot. This initial iteration was a huge success and inspired the scale of this iteration to include a wider audience. The program now runs on a yearly basis and has been expanded to include mentees who identify as women and non-binary team members.

Please see the results section for a list of sessions since launch.

Testimonials

Don't take our word for it - check out what mentors and mentees at GitLab have to say about the program!

From the Mentees

> This mentorship program has been one of the highlights from my time at GitLab so far. My mentor is a great example of an empathetic leader who is great at strategic planning and communicating effectively. I was able to learn things during the program that I immediately applied to my work, and she inspired and motivated me in a way will persist much longer. My mentor has become one of my new role models, and I plan on keeping in touch with her far beyond this program's end.

>

> This was my first mentorship experience and I'm so glad I participated. I found my self confidence in my mentor session. I lacked that for so many years and to be reminded of my self value and worth was so enriching. I would highly recommend participating!

From the Mentors

> I've been a Mentor throughout my career, the GitLab program is hands down the best experience I've had. Both Mentor and Mentee are provided with resources and guidance to ensure a successful connection.

>

> One of the elements I really enjoyed about this program was the opportunity to meaningfully connect with someone outside of my team - we both learned from each other!

Program Structure

| Title | Description |

| ---- | -

| Start of Program Feedback Form | A Culture Amp survey to measure results of the program. Participation is required. |

| Mentor/Mentee Training | Completion of the self-paced How to be a Good Mentor or Mentee course on LinkedIn Learning is required of all mentors and mentees. If you prefer to review text-based information, you can instead review this slides, created using content from the LinkedIn course. |

| Initial program kickoff | A 25-minute discussion to meet other mentors and mentees in the program. Attendance is encouraged. |

| 1:1 Mentor Sessions | Mentors and mentees should meet every other week for 30-minutes for a total of 5 months (with the option to extend). Sessions are led by the mentee and should be focused on specific goals. Attendance is required. |

| Mentor/Mentee Resources | Async resources are available as a training guide for all mentor/mentee pairs. These resources include suggested articles to read and discuss, strategies for goal setting, sample meeting agendas, and additional training material. Use of resources is encouraged but not required. |

| End of Program Feedback Form | A Culture Amp survey to measure results of the program. Participation is required. |

Being a Mentor

As a mentor, you benefit from:

- Fast feedback loop between team members and leadership
- Opportunity to form relationships with team members in other departments
- Opportunity to support Women at GitLab and live our values

Mentor requirements

- You have been with GitLab for at least 3 months at the time of application
- You have availability in your schedule to meet with your mentee on a bi-weekly basis for at least 30 minute meetings for the entire length of the program
- You plan to make every effort to attend all live trainings included in the program structure
- You are not on a Formal Coaching plan or PIP (Performance Improvement Plan)
- You can complete the DIB training certification before the program begins

Note: Anyone at GitLab, regardless of gender identity, can apply to be a mentor in the Women at GitLab mentorship program.

Applications will be prioritized based on:

- Skill and prior experience as a mentor
- Performance in current role
- Available and appropriate mentee match in the current session

Apply

Please complete this interest form to be notified of the next program iteration.

Applying as a mentor does not guarantee you a spot in the program and eligibility will be evaluated based on criteria above.

If you've participated in a previous GitLab mentor program, you are welcome to apply again!

Being a Mentee

As a mentee, you benefit from:

- Increased visibility with leadership
- Increased professional development opportunities

- Career coaching and guidance
- Opportunity to form relationships with leaders on other teams

Mentee requirements

- You're a woman, including cis and trans women, or non-binary team member at GitLab.
- You have been with GitLab for at least 3 months at the time of application
- You have availability in your schedule to meet with your mentor on a bi-weekly basis for at least 30 minute meetings for the entire length of the program
- You plan to make every effort to attend all live trainings included in the program structure
- You are not on a Formal Coaching plan or PIP (Performance Improvement Plan)

Applications will be prioritized on many points including:

- Team members on a management career track
- Performance in current role

Apply

Please complete this interest form to be notified of the next program iteration.

Applying as a mentee does not guarantee you a spot in the program, and eligibility will be evaluated based on criteria above.

If you've participated in a previous GitLab mentor program, you are welcome to apply again!

FAQ

Can I participate as both a mentor and a mentee?

Yes, this is a possibility. It's important that team members talk with their managers to discuss their capacity to participate in both roles in this program. Participation in both roles will require a 2hr commitment per month (two 30 minute sessions as a mentor and two 30 minute sessions as a mentee).

It's possible that we will have a shortage of mentors and be unable to complete all mentor/mentee pairs. If there is a shortage of mentors and you've applied as both a mentor and a mentee, you will be assigned only as a mentor in this program.

I participated in a past mentorship program at GitLab. Can I still participate in the current iteration?

Yes! Past participants in any mentor program and as either mentees, mentors, or both, are encouraged to apply to participate again.

I'd like to participate but I can't commit the entire length of the program. Can I still apply?

If you cannot commit to the 5 month program, please consider applying for a future mentorship program at GitLab. It's important that both mentors and mentees are available for the full 5 month program to achieve the best results.

I'm not eligible to be a mentor or a mentee in this program. What are my options for future participation?

Other mentorship resources at GitLab can be found here in the handbook. Team members are always encouraged to build mentor/mentee relationships independently. You can find resources and a list of available mentors in the Learning and Development handbook

Results

2023

1. Total Participants: 136 team members / 73 mentor/mentee pairs

In 2023, mentees and mentors were surveyed using Culture Amp before and after the program to measure key impacts of their mentorship. The following data outlines the impact that mentorship had on these impacts for mentees and mentors.

We used CultureAmp to collect feedback. CultureAmp sorts data as favorable, neutral, and unfavorable based on responses. The data below indicates the rating for each question, and the number by which the score changed from pre to post program, if at all.

Mentee Results

All mentee impacts trended upwards post program, with the greatest impact being on mentees sense of support network at GitLab. Survey participation went from 91% to 64% pre to post.

| Question | Trend Pre to Post Program |

| ----- | ---- |

| I know where to find GitLab resources to support my career growth. | Favorable, +14 |

| I have a network of support to help me reach my goals at GitLab. | Favorable, +30 |

| I have a vision of how I'd like to grow over the next 12 months at GitLab. | Favorable +7 |

Summary: The experience of a mentee has an overall favorable rating, and positively impacts mentees knowledge of growth resources, support network, and personal vision.

Mentor Results

Both mentor impacts trended slightly downward. Survey participation went from 91% to 67% pre to post.

| Question | Trend Pre to Post Program |

| ----- | ---- |

| I have relationships with team members outside of my own department. | Favorable, -2 |

| I am confident in my ability to support others towards achieving their goals. | Favorable, -2 |

|

Summary: The experience of a mentor has an overall favorable rating, with negligible impact on mentors relationships outside their department and confidence in supporting others towards their goals.

2022

Participation

1. Total Participants: 120 team members / 63 mentor/mentee pairs
1. Unique Departments Represented by Mentees: 21
1. Unique Departments Represented by Mentors: 24

Skills Developed

Skill development was a key variable used to measure success of this program.

Top 5 skills developed by Mentors

- Situational Coaching (70.8%)
- Listening (66.7%)
- Mentorship (58.3)
- Awareness (41.7)
- Empathy (41.7)

Top 5 skills developed by Mentees

- Communication (71.4%)
- Self-Promotion (57.1%)
- Leadership (52.4%)
- Goal Setting (47.6%)
- Self-Value (47.6)

Feedback

1. 84% of mentors agree the program strengthened their leadership skills.
1. 91.7% of mentors agree the program strengthened their coaching skills.
1. 100% of mentors agree they had the time, resources, and support needed to be a great mentor, would serve as a mentor in a future program, and would suggest the program to their colleagues.
1. 95.3% of mentees agree that their mentorship contributed to the achievement of their career and development goals at GitLab.
1. 95.2% of mentees agree that their mentorship contributed to the achievement of their business goals in FY23 Q1 and/or FY23 Q2 at GitLab.
1. 95.2% of mentees agree that this program strengthened their self-confidence.
1. 100% of mentees would suggest other GitLab team members join this program as a mentee.

- > I am grateful the company has invested in the Women in GitLab mentorship program. My mentor and I had both a very structured approach to our relationship, but then also took the time to get to know each other and build trust, which allowed for open and honest discussions. I would recommend other team members showing up for this program, both on the mentor and mentee side!

- > Having someone that is not my manager to work through developmental goals has been extraordinary and I am grateful to my mentor for all the feedback and support as I went from feeling heavy with imposter syndrome to believing in myself and my knowledge level!

- > Women at GitLab Mentorship Program has been a crucial experience for me. My mentor is an outstanding leader who supported me in most useful ways, strengthening especially my self-value

and goal-setting skills. She sought out opportunities for me, asked good questions and listened intently - all that has already helped with furthering my career development here at GitLab. I'm grateful to her and for that program, and I recommend it greatly.

- > The Women at GitLab Mentorship program gave me the opportunity to grow as a mentor by providing resources on how to better my listening and guidance skills so that I could better mentor across disciplines.

- > The GitLab mentorship program is an incredible opportunity to step out of your usual role and look at your management style from a more holistic perspective, taking a moment to get out of the weeds and look more at the big picture. I learned so much from my mentee! I took these learnings back to my team, in terms of my management style. It also gave me time to recognize the strengths of my team in terms of how we present large initiatives to a broader audience as this was an ask of my mentee and something we worked on together.

2021

Participation

1. Total Participants: 66 team members / 33 mentor/mentee pairs

1. Unique Departments Represented by Mentees: 19

1. Unique Departments Represented by Mentors: 18

Watch session 1 and session 2 on the GitLab Unfiltered YouTube channel.

Skills Developed

Skill development was a key variable used to measure success of this program.

Top 5 skills developed by Mentors

- Situational coaching (73.9%)
- Mentorship (52.2%)
- Listening (47.8%)
- Coaching (43.5%)
- Communication (34.8%)

Top 5 skills developed by Mentees

- Communication (78.9%)
- Confidence (63.2%)
- Strategy and idea pitching (36.8%)
- Self-promotion (36.8%)
- Self-value (31.6%)

Feedback

- 84.3% of mentees plan to continue meeting with their mentor
- 55% of mentees want to participate as mentors in future iterations of this program
- 91.3% of mentors had the time, resources, and support to be a great mentor
- 86.9% thought their mentee was a good fit based on their career history and expertise

SECTION: company/culture/summit/_index.md

Over the years, GitLab has hosted GitLab Summits, global team member events. In the past, these events have sometimes been called Contributes.

Summit is an all-company team member gathering to foster collaboration, alignment, and motivation. We'll meet face-to-face, welcome new team members, reconnect with old friends, and reinforce our business through our core values, all while having fun in the process!

Summit goal

The goal of Summit is to build trust through social connections. This trust should lead to higher individual and team motivation, leading to higher productivity and retention. Higher trust between individuals and teams fuels collaboration and leads to stronger results.

Format and structure

Typically, Summit takes place over the course of a single week.

During that time, there is a mix of general sessions, divisional sessions, unconference, excursions, and social time.

Team members can find more details in the relevant Summit project.

SECTION: company/culture/summit/previous.md

Summit in Las Vegas, Nevada, USA

In March 2024, over 1800 team members gathered in Las Vegas. GitLab team members were joined by a number of guest speakers, and board members.

<small>In March 2024, the team had grown to 2132!</small>

Virtual Contribute

In April 2020, we pivoted to a Virtual Contribute after canceling the Prague Contribute due to Covid-19. GitLab team members and investors joined from around the world to enjoy keynotes, workshops, and speed coffee chatting.

<small>In April 2020, the team had grown to 1250!</small>

Contribute in New Orleans, Louisiana, USA

In May 2019, 518 team members and 43 guests gathered in New Orleans. Around a dozen customers, community members, and investors also experienced the GitLab culture.

In May 2019, the whole team counted 518 GitLab team-members!

Summit in Cape Town, South Africa

At the end of August 2018, over 260 team members gathered in Cape Town, South Africa. Over 85 guests, a handful of customers, advisors, and investors also joined in the fun.

In August 2018, the team had grown to 320 GitLab team members!

Summit in Crete, Greece

By October 2017, we had 200 team members and 65 guests get together in Greece to enjoy the beautiful islands of Crete and Santorini.

When October 2017 came around, the team grew to 200 GitLab team members!

Summit in Cancun, Mexico

In January 2017, we met in Cancun, Mexico, where roughly 150 team members and 50 guests join from 35 different countries.

In January 2017, the team had grown to 150 GitLab team members!

{{< youtube "XDfTj8iv9qw" >}}

Summit in Austin, Texas, USA

In May 2016, our team of 85 met up in Austin, TX to see if they were (still) as awesome as they seemed on Google Hangout.

Here's some footage our team put together to show how much fun we had:

Back in May 2016, the team was a total of 85 GitLab team members

{{< vimeo "175270564" >}}

Summit in Amsterdam, The Netherlands

Here are some impressions from our second summit in October 2015.

<small>In October 2015, the team had grown to almost 30 GitLab team members!</small>

{{< youtube "GJP-3BNyCXw" >}}

Summit in Novi Sad, Serbia

Less than 10 people attended GitLab's first summit. The highlight was lunch at Marin's mom's home in October 2013.

For the context of this video, please see the project challenges in the Greece recap

</small>

Company leaders who attend GitLab Summit should take the opportunity to engage with GitLab team-members across the organization and should be mindful of silos and favoritism as they observe team dynamics.

Be conscious

Leaders should consider themselves "hosts" of the event, which means that, in addition to facilitating team building and interaction, they should be aware of potential issues that could arise during the event related to the behavior, health, and safety guidelines below. These include:

- Harassment, sexual or otherwise
- Excessive drinking and/or drug use
- Fighting and physical altercations
- Accidents (e.g. trips, falls, motor accidents, etc.)
- Inappropriate dress (business/work event)
- Various mental states and moods (anxiety, depression, etc); neurodiversity

What should managers do?

- Protect and reduce risk to all team members and to the company
- Check on your team throughout Summit
- Err on the side of caution and over-communication by contacting People Ops immediately if there is an issue or if you think there may be a problem/concern

Who to contact if an issue or violation occurs?

- Corporate Events team - can be reached through the event app or via email
- People Operations Team - can be reached via Slack and people ops email address

Behavior

- Attending Summit is optional but recommended. Most team members report it is great to get to know each-other better and the schedule is fun. In past in-person Summit events, about 90% of the team were able to attend.
- The executive team is required to attend for the full duration of the event.
- Wear your name-tag when you're outside your room, including during excursions, meals, and on departure day.
- Try to join different people every time we sit down for a meal
- Try to form a personal bond with team members of other teams.
- Summit is great for informal meetings and brainstorming, like Unconference sessions. People already know their team, so try to make UGC sessions cross functional.
- Don't plan meetings and 1-1's with your own team, we already do these when we're not together during Summit. There will be some allocated time for team-time.
- Prior to Summit, ensure to communicate to any external stakeholders (i.e. candidates, customers, vendors, etc) that response time may be less reliable, as you will be out of the office and will not have as much access to email and calls.
- Respect the laws and customs of the location we are visiting.

Extroverts and Introverts

Remember that you and your co-workers may have different personality types in terms of how you interact with others in large social situations. Consider the differences between extroverts and introverts:

Extroverts

- Recharge by being Social
- Enjoy group conversations
- Speak more
- Make decisions quickly
- Love getting attention
- Speak up in meetings

Introverts

- Recharge by spending time alone
- Enjoy one-on-one conversations
- Listen more
- Reflect before making decisions
- Are not interested in getting attention
- Shares ideas when prompted

Ambiverts

- A combination of both introverts and extroverts

References:

Are Extroverts Happier Than Introverts? Psychology Today
Are You an Extrovert, Introvert, or Ambivert?

Health and safety

- Look after your self during Summit and avoid event burnout. It can be an exciting time with lots of new people to meet and things going on you want to take part in. Remember to take down-time if you need it to recuperate during the week rather than trying to burn the candle at both ends and risking exhaustion.
- Every year about a third of us have some kind of flu after the event, so please take infection prevention seriously.
- Use hand sanitizer after getting your food and before eating. Shared buffet utensils spread disease. We will do our best to provide hand sanitizer to everyone whenever we can.
- If you are sick please wear a surgical mask which reduces the spreading by up to 80%. We'll try to provide them.
- Remember our values and specifically the permission to play behavior
- Be respectful of other hotel guests (e.g. don't talk on your floor when returning to your room at night & keep your volume down at restaurants/bars).
- Utilize the resources available to understand the safety and crime considerations in the location we are visiting. Examples are the UK's Foreign Travel Site and the U.S. State Department. If you are alarmed by what you are reading, please feel free to reach out to People Ops Team with your concerns. We also advise reviewing the data for countries you feel are safe. You may find that even the safest countries have warnings on crime and safety. Staying with a group and away from known dangerous areas is the most basic way of avoiding problems.

Inclusion

- We provide pronoun stickers during check in so that everyone feels welcome and included
- We provide greeting stickers (Eg. wave, hand shake, hugs) during check in so that each person is able to share how they would like to be greeted. Each person may have different preferences in how they feel most comfortable greeting others and we would like to be mindful and inclusive of that.

Cultural Impacts and Differences

It is important to recognize that people from different cultures have different ways of saying things, different body language, different ways of dressing/attire and even different ways of looking at things. You can review examples of typical cultural differences on the Center of Intercultural Competence.

Summit attendees should also remember:

- We have various generations and 50+ countries/cultures coming together for several straight days, versus our normal routine of interacting remotely.
- We are guests of this country, of the hotel, and of the sites we will visit - it is our privilege to be there, and we need to be ambassadors of GitLab and lead by example the whole time according to our values.

- Be sensitive to political, religious and other potentially divisive conversations

Lost in Translation

Translation tends to sound easier than it is. People often think that it is just a matter of replacing each source word with a corresponding translated word, and then you are done. Assume best intent from your fellow team members and use it as an opportunity start a new dialogue. For more information you can review the following articles on LTC Language Solutions

SECTION: company/infrastructure-standards/_index.md

Overview of Infrastructure Standards

This handbook section defines the latest iteration of infrastructure and security standards for GitLab team members. These provide a baseline for the GitLab organization, and we have Infrastructure Realms for each of our infrastructure teams that override these standards to meet specific business needs.

The following standards are covered:

- Access Requests
- AWS Cloud Provider
 - Architecture Diagram
 - Organization Policies
 - IAM and Access Requests
 - IT Realm
 - SaaS Realm
 - Sandbox Realm
 - Project Horse Realm
- GCP Cloud Provider Architecture
 - Architecture Diagram
 - Organization Policies
 - IAM and Access Requests
 - IT Realm
 - SaaS Realm
 - Sandbox Realm
- Infrastructure-as-Code
 - Terraform
 - Ansible
- Labels and Tags
- Policies
- Security Standards
 - Application Security
 - Infrastructure Security
- Tutorials

Background Context

These standards were created by a cross-department collaboration in this [sandbox-cloud3 Budget and Cost Allocation](#) issue and [infrastructure&257](#) Provide cloud resources for non-production usage.

These standards apply to new infrastructure. Existing resources can adopt these standards as infrastructure is iterated, unless advised by Infrastructure Security, IT, Reliability SRE.

Realms

You can think of each realm as a domain or namespace that provides flexibility for department(s) and group(s) that use that realm to customize their infrastructure configuration and security policies as needed without affecting other departments or realms at GitLab.

For cloud infrastructure, we have created top-level AWS organizational units and GCP folders under the respective cloud provider top-level organization account that we refer to as "realms".

Which realm should I use?

Realm	Data Classification	Resources Managed By	Usage Documentation	Slack Channel
infra-shared-services	Red/Orange/Yellow/Green	infra-realm-owners	Realm Docs	infra-realm-owners
it	Orange/Yellow/Green	IT Engineering	Realm Docs	ithelp (tag @it-eng)
saas	Red/Orange/Yellow/Green	Reliability Engineering	Realm Docs	infrastructure-lounge
sandbox	Green	Self Service (Team Member)	Sandbox Cloud	sandbox-cloud-questions
security	Orange/Yellow/Green	Infrastructure Security	Realm Docs	security-infrasec

Managed by Infrastructure Teams

Are you looking to deploy a production or production-like service? All engineering or product related production infrastructure should be deployed and managed in the **saas** realm that is managed by the Engineering Infrastructure team with SRE on-call coverage. All business (non-engineering) production infrastructure should be deployed in the **it** realm in the GCP project or AWS account specified by the security team. All standardized security and logging resources that are not managed in the **saas** or **it** realm should be deployed in the **security** realm.

Want to add a realm? Any departments without their own realm should have resources for their groups (teams) created in the **sandbox** or **it** realms. If there are enough cloud resources and a dedicated infrastructure engineer team member to justify creating a new realm, please see the [instructions for creating a new infrastructure realm](#).

Self Service Infrastructure

Approximately ~750 of the GitLab team members are in departments that use cloud infrastructure for development, experiment, testing or non-production purposes. This includes team members in Customer Success, Engineering division departments, Support, etc. For documentation purposes,

we refer to this as the GitLab infrastructure community.

For any groups that are not part of the GitLab infrastructure community (ex. Finance, Marketing, Sales, etc), please reach out to [ithelp](#) for assistance with your infrastructure needs.

We've standardized how we create and manage ephemeral (sandbox) infrastructure that GitLab team members provision.

The oversimplified user story is "I need to spin up VM(s) or cluster(s) in GCP or AWS to try something (anything, may not be GitLab product specific), what's the company infrastructure standards for doing that?"

The Sandbox Cloud is a custom-built web application that automates the provisioning of an AWS account or GCP project for each GitLab team member that needs one for ephemeral sandbox and testing use cases.

The goal is to create a frictionless approach for technical team members that includes the tagging needed for cost allocation, best practice security configurations, and provide you the ability to create any resources that you need using the AWS or GCP web console or use our shared library of Terraform modules that include documentation and usage examples that can be copied into the Terraform configuration file for each user account. When you sign in with OKTA, we use the OKTA meta data that is integrated with Workday to determine your department and entity for cost reporting, and use this for the auto-creation of a tagging policy for resources that you create.

Learn more on the [sandbox realm handbook page](#).

Individual Environment

Are you looking for a sandbox or testing AWS account or GCP project? Please use the GitLab Sandbox Cloud which gives you access to your own private AWS account or GCP project that grants you owner permissions and has centrally managed billing with the GitLab master account.

Group Environments

Are you looking for an AWS account or GCP project to deploy experimental or testing resources that you will share with your team? You can request a Group AWS account or GCP project using the Sandbox Cloud. See the [handbook page](#) for instructions.

Definition of Sandbox and Test Infrastructure

- Any infrastructure that you or your team manages that does not contain real customer or team member data/information or RED/ORANGE data. In other words, it's real infrastructure but uses fake data for testing.
- Any infrastructure that is only used internally (scripts, test apps, tools, etc) and does not impact business continuity if the service is unavailable temporarily.
- Any infrastructure that is ephemeral in nature that is available externally but does not contain real customer data/information/intellectual property or RED/ORANGE data. This categorically includes collaboratively reproducing customer problems (with fake data), demos,

proof-of-concepts, training, workshops, etc.

- Any infrastructure that does not have global infrastructure support coverage (ex. is this managed by the SRE team?).

- Please review the Data Classification Policy and the Data Classification Index to ensure your infrastructure does not contain sensitive information. It is best practice to contact the Security team for a review if your infrastructure is in a gray area.

In the near future, we will be introducing readiness reviews for more infrastructure realms.

Realm Owners

Each realm has one or more team members that are system owners that are the DRI or stable counterparts responsible for all of the infrastructure architecture, billing, resource provisioning and security policies in that realm.

Each realm DRI or counterpart is an engineering manager or experienced infrastructure engineer who can perform all actions needed for day-to-day management of the realm, including responding to security incidents and supporting group owners and counterparts in their realm.

Our infrastructure standards are designed to provide a well defined baseline with guidelines for customization by realm owners as needed within their realm.

You can see the list of infrastructure realm owners in the Google Group (internal).

AWS Architecture Diagram

The AWS architecture is currently being designed. Please create a GitLab issue and tag jeffersonmartin, dawsmith, and jurbanc for assistance in the interim.

SECTION: company/infrastructure-standards/helpdesk.md

Overview

This is a placeholder for helpdesk and support documentation.

In the interim, please contact the realm owner on Slack or in a GitLab issue for assistance.

SECTION: company/infrastructure-standards/labels-tags.md

Quick Reference

We use the `gl` prefix for all labels and tags. All keys use underscores (snakecase). All values should use hyphens (alpha-dash for slug'd values), however underscores are allowed.

In labels and tags for specific realms should be prefixed with the realm prefix. You can learn more about the realm variables in the respective realm's documentation.

Global Labels/Tags

Slug/Label/Tag/Key	Usage	Human Name

Realm Labels/Tags

Please see the realm label and tag handbook pages for labels and tags specific to the realm.

- infra-shared-services
- it
- saas
- sandbox
- security

Design Decisions and Change Log

Here is a summary of changes made during the design of these standards based on team feedback that should be preserved for historical reference.

- Based on feedback in the issue, we have revamped the list of departments and groups based on functional teams rather than people manager reporting structure.
- The GitLab Division has been deprecated since it is prefixed on the gldepartment.
- We have renamed gldepartment to gldept to allow it to be shorter as a prefix for gldeptgroup.
- We have renamed glteam to gldeptgroup based on feedback about the ambiguity of team and the remapping that we did in the spreadsheet that most departments have groups/teams but none have sub-groups other than engineering which has the sub-department/stage (Ex. Dev - Plan) organizational hierarchy. The engineering sub-department is not used in our label/tag structure.
- We have added glproductstage. Earlier iterations used glstage however the term stage is ambiguous so we identify it as the product stage.
- We have abbreviated all values to allow for easier prefixing using industry recognizable abbreviations. We use full words where an abbreviation is not universally recognizable. For OKTA integration, we remap values from Workday to their short names that we use for infrastructure.
- We removed glownerusername since GitLab.com usernames can have characters not allowed cloud provider labels and tags.
- We renamed glowneremail to glowneremailhandle to provide clarity of the value that is expected.
- We have removed glownerslackid since we won't perform any action from a cloud resource and will use owner lookup in separate tools using glowneremailhandle.
- We added the allocate value to glentity for legacy parity with how we allocate global costs based on percentage of revenue for each entity.
- We added the glesourcetype and glesourcenam fields since GCP doesn't support easy reporting based on type of resource or name unless you use labels.
- We added gresourcehost to help show aggregate costs of a parent resource for all resources (ex. disk, network, etc.)
- We added gresourcegroup to allow for infrastructure-as-code tools (ex. Ansible) to deploy

resources to multiple instances of the same type and configuration.

- On 2021-07-22, we performed an audit and updated the gldept, gldeptgroup, and glproductstage tables with the latest values. A new table was added below gldeptgroup expected values with the list of renamed or removed department groups.
- The sales-cs realm was consolidated into the business-tech realm since the Demo Systems infrastructure is now managed by Business Technology.
- The infra-shared-services realm was added for top-level infrastructure management.
- We now allow short-term and long-term working groups to use the gldeptgroup label with the prefix of wg- and an easily understood name of their choice (no codenames).

Environment Realm (glrealm)

```
{{% alert color="success" %}}
This label/tag is required.
{{% /alert %}}
```

```
terraform
glrealm: eng-dev
```

This is for the top-level identification of what type of resources reside here, and which infrastructure team has authoritative ownership of it.

Any custom labels or tags that are created should use the respective realm slug as the prefix for the label/tag key (Ex. glsandboxkeyname).

Shared Services

```
<table>
  <thead>
    <tr>
      <th style="width: 25%;">Value</th>
      <th style="width: 25%;">Human Friendly Name</th>
      <th style="width: 40%;">Description</th>
    </tr>
  </thead>
  <tbody>
    <tr>
