

nnel.

Executives propose OKRs for their functions

Function objectives should cascade from one of the Company OKRs in GitLab.

3-4 weeks before the start of the fiscal quarter, E-Group firms up KRs.

2-3 weeks before the start of the fiscal quarter, during a designated block of time in an E-Group Weekly, Executives propose OKRs for their functions. At a minimum, they should have 2-3 function KRs that cascade from each company-level objective. They may choose to have more OKRs for function management purposes and have discretion to what degree other goals are highlighted in this forum.

After this meeting, as OKRS are finalized, functional OKRs should be posted in GitLab. This should be noted through a Slack message in the okrs channel. The CEO and Chief of Staff to the CEO should be @ mentioned. The CEO will confirm sign-off on objectives by commenting directly on them. While the CEO is the DRI, this responsibility may be delegated to the CoS to the CEO. The CoS to the CEO will also post company OKRs in GitLab.

The exact timeline for the upcoming quarter will be available in the handbook.

When ready for review or when changes to objectives or KRs are made, relevant objectives and KR links from GitLab should be shared in the okrs channel in Slack and at-mention the CoS to the CEO, and CEO. The CEO is responsible for OKR approvals, but may delegate this responsibility to the CoS to the CEO.

See How to Use GitLab for OKRs for how to create and align OKRs to company OKRs using GitLab.

Cascade

Once Executive (function-level) OKRs are set
(as set as things are at GitLab; everything is always in Draft!),
Executives shift their focus to finalizing OKRs within their team.

This is also the opportunity to, if desired, create team OKRs in GitLab, and add them to the relevant CEO and executive OKR.

In advance of designated E-Group Weeklies, the relevant DRI for Company KRs are expected to provide updates.

Dependency Commitments

Top level dependencies should be identified in the draft review session that happens in the E-Group Weekly. Additional dependencies may be identified as OKRs cascade. We want to avoid situations where big asks are coming weeks into the quarter, or teams are being committed to doing work without first having input. This makes it difficult for teams to manage their own priorities and succeed in their own initiatives.

It is each team's responsibility to proactively identify dependencies in which the team cannot reach success without meaningful engagement from another team. In these instances, it is

important that all teams required to make a significant contribution sign off on the KR and agree on the level of support to be provided. A boring solution is to create a sister KR for other departments that will need to be actively involved and link the KRs using the dependency function. KRs with dependencies should not be considered final until other teams have confirmed support, but other teams should also respect department KRs as the top priorities for the overall business and do what they can to support them.

Documenting How to Achieve

A dedicated session during an E-Group Weekly is the key the forum for introducing new function OKRs. During the draft review meeting, each function should share:

1. KRs that related to company-OKRs, including:
 1. CEO OKR that cascade from
 1. Any risks or dependencies
1. (Optional) Functional level-OKRs that don't directly cascade from company OKRs if they require cross-functional support to achieve or important for cross-functional awareness.

The quarter begins

The Chief of Staff to the CEO takes company OKRs and updates the OKR handbook page for the current quarter to be active. Each objective and KR should include the related GitLab link. The Office of the CEO should also create the handbook page for the following quarter and document the OKR process timeline.

The CoS to the CEO shares the handbook update MR in the okr channel in Slack and notifies E-Group in an E-Group Weekly.

Reviewing progress within and after the quarter

We will review company-level OKR progress once a month in an E-Group Weekly. Updates should include:

1. Key Result
1. Link to OKRs in GitLab
1. DRI
1. Completion score
1. Update summary
1. Learnings
1. Remaining dependencies to achievement
1. Next steps, if incomplete

This is also a time to discuss function KPIs and functional level OKRs that E-Group feel should be highlighted with the broader team.

Two weeks after the end of the quarter, we'll have an E-Group Weekly session that reviews company-level OKR and key metrics progress from the previous quarter.

Making changes within quarter

We value iteration. We can change an objective or KR if we find that in our pursuit of the initial KR we have not set the optimal goal. Here are a few examples of when this could happen:

1. It becomes clear that the performance indicator does not provide the best measure for success

1. A KR statement exists, but the target is a placeholder. For example, "Obtain \$XM in bookings in Q1"

1. A KR is related to achievement of a new initiative, and it is agreed that we should pivot in terms of scope or focus as we learn more about what we want to achieve

Please note that iteration does not mean changing or lowering goal posts, because it looks like we can't meet what were ambitious but agreed upon key results.

It is better to update an objective or KR than continue to work toward a goal that is not best aligned with desired business results. In instances where Company KRs are being updated in the spirit of iteration, flag the GitLab change in the okrs Slack channel and tag the CEO and Chief of Staff to the CEO and the CEO for approval. Approval of the change indicates that the revised goal has been agreed upon. At this point, you can also update any associated issues and epics that exist.

In the event that a functional objective that is captured in GitLab needs to be updated, please note the change in the okrs Slack channel and tag the CEO and Chief of Staff to the CEO for approval. Approval of the change indicates that the revised goal has been agreed upon.

Format of OKR on the Handbook Page

Top level Company KRs will appear in the handbook. OKRs have numbers attached to them for ease of reference, not for ranking. In order to maintain a single source of truth (SSoT), starting in FY24-Q1, we're putting functional objectives and KRs in GitLab and linking this to the handbook page. It also provides a SSoT for OKRs.

Functional leaders are responsible for updating their objectives and KRs in GitLab before review meetings.

Maintaining the status of OKRs

Teams should update the score for their key results in GitLab regularly. Company-level KRs should be updated in the first week of a new month. They will be reviewed in the following E-Group Weekly meeting. If a key result is off track, it should be clear why. The owner should leave a comment with the most recent Health Status or there should be a link to an issue, an epic, or another source for details.

If a function level OKR is meaningfully off track, it is the Exec Sponsor and DRI's joint obligation to proactively flag the issue. This may mean raising it outside of an E-Group Weekly.

Health Status

When presenting the status of OKRs, we use the following terms to denote the status of a key result:

1. On track - the DRI is confident the key result will be achieved.
1. Needs attention - the DRI believes there is some risk the key result will be achieved. Elevated attention is required in order for the key result to be achieved.
1. At risk - the DRI does not expect the key result will be achieved. Urgent action is required in order for the key result to be achieved.

An Objective/Key Results health status should be maintained as the SSOT on the status. This is something that should be able to be referenced at any point in order to get a clear view of progress against the objective. The objective owner will be responsible for designating a health status based on a roll up the health statuses of all relevant KRs.

Each KR should have a clear scoring.

Company OKR progress that does not involve MPNI can be viewed in the GitLab OKR project with the ~"Company OKR" label.

Scoring OKRs

OKRs and their scoring align with fiscal quarters.

Since we set OKRs that are aspirational, we don't expect 100% achievement across KRs. We score individual KRs to note our achievement against our stated goal. This is the scoring framework.

Achievement against targets	Score
On-target	85 to 100%
Off-target	70 to 84%
At risk	0 to 69%

See also Tips for OKRs that are scoreable.

Everyone can contribute

Everyone is welcome to a suggestion to improve any OKR.

To update please make a merge request and post a link to the MR in the okrs channel in Slack and at-mention the Chief of Staff to the CEO. If commenting on a functional objective or KR, comment directly on the OKR in GitLab.

SECTION: company/okrs/fy20-q1.md

Note: This is the first quarter where we shift our fiscal year. FY20-Q1 will run from February 1, 2019 to April 30, 2019.

CEO: Grow Incremental ACV. More leads. Successful customers, Scalable marketing

1. Alliances: Measure the value partners can bring to the business. 3 references for each major public/private cloud, establish customer ability to purchase through marketplaces, joint

marketing with key partners - 200+ leads per event

1. CRO: Generate IACV from sales to higher tiers. Target 250 new opportunities created from free accounts, Implement sales motion to show all starter renewal accounts the benefit and value of premium and ultimate, Identify two new already deployed large enterprise free customers in each SAE territory

1. CRO: Faster delivery of customer value. Deliver plan to have Sales quote implementation services and success plan on all new account quotes, Launch standard implementation model in large segment, Measure time to completed implementation for all new enterprise accounts.

1. CMO: Recharge Inbound Marketing Engine. Top 10 GitLab.com Pages optimized for inbound, Inbound trial and contact-us strategy documented and baselined, Pages optimized for top 20 non-branded SEO target terms, Inbound strategy for Dev, Sec & Ops personas launched

1. Content Marketing: Broaden audience reach by increasing new user sessions on the blog by 15%. Create next iteration editorial mission statement and content framework. Publishing plan mapped to key topics, persona, and campaigns. Publish 5 interactive or deep-dive assets.

1. Content Marketing: Increase social referral traffic 20%. Execute 2 social campaigns. Next iteration social strategy and framework. Create internal social advocacy program.

1. Content Marketing: Build content paths to support lead flow. Create content strategies for 3 personas/buying groups. Execute plan to increase newsletter subscribers 50%. Contribute 10% of overall click-thrus to form fills.

1. Digital Marketing programs: Improve Top 10 GitLab.com Pages and increase inbound CTR and conversion rate as measured in marketo form completions by 10% QoQ. Optimize and increase organic search visibility for 20 non-branded terms, Optimize competition pages for better visibility and to assist competitive take-out with 10% increase in CTR from Organic Google.

1. Digital Marketing programs: 15% QoQ increase in inbound website leads through gated content and paid digital and increase conversion rate with improved nurture. Implement 3 baseline nurture tracks to educate and generate leads within the database, Implement an always-on digital paid program (to include re-targeting, etc.).

1. Product Marketing: Document buyer's journey (buyer's experience, tribe needs). Documented handbook pages of messaging around the 3 core pillars of Dev, Sec & Ops.

1. Product Marketing: Execute 1 competitive takeout campaign. Create campaign materials (web pages, demos, whitepapers, blogs), perform global sales enablement sessions.

1. Product Marketing: Identify, evaluate and implement competitor analysis and comparisons strategy. Deliver first 5 comparisons using new strategy.

1. Product Marketing: Improve case study publish rate. Publish case studies at cadence of at least 2 per month, with at least 3 reference customers using all stages concurrently.

1. Field Marketing: Create the ABM Framework and tooling. Execute ABM in 5 accounts per region, Identify messaging per account, Execute 1 account-targeted online campaign.

1. Developer Relations: Increase the number of contributions (not contributors) from the wider community (including Free Team) across selected GitLab projects. For the 11.7 release, the target is 180; for the 11.8 release the target is 200; for the 11.9 release the target is 220.

1. Developer Relations: Accelerate open source project adoption of GitLab.com. Hire an Open Source Program Manager, gain commitment of 1 big open source project (1000+ contributors) to migrate to GitLab.

1. Developer Relations: Jumpstart meetups. Schedule 10 meetup events, at least one in every region (EMEA, APAC, NA).

1. Developer Relations: Increase responsiveness and coverage. Decrease median first reply time to 7 hours while adding two new response channels (GitLab forum, Stack Overflow).

1. CMO: Achieve marketing process and visibility excellence. 100% visibility into any and all leads at any time, Full-funnel marketing dashboard published in Looker, Unified marketing

calendar published.

1. Digital Marketing programs: Build out a framework and launch for an integrated campaign structure (ICS), execute one campaign, run one competitive take-out sub-campaign and adapt ICS to ABM use cases.

1. Sales Development: SDR role clarity, defined development path. Clarified Lead Sources, add at least 2 Additional Lead Channels , inbound "call sales" phone line, Drift optimization - implement Drift Account Based Marketing.

1. Sales Development: Reduce xDR Ramp Time to 3 months. Hire an Onboarding and Enablement Manager (Done), "Expert" Certifications around Personas, Product Tiers, better knowledge management solution: battlecards by persona, vertical.

1. Field Marketing: Create Field Marketing Dashboard in SFDC. Identify & create the elements for dashboard, Creation of data driven decision framework for field, Improved visibility of field activity.

1. Field Marketing: Create SLAs around Field Marketing & Marketing Ops. Creation of SLAs for Field Marketing to Ops (ops to field already exists), Create manual dashboard to track SLAs and improve performance, Improve overall speed of contact to MQL cycle time (need baseline).

1. Developer Relations: Increase responsiveness and coverage. Decrease median first reply time to 7 hours while adding two new response channels (GitLab forum, Stack Overflow).

1. CMO: Achieve \$9.4m in Net New IACV Pipeline created by beginning of Q2 FY20 --FY19-- (as measured in this report). 720 SAOs delivered to sales by SDRs (Revised definition of SAO as of Jan 2019), 26,000 MQLs created, 11% MQL to SAO conversion rate.

1. Sales Development: Increase Accepted Opportunity per SDR to 8/month. Rise in reps achieving quota per month. 16 Jan, 18 Feb, 20 Mar, 22 Apr; > 1 significant (3 min+) conversation per rep per day; complete an Outreach.io audit and content improvement.

<p class="h3">CEO: Popular next generation product. Grow secure and defend. Grown use of stages (SMAU). iPhone app on iPad.</p>

1. Product: Increase product breadth. 25% (6 of 22) "new in 2019" categories at minimal maturity, CI/CD for iOS and Android development on GitLab.com, develop an iOS app on GitLab.com web IDE on iPad => 17%, 100%, 100%

1. Product: Increase product depth for existing categories. Consumption pricing for Linux, Windows, macOS for GitLab.com and self-managed, 50% (11 of 22) "new in 2018" categories at viable maturity => 17%, 36%

1. Product: Grow use of GitLab for all stages of the DevOps lifecycle. Increase Stage Monthly Active Users (SMAU) 10% m/m for each stage, 3 reference customers using all stages concurrently => 19.3%, 0%

1. Tech Writing: In 100/100 sampled Support/forum interactions in FY20-Q1, customer-facing product info is incorporated in docs, reinforcing Docs-First Methodology

1. Alliances: evaluate if key partner services (AKS,EKS,GKE, VKE, etc) can grow use of stages. Conversion of SCM customers to CI/CD through joint GTM.

1. CRO: Increase CI usage. Perform CI workshop/whiteboard at 2 of the top 10 customers that are only using SCM today in each region/segment by end of Q1.

1. VPE: Make GitLab.com profitable. Recognize TBD% cost reduction on a per user basis.

1. VPE: Increase productivity. Increase MRs per engineer 20% for all teams.

1. Development: Increase velocity. Increase MRs per engineer 20% for all teams.

1. Development: Develop memory program to reduce memory footprint based on customer feedback Memory OKR.

1. Fellow: Make GitLab performant with Gitaly atop NFS

1. Dev: GA of GraphQL to increase throughput for BE and FE. Resolve general topics like

performance, abuse prevention and enjoyable development experience. Endpoints for Create and Plan relevant models. Implement new frontend features in Create and Plan only with GraphQL.

1. Plan BE: Complete steps for general availability of GraphQL. => 70%

1. Dev: Increase velocity for frontend implementations. Increase throughput by 20%.

Have at least 50 gitlab-ui components at the end of Q1. Improve tooling in GitLab itself for JS engineering (webpack map, visual diffing, etc.) by adding 3 new tools to our workflow.

1. Dev: Improve Performance of JS computation that is done on every page. Improve Initialisation execution by 20%. Reduce main bundle size by 20%.

1. Manage BE: Take on more maintainer responsibilities: add a CE/EE backend maintainer => 100% (MR)

1. Manage FE: Increase throughput via proper backlog refinement, improved estimation, and proper issue planning. Also utilize all existing gitlab-ui components for Manage code.

1. Manage FE: Fully integrate Sentry into the FE org workflow by updating the library, optimize and repair (loading order, configuration, sourcemap support), and determine process for fully utilizing it as an org. Also explore using it in dev, canary, and/or small percentage of production via A/B flipper.

1. Create BE: Improve maintainability and performance of GitLab Shell: port GitLab Shell to Golang => 43%

1. Create BE: Take on more maintainer responsibilities: add a CE/EE backend maintainer, add a database maintainer => 50%

1. Create BE: Prepare Elasticsearch for use on GitLab.com. Improve admin controls, reduce index size => Running at the moment on staging for the gitlab-org group; production readiness is planned for 2019-06-22 (GitLab 12.0)

1. Sec: Increase Secure throughput by 20% and drive consistency week to week: Increase number of MRs week to week, increase number of reviewers and maintainers, and drive consistency in the trendline

1. Philippe Lafoucrière: Handover to new Secure Engineering Manager. => 100%

1. Philippe Lafoucrière: CISSP certification. => 0%

1. Philippe Lafoucrière: Benchmark 3 new security tools for integration in the Security Products. => 10%

1. Ops (Verify, Release & Package): Increase BE team's throughput by 20% and drive consistency week to week: Increase number of MRs week to week, increase number of reviewers and maintainers, and drive consistency in the trend-line

1. Kamil Train 2 new maintainers of GitLab Rails,

1. Kamil Help with building CD features needed to continuously deploy GitLab.com by closing 5 that are either ~"technical debt" or ~"type::bug"

1. Verify BE: Increase Verify throughput by 20% and drive consistency week to week: Increase number of MRs week to week, increase number of reviewers and maintainers, and drive consistency in the trend-line

1. Verify FE: Reduce implementation time by building on top of gitlab-ui components; increase throughput by building/improving upon JS and Frontend specific tooling by doing product discovery for 2 new tools.

1. Verify FE: Improve onboarding for new engineers by creating a specific Frontend todo in the overall onboarding issue.

1. Release BE: Increase Release throughput by 20% and drive consistency week to week: Increase number of MRs week to week, increase number of reviewers and maintainers, and drive consistency in the trend-line

1. Release FE: Reduce implementation time by building on top of gitlab-ui components; increase throughput by building/improving upon JS and Frontend specific tooling by doing product discovery for 2 new tools.

1. Release FE: Improve onboarding for new engineers by creating a specific Frontend todo in the overall onboarding issue.

1. Ops (Configure & Monitor): Define additional data to complement throughput: Implement a prototype for team pulse and define a path to implement it in GitLab product.

1. Ops (Configure & Monitor): Increase the groups's throughput by 20% and drive consistency week to week: Increase number of MRs week to week, increase number of reviewers and maintainers, and drive consistency in the trend-line

1. Configure BE: Increase Configure throughput by 20% and drive consistency week to week: Increase number of MRs week to week, increase number of reviewers and maintainers, and drive consistency in the trend-line

1. Configure FE: Implement ES2015+ bundles for modern browsers & transpiled ES5 for older ones should reduce bundle size and parsing time

1. Monitor BE: Increase throughput and consistency, Increase throughput by 20% and even out throughput week to week to bring the standard deviation below 2 for the most recent 12 weeks. As of Jan 4 the standard deviation is 2.8

1. Monitor FE: Reduce 5% of the css loaded in our main css bundle and implement for 4 additional gitlab-ui components.

1. Enablement: Communicate and address pain points with issue boards: identify and work with Product to prioritize 5 issues

1. Enablement: Increase ownership for key GitLab components: add one new maintainer for each of Gitaly, Pages, Workhorse, and the ElasticSearch indexer

1. Geo BE: support Production team in preparing Geo for DR: enhance selective sync to work at scale, support GitLab Pages

1. Infrastructure: Make all user-visible services ready for mission-critical workloads while seamlessly supporting delivery of new product functionality and integrating infrastructure solutions in GitLab. [Availability] Definition and tracking of GitLab.com metrics for SLAs, [Product] Deliver OKR Infrastructure workflow and tooling using GitLab, [Introspective] Achieve a 10% cost reduction on GitLab.com spending.

1. Reliability[AS]: Support SRE-at-large MTBF and MTTR objectives. [Availability] Reduce spin-up time for provisioning auto-scaled servers to <3.5min, [Product] Automate error budgets as a GitLab feature, [Introspective] Deliver new testing environment.

1. Reliability[DS]: Drive all user-visible services' MTBF to Infinity. [Availability] Deliver improvements to GitLab.com reliability on two foundational subsystems (ZFS on storage, Kubernetes + Charts), [Product] Take full operational ownership of CI/CD (take oncall from tomscz), [Introspective] Operationalize Vault and Consul.

1. Reliability[JF]: Drive all user-visible services' MTTR to less than 60 seconds. [Availability] Implement 4 significant availability features to improve database reliability (autovacuum, masterless backups, pgrepack, replica on ZFS), [Product] Deliver Patroni on GitLab, [Introspective] Deliver full service operational inventory

1. Delivery: Streamline GitLab deployments on GitLab.com and self-managed releases. [Availability] Create deployment rollback process, [Product] [Merge CE/EE codebases, [Introspective] Replace takeoff off with a method better suited for CI pipelines.

1. Andrew Newdigate: Improve observability for all-user visible services to maximize MTBF and minimize MTTR. [Availability] Deliver distributed tracing on GitLab.com, [Product] Deliver Puma on GitLab and experiments on GitLab.com, [Introspective] Deliver overall service-level tracking in preparation for SLA tracking.

1. Quality: Build everything in GitLab, move GitLab Insights production ready graphs into GitLab itself. => 75%

1. Quality: Implement performance monitoring for the development department. Continuous measurement with performance tests for on-prem instances (10K scaled down reference). => 80%

1. Quality: Improve Engineering velocity. Add 4 Engineering Productivity metrics with historical measures. Monthly throughput, total monthly Merge Requests, Merge Request review time, and time to resolve P1 P2 Bugs. => 80%

1. Security: Secure the Product. Conduct one Red Team exercise with H1.

1. AppSec: Security release: complete at least 4 cycles of security release process/checklist X%

1. AppSec: App sec reviews: conduct at least 4 appsec reviews X%

1. Compliance: SOC2 Examination Preparation and Gap Assessment: Complete SOC2 Control Statements, supporting documentation, and self-assessment questionnaire, including its distribution 100% GitLab Security Control Statements and Supporting Guidance

1. Compliance: PCI Compliance: PCI requirements review and self-assessment 100% PCI Runbook

1. Security: Secure the company.

1. Strategic Sec: Evaluate at least 2 enterprise centralized SSO solutions and make selection. X%

1. SecOps: Evaluate at least 2 security monitoring capabilities and deploy in GitLab.com as part of Zero Trust initiative. X%

1. SecOps: Evaluate at least 2, and implement vulnerability scanning capability for GitLab.com infrastructure. X%

1. SecOps: Develop and deliver one monthly New Hire Security Orientation training by EOQ. X%

1. Support: Clarify support expectations within each solution.

1. Support: Author architecture document for 10k GitLab install with review and approval from Infrastructure..

1. Support: Improve docs based on solutions to customer reported issues.

1. UX: Convert more prospects into new GitLab users. Decrease sign-up time to 1 minute or less. Document the existing user journey in video, propose a new sign-up flow, test it with users, and ship the first iteration of the new workflow. Design work is complete, but Implementation has moved from Manage to Fulfillment, currently with P2 priority. => 65% attainment

1. UX: Provide a guided onboarding experience that helps new users become productive in GitLab more quickly. 80% of new users should start guided onboarding, and 80% of those who start should finish. Create a user journey of current experiences and pain points, propose and test a guided first-time experience, and ship the MVC solution. Design MVC is complete and implementation is in process. => 66% attainment

1. UX: Improve usability and help beautify our UI by addressing 100% of known color contrast issues and updating CSS according to design system specs. For every stage group, identify areas where we rely solely on color to convey information by performing an audit, creating related issues, and identifying solutions. => 49% attainment

1. UX Research: Democratize UX Research and prolong the relevance of every research study (scale) by making insights easily findable by anyone. Create a GitLab repository, evaluate 100% of existing studies to identify granular findings and recommendations, and tag every finding with searchable labels (such as stage group and customer type). Insights Repository => 90% attainment

1. UX Research: Understand how GitLab users currently rate our usability so we can track changes over time. Identify segmenting data (such as customer type and length of use), run a pilot study, analyze data, and re-run a larger study. SUS is complete with baseline score of 74.4 => 100% attainment

<p class="h3">CEO: Great team. Employer brand, Effective hiring, Increase decision making

effectiveness.</p>

1. CFO: Improve financial reporting and accounting processes to support growth and increased transparency.

1. Mgr. of Data Team: 100% of executive dashboards completed with goals and definitions

1. Mgr. of Data Team: Public release of finance metric(s).

1. Dir. of Bus Ops: Data Quality Process (DQP) completed for ARR, Net and Gross Retention and Customer counts.

1. FinOps Lead: Integrated financial and hiring model that covers 100% of expense categories driven by IACV (as first iteration) and marketing funnel (as second iteration).

1. Sr Dir. of Legal: Detailed SoX compliance plan published internally and reviewed by Board.

1. Sr Acctg Manager: Key internal controls documented in handbook.

1. CFO: Create scalable infrastructure for achieving headcount growth

1. Sr Dir. of Legal: 90% of team members covered by scalable employment solution

1. Payroll and Payments Lead: Automation of contractor payroll completed.

1. CFO: Improve company wide operational processes

1. Mgr. of Data Team: All data processes documented with handbook as SSOT

1. Dir. of Bus Ops: Roadmaps for all staffed business operations functions are shipped and Q2 iteration by EOQ

1. Controller: Zuora upgrade to orders which will allow for ramped deals, multiple amendments on single quote and MRR by subscription reporting.

1. VPE: Create a happy and productive team. Unify vacancy descriptions with experience factor content and career matrices for all roles, develop compensation roadmaps for every major role in engineering, hold a roundtable meeting for each role benchmark

1. Development: Deliver the 2019 roadmap. Hire IC's to plan, Hire Directors for secure and enablement

1. Development: Improve customer focus. Get every engineer in one customer conversation

1. Fellow: Help solve critical customer issues: Solve 1 P1 issue

1. Dev

1. Gitter: Improve security practices: Enable use of dev.gitlab.org for security issues, document security release process for gitter.im in partnership with Security => 100%
- Now using <https://dev.gitlab.org/gitlab/gitter/webapp> for security releases/fixes
- Security release process now documented

1. Manage BE: Increase test coverage for the CustomersDot: increase from 45% to 60% => 56.87% coverage = 79.13% of target

1. Manage BE: Proactively reduce future security flaws. Identify five areas where we have systematic/pervasive/repeated security flaws, Finalize plan to tackle three areas, 2 merge requests merged => 4 areas identified (80%), 0 MRs merged

1. Create BE: Increase set of people working on Create features: have team deliver 6 Create Deep Dives => 50%

1. Plan BE: Add to engineering blog to make it a more attractive destination for customers and prospective candidates. Four blog posts from the team on recent Plan work (including backstage) => 75%

1. Sec

1. Secure BE: Improve onboarding for new engineers: Improve team page, resources, time to first MR merged by new engineers.

1. Ops (Verify, Release & Package): Improve on-boarding for new engineers: Improve team pages, resources, time to first MR merged by new engineers: Goal for first MR to be complete in

the first 2 weeks.

1. Verify BE: Improve on-boarding for new engineers: Improve team page, resources, time to first MR merged by new engineers.

1. Release: Improve on-boarding for new engineers: Improve team page, resources, time to first MR merged by new engineers.

1. Ops (Configure & Monitor): Improve on-boarding for new engineers: Improve team pages, resources, time to first MR merged by new engineers: Goal for first MR to be complete in the first 2 weeks.

1. Ops (Configure & Monitor): Define first iteration for BE role framework (Software Engineer, Senior Software Engineer, Staff Software Engineer)

1. Configure BE: Improve on-boarding for new engineers: Improve team page, resources, time to first MR merged by new engineers.

1. Monitor BE: Improve on-boarding for new engineers: Improve team page, resources, time to first MR merged by new engineers.

1. Enablement: Improve documentation and training for supporting our customers: identify and address 3 major pain points for customer support and/or professional services.

1. Distribution: GA for GitLab Operator: GitLab Operator enabled by default in the charts

1. Distribution: Create automated charts installation and upgrade pipelines for supported Kubernetes flavors (e.g. GKE, EKS, etc.)

1. Distribution: Generate library licenses and collection for the official Helm charts (similar to the omnibus-gitlab functionality)

1. Gitaly: Make rapid progress on top company priorities: ship GA of object deduplication, ship beta of Gitaly HA => 50%

- Pending QA on GitLab.com git object deduplication will be GA in %12.0, removing the feature flag and fixing minor bugs is what's left.

- Beta of Gitaly HA is postponed given the renewed focus on performance. Hopefully 12.1 is the new target.

1. CCO: Improve the candidate experience at GitLab for hiring great talent.

1. Recruiting Director: Recruiting processes and systems to expedite hiring communicated across GitLab

1. Recruiting Director: Average candidate timeline between application and offer reduced to 30 days.

1. All Hiring Managers and Interviewers: 80% of candidate feedback submitted within 24 hours of the interview.

1. CCO: Improve GitLab's training and development Program,

1. People Ops Director: Hire a L&D Specialist by the end of Q1.

1. People Ops Director: Increase the tuition/course reimbursement utilization by 10%

1. People Ops Director: Define metrics for each training that inform us on the value of current and future trainings

1. L&D Specialist: 80% of attendees rate the training as valuable and/or actionable

1. L&D Specialist: Defined key business metrics that should be improved by the training.

1. L&D Specialist: Follow-up survey 30-60 after training to gauge applicability and usefulness.

1. CCO: Improve GitLab's Employer brand to increase our hiring and sourcing success.

1. Recruiting Director: Hire an employment branding specialist by the end of Q1.

1. Recruiting Director: Identify 5-10 locations to focus our branding and sourcing (25% increase in pipeline from these locations).

1. Recruiting Director: Collaborate with Marketing to ensure that recruiting activities are integrated into at least 95% for conferences by the end of Q1

1. Employer Branding Specialist: Reply to 90% of Glassdoor reviews
1. Alliances: 3 acquisitions completed with 15 new team members joining GitLab. Establish the foundations of the sourcing process.

Engineering (VPE)

Development

Dev

Plan BE

- GOOD
 - The team wrote seven blog posts! (Three merged, four in review.)
 - GraphQL collaboration between Plan and Create, and frontend and backend, worked well
- BAD
 - Swapped GraphQL for Elasticsearch with Create, both missed
 - Not all blog posts completed
- TRY
 - Extending blog posts goal to more engagement in other forms, too

Create BE

- GOOD
 - Overperformed on hiring target: hit Q1 + Q2 goal of 3 hires in Q1
 - Benefits of Create Deep Dives are already showing: One engineer was able to help resolve a repository mirroring related production issue because he had learned how to troubleshoot it in the Deep Dive
 - ElasticSearch is enabled on staging for the gitlab-org group
 - We found multiple ElasticSearch related bugs that have been or are in the process of being fixed
- BAD
 - Little progress was made on improving ElasticSearch admin controls
 - Wasn't able to add a database maintainer because the database maintainership process took some time to be established
 - Single Code Base issues took resources away that could otherwise have been spent on other engineering-led efforts like some of these KRs
 - Most significant gitlab-shell features (push, pull) have not yet to be ported to Golang
 - The gitlab-shell epic wasn't as fully fleshed out at the beginning of the quarter as it could have been, which would have allowed us to spread the work out better
 - gitlab-shell Golang features haven't been enabled and tested on any live environment yet
- TRY
 - Fleshing out KR-related epics better ahead of time

Manage BE

- GOOD
 - Hiring: 2 new joiners in Q1, 3 new candidates accepted offers to join in Q2
 - Fulfillment section is now functional, reducing product scope of Manage

- We have a plan to split the Manage stage in to two groups: Control and Framework, which will help scale up both team size and product scope
- BAD
 - We haven't delivered any more Deep Dive sessions, which brought value to the team in Q4 CY18
 - "Proactively reduce future security flaws" OKR was too generic and we didn't have foresight that completion would be valuable or achievable. Identifying pervasive flaws was useful, but the only MR we felt would add value had already been picked up by another group
 - We no longer have a Maintainer in Manage, as James moved to Fulfillment
- TRY
 - Encourage continuation of previous OKR initiatives that have added value (e.g. Deep Dives)

Gitaly

- GOOD
 - Onboarded 2 engineers, doubling the capacity of the team
 - Were fast switching priorities to performance:
 - Commit Graph shipped (<https://gitlab.com/gitlab-org/gitaly/issues/1627>)
 - Delta Island shipped (<https://gitlab.com/gitlab-org/gitaly/issues/1382>)
 - Cat-File caching (<https://gitlab.com/gitlab-org/gitaly/issues/1505>) - Almost Rugged like performance while using Gitaly
- BAD
 - As a team the focus should've been more on performance
 - Missed Gitaly HA OKR, a push to get the same architecture for .com and our customers.
- TRY
 - Work better with customers to understand their performance characteristics to be able to provide a better experience

SECTION: company/okrs/fy20-q2.md

This fiscal quarter will run from May 1, 2019 to July 31, 2019.

<p class="h3">1. CEO: Grow Incremental ACV. Grow website visitors, Introduce a certification program, Create DevOps Transformation messaging.</p>

1. CRO: Create DevOps Transformation Messaging KR: Complete customer pitch for "what it looks like to partner with GitLab over the next three years", test customer three-year pitch with 5 customers, create customer success journey map with defined plan for initial DevOps transformation services offering, rollout CS process to ensure all new customers are deployed with Self-Monitoring active and a CS motion is in place to drive adoption with existing large customers.

1. CRO: Define and prepare initial training and certification program. Sales messaging framework and content complete, training materials and program created, trainer ready to deliver to WW sales team 2019-08.

1. CPO

1. CMO:

1. Open a communication channel with GitLab.com users. Implement a growth analytics and user communication tool in GitLab (self-managed & gitlab.com), Test an in-app message and

hyperlink in GitLab.com as an iteration, Redesign the gitlab.com/explore page.

1. Digital Marketing Programs: Redesign gitlab.com/explore page, create better in-product linking to about.gitlab.com, and create a strategy for in-app messaging to increase traffic from product to about.gitlab.com by 10K users.

1. Marketing Operations: Open up communication channel with CE users. Re-implement health check.

1. Re-focus on technical & how-to content. Hire technical content re-mixer, publish 15 pieces of blog and social technical content, SEO analysis of docs.

1. PMM: Create at least 1 "how-to" technical content for each hidden IT group (5 total).

1. Corporate Marketing: Engage with technical developers and DevOps audiences via content pillars. Hire technical content editor, work cross-functionally with digital marketing to optimize all new technical content and 10 hardest-working existing technical content pieces, increase new users to the blog through technical and DevOps focused content by 10% Q2 over Q1.

1. Content: Cross-functional content alignment across marketing. Complete first iteration of new blog UX to enable higher volume of content. Implement Path Factory. Create 3 full-funnel content pillars to meet 100% of content creation roadmap.

1. Technical evangelism: Hire team and build first iteration of speakers bureau.

1. Digital Marketing Programs: Drive traffic to docs and from docs to about.gitlab.com via on-page optimization, improved cookie-ing, remarketing, and ABM to increase new user traffic to docs by 10% QoQ.

1. Field Marketing: Implement ABM Strategy. Increase the number of contacts engaged with us at enterprise named accounts to XXX in XXX accounts.

1. Attract net-new developers and DevOps practitioners. Deploy paid digital campaign focused on technical audience, enable retargeting of deeper technical content to docs visitors, launch GitLab "heroes" program, sign-up 1,500 users to 3 user conferences (500 each).

1. PMM: Define and deliver a series of 5 webinars talks focused on DevOps practitioners, and aligned to campaigns. Tag team with SDRs to drive webinar attendance.

1. Digital Marketing programs: Build out developer marketing paid digital program to target and attract developers and to increase form fills for the demo and increase .com users by 10% QoQ

1. Corporate Marketing: Prominent presence at strategic industry events (KubeCon EU, DOES EMEA, OSCON). Capturing over 15% of an engaged audience (through talks, social, booth scans, giveaways, dinners and meetings)

1. Technical Evangelism: Reach 10,000 people through technical evangelism efforts (such as talks, onboarding CNCF projects on GitLab CI), create 5 technical blog posts and social technical content from show content within 2 weeks of event.

1. Technical Evangelism: Prominent presence on (at least 2 net new) foundation committees - CNCF board, CI working group, Helm Summit, KubeCon, Colocated events (and content to show that off)

1. Events: Announce user conferences. Drive 600 sign ups to the events, align GitLab "heros" program with the user conferences, recruit 5 well-known speakers to be part of the event to drive sign ups.

1. Content: Support event presence. Execute content marketing and social plan for 3 premium events. Optimize effectiveness and reach of technical content. Implement success metrics and tracking.

1. Corporate Marketing: Create GitLab brand swell. Launch Onion Labs video and reach 100,000 page visits, GitLab included in 15% of Atlassian and Azure DevOps news moving forward, and increase coverage in EMEA by 10%.

1. Content: Support brand swell. Launch 2019 Developer Report and get 20 press mentions. Launch "You're Living Like This?" campaign to drive 4MM video views and 100,000 page

views.

1. Field Marketing: Execution of 3 technical workshop to build framework for workshops in future qtrs. AWS Summit Excellence. Building audience of 4000 leads to support the practitioner campaign, pipeline generation of 2X investment in Q2 (knowing 5X will be forthcoming in Q3 & Q4).

1. Developer Relations: Increase the number and diversity of regular contributors. Have 35 contributors with at least 5 merged MRs ("Enthusiast Contributor" status); have at least 1 contributor from an underrepresented group featured on a contributor blog post; redesigned, SEO-optimized Contributor page with metrics.

1. Developer Relations: Launch Heroes Program. Program assets including membership requirements, application process, clear incentives, dedicated webpage, blog post, and PR campaign; announcement and launch to be made at OSCON on July 15; at least 3 heroes recruited who have made significant community contributions announcement; at least 1 founding member from an underrepresented group.

1. Developer Relations: Increase response coverage and improve responsiveness on high priority channels. Decrease median first reply time to 5 hours for Hacker News and website comments, Monitoring with ZenDesk integration and response workflow in the handbook available for all Youtube GitLab channels.

1. Developer Relations: Increase strategic Open Source projects engagement. At least 1 net new successful POC with a strategic open source project (e.g. a project in CNCF) to migrate to GitLab. PR/Blog post featuring an open source project on GitLab.

1. VP Eng: Ensure self-managed GitLab scales for large enterprise customers.

1. Development

1. Growth: Increase Revenue. Raise retention metric from Xr to Yr, raise activation metrics from Xact to Yact, raise upsell metric from Xu to Yu, raise adoption metric from Xadp to Yadp, add SMAU to usage ping.

1. Enablement: Kickstart Memory project. Determine first iteration scope, hire team members, build dev and testing framework, establish and collect performance metrics, complete 1 low hanging fruit enhancement.

1. Fellow: Work across teams to ensure Gitaly I/O and other performance issues resolved with 10K reference test. => 40%

1. Fellow: Solve 3 priority customer issues that may impede significant GitLab adoption. => 100%

1. VP Alliances: Close xxx deals through partner custom deals. Joint case study with customer highlighting the secure stage. Secure speaking slots at VMworld (US and EMEA) and Reinvent

1. VP Alliances: deliver shared partner strategy together with the new VP Channels

<p class="h3">2. CEO: Popular next generation product. Grow use of stages (SMAU). Deliver on maturity and new categories. Add consumption pricing for compute.</p>

1. CPO:

1. CMO: Ensure appropriate transactional business/pricing. Analyze buying patterns of Starter & Bronze (user count, etc.), analyze web direct business, develop an iteration to low-end offerings based on data and solving potential conflicts with enterprise selling motions.

1. CMO: Publish visual proof of benefits of single application. Benchmark toolchain clicks, handoffs and integrations, create methodology for comparing to GitLab. Identify 2 customers to work with and create internal business case justification for GitLab purchase based on single application benefits.

1. VP Product: Become data-informed and more customer driven. Build all product KPI dashboards (with Business Ops), 40% of direction items are provably successful, each PM conduct three

customer discovery conversations per quarter. => 27%, 0%, 227%

1. Director of Product, Dev: Make GitLab the most usable DevOps platform on the market.

Prioritize issues to raise SUS score from 74.4 to 76.2. => -1.2%

1. Director of Product, Dev: Grow use of GitLab. Increase SMAU 10% m/m for Manage, Plan, Create. => 28%

1. PM, Create: Ensure self-managed GitLab scales for large enterprise customers.

Prioritize Gitaly N+1 query issues. => 55%

1. Director of Product, CI/CD: Grow use of GitLab. Increase SMAU 10% m/m for Verify, Package, Release, drive MAU for Verify by 8% through Grand Unified Theory of CI/CD (high ROI primitives), drive MAU for Release by 8% through establishing Progressive Delivery leadership in marketplace and making associated deliverables. => 33%

1. Director of Product, Ops: Grow use of GitLab. Increase SMAU 10% m/m for Monitor, Configure.

1. Director of Product, Secure: Grow use of GitLab. Increase SMAU 10% m/m for Secure.

1. Director of Product, Growth: Improve key growth metrics for both self-managed and GitLab.com. Create MAU and SMAU dashboards, execute and analyze 4 growth experiments, increase SMAU 10% m/m. => 0%, 25%, 27.5%

1. Director of Product, Enablement: Become data-informed. Implement telemetry (usage and events) suitable for entire company, track all events across GitLab.com and (non-opted-out) self-managed instances, track usage more robustly. => 100%, 33%, 0%.

1. PM, Memory: Ensure self-managed GitLab scales for large enterprise customers.

Prioritize memory issues. => 100%

1. PM, Fulfillment: Ensure customers can trial, purchase, and renew easily. Prioritize CustomersDot. => 34.5%

1. VP Product: Introduce new categories and improve the maturity of existing ones. Deliver on our maturity plan.

1. Director of Product, Dev: Three from none to minimal, two from minimal to viable, two from viable to complete. => 29%

1. Director of Product, CI/CD: One from none to minimal, five from minimal to viable, zero from viable to complete. => 33%

1. Director of Product, Ops: Three from none to minimal, four from minimal to viable, zero from viable to complete.

1. Director of Product, Secure/Defend: One from none to minimal, three from minimal to viable, zero from viable to complete.

1. VP Product: Sell more CI runner minutes. Add another type of Linux consumption pricing (e.g. larger instances), make add-on compute minutes available to self-managed instances, sell additional \$10k IACV in CI runner minutes. => 44%

1. VP Eng: Build our product vision.

1. Development: Increase productivity. => 85%

1. Development:

1. Secure:

1. Philippe Lafoucrière: Enable Secure Stage Third Party Integrations with 3 official integrations. => 25% (Detectify and SonarQube still ongoing, 3rd integration not started)

1. Gitter: Add automatic npm dependency updates to reduce technical debt and keep on top of security fixes => 100%

1. Infrastructure: Make all user-visible services ready for mission critical workloads.

1. Dev and Ops: Drive all user-services MTTR to less than 60 seconds. Move writes from NFS (shared01) to object storage, implement Elasticsearch on GitLab.com, migrate repos to ZFS storage.

1. CI/CD and Enablement: Drive all-user services MTBF to infinity. Deliver p90 latency for CI/CD to less than 20 seconds, deliver SnowPlow for internal growth and revenue working groups, migrate Chef to version 14.

1. Secure and Defend: Secure GitLab.com. Deploy Camo proxy server, deploy Vault to provide a solution for secrets management and use, Upgrade Postgres to version 11 with log centralization and reporting.

1. Delivery:

- Streamline GitLab deployments on GitLab.com and self-managed releases => 100%
- Migrate GitLab.com registry to Kubernetes and have it autodeployed as part of release process => 50%
- Complete GitLab codebase merge => 80%
- Implement storage limits => 40%
- Implement single object storage => 5%

1. Infrastructure: Control gitlab.com cost. Decrease cost per user from X to Y, Lower total target spend from X to Y.

1. Quality: Make self-managed mission critical. => 94%

1. Quality: Increase Engineering Productivity. => 87%

1. Security: Secure the company, secure the product and customer data.

1. Security: Continue rollout of Zero Trust model.

1. Application Security: HackerOne program spend on plan.

1. Application Security: Roll out external secure coding training for all developers.

1. Compliance: Develop and publish Information Security Compliance Roadmap. 100%

Security - Trust Center

1. Compliance: Complete information security controls gap analysis. 100% GitLab Control Framework Gap Analysis Results 2019-07-31

1. Red Team: Conduct and document at least 5 threat modeling exercises.

1. Red Team: Identify 5 risks to customer data in GitLab.com and/or GitLab CE.

1. Security Operations: Reduce GitLab.com cloud spend through Abuse activity mitigations.

1. Security Operations: Automate end-to-end vulnerability management process.

1. Support: Improve the Customer Experience. => 50%

1. AMER-W: Improve the customer experience by decreasing the time to resolution (TTR) of tickets and reported issues. => 85%

1. Support Operations Specialist: Clean up SFDC -> Zendesk data sync to ensure proper SLA workflows. => 80%

1. Support Operations Specialist: Create plan to evolve our Customer Satisfaction survey process. => 95%

1. AMER-C: Strengthen Support's Skill Base. => 33%

1. EMEA: Initiate a weekly CSAT feedback review process. => 50%

1. EMEA: Add doc and issue search to Support portal and improve ticket deflection by enabling customers to find solutions by searching before submitting tickets. => 30%.

1. Support: Establish consistent escalation path of customers issues. => 80%

1. AMER-E: Define roles & responsibilities between tech support and customer success based on Denver Customer Success Workshop. => 90%

1. AMER-W: Rollout Support Stable Counterparts. => 90%

1. Support Operations Specialist: Complete Federal support instance process and implementation. => 90%

1. APAC: Establish consistent escalation path of customers issues. => 20%

1. APAC: Iterate on Incident Management for self-managed customers. => 20%

- 1. APAC: APAC: Improve quality of non-English ticket support. => 30%
- 1. AMER-C: Revamp Support Onboarding. => 60%
- 1. AMER-C: Establish Americas Central team. => 100%
- 1. UX Director: Make GitLab the most usable DevOps platform on the market. => -1.2%
- 1. UX Director: Make GitLab UX more strategic by basing more of our experience decisions on feedback from the wider GitLab community. => 65%
 - 1. CI/CD UX Team: Elevate UX from reactive to strategic.
 - 1. Staff Designer: Improve the quality and consistency of our UI. => 47%
 - 1. Ops UX Team: Elevate UX from reactive to strategic by proactively identifying, defining, prioritizing, and tracking experience improvements. => 88%
 - 1. Dev UX Team: Elevate UX from reactive to strategic by proactively identifying, defining, prioritizing, and tracking experience improvements. => 88%
 - 1. Secure UX Team: Elevate UX from reactive to strategic by proactively identifying, defining, prioritizing, and tracking experience improvements. => 88%
 - 1. Growth UX Team: Elevate UX from reactive to strategic by proactively identifying, defining, prioritizing, and tracking experience improvements. => 88%
 - 1. Technical Writing Team: Make GitLab docs more complete, findable, and easy to update, using 'single source of truth' standards. => 92%
 - 1. Technical Writing Team: Make sure we're proactively addressing the most valuable doc improvements and corrections in every stage group. => 80%
- 1. VP Alliances: deliver mature product that can license, bill and meter for our partner offering/marketplaces

3. CEO: Great team. Become known as the company for all remote. Get all KPIs and OKRs from dashboards instead of slides. Handbook more accessible and SSoT. Become a world-class hiring and on-boarding company.

- 1. CFO: Improve accounting processes to support growth and public company reporting requirements.
 - 1. Controller: Audit completed by July 31, 2019
 - 1. Senior Technical Accounting Manager: 606 signed off by E&Y prior to end of April. Other technical accounting issues for FY 18 resolved prior to end of May.
 - 1. Senior Accounting Manager: Achieve ten day close.
 - 1. Senior Accounting Manager: Implement Blackline.
 - 1. Senior Accounting Manager: Implement Tipalti.
 - 1. Senior Internal Audit Manager: First phase of SoX compliance completed
 - 1. Senior Internal Audit Manager: Standard Operating Procedures fully documented and included in handbook
 - 1. Senior Internal Audit Manager: Test of Design of internal controls over financial reporting. This excludes ITGCs.
 - 1. Senior Internal Audit Manager: Phase I - Test of operating effectiveness completed (For controls that passed the test of design)
- 1. CFO: Improve financial planning processes to support growth and increased transparency.
 - 1. Dir. of Bus Ops: 100% of KPIs on executive dashboard completed with goals and links to definitions. All KPIs labeled as P0 and P1 completed in periscope.
 - 1. Dir. of Bus Ops: BambooHR and Greenhouse ingestion fully automated.
 - 1. Dir. of Bus Ops: Historical reporting from snapshots / log in place for SFDC.
 - 1. Dir. of Bus Ops: Data Quality Process (DQP) completed for ARR, Net and Gross Retention and Customer counts. Third party review completed for same metrics. GitLab Metrics at IPO - Google Sheet.

1. FinOps: Fully integrated five year financial model that has gearing ratios documented in the handbook for non-headcount spending and headcount.

1. FinOps: Metrics incorporated in financial model shown in periscope as KPIs with plan, forecast and actual data.

1. FinOps: Financial results shown as plan vs actuals vs (forecast-tbd) at department level.

1. Finance Business Partner: Show working model end to end for integrated financial modeling for support by May 15.

1. Finance Business Partner:

1. GitLab.com allocation model signed off by CFO and VP Engineering with handbook updated for methodology.

1. Product Line P&L completed and issued on a monthly basis.

1. CFO: Create scalable infrastructure for achieving efficient growth

1. VP of Legal, Contracts, IP and Compliance: 95% of team members covered by scalable employment solution

1. Director of Business Operations: Procurement function created with leader in place.

1. Director of Business Operations: First iteration of purchasing process changes merged into handbook.

1. VP of Legal, Contracts, IP and Compliance:

1. VP of Legal, Contracts, IP and Compliance: Streamlined legal review process for contracts fully implemented.

1. Director of Business Operations: GitLab Team Members are securely online Day 1

1. Director of Business Operations: 100% GitLab team-member Adoption of OKTA

1. Director of Business Operations: macOS & Linux standards for purchasing are fully documented and the process is automated where available

1. Less supported geos have purchasing guidelines documented

1. Global Repair and Laptop Disposal policies documented

1. Automate Laptop Deployment via Apple DEP

1. Director of Business Operations: Evaluate and Install Client side security and provisioning on 50% of GitLab owned laptop fleet.

1. CPO:

1. Defined key business metrics that should be improved by the training.

1. Implement and iterate on new manager enablement program

1. Develop and rollout professional communication training

1. Onboard and enable our Diversity, Inclusion & Belonging Partner

1. Implement a diversity dashboard by department

1. Compensation: Continue the evolution of our Compensation Model

1. Ramp new Analyst successfully to understand our compensation model, working transparently in GitLab, and ensure proficiency in all related tools.

1. Complete Phase 1 and 2 of our compensation iterations.

1. Benefits: Commence a review of benefits in our team member locations

1. Review Benefits for each payroll provider (entity and PEO) we have and ensure alignment to the global benefits guiding principles.

1. People Operations: Continue to increase efficiencies across the People Ops team

1. Transition to using Boards for projects to increase efficiency and transparency

1. Fill open vacancies in the People Ops team - HRBP x2, People Ops Specialist, Web Content Manager

1. Iterate further to streamline the Onboarding Issue to enhance our new hire experience

1. Continue to support the conversion of contractors to our PEO - 10 countries during

Q2

1. Sign off on new HRIS system and have agreed implementation plan
1. Recruiting: Deliver on the aggressive Hiring Plan in partnership with Leaders
1. Employment Brand: Evolve GitLabs Employment Brand
 1. Collaborate with Marketing to create and publish a new GitLab recruiting video to promote working at GitLab and what it's like to work at GitLab.
 1. Define and publish GitLab's employer value proposition.
 1. Identify 5 locations to focus our employment branding, recruitment marketing, and sourcing efforts and create campaign plans for these locations.
 1. Achieve "OpenCompany" status on Glassdoor; create and activate a process for gathering and responding to at least 50% of our Glassdoor reviews.
1. Talent Operations: Enhance reporting capabilities
 1. Create scorecards for Recruiter, Sourcer, and Coordinator to measure effectiveness and balance workloads.
 1. Partner with Diversity Manager to Improve Diversity reporting capabilities and use it to influence recruiting processes and workflows to better eliminate bias.
 1. Build out leading indicators and evolve progress vs. plan dashboard
1. Recruiting: Optimize current technology
 1. Evaluate ATS to renew/modify offerings with contract renewal in June.
 1. Consider Greenhouse Inclusion feature or other tools to remove bias.
 1. Find a solution to move from wet signature to electronic signatures for contracts in Germany
1. Recruiting: Continue to identify process improvement opportunities and improve key metrics:
 1. Further leverage candidate survey data to inform process improvement opportunities.
 1. Initiate Hiring Manager Survey and action key insights.
 1. Continue to work towards stretch goal of 30 days for apply to accept metric
 1. Double the percentage of sourced hires from Q1 to Q2
 1. Standardize onboarding/training for new Recruiters, Coordinators, and Sourcers to provide efficient and effective ramp up with consistent ways of working.
 1. Hire executive recruiter to support more senior level roles / pull back on agency reliance
 1. Low location factor hiring goal consistent with department goals
1. CMO:
 1. Launch All-Remote web destination. Digest existing all-remote content, create an all-remote landing page for recruiting support, at least 2 all-remote related press articles in mainstream press (defined as non-tech press).
 1. Corporate Marketing: Launch all remote thought leadership platform. Increase coverage of GitLab being all remote by 20% in the media, secure 2 mainstream media articles, increase speaking opportunities on all remote by 20%.
 1. Events: Help support all-remote thought-leadership. Work cross-functionally with peopleops to create and implement collateral at events, commit to 2 all-remote events, and put together a strategy/proposal around an all-remote GitLab event.
 1. Have successful Contribute New Orleans. Reach 3,000 viewers with Contribute content about being all-remote, reach 4+ (out of 5) survey rating on Contribute New Orleans, announce Contribute 2020 built with NOLA feedback in mind.
 1. Content: Develop all remote editorial strategy. Create "all remote" content section on GitLab's digital publication. Increase new users on all remote blog content and increase views of all remote YouTube content by 10%. Publish 5 videos from Contribute.
 1. Digital Marketing Programs: Ensure metrics from Google Analytics are accessible in

funnel and consult on all top-of-funnel and website metrics reporting discussions

1. Digital Marketing Programs: Improve inbound lead conversions by creating end-to-end customer nurture paths, with email and digital advertising to increase MQLs.

1. 100% real-time funnel metrics. All funnel marketing metrics in periscope available to anyone at GitLab.

1. Achieve Revenue Plan funnel targets. \$13m in Net New IACV Pipeline created by beginning of Q3 FY20. 34,000 MQLs created, 11% MQL to SAO conversion rate.

1. VP Eng: Scale processes to accommodate a 500 person organization

1. Development: Achieve Level 3/4 Maturity for KPIs => 74%

1. Ops: Roll out the pulse survey to FE team.

1. Secure: Roll out the pulse survey across the section teams.

1. Development: Hire to plan => 100%

1. Development:

1. Secure:

1. Philippe Lafoucrière: Evaluate OWASP Sponsorship to improve GitLab visibility on the Security market. => 100%

1. Infrastructure: Get all KPIs built.

1. Quality: Increase maturity of Quality Department KPIs. => 80%

1. Security: Get all KPIs built.

1. Application Security: Hire to plan. 2 hires made.

1. Compliance: Hire to plan. 1 hire made.

1. Red Team: Hire to plan. 2 hires made.

1. Security Operations: Hire to plan. 2 hires made.

1. Support: Adopt capacity model with finance, and update vacancies in team.yml => 100%

1. AMER-W: Develop blended team model. => 60%

1. AMER-E: Convert all current metrics to use FY designation & Explore Periscope or Zendesk Explore as the next iteration platform. => 10%

1. AMER-E: Review Support Engineering Onboarding and redesign to align with product stages and define post-onboarding stages. => 10%

1. UX Director: Get all KPIs built.

1. VP Alliance
