Overview

Our Emerging Talent strategy ignites GitLab to build toward creating globally inclusive access to opportunities so that everyone can contribute. Emerging Talent program participants, defined as talent with 2 years or less experience in a given domain, will be a value add as GitLab scales.

These programs aim to bridge the gap between education and experience by offering curriculum and work-integrated learning to talent at the Associate level, with no academic-based prerequisites.

.

Goals

1. Establish Emerging Talent Acquisition Strategy within Engineering.
1. Build Emerging Talent Programs within Engineering.
 - FTE Rotation Program [Marketing Name = Associate Engineering Program aka AEP]
 - Internship Program [Marketing Name = Engineering Internship Program aka EIP]

Exit Criteria

TBD

Property	Value
Date Created	March 6, 2020
Target End Date	August 20, 2020
Slack	wgcareermatrices (only accessible from within the company)
Google Doc	Career Matrix Working Group Agenda (only accessible from within the company)
Issue Board	Plato Coaching Pilot Issue Board

Business Goal

Deliver 4 career matrices in Engineering as part of PlatoHQ program in response to CultureAmp feedback aligned with this FY21-Q1 Engineering KR

Roles and Responsibilities

Working Group Role	Person	Title
Facilitator	Darva Satcher	Engineering Manager for Create: Knowledge and Create: Editor
PO Functional Lead	Roos Takken	People Business Partner, Engineering
Development Functional Lead	Jean du Plessis	Engineering Manager, Static Site Editor
Support Functional Lead	Shaun McCann	Support Engineering Manager - APAC
Quality Functional Lead	Tanya Pazitny	Quality Engineering Manager, Secure & Enablement
Infrastructure Functional Lead	Marin Jankovski	Senior Engineering Manager, Delivery and Scalability
Executive Sponsor	Christopher Lefelhocz	VP of Development

Exit Criteria

The Career Matrix Working Group will deliver:

Iteration	Task	Status
1	A Baseline Engineering Career Matrix	Completed
2	A Framework for Engineering Functional Leads to implement and customize for their teams to ensure consistency and uniformity across Engineering Teams.	Completed
3	A fully populated Department Level Career Matrix	Completed
4	A fully populated Sub Department Level Career Matrix	Completed
5	Application by a Sub Department IC / Manager Pair	Completed
6	Gather Survey Feedback to determine whether or not the Framework is useful	Completed

SECTION: company/working-groups/engineering-internship.md

Date Created	March, 2022
End Date	March 28, 2023
Slack	wgeengineeringinternshipprogram
Google Doc	Working Group Agenda
Docs	Handbook Page
Meetings	This working group meets bi-weekly (every other week) on Tuesday 21:00 UTC
Documents	Working Group - Shared Folder

Due to the high probability of discussing applicants, the recordings and documents are private and accessible by GitLab team members only.

Business Goal

1. To run an inclusive engineering internship program to provide all qualifying candidates with a fair and equal opportunity. This program allows us to create opportunities for candidates, diversify the experience levels of our teams, and bring fresh perspectives to our initiatives.

1. To establish processes and support to give our successful internship applicants the best chance to successfully complete the internship and onboard in a full-time role at GitLab.

This working group aims to build on the previous work from the internship-pilot program from 2020.

Exit Criteria

Stage 1: Establish the internship => 100%

- · Form a team to re-establish the engineering internship
- · Open an evergreen internship for applicants
- · Identify and work with several hiring managers to review, screen, and interview candidates for specific roles

Stage 2: Iterate on the process with a small number of teams => 100%

- · Create role specific recruitment funnels
- · Determine requirements and benchmarks for technical interviews
- · Support managers, teams, and interns through the first round of internships
- · Re-introduce the Junior level, renamed Associate, and add as a pathway from internship

Stage 3: Plan for FY24 => 0%

- · Work through options to extend the internship in FY24

Options to extend the internship program for Engineering in FY24 and beyond are being worked through as part of the recruitment team emerging talent program.

Roles and Responsibilities

Google Doc	Working Group Agenda (only accessible by GitLab team members)
Docs	TBD
Issues	TBD
Label	TBD
Associated KPIs/OKRs	Increase market share in the enterprise segment
GitLab group for working group	TBD

Business Goals

1. Increase enterprise market deal support related to the DevOps Platform.
1. Increase market share in the enterprise segment.

Protocols and Processes

1. We will have a recurring bi-weekly sync with the working group

1. We will use a issue board for assigning tasks and delegating efforts across the working group
1. We will track efforts in phases, which will be broken up into epics
1. The DRI for this effort is Jackie Porter and investment cases will be approved via the VP of Product Management

Exit Criteria

1. Craft a vision to deliver on the needs of the enterprise market.
1. Establish business cases/investment cases to accelerate most critical scope.
1. Deliver iteration plan for vision.
1. Deliver updates to Product Marketing Platform Content.
1. Deliver market research (e.g. message testing).
1. PMs to prioritize iteration plans.

Meetings

Meetings are recorded and available on YouTube in the Working Group - Enterprise Market Leadership playlist. The playlist is private (GitLab Internal Only) due to the nature of the material covered in the call.

 ## SECTION: company/working-groups/event-stream.md

Attributes

Property	Value
Date Created	2021-09-20
Target End Date	2023-04-01
Slack	wgevent-stream (only accessible from within the company)
Google Doc	Event Stream Working Group Agenda (only accessible from within the company)
Issue Label	~WorkingGroup::EventStream

Context

There are currently 3+ methods for publishing and listening to events within the GitLab product.

There is no single standard for events and there is no standard way of publishing and subscribing to events from other GitLab systems and services.

There is a growing need to standardize events and how to publish and consume them for both GitLab.com and self-managed installs.

Working Group Goals

This Working Group has the following goals:

1. Document the current event systems
1. Document the currently identified use cases for an event stream
1. Define and socialize an architecture for a standardized event stream and events
 1. Architecture Blueprint for Event Stream usage within GitLab and self-managed
 1. Define sane and secure defaults. Provide security recommendations and guidelines.
1. Define a rollout strategy and plan
 1. SaaS rollout strategy for current use cases
 1. Prepare the groundwork for adding the event stream to our reference architectures
1. Develop a communication plan to socialize the outcome of the working group

Exit Criteria Progress

Criteria	Start Date	Completed Date	Progress	DRI
-----	-----	-----	-----	

Document current event systems				
Document use cases				
Develop and social architecture strategy				
Develop rollout strategy				
Develop and implement communication plan				

Definitions

What is an Event Stream?

An event stream is simply a stream of events that occur within the product. More specifically, for us at GitLab, it will involve the software changes we need to make in the product, event schemas and protocols, and infrastructure.

Potential Tools/Services

There are some tools/services that other companies are using for this

- 1. Kafka
- 1. NSQD
- 1. RabbitMQ
- 1. GCP PubSub

Related GitLab Documentation or Issues

- <https://gitlab.com/gitlab-org/gitlab/-/mergerequests/34042>
- <https://gitlab.com/gitlab-org/gitlab/-/issues/338454>
- Streaming Audit Events

Exit Criteria

If it is decided that an Event Stream should be implemented, our exit criteria should be:

- 1. Define the tool(s)/service(s) we should use for SaaS and on-prem (they might be different)
- 1. Define system architecture
- 1. Define an implementation plan and philosophy
- 1. Define event structure

Roles and Responsibilities

Property	Value
Date Created	2021-07-20
Estimated Date Ended	2021-04-30

| Slack | expensemanagementnirvana - (only accessible from within the company to a private group) |
| Google Doc | Expense Mangement Working Group - Agenda |

Business Goal

Ensure that our expense policy relects GitLab's spend company money like its your own operating principle while being highly efficient for accounting and other team members.

This will include:

1. Providing clarity around how to interpret the operating principle
1. Updating the purchase recommendations page in the handbook
1. Evaluating current expense infrastruture and making any required changes
1. Updating current expense processes and policies and making any required changes
1. Manager enablement and training

Exit Criteria

Updated expense policy and processes in line with GitLab's spend company money like its your own operating principle that are clearly documented in the handbook.

SECTION: company/working-groups/experimentation.md

Attributes

Property	Value
Date Created	September 17, 2020
Date Ended	October 30, 2020
Slack	wgexperimentation (GitLab internal) - archived
Google Doc	Experimentation Working Group Agenda (GitLab internal)

Business Goal

Define the process for Product Groups to self-service the definition, running, and results analysis of Product experiments on GitLab.com.

In order to keep the working group short-lived and our discussions focused, we are explicitly & exclusively focusing on experimentation within GitLab.com. This means that we will consider the discussion of experimentation on self-managed, customers.gitlab.com, about.gitlab.com, and other such entities as being out of scope for this working group.

Exit Criteria (100%)

- A short to medium term decision and rationale for build vs buy when extending experimentation capabilities for GitLab.com.
 - Epic preference is to dogfood
- High level requirements analysis comparing improve, build, buy options.
 - Epic
 - Issue
- An updated and documented experiment ideation process.
 - Issue
 - Issue
- A guide to the types of experiments supported, how these can be rolled out by user/namespace/group, and the technical process to implement this rollout.
 - Issue
- How to track experiments using frontend and backend events.
 - Issue
- A guide to the types of data that can be collected, where, how, and for what use.
 - Epic
 - Issue
- A code cleanup process for completed experiments.
 - Issue
- A handbook page describing how and where to write up results for completed experiments.
 - Issue
- A way to view currently active experiments on GitLab.com.
 - Issue
- Summary of recent progress extending existing experimentation capability
 - Issue
 - Issue

SECTION: company/working-groups/feature-flag-usage.md

Attributes

Property	Value
:----- :-----	

Date Created	Dec 3, 2020
End Date	July 28, 2021
Slack	wgfeature-flag-usage (only accessible from within the company)
Google Doc	Working Group Agenda (only accessible from within the company)

Charter

This working group will co-ordinate the organization of the effort to improve the usage of feature flags in the development of GitLab. There are many asynchronous and currently ongoing discussions in the organization about internal feature flag usage. We aim to collect and co-ordinate these conversations in order to create uniform policies and processes for the usage of feature flags within GitLab. The uniformity of these policies is key in order for internal stakeholders, community members, and customers have more consistent insight into the availability of GitLab features.

Scope and Definitions

This group will create processes and policies that are as lean as possible in order to ensure that the way feature flags are used by engineers meets the needs of all stakeholders. Stakeholders for feature flags generally are individuals who care about the current state of features on GitLab.com and self-managed GitLab instances of a particular version.

Definitions

- Feature Flag - this isn't necessarily the feature flag feature but rather the way we use feature flags in the development of GitLab

Exit Criteria

1. · Fulfillment of the feature flag architectural blueprint
1. · Completion of all issues labeled with the working group scoped label on GitLab.org and GitLab.com
1. · Refinement and assignment of Feature Flag Training, and Feature Flag Monitoring training for GitLab engineers
1. · Audit, refine, and communicate the Feature flags in development of GitLab documentation
1. · Each functional lead is satisfied of the state of the feature flag processes in place in the development of GitLab
1. · Provide data to support long-term feature flag management so we can monitor the lifecycle of feature flags and take action on them as appropriate.

Work in Progress

- Capturing the current feature flag lifecycle

Roles and Responsibilities

The functional leads will be responsible for:

- Representing the needs of individual stakeholders in their department/sub-dept
- Gathering and consolidating feedback on specific proposals from their department/sub-dept
- Communicating the output from the working group (if any) and answering questions from their dept/sub-dept

Ideally the functional lead is someone who is an IC that might be affected by the policy put in place. but anyone capable of representing a department or sub-department in the fashion mentioned above is welcome.

The stakeholder departments in the table are the ones identified in the architectural blueprint, and listed here for reference: Engineer, Engineering Manager, Engineering Director, Product Manager, Technical Writer, Delivery Engineer, SRE.

Epic	
Overview & Status	See Exit Criteria

Context

The current approach to feature testing, using RSpec and Capybara, has a number of drawbacks:

Due to lack of coverage or quantity of quarantined specs, the feature suite overall provides limited confidence in code changes and fails to catch regressions.

Low level of stability leads to high frequency of broken master.

Limited debugging tools make it difficult to create stable tests and debug flaky ones.

Maintenance of tests written in Ruby is frequently the responsibility of Frontend engineers, who may or may not have skill in this language.

Goals

This Working Group has the following goals:

1. Establish the credibility of an alternative JavaScript-based testing system, Playwright, as an alternative to Capybara.
2. Create a proof of concept using Playwright with a part of the GitLab platform.
3. Create an architecture blueprint with a strategy on how to migrate to Playwright.

Exit Criteria

Criteria	Start Date	Completion Date	Progress	DRI
-----	-----	-----	-----	-----
CI/CD and environment setup	2024-12-11			Javiera Tapia
3 converted spec examples	2024-12-11			Natalia Tepluhina

	Migration Plan			

Details

CI/CD and environment setup

Need to determine how to spin up a Playwright server within the GitLab build process.

3 converted spec examples

Full examples for an apples-to-apples comparison with currently flaky tests:

<https://gitlab.com/gitlab-org/gitlab/-/blob/wild-standalone-test/spec/features/boards/boardsspec.rb>

<https://gitlab.com/gitlab-org/gitlab/-/blob/wild-standalone-test/ee/spec/features/epicboards/epicboardssidebarspec.rb>

<https://gitlab.com/gitlab-org/gitlab/-/blob/wild-standalone-test/spec/requests/api/committsspec.rb>

The plan is to measure and compare the following metrics:

- % of runs failed

- Time to run spec

- Debugging steps

Migration Plan

Strategy to take to gradually migrate to Playwright.

Update 2025-01-22

Current Progress and Challenges

After extensive efforts on the proof of concept to replace Capybara with Playwright, the working group has encountered significant challenges that impede further progress:

Authentication Issues: Integrating Playwright with our existing authentication mechanisms has proven to be complex and while seemingly solved, it is in a way that makes it difficult to troubleshoot future problems.

Increased Complexity: Troubleshooting the Playwright POC revealed that migrating to a new testing framework introduces additional layers of complexity, making maintenance and debugging more challenging than anticipated.

Resource Constraints: The time and resources required to overcome these roadblocks are substantial, diverting focus from other critical testing improvements.

Given these obstacles, the working group recommends discontinuing the current experiment to replace Capybara with Playwright.

Recommendation

With the conclusion of the Playwright experiment, the working group has closed. We propose the following recommendations to increase testing coverage and reduce flakiness within our existing Capybara/RSpec framework:

1. Increase Test Coverage:

Identify Gaps: Conduct a thorough analysis to identify areas with insufficient test coverage and prioritize adding tests to those regions.

End-to-End (E2E) Tests: Gradually introduce E2E tests for critical user flows, encouraging authoring of these E2E tests by frontend/fullstack engineers.

1. Training and Documentation:

Skill Development: Provide training sessions for engineers on best practices with Capybara and RSpec to improve test writing and maintenance.

1. Regular Maintenance and Review:

Flaky Test Identification: Establish a routine for identifying and addressing flaky tests promptly to maintain test suite reliability.

Continuous Improvement: Foster a culture of continuous improvement where feedback from test runs is regularly used to enhance testing strategies.

By implementing these recommendations, we aim to strengthen our feature testing framework, increase coverage, and significantly reduce flakiness, thereby enhancing overall code quality and stability.

Steve Manzuik	Dir. Threat Management	Vulnerability Remediation DRI
Stephen Dumesnil	EM US Public Sector Services	USPS Team DRI
Cynthia Miller	Sr. Dir. Security Assurance	Security DRI

Direction

GitLab is pursuing FedRAMP authorization at the Moderate Impact Level. We will evaluate demand for High once we attain Moderate.

Further details of the FedRAMP plan, including anticipated or actual dates, cannot be shared publicly at this time.

Team members can view details in the internal handbook. This public handbook page contains information about the FedRAMP Authorization process as it pertains to GitLab.

SECTION: company/working-groups/frontend-observability.md

Attributes

Property	Value
Date Created	2021-07-14 (Paused from 2022-06-01 to 2023-02-24)

End Date	2023-11-01
Slack	wgfrontend-observability (only accessible from within the company)
Google Doc	Working Group Agenda (only accessible from within the company)
Overview & Status	Epic

Charter

This working group will co-ordinate the organization of the effort to develop a frontend observability framework for GitLab and establish guidelines for its usage. There is currently no method to instrument the frontend for the purposes of monitoring performance, especially across a range of devices and content. Error monitoring is possible but is mostly unused. This group will explore, define, and coordinate the development of system to make this instrumentation possible and document recommendations for use.

Scope and Definitions

This group will focus on creating a method for sending browser performance data to a frontend stats gateway that will allow the metrics to be accessed via our system, like the current backend metrics. Determining the details of this is part of the remit. Once this exists, the group will be responsible for documenting its use, as well as usage recommendations for error monitoring. This will allow frontend engineers to understand the performance of their code in various contexts and add another source of data to help find issues when new features are rolled out.

Stakeholders for this project include frontend engineers and SREs.

This group will not focus on instrumentation around user actions for product reasons; this is covered by Snowplow and has a different use case.

Definitions

- Frontend Observability describes the process of being able to answer questions about the performance of frontend code "in the wild". It is provided via the instrumentation of frontend Javascript. This is a nice talk covering what it can mean, although the goals of this group will be focused around performance and errors.

Exit Criteria

This working group will have fulfilled its purpose when:

- x] The @sentry/browser package is upgraded automatically via renovate [Link
- x] Sentry is configured to track and report frontend errors reliably [Link
- x] Sentry is configured to monitor our performance with performance tracing [Link
-] A triaging / diagnosing process is created for sentry errors [Link
-] Documentation is written that allows other frontend engineers to contribute [Link
-] The old sentry settings are deprecated and removed [Link

Roles and Responsibilities

The functional leads will be responsible for:

- Representing the needs of individual stakeholders in their department/sub-dept
- Gathering and consolidating feedback on specific proposals from their department/sub-dept
- Communicating the output from the working group (if any) and answering questions from their dept/sub-dept

Ideally the functional lead is someone who is an IC that might be affected by the policy put in place. but anyone capable of representing a department or sub-department in the fashion mentioned above is welcome.

Date Created	2023-03-27
Target End Date	TBD
Slack	wgfrontend-vision (only accessible from within the company)
Google Doc	Agenda (only accessible from within the company)
Overview & Status	See Exit Criteria Progress

Context

Currently, our frontend development guidelines only document features and practices we are currently using in production. There is no clear documentation about what we see as a desired state of the frontend at GitLab, nor guidelines regarding practices we plan to deprecate. It would be nice to define a set of high-level expectations regarding frontend architecture, tech stack, and best practices as we see them in the scope of three years from now. Here is a non-exhaustive list of topics we should discuss:

- Single-Page Application vs Multi-Page Application vs hybrid approach (multiple SPA's that handle some functionality).
- Server-Side rendering

- Technical stack (frontend framework, state management approach, testing levels and tools)
- Real-time features, optimistic updates, frontend caching and "snappy GitLab experience" overall
- Exception process when certain group requires the tool that deviates from the main strategy

Exit Criteria

Updates are being tracked every other week within <https://gitlab.com/gitlab-org/gitlab/-/issues/419576>.

1. Add introduction page to frontend documentation, explaining direction and high-level overview of the frontend codebase/architecture.
1. Include evolution of codebase over three year horizon.
1. List frontend technologies used and the design principals that guide the frontend team's work.
1. Explicitly define deprecation/removal plans, including why these features are being deprecated.
1. Communicate outcome to the broader frontend functional group.
1. Discuss and document communication plan, including frequency of updates from working group.
1. Document the requirements for reusable components outside of GitLab UI.
1. Determine DRIs around specific parts of frontend documentation.
1. Determine how the exception to the main strategy process will work, and if there is a need for a separate area for "wild" ideas.
1. Determine evaluation and decision-making process for RFCs.

Problems To Solve

For more details please reference the Product FY'21 Engagement Survey Results.

1. How can we provide a clear, actionable and trackable path for product managers to grow and thrive at GitLab and beyond?

1. How can we better support and help product managers focus on creating innovative and valuable products for GitLab's customers?

Business Goals

- Create focus on customer value and business outcomes in the product manager role at GitLab
- Boost product team job satisfaction and retention
- Provide a clear path to success at GitLab for product managers of all levels
- Attract, grow and support a diverse group of product managers at GitLab

Protocols and Processes

How we'll do the work

In order to stay focused and move quickly on actions, we need to stay lean. Therefore, the working group will be limited to 9 functional leads, 1 facilitator and 1 executive sponsor. The 9 functional leads will then be split into three groups of 3 collaborators, who will each own one of the problems to solve, as noted above.

Creating Epics, Issues and MRs for the working group board

- All epics should have labels: product operations wg-fy21-engagement-actions
- All issues should be linked to a WG epic and have labels: milestone product operations wg-fy21-engagement-actions and a product operations workflow label: prodops::todo prodops::validation prodops::planning prodops::doing prodops::inreview With these labels, the issues will be viewable as part of the product operations issue board
- All MRs should be linked to a WG issue and have the labels: milestone product operations wg-fy21-engagement-actions

Please note the above actions are necessary for succesful async collaboration.

How we'll review and share the work

- Please provide a standup style update of your work in progress at the weekly sync by adding it to the agenda and then voicing it over. If neither you or your partner are able to attend weekly sync, please still add the written update and the WG facilitator will voice over.
- Please explicitly communicate any reviews, feedback or contributions you need from the bigger WG team by adding an agenda item to weekly sync meeting or by posting in the WG Slack channel, in addition to pinging directly as appropriate in the epic, issue or MR. Highlighting in weekly sync and Slack are critical as we all have many pings and ToDos in GitLab daily. Please make any due dates for feedback clear as will help the WG prioritize when you need feedback.

- Please add the WG facilitator '@fseifoddini' as a reviewer on all MRs as DRI and to also allow her the opportunity to further label any items that need to show up on product operations release pages
- Please add required reviewers of your MR by assigning them as reviewer
- Please unassign yourself as reviewer when you've completed feedback

NOTE TO ALL: Please pay attention to your To-Do list! We'll not hold the train on non-controversial MRs for more than 24 hours.

Meetings

Meetings are recorded and available on Product GDrive. The facilitator will post a link to the video in a Slack as part of a meeting summary after every weekly sync. Due to the subject matter of this working group and the high probability that every synchronous meeting will discuss sensitive customer information, the playlist is private and accessible by GitLab team members only.

Exit Criteria

Required per Product FY'21 Engagement Survey Results:

1. Define a competency for managers to conduct effective 1-2 year career development conversations. Update the product handbook with guidance, and develop a template so we have a consistent approach across the division. Each team member should then feel welcome to fill out the document and schedule time with their manager to discuss. We very much want to be having regular career conversations on a cadence that works for each person.
1. Invest in a more robust Learning & Development curriculum for Product team members for at least three key competencies. Leverage content from LinkedIn, ProductTalk, and homegrown sources. Link content to competency development handbook descriptions, the Career Development Framework, and onboarding instructions.
1. Develop a product handbook page outlining the required monthly release tasks for PM's. Make it clear what's required, and what's optional and/or there for best practice guidance. Endeavor to reduce the monthly release task list for PM's so there is more time available for high value activities like customer, market, and competitive research.

Required per Product Operations:

1. Communication strategy for initial updates of each actions
 - Conduct an AMA to answer all questions / concerns
 - Communication in meetings, Slack and release pages as appropriate
1. Ongoing communication for updates/maintenance of the L & D and other actions as a whole
1. Dogfooding: Identify a Section/ group to dogfood L & D and other components as appropriate
 - Document and capture feedback for future iteration

Stretch:

1. Define quantitative and qualitative measures of success for
 - Learning and development hub
 - Product manager onboarding
 - product manager job satisfaction

Roles and Responsibilities

Working Group Role	Person	Title
Executive Sponsor	Scott Williamson (Product)	Chief Product Officer
Facilitator	Farnoosh Seifoddini (Product)	Product Operations
Functional Lead	Kevin Chu (Product)	Group Manager
Functional Lead	Mike Karampalas (Product - Growth)	Principal Product Manager
Functional Lead	Mark Wood (Product - Create / Plan)	Senior Product Manager
Functional Lead	Josh Zimmerman (People)	Learning & Development Manager
Functional Lead	Viktor Nagy (Product - Configure)	Senior Product Manager
Functional Lead	Derek Ferguson (Product - Secure)	Senior Product Manager
Functional Lead	Jacki Bauer (UX)	Product Design Manager

Onboarding	Patrick Faucher	Omar Fernandez
Design/UX	Pedro Moreira da Silva	

Overview & Goals

This is a cross-functional working group to establish a better together vision and experience for GCP/GitLab users and customers. This working group plans to deliver some meaningful improvements to integration, user experiences in GCP and GitLab to make it easier than ever to use GitLab for GCP products.

SECTION: company/working-groups/git-host-migration.md

Attributes

Property	Value
Date Created	January 30, 2020
Target End Date	April 24, 2020
Actual End Date	May 12, 2020
Slack	wggithostmigration (only accessible from within the company)
Google Doc	GitHost Migration Working Group Agenda (only accessible from within the company)

Business Goal

Successfully migrate a key customer from GitHost.io to GitLab.com. More details on the specific customer in Google Doc above.

Exit Criteria

1. Define acceptance criteria for customer. => Done The customer has stated they want all data migrated across. We have confirmed scope of data included in migration, which is viewable by following the Migration Features link here.
1. Identify and deliver issues blocking migration efforts in this epic. => Done.
1. Complete an end-to-end testing plan and conduct a migration dry-run. => Done.
1. Document known risks as part of the migration process. => Done Risks listed here. Working Group to add approval for each risk.
1. Execute on migration for customer. => Done Start Date 13th April. End Date 13th May.

Roles and Responsibilities

Working Group Role	Person	Title
Executive Stakeholder	Christopher Lefelhocz	Senior Director of Development
Facilitator	Allison Walker	Professional Services Project Manager
Functional Lead	Liam McAndrew	Backend Engineering Manager, Manage:Import
Functional Lead	Jeremy Watson	Group Product Manager, Manage
Functional Lead	Michael Lutz	Senior Director of Professional Services
Functional Lead	Paul Harrison	Security Manager, Security Operations
Member	Haris Delali	Product Manager, Manage:Import
Member	George Koltsov	Backend Engineer, Manage:Import
Member	Désirée Chevalier	Software Engineer in Test, Manage
Member	Sanad Liaquat	Senior Software Engineer in Test, Manage
Member	Glen Miller	Professional Services Engineer
Member	Petar Prokic	Professional Services Engineer, EMEA
Member	Sean Hoyle	Customer Success Manager
Member	Luca Williams	Product Manager, Manage:Spaces
Member	Lyle Kozloff	Support Engineering Manager

Outcome

The key customer was successfully migrated from GitHub.io to GitLab.com. As part of this process a new Group Import/Export API was introduced and the reliability of our Project Import/Export functionality was improved. Thank you for everyone's contribution in the Working Group.

Target End Date	2023-10-01
Slack	wggitlabtosnowflakepipeline (only accessible from within the company)
Google Doc	Working Group Agenda (only accessible from within the company)
Issue Board	Issue Board

Business Goal

Provide reliable, stable, scalable and secure data feed for reporting and analytics use cases like MR Rate & Performance KPIs (Product development), Product Usage for Gainsight, License Utilization (Customer Success), Product Health Dashboard (Health) Propensity to Expand and Churn Models, Forecast, Territory Management (Sales).

Technical Goal

Implement a data pipeline that captures create, update and delete operations and stores them in the GitLab Data platform to be available for further processing and analytics.

Exit Criteria

- Reliable: All 'metadata' and relevant descriptive data (create, update and delete) operations in the PostgreSQL database are captured, transferred and loaded into the data platform within 6 hours of the original event. Partially achieved.
 - Background migrations are not captured due to the fact that updatedat column not gets updated.
- Stable: End to end solution runs for 30 days without interruption or human intervention. Achieved
- Scalable: Solution scales with GitLab.com and does not require undue burden to expand as new GitLab.com databases, shards, zones, tenants, or cloud locations are deployed Partially achieved
 - Partially achieved as this is not possible with the existing architecture. With changing architecture this is included as requirements.
- Secure: Red data is not loaded or it is hashed if stored on a system that is not a data sub-processor. Achieved
- Defined and agreed SLO with all business partners. Achieved
- Full end to end monitoring. Achieved

Exit Criteria

The exit criteria for GitLab Dedicated Top Cross-Functional Initiative are the same as the exit criteria from Limited Availaility

Project Management

How We Work

The GitLab Dedicated Initiative Working Group follows the same processes as the GitLab Dedicated Engineering team from the Dedicated Engineering team page. This includes:

- Epic management
- Status updates
- Labels and usage

Epic Management

See epic management and hierarchy on Dedicated Team Page.

The Cross-Functional LA Requirements epic is a child epic of the GitLab Dedicated Top Level epic. This cross-functional epic is comprised of function-specific child epics managed by the DRI for that functional area. These functional child epics have sub-epics and/or issues representing groups of related tasks that are delivered in a specific phase from Limited Availability Roadmap.

Milestones for functional work from the Cross-Functional LA Requirements epic are included in Limited Availability Roadmap.

Status Updates

The GitLab Dedicated Initiative Working Group follows the status update process from Dedicated Engineering team page. The status updates that Functional DRIs make in their respective Functional Epics will be incorporated in the status update cadence and used to update the status of the Cross-Functional epic and the Top-Level Initiative Epic.

In addition to the status process from Dedicated team page, the Dedicated initiative has

additional status update requirements as a Top Cross-Functional initiative that the Initiative DRI is responsible for:

- Key Reviews
- Top Initiative Quarterly Meeting

Key Review

- Initiative DRI provides updates in Product Key Review as the Chief Product Officer is the executive sponsor of this initiative.

Top Initiative Quarterly Meeting

- Top Initiative Quarterly Meeting occurs once per quarter to review initiative health, risks, and blockers.
- Initiative DRI provides current status for Dedicated during this meeting along with plan for the initiative.
- The Initiative DRI will provide a summary from the most recent update from the Top-Level Initiative Epic.
- The Initiative DRI will share a draft of the Quarterly Update with the Ded
