

icated leadership team and Dedicated Executive Sponsor at least 3 business days before the scheduled presentation date order to gather feedback in order to add responses to the Top Initiatives agenda at least 1.5 days before Top Initiatives meeting.

Roles and Responsibilities

Initiative DRIs

1. Exec Sponsor: David DeSanto - Chief Product Officer
1. Initiative DRI: Ryan Wedmore - Director, Strategy & Operations
 - Working Group DRI responsibilities and Cross Functional Initiative DRI responsibilities
 - DRI for cross-functional initiative strategy, collaboration, and work streams
1. Engineering DRI: Marin Jankovski - Director of Infrastructure, Platforms
 - Overall DRI for Engineering, Infrastructure, and Engineering Strategy
1. Product DRI: Fabian Zimmer - Director of Product Management, SaaS Platforms
 - Overall DRI for SaaS Platform Product, Product Strategy, and Product Changes

Functional Areas and DRIs

Below are the functional areas involved in this Cross-Functional Initiative as well as the Functional DRI representing that functional area.

Working Group Functions (alphabetical)	Team Member	Title
-----	-----	-----
Functional Lead: Channel Partners Manager	Honora Duncan	Senior Channel Services
Functional Lead: Comms & PMM Manager	Saumya Upadhyaya	Principal Product Marketing
Functional Lead: Enablement	Kelley Shirazi	Manager, Sales Enablement
Functional Lead: Engineering Platforms	Marin Jankovski	Director, Infrastructure
Functional Lead: FP&A	Shuang Shackleford	Director, FP&A
Functional Lead: Post-Sales (CS/PS) Services	Brian Will	Senior Manager, Professional
Functional Lead: Pricing & Fulfillment Monetization	Justin Farris	Senior Director, Product
Functional Lead: Product	Andrew Thomas	Principal Product Manager
Functional Lead: Sales	Aileen Lu	Director, Sales Strategy
Member Enablement	Josh Lambert	Director of Product,
Member	Jake Bielecki	VP, Sales Strategy & Analytics

Functional DRIs are also mentioned at the top of the description of their function's child epics in the Cross-Functional LA Requirements epic per epic structure.

Function DRI Responsibilities

Please see Functional Lead on Working Group page.

Functional DRIs are responsible for maintaining their function's epics by following process mentioned in Epic Owner Responsibilities and Epic Structure.

Dedicated Team DRIs

Below are the specific areas of responsibility within the Dedicated team:

Area	Tasks	DRI
-----	-----	---
E-Group reporting	Write status updates, Key review updates	@rwedmore
Program management	Cross-functional workstream coordination, create launch list, ad hoc coordination requests	@rwedmore
Customer Success (CS)	Define onboarding PS package, outline CS engagement post-sales	@rwedmore
Environment Automation Roadmap	Updating direction page, prioritization changes etc.	@awthomas consulting and collaborating with @o-lluch
Switchboard Roadmap	Updating direction page, prioritization changes etc.	@fzimmer consulting and collaborating with @marin
PRE deal Customer interactions	Meeting with customer prospects, customer qualification, steps 1-6 in onboarding process Supporting customers until CS packages are defined	@awthomas
POST deal onboarding management	steps 7-9 in onboarding process; until CS package defined	@rwedmore or @fzimmer
Automate manual onboarding tasks	Includes driving documentation changes.	@awthomas
Drive cross-product feature requests needed for Dedicated	examples include Maintenance mode prometheus metric, silent mode	@awthomas
Go to market definition	PMM and PM to define the remaining GTM items, rest in cross-functional workstream coordination,	@awthomas
Coordinate with Finance	Fy24 Rev Projection, Cost Optimizations; P&L and min seat count later	@fzimmer consulting with @marin

This table will be reviewed at the end of each month.

SECTION: company/working-groups/gitlab-ui.md

Attributes

Property	Value

Date Created	March 26, 2019
Date Ended	July 24, 2020
Slack	wggitlab-ui (only accessible from within the company)
Google Doc	gitlab-ui Working Group Agenda (only accessible from within the company)
Epic	gitlab-ui Codebase

Business Goal

Drive forward the gitlab-ui roadmap of our CSS Cleanup/Restructuring and the implementation of Reusable Components based on our design system. gitlab-ui will from now on have our base CSS implementation and all reusable components in one package to group all efforts of generic styling in one UI project. This will improve engineering productivity and consistency throughout the product. The main target of the working group is not to implement everything themselves but rather keep the effort moving across the whole frontend engineering group in a constant pace and pick up key tasks.

Exit Criteria

All to-do list items in the main Epic

Especially the following items:

- Shepherd restructuring for splitting generic CSS in GitLab UI and page specific in CE/EE by creating a utility-class library based on the design system
- Ensure utility-class library is available and usable within GitLab, ensuring the entire set of classes can be imported into GitLab without clashes and there is documentation to guide consumers on how to use them
- Establish working group FE members as GitLab UI maintainers
- Ensure there is clear documentation written for when and how new components should be introduced into the design system and the product, including responsible counterparts
- Ensure there is clear documentation of how to implement GitLab UI components and utility classes

Roles and Responsibilities

Working Group Role	Person	Title
Facilitator	Tim Zallmann	Director of Engineering, Dev
Frontend Lead	Enrique Alcántara	Senior Frontend Engineer
Member	Sarah Groff Hennigh-Palermo	Senior Frontend Engineer
Member	Denys Mishunov	Senior Frontend Engineer
UX Lead	Taurie Davis	Staff Product Designer
Member	Jeremy Elder	Senior Product Designer
Executive Stakeholder	Christopher Lefelhocz	VP of Development
Member	Paul Gascou-Vaillancourt	Frontend Engineer
Member	Justin Boyson	Senior Frontend Engineer

SECTION: company/working-groups/hpt-product-division.md

Attributes

Property	Value
----- -----	
Date Created	June 13, 2024
Estimated Date Ended	August 31, 2024
Slack	wghptproduct (only accessible from within the company)
Google Doc	HPT Product Division Working Group Agenda (only accessible from within the company)

Business Goal

Improve the consistency of results across the Product Division by implementing the HPT framework.

Company-Wide: HPT Principles + Indicators	Product Division: Indicators of success
--- ---	
Act with urgency to deliver key results. Owned · team members take ownership and responsibility for their contributions Quality · team acts with as much urgency as allows them to deliver high quality results Proactive · team acts with a bias for action	
Define MVCs and potential iterations while minimizing risks to value, usability, feasibility,	

and business viability with qualitative and quantitative analysis. Align milestone plans and deliverables to company strategy pillars. |

| Hold individuals and teams accountable for great work.
Clear · Responsibilities and expectations are clearly defined and aligned to GitLab's goal and mission.

Recognized · Managers speak up about great performance and underperformance early and often.

Inspired · Managers motivate their team to be part of transforming the DevSecOps industry. | GitLab's product mission is to consistently create products and experiences that users love and value. Every role has a part to play in the success of this: Product Managers, User Experience Researchers, Technical Writers, and Product Designers should work together as strategic counterparts both within the Product division and with stable counterparts in other parts of the organization to better understand the problem and discover user needs. |

| Trust each other.
Listen · Teams build inclusive environments by listening deeply and taking time to understand their teammates.

Consistent & Dependable · Managers follow through with the support they promise.

Modeled · Managers use continuous check-ins to role model vulnerability and create psychological safety. | Be someone who helps make GitLab a workplace of diversity, inclusion, and belonging, so that everyone can come to GitLab and do their best work. Embrace differences in our roles and reach across departments, stages, stable counterparts, and groups for many perspectives. Empower each role and function to perform their job to the fullest and execute to the highest level. |

| Deliver results on time.
Prioritized · Managers are realistic and ruthless in prioritizing what their team will deliver each quarter.

Documented · Timeframes and deliverables are documented in a place for the team to easily access.

Communicated & Delegated · Team members know their roles and responsibilities and are held accountable for when their deliverables are due. | Set ambitious, measurable goals within your product groups using OKRs and KPIs as guiding targets for delivering superior customer experiences. |

| Collaborate with open & effective communication.
Safe · Team members feel psychologically safe to admit they are wrong, make mistakes, and challenge each other to do their best.

Streamlined · Teams set and maintain clear expectations on where, when, and how they will communicate.

Filtered · Managers reduce noise and distractions by sharing context at the right time for relevant team members. | Both written and verbal communication are paramount for success in a remote and largely asynchronous work environment where our teams are globally distributed. Be a great teammate in accessible, open environments so your teammates can co-create with you. |

Exit Criteria

1. Align the HPT definitions across artifacts for career development
1. Determine if artifacts for career development are meeting the needs of the team
1. Revamp the artifacts
1. Roll out updated artifacts and HPT framework for the Product Division

Charter

The charter of this working group is to consider whether to implement a Individual Contributor Gearing Ratio policy within Engineering, implement the decision if it's decided to proceed. Ideally any policy could be adaptable to other divisions in the same company (Sales, Marketing,

Finance, etc) since there is interest in doing so.

Since this is a potentially controversial decision for ~1300 team members, the working group should also document a generic version of the process we follow (if successful) to allow future controversial, but important decisions to be made by any leader in the company while preserving transparency, handbook-first, and everybody-can-contribute in a scaled way.

Scope and Definitions

The primary scope that the group will address through the charter is the current proposal and suggestion around "Staff+" Engineering roles and the implementation of gearing ratios for those roles.

The proposal and conversation leading to the formation of this working group can be found in this MR.

The working group has a primary goal to complete the initial implementation of this policy addition within Engineering. As a secondary concern, the working group will seek to structure this policy in a way that will allow for adoption elsewhere in the company, or as an example for other organizations outside of GitLab.

The working group will also seek to iterate on how GitLab can further scale everyone can contribute. The original MR for this change resulting in tremendous collaboration and very useful feedback. While incredibly valuable, it also resulted in a heavy work burden for the DRI. Some ideas on improving similar changes which expect to receive tremendous engagement have already been identified and this working group will take action on these where appropriate.

Deliverables & Expected Outcomes

Complete the initial iteration of Engineering Gearing Ratios for ICs above the Staff-level

MR

1. Consolidate feedback from the MR process and document key themes, axioms, or other structures helpful in implementing further changes

1. Identify and communicate next phase(s) for iteration and further feedback

1. Publish and provide for additional feedback

1. Implement initial policy

Iterate on how to scale the processes supporting everyone can contribute

1. Identify areas where iteration can allow for better scaling for high engagement MRs

1. Implement iteration through handbook first suggestions

- [] TBD

- [] TBD

Roles and Responsibilities

The functional leads (1 per department, 4 for the development department) will be responsible

for:

- Representing the needs of potentially affected people in their department/sub-dept
- Gathering and consolidating feedback on specific proposals from their department/sub-dept
- Communicating the output from the working group (if any) and answering questions from their dept/sub-dept

Ideally the functional lead is someone who is an IC that might be affected by the policy put in place. but anyone capable of representing a department or sub-department in the fashion mentioned above is welcome.

SECTION: company/working-groups/improve-ops-quality.md

Attributes

Property	Value	
-----	-----	
Date Created	March 3rd, 2021	
Target End Date	July 7th, 2021	
Slack	wgimprove-ops-quality (only accessible from within the company)	
Google Doc	Working Group Agenda (only accessible from within the company)	
Task Board	Issue board	

Business Goal

Mitigate future incidents by empowering developers to efficiently work on test coverage; identifying and addressing missing test infrastructure and testing categories; and filling test gaps in high-risk product categories.

Entry Criteria

1. Identify high-risk product groups.

Exit Criteria (100% completed)

1. Analyze all high-severity incidents in the past 3 months and list improvement themes needed (e.g. mixed deployments, new staging, load testing, better tests outside unit tests). => 100%

- Review package incidents review
- Pipeline Execution/Runner incidents review
- Runner executable E2E environment

1. Add runner executable E2E test environment => 100%

1. Add test coverage for high risk runner functionality => 100%

1. Set up load testing environment for PE => 100%

1. Address critical test gaps with new smoke tests for Package group => 100%

1. Update our process, documentation, on-boarding, and culture going forward. => 100%

- Create risk map for PE, Runner, and Package => 100%
- Create generalized risk mapping framework => 100%
- Create 3 end-to-end overview videos for training => 100%
- Train 1 maintainer each for Package, Runner, PE on end-to-end testing => 100%

Post working group planned improvements

Items identified to continue work on past the scope of the Working Group but necessary for ongoing improvement of Ops quality.

1. Runner staging environment

1. Mixed deployment test environment

1. Package and Container Registry performance test environments

1. Add a performance test for Pipeline Execution

1. Add e2e test contributor role to team.yml for non-SET/EPE Engineers who have been trained to or have worked with the e2e test framework

Roles and Responsibilities

Working Group Role	Person	Title
Executive Sponsor	Mek Stittri	VP of Quality

-----	-----
Date Created	February 01, 2022
Target End Date	April 30, 2022
Slack	wg-incident-respose-management-framework
Google Doc	Incident Response Management Working Group (internal)
Issue Label	WG-IRM (gitlab-com/-org)

Business Goal

1. Increase efficiency through common incident response, analysis, documentation, ongoing management and reporting methods.
1. Increase transparency through improving visibility and communication of incidents to business and e-group
1. Support results by building our clients' confidence in GitLab's ability to quickly resolve and communicate incidents when they occur
1. Align Incident Management activities and priorities with those of the business
1. Prepare materials for the creation of training modules for the Engineer Department on the Incident Management Process at GitLab
1. Highlight dogfooding opportunities

Exit Criteria

1. Single source of truth documenting incident response management that will be applicable to all areas of Engineering and teams who provide Incident Response
 - Each functional area of Engineering will develop their own Incident management requirements for identifying and reacting to service outages or security threats.
1. Create a comprehensive knowledge base for GitLab team members to help them understand how incident response teams implement the IR process

Outcome

1. Help teams across GitLab lower MTTR

Other Investigations

1. Improvements in feedback and learnings from Incident to build resilience

1. Service Catalog

What do other companies do?

- Pagerduty Response docs

How is IR done today?

1. SIRT

- Incident Response Guidance
- Engaging Security Engineer On-Call

Roles and Responsibilities

Working Group	Role	Person	Title
Facilitator	Anna Liisa Moter	Manager Reliability	
Exec Sponsor	Steve Loyd	VP Infrastructure	
Member	Anthony Fappiano	Manager Reliability	
Development Functional Lead	Dan Croft	Senior Engineering Manager, Ops	
Member	Sam Goldstein	Director of Engineering, Ops	
Member (CMOC)	Kenneth Chu	Support team	
Member	Kevin Chu	Group Manager of Product, Monitor	

Requirements and Considerations

Actors

- Reliability Engineers
- SIRT Engineers
- Development Team
- Quality Team
- Support Team

General

- As a GitLab team member who can raise an incident, I know how incident can be initiated
- As a GitLab team member who can raise an incident, I have a general understanding about

incident severity levels

- As a GitLab team member who can raise an incident, I understand the high level process of Incident Management and its importance to the business
- As a GitLab team member who can raise an incident, I can contact the right team via dedicated slack channel.
- As a GitLab team member who can raise an incident, I can easily find a page in the handbook that documents the Incident Response Procedures

SIRT Engineer

- As a SIRT Engineer I know how to pull relevant resources from other teams when I need assistance
- As a SIRT Engineer I can easily categorized the incident
- As a SIRT Engineer I can identify triggers and indicators
- As a SIRT Engineer I know where to document the incident details
- As a SIRT Engineer I know when to transitions from Incident identification, to mitigation, to remediation, and post incident activities
- As a SIRT Engineer I can follow a reporting process to handoff incidents, or provide updates to Management

Reliability Engineers

- As a Reliability Engineer, I know how to level an incident in a manner that is consistent across the org
- As a Reliability Engineer, I know how to engage the other roles during an incident
- As a Reliability Engineer, I know when to transition from Incident identification, to mitigation to resolution and post-incident activities

Development Team

- As a leader in Development who is part of the Incident Manager rotation, I am clear on the role's responsibilities and how the role supports the Incident Management process.

Quality Teams

Support Team

- As a Support Engineer, I know how to create a status page
- As a Support Engineer, I know the differences between the Incident Status states on the status page
- As a Support Engineer, I know how frequently to update the status page
- As a Support Engineer, I know how to engage the Incident Manager or EOC when asking about feedback for an update I am about to post on the status page
- As a Support Engineer, I know how to notify the stakeholders
- As a Support Engineer, I know how to find related tickets in Zendesk and the GitLab issue tracker to help assess the impact of an incident
- As a Support Engineer, I know how to contact users if their usage of GitLab SaaS was restricted due to an incident

SECTION: company/working-groups/internship-pilot.md

Attributes

Property	Value
Date Created	October 2, 2019
Target End Date	January 31, 2020
Slack	wginternship-pilot (only accessible from within the company)
Google Doc	Internship Working Group Agenda (only accessible from within the company)
Issue Board	Issue board

Business Goal

Run a pilot internship program to determine feasibility for future programs.

Overview:

1. Intention of hiring available candidates that perform well at the end of the internship
1. Limit duration (see exit criteria)
1. Open to anyone starting their career in tech (not just students)
1. Timeline:
 1. Design in Oct
 1. Recruiting in Nov
 1. Offers in Dec
 1. Internship start June 2020
1. We welcome applications from anyone. 100% of the active sourcing our talent acquisition department will do will be from groups under-represented in the technology industry. This is in order to make the candidate pool more reflective of society at large. Offers will be made purely based on merit.

Phase 1 - Design program

Phase 1 focuses on designing and launching the internship program with the primary objective of designing the program and getting to the point of being able to recruit and interview candidates.

Roles and Responsibilities

Working Group Role	Person	Title
Executive Sponsor	Eric Johnson	VP of Engineering
Facilitator	Jean du Plessis	Engineering Manager, Static Site Editor
Functional Lead	Roos Takken	People Business Partner, Engineering
Functional Lead	Nick Nguyen	Engineering Manager, Ecosystem
Member	Tanya Pazitny	Quality Engineering Manager
Member	Phil Calder	Growth Engineering Manager
Member	Liam McNally	Interim Talent Acquisition Manager
Member	John Hope	Engineering Manager, Plan

Exit Criteria

1. Define budget => 100%
 1. Determine number of internship positions available ·
 1. Determine compensation ·
 1. Determine budget for co-location ·
1. Communication plan => 100%
 1. Choose the internship program name ·
 1. "GitLab All-Remote internship"
 1. Define branding opportunities for all-remote company culture ·
 1. Connect with Universities, Meetup groups and Programming bootcamps
 1. LinkedIn, Instagram, FB ads
 1. Sourcing
 1. GitLabbers to contact their universities/Meetup groups/programming clubs
 1. Define communication milestones ·
 1. 2019-11-05: Internal announcement of the program + handbook update
 1. 2019-11-15: Opening of jobs (Glassdoor, LinkedIn, Stack Overflow etc.)
 1. 2019-11-30 - 2019-12-15: Internship branding campaign
 1. 2020-01-01 - 2020-02-01: Announce who will be invited/join contribute.
 1. 2020-03-27: Contribute blog on interns
 1. 2020-06-06: Blog on kickoff + Personal stories
 1. 2020-09-14: Evaluation blog post.
 1. 2020-10/2020-11: Announce next internship (if pilot was successful)
1. Recruitment plan => 100%
 1. Define candidate qualification criteria ·
 1. Ruby on Rails and/or modern frontend JavaScript framework (React, VueJS, AngularJS, Ember etc.) programming experience.
 1. Contributor to open source projects
 1. Available full-time during the course of the internship
 1. Able and willing to travel to the United States of America and the Netherlands for 1 week each
 1. Interested in fulltime employment after the internship (either immediately, or "next semester") - no upfront commitment to GitLab required
 1. Create job family page ·
 1. Identify sourcing targets and engagement plan ·
 1. Advertising
 1. Advertise the roles across all traditional platforms
 1. Advertise on internship focussed job boards (e.g. Youtern, angel.co etc)
 1. University Recruitment
 1. Proactively reach out to and engage with universities/colleges to hold a Virtual Careers Talk to encourage students at those universities to apply.
 1. Proactively reach out too and engage with any associations within these universities that represent underrepresented groups and hold a Virtual Careers Talk, to encourage students to apply.
 1. Hold virtual talks at 5 universities in the following regions: North America, European, APAC, MENA
 1. Underrepresented groups
 1. All our active sourcing activities will exclusively be focused on candidates from underrepresented groups.
 1. We will be utilizing LinkedIn, meetup groups and online tech forums to identify

potential candidates.

1. Create Greenhouse vacancies ·
1. Internship program structure => 100%
 1. Determine duration of the internship ·
 - 16 weeks
 1. Determine timing of the program ·
 - Mon, June 15, 2020 until Friday 2, October 2020.
 1. Decide on all-remote vs timezone alignment vs co-located cohort ·
 - Week 1: Co-located in Amsterdam
 - Week 2-15: All remote
 - Week 16: Co-located in San Francisco
 1. Define the criteria for teams to be able to request an intern slot ...
 1. Mentorship
 - Does the team have a manager and at least 1-2 engineers who are willing to serve as mentors for the duration of the program?
 - Do the mentors have previous experience mentoring interns or junior engineers?
- Previous experience is a nice-to-have, but not a must-have.
 1. Workload
 - Does the team have a roadmap containing low weight issues with few dependencies that would be appropriate for an intern to work on?
 1. Team Size and Maturity
 - How established is this team? Will they be able to take on an intern without risking a decrease in velocity?
 1. Define expected day-to-day activities for interns (skeleton outline) ·
 1. The activities during the co-located weeks (1 & 16) are still to be determined.
 1. For weeks 2-15 an intern's daily schedule will generally reflect how GitLab team members work, which is to say we will not impose a rigid schedule.
 - Interns will be encouraged to favor async communication and to set their own work schedule.
 - Mentors and program coordinators will provide coaching if an intern needs help adjusting to remote work.
 1. Interns will participate in the following pre-determined activities
 - Weekly 1:1 with their manager
 - Weekly 1:1 with a mentor
 - Weekly 1:1 with an internship program coordinator
 - Weekly intern coffee chat
 - 2-3 group meetings per week moderated by the program coordinator, rotating in timezone assuming we have people in more than one timezone.
 - Regular pair programming sessions with mentor and other team members.
1. Interviewing => 100%
 1. Define interview process and technical assessments ...
 1. Comprehensive Application form including
 - Technical assignment
 - Situational questions rather than STAR, as may not have any direct work/relatable experience.
 - Cover letter asking for candidates to specifically address defined areas.
 1. Automated online technical assessment
 1. Technical assessment interview (To be confirmed whether this step will be included)
 1. Behavioral/Values interview panel (Candidates must score a strong yes to move on to the panel interview stage.)

- Hiring manager
- Recruiter/HR
- Misc Interviewer

1. Measurements of success => 100%

1. Determine criteria for considering the pilot a success ·

1. Feedback rating on the program experience as scored by the interns (questions and desired score TBD).

1. Feedback rating on the value and overall experience working with the intern from the teams with interns (questions and desired score TBD).

1. Throughput of at least 24 MRs over the period of the internship

- Average of 2 MRs merged per week

- This takes into consideration the 16 week internship with 1 week onboarding, 1 week offboarding

- Handbook/Blog MRs will count towards throughput

1. Making a job offer(s) to 50% of the interns in the program

1. Assignees for the program roles ·=> 100%

1. Program Lead (overall DRI) - Roos Takken

1. Recruitment Lead - Liam McNally

1. Program Coordinator - Jean du Plessis

1. Program Coordinator - Nick Nguyen

(· Done, · · In-progress)

Phase 2 - Kick-off program

Phase 2 starts with the launch of the internship applications and has the primary objective of overseeing the recruitment, interviewing and hiring of interns and ensuring all program details are fleshed out.

The working group will dissolve once the exit criteria for these objectives are met and the program lead and coordinators will then take over the running of the program and seeing it through to completion.

Roles and Responsibilities

Working Group Role	Person	Title
Executive Sponsor	Eric Johnson	VP of Engineering
Facilitator	Roos Takken	People Business Partner, Engineering
Functional Lead	Jean du Plessis	Engineering Manager, Static Site Editor
Member	Nick Nguyen	Engineering Manager, Ecosystem
Member	Liam McNally	Diversity, Inclusion and Belonging Partner
Member	John Hope	Engineering Manager, Plan

Exit Criteria

1. Determine host teams => 100%

1. Facilitate Q&A session for interested teams ·

1. Review and approve team applications ·

1. Onboarding/offboarding => 100%
 1. Define onboarding process ·
 1. Define offboarding process ·
1. Measuring program success => 100%
 1. Create feedback questionnaire for interns (internal) ·
 1. Create feedback questionnaire for teams ·
1. Promote the internship => 100%
 1. Blog post ·
1. Flesh out program details => 100%
 1. Define "Week 1: Intern Fast Boot" program details ·
 1. Define "Week 16: Intern send-off" program details ·
 1. Logistical details to be handled by program coordinators after working group closes. ·
1. Hire 4 interns => 100%
 1. Job offers accepted ·
 1. Invite interns to Contribute - Prague ·
 1. Match interns to roles in teams ·
1. Training for Mentors of hosting teams => 100%
 1. Include creating opportunities for interns to ask questions/ pair programming sessions ·
 1. Provide guidelines on choosing the right project/ amount of work ·

Google Doc	Working Group Agenda (only accessible from within the company)
Docs	Handbook Page
Related Issue	Adding context to customer's requests
Associated OKRs	Increase TMAU and Paid TMAU

Problem To Solve

- We currently do not distinguish between "nice to have", "blocker", and "this will likely cause a downgrade/churn/prevent upsell." One customer may view Feature ABC as nice to have, whereas another customer desperately needs it. The time necessary to collect this information, transfer it, and then disseminate it among departments is likely to be inefficient and error prone. It also does not solve the problem of a standardized model for determining relative priority across all stages based on quantifiable data such as impact to retained ARR or net new ARR.
- We are currently proposing that we establish a highly manual process where individuals will act as bridges to transfer information across departments.
- We are not leveraging our existing data to the fullest extent. Let's understand why and solve

for this.

Business Goal

- Create a standardized prioritization framework based on quantifiable data that enables us to determine urgency/value per issue/epic at scale and speed so that Product, Sales, and Customer Success can use a common language and model when discussing prioritization trade-offs.
- Product DRIs have more accurate inputs to help them globally optimize their delivery backlogs resulting in increased customer retention and acquisition.
- Positively impact Net ARR growth and improve retention of existing ARR.
- Improve the accuracy of the prioritization feedback among departments.
- Further operationalize the process of creating effective bridges between Customer Success, Sales, and Product.

Exit Criteria

(· Done, · · In-progress)

Step 1: Determine a viable model => 90%

Issue

- · Cost of Delay / Duration will serve as the primary model to run a pilot against.
- · We've determined how to assign monetary value for issues with links to SFDC.
- · Determine model inputs for issues that do not have SFDC links.
- · Define CSM inputs.

Step 2: Implement & validate model => 100%

Issue

- · Design initial pilot and break down into tasks and DRIs.
- · Identify a DRI that can complete the data related tasks.
- · Implement pilot.
- · Assess results and outcomes. If pass, move to Step 3. If fail, exit WG or cycle back to Step 1.

Step 3: Verify at scale and measure outcomes => 15%

Issue

TL;DR: Once validated, we drive adoption across Product/CS/Sales and collect measurements to confirm that this model is producing the desired business outcomes. If not, decide to go back to Step 1 or Exit.

Limited pilot (select IC PMs):

- 100% of stages participating in the pilot.
 - Current: 0 / 15
- Process for mapping issues/epics to themes and product investments is finalized, documented,

and has the support of Product, Sales, and Customer Success.

- Current: No

Scaled pilot (IC PM / CSM focused) measures of success:

- > 80% of Product Managers regularly use the dashboards powered by the framework and find the prioritization framework an invaluable sensing mechanism as measured by quarterly survey responses.

- Current: N/A

- > 80% of Customer Success Managers regularly use the dashboards powered by the framework and report a > 30% efficiency gain of reporting on customer requested issues as a result of utilizing the CSM dashboard as measured by quarterly survey responses.

- Current: N/A

Verify and measure at scale:

- Improve lead time for the top 25% of customer requested issues from x to y.

- Current: N/A

- The prioritization model and dashboard(s) are adopted as an effective replacement to using spreadsheets to manage and track Top ARR drivers.

- Current: N/A

- 20% increase of feature requests tagged month-over-month or quarter-over-quarter.

- Current: N/A

- 20% increase of Sales team members tagging feature requests month-over-month or quarter-over-quarter.

- Current: N/A

Roles and Responsibilities

Working Group Role	Person	Title
Executive Sponsor	David Sakamoto	VP Customer Success
Facilitator	Gabe Weaver	Senior Product Manager, Plan

Member	Mek Stittri	Director of Quality Engineering
Member	Farnoosh Seifoddini	Product Operations
Member	Jonathan Fullam	Solutions Architecture
Member	Sherrod Patching	Director, Customer Success Managers

Meetings

This working group meets bi-weekly (every other week.)

Meetings are recorded and available on YouTube in the Working Group - Issue Prioritization

Framework playlist.

Due to the subject matter of this working group and the high probability that every synchronous meeting will discuss sensitive customer information, the playlist is private and accessible by GitLab team members only.

Google Doc	Working Group Agenda
Issue Board	Working Group Issue Board
Overview & Status	Main Epic

Scope and Definitions

In the context of this working group:

1. keep-around refs: Git references created through Gitaly to ensure certain Git data does not get pruned by Gitaly.

Exit criteria

1. Rails tracks keep-around references it creates as well as the entities that depend on the Git objects it holds onto.
1. Rails removes keep-around references when they are no longer needed by any entity.
1. Rails prevents keep-around references from being created in an unbounded way.

Overarching Goals

1. Git operations are performant even for large repositories with many merge requests, pipelines, etc.

Future goals

1. A retention policy is set for keep around refs.
1. Migrate existing and unneeded keep around refs on GitLab.com:
 - Dependencies between existing keep-around references and the database entities are recorded and maintained.
 - Existing unneeded keep-around references are removed.

Roles and Responsibilities

Working Group Role	Person	Title

Issue Board	Epic

Business Goal

Increase the number of unique monthly contributors by recognizing and incentivizing organizations who are among our most active contributors. This will create internal experts at GitLab organizations and ensure customers see it as their own product. This initiative supports our mission and our dual flywheel strategy where increasing wider community contributions leads to more users, thus higher revenue.

Proposed Exit Criteria

Build scalable model to activate 100 Leading Organizations by the end of FY24-Q4.

Plan

1. Develop robust pipeline
 1. Execute nurture campaigns and digital marketing playbooks to generate interest
 1. Integrate into strategic account segmentation and sales enablement
 1. Create customer success referral machinery
1. Faster time to value
 1. Increase conversion rate of workshops
 1. Reduce time to activation
1. Recognize and amplify success
 1. Publish case studies, blog posts and fireside chats with members about co-creation
 1. Amplify Leading Organizations' contributions at industry conferences
1. Increase capacity and improve attribution
 1. Increase reviewer/maintainer capacity in product areas with high number of contributions
 1. Improve contribution tracking, customer segmentation and attribution

Roles and Responsibilities

Working Group Role	Team Member	Functional Title

| Related Epics and Issues | PROJ: LXP Platform Evaluation Epic |

Business Goals

1. Identify a Learning Experience Platform for Professional Services
 1. Present to e-group
 1. Define & confirm requirements
 1. Evaluate vendors
 1. Ensure content is searchable in handbook
 1. Select platform
1. Determine if Field Enablement and Learning & Development use cases can be met by Professional Services Learning Experience Platform
 1. Need to ensure that the platform meets the use cases for internal team members
1. Create ongoing implementation and workback plan

Exit Criteria

Select a learning platform for Professional Services, that supports the following

1. System must include:
 1. eCommerce features
 1. Excellent learner experience
 1. Learning Paths
 1. Certification Exams
 1. Certification Provisioning
 1. Integration with CRM

Determine if learning platform can be used by other audiences

1. Document in the handbook if learning platform can be used by Field Enablement and L&D use cases
1. Go/No-go decision on the need for an additional learning platform for team members

Roles and Responsibilities

Working Group Role	Person	Title
Executive Sponsor & Facilitator	Bryan Wise	VP, Information Technology
Functional Lead	Michael Lutz	Senior Director, Professional Services
Functional Lead	David Somers	Senior Director, Field Enablement
Functional Lead	Christopher Nelson	Sr. Director, Enterprise Applications
Member	Sean Sandoval	Sr. Manager, Professional Education Services
Member	Kendra Marquart	Sr. Technical Instructional Designer, Customer Education
Member	Jamie Allen	Learning Systems Administrator, Learning & Development
Member	Barbara Roncato	Business Systems Analyst, Enterprise Applications

Slack	wg-learning restructure (only accessible from within the company)
Google Doc	Learning Restructure Working Group Agenda (only accessible from within the company)
Related Epics and Issues	Learning Restructure Issue and GitLab Education Content Management Epic

Business Goal

1. Fix key current pain points in trainings. Specifically:
 1. Inefficiency
 1. Lack of clarity on training ownership
 1. Duplication in training content
 1. A sub-optimal user experience
 1. Need greater clarity on which part of the training is for what and who
1. Determine ongoing plan, processes, and ownership for future training coordination

Exit Criteria

Update /Learn

1. Inventory existing training programs to establish a SSoT ==> Complete, established in GitLab Learn
1. Update <<https://university.gitlab.com/>> to capture SSoT and provide more clarity on which training is for what ==> Complete

Create future coordination processes and plan

1. Document in the Handbook a process that DRIs working on learning content will follow to keep GitLab Learnup-to-date, to ensure it remains the SSOT of GitLab-produced learning content. This will include existing content and planned content. ==> Complete, documented and established gitlab-learn-updates Slack channel for reminders to update and x-team communications.

SECTION: company/working-groups/lighthouse-metric-definitions.md

Purpose

This working group is charged with driving the necessary cross-functional alignment, prioritization, and execution required to define the Lighthouse Metric and Leading Indicators for each Customer Product Adoption Use Case. This lighthouse-metric-definitions working group ladders up and is an input to the customer-use-case-adoption working group. The lighthouse-metric-definitions working group has a narrower scope than the customer-use-case-adoption working group and is focused on defining the Lighthouse Metrics and Leading Indicators. The customer-use-case-adoption working group defined the CI Adoption Lighthouse Metric and Leading Indicators. The lighthouse-metric-definitions working group will create a Single Playbook for determining which metric(s) best measure customer adoption of a use case. The playbook will be used to define the Security and Compliance Lighthouse Metrics and Leading indicators in FY24-Q4. The formation of this working group will accelerate efforts to win against GitHub and reduce Churn & Contraction.

Desired Outcomes

1. Develop a single, cross-functional playbook to define the Lighthouse Metrics and Leading Indicators for each Customer Product Adoption Use Case
1. Drive cross-functional alignment around the Lighthouse Metrics and Leading Indicators definition process across sales, customer success, product, data, finance, etc.
1. Publish a certified Tableau dashboard that shows the performance of the Lighthouse Metrics versus target for CI, Security, and Compliance

FY24-Q4 Customer Use Cases in Scope

1. CI
1. Security
1. Compliance

Attributes

Property	Value
-----	-----
Date Created	2023-11-01
Target End Date	2024-01-31
Slack	wglighthouse-metric-definitions
Google Doc	Lighthouse Metric Definitions Agenda
Epic - Primary	Primary
Epic - Security	Security
Epic - Compliance	Compliance
Board	Lighthouse Metric Definitions Board
Overview & Status	See Exit criteria below

Exit criteria

Note that these goals are aspirational so we set a high bar (and potentially achieving something that is good enough vs. setting a low bar and not achieving something that is good enough).

- [] Lighthouse Metrics for Security and Compliance have been defined in the handbook
- [] Publish a Certified Tableau Dashboard that shows the performance of the Lighthouse Metric versus target for CI, Security, and Compliance
- [] Publish a single, cross-functional playbook to define the Lighthouse Metrics and Leading Indicators in the handbook

Roles and Responsibilities
