

cle of Accelerator development and delivery. They provide key insights into where work is being done and help align efforts with the broader value stream.

Why Labeling Matters

Labels:

- Facilitate workflow tracking: Ensure clear progress monitoring across stages.
- Enable data-driven insights: Leverage Value Stream Analytics (VSA) to identify bottlenecks and optimize processes.
- Support alignment with business goals: Ensure that efforts are focused on high-priority initiatives.

Workflow Labels and Their Purpose

1. Backlog Stage

Label: workflow| problem validation

- Used for issues in the initial discovery phase.
- Ensures problems are clearly defined before moving to solution validation.

2. Accelerator Validation Stage

Labels:

workflow| solution validation · workflow| planning breakdown

- Marks issues undergoing exploration for potential solutions.
- Prepares detailed plans to validate Accelerator concepts before development.

3. Accelerator Planning Stage

Labels:

workflow| planning breakdown · workflow| ready for development

- Indicates readiness to begin development.
- Ensures all dependencies and tasks are clearly defined.

4. Accelerator Development Stage

Labels:

workflow| in progress · workflow| scheduling

- Tracks active development of Accelerators.
- Scheduling ensures alignment with delivery timelines.

5. Accelerator Review Stage

Labels:

workflow| scheduling · workflow| in review

- Represents the review and refinement process.
- Ensures Accelerators meet quality standards and deliver intended outcomes.

6. Peer Review Stage

Labels:

workflow| in review · Issue closed

- Issues are reviewed by peers.
- The stage is exited once the issue is closed.

Making the Template Actionable

To streamline the development of Accelerators and make the process more actionable, CSAs & their should focus on asynchronous collaboration, leverage existing meetings like the Accelerator Delivery Framework Meeting.

{{< youtube "aSCGpEXoQbU" >}}

In the walkthrough you will see how to streamline accelerator development using the accelerator issue template and track performance with Value Stream Analytics for optimal lifecycle management, all in GitLab.

1. Leverage GitLab Issue Boards for Workflow Management

The CSA Issue Board provides a Kanban-style view of Accelerator states, making it easy to track progress.

- Kanban Workflow:

Organize issues by labels (e.g., workflow| in progress, workflow| in review) and track them through stages like Backlog, Validation, Planning, and Development.

- Pull-Based Workflow:

Developers can self-assign tasks based on their bandwidth, ensuring balanced workloads and reducing bottlenecks.

2. Use Value Stream Analytics (VSA) for Insights

GitLab's Value Stream Analytics offers key insights into the Accelerator development process, helping to:

- Balance Workloads:

Identify team members who may be overburdened or underutilized.

- Example: If one CSA consistently spends longer in the workflow| planning breakdown stage, redistribute tasks to streamline progress.

- Predict Timelines:

Use data to estimate development timelines more accurately.

- Example: If the average workflow| in progress stage duration is 2 weeks, you can plan delivery milestones accordingly.

- Optimize Processes:
Spot bottlenecks, such as extended time in workflow| in review, and refine review processes.

3. Example: Balancing Workloads with VSA

Scenario: The team notices that Accelerators in the workflow| solution validation stage take longer than expected to progress to workflow| ready for development.

Actions:

1. Use VSA to analyze the average time spent in this stage.
2. Identify whether delays are due to insufficient resources or unclear requirements.
3. Adjust by:
 - Adding additional reviewers for faster feedback.
 - Splitting complex tasks into smaller issues for parallel work.

Result: A smoother workflow with reduced cycle times and more predictable delivery schedules.

5. Simplified Action Plan

Activity	Method	DRI	Deliverable
Task Assignment	GitLab Issue Board (Async)	CSA Team	Assigned tasks with due dates
Progress Updates	GitLab Comments (Async)	Issue Assignees	Regular updates on assigned issues
Development Check-Ins	Async	CSA Manager	Sync on blockers and priorities
Analyze Workflow Efficiency	Value Stream Analytics	CSA Team/Manager	Improved workload distribution

Leveraging Value Stream Analytics (VSA) for accelerator development reporting

Value Stream Analytics (VSA) is a powerful tool that provides managers and leadership with actionable insights into the Accelerator development process. It allows for better workload management, resource allocation, and alignment with strategic goals. Here's how VSA can be utilized:

1. Workload Balancing Across Teams

Managers can use VSA to monitor where time is being spent in the Accelerator development lifecycle and ensure workloads are distributed equitably across team members.

- Example: If one CSA consistently handles the majority of tasks in the workflow| planning breakdown stage, managers can reassign tasks to other team members to avoid burnout and maintain productivity.

2. Predicting Timelines and Delivery Dates

Leadership can use VSA data to identify average cycle times for different stages (e.g., workflow| in progress, workflow| in review) and predict when Accelerators will be ready for delivery.

- Example: By analyzing historical data, leadership can estimate that an Accelerator typically takes 2 weeks to move from workflow| planning breakdown to workflow| ready for development. This insight helps in setting realistic delivery timelines for customers.

3. Identifying Bottlenecks

VSA highlights stages where issues remain for longer-than-expected durations, helping managers identify process inefficiencies.

- Example: If the workflow| in review stage consistently delays progress, leadership can allocate additional reviewers or improve review processes to streamline approvals.

4. Strategic Alignment with Corporate Goals

Leadership can track the Accelerator portfolio's progress and ensure it aligns with broader corporate initiatives and customer needs.

- Example: If a corporate priority is enhancing CI/CD capabilities for customers, leadership can prioritize Accelerators like "Reusable Pipeline Templates" and monitor their development closely using VSA metrics.

5. Data-Driven Decision Making

VSA provides metrics that allow managers to make informed decisions about resource allocation, task prioritization, and team performance.

- Example: If data shows that the team is consistently slow in the workflow| problem validation stage, leadership might decide to provide additional training or hire specialized resources to improve efficiency.

6. Transparency and Reporting

VSA offers clear, visual reports that leadership can share with stakeholders to demonstrate progress and performance.

4. Example: Balancing Workloads with VSA

Scenario: The team notices that Accelerators in the workflow| solution validation stage take longer than expected to progress to workflow| ready for development.

Actions:

1. Use VSA to analyze the average time spent in this stage.
2. Identify whether delays are due to insufficient resources or unclear requirements.
3. Adjust by:
 - Adding additional reviewers for faster feedback.

- Splitting complex tasks into smaller issues for parallel work.

Leveraging GitLab Roadmaps, Epics, and Child Issues for Accelerator Development Reporting

{{< youtube "3jQIkLruvcl" >}}

In the walkthrough you will learn how to leverage GitLab Roadmaps and Epics to manage the development and delivery lifecycle of SPS Accelerators.

GitLab Roadmaps, along with Epics and child issues, offer a structured and transparent way to manage and report on the development and delivery of Accelerators. They enable centralized visibility, strategic alignment, and data-driven decision-making. Here's how these tools can be effectively utilized:

1. Centralized Visibility for Teams

Using Roadmaps provides a consolidated view of all Accelerator projects across quarters, allowing teams to monitor workload distribution and progress.

- Example: A quarterly Epic, such as ·Accelerators Q4FY25,· is broken down into monthly sub-epics, enabling better tracking of deliverables and team capacity.

2. Strategic Resource Allocation for Leadership

Leadership can leverage Roadmaps to align resource planning with customer needs and corporate priorities, ensuring that high-impact projects are prioritized.

- Example: If CI/CD-focused Accelerators are a priority, leadership can track their progress in the Roadmap to ensure timely delivery.

3. Tracking Performance Metrics

Roadmaps, when paired with labels and issue weights, help measure delivery velocity and team performance.

- Example: Assigning weights to issues (e.g., weight 8 for a medium effort Accelerator) allows leadership to gauge team capacity and adjust workloads as needed.

4. Identifying and Resolving Bottlenecks

Clear timelines and workflow labels in Roadmaps make it easy to pinpoint where issues are stuck and resolve bottlenecks quickly.

- Example: If many tasks are labeled as workflow: in-review for extended periods, managers can add reviewers to expedite progress.

5. Aligning with Customer Needs

Using clear naming conventions for issues (e.g., [Customer Name] - [Accelerator Type]) ensures that each Accelerator aligns with specific customer requirements and goals.

- Example: An issue labeled 'Acme Corp - CI/CD Enhancer' provides clarity on the Accelerator's purpose and value.

6. Transparent Reporting for Stakeholders

Roadmaps provide visual reports on the Accelerator portfolio's progress, which can be shared with stakeholders to demonstrate alignment with corporate strategies and delivery timelines.

Example: Tracking Accelerator Delivery via Epics

Scenario: Leadership wants to ensure timely delivery of CI/CD-focused Accelerators in Q4FY25.

Actions:

1. Create a parent Epic for Q4FY25 and link relevant monthly sub-epics.
2. Assign issues with clear weights, labels, and due dates.
3. Regularly update completion percentages and monitor progress in the Roadmap view.

SECTION: customer-success/workshops/_index.md

Please reference the Workshops section on the Customer Success page for up-to-date information on and links to CS Workshops.

SECTION: customer-success/workshops/ci-workshop.md

- CI Workshop Overview
- Workshop Materials
- Discovery Questions
- Workshop Planning Checklist (Google Doc - Make a copy)

CI Workshop Overview

This workshop is intended to provide enablement for new or existing customers such that a CSM or SA could:

- Select either the "Basic" or "Advanced" CI Workshop deck that's best suited to the customer's level of experience and areas of interest
- Pitch to a customer using our Collaboration Project Issue Template
- Create a zoom meeting complete with customer registration to facilitate follow-up contact with interested parties (potentially broadening or deepening the relationship)
- Ask appropriate discovery questions
- Drive followup actions

This workshop is not intended to provide a "hands-on-keyboard" demo experience.

Typical time: 60-120 minutes is a good guideline. The Advanced CI Workshop with pre-recorded

video includes approximately 80 minutes of pre-recorded video plus approximately 5-15 minutes of "rules: examples". Don't forget to allot time for questions.

```
<figure class="videocontainer">
  <iframe src="https://www.youtube.com/embed/bF53StwhMUc" frameborder="0"
allowfullscreen="true"> </iframe>
</figure>
```

How to Get Started

1. Create an Issue in the customer's Collaboration Project using the CI Sell Sheet issue template and discuss with your customer whether the Basic or Advanced workshop is appropriate.
1. Agree on an appropriate amount of time for your session with your customer (90-120 minutes recommended)
1. Create a signup page via Zoom for the workshop for your customer to share internally. The benefit of a signup page is that:
 1. You can understand in advance the number of expected attendees, and prepare accordingly (ie. by engaging volunteer resources to handle async Q&A).
 1. You will know who is coming and can tailor content to specific levels/titles of attendees (Don't forget to add a title question to your signup page!).
 1. You will have a list of attendees to follow up with. This part is incredibly significant as this workshop becomes a means to engage with dev leads and end users, that we often do not have otherwise.
1. Make a copy of the Intro to CI/CD Lunch and Learn slides or the Advanced CI Workshop Slides as the starting point for Basic or Advanced workshops, respectively.
1. Customize the slide deck as agreed with the customer.
1. Find a partner to present with... another CSM, the SA for the customer or one of the creators of this workshop. It's always better to have someone to take notes or bounce questions off of. It's recommended to have one co-facilitator for every 20 attendees.

Workshop Materials

- Basic Workshop Intro to CI/CD Lunch and Learn slides
- Advanced Workshop Advanced CI Workshop Slides
- For any auxiliary material, feel free to draw from other decks in the Lunch and Learns Google Drive Folder

If you'd rather leverage pre-recorded content for an advanced workshop, you could consider using the below:

- (Deprecated) Advanced CI Configuration Slides with pre-recorded video
- (Deprecated) Advanced CI Configuration Slides without video

Please use this issue for feedback on any of the above, as well as learnings from this workshop process so that we can continue to iterate.

Collaboration Project Issue Template

Reference: CI Sell Sheet issue template

Discovery Questions

It's highly recommended to review Strategic Marketing's list of usecase-centric discovery questions ahead of the session.

When you introduce yourself and the workshop, it can be helpful to ask discovery questions about the team(s) in attendance, the roles individuals hold, and invite commentary on their current goals or challenges.

SECTION: customer-success/workshops/innerSource-workshop.md

InnerSource Workshop Overview

This workshop is intended to provide enablement for new or existing customers that have voiced interest in InnerSource or how to become better at collaborating across their organization. The expected outcome is that a customer has successfully setup a GitLab project in an InnerSource ready fashion, including secrets-detection using GitLab CI.

- Start with understanding their "why" with discovery questions
- Share the "Unlocking InnerSource with GitLab" webinar asynchronously
- For a more high-touch customer you can offer them an executive level overview and/or a hands-on workshop
 - Session 1 (15 - 30 min.) is an overview of the value prop for an organization, a customer proof point, as well as a quick start guide
 - Session 2 (30 - 45 min.) is a Hands-on workshop where the customer is expected to bring an InnerSource ready project to the table and configure it with our guidance
- After the workshop(s), record whether or not the customer has successfully built a GitLab CI pipeline; use this opportunity to pitch the value of service ping (internal link) if you haven't done so recently

Note: You can combine the two sessions into one if you don't have a different audience. When we were trialing this playbook, we had sr. leadership/sponsors for the first session and practitioners in the second session.

```
<figure class="videocontainer">  
  <iframe src="https://www.youtube.com/embed/ZS1mCpBHXaI" frameborder="0"  
allowfullscreen="true"> </iframe>  
</figure>
```

Discovery Questions

The goal of the discovery questions is to help your customer tie this back to a larger initiative and identify a champion who will sponsor their efforts. The champion is who you will be running Session 1 with.

- Tell me about your use case for innerSource. Does it show up explicitly in a transformation or company goal?
- What is it that you're hoping InnerSource will accomplish for your company? What outcome?
- How is source code classified within your company? (i.e. "highly secure"/least privilege?)

- What do you use for secrets management and secrets detection?
- Who is championing innersource?
- Do you have a use case in mind?

InnerSource Project Examples from Enterprises

Some feedback that we've heard is if GitLab could provide examples of good InnerSource projects that our customers have had success with.

- UI Design Systems/Libraries - every UI engineer references these repositories as they have brand compliant libraries for them to use. If these are InnerSourced, then they can contribute more design elements.
- Architecture Decision Records - ADRs are a great place to start InnerSourcing. At a large American telecommunication company, they built an "Enterprise Decision Record" repository that hosted all significant architecture decisions for development teams to vote on and weigh in on via GitLab issues. Once decided on, they are documented within a repository.
- Cloud Security Policies - enterprises must secure the usage of their cloud platforms. The code that governs a company's security policies are good for InnerSource model because it provides clarity for developers on what is required, plus it will allow developers to request new services be enabled as the cloud providers (AWS, GCP, Azure) make them available. This speeds up the communication and process between security and development.
- GitLab CI Templates - CI templates are perfect for InnerSource as they are shareable across tech stacks and can save time. If companies require certain stages in a CI pipeline to run, it's only fair to expose that configuration code and make it InnerSource in case something goes wrong or a DevOps engineer needs to recommend changes.

Workshop Materials

- Executive Overview Session 1: InnerSource Quick Start w/GitLab slides
- Hands-On Workshop Session 2: InnerSource Workshop
- Demo project that was leveraged in the InnerSource webinar

SECTION: customer-success/workshops/secure/_index.md

Overview

The Secure Workshop is a Customer Success activity to provide customer enablement on Secure stage features.

The objectives of a Secure Workshop are to:

- Provide the customer with best practices for Secure capabilities
- Help the customer to adopt Secure stage features they already have access to
- Show the customer the value of the Secure stage to position tier upgrade

A Secure Workshop is not a hands-on-keyboard demo or implementation effort.

Getting Started

When first discussing a Secure Workshop with your customer, you can use these points to describe the purpose of the workshop and set expectations.

- The Secure Workshop is tailored to your interest in Secure capabilities.
- We will work with you to determine which information to cover, and the objectives you are looking to achieve with Secure.
- We will work with you to determine when to schedule the workshop, who to invite, and what to expect.
- Your CSM will deliver the workshop and answer questions and may bring additional team members for support.
- Depending on the number of topics to be covered the workshop, length will vary, but you should plan for a minimum of 60 minutes.

Discovery Questions

Once a customer has agreed to conduct a Secure Workshop session, we need to scope the workshop and what topics should be covered.

To determine the scope and contents of the workshop, refer to the discovery questionnaire which provides guidance on information to gather and questions to ask, as well as links to additional questions and resources to use.

Workshop Development

Use the information you attained during discovery to plan how you will deliver the workshop, and collaborate with the customer to make sure you're covering the right information. Use the provided materials to assemble the workshop modules that your customer is interested in.

Generally speaking, you should expect the workshop to follow this format:

1. Overview of Secure capabilities (20-30 minutes)
1. Click-through demo from developer & security perspective (10-15 minutes)
1. Q&A (5-10 minutes)

For planning and scheduling purposes, it's safe to aim for the upper end of each estimate. If there are no questions, the workshop can be done within 45 minutes, but realistically questions can easily add 15 minutes or more.

Workshop Materials

The materials for this workshop are intended to be delivered based on the customer's expressed interest in Secure capabilities. Depending on your level of familiarity with the Secure stage capabilities, you (and your supporting team members) can conduct the session directly or utilize available pre-recorded videos.

The slide decks provided contain information for the entire Secure stage. Please make a copy of the deck(s) you need for your workshop and tailor the content to the features you'll be covering with the customer.

- Secure Workshop This deck is built by the CSM team and provides the slides needed to deliver

the workshop directly, with a talk track and click-through demo.

- GitLab Security & Compliance Capabilities This deck is built by product marketing and will likely be best used as an initial overview of Secure, either as part of selling the workshop or as a basic introduction.

Team Support

It is highly recommended that you have at least one other team member helping you to deliver the workshop. This person can monitor the chat (or other designated locations) for questions and provide answers, as well as moderate the chat.

Attendee Registration

The recommended way to manage attendees is creating a signup page for the workshop for your customer to share internally. The benefit of a signup page is that:

- You can understand in advance the number of expected attendees, and prepare accordingly (i.e. by engaging volunteer resources to handle Q&A in chat)
- You will know who is coming and can tailor content to specific levels/titles of attendees (don't forget to add a title question to your signup page!)
- You will have a list of attendees to follow up with, which is incredibly significant as this workshop becomes a means to engage with dev leads and end users that we often may not have otherwise

If your customer would prefer not to use this method, you can suggest that they provide you a list of attendees that you can subsequently send out a meeting invite to.

Supplemental Videos

- Shifting Security Left - GitLab DevSecOps Overview
- Adding Security to your GitLab CI/CD Pipeline

Videos by Feature

- SAST
- DAST
- Dependency Scanning
- License Compliance
- Container Scanning

SECTION: customer-success/workshops/secure/questionnaire.md

Use this questionnaire to determine what information to cover in the workshop you are conducting with your customer. Copy the information below into an issue in your customer collaboration project, and fill in the details either by asking the questions during your initial planning session (recommended), or asynchronously by asking the customer to answer the questions in the issue.

A few things to keep in mind about this questionnaire:

- The capabilities listed are based on what the Secure Workshop materials currently support. As additional materials are added, this list will be expanded.
- Tailor the questions to your customer and your understanding of their objectives. As appropriate, add discovery questions provided by the Marketing team.

markdown
Product Capabilities

Please indicate which areas of the Secure stage you would like covered in the session:

-] [SAST
-] [DAST

Objectives & Scoping

What tool(s) are you currently using for [Secure capability (SAST/DAST, etc.)]?

What is your biggest concern regarding application security and scanning?

What would you like to change about your current security scanning process?

What is the outcome you're looking to achieve with this workshop?

Attendees

Who will be the primary audience for this session (e.g. developers, security team members, etc.)?

Have we invited members of your organization's application security team?

SECTION: eba/_index.md

Intro

This page details processes and general guidelines specific to the Executive Business Administrators (EBAs) at GitLab. The page is intended to be helpful, feel free to deviate from

it and update this page if you think it makes sense.

Executive Business Administrator Team

ORG	EBA / SR EBA	EXECUTIVE
CEO	Jeanne Rotenberry Staff EBA	Bill Staples (CEO)
Chief of Staff	Linsea O'Shea Sr EBA	Stella Treas (Chief of Staff, Interim Head of Product Marketing)
Engineering	Vange Ingan Sr EBA	Sabrina Farmer (CTO)
Engineering	Liki Simonot Sr EBA	Marin Jankovski (Sr. Director of Infrastructure) Tim Zallmann (VP of Engineering, Core Development) Michael Wildpaner (VP Engineering)
Engineering	Kyra Wright EBA	Johnny Scarborough (VP of Support) Michelle Gill (Director of Engineering, DevOps)

 Julie Davila (VP of Product Security) |

Contact us

Please feel free to ping/hang out with us in slack at eba-team. If you need to quickly communicate with the entire team please @ mention exec-admins in slack. For requests for the CEO, please tag @ceoeba.

Meeting request requirements

If you would like to schedule a meeting with a Leader at GitLab, please slack the appropriate EBA in eba-team with the following information (or DM if confidential):

1. Must have/optional attendees

1. Meeting type: internal prep, client facing/customer, prospective customer, etc

1. Urgency/ Desired timeframe: in the next two days, in the next week or two, etc

1. Duration: 25 mins, 50 mins, etc.

1. Subject of the meeting

1. Desired outcome of the meeting

1. Provide context: include a link to the agenda doc and provide context in the document so that the EBA can adequately understand and prioritize your meeting with E-Group. The google doc is required to be included in the calendar invite. If you're requesting the meeting, it is your responsibility to prepare the agenda document.

1. For meetings with the CEO, please tag @ceoeba in your slack message to reach the CEO EBA team.

1. When scheduling an internal call with the CEO, confirm that there are attendees in non-United States time zones before requesting meetings before 10am PST.

Agenda Document Templates

1. Agenda Document Template should be used for all meetings with members of our E-Group and provided at the time of the meeting request. Select file > make a copy to use this template. If relevant to your meeting request, the agenda document should include links relevant MRs, issues, slides, or helpful background material and information. This document is sufficient for most internal meetings.

Customer, Prospect and Partner Meetings with an E-Group Member

Please follow the instructions above for scheduling a call with your customer, prospect or partner and an E-Group member at GitLab. Instead of using the Agenda Document template, meetings with customers, partners and prospects require the following documents in order to schedule:

1. Executive Customer/Partner Briefing Document should be used for all meetings with Customers or Prospects and provided to the EA at the time of the meeting request. This is the internal document that you will use to brief the Executive in a pre-meeting. Select file > make a copy to use this template and please make sure it is editable by everyone at GitLab. Watch Nico Ochoa in this 6.5-minute video share his best practices for completing this template (click

here for Nico's template). If you have any questions related to this document, please ping the Executive Business Administrator Team in eba-team in slack.

E-Group / VP In-Person Customer Visit Requests

If you would like to request that an E-Group member / VP travel to visit a customer, please review this template in its entirety to understand expectations.

- Please coordinate with respective EBAs on aligning all visit details. If the requested GitLab Executive does not have an EBA, please work with them directly. Please tag applicable EBAs in the eba-team Slack channel to get the process started.
- Note: It is encouraged that an Internal Briefing Document has been completed prior to requesting. Executive attendance to ensure proper background and prioritization.

Requesting Customer Meetings for your Executive

If your Executive is requesting customer meetings while onsite or virtually, please refer to the following contacts as a helpful starting point. These contacts will assist in engaging the proper Sales representatives:

- AMER: Darren Moffett, VP AMER Sales
- APJ - APAC/Japan: Craig Nielsen, VP Sales APAC
- EMEA: Michel Isnard, VP of Enterprise Sales
- Public Sector: Bob Stevens, VP Public Sector Sales

Please contact the @sales-eba-team with any questions.

External Events & Speaking Engagement

1. If you have a request for a member of E-Group to attend and speak at an event (keynote, panel, fireside chat, etc.), please fill out the Executive External Event Brief with the key information and email to the EBA supporting the Executive with your request. The EBA will review, provide feedback, and gain approval accordingly and confirm directly with you. If the request involves the CEO, please follow the process outlined here. The EBA to the CEO will gain approval from the function head of the requestor on whether the CEO will attend or not. Whether a new talk needs to be prepared or an existing one can be adjusted to the audience should be a part of the decision whether or not to participate in the event.

1. In-Person Event Meeting Template

Interview Requests with Executives

The process outlined below should be followed for requesting interviews with any executives. The Candidate Experience team and Executive Business Administrator team will adhere to a 24 hour working day SLA response time for scheduling interviews. Hiring is a top priority at GitLab and the team should prioritize interview requests.

1. The CES team will tag the appropriate EBA in the private eba-team-interview-requests slack channel with all the required details for the interview
 - Executive needing to be scheduled
 - Length of Interview

- Any special timeframes
- Candidate Greenhouse link

1. Within the thread of the message, the CES team will include a copy and pasted view of the candidates availability with the timezone specified

1. The EBA can either:

- Provide the time and zoom link (if applicable) to the CES in the thread of the message to have the CES schedule within Greenhouse and send the confirmation email
- Navigate to Greenhouse to schedule the interview and then notify the CES team in the thread that the interview has been scheduled and the confirmation is ready to be sent. CEO and CRO scheduling is the exception and handled by the EBA to the CEO and CRO. Confirmations are sent directly from the EBA.

1. The CES team will follow up, as necessary if no response has been received from the EBA within the 24 working day business hours

EBA Team Best Practices

Suggested formats for calendar invites within Executive Group (E-Group)

- MTG for meetings in person, either at Mission Control or another location
- INTERVIEW for media interviews (make sure to loop in our PR partner)
- CALL for phone calls or conference call
- LIVESTREAM for livestreams
 - When a meeting is being live-streamed to YouTube add Public Stream or Private Stream in the subject and body of the calendar invite to indicate which live stream
- 1:1 for one-on-ones with direct reports
 - Example: "1:1 Jane Doe & John"
- "Skip Level" should be in the title of skip level meetings
- Flight travel should include "flight" in the title
- Ground transportation is indicated by "Uber", "Ground Transportation", or "Car service" in the title
- Executive time should be labeled "Exec Time" or "Executive Time"
- Please utilize the Zoom plugin for Google Calendar to schedule Zoom meetings on behalf of E-Group
- Please add the subject of the call in the description, for internal and external calls.
- All external meetings RSVP should be confirmed with the guests at least 24hrs in advance
- When meetings are being rescheduled please add RESCHEDULING in the subject line of the calendar invite to indicate the reschedule and change the RSVP to "No"

When sending a calendar invite for an in-person meeting at Mission Control, please make sure to include the following items in the calendar invite:

1. Calendar blurb

1. Cell numbers (in case of an in-person meeting)

1. Mission Control Access Instructions (when meeting at Mission Control)

General scheduling guidelines

- For meetings spanning across multiple time zones and with external parties, Time & Date Calculator can help determine the best time to schedule
- When scheduling internally with multiple attendee's, please utilize Google calendarsFind a

Time feature to see when GitLab team-members are free to schedule a meeting with. Please be cognizant of people time zones. If in doubt, please reach out to the team member directly in slack

- When researching flights, consider using a tool like Skyscanner or Google Flights to explore options for flights
- Schedule calls in European timezones in the morning (am) Pacific (Daylight) Time and US time zones in the afternoon (pm) Pacific (Daylight) Time
- Holds on the schedule should be removed at least 60 minutes before the preceding meeting starts. Preferably 24hr in advance of the meeting when possible
- Meetings should be scheduled for 25 minutes or 50 minutes. As a general guideline meetings should not be scheduled to the full 30/60 minute mark
- If the call is with any Google company, use Hangouts instead of Zoom.
- For meetings at Mission Control and another guest joining via video call: The EBA will schedule an additional ten minutes before the appointment to test the zoom room system.
- For meetings or lunch/dinner appointments, always make sure to add the address in the invite of the location where it's scheduled.
- Make sure to plan travel time (in a separate calendar item, just for the exec) before and after the meeting in case another meeting or call should follow.
- After each meeting with a potential investor, make sure to update Airtable with the information on these meetings.

Scheduling with the Executive Team

Please remember to reach out to the EBA of the executive you need to schedule for with an agenda, any time preferences, and length of the meeting.

<p class="h4">Scheduling with the CEO</p>

<p class="h4">Scheduling with the E-Group</p>

<p class="h4">Scheduling with VPs or Directors</p>

What to expect when joining a meeting with E-Group

Before the meeting

1. Ask yourself or the requestor of the meeting: can this be done async?
 - If not, schedule the meeting. Please consider that synchronous meetings consume valuable time and resources, please consider conducting your meeting asynchronously whenever possible
1. Calendar event for the meeting must include:
 - Link to the Agenda Document. Please avoid hyperlinking and paste the full URL in the invite. Consider utilizing the Share button at the top right hand corner of the Google doc and use the copy link function to make sure you get just the link to the doc itself unless you really need to link to a specific section of the document. The agenda doc should be editable by everyone in the meeting and whenever possible be editable or viewable by GitLab team members. It should also be editable for the EBA's scheduling the meeting or supporting members of E-Group involved in the meeting.
 - Link to the Zoom meeting in the location field and body of the invite
 - If the meeting is in person, include the address and any pertinent details (like how to access the building or security requirements) in the location and body of the invite. Please

include the cell phone numbers of key contacts.

1. Must be a speedy meeting

1. Agenda for the meeting must be complete 24hrs or 1 business day before the meeting and include any links to materials and pre-recorded presentations

- Live doc meetings provides a great overview of how we use live docs in our meetings.

- We do not present in any of our meetings. If you wish to present your material, you can record a presentation in advance and link it in the agenda document. We use synchronous meetings for Q&A. More detail at <https://handbook.gitlab.com/handbook/communication/few-meetings-with-presentations>

1. Plan to join the meeting on time. We start on time and do not wait for folks to join.

- As most of our meetings are conducted over zoom, please join with your camera on and with a headset or dedicated microphone whenever possible

1. The meeting may be recorded or live streamed to GitLab Unfiltered on YouTube, please determine in advance if the meeting should be live streamed or recorded

1. Hybrid calls are horrible - remote meetings should have participants taking the meeting from their own equipment versus a shared conference room, shared device, etc.

1. If you need to reschedule, contact the EBA team in eba-team in slack versus contacting the E-Group directly

During the meeting

1. The Host should start the meeting on time, if the Host is late, the participants should feel empowered to start the meeting on time

1. We start in order of the agenda, with the person who has the first point in the numbered list

- Unless it is a 1-1 meeting or some working group meetings, then we'd start at the bottom and work our way up

1. If you're not actively speaking please help take notes. We prefer to document everything live.]

1. If something is not on the agenda, we do not discuss it. However, participants can add topics during the meeting if time permits

1. If you're not benefitting or contributing to the meeting, it is okay to leave the meeting

1. Speak up if something is not working, i.e. a webcam is causing issues, a speakers volume is too low, there is latency.

1. We end meetings on time. It is also okay to end meetings before time but not after time.

After the meeting

1. Update and review the notes, if necessary.

1. Add a link to the recording or live stream at the top of the doc

1. Assign any action (TODO) items to stakeholders

Travel

EBAs research the best option for a flight and book it according to their executive's schedule. If the Executive requires approving the flights beforehand, please follow that process before booking.

Make sure to add a calendar item for 2 hours before take off for check in and add a separate one for travel time before that in the exec's calendar.

If a flight was changed or not taken due to delays or other circumstances, make sure to check

with the airline for the current flight status.

Navan

EBAs research the best option for a flight and book it according to their executive's schedule. If the Executive requires approving the flights beforehand, please follow that process before booking. Make sure to add a calendar item for 2 hours before take off for check in and add a separate one for travel time before that in the exec's calendar.

If a flight was changed or not taken due to delays or other circumstances, make sure to check with the airline for the current flight status. Navan is the new corporate travel & expense management platform, formerly known as TripActions and Expensify, respectively. EBAs will need delegation access from the managers they support in order to book travel and file expenses on their managers behalf. Travel itineraries are added to the traveling managers calendar as well as any updates necessary. Navan requires that all expenses are submitted with receipts. Any missing receipts or information will cause a delay in the reimbursement process, so please refer to the end-user guide for additional information. Navan end-users guide

Zoom

- Request Schedule Privilege for executives by having the executive go to their Zoom profile settings and scrolling down to the Schedule Privilege section. The executive will need to click the plus button icon to add the EBA's email address to the Assign Scheduling Privilege pop-up box.

- This setting will allow EBAs to create meetings using the user's One-time Meeting ID.

- To add yourself as an alternative host to a meeting, click on your profile and select Meetings from the header. Find the meeting you'd like to be an alternative host for, and click on the meeting title. Scroll to the bottom and select, Edit this Meeting. Scroll to the bottom and add yourself and/or others as Alternative Hosts.

- This will allow you access to additional meeting settings such as Mute All, Unmute All, Play Enter/Exit Chime, Mute Participants on Entry, Record, End Meeting, and more.

Google Groups

To view members of Google Groups, reference the Google Workspace group member repo. A sync is run on the repository every hour, as noted in the README.md file.

Company Mail

- GitLab uses a domestic enterprise mail service called Stable to retrieve mail from our UPS box to then be scanned and routed to the appropriate recipients.

- Routing rules and distribution guidelines can be found [here](#).

- Address: 268 Bush St. 350 San Francisco, CA 94104

OKRs

- EBA to the CEO to assist in maintaining and scheduling meetings revolving around the OKR updating process.

Performance Indicators (PI)

More information can be found here

Signature Request procedure

Requesting a wet signature

When requesting a wet signature for a document(s) please have the following questions answered in advance

1. Is there an issue? If there is more than two documents you may want to consider creating an issue to track progress

1. What is this for?

1. Electronic signature or physical wet signature?

1. Who needs to sign? See Authorization Matrix

1. Why is this person's signature required?

1. If a wet signature is required, is there a specific ink color that should be use?

1. Is there a specific paper size that is required? For example, Ireland requires A4.

1. Is Legal required to review and/or stamp approved?

1. Is a notary required?

1. Is an apostille required?

1. When is this due?

1. Where should the originals be sent? Include the recipient's name, company name, address and phone number.

Specific directions for signature request

- Indicate page numbers of document where signature is required, per document. For example Jane Doe is required to sign pages 3, 5 in two places and 8.

- If there is more than one signature line on the signature page without details (name / company name) please indicate where to sign.

- Should the document be dated? If yes, are we using the date the document is actually signed or different date? If we are using a different date please explain why.

Directions for executed documents

- Scan and upload to Google drive?

- Scan and email?

- Send originals where?

SECTION: eba/ceo-scheduling.md

The CEO Support Team

1. Chief of Staff to the CEO

1. Cross-functional and multi-functional projects

1. EBA to the CEO

1. Board Meetings

1. Board Member AMAs

- 1. CEO e-mail management
- 1. Preparing agendas and content for CEO's meetings
- 1. Triage ceo slack channel
- 1. Coordinates the quarterly E-Group offsite and other social/team bonding events for the Executive team
- 1. Schedules internal and external meetings with CEO
- 1. Triage meeting requests in eba-team
- 1. Expense Reports for the CEO
- 1. Total travel coordination for the CEO
- 1. Live-streaming meetings on behalf of the CEO. For instance: CEO AMA
- 1. Ad-hoc requests from the CEO
- 1. Sr. Executive Communications Manager, CEO
- 1. Vetting, preparing content, briefing and supporting the CEO for external speaking engagements

How to request a meeting with CEO?

Reach out to the EBA to the CEO by tagging @ceoeba in eba-team with the required details to book a meeting with the CEO.

All meetings on the CEO's calendar should be scheduled and vetted by the EBA to the CEO. Please do not directly schedule a meeting onto the CEO's calendar without confirming with the EBA to the CEO in advance. The CEO requires meetings to originate from their calendar and on their Zoom account.

Prep Calls for Customer/Prospect Meetings

- 1. Prep calls for Sales meeting should be scheduled for 10 minutes by default. An Internal Customer Briefing Document and an External Collaboration Doc is preferably provided by the Sales team member at the time of requesting the meeting with the CEO, however is not required until the prep call if the meeting logistics require it be booked quickly with the customer.
- 1. The account team including a Solutions Architect or Product Manager should always be included on the invite for both the prep meeting and the external meeting with the customer or prospect.
- 1. A draft email for the CEO to send should be made available in advance of the call. Any updates to it should be made immediately after, so the EBA to the CEO can quickly stage to send (within one business day of the meeting occurring).

Calendar blurb for External Meetings with the CEO

For all external parties meeting with CEO (both video call and in-person), the EBA should include the following verbiage and links in the calendar invite:

text

GitLab is a very transparent company and materials that are normally confidential can be found online, please consider looking at the following Handbook links prior to your meeting with GitLab:

Company strategy: <https://about.gitlab.com/company/strategy/>

Our Objectives and Key Results per quarter: <https://handbook.gitlab.com/handbook/company/okrs/>

All team members and numbers per department: <https://about.gitlab.com/company/team/>
Handbook with all our processes in: [/handbook/](https://about.gitlab.com/handbook/)
Pricing plans: <https://about.gitlab.com/pricing/>
Pricing strategy: [/company/pricing/](https://about.gitlab.com/company/pricing/)
History: <https://about.gitlab.com/company/history/>
About: <https://about.gitlab.com/company/>
All Remote: <https://handbook.gitlab.com/handbook/company/culture/all-remote/>
GitLab Unfiltered on YouTube <https://www.youtube.com/channel/UCMtZ0sc1HHNtGGWZFDRTTh5A/videos>

Depending on the subject of the interview (e.g. events, all-remote, etc.), the arranger should consider adding other relevant links beyond the baseline below.

Contact details for external meetings should be collected in advance by the EBA to the CEO and listed in the calendar invite as:

Executive cell:

Guest cell:

CEO Evangelism and External Speaking Engagements

Process

- An issue is created in the Corporate Marketing project using the label of ceo-evangelism and assigned to the Sr. Corporate Communications Manager, Executive Communications and EBA to the CEO.
- Where there is content alignment, the Corporate Communications team provides the thesis of the talk along with an outline in slide deck form
- The DRI collaborates on this thesis and outline and then presents it to the Exec for approval
- The DRI takes over slide deck creation with design support from our Design team or PR firm as necessary (one week lead time needed to acquire their resources)

Example talks

- Open Core Business Models
- Multicloud Maturity Model
- Remote Work/ The Future of Work

Content Review

- The EBA to the Exec is responsible for scheduling an initial set of practice sessions with the content DRI, the Exec, and a Developer Advocate. It is the EBA's discretion based on experience with the Exec and their speaking engagements in the past to decide how many times to set up.
- The call attendees are responsible to communicate with the EBA if they need more or less sessions ASAP

As a rule of thumb, there should be 1 slide per minute of expected speech delivery.

The initial content review for the CEO should be in bullet points only.

Then the CEO can talk through the slides and a team member can capture the CEO's tone of voice as he talks through the talk.

This helps ensure the talk track is in the CEO's voice.

The Chief of Staff to the CEO is responsible for making sure that all of the CEO's Evangelism engagements are on our events page by updating the events.yml file.

Pick Your Brain meetings

If people want advice on open source, remote work, or other things related to GitLab we'll consider that. If the CEO approves of the request we suggest the following since we want to make sure the content is radiated as widely as possible. To start, we send an email as shown below.

> Thanks for being interested in GitLab. If we schedule a meeting it will follow GitLab's Pick Your Brain format. Are you able to submit a draft post with us within 48 hours of interview?

>

> GitLab is a very transparent company and many things that are normally confidential can be found in our handbook, available online. Please consider looking at the following pages prior to our meeting.

>

- > - Company strategy
- > - Our Objectives and Key Results per quarter
- > - All team members and numbers per department
- > - Handbook with all our processes
- > - Pricing plans
- > - Pricing strategy
- > - History
- > - About
- > - All Remote

1. If we receive a positive answer we schedule a 50 minute YouTube public livestream. For an example of an interview, see this one about stress in remote work.

1. Within 48 hours you share a draft post with us in a Google Doc with suggestion or edit rights for anyone that knows the URL.

1. You can redact anything you don't want to publish.

1. Our executive administrator will work with you to publish the post if we agree that it fits with our current marketing plan and would be a good fit for our audience. The EBA-team will follow up to make sure the draft post is submitted and coordinate with Content Marketing to cross-post on our blog.

1. Read and watch past Pick Your Brain interviews, including one hosted by Slab co-founder Jason Chen that reached the top spot on Hacker News.

Reply to emails: Thanks for wanting to chat. I propose we meet in the format proposed in GitLab's Handbook so that other people benefit from our conversation too. If you're up for that please work with my EBA, XYZ (cc:) to schedule.

Please note, requests for meeting about remote work, all-remote efforts, distributed workforces, and such should be scheduled with the most appropriate team member.

Scheduling Pick Your Brain meetings

1. Once Pick Your Brain meetings are confirmed, schedule a Zoom Webinar and send out a calendar invite to all guests and make sure to add a separate calendar invite for the CEO with preparation time. Scheduling a Zoom webinar

1. Link the document that the external guest has provided to the calendar invite and ensure it also includes:

- Who the PYB Meeting is with, Name, Title, Company and their LinkedIn Profile (if applicable)
- Context: Where did the request originate from (email, text, twitter), what's the source?
- Subject: One Sentence for the PYB Meeting

CEO Preferences

CEO Email Management

- Labels: /archive, /read-respond, /chief of staff, /personal, /investor relations to handle, ea
- Emails that need the CEO's attention should be "starred" versus labeled
- EBA to CEO should prepare draft responses
- EBA to CEO should proactively schedule meetings requested via e-mail
- Requests for introductions should follow "The Double Opt-in Introduction)" guide: when introducing two people who don't know each other, ask each of them to opt-in to the introduction before making it.
- Standard reply for recruiters:
 - "We do not accept solicitations by recruiters, recruiting agencies, headhunters, and outsourcing organizations. Please find all info on our jobs page."

Travel preferences

Current preferences for flights are:

- Aisle seat
- Check a bag for all trips longer than one night
- Frequent Flyer details of all (previously flown) airlines are in EA vault of 1Password as well as important passport/visa info

Visiting Mission Control in San Francisco, CA

The EBA to the CEO will coordinate all meetings at Mission Control. If a group would like to visit GitLab's offices, please ping the EBA to the CEO in slack to discuss the opportunity. Due to limitations in size, we cannot host large groups but are willing to meet remotely and publicly. GitLab is an all-remote and distributed organization and we do not have a head office.

Access to Mission Control: In case of a meeting in San Francisco at Mission Control please copy-paste building access instructions into the calendar invite from the "GitLab Mission Control Access Instructions" Google Doc.

- If the PYB meeting is about all-remote work, please invite the Head of Remote to the meeting

SECTION: eba/e-group-scheduling.md

Before scheduling with an E-Group member, please be sure to reach out to their perspective EBA with meeting details.

Scheduling for Brian Robins, Chief Financial Officer

- All meeting requests should go through the CFO's Staff EBA, Darci Tadich.
- Daily office hours are 9am-5pm ET, with meetings scheduled between 11a and 5p ET. Please do not book meetings outside of working hours unless arranged with the Staff EBA.
- All meeting requests should include an agenda and any relevant reference material. Ensure that all participants on the invite have access to the agenda and materials. If the Staff EBA does not have access to the agenda to confirm access, it is the responsibility of the meeting/agenda owner to ensure proper access is shared in advance of the meeting.
- It should be made a priority for agendas to be populated 24 hours in advance. If that is not possible, at a minimum they should be populated by EOD prior to meeting. The CFO reviews all materials for the day during the hours of 7-9a ET in order to prepare for the day.
- Do not schedule over DNB (Do Not Book).
- Prefers "appropriate length" conversations, so short meetings are okay on the calendar. If a topic only needs 10 mins, book 10 mins instead of 25, etc.
- Schedule two 30 minute blocks a day for work time - title "DNB". This is time for email/Slack follow-up and general work time. If the time has to move to accommodate another meeting, ensure another time is found and that daily workflow is still achieved.
- Schedule one 60 minute block a day for lunch - title "DNB / lunch". This is time for a lunch break, follow-up and general work time. If the time has to move to accommodate another meeting ensure another time is found and that daily lunch break is still achieved.
- If you add any meetings to the calendar directly, tick the box "Attendees can modify" so the Staff EBA can change if necessary.
- Please do not @ Brian for scheduling questions or requests in Slack, please reach out to his Staff EBA.
- Please do cc: @ Brian and his Staff EBA with last minute scheduling changes in Slack.
- During Zoom meetings please do not post information or questions in the chat, add it to the meeting doc or in Slack.
- Priority to candidate interviews, E-Group, GitLab BoD, Investor Relations and 1:1's.
- When in-person meetings are being requested, please check with the CFO's Staff EBA prior to scheduling the meeting.
- For candidate interviews: CES should tag the Staff EBA in eba-team-interview-requests to review times submitted by the candidate, or to provide alternate times for the CFO. CFO prefers 25 minute candidate interviews.
- A calendar key is available for viewing in the CFO's daily schedule.

Scheduling for Stella Treas, Chief of Staff to the CEO

- All meeting requests should go through Sr. EBA, Carla Sylva.
- Priority given to candidate interviews, CEO, E-Group, GitLab BoD, and direct reports to the CoS to the CEO
- Limited availability due to personal commitments from 7-9am PT Mon.-Fri. Can often make meetings during these blocks, if given advance notice, but strong preference for meeting

outside of these times

- If meetings need to happen before 9am PT or after 5pm PT check with the Sr. EBA
- Do not schedule over DNB (Do Not Book) without reaching out for approval from CoS to the CEO or the Sr. EBA
- For meetings outside of set business hours contact the CoS to the CEO's Sr. EBA
- During Zoom meetings please do not post information in the chat, add it to the meeting doc or in slack
- Sr. EBA to add reminders at 1 month, 2 weeks, 1 week and 2 days on the calendar for the following events: OKR How to Achieve, Group Conversations and Board of Director meetings
- All meeting requests should include an agenda or some sort of reference material
- A calendar key is available for viewing in the CoS to the CEO's daily schedule

Scheduling for Robin Schulman, Chief Legal Officer and Head of Corporate Affairs

- All meeting requests should go through the CLO's Staff EBA, Sharlene Seemungal
- Priority to candidate interviews, CEO, E-Group and GitLab BoD
- Unavailable due to Group Conversations, Company Calls and personal commitments from 7-9am PT
- During Zoom meetings please do not post information in the chat, add it to the meeting doc or in slack
- Calendar key is available for viewing in the CLO's daily schedule
- All meeting requests should include an agenda or doc for reference unless it is a Coffee Chat
- Keep meetings to 25 or 50 minutes unless otherwise specified
- Working blocks on the calendar are OK and can be moved to prioritize other meeting requests, team members should check in with the CLO's Staff EBA to request a meeting using the meeting request requirements as a guideline

Scheduling for Rob Allen, Chief People Officer

- Please schedule all meetings through the People Function's EBA, Annette Ramirez
- All meeting requests should include an agenda or doc for reference unless it is a Coffee Chat
- Keep meetings to 25 or 50 minutes unless otherwise specified
- Direct Report 1:1's occur weekly, Skip Level 1:1's Monthly
- Calendar color coding: 1:1s - dark green, Coffee Chat - light green, CEO or E-group meetings - red (Important meetings NOT to be moved are in red).
- Do not schedule over DNB/Focus Time blocks without consulting the EBA of the People Group.
- Scheduling should ideally be kept between 9:00 am and 5:00 pm Pacific Time

Scheduling for David DeSanto, Chief Product Officer

- Daily office hours are 9am-5pm ET, please Do Not Book meetings outside of working hours unless arranged with Sr. EBA, Gena Schwam
- All meeting requests should go through the Sr. EBA for Product, Gena, and should include an agenda doc
- If you add any meetings to calendar directly, tick the box "Attendees can modify" so EBA can change if necessary
- 1:1's with direct reports should occur weekly unless scheduling conflicts
- Biweekly Product Meeting and Weekly Product Leadership meetings cannot be scheduled over
- David will allocate "Focus Time" blocks for work time based on upcoming priorities, please check with EBA before scheduling over these blocks
- Reminders at -2 weeks, -1 week and -2 days should be put on the calendar for the following

events: OKR, Group Conversations (Product), Board of Director meetings, Monthly Key Reviews, Monthly Top ARR Drivers Reviews, and Performance Indicator Reviews.

- 1:1's should always be rescheduled instead of cancelled unless unavoidable due to OOO/PTO schedules
- Meetings will be declined if no agenda is added or shared 48 hour priors to the meeting time

Scheduling for Ashley Kramer, Interim Chief Revenue Officer, and Chief Marketing & Strategy Officer

- To schedule Marketing/Strategy-related meetings, please coordinate with Kato Faylor, Staff EBA. (Please tag cmso-cro-ebas in all requests)
- To schedule CRO/Sales-related meetings, please coordinate with Alexa Schrauth, Staff EBA. (Please tag cmso-cro-ebas in all requests)
- Priority will be given to customer & E-Group meetings - even last minute.
- Flexible for early/late calls to support EMEA & APAC, but please check with Staff EBAs first.
- Prefers "appropriate length" conversations, so short meetings are okay on the calendar (e.g. if a topic only needs 10 mins, book 10 mins instead of 30, etc.).
- For scheduling questions, please do not tag @Ashley, reach out/tag cmso-cro-ebas.
- Include meeting agendas in invites and/or briefing docs (excluding coffee chats) at least 24 hours in advance.

Scheduling for Sabrina Farmer, Chief Technology Officer

- All meeting requests should go through Sr. EBA, Vange Ingan.
- Priority given to candidate interviews, CEO, E-Group, GitLab BoD, and direct reports to the CTO.
- Sabrina will allocate "Focus Time" blocks for work time based on upcoming priorities, please check with the Sr. EBA before scheduling over these blocks
- Daily office hours are 8am-5pm PT, please Do Not Book meetings outside of working hours unless arranged with the Sr. EBA.
- If meetings need to happen before 8am PT or after 5pm PT check with the Sr. EBA
- Can often make meetings during these blocks, if given advance notice, but strong preference for meeting outside of these times
- Do not schedule over DNB (Do Not Book) without reaching out for approval from the Sr. EBA
- For meetings outside of set business hours contact the Sr. EBA
- Sr. EBA to add reminders at 1 month, 2 weeks, 1 week and 2 days on the calendar for the following events: OKRs, All Hands, Offsites, and Board of Director meetings
- All meeting requests should include an agenda or some sort of reference material. For meetings with customers, please include a briefing doc and information about any current executive sponsors.

Scheduling for Josh Lemos, CISO

- All meeting requests should go through Sr. EBA, Marisa Carlson.
- Priority given to candidate interviews, CEO, E-Group, GitLab BoD, and direct reports to the CISO.
- Limited availability due to personal commitments from 8-9am PT and 3-4pm PT Mon.-Fri. due personal commitments
- Can often make meetings during these blocks, if given advance notice, but strong preference for meeting outside of these times

- If meetings need to happen before 8am PT or after 5pm PT check with Sr. EBA
- Do not schedule over DNB (Do Not Book) without reaching out for approval from Sr. EBA
- For meetings outside of set business hours contact Sr. EBA
- Sr. EBA to add reminders at 1 month, 2 weeks, 1 week and 2 days on the calendar for the following events: OKRs, Key Reviews, Offsites, and Board of Director meetings
- All meeting requests should include an agenda or some sort of reference material. F
