

t people.

If you encounter that, please ask whether that is the case.

English is not my native language which can affect how I express myself.

I tend to mix words like frustrated and upset and sometimes oversimplify sentences.

I will also say I don't understand often when I am having trouble translating what is being said. Please ask for clarification if you encounter this.

I have been at GitLab since the start and have a strong sense of ownership.

Due to this, I sometimes tend to be overprotective if I think that something won't benefit GitLab. If you explain how an item will help GitLab in general and not individual/team I will look into ways of helping if I agree.

I do not like inefficiency and will look for any way to improve that. This is also the case in group conversations where bike-shedding is making me uncomfortable and I tend to speak up very directly regardless of the list of participants. If this makes you feel uncomfortable, please schedule a call with me and provide me feedback.

I am not an optimist person by nature so I tend to see everything as glass half empty. There is always room for improvement and I always stress the improvement part. In recent times I've been learning on how to provide feedback that is positive in nature, and I've asked people to help me with that by asking for that type of feedback specifically. If I am not able to provide it on the spot, give me time to think as that takes an extra effort from my side.

Trust

My default position is to trust everyone, be it work related or not.

To some people I come off as too open and free as I expect people to say when they don't want to share some information or are not in agreement.

At work, I will trust that intentions are good by default. I will often provide feedback if I see something that I find is not beneficial to the company whether that is my job or not.

I will provide direct feedback to individuals of all ranks if I observe this type of behaviour.

If I feel that I am repeating my feedback or that my feedback is being misused without raising this directly with me, I tend to react by withdrawing the trust completely. From then on, earning back my trust tends to be a lot of work.

For this reason I ask people working with me to always provide me direct feedback in time, and to react to my feedback timely without holding back.

<!-- This template will help you build out your very own GitLab README, a great tool for transparently letting others know what it's like to work with you, and how you prefer to be communicated with. Each section is optional. You can remove those you aren't comfortable filling out, and add sections that are germane to you. -->

Mario's - README

Hello, I'm Mario and I am a Support Engineer at GitLab.

This page is intended to help others understand what it might be like to work with me, especially people who haven't worked with me before.

Related pages

[LinkedIn](#)

[About Mario](#)

[GitLab handle](#)

About me

I was born in Costa Rica, a beautiful tropical country in Central America, with 3% percent of all the biodiversity of the world you can definitively find a lot of things to do and enjoy over here; I love to do outdoor activities like hiking or running while listening to audiobooks, or going outside and take pictures with my camera. When at home I love to do cooking and really enjoy doing BBQs, and playing ping pong, I also enjoy doing Raspberry Pi projects.

I come from a background of IT companies in which I had worked for about 15 years, yet I can certainly say that working at GitLab has been a life-changing experience and I'm very thankful for it since in GitLab our values are truly lived every day and this is reflected in the quality of relationships between our peers and our methodologies to make things happen.

How you can help me

When working on a difficult issue I had found it better for me to split it into different sections so that I can know:

what/why is not working?

what had been tried to fix it?

how does it look when is working properly?

If you have any feedback please share it with me since I enjoy enhancing my labor and it's always welcomed because it helps me identify blind spots that I need to correct.

Feel comfortable asking me for help with any tasks you need and please expect me to do the same as well.

My working style

I prefer to work intensively on one task at a time and focus until it is completed. Because of this usually, I split my day into "blocks of hours" on which I set apart some hours for training and complementary tasks to my role and focus the rest of the day at fulfilling my production tasks.

What I assume about others

That you will provide constructive feedback for me to grow.

That you are also learning and getting better every day.

What I want to earn

The confidence of my peers and the GitLab community that I will always serve them at the best of my capacity with their needs.

Communicating with me

By the time I sit in front of my desk, you can DM me at @mmora on Slack or through any channel, I'll gladly reply back as soon as I can.

I love to chat and will enjoy talking to you through messaging or a call whenever is required. Feel free to set up a coffee chat or just ping so that we can talk or just say "hello".

Strengths/Weaknesses

I try to be methodic in every area of my life which I believe it to be a good thing since it helps me to be organized and gives me a perception of the progress that I had made through the day, sometimes however this could create certain "stiffness" which could make me overlook special details in a particular situation.

SECTION: engineering/readmes/matt-nohr.md

Matt Nohr's README

I'm an Engineering Manager at GitLab for the Code Creation team.

I've previously worked on these teams at GitLab:

- Create:Code Creation
- Ecosystem
- Create:Editor
- Create:Knowledge
- Monitor:APM and Monitor:Health

My Links:

- GitLab
- LinkedIn

Work Style

- I believe in the servant leadership model
- I tend to follow a mindset like: "If you are running, I'll let you run. If you trip, I'll be there to help you back up."
- I have a Defender personality
- I prefer a bias towards action.
- I respond well to being asked for help ("Can you help with X?"). I don't respond well to

being told what to do ("Do X!")

- I have worked for Fortune 100 companies and small startups. They each have advantages and disadvantages.
- I look for small, incremental deliverables and a willingness to work on any task.
- I prefer to automate repetitive tasks.
- I believe managers are not the only leaders.

Work Patterns

- I live and work in the Central Time Zone.
 - Central Standard Time (UTC-6) in the winter
 - Central Daylight Time (UTC-5) in the summer.
- I spend time with my family before school in the mornings and in the evenings, and I am typically not available during these times. I will sometimes break this rule, especially if I have advanced warning.
- Fridays are reserved for focused asynchronous work, not meetings in alignment with GitLab's Focus Fridays
- Even if I am working a bit on weekends, I never expect anyone else to work outside of regular work hours.
- I take vacations where I do my best to disconnect (or travel places where there is no access to internet).

Communication Preferences

- You can slack or email me at any time, but I likely will only respond during my working hours. My devices are on "do not disturb" mode overnight.
- I may slack or email you during non-working hours, but I do not expect a response until your next work day. I sometimes just need to write something down so I don't forget.
- If you need a response in a certain time, please let me know. For example, "Can you review this before our meeting?" or "Can you let me know before the end of the day?"
- In GitLab, I only get notified of mentions of @mnohr

Feedback

- I welcome feedback from everyone and I see it as a way for me to learn and improve.
- Please provide feedback to me, in private, and specifically indicate it is feedback. It will work best if you are clear and specific.

Book Recommendations

- Drive: The Surprising Truth About What Motivates Us - Also watch this video overview
- Turn the Ship Around!: A True Story of Turning Followers into Leaders - This also has a corresponding video
- The First 90 Days: Proven Strategies for Getting Up to Speed Faster and Smarter
- Creativity, Inc.: Overcoming the Unseen Forces That Stand in the Way of True Inspiration

There is also a good book list in our handbook if you are looking for more suggestions.

Personal

- I enjoy spending as much time as possible with my wife and 3 kids.
- I have a dog named Chaco.
- In the summer I like to be outside, hike, camp, and spend time on one of Minnesota's 10,000 lakes.
- In the winter you can often find me on the ice curling.

We all do better when we all do better - Paul Wellstone

SECTION: engineering/readmes/mike-dunninger.md

My Role and Responsibilities

As your manager, I will do all I can to make it possible for you to succeed professionally. That means I will strive to do at least the following...

- Provide you with the tools to do your job
- Coach and mentor you in career development
- Bring you information from the rest of GitLab
- Shield you from outside pressures
- Set clear expectations for you & give clear feedback
- Be available for you to lean on me
- Give you many opportunities to stand on your own two feet

I Expect

- honesty, integrity and professionalism
- that you share and will act in accordance with GitLab's Values
- understanding of GitLab's business and goals
- full participation
- creative thinking
- ownership · of your career, of your actions
- teamwork · support each other
 - Do your fair share of work
 - Ask for help, and be available to help
 - Be reliable and timely
- adherence to team and company policies & processes
- respect for each other, our company, and our customers
- for all of us to have fun

I Believe

- in the individual
- in the team
- in the customer
- in doing what's right
- that communication is at the heart of all of our successes and most of our failures
- that customer support and service can be a competitive differentiator for GitLab
- in time off

Working with Me

- Need something from me? No need to schedule a meeting in advance. Just contact me on Slack or send me an email.
- I appreciate when people get to the point quickly instead of working around to it slowly. It's not that I'm in a hurry; I just like to get to the heart of the matter.
- Similarly, I tend to be pretty direct and straightforward. If it's too much for you, please just let me know and I'll do my best to adjust.
- I seek only useful, beneficial change - pretty much never change for the sake of change.
- I want to be the most helpful, useful, supportive manager I can be for each person on my team. So please tell me:
 - what I'm doing well, and should therefore keep doing
 - what I can do better
 - what I should start doing
 - what I should stop doing
- I try very hard to write or say exactly what I mean, with no hidden agenda or secrets. If there's information you want but that I can't give you, I'll let you know. But I won't make stuff up, and I won't make you guess. So you shouldn't need to read between the lines.

Personal History

- B.A. in Computer Studies from Northwestern U. (Go Wildcats!)
- M.S. in Computer Science from U. Wisconsin
- Moved to Colorado in 1989 to start my career
- Remarried in 2012 to Kim, an amazing woman who's taught middle school choir for many years and is a beautiful singer specializing in choral music

Personal Interests

- American Football - Denver Broncos season ticket holder, and a big fan of my alma mater, Northwestern
- Cooking and baking
- Travel - favorite places so far are New Orleans, San Francisco, Tuscany (Italy) and Kauai, Hawaii
- Movies, plays, musicals and music
- Crossword puzzles, other word puzzles, number puzzles
- Reading and writing

Professional History

- 10 years in HP's Graphics Software Lab as a software engineer and a software development process engineer
- 8 years at Rational Software (IBM) building and leading the Premium Support team
- 7 more years at HP as an enterprise support manager and then a support team manager
- 4+ years at LogRhythm as a support engineer and support manager
- joined GitLab in 2020!

About me

<!-- Consider embedding a video of you working or being interviewed, along with 5-10 bullet points outlining interesting tidbits about you and your interests. Focus these on non-work attributes. Also, add detail on what GitLab values and sub-values resonate most with you. This enables ice-breakers to occur ahead of meetings. -->

G'day, I'm Mike! Computer generalist, percussionist, humanist, and dad. Sometimes also a computer-percussionist.

I enjoy meeting and engaging with people, and solving customers' technical problems by being their trusted ambassador to experienced technologists within the company. With my Support role I'm sure to be asking for help from all parts of GitLab. Hit me up for a coffee chat!

TL;DR

More than twenty years as a support sysadmin

I like computers, tinkering and programming many kinds from 1980s onward

Grew up and live in Tasmania, the island to the south of Australia's mainland

Married since 1998, father of 3 boys

Animals: dog, cat, chickens

Hobbies: taiko drumming, walking, technical blogging, hacking (software and hardware)

Interests: electronics, code, maps, musicology, multimedia

Background

I grew up in Northern Tasmania in the 1980s, cutting my teeth on 8-bit British micro's, eagerly typing in codes from computer magazines and library books. After graduating from Uni of Tasmania I moved to Sydney, then the Blue Mountains, and spent 15 years cat-hurding at major IT corporations on all sorts of computers from mainframes to mobiles. My family and I returned to Tassie in 2013, where since I have been working as a support sysop for Linux-based web systems. My wife Jenny and I juggle three boys and various animals, in a little house South of Hobart.

When not computing, I like to read, walk our dog while listening to music, or audio books, podcasts and Support Week In Review. I also cycle (casually) and play music. I play percussion, keyboards, a little bit of blues harp, and code. I also play trombone since I was ten, but not since our first child. With the family I like to play card- or board-games, and I regularly get involved in the boys' Scouting activities.

How you can help me

<!-- Add 5-10 bullet points on what others can do to make your life easier when working with you. Strive to include elements that are nonobvious, or that people would not typically think to ask or consult you about. This enables others to be more efficient in helping you in a way that feels like help. -->

It matters to me that I can say your name properly, even though I'm terrible at it. So do tell me if I say it wrong =)

The same goes for unconscious biases: if I do or say something to upset you, please tell me about it, if you feel able. I want to un-learn biases and be as inclusive as I can be.

My working style

<!-- Add 5-10 bullets on how you prefer to work, interact with others, and learn. You may optionally include intel from Strength Deployment Inventory, Myers-Briggs, etc. This is most effective when you are precise and specific about your norms, assumptions, and expectations. If you are unsure what would be helpful here, ask your colleagues for their input. You may learn something from listening to outside perspective! -->

I live and work in the Australian Eastern Time Zone

Australian Eastern Standard Time (UTC+10) in late Autumn/Winter/early Spring (Southern hemisphere)

Australian Eastern Daylight Time (UTC+11) in late Spring/Summer/early Autumn

I'm more of a morning person than a night owl, usually do my best work before 12:00 (local), and not very useful after about 16:00

I have a four-bit list of rules that I work by in computing. You'll probably see a lot of overlap with GitLab's core Values…

I strive to write down new learnings and observations as soon as possible. I keep a digital lab book for this purpose

Also I keep a public wiki for more general notes. Dumping things in there gets them out of my brain, so that I can focuss better

New things excite me: be they technology, methods, people, language, ideas…

Start with "Why?"

Find a way

Stay calm and be kind

Fight for better-er

What I assume about others

<!-- Add 5-10 bullets on the assumptions you typically hold when working with others. Strive to be as open with these as possible, so others understand your perspective when engaging with you on projects. Remember, the honesty put forth in these answers enables others to be more understanding and empathetic. -->

If you're doing something in a way that's different to how I do it, then I'm super interested — I assume there are good reasons for how people work.

What I want to earn

<!-- Consider 3-5 bullets on your goals for earning things like trust and respect, or a broader understanding of new topics. This enables others to understand what motivates you. -->

I want to earn your trust and gain a better understanding of how you work.

Communicating with me

<!-- Consider 5-10 bullets on your communication preferences. This includes traditional styles such as verbal, textual, and visual, but you are encouraged to be precise. You can mention things like routine, availability, your travel habits, etc. This helps others understand why you communicate in the manner than you do, and it enables them to tailor their communication in a way that resonates most with you. -->

This "asynchronous" idea is new to me, and I love it. You are welcome to @-mention me in GitLab and Slack

If we're both online then I'll probably /zoom you after a couple of back-and-forth, if it seems we're talking at cross purposes

I check email maybe once or twice a day, so use Slack to get my attention

If I gave you my mobile number, then that means you're welcome to call it. It goes silent between 22:00 and 07:00 (UTC+10/11)

Pairing is awesome! I always come away feeling great about what I learnt and who I learnt it from. Sometimes I might even show you something new, too
I'm comfortable with long silences in pairing video calls. Just having the virtual company is nice as well

Weaknesses

<!-- These may be covered in the above sections. If you prefer a section devoted to strengths and weaknesses, this will enable others to lean on your areas of published expertise and offer support in weak areas without passing judgment. -->

Responding quickly on Slack. I may not even see things for a few hours or days, unless I'm mentioned or DM'd

Prone to overthink things, branch off-topic down curious rabbit holes, or ruminate on unresolved conflict

My quick witt is hobbled by my tendency toward dad jokes

Sometimes I say perfectly innocent things, but with accidental innuendo. I've been told I'd make a good straight-man in a comedy duo

I prefer to think in 24-hour times; AM/PM confuses me no end

Strengths

People ask me strange technical questions, because I know obscure things about computers and internets

I've worked in the customer-facing support role all my career, and understand the sub-value "assume good intent" as well as keeping timely updates for customers

Not afraid to admit when I don't know something, but I will find it out or ask for help from someone who does know

Approach difficult conversations with humility and empathy

I will have your back, even if I don't have the skills. At the very least, I make a good "rubber duck"/"sounding board". No idea is too crazy, though we may both laugh about it afterwards

Related pages

Here are some pages where you can read and learn about who I am and connect, if you like :)

- <http://m.lunoe.dk/>
- <https://www.linkedin.com/in/mlunoe/>
- <https://stackoverflow.com/users/1008519/mlunoe>

About me

Hi! My name is Michael and I am from Copenhagen, Denmark, where I currently reside (I used to live in San Francisco from 2014 - 2018). I love using my hands creatively cooking, eating, baking bread, brewing coffee, playing guitar and taking photographs, which for me is a good way of enjoying nature.

```
<figure>
  <picture>
    
  </picture>

  <figcaption>This photo of me is from a Swedish midsummer folk music celebration, combining
  multiple things I love; spending time with people, camping, music, dancing, Sweden in the
  summertime, and getting in touch with nature ·</figcaption>
</figure>
```

The iteration value really resonates with me. I've found the value in chopping tasks up into smaller bite-size and accomplishable pieces, which helps gain the overview of what needs to get done, how far one is from reaching the goal, but also helps re-define the goal as one learns more about the task. Finally, it is the implementation of "appreciating the journey", and not only be concerned with the end goal ·

How you can help me + my working style

- I like to bundle up my tasks to when I actually choose to go through them as I generally don't work well with distractions I can't escape, so if you "just" need me to look at something within the next few hours (within my working schedule), consider send me an email, or tag me on an issue and I'll get to it when I go through my items there ·
- I am a very social person, so don't hesitate to suggest a call, or schedule something on my calendar!
- I love pairing, so if you have something you need to work through and you could use my help, let's pair! I'll probably suggest the same if there is something you can help me with ·
- I love to learn new things and share what I have learned!
- Please share your feedback with me. I am eager to hear what you have say and to improve.
- Myers-Briggs personality test result: Protagonist ENFJ-A

What I assume about others

I generally don't make too many assumptions, but here are a few items to consider:

- I expect you to follow up on tasks on you own, if they matter.
- When I follow up on an item with you, I expect you make an effort to get back to me with a timely response, as I will do the same.
- What I want more than anything is an open environment where you can express your concerns and needs, so if I in some form do not enable that in you, I expect you to tell me so.

What I want to earn

I want to earn your trust and gain a better understanding of who you are and how you work.

About me

Hi! I started with GitLab in April, 2022 as a Servant leader (Director of Contributor Success) in the area of Contributor Success.

I live in Ghent, Belgium and my primary operating hours are 9 AM to 5:30 PM (CEST).

Coffee Chat topics

If you're reading this, you might be trying to find things we can talk about for a coffee chat or 1:1.

Here's a bunch of topics I'll be happy to talk about:

Tech-stacks / Open Source communities

- Drupal
- Mautic
- PHP
- Apache Solr / Lucene
- Google Cloud Platform
- Large scale linux deployments/production cloud systems
- GitLab
- Google Sheet scripting
- OSX little tools to make life easier
- Gmail tips & tricks

Travel

These are some places I've lived in for a while, or live in that I am always keen to talk about:

- Boston, USA
- Barcelona, Spain
- Lisbon, Portugal
- Ghent, Belgium

Conferences I adore

- Fosdem
- Drupal Developer Days
- Drupalcon

Parenting & Kids

It's a challenge. Always in for tips!

My working style

I'm here for you. You in my role is a really wide interpretation. This means

- You, as an employee of GitLab
- You, as a contributor to GitLab
- You, as a member of our team
- You, as a customer

I prefer to deep-dive into an issue so I can get a great understanding of the topic at hand. I don't function very well without a deep understanding of the technicalities behind the conversation, so please do not withhold any information because of the words in my title!

Next to that I like to brainstorm and have direct conversations to dig deeper into the why and the semantics of the words. Words mean something different to everybody, so finding a common understanding is key. I prefer to do this synchronous, and once we found that common ground, we can continue async.

How to communicate

I generally keep Slack & Email open, but it is possible I don't reply instantly. For your information, I work with 3 types of todo classifications. So it is possible you will receive communication from me a month later asking for a reply or your insights to a specific issue.

- To Reply
- Expect a reply
- Longer term follow-up

In terms of communication style, I like direct communication but I don't fear the hallway-track/coffee chat style conversations. You can schedule a

coffee chat any time that fits in my working-hours.

Weaknesses

I have a tendency to be impatient. Please push back, and don't worry about me being offended by it, I hardly ever am. I prefer a good discussion compared to a walk through the china cabinet :).

Strengths

I have a lot of experience with Open Source communities, mainly the Drupal ecosystem, but some others as well. Next to that I am a social person, which comes from my background as a youth-organization leader. I love public speaking, so I am not shy to take the stage to talk about topics that I am passionate about. I also love working towards big goals, and will always cheer for you, as I can't get there on my own!

Book Recommendations

- The First 90 Days: Proven Strategies for Getting Up to Speed Faster and Smarter
- Behind the Cloud
- The Innovator's Dilemma
- Crossing the Chasm
- The practice of Cloud System Administration
- What got you here, won't get you there
- The art of doing twice the work in half the time

There is also a good book list in our handbook if you are looking for more suggestions.

Where do I work

I work in a coworking office in the city centre of Ghent. Come say hi!

SECTION: engineering/readmes/rebecca-spainhower.md

My Role and Responsibilities

Tips on Managing Yourself and Your Emotions

The art of not taking things personally -- factors to consider when people on your team (including you!) have outsize reactions

Questions I Ask Myself

These questions are drawn from Gay Hendricks' book *The Big Leap*:

What work do you do that doesn't seem like work?

- career development - for teammates and myself

- process improvements - thinking systematically and asking questions about alternatives

- document reviews and revamps (I love to read!)

In your work, what produces the highest ratio of abundance and satisfaction to the amount of time spent?

- 1:1 meetings with teammates - building connection

- creating processes, documents, and guidelines that enable others to achieve work goals

- any activity that brings together diverse viewpoints and geographically distributed teammates

What is your unique ability?

- fostering team camaraderie that endures over time

SECTION: engineering/readmes/ronnie-alfaro.md

Ronnie's - README

Hi, I am Ronnie, I am proud to be one of the GitLab Support Engineering Managers.

This page is intended to help others understand what it might be like to work with me, especially people who haven't worked with me before.

It's also a well-intentioned effort at building some trust by being intentionally vulnerable, and to share my ideas of a good working relationship to reduce the anxiety of people who might be on my team.

Please feel free to contribute to this page by opening a merge request.

Related pages

- [GitLab Team page](#)

- [GitLab Profile](#)

About me

Travel is my favorite thing, thanks to it I've had experiences like

- Having a cup of butter tea @ Mt. Everest base camp.

- Trying salteñas from a street vendor in la Paz Bolivia

Seeing the sunset in the desert in Chile

Pointing at the only Chinese menu in a very small restaurant in rural China with the hope to get something good.

I like cooking and collecting recipes books from all the places I visit

My wife's most requested meals are Bánh mì and the russian borscht.

One time I was asked what was my secret to have a team doing so good, I said there is no secret, it is easy actually: Happy people work better

I love spicy food, even completed the Phaal Challenge

Most of the time you'll see me carrying my camera, and you can see some of my photos on my personal website.

I have 2 beautiful daughters, a lovely wife and we have a pet rabbit

I believe in our values, and how by following them GitLab has been able to create this unique culture.

How you can help me

If I start talking too fast, it is always ok to tell me to slow down or repeat.

If you're part of my team , don't think twice if you need to talk, I am here for you, we're a team.

Don't keep your ideas, comments or suggestions always share them, they are welcome anytime.

Do your best but also remember all the good people you have ready to help when needed.

Be there for our customers in the same way you'll expect to be helped when you have a problem with any service you hire.

My working style

As a manager I believe a team will work better when happy, empowered, trusted and recognized.

In my experience getting there is always a different path for everyone, that's why I like to have open conversations, ask for opinions, give people challenges they can do and ask them what is something new they would like to do or learn.

What I assume about others

We will talk when something is preventing you from doing your best work.

You have more going on than the one thing we're discussing.

You'll ask for help from anyone at GitLab if needed.

You'll provide feedback.

You'll document any new shiny piece of new knowledge which is not documented already

What I want to earn

Trust from my team to be better at enable them to reach their goals.

Knowledge about GitLab products, the more i know the more we can help our customers.

Opportunities to be outside of my comfort zone and be challenged.

Communicating with me

Slack is awesome let's talk there.

supportteam-chat for any question / comment which may help our team.
private channel for any conversation which you prefer private and require me and others.
You can always just DM me at @ralfaro for anything else.

I am a bit of an introvert, so if i stay quiet in a big group conversation, just push me out of the comfort zone with a question or comment. Eventually I would probably just talk too much

Try to be specific:

- > Instead of: Ronnie, Git is too difficult
- >
- > Maybe something like : Ronnie, I have problems understanding the rebase in git.

Strengths/Weaknesses

I put too much attention to detail on what I do, for example when I take a photo most of the time I would say: Oh it is skew , and maybe it is but just 2 degrees. I need to improve on that

Sometimes I think too much, so something small my brain will make a n-ary tree with a deep of $N+K$. I am working on improving that

I don't give up easily, I try, try, try until i learn it, until i can do it.

I never stop learning, i always believe there is a bit more to know, to learn and to improve.

SECTION: engineering/readmes/savas-vedova.md

Savas Vedova' README

Hi there,

My name is Savas (pronounced Savash), and I am a Senior Frontend Engineer at GitLab, in the Govern team. This page is a brief readme about myself and the ways I work.

Having spent half of my life in Switzerland and the other in Turkey, I consider myself a bicultural person. I believe this allowed me to make friendships quite fast and get used to other cultures pretty quick. I speak 3 languages fluently: English, Italian and Turkish. I have some French knowledge and enough German to explain my needs in the tax office.

I do like running, swimming, hanging out with friends and spending time with my family. I love nature and all the beauties that comes with it.

My working style

I am mostly available. I enjoy working.

If I have been given a task, I put all of my effort to complete it within the expected delivery time.

I am a fast learner.

What I assume about others

Everyone is different so I usually put myself in other's shoes and behave accordingly.

No matter how experienced is the person I am talking to, I always assume that they have no context and I try to explain even the most obvious thing. I don't do this because I think the person has no knowledge but rather I do this because sometimes people (including myself) are timid to ask questions and I don't to put anyone in that position.

Communicating with me

I am very easy going - just try to be as direct as possible with me.

I prefer async communication, however when async is not being helpful I am almost always available for a sync communication.

Let's connect on Social Media

Feel free to follow/add me on these accounts and/or reach me out:

SECTION: engineering/readmes/simon-street.md

Simon's README

About me

A short history of me

Hello! This page is intended to give you a little bit of information about me.

I started at GitLab in March 2022 as a Support Engineer. I live in Bedfordshire, England, UK. In February 2024 I was promoted to Senior Support Engineer.

All of my working life has been in tech having started out replacing computers on lease cycles in a primarily Novell NetWare environment before moving on to a desktop support role at a small stage/projection equipment hire company.

Throughout this period I was dabbling with FreeBSD/Linux and generally tinkering with computers as a hobby.

This led to an all encompassing role at a small company that started out renting game servers which involved building out a very low latency network to keep gamers happy. This evolved into co location, dedicated, and other data centre services due to the position our network put us in. After a period of time we wrapped up the gaming side of things to concentrate more on the data centre side and added managed services/support to our line up.

For mostly geographic reasons I moved to a similar role at another more local company who

offered web hosting/data centre services. This could be quite an intense environment at times due to some of the high revenue customers but this is something I enjoy. The role exposed me to maintaining and designing scalable services for customers and helped me grow my Linux knowledge a lot.

I have been aware of GitLab for quite a while having set it up on and off over the years for personal reasons, including back when MySQL was an option! Feeling it was time for a change, particularly during the pandemic and realising the perks of working from home I started looking for a new position and jumped to apply to GitLab when I could. The rest, as they say, is history!

Some links

- Team Page
- Team Pet Page
- GitLab Profile
- Personal GitLab Profile

Hobbies

- Gaming (World of Warcraft, Zelda (The classic eras), HITMAN, Factorio) - Recommendations always welcome in or out of those genres
- 3D Printing
- TV/Movies
- Walking (Although not as much as I would like at the moment!)
- Home automation
- Home networking/labbing

Working with me

I am most active in the morning (Europe/London), spending that time on tickets and helping out where I can on Slack. Later on in the day I'm often working on other projects depending on ticket load.

Feel free to reach out to me on Slack or pop a pairing session in my calendar if you have a ticket you think I can help with, or a coffee chat if you just want a chat!

Strengths

My history in support and system administration puts me in a strong position with self managed tickets and helps me take a full stack view when approaching tickets looking beyond GitLab itself take the environment as a whole in to account.

My experience means I start a ticket ensuring I have as much information and detail as possible to be able to properly investigate what's going on to hopefully arrive at a solution as quickly as possible.

Weaknesses

Sometimes my personal experiences will bias my thoughts on the root cause of an issue to the

detriment of solution, this is something I am improving at but there are some hard habits to break particularly when you have been involved large outages from certain technologies in the past.

SECTION: engineering/readmes/thong-kuah.md

Introduction

Hello, my name is Thong Kuah. I am a Staff Backend Engineer with the Tenant Scale group. I currently reside in Wellington, New Zealand.

I joined GitLab in 2018, starting with the Configure group.

LinkedIn

My day

As my timezone is UTC +12 or UTC +13, Mondays are relatively quiet. There is some overlap with AMER in my mornings. As some in my team are in EMEA, I have some evening meetings with them.

After dropping my children off at school, I start work shortly after 9 AM. The morning will then be either reviewing merge requests, replying to mentions to unblock others. Sometimes I elect to focus on a particular issue instead.

I mostly work from home, so lunch is mostly leftover dinners. After lunch, there's usually more work to continue though I tend to slow down. I stop work to pick up kids from school at 3 PM.

In the evenings (Mon-Thurs) after the kids have gone to bed, I resume work as this is my most productive time. Friday evenings is a no-work time slot as it is reserved for movie nights with my partner.

I am always open to coffee chats, whether or not we have met before. Simply schedule it within my working hours in Google Calendar.

Work style

I am motivated by feedback, and a sense of accomplishment. I welcome direct, actionable feedback from customers, co-workers, code review comments, and even RSpec telling me the tests are failing.

I work mainly off the GitLab To-Do List, mostly on a First-in-First-out basis. I tend to operate best when I am working on one or two "things" at a time.

When reviewing merge requests (MRs), I tend to look for:

1. Why we are making this change - usually an issue link will suffice.
1. Any glaring security issues.
1. If I can understand the code at first read. If not, then there is some chance others will not understand the code in the future.
1. If the MR is not obvious, how can I try this out myself locally ? Sometimes this means running the unit tests and manipulating the tests, sometimes this requires trying out the MR in development.
1. All code added, or changed has corresponding tests.

Setup

Here is my office setup:

Standing desk from a local office supplier
Samsung WQHD 24 inch external monitor (S24H850)
Goldtouch adjustable keyboard
Logitech mouse
Logitech wired headset

Trivia

I joined GitLab because of the transparent handbook, and that each job page had the amazing phrase "Avoid the confidence gap; you do not have to match all the listed requirements exactly to apply".

Prior to GitLab, I have been a manager of developers. I went back to being an individual contributor because of the engineer/manager pendulum, and also I much prefer shorter feedback loops.

I have read War and Peace, translated. Vanity Fair, or the Wheel of Time is much better.

I have JavaScript disabled globally in my browsers.

About me

I'm passionate about life itself. I love learning new things, preferably on a daily basis. I like it so much that if I would have to name one goal in life, it would be to become a full-time learner.

Whenever I'm not behind a computer, I try to find any excuse to be outdoors, living life dynamically in many different ways. I like :palmtree: Slacklining, :surfer: Kitesurfing, :dog: :snowboarder: Dogsurfing, :mountfuji: Climbing. I'm an adept of the :monkey: Movement Culture.

I have many :musicalnote: musical instruments, and try to find time in between all other activities to explore musicality as much as I can.

My most recent passion is Carpentry :hammer:; I really feel like human beings are meant to construct their own structures. I love setting out time to plan, design and build practical things, from chairs, tables and shelves all the way to small houses and shelters.

Here are a couple of things I like doing every day:

Going for a walk :runner:

Writing :orangebook:

Spending time alone in silence :thoughtballoon:

At least one deep, meaningful conversation with someone I love :speechballoon:

Some deep, focused work :godmode:

A good night's sleep :zzz:

Personally

I currently live in the beautiful Netherlands, but I'm originally from Brazil.

I am a 'sea' person. I'm the happiest version of myself when on walking distance from a seashore.

Two of my best friends are actually not human. I spend dumb amounts of time with my two dogs, Kiss and Ravi:

Things I don't care about you

Your age, skin color, political beliefs, religious beliefs, sexual orientation, alma mater, past mistakes, how much you earn.

Things I care about you

Your integrity, who you are today, whether you try to make society a better place, the things you care about.

Finding me

In general, I can be reached via email (ddiniz@gitlab.com). I'll try to respond as quickly as possible.

Gitlabbers can find me in Slack, either via DM or at one of the channels below:

SECTION: engineering/releases/_index.md

Overview and terminology

This page describes the processes used to release packages to self-managed users.

Monthly self-managed release: A GitLab version (XX.YY.0) that is published every month. From this monthly release, patch releases are created as needed.

Patch release: Patches addressing bug and vulnerabilities per the GitLab Maintenance policy.

Maintenance policy: Describes in detail the release pace of our major, minor and patch releases for self-managed users. The major release yearly cadence was defined after an all stakeholder discussion.

Upcoming version: New GitLab release (XX.YY.0) being developed.

Current version: Last stable released version of GitLab.

Maintained versions: GitLab versions covered by the maintenance policy

Backports: Bug or security fixes from a recent version applied to an older version.

Auto-deploy: GitLab process to deploy application changes to GitLab.com

Release managers: DRI's to deliver GitLab releases and performing deployments to GitLab.com

Monthly self-managed overview

The self-managed release is a semver versioned package containing changes from many successful deployments on GitLab.com. Users on GitLab.com, therefore, receive features and bug fixes earlier than users of self-managed installations.

The deployments and releases page details how the two processes work together.

Monthly self-managed releases process

The monthly self-managed release timelines are concentrated around the release date.

Overview of the steps involved on the self-managed release process:

Diagram source

The end-to-end process consists on the following stages:

1. First steps - Initial steps to setup the monthly release, including setting up the release schedule and the deployment cadence.
1. GitLab.com deployments - From the start of the milestone up to one week before the release date, GitLab.com receives multiple deployments per day. For application changes to be considered in a self-managed release they need to be successfully deployed to GitLab.com.
1. Candidate commit - One week before the release date a candidate commit is selected and broadcasted by release managers, the commit is usually the current commit running on GitLab.com. Pending GitLab.com availability, a different commit might be chosen, this means that the availability and stability of GitLab.com deployments will determine the cutoff date for inclusion in the release. This commit is announced in multiple Slack engineering channels, including releases, development, backend, and frontend.
1. Release candidate - A test release candidate (RC) is created, along with a stable branch for the targeted semver version. The release candidate package is built, tested and deployed to the pre environment. A successful outcome indicates this package can be used as the final version. At this point release managers will announce the final commit to be included in the release.
1. Tag - Release managers tag the final version of the release based on the release candidate. The release is built and deployed to the Release environment.
1. Release - On the release day, the release packages are published.

Timelines

The only guaranteed date throughout the release cycle is the release date. On this date, the self-managed release will be published together with the release announcement.

All other dates are a guideline only and cannot be considered a deadline when it comes to what will be included into any type of release. This includes the development month and the dates defined there as well as any promises given to customers. This is strictly because there are a lot of moving parts to be considered when preparing a release which includes working on highest priority and severity issues as well as security related issues.

If it is absolutely necessary to get a certain feature ready for a specific version, merge the feature early in the development cycle. Merges closer to the release date are absolutely not guaranteed to be included in that specific monthly self-managed release.

How can I determine if my merge request will make it into the monthly release?

When we create release candidates, and when we create a new release package, the Release Tools project will add a label to the merge requests included.

For more information, refer to the Auto-deploy status command.

In the runup to the release date, release managers will also start announcing what commit will at the very least make it into the release. Such notifications are shared in Slack releases channel and will look something like this (format is defined in the release-tools monthly template):

> This is the candidate commit to be released on the release date.
<https://gitlab.com/gitlab-org/gitlab/commits/4033cb0ed66de77a4b5c1936e33de918edef558e>

The last commit to make it into the release will have a message similar to this:

> :mega: Barring any show-stopping issues, this is the final commit to be released on the release date.
<https://gitlab.com/gitlab-org/gitlab/-/commits/13-1-stable-ee>

Merge Requests that have been included in the monthly release will receive a label indicating inclusion.

Monthly release information dashboard

GitLab team members can view the internal Grafana dashboard "Release Information" for the following information:

- Upcoming monthly release version
- Upcoming monthly release date
- Current status of the upcoming monthly release

The metrics used to display this information are updated automatically throughout the self-managed releases process.

Patch releases overview

The patch release policy allows bug fixes to be backported to the current stable released version of GitLab, and security fixes to be backported to the current and previous two GitLab Versions.

Patches that are outside of our maintenance policy for bug fixes must be requested and agreed upon by the release managers and the requester (see backporting to versions outside the maintenance policy for details).

Patch release cadence

Patch releases are scheduled twice a month on the Wednesdays before and after the monthly release week. These are best-effort dates and they might be subject to change.

Patch release process

Patches fix regressions in the current self-managed release and vulnerabilities in the current and previous two GitLab versions.

Overview of the steps involved with creating a patch release:

Diagram source

Details of the patch release lifecycle can be found on the patch release section

If you're a GitLab engineer looking:

To include a bug fix in a patch release, please follow the steps on the patch release runbook for GitLab engineers.

To include a security fix in a patch release, please follow the steps on the security runbook for GitLab engineers.

If you're a GitLab release manager looking:

To include a bug fix in a patch release, please follow the steps on the patch release runbook for GitLab release manager.

To include a security fix in a patch release, please follow the steps on the security runbook for GitLab release manager.

Patch release information dashboard

GitLab team members can view the internal Grafana dashboard "Release Information" for the following information about the upcoming patch release:

Upcoming patch release versions (stable version + 2 backport versions)

Upcoming patch release date

Current status of the patch release

Open: Bug fixes and MRs associated with security issues labeled security-target are expected to be included in the next patch release.

Warning: Signals that teams should get bug and security fixes ready to merge.

Closed: Default branch MRs have been merged, no further bug or security fixes will be included.

The metrics used to display this information are updated automatically throughout the patch release process.

Internal release overview

Internal releases are reserved for delivering high-severity fixes to GitLab single-tenant SaaS instances like

GitLab Dedicated before public disclosure within remediation SLAs and without disrupting the regular release process.

Internal release process

Internal releases address high-severity issues in the applicable versions running on single tenant SaaS instances.

Overview of the steps involved with creating an internal release:

Diagram source

Details of the internal release lifecycle can be found on the internal release section

If you're a GitLab engineer looking to fix a high-severity issue via an internal release, please follow the steps on the runbook for GitLab engineers.

If you're a GitLab release manager looking to fix a high-severity issue via an internal release, please follow the steps on the runbook for GitLab release manager.

Backports overview

For information on backports, visit the backports page.

Labels of importance

The release process has a few labels of specific importance.

Delivery impact labels

Incidents may optionally have a Delivery impact: label to indicate the impact the incident has when active. This label is intended to help with prioritizing between multiple incidents.

| Impact label | Definition |

| ----- | ----- |

| Delivery impact::1 | Deployments and/or scheduled releases are fully blocked by this incident. Action should be taken to resolve this immediately |

| Delivery impact::2 | Deployments and/or scheduled releases will soon become blocked. Resolve as soon as possible |

| Delivery impact::3 | Deployments and releases are not currently blocked but there is some impact on the delivery process |

Labels indicating inclusion in upcoming Self-managed release

As a merge request is included in monthly self-managed release candidates (RC), it will receive the

released::candidate label when the release candidate it is included in is deployed to pre.gitlab.com. See "What is a release candidate and when are they created?" for more information on release candidates. This label indicates that the MR will most

likely be included in the upcoming Self-managed release.

A merge request will receive the released::published label (which replaces the released::candidate label) when included in a packaged release, such as 13.6.0 or 13.5.2, and deployed to release.gitlab.net for both automated and manual testing. This label indicates that the MR will be published with the Self-managed release.

Frequently Asked Questions

Who are the release managers for release X?

You can find this out by taking a look at the GitLab Release Managers schedule.

What is a release candidate and when are they created?

A release candidate (RC) is a GitLab package that includes the changes that will make it into the final self-managed release, except for the rare case where a change may need to be reverted. RCs are only created for the monthly self-managed release, not patch releases. The amount of RCs created per month will vary per release.

There is no fixed point in time where a release manager creates a release candidate. Instead, this is based entirely on how the release process has been going, what the state is of GitLab.com, etc.

Release candidates are created whenever possible, and as such there are no guarantees on creation timing. This will depend on factors such as:

- Any incidents on GitLab.com that are or have been going on in the run-up to the release.

- Any (critical) patch releases that require the attention of release managers.

- Any issues with our auto-deployment pipelines.

- Other release related work that may delay or prevent the creation of a release candidate until said work is dealt with.

In other words, if you want to know when a release candidate is created your best option is to join one of the following Slack channels:

- releases
- fupcomingrelease

Release candidates are deployed to pre.gitlab.com for both automated and manual testing.

Will release managers create a release candidate earlier if I ask them to?

It is up to a release manager to decide when to create a release candidate, taking into account the state of deployments and GitLab.com.

Please do not message a release manager in private about release related questions or requests. Instead, post your request/question in the releases channel.

When do I need to have my MR merged in order for it to be included into the monthly release?

The earlier in the monthly cycle your MR is merged, the higher the chances are for it to be included in that month's release.

There is no guaranteed "cut-off", "freeze" or any other date defined under which the MR will be included.

Availability, security and performance of GitLab.com is a pre-requisite for any monthly self-managed release.

If GitLab.com is not experiencing any issues, MR's merged as late as 2 days before the release date were included in the release.

On the opposite side, when GitLab.com stability was lower, MR's merged as early as one week before the release date of the month were not included.

In other words:

The quality and stability of what is delivered by everyone defines the final MR that will be included in the monthly release.

For more detailed information:

Use the internal dashboard to verify the status of a merge request with respect to the monthly release.

See self-managed release timelines.

Refer to status of a merge request with respect to the monthly release documentation.

What's the process for a release of type X?

The different processes are documented here:

Self-managed releases:

- Monthly releases

- Patch release types

GitLab.com releases:

- Auto-deploy releases

- Hot patch

How can I get a high severity bug fix released?

Any high severity issue should start with an issue labeled with the appropriate bug and severity labels.

Depending on the bug details, follow one of the following processes:

For high severity security bugs

For high severity bugs affecting self-managed users. If the bug has been found close to the release date of the month please also alert the Release Managers in releases.

For high severity bugs affecting GitLab.com

For high security bugs affecting security merge requests

SECTION: engineering/releases/backports.md

Backports overview

This section seeks to remove confusion around backports at GitLab. Please raise an MR to this page or reach out to the Delivery Group if you have questions. Also remember to check the Backports FAQ

What kind of release do I need for my backport?

This flowchart can be used to guide you on what process you need. The ends of the flowchart are clickable links.

mermaid

graph TD

A[Bug Fix] -->|Raise MR| C{Is my MR is targeting the current version?}

C -->|No| E[Backport Exception Request]

C -->|Yes| F[Patch Release]

click E "/handbook/engineering/releases/backports/what-if-my-backport-is-not-covered-by-the-maintenance-policy"

click F "/handbook/engineering/releases/patch-releases-overview"

Backport principles

- Backports are delivered according to the Maintenance Policy and backport exceptions out of that policy are delivered on a best-effort basis and not guaranteed

- Release Managers have the final say on backports that are not covered by the maintenance policy
- Release Managers will schedule releases containing backports in a way that means customers are not given excessive amounts of upgrades

Backport Process Overview

This section provides an overview of the end-to-end process.

Backporting is a multi-step process. Here we outline the basic steps to develop and deploy a backport: The list of steps below is indicative of the typical tasks involved in a backport, but is not all-inclusive and does not cover all eventualities.

1. Engineer identifies the issue within the software version that requires a patch or update.
1. Engineer determines what patches, updates or modifications are available to address this issue in later versions of the same software.
1. Engineer adapts the fix to be compatible with the older code version as required.
1. Engineer raises MRs required to add fix(es)
1. Engineer + Quality conduct robust testing to ensure that the backported code or backport package maintains full functionality within the system.
1. Engineer addresses any unwanted side effects identified in the previous step. Repeat as many times as necessary
1. Release Manager tags a new release containing the fixes
1. Release Manager creates an official release
1. Release Manager publishes the release under a new tagged version.

Backporting can be a very involved process requiring many cycles of back and forth for teams and individuals involved in the process.

How do I know if my backport is covered by the maintenance policy?

You can check the Maintenance Policy to see what is covered

What if my backport is not covered by the maintenance policy?

If your backport is not covered by the maintenance policy then it is not guaranteed. However, we realize that there is sometimes a need to backport a fix to more than one stable release, depending on the severity of the bug. Backports that are outside of the maintenance policy are performed at the sole discretion of the Release Managers .

You can request a backport by:

1. Raising an MR to the stable branches that you want to backport to
1. Ensuring that the pipelines are green and no new issues are introduced
1. Raising a backport request in the release/tasks repository
1. PM DRI shares business impact analysis and justification for exception on backport request
1. Release Managers will accept or reject the backport request based on criteria including
 1. Estimated severity of the bug
 1. Estimated priority of the bug
 1. Potentially incurring data loss and/or security breach.

1. Potentially affecting one or more strategic accounts due to a proven inability by the user to upgrade to the current stable version.

1. Impact to other planned release tasks

1. Wait for confirmation and approval from the RMs

1. Communicate to your stakeholders if/when the release is available on our releases blog

Please note that this is done on a case by case basis and not covered by any of our Maintenance Policies or releases.

Backports FAQ

What is a Backport?

Backporting is when a software fix or update is taken from a recent software version and applied to an older version of the same software.

This process can be as straightforward as updating several lines of code; it can also involve a major overhaul that is spread across multiple areas of the software requiring tight coordination. In the latter case, applying a backport may be impractical as compared to upgrading to the latest version of the software.

At GitLab, we backport security fixes and bug fixes according to the Maintenance Policy.

Is that the same as a Patch Release?

No it's not. Backporting is a catch-all term for any activity that applies updates or patches from a newer version of software to an older version. At GitLab we have a specific Patch Release process that is applied according to the Maintenance Policy. There is a separate exception process for backports that are outside the scope of our maintenance policy and these are delivered on a best effort basis and not guaranteed.

How do I get a backport for my bugfix/security issues?

If your backport is a bug or a security fix and covered by the maintenance policy, please follow the Patch Release Process.

For anything outside of the maintenance policy, please follow the exception process

What should Product Managers consider when approving a backport?

Backports require multiple engineers to apply a fix through multiple versions and are time intensive. When reviewing a backport request, product managers should consult our backport policy to ensure that the backport proposal meets the criteria. Product managers should ensure that the severity, priority, customer impact and the potential risks associated with not backporting are properly documented before approval.

Common Backporting Issues and Considerations

Additional Release Manager and User Capacity

Backports can be intensive and require many interactions between different groups to get right and deliver successfully. It is likely t
