

ail that is directly relevant in assessing leveling.

Effective Feedback Example

Competency: Clear communication across all levels and departments

Key Takeaways: The candidate had multiple examples of how they led large discussion groups, including for E-group members. They also facilitated a difficult conversation between two VPs who were arguing about a recent policy change. I do, however, have a concern about their ability to engage with people that they manage with clear instruction. They gave an example of a poor performer and how they didn't feel the direct report was listening, but acknowledged a few times that they changed project directions and could have given more sufficient notice. The candidate admitted that this may be due to changing expectations frequently and at the last minute.

In comparison to the previous feedback example, this feedback is effective because it is:

1. More specific
1. Aligned with the specified competencies
1. Relevant to the role
1. Includes featured examples

SECTION: hiring/contractor-conversions.md

Converting Contractors

If you want to convert a current contractor into a full-time position, please follow the steps below before reaching out to Talent Acquisition:

1. If the contractor is employed through a third-party agency, please reach out to the agency to confirm the end date of their current contract
 - If the end date works with the intended start date for the full-time role, that is the ideal scenario
 - If the date does not work with the intended start date for the full-time role (for example, their contract ends in September and we intend to convert them in March), ask the agency about any early contract termination fees as this will need to be covered by your team's budget
2. Ensure the role you want to convert the contractor into has a job family.
3. Confirm that their country is eligible for hiring as this will technically be adding more headcount to a location
 - If the country is not open for hiring, we unfortunately will not be able to convert the contractor into a full-time position
4. Confirm the budget you have for the new full-time role with your FP&A partner/s and make sure it aligns with compensation benchmarks for the contractor's location.
 - Please note the budget may not perfectly align to the contractor's actual location and

that there are several factors that go into a total compensation package at GitLab including base salary, equity, benefits, and other personal motivation factors. These do not directly equate to a contract rate, so the recommendation is to ensure we are in the same range during this step and you will work with your Talent Acquisition partner down the line on a final offer recommendation.

If all of the steps above have been completed and we're able to move forward, please reach out to a Talent Acquisition Leader to get this process started. From there, one of our Recruiters will work with you to:

1. Request a GHP ID from Finance
2. Input the requisition into Greenhouse for approvals
 - TA will post the role internally only and add the contractor's information manually once we have their name and contact information (email and phone number)
 - The source should be changed to "Contractor Conversion"
3. Work with the current contractor directly for compensation expectations, as well as interview scheduling
 - NOTE: TA requires completing 1-2 interviews for any contractors converting into full-time roles
4. Recommend an offer (including equity) for the contractor, keeping in mind their location, our compensation ranges, the budget for the role, compa ratio, full-time benefits and equitability across the current team
5. For R&D only - create and submit the business justification scorecard.

Talent Acquisition Responsibilities

1. Contractors will need to complete the reference form so CES can capture their details (full legal name, address, etc). Reference checks aren't required.
2. The Recruiter will work with the hiring manager to recommend, create and extend an offer that is in line with the contractor's experience and skill set, as well as the role, job grade, and compensation range.
3. When submitting the request for the contract, the Recruiter should note in the request that this offer is a contractor conversion for CES.
4. When selecting a start date, please ensure there isn't a large gap between someone's end date and new start date as this will affect their GitLab systems access. Ideally, the start date will be the following Monday from a Friday contract end date to limit disruption to their access to systems, etc.
 - If a start date is after their contract end date, there is no need to terminate the contract through Procurement - the contract should expire after the end date and the PO should be closed.
 - If the start date is before their contract end date, the hiring manager will take on the responsibility of terminating their contract with Procurement.
 - Procurement will ask that a Termination Request is submitted in Zip. This allows the team to complete any steps needed to close out the PO early. In these cases, it should be noted to Procurement either in the title, description, or a comment in the Zip request that the contractor is being converted. Then, if IT has to review they are aware as well and can take the correct actions with system access.
5. For all contractor conversions, CES will need to confirm with IT Ops whether the candidate will need a new laptop or not (full CES process here).

What to know and action as the hiring manager

1. If more than one current contractor is interviewing for a full-time role, the hiring manager will be making a decision based on overall skills and experience for the role. If the budget allows, the contractor not selected for the full-time role can continue in their role under their current contract.
2. If a current contractor is interviewing for a role that is also open externally, the hiring manager will ultimately hire the strongest candidate for the role. If the budget allows, the current contractor can continue in their current contract role if not selected for the full-time opportunity.
3. There may be situations where a contractor from one team is interviewing for a full-time role on another GitLab team.

- In this case, the hiring manager of the new full-time position will connect with the contractor's current manager to ensure they're supportive
- The contractor's current manager can share more details about their contract timeline, etc. The current manager may need to reach out to Procurement to obtain and confirm contract details.
- As a contractor, please always ensure your current manager is supportive of you interviewing for open roles at GitLab before applying

Once a Contractor is marked as hired

1. The hiring manager will receive a new onboarding issue
2. The hiring manager will submit an issue here using the `·tsptofteconversion·` template
3. There may be some additional Access Requests that need to be completed to differentiate the new hire's contract vs full time access. Please check in with IT about this if you have questions.

SECTION: hiring/emerging-talent.md

Emerging Talent, defined as talent with 2 years or less experience in a given domain, will be a value add as GitLab scales.

This page will serve to provide additional information for hiring managers when we achieve a critical mass of intern and job grade 4 positions.

Our Mission

Our mission is to attract, acquire, and activate talent to unlock their potential, connecting learning agility with employment opportunities.

This is anchored in the belief that building a balanced workforce will enable GitLab to scale effectively and inclusively, and that building a strong foundation today will greatly impact our future growth.

SECTION: hiring/gitlab-ambassadors.md

Become a GitLab talent ambassador

It's an exciting time to be part of the GitLab team. As we continue to grow, our goal is to create and foster a culture where our team members are comfortable and excited about the opportunity of being a GitLab talent ambassador.

Whether you're a hiring manager or an individual contributor, you play an important role in this.

Keeping in line with our mission that everyone can contribute, we want all GitLab team members to feel encouraged and equipped to take part in helping us find great talent and act as ambassadors for the company and our talent brand.

Here are a few key things you can do to become a talent ambassador for GitLab.

How to get started

1. Optimize your social media profiles (especially LinkedIn)

Whether they're just interested in GitLab or have already been sourced or interviewed for a role, most candidates have done their homework on their prospective manager and team.

If you're a hiring manager or part of the hiring team, you'll want your LinkedIn profile (and any other sites you use for work, like Twitter) to represent you and GitLab in the best way.

Here are some steps you can take to get started optimizing your profile.

1. Name, photo, and headline

- Use your real name.
- Include a headshot that represents you professionally.
- Write a headline that creatively explains your role or passion.

2. Use a banner image

- Your banner image is a great way to visually associate yourself with GitLab or a subject matter area you're passionate about. You can find several GitLab-branded banners in the talent brand & engagement repository.

3. Write a summary

- Your summary should mirror your personal elevator pitch. It should tell people who you are and what you're passionate about.
- It's also a great place to talk about your team and GitLab, and why a candidate would want to work with you.
- Feel free to use and build from this boilerplate summary about working at GitLab:

> Joining GitLab means you'll contribute to the most comprehensive DevSecOps platform, empowering development, security, and ops teams to build better software, faster. As one of the

largest all-remote companies in the world with globally distributed team members, this is a place where you can contribute from almost anywhere. You'll be part of an ambitious, productive team that embraces a set of shared values in everything we do. As part of GitLab's (YOUR TEAM) team, my role is to (ADD CONTEXT HERE ABOUT YOUR ROLE AND TEAM).

4. Your current role

- This is an important one people often miss: Make sure you've listed your current role and connected it to the GitLab page. You'll know this worked when you see the GitLab logo next to your current role.

5. Follow GitLab's company page

- You'll be able to stay up to date on what our social media team is sharing about GitLab.

6. Add media

- Videos about your team or life at GitLab
- Blog posts
- Your README file

More training for rocking your profile on LinkedIn

- How to optimize your LinkedIn presence (and why it matters)

2. Share what life is like as part of the GitLab team

Candidates will do their research in places far beyond our jobs site to find out more about whether GitLab is the right fit for them.

We want to be sure we're telling an authentic story about life at GitLab, and one of the best ways to do that is through our team members.

Once you've reviewed the team member social media policy, you'll find a library of suggested posts to share using our social media advocacy platform, EveryoneSocial.

Being an advocate for our talent brand on social media

There are several important things to keep in mind when sharing your opinions about working at GitLab on social media. Please keep these things in mind as you create public-facing posts:

1. Be as specific as possible when sharing examples about your experience.

- With more and more team members joining GitLab there's likely to be more variation in the team member experience. Making statements like, "At GitLab, we all..." or, "At GitLab, everyone..." may create unrealistic expectations if the detail being shared only applies to particular teams or functions within the company.

- As GitLab grows, there will be more variation in the experience of working here. If you're sharing a specific practice or ritual that happens on your team it would be more appropriate to say something like "On GitLab's Marketing team, we..." versus "At GitLab, we...". It's often the case that teams within GitLab will develop their own unique practices

and being as specific as possible will better set expectations with candidates.

1. Speak to your personal experience.

- The more you're able to add color to a social post by adding details from your personal experience the more effective it will be in illustrating the experience of working here. A good example of this would be to talk about how you took advantage of a particular benefit rather than simply highlighting a particular benefit that GitLab offers.

1. Actively invite people to help us on our journey.

- Future candidates will be more interested in hearing about what we're building toward rather than where we have already arrived. Think about ways in which your messaging can invite others to "help us build a special company" rather than "joining a special company".

1. Be considerate of tone and how your message may be perceived by the audience reading it.

- As a general guideline, we don't bash our competitors on social media

- For our talent brand, this extends to the employment practices of our competitors.

Especially given there have been a number of tech companies lay off staff in 2023, it's important that any messaging to those who may have been impacted by a lay off clearly convey sympathy and compassion.

- An example of a compassionate tone: "With many layoffs in the tech industry, please know that GitLab is currently hiring."

- It is ok to mention companies by name if it is relevant to the post, and the employees losing their jobs and the company doing the layoffs are treated with empathy and respect.

- An example of what we want to avoid: "Lost your job? Come work at GitLab!"

1. If you're unsure how to communicate something, you can always reach out to the talent-brand channel on slack.

On LinkedIn

- As you're sharing content on LinkedIn, use the hashtags LifeAtGitLab and AllRemote as you deem suitable. This will connect your post to a curated feed of content from our team members on GitLab's "life" tab on LinkedIn, and promote our remote culture.

- If you're sharing a GitLab job on LinkedIn, we require team members to use only the provided templates to ensure we have consistent messaging when sharing jobs. Messaging options include:

- > It's an exciting time to join @gitlab. We're hiring for a [INSERT ROLE NAME]! [INSERT JOB LINK] AllRemote LifeAtGitLab

- > Interested in joining one of the world's largest AllRemote companies? @gitlab is hiring a [INSERT ROLE NAME]! [INSERT JOB LINK] LifeAtGitLab

- > Do your best work from wherever works for you. @gitlab is one of the world's largest AllRemote company and we're hiring a [INSERT ROLE NAME]. Interested? Learn more: [INSERT JOB LINK] LifeAtGitLab

On X (formerly Twitter)

- Be sure to follow the @gitlab X (formerly Twitter) account and reshare content our social media team is posting.

- Consider tweeting some of the content ideas above, and tag the GitLab account for potential retweets.

- Just like on LinkedIn, use the hashtags LifeAtGitLab and AllRemote as you deem suitable in your tweets.

- If you're sharing a job opening on X (formerly Twitter), we require team members to use only the provided templates to ensure we have consistent messaging when sharing jobs. Messaging options include:

- > It's an exciting time to join @gitlab. We're hiring for a [INSERT ROLE NAME]! [INSERT JOB LINK] AllRemote LifeAtGitLab

- > Interested in joining one of the world's largest AllRemote companies? @gitlab is hiring a [INSERT ROLE NAME]! [INSERT JOB LINK] LifeAtGitLab

Glassdoor & Comparably

There are a number of platforms and touchpoints where candidates interact with our talent brand or our jobs prior to ever applying or talking with us.

Beyond helping us to identify top candidates for our team and making referrals, you can also help us attract great candidates by sharing why GitLab is a great place to work on our Glassdoor & Comparably pages. Taking 3-5 minutes to post a review will help future joiners understand our culture and company!

Here are a couple of ways you can help tell GitLab's story on these sites.

- Leave a Glassdoor review
- Rate GitLab on Comparably

Know of another site where GitLab should have a talent acquisition or talent brand profile? Send us a message in the talent-brand channel on Slack.

Responding to potential candidates

As you share more about life at GitLab, you'll likely start to get more direct outreach from people interested in working here.

If you do not know someone who messages you on social media and you do not have a shared connection in common, then it is up to your discretion if you want to engage with them.

Here's a suggestion for how to respond to these messages, particularly if you don't know the potential candidate.

Feel free to make this your own and personalize it based on the specific message or questions you received:

> Hi, {NAME}, thank you for your interest in GitLab! It's an exciting time to be part of our team.

>

> The best way to share your information with our talent acquisition team is to apply to a relevant role on our careers page. I'd also encourage you to take a look through our company handbook and our Life at GitLab Content Library to learn a bit more about our culture.

>

> GitLab is an incredibly unique place to work.

>

> Thanks for reaching out,

>

> {YOUR NAME}

3. Refer great people to GitLab

One of the best ways to help GitLab grow is by referring talented people in your network.

As you think about who would be a good fit for GitLab, don't limit yourself to only the people you know are actively searching for a job. You never know when someone is ready for their next career journey.

We want to hire the best candidate for the role and make sure that person will be a "values add" to GitLab's unique culture.

Here's a fact sheet that can be used as a reference guide as you're having conversations with potential candidates.

Ready to make your first referral? Check out this guide.

4. Get Involved

Contribute your perspectives on a video

> Using video is a highly valuable means of offering a glimpse into the inner workings of our company and what life is like at GitLab. It presents an excellent chance to showcase your genuine self and portray GitLab as an outstanding workplace for prospective candidates. Here's what you can expect during the video collection process:

>

1. You'll be asked to record and submit your video via Cinebody, a powerful tool used to collect and review team member video sentiment before editing into a final video.

1. You'll receive a PDF from the team member leading the video project describing how to collect the video and prompts to assist your candor in the video.

1. Cinebody is integrated with GitLab's Okta SSO system, so once you receive the PDF, click the link either on your phone or computer, sign in, and record away!

1. As soon as you submit your video, Cinebody will receive and store it where it will be reviewed by a member of the Talent Brand team before being sent for final editing.

1. The video may be used in candidate outreach, in job advertisements, on GitLab social media, or on external talent platforms such as our careers site.

>

>Please Slack @cchiodo if you're interested in getting involved.

>

Provide your viewpoints in a piece of written content

> Written content in the form of perspectives, articles, blogs, and/or roundups offer powerful opportunities for our team members to share their thoughts and beliefs about working at GitLab. If you're participating in a piece of written content for the Talent Brand team, here's what you can expect during the collection process:

>

1. The team member managing the written project will provide you with an overview of the project and what is expected of you.

1. The collection of your written perspectives is typically completed in Google Docs, unless otherwise directed.

1. Once the piece is finalized, a final review will be conducted by all necessary teams before publication.

1. The written piece may be used in candidate outreach, in job advertisements, on GitLab social media, or on external talent platforms such as our careers site.

>

>Please Slack @cchiodo if you're interested in getting involved.

SECTION: hiring/greenhouse.md

How to join Greenhouse

Greenhouse is GitLab's ATS (Applicant Tracking System). All Hiring Managers and Interviewers will use Greenhouse to review resumes, provide feedback, communicate with candidates, and more.

You can log into Greenhouse in your Okta homepage. All GitLab team-members are granted Basic

access, which will allow you to track Referral submissions, interview candidates (if assigned to a requisition), and share requisition postings on social media. Until your access is changed by an Admin, you will only have access to the Greenhouse dashboard.

During onboarding, all new team members are assigned permissions based on their role in the hiring process. If a current team member needs to change their access level, they'll need to submit a new access request issue in the GitLab access-requests project. Their Manager and the Talent Acquisition Team will be pinged to approve and action that request.

Your dashboard

The Greenhouse dashboard will be your primary page for activities in Greenhouse. All team members have access to this page. However, depending on your role in the hiring process, you may have more dashboard widgets than others. All team members can see the Add a Referral, My Referrals, and Share Jobs with your Social Network sections (all of which are described in more detail below). On the righthand panel, there is a section called Helpful Links, which is home to several self-help resources, as well as the Greenhouse Support Team.

Members of a Hiring Team may have additional sections, such as My Interviews, which contains a preview of your next three scheduled interviews. That section will link to the candidate's profile and interview kit; click See All Interviews to view the full list of upcoming interviews and See Past Interviews to view completed interviews. You may also see My Reminders, which houses reminders that you set for yourself.

A Recruiter will see an additional section called, Applications to Review, which will list their requisitions and link to the Application Review workflow. There, they can review applications and advance, decline, or submit feedback. This panel only shows the five requisitions with the most pending applications. To see all requisitions, click See All and select yourself as the responsible user. To note, Hiring Managers do not have this section on their dashboard. However, they can view the Application Review section by going to a specific requisition and clicking Application Review in the righthand panel.

On the righthand panel, members of the Hiring Team can see a list of My Tasks and All Tasks, which shows how many candidates you have pending action items on. For example, "Needs Decision", "Candidates to Schedule", "Take Home Tests to Send", or "Offers". You can view all pending tasks by clicking All Tasks.

Members of the approval process (i.e. Executives, Finance Business Partners, and Total Rewards) will have an additional section titled My Approvals, which contains a list of any requisitions and candidates that require their approval.

The next section is called, Helpful Links, which includes a link to our internal job board, a link to a list of our "in-house contacts" (which are GitLab team-members who are our Greenhouse account owners) with their names and emails, and a link to the Greenhouse Help Center.

The last button of note is the Personalize Dashboard button at the bottom of the righthand panel. You can use this to adjust your settings on your dashboard. For example, to hide or rearrange sections to your liking.

For all Interviewers

Feedback and Interview Kits

When you have an interview, you have two ways to get to your Interview Kit to leave feedback for a candidate. The first is by clicking the link in the calendar invitation for the interview. The second is by going to your Greenhouse dashboard where you will see a list of your upcoming interviews and can click See Interview Kit.

The Interview Kit consists of a few tabs:

- Interview Prep
 - Quick overview of what you'll want to look for in the interview, as well as any notes that previous Interviewers left to look into further.
- Job Details
 - The full requisition description posted on Greenhouse.
- Resume
 - This tab will only show up if the candidate provided a resume.
- LinkedIn
 - This tab will only show up if the candidate provided their LinkedIn profile.
- Scorecard
 - This is where you will enter all of your notes, score various attributes, and make a decision. (More detail below!)

Additionally, the Interview Kit shows the candidate's name, contact details, pop-out links to their resume, cover letter, and other details, as well as the details for the interview (location, time, etc.) on the lefthand side. It also includes the requisition that the candidate is interviewing for at the top of the page.

Scorecards

The scorecard consists of a few elements. In general, they feature text boxes for adding notes and text boxes for addressing specific questions. To note, if a text box is required, there will be a red asterisk by the question.

All the meeting notes should live in Greenhouse, and not in links to Google Docs or other external sources. Doing so we allow Greenhouse to be the single source of truth (SSOT) for information from the candidate for GDPR and compliance reasons.

Underneath the first text box, Key Take-Aways, there are two additional links, Private Note and Note for Other Interviewers, which will open additional text boxes. A Private Note is typically used by the Talent Acquisition Team when collecting compensation information and it's only viewable by the Talent Acquisition Team and Hiring Managers for the requisition. The Note for Other Interviewers text box is extremely useful to all Interviewers, as it's where you can include information that you think would be relevant to future Interviewers. For example, specifying areas to dig into, further evaluate, or look out for. Any notes in this field will appear in the next Interviewer's Interview Kit on the Interview Prep tab.

We want to highlight the strengths and weaknesses of the candidate in an easy to absorb, standardized way. Every scorecard must include Pros and Cons. This helps the talent acquisition team gather data that will be presented to the candidate in the form of feedback.

Below the text boxes for notes, each role has a list of desired attributes. Each stage has certain attributes highlighted that are recommended points of evaluation. However, no attributes are required, so you're welcome to rate any attributes you've gained insight into. All stages include attributes for values-alignment, which all Interviewers are heavily encouraged to complete, so we can assess values-alignment for each candidate.

You'll see a selection of symbols aligned with each attribute. You should use the neutral symbol sparingly

. Do not use the neutral symbol to indicate you skipped the assessment of this attribute or didn't meet with the candidate.

Below the attributes is the final piece where you will make your decision. Greenhouse says "Overall Recommendation: Did the candidate pass the interview?". The final score is not required by Greenhouse, but it must be completed by the Interviewer. If the Interviewer does not add their vote, the Talent Acquisition Team will follow-up to fetch their vote. If you are on the fence about a candidate, that's typically an indication that you would not recommend hiring this candidate based on the competency you are assessing. Though, if you're really unsure, feel free to reach out to the Recruiter to discuss further. Your Recruiter may agree with your hesitations and decline or you may agree that there is an element that should be explored in an additional interview.

Your scorecard will automatically save as you enter information. If there is an error and Greenhouse is not able to save the scorecard, it will say so at the top righthand corner and you'll be unable to submit your scorecard. You can either wait until it does save or open the Interview Kit again and copy/paste the information over. If you have further issues, please reach out to the Talent Acquisition Team.

Finally, click Submit Scorecard and you're done! From there, you may go back to review and edit your scorecard, view the candidate profile, or return to your dashboard. Shadows should not submit their scorecard, but can keep the draft to discuss during their debrief with the interviewer they are shadowing. In order to ensure a timely response for each candidate and to reduce the possibility of forgetting important details and impressions of the candidate, all scorecards should be submitted within 24 hours of the interview. Please note that unless in interview training or interview calibration, interviewers should not discuss nor debrief on candidate interview performance prior to submitting scorecards in Greenhouse.

In order to help remove bias, Interviewers (unlike Hiring Managers) are not able to see another Interviewer's scorecard. If there are certain specific flags, concerns, or notes that should be highlighted to the rest of the Interview Team, the Interviewer should add a note in their scorecard by clicking the Note for Other Interviewers section right underneath the Key Take-Aways text box. This box can also be used to communicate what topics you were expected to cover and were unable to make time for so they can be covered in later interviews. You are also able to add notes outside of your scorecard that will be visible to future Interviewers by going to the candidate profile and to the text box on the right side under Make a Note, adding your note, and checking off the radio button to make it Visible to Interviewers.

Interview notifications

You can set up reminders in Greenhouse by going to your account settings and turning on Daily interview reminder email which will email you each morning with a list of your interviews for

the day. You can also connect your Slack account to your Greenhouse account and receive reminders after the interview is over if your scorecard is still due, as well as other notifications depending on your settings.

You can also set up notifications to be delivered to your Slack by clicking on your name > account settings. From there, connect your Slack account and set @mentions as well as any job-specific notifications.

Searching candidates

Since we have a great pool of talent within our ATS, Greenhouse enables the Hiring Teams to search for specific attributes of candidates. To search for keywords, go to the candidates tab at the top of the Greenhouse website, use the search bar on the lefthand sidebar to input your keywords, and enable to option Full Text Search.

A popular method of searching is with boolean queries, which allow you to combine keywords or phrases to get more relevant results. For example, engineer AND "ruby on rails". All fields in a candidate resume, application, forms are searchable. You're also able to sort candidates via defined filters in the sidebar.

Email syncing

All email communication with candidates must be kept in Greenhouse. Only Job Admins (Hiring Managers, Executives, and People Success) are able to email candidates from Greenhouse. If you are not a Job Admin and want to email your candidate, please reach out to your Recruiter. In order to ensure that the candidate's responses are also kept in Greenhouse, you have two options (there is no automatic sync). The first option is to use a Google Add-on "Greenhouse for Gmail" which will allow you to sync any emails you receive from within your gmail inbox. The second option is to either bcc your outgoing email or forward your received email to maildrop@ivy.greenhouse.io.

Leaving notes

It's always recommended to leave notes in a candidate profile to maintain communication between the Hiring Managers, Interviewers, and Talent Acquisition Team. To leave a note, go to a candidate's profile, and, on the right side under Make a Note, type your note and tag anyone you like to see the note. If you do not tag anyone, no one will receive a notification. Once you're done with your note, click Save and it will notify anyone tagged and be logged in the candidate's profile in the Activity Feed. Anyone who has access to the requisition will be able to view it there.

Again, Private Notes should only be used to discuss compensation or other confidential items related to the candidate. To leave such a note, go to the candidate's profile, click Private, scroll to the bottom, and click Add Private Note. Be sure to tag anyone that should be notified. Please note that only Job Admins (i.e. not Interviewers) are able to view these notes. All Job Admins, including Hiring Managers, are able to see private notes whether or not they are tagged.

Access to roles

If you need access to review or interview candidates for a requisition, please reach out to the Talent Acquisition Team through Slack or email. The Talent Acquisition Team will verify with the Hiring Manager and provision access accordingly.

For Hiring Managers

What access do I have?

Hiring Managers and Executives have access to view all candidates for any requisition where they're listed as a Hiring Manager. Additionally, they can view Private Notes for those candidates. To note, a Hiring Manager is not able to view candidates once they are hired or any candidates outside of a requisition where they're a Hiring Manager.

How do I view my roles and candidates?

When you log in to Greenhouse, you will see your dashboard; however, this will not paint the full picture for all of your roles. In order to view the status of your current vacancies, click All Jobs at the top of the page, then choose whichever job you want to review. There will be an indicator if you are the Hiring Manager for a role or not below the job name, and you will only be able to view the jobs you have access to as a member of the Hiring Team for that role; please note the below details are only accessible to Job Admins, and Interviewers have less functionality available to them.

After you click on a requisition, you will be brought to the job dashboard for that specific requisition, which contains all of the information you should need. At the top of the page, there is a quick snapshot of application trends, showing you how many applications have been received, how many have been rejected, and how many are active. Below that you can see a snapshot of the sources where you are getting your applicants as well as the average quality of the applicants from each source. Next, you'll see a list of any candidates you're following in this role. The last section on this page is Pipeline Tasks where any pending tasks for candidates in this role will be shown. You can also view a less detailed version of this task list at the top right sidebar on this page, where you can easily click Review Applications (which is the quickest and easiest way to bulk review applications) or click on the number next to each stage to view the candidates in each stage. If you wanted to view all candidates regardless of stage, simply click Candidates right above the Application Trends section (not the All Candidates at the very top of the page). Below the snapshot pipeline at the right sidebar, you can view any prospects for this role, Greenhouse predictions of when the role will be filled, and finally job setup links that enable you to adjust the settings for the requisition. It's recommended for only the Talent Acquisition Team to edit the requisition setup, but please reach out to them if you have any questions.

If you want to review the candidates for multiple jobs at the same time, click All Candidates instead, and then use the filter on the left sidebar, Jobs > Filter by Job > select the appropriate jobs. You can use the filters to further narrow down candidates.

How do I review candidates in the Talent Community prospect pool?

As a non-talent acquisition team member, you would need to be added as a Pool Admin in a specific prospect pool within Greenhouse. You can reach out to your recruiter or create an issue to request access.

Configuring notifications

Notifications are configured as part of the requisition creation process but can be adjusted at any time. To set up notifications, go to the requisition's job dashboard and click on Job Setup at the top, then Notifications at the left. Under each section, you can then click Edit to add or remove yourself for that section.

Reporting

Hiring Managers have the ability to quickly view and pull reports for their vacancies. To do so, go to the job dashboard of the requisition you want to report on, then click Reports. From there, it will show you a variety of different reports you can pull depending on what you're looking for, and each one will dynamically show you the report which you are able to use some filters on. You're also able to save reports to come back to them later, share a report via email to set up recurring reports to have reports emailed to you or someone else on a weekly basis, and to download the report as an excel file for easy sharing through Google Sheets.

Setting Up Interview Questions

Greenhouse includes the ability to include specific questions within the interview kits made available to interviewers. Setting interview questions in advance makes the interviewing process more consistent. Having a consistent interviewing process improves the efficiency and fairness of the hiring process.

To add interview questions to a position from the Job Dashboard click the Interview Plan link on the right sidebar. In the Team Interview section select the interviewer you would like to assign the question to and click the edit link for them. In the Interview Questions section press the add button to bring up a modal form for adding your specific question. A video walkthrough of using this feature can be found on the GitLab unfiltered YouTube channel [here](#).

For Talent Acquisition

Access levels and permissions

This can be done by Enablement only. For instructions, see the internal handbook for more information.

How to upgrade or change access levels

Only Admins can upgrade another team member's access level. During onboarding, all new team members are added to Greenhouse at the appropriate level listed above. If a current team member needs to change their access level, they will need to create a new access request issue in the GitLab access-requests project.

The default access level is Basic, which is also sufficient for team members who will interview candidates. To upgrade access levels:

1. Go to settings and click on users
1. Search for the team member in the search bar; if their name appears, click on their name
1. Click Edit in the permissions section and choose the Job Admin option

1. Click Add under Job-Based Permissions

1. Search for the job they should have access to and click Add next to it

For any team members who are Hiring Managers (or above), choose Job Admin: Hiring Manager for the specific roles they should have access to; if they are a Hiring Manager for an entire department, they should also be added as Job Admin: Hiring Manager for future roles within that department. The Executive for a division (e.g. CRO, CMO, VPE, etc.) should receive Job Admin: Job Approver for all of their division's current and future roles in order to give them the same permissions as Job Admin: Hiring Manager as well as the ability to approve new vacancies.

Similarly, Talent Acquisition receives Job Admin: Talent Acquisition for all current and future roles; People Success receives Job Admin: People Success for all current and future roles.

There are additional "User-Specific Permissions" listed beneath the job-based permissions.

1. For the People Success Team, check off Can invite new users to Greenhouse and reactive disabled users, Can manage unattached prospects, and Can invite and deactivate agency recruiters.

1. For the Talent Acquisition Team, check off each additional option.

1. Site Admins should typically have access to all of the additional options, but always be sure to check off Can see EEOC and demographic reports, Can create and view private candidates, and Can see private notes, salary info, manage offers, and approve jobs/offers.

Adding an Agency Recruiter to Greenhouse

To add an agency recruiter to Greenhouse and their agency doesn't exist, then a new agency will need to be created. If the agency does exist, this is how to add a new recruiter. Please contact Enablement to add the Recruiter to Greenhouse.

Linking users to their profiles

All hired candidates are marked as private when they are hired. Meanwhile, all Site Admins, Job Admins: Talent Acquisition, and Job Admins: People Success have access to view private candidates. As a result, any new team members who fall into one of those permission levels needs to have their Greenhouse user account linked to their candidate profile. Please note only Site Admins can link a user to a candidate profile. To do so, go to settings, click on users, search for the team member in the search bar, click on their name, click Link to Candidate, then search for the team member's name again, and click Link on the appropriate profile, then scroll to the bottom and click Save. You can also follow the instructions which include screenshots on Greenhouse's website.

Any internal candidate who applies to a requisition via the internal job board will automatically have their user profile and candidate profile linked.

Enabling LinkedIn Recruiter System Connect

Assuming that you've already been assigned a LinkedIn seat, here's how to enable the LinkedIn Recruiter System Connect integration in Greenhouse. There are two steps to the process.

Step 1:

1. Click Hi [NAME] in the top-right corner of Greenhouse > Account Settings
1. Scroll down to the LinkedIn Recruiter System Connect section in the right column and click Connect
 - If you have Basic permissions in Greenhouse, you will not be able to access this integration.
1. Click Allow and you'll be set-up to access information seamlessly between both systems

Step 2

1. Click ... > Integrations from any page in Greenhouse
1. Search "LinkedIn Recruiter System Connect" and select the result of the same name
1. Enable the integration

If you have not been assigned a seat and would like one, please add your GitLab email to your LinkedIn profile and submit an Access Request issue using the LinkedIn Access Request template.

To add your email to your LinkedIn profile, click Me > Settings & Privacy > Sign in & security > Email addresses > add your GitLab email address and verify it.

Configuring notifications

Notifications are configured as part of the requisition creation process but can be adjusted at any time. To set up notifications, go to the requisition's job dashboard and click on Job Setup at the top, then Notifications at the left. Under each section, you can then click Edit to add or remove people for that section.

It is recommended for the Recruiter of a requisition to set up notifications for themselves regarding new internal applicants, new referrals, new agency submissions, approved to start talent acquisition, offer fully approved, stage transitions, and new scorecards. Best practice is to use the name of the person to be notified rather than Candidate's Recruiter or Candidate's Coordinator.

Configuring email permissions

Greenhouse allows Job Admins to grant other Job Admins the permissions to send out emails on their behalf. This is helpful, for example, when a recruiter is sending out an availability request email but wants the responding email with the times to go to the coordinator so they can schedule next interviews, they could send the email from the coordinator's email address to ensure that happens. In Greenhouse, the activity feed on the candidate's profile shows who actually sent it and who it came from, so that it is clear.

In order to set up these permissions, the person allowing another person to send emails on their behalf should log in to Greenhouse, hover over their name in the top right corner, and click Account Settings. Then scroll down to the section called Email Permissions. You can select the first option to allow any Job Admin or Site Admin to send emails on your behalf, or you can select the second option and choose specific people (who are Job Admins or Site Admins) only who are able to send emails on your behalf. You can remove these users or this functionality at any time.

Once you have the permissions to send emails on someone else's behalf, when you are sending an

email to a candidate, you can click the "From" button at the top of the email pop up and choose from the list of available email addresses. If you are using an email template, remember to choose the template and then change the sender, or the template will override any changes you've made.

Changing jobs

If a candidate applies for a job but is a better fit for another job, they will need to be added to a new job. There are a few options to do this. To start, go to the candidate profile and click Add or Transfer Candidate's Jobs at the bottom right. From there, you can either add a new job to the candidate profile, which will keep all data within the original job and start a clean slate for the new job. You should choose this option when you will be taking the candidate through a brand new hiring process from start to finish, and do not want previous interview details to appear on the new job.

Alternatively, you can also transfer the candidate data to the new job, which should be used when the positions are the same or they will be continuing their current interview process and scorecards into the new role. It should also be used in the case of Evergreen positions. Please exercise caution during this process, because while scorecards will transfer, scheduled interviews will not. If a scorecard has not been submitted, it will also not transfer and will be lost. Transferring will remove the candidate from any reports about the original job. Admins are also able to remove a job and its history from a candidate profile, which should be done only when absolutely necessary.

Auto-tags

It is possible to add tags that automatically link to applicants when they apply based on their answers to certain application questions. To add an auto-tag to a requisition, go to the requisition's Job Setup page, then Job Post. To the right of the requisition name, there will be a link called Manage Rules. Click that, then Add a Rule. You can then select which application question on this requisition and what answer you want to create the auto-tag for. (Please note: only application questions that are yes/no, single select, or multi-select supports auto-tags.) For example, you could choose the question, "Do you have experience with Ruby on Rails?" If an applicant answers "No", they'd be auto-tagged or auto-rejected based on the given rule. Once you've selected any and all tags you want to be associated with this question and answer, click Save. If you want to create auto-tags for multiple questions and/or multiple answers, you will need to repeat this process.

Going forward, all new applicants whose answers in their application questions correlate to the rule you set up will automatically also have the tags you chose. To quickly find candidates, go to either All Candidates or the candidates for a specific requisition, open the Profile Details section on the left sidebar, and under Candidate Tag select the appropriate tag. You can add additional filters as desired, and you can then perform bulk actions on these candidates by using the bulk function on the top right.

EEOC Questionnaire

All candidates that are evaluated for a requisition must be sent the EEOC Questionnaire. For requisitions that are posted externally, where a candidate would apply, the candidate will automatically be presented with the optional survey in the application. If a candidate comes from a source where they wouldn't have necessarily applied (e.g. via an Agency or were Sourced

or Referred), then the candidate will receive an automated email from Greenhouse when they reach the Assessment milestone. In the case of the requisition not being posted externally, then the EEOC Questionnaire will need to be sent manually.

The DRI for manually sending the EEOC Questionnaire would be whoever sends the Screening invite (e.g. the Recruiter or Sourcer).

Here's how to see if it's been sent and, if applicable, how to send it:

Checking or Sending the EEOC Questionnaire

1. From Candidate profile, navigate to Application (on left hand side)
1. Navigate to Job Post > Job Post Questions
1. Reference the EEOC row to view its status; it'll either read, Not yet sent or Submitted by [CANDIDATE NAME] on [DATE]
 - If the survey has not been sent, please click Send and you're done.

Scheduling interviews with Greenhouse

The Candidate Experience Specialist team handles all interview scheduling once a candidate has passed the "screening" stage.

Important scheduling and interview notes

- Please be sure to go to your Google Calendar settings and input your current timezone.
- Make sure that a candidate is in the proper stage to schedule when scheduling.
- If you cannot attend the interview, please let the Talent Acquisition Team know so they can reschedule. Simply declining the interview does not effectively notify the Talent Acquisition Team. The Talent Acquisition Team should first cancel the currently scheduled interview through either Greenhouse or Google Calendar (specifically the Interview Calendar) before creating the new one to avoid any confusion.
- All outgoing emails and scheduling must be done through Greenhouse. Scheduling details, emails, and communication between team members can be viewed in the activity feed of a candidate.

Scheduling Timed Assessments

In some cases, some positions require a timed assessment to be sent to the candidate. These timed assessments can be sent by following the steps below:

1. Obtain availability from the candidate to agree on a specific time to administer the test.
1. Enter it as an interview appointment on their schedule.
1. Schedule an Email with the assessment for the agreed time.
 - Click Email Candidate
 - Select Assessment template or write body and attach Assessment
 - Select the agreed upon time using Send Email when option
1. The time stamp when the candidate sends the assessment back will determine if they sent it back within the agreed timeframe.

Rejecting candidates

To remove a candidate from the active pipeline, they need to be rejected in Greenhouse, which is typically done only by talent acquisition.

The candidate should always be notified if they've been rejected. The talent acquisition team is primarily responsible for declining the candidate, but the hiring manager should be prepared to let the candidate know why they were declined if they had progressed to the team or manager interviews. The hiring manager can also share this feedback with the talent acquisition team, who will relay it to the candidate.

|Stage|Timing|Medium|Type|

|-----|-----|-----|-----|

| Application Review | At application review or when the role is hired | Email | Standard Template by default, may provide specific feedback, but not required|

|Screening Interview with Recruiter|Within 5 days of Screening Interview|Email OR Verbally during the Screening Interview |Standard Template by default, may provide specific feedback, but not required|

|Assessment|Within 5 days of Assessment Submission|Email |Standard Template by default, may provide specific feedback, but not required|

|Team Interview|Within 5 days of Team Interview|Email or via Zoom Call |Must provide feedback that is personalized and customized. Only offer frank feedback. This is hard, but it is part of our company values. All feedback should be constructive and said in a positive manner. Keep it short and sweet. Feedback should always be applicable to the skill set and job requirements of the position the candidate applied and interviewed for.|

Any time a candidate is rejected, the Talent Acquisition Team will notify them, as they will not automatically be notified if we reject them. When clicking the reject button on a candidate, Greenhouse will open a pop up where you can choose the appropriate rejection reason, as well as a rejection email template. Feel free to adjust the template per the guidelines in the handbook. You can also select a time delay to send out the rejection email. Finally, you are also able to start a new prospect process for a candidate when rejecting them, in the event you want to reach out to them again in the future.

In Greenhouse, we have compiled a list of reasons for candidate declines or rejections that will allow us to continuously iterate on and improve our hiring process. Please choose your reasons thoughtfully with this goal in mind, and provide as much detail as possible in the notes--particularly when candidates have reached the offer stage.

If you want to consider a candidate for the future, the best practice is to utilize candidate tags; however, you can also start a prospect process when rejecting them so they are including in a pool of future interest candidates for the role, or you can simply add a follow-up reminder for yourself, the recruiter, and/or the coordinator to reach out to the candidate in a certain amount of time.

Please ensure that if candidates are rejected or remove themselves from the process that all further scheduled interviews are cancelled either through Greenhouse or through the Google Calendar "Interview Calendar" in order to remove the calendar event from Interviewers' calendars. Rejecting a candidate will not automatically remove the calendar event from an Interviewer's calendar.

You can also reject candidates in bulk by going to the candidates page, filtering accordingly, clicking Bulk Actions at the top right, selecting the appropriate candidates or by clicking "Select All", clicking "Edit Selected", clicking "Reject" in the pop up, and following the same procedure as above to reject and email. Note: you can only choose one reason when archiving in bulk.

To unarchive a candidate, click "Unreject" on the candidate profile under the appropriate role.

Consideration of previously rejected candidates

Rejected candidates will stay in our talent community and we may revisit them for future roles.

Generally, we will leave a minimum gap of 6-months before reconsidering someone. We will only reconsider candidates who were rejected because they lacked skills or experience.

We will not reconsider candidates who were mismatched with our values competencies and/or our remote work competencies.

Single-vetos

We do not operate under a single-veto basis. This means that even if a candidate receives a "No," they still may be moved on in the interview process depending on the feedback submitted by the Interviewer. The Hiring Manager is responsible for reviewing all scorecards and making the decision to move the candidate forward or not. As a good heuristic, two "No" votes will result in the candidate's rejection. A "Definitely not" vote should be carefully looked at, and in most cases this would result in the candidate's rejection.

In situations where scorecards greatly differ, it is helpful to meet with everyone who interviewed the candidate to better understand each Interviewer's experience. The Hiring Manager can then evaluate each experience and make a collective decision.

While Hiring Managers are the directly responsible individual (DRI) for hiring decisions and are allowed to override Interviewers, making great hiring decisions is part of their own individual performance and they will be held accountable for them.

Updating candidate information

To update a candidate source, go to the candidate's profile and, underneath the name of the job they're being considered for, click the pencil button. Where it says "Source", search for the correct source; some common examples are "Referral", "LinkedIn (Ad Posting)", "LinkedIn (Prospecting)", "Internal Applicant", and "Jobs page on your website". If you need a source that is not listed and you're not able to add a new source, reach out to the Talent Acquisition Team. If you select the referral option or one of the outbound sourcing (also called prospecting) options (such as "LinkedIn (Prospecting)"), be sure to then select "who gets credit" by searching for the referrer or sourcer who found the candidate. Then click "Update Source". If they were referred or are an internal applicant, their profile will now have a highlighted field next to their name indicating this.

To update a candidate's personal details, go to the candidate's profile and click "Edit Profile" on the top right. You'll be able to change the candidate's name, current company,

current title, tags, phone numbers, email addresses, social media accounts, websites, address, and education details. You can also go to the "Details" tab of their profile and click "Edit" next to "Info" as these fields are connected.

To add a candidate's pronouns in a visible location, navigate to the Headline section under the candidate's name and email on their Greenhouse profile. Click the pencil next to "Add a Headline", enter the pronouns and click save. This allows any interviewer to see the pronouns.

To update a candidate's assigned recruiter and coordinator, go to the candidate's profile and go to the "Details" tab, then scroll down to where it says "Source & Responsibility". Click the pencil icon that will appear when hovering over either the recruiter or coordinator, then update accordingly. (This can also be done in bulk if needed using the bulk actions button on the candidates page.) You can update their source in the "Source & Responsibility" section as well.

To add attachments or documents to a candidate's profile, go to their profile and to the "Details" tab, then scroll to the bottom where it says "All Attachments". Next to the appropriate job they are being considered for, click "Add file" and choose if it is a resume, cover letter, or other document, then click "Choose File" and upload the document from your computer. You can change the visibility of a document by clicking the three dots (...) above the document so that only Super Admins and Talent Acquisition can view it. Please note that cover letters and resumes are by default public to the hiring team for that requisition and cannot be made private.

Updating and creating email templates

The Greenhouse Site Admins are able to add and adjust email templates. To access the email templates if you are a Greenhouse Site Admin, go to the configure section by clicking the gear at the top right corner, then click "Email Templates".

To ensure a best-in-class candidate experience with up-to-date branding and communication, the Talent Brand team and Greenhouse Site Admins have reviewed, updated, and published email templates with the word "REVIEWED" included at the end for all stages of recruitment. We strongly recommend leveraging these templates as your primary sources of communication to candidates to create consistency and to foster an amazing candidate experience. While we recognize that you may need to leverage other templates for specific roles that have not received the "REVIEWED" label, please ensure you read over all email templates you plan on sending and confirm that all numbers are up to date, links are accurate and relevant, and that your language is clear and positive.

If you have specific roles, regions, or processes that you would like to create personalized templates for that are only visible and accessible by you, click "+ New" to the right of "My Templates" and follow the below steps:

- Add a name for your template that will allow you and your team to recognize what the template is for. Try to keep the name as consistent as possible with other templates (e.g. rejection emails all begin with Reject and then the reason why, such as Reject after no show).
- You will need to select an email type, which categorizes the emails so that they appear as options when they are relevant (e.g. so that a interview availability request does not populate when you are trying to reject a candidate). Please review the available email types and when

each appears on Greenhouse's support page.

- You can add an optional description, but it is typically not needed due to the descriptive template name.
- You can choose to have the email sent from the sender's email address, the talent acquisition distribution email address, or the no-reply email address, depending on the nature of the email.
- You can opt to cc specific GitLab team-members and/or the specific recruiter/coordinator for the role that the candidate you are communicating with is in process for.
- Next, create a subject for the email. You can include tokens (elaborated below) in the subject line in order to customize the subject with the candidate's name, requisition, etc.
- You can also include attachments to the email.
- Next, you will see in a blue box the various tokens that are able to be included in your email template. These will vary based on the email type and the available tokens will show up as options when you are creating/editing a template. You can also review the token glossary to understand what each token means.
- Finally, you will type out the body of your email template, including tokens and formatting as needed.
- Click save, and your template is ready to be used!

If you have a suggestion for a new or existing REVIEWED email template for the Recruitment team, please submit an issue describing the email
