

template you wish to create with the title "Greenhouse Email Template Suggestion" and tag @cchiodo. For reference, all REVIEWED templates are linked here.

Creating and updating offer templates

To create a new offer template or update an existing one in Greenhouse, follow these steps:

- Download the template as a Word document from the internal handbook
- In Greenhouse, navigate to Settings > Offer Templates > Upload New Template.
- Enter the name of the Offer template, and include any additional instructions for CES (add initials, checkbox, textbox etc), then upload the Word document. Click "Save Template".
- Test the new template by clicking the "Test" button. This will check if all tokens in the document are functioning correctly. If the test is successful, click "OK."
- If the test fails, indicating one or more tokens are incorrect:
 - Return to the document to identify and correct the faulty token.
 - Re-upload the corrected document to Greenhouse.
 - Notify the Legal team about the incorrect token so they can update their master template.
- If replacing an existing template, remove the old template in Greenhouse by clicking the three dots next to it and selecting "Delete."

Updating requisition and offer approval flows

This can be done by Enablement only. For instructions, see the internal handbook for more information.

Approval flows

For requisition "Job" Approvals, the approval chain is as follows:

- Step 1: Finance Business Partner of the Division/Department (1 of 2-4 required)
- Step 2: Executive or VP of Division/Department (1 required if multiple people are listed)

For Offer Approvals, the approval chain is as follows:

- Step 1: Total Rewards (1 of 3 required)
- Step 2: Finance Business Partner of the Division/Department (1 of 2-4 required)
- Step 3: Executive of Division/Department (1 required if multiple people are listed)

It is recommended that no stage has only 1 possible approver to eliminate bottlenecks.

Delays at the Offer Approval stage can negatively impact our time to hire metric. To keep delays to a minimum, we ask for approvals to be completed within 24 hours of reaching the reviewer.

Please note that the approval order should always be In Order and not All at once (located at the top of each section).

Updating or adding new departments

Occasionally, the Finance team updates our organization's divisions and departments. We try to

keep Greenhouse as aligned as possible to Finance's structure so that we can maintain accurate alignment and headcount planning.

Please note that only Site Admins are able to update or add new departments in Greenhouse. In order to update or add divisions or departments, log in to Greenhouse and go to the configure section by clicking the gear at the top right corner. Then click "Organization" and scroll down the "Departments" section. You will see each current division listed and, when clicking on the expand button, each department that falls under that division.

To change the name of a division or department, click the pencil button next to it. Please note you are unable to have a division and department with the same name. To add a new division or department, click "New Department" and type in the name; if it is a new division, simply click create, but if it is a new department click the "Subordinate to" dropdown and choose the division it is associated to (for example, the "Security" department is a subordinate to the "Engineering" division).

Additional resources

Greenhouse CRM

The Greenhouse CRM is the entry point for prospective candidates (a.k.a. Prospects). There, they have the option to join our Talent Community. Below is an overview of system resources and its general workflow.

UPDATE: As of 2021-02-24, Prospect Posts for the CRM were disabled. The following resources and workflows still apply in the event a Prospect is sourced from the Talent Community.

CRM Resources

- CRM Overview
- CRM License Functionality
- Leveraging Greenhouse CRM (Webinar)
- Greenhouse Recruiting Chrome Extension

High-Level Workflow

- When a Prospect signs-up for the Talent Community, their default source will be Talent Community.
- Prospect Pool Stages are as follows:
 - No Stage Specified
 - Not Contacted
 - Nurture
 - In Discussion
 - Not Interested
- Tags can be used to keep track of Prospects just as they are with Candidates.
 - If additional tags are needed, please contact [Talent Acquisition Ops])(<https://gitlab.com/gl-talent-acquisition/operations/-/issues/new>).
- All Prospect communications are tracked in Greenhouse just as they are with Candidates.
- When a Team Member identifies a Prospect for a requisition, they'll need to click the Convert to Candidate button on the Prospect's profile in order to move them to the requisition's active

candidate pool.

- Doing this will remove the Prospect from the Prospect Pool.
- To claim credit for a CRM-sourced Candidate, the Team Member will need to manually update the Candidate's source and add their name in the Who Gets Credit field.
 - Details > Source & Responsibility > Source (Pencil icon) > Who Gets Credit > Update Source
- If there are duplicate Prospect profiles, they can be merged by an Admin. Please tag @Talent Acquisition Operations and Insights within the Greenhouse candidate profile.
- Name and Email are the two fields Greenhouse looks at when suggesting a potential duplicate profile.

Greenhouse Inclusion

We use Greenhouse Inclusion to mitigate unconscious bias, ensure consistent candidate evaluations, and to measure the impact of these practices in our Diversity, Inclusion & Belonging efforts.

Enabled features include:

- Nudges, or reminders, to all users when creating a requisition description, adding a referral, and/or filling out a scorecard.
- Anonymous take-home test grading.
- Hiding a candidate's source to Interviewers.
- Hiding specific sections of a candidate's resume in various workflow stages.

SECTION: hiring/job-families.md

- Job families are organized by function in directories in the content-sites/handbook repository.
- For any questions related to job families, please post in job-family.

Things to Keep in Mind

1. Before you begin creating a new job family you should check the directory to see if there is an existing job family or a role close to the one you are working to create. Job families should encompass a team, a department, or perhaps a division.

- Sometimes you should just add a level, a specialty or a segment and not create a new job family.

1. We don't include location requirements for most roles (EMEA, Americas, APAC) in the job family because these can change over time and job families are constant.

1. We don't include expertises, since these are free form.

1. We don't include a specific number of years of experience unless they are directly relevant to the ability to perform in the role at the level required. If the years of experience are not directly relevant to the role, then we instead say that a person in a specified role should be able to show 'relevant, progressive experience' and then define what constitutes relevant, progressive experience in that particular context.

- For grade 4 & 5 roles, we avoid listing any kind of prior experience requirements to encourage people with unique career or educational journeys to see themselves in a particular role.

1. We don't allow them to read like a vacancy. The job family could be used for hiring however they are more often serving as the requirements that team members and managers alike use in conversations around career development and performance management. The verbiage you don't want to use includes phrases like "you will", or "exciting opportunity" or "we're hiring for".

1. We are continually iterating on job families. Do not search other job families for examples of what good looks like. The templates below and this page are the SSOT for guidance.

1. Job Families should be consistent with GitLab level expectations. Please refer to the Job Frameworks for guidance on expectations related to Scope and Influence, Complexity and Problem Solving, and Leadership and Communication requirements by level for both Individual Contributors and People Managers.

1. Team Lead vs people Manager vs function Manager: you should be aware of how GitLab defines these terms. Depending on the needs of the organization, a Team Lead may or may not directly manage people. There are 2 instances where a Team Lead role can be used:

- Team Lead as an Individual Contributor - in this context, the Team Lead would be responsible for a specific project/s or area of expertise (a Subject Matter Expert), and may partner with others to accomplish the work. The Team Lead can be leveraged as a player/coach, where they have their own individual tasks to complete, but they also mentor, train and coach others on the team. A team lead may also handle escalated or complex cases or projects.

- Team Lead as a People Manager - in this context, the Team Lead would directly manage a team of people as a first level or entry-level people manager, which means they are directly responsible for hiring, promoting, performance management, or termination of team members. Team Leads can report into Managers, even though they may share the same compensation benchmark.

- Manager job families are those responsible for directly managing other GitLab team-members. They hire, promote, and terminate team members, and performance management is one of their key functions. Nomenclature to represent someone is a manager of people can be clarified with "Manager, Benchmark" (e.g., Manager, Corporate Events). The same holds true for director (e.g. Director, Corporate Events).

- Nomenclature to represent when someone manages a job function, and does not have people management responsibilities, can be clarified with "Benchmark Manager" (e.g., Marketing Manager)

Approval Flow

Anyone can create or edit a job family, but generally it is the responsibility of the person who will manage the position or job family to kick off the approval process. They may enlist help from others as necessary. After a merge request is created for an existing or new job family, the merge request must follow the approval flows below:

1. Your manager: Your direct manager is responsible for clarifying the scope of responsibilities and level of roles, ensuring clear differentiation between levels, and checking responsibilities and requirements and ensuring the job family follows the template logic and has all of the required areas. Managers should validate business need for the role with their direct manager. Any review after this should be quick so the manager is the gatekeeper.

1. Talent Management: Talent Management will review for job level expectations consistency with other similarly leveled roles across the organization, alignment to our GitLab Job Frameworks, and overall structure, then notify your People Business Partner (PBP).

1. Your Department Head and People Business Partner: Your Department Head (typically at the VP level) is responsible for confirming there is a business need for the role and will review department/division structure and levels in partnership with the aligned People Business

Partner. If the role is being created due to headcount planning, please ensure your Talent Acquisition partner has visibility for recruiting purposes.

1. Total Rewards: The Total Rewards Team, @gl-total-rewards, is the final approver for job families on the merge request ensuring.:

- The level is common in the market based on survey data.
- All components of the job family are populated.
- A benchmark is set to add to the Compensation Calculator.
- A Job Title is created within Workday.

1. To create more visibility for the Merge Request, send a note to the job-family slack channel

Templates for New Job Family

There are two templates on this page. The first template is appropriate when the job family has 1 or 2 job titles and more levels (i.e. junior, intermediate, senior, manager, director) or specialties; for example. There can be many levels for each of the titles. The second template is appropriate when there are many different job titles within the same family; for example.

{{< youtube "8cUTvSwUqVc" >}}

Job Family Template 1

After pasting this template search for {add to quickly navigate to areas of input.

markdown

{add overview; a brief description of the job family}

Responsibilities

- {add a bulleted list of responsibilities that apply for all levels of the role}

Requirements

- Ability to use GitLab

- {add a bulleted list of requirements that apply for all levels of the role}

Levels

{add name of level - i.e. Junior/Senior/Manager. Note we do not list the intermediate level in the title but after the role in parentheses - i.e. IT Systems Engineer (Intermediate)}

The {add the position title} reports to the {add the reporting position and link to the job family or heading (if on the same page)}.

{add Level} Job Grade

The {add the role name} is a grade .

{add Level} Responsibilities

- {add a bulleted list of responsibilities that apply for this level}

{add Level} Requirements

- {add a bulleted list of requirements that apply for all levels of the role}

{add Level} Performance Indicators

- {add 3-5 KPIs that this role will be the DRI for, if the PIs are the same for all levels
remove this section and use the heading 2 section later in the template}

{add name of level - i.e. Junior/Senior/Manager. Note we do not list the intermediate level in the title but after the role in parentheses - i.e. IT Systems Engineer (Intermediate)}

The {add the position title} reports to the {add the reporting position and link to the job family or heading (if on the same page)}.

{add Level} Job Grade

The {add the role name} is a grade .

{add Level} Responsibilities

- {add a bulleted list of responsibilities that apply for all levels of this job family}

{add Level} Requirements

- {add a bulleted list of requirements that apply for all levels of this job family}

{add Level} Performance Indicators

- {add 3-5 PIs that this role will be the DRI for, if the PIs are the same for all levels
remove this section and use the heading 2 section later in the template. PIs should link to the data}

Segment

{add name of Segment}

{add a brief description of the specialty}

{add name of Segment} Requirements

- {add a bulleted list}

{add name of Segment} Responsibilities

- {add a bulleted list}

Specialties

{add name of Specialty}

{add a brief description of the specialty}

{add name of Specialty} Requirements

- {add a bulleted list}

{add name of Specialty} Responsibilities

- {add a bulleted list}

Performance Indicators

- {add 3-5 PIs that this role will be the DRI for, if PIs were listed for each level, because they are all unique, remove this section. PIs should link to the data}

Career Ladder

{add brief description of the career ladder}

Hiring Process

Candidates for this position can expect the hiring process to follow the order below. Please keep in mind that candidates can be declined from the position at any stage of the process.

- Qualified candidates will be invited to schedule a 30 minute screening call with one of our Global Recruiters.

- {add a bulleted list of the hiring process steps here}

Additional details about our process can be found on our hiring page.

Template 1 Additional Details

- List levels in ascending order. Start w/ junior/associate and end with the highest level.

- List any overarching responsibilities or requirements that are applicable for the entire job family before listing the levels.

- Do not repeat the junior requirement list for more senior levels:

- You do not want to relist an entire requirement set from a more junior level that also pertains to a more senior one. You can choose to keep the section title as {Level} Requirements. You can then add a first bullet that says, "Extends the {name of lower job level} responsibilities" or "Extends the {name of lower job level} requirements."

- Specialties may be relevant for some but not all levels. Clarify which specialties each level pertains to. If there are no specialties remove the section.

- Segment: A Segment is something you will see with Sales based Job Families (Example, Enterprise, Mid-market, SMB, Public Sector). If there is no segment for the job family remove

the section.

- If performance indicators are the same for all the levels on the job family do not list them under the levels section, rather list them at the end of the entire job family. Remove either the performance indicator section in the level section or at the end of the template.
- Career Ladder: The next job family. All levels should be on one job family, except when the next job family manages over multiple job families. For example. Some teams added a Career Path: Moving to and moving from- which describes possible current and future roles which move to the job family and which the job family might move to. Here is an example.
- The Compensation and About GitLab sections will auto-populate because of the job family formatting.

Job Family Template 2

The second template is appropriate when there are three or more job titles within the same family. For example the team is made up of many different positions, that all report into the same person or are all working to accomplish the same goals.

After pasting this template search for {add to quickly navigate to areas of input.

markdown

{add an overview; a brief description of the job family}

Role

{add brief description of the role} The {add the position title} reports to the {add the reporting position and link to the job family or heading (if on the same page)}.

Job Grade

The {add role name} is a grade .

Responsibilities

- {add a bulleted list}

Requirements

- Ability to use GitLab
- {add a bulleted list}

Performance Indicators

- {add 3-5 PIs that this role will be the DRI for, they should link to the data}

Career Ladder

{add a brief description of the career ladder here}

Hiring Process

Candidates for this position can expect the hiring process to follow the order below. Please keep in mind that candidates can be declined from the position at any stage of the process.

Creating a New Job Family from Scratch

{{< youtube "x3q2KVFwMUy" >}}

Here is a brief walkthrough of this process. If you use these slides please remember that the HANDBOOK is the most up to date and the slides and/or videos may be dated.

1. Go to the content-sites/handbook project on gitlab.com
1. Select the content directory
1. Go to the job-families directory
1. Select the department where you will be making the new job family (i.e. Marketing, Sales, etc)
1. Once you are in the correct department directory, select the +
1. From the drop down list, select New file
1. Insert the title in the format of job-title.md for example marketing-campaign-manager.md
1. Copy the Template for New Job Family and insert it into the body of the file
1. Fill in the sections of the template by replacing everything in {curly brackets} search {add
1. Use markdown formatting
1. Delete any unnecessary sections - for example, there may be no Levels or Specialties at this time, so those sections can be deleted
1. Update the Commit message with a description of what you are doing
1. Update Target Branch to an abbreviation of what you did. Note: include dashes between words instead of spaces.
1. Make sure "Start a new merge request with these changes" box is checked.
1. Click the Commit changes button at the bottom
1. Check: Delete source branch when merge request is accepted.
1. Click the Submit merge request button at the bottom

Creating an Overview page

In cases where a job family is quite large you may decide to create an overview page of the job family. This helps when we are actively sourcing for external candidates on a role. Here is an example of a job family overview page.

{{< youtube "eECNGB-JkZE" >}}

- Keep in mind that the overview page needs to be updated when you add a new level or a new role to a job family.
- The opening statement about the job family should be copied from the job family page to the overview page. Because not all job families have overview pages you should not remove it from one or the other.
- The overview page should follow the typical naming convention by adding a sub folder overview

Format

For every overview page we created, the page has the URL /job-families/department/title/overview/ and should be

created starting from the template. There's only a few additions you should do with the template.

New Job Family Overview creation

1. Create the folder in /job-families/[department]/[name-of-job-family]/overview, being sure to use only lower case in naming your directory if it doesn't already exist, and add it to the correct department subdirectory.

1. The file type should be index.md.

1. Copy the template and add it to your new file

1. Update all the places that need updates:

- replace {Job Title} with the job title
- replace {Job Family introduction} with a paragraph giving more information about the job itself.
- if there's a video for this job family, switch out the youtube IDFORVIDEO with the relevant ID
- if there's no video, remove the entire snippet that adds the video
- for every role within the job family, you need a card.

Template for New Job Family Overview

markdown

Updating a URL and Redirect

This video will walk you through how to change a Job Family URL as well as set up a redirect for the old URL.

```
{{< youtube "MRzgOzlbsPQ" >}}
```

Failed Pipeline

We have a CI job that checks job families for hard requirements:

- Requirements
 - every role must have Ability to use GitLab as a bullet point.
- Responsibilities
- Performance Indicators
- Job Grades
- Hiring Process
- Inclusive Language Check

Inclusive Language Check

We use an open source Ruby gem to perform a inclusive language check on all job families.

```
{{< youtube "0ZIfDU0l2sU" >}}
```

Currently that library covers:

- the usage of masculine vs feminine-coded language
- the usage of gendered pronouns
- misused words
- fixed vs growth mindset

The following results lead to failure of the pipeline:

- High usage of masculine-coded language: this means the job family is using more masculine-coded words than feminine-coded words.
- Usage of any misused words as this could excluded diverse groups.
- High usage of fixed-coded language: this means the job family is using more fixed-coded words than growth-coded.
- Usage of gendered pronouns: we want to be inclusive to all.
 - If you're using language that is marked as subtly masculine-coded, fixed-coded or using misused words, the pipeline will fail and you will need to fix it before following the approval flow. Please reference (and add to) this list for suggested words to use in place of masculine or fixed language.
 - If the pipeline does fail, the first recommendation is to read the error. It will say what is wrong with the text. For example:

text

1. ["ATTENTION: In /builds/gitlab-com/www-gitlab-com/sites/uncategorized/source/job-families/marketing/reference-program-manager/index.html.md you're using masculine gender-coded language", "Masculine coded words used: analyst, analytical, decision, driven, leader"]
2. ["ATTENTION: In /builds/gitlab-com/www-gitlab-com/sites/uncategorized/source/job-families/marketing/production-designer/index.html.md you're using fixed-coded language", "Fixed coded words used: established"]

In this case, there are two job families that failed and each for a different reason. You can do two things now:

- fix the text to be more inclusive, commit your changes and the pipeline will run again
- if you disagree or you feel like the pipeline found a false positive, you can add the file to this list. The files in this list are ignored by the inclusiveness check. If you request your job family to be added to the skip level you will need to paste a screenshot of the inclusiveness check in the MR as this will be asked for prior to merging.

Why Job Families Have Performance Indicators

{{< youtube "9EJkgBRUSDA" >}}

- All job families should have performance indicators (PIs).
- Performance indicators should tell you whether or not you're doing your job well or correctly. For example, our Vice President, Investor Relations role has performance indicators that compare how we're being described by analysts to how we describe ourselves.
- Performance indicators are important because people want to know that they're contributing.
- Candidates want to know what success looks like in a role.
- Team Members want to know how they're being measured for success.

- Company, functional, or department KPIs are too generic and, thus, not useful as job family performance indicators, only a sub-set of performance indicators are KPIs.
- Time sensitive PIs, like OKRs or weekly goals, are also not useful because they are not long term success factors.
- Performance indicators should be specific to the role and not dependent on anyone else's performance.
- Job Families should have three to five PIs.
- Performance Indicators should be linked to one or more performance indicator definitions for which this job family will be the DRI.

SECTION: hiring/meetings.md

Defining Success in Talent Acquisition

Clearly defining success is essential to ensuring we, as a Talent Acquisition team, not only know what good looks like but also have clarity on how success is measured as it relates to our job duties. When we further break down what good looks like in our craft, it is important to understand that success encompasses the what and the how - ultimately, much more than just a hiring target.

For more information on how this relates to positions and levels in our function, reference our growth profiles below.

Growth Profiles: Talent Acquisition Team

Functional Productivity Metrics

Each quarter, the Talent Acquisition team reports out on 4 top line productivity metrics as a function. Reports can be accessed in this folder by internal team members.

1. Achievement against our External Hiring Target
1. Average Time to Fill (period of time for a requisition opening to hire)
1. Cost per Hire
1. Requisition Aging (% of requisitions that are open 75+ days)

There are a number of additional metrics we monitor to understand the overall health of our hiring motion and where we have risk or are trending above or below industry benchmarks. Those metrics are defined to include:

- Start Date Forecast Attainment: Total number of external starts against forecast starts target set in partnership with Finance during the first week of each quarter. Goal is to be within +/-5% of the forecast.
- Ending Headcount to Plan Variance: Ending headcount from original FY25 Annual Operating Plan.
- Reforecast: Quarterly reforecasted ending headcount number (taking into account RLoA/Incremental Headcount additions, Headcount splits, Reallocation of funds, Culling, etc).
- Time to Fill (TTF): Number of days from a requisition opening in Greenhouse to offer acceptance. Under 75 day time to fill is considered healthy.
- Aging Requisitions: Number of requisitions with running TTF of 75+ days. On track is anything

under 10%, at risk 11-19%, and off track 20%+.

- Offer Acceptance Rate: Number of offers accepted divided by offers extended. On track is anything between 75-85%.
- Source Mix: Percentage of hires from (a) passively sourced talent (b) applications or (c) referrals. The goal is to have equal distribution to show balanced, healthy pipelines.
- 'On Hold' Requisitions: Number of requisitions 'on hold'. These roles are in plan but technically 'closed' in the ATS, thus 'pausing' TTF until decisions have been made by the business. Any role awaiting business decision for 14+ business days will move to on hold and will be flagged with senior leadership.
- Time to Start (TTS): Number of days from a requisition opening in Greenhouse to new hire starting in role.
- Hire to Start (HTS): Number of days from offer acceptance to new hire start date.
- Pipeline Conversion Rates: Percentage of candidates moving from each stage in the recruitment process. Targets for 'on track' status include Initial > Team interview (40-50%), Team Interview > Offer (25-33%), and Offer > Hire (75-85%).

Recruiter Productivity Metrics

We have outlined and defined our productivity metrics for recruiters to adequately measure both quantity (such as number of hires, prospects) and the quality (such as conversion rates, sourcing rate %) of our work.

Full Lifecycle Recruiter

Metric	Definition
External Hires	Total number of external hires made in the course of the quarter. - Technical teams goal set at 6/quarter. - Non-technical teams goal set at 9/quarter.
Screens per Week	Number of recruiter phone screens at or above 12 per week.
Conversion Rates	Consistent management against industry benchmarks for candidate conversion through the funnel to ensure we are running a quality recruitment process. Targets for 'on track' status include Initial > Team interview (40-50%), Team Interview > Offer (25-33%), and Offer > Hire (75-85%).

Important Health Metrics

In addition to our productivity metrics above, we have a number of other important metrics that we use as signals to understand if our recruiting motion is considered 'healthy'.

1. Sourcing Rate %: Percentage of outreach made with a sourcing strategy targeting building representation into top of funnel. Our goal is to maintain activity above 50% consistently.
1. Source Mix: Percentage of hires made from applications vs. referrals vs. passively sourced candidates. Our goal is to maintain a balanced mix quarter over quarter at the team level.
1. Time to Fill: The average number of days from a role opening to a candidate signing an offer and being marked as hired. Our goal is to remain under 75 days TTF consistently.
1. Team Interview Count: Total number of team interviews. Our goal is to keep a healthy ratio of team interviews to open roles.
1. Offer Acceptance Rate: The percentage of candidates that accept an offer against total

offers extended. Our goal is to hold an average AR above 75%.

1. Candidate Throughput: The average time it takes a candidate to move through our interview process to hire. Target to keep this metric below 75 days consistently.

Reporting Tools

In addition to defining our KPIs, we have also invested in our tooling to track as a team in a transparent manner. Utilizing both the KPIs and tools, TA team members should feel well equipped to own their growth, development, and performance and be able to tell a thoughtful, data-driven story when we are problem-solving, trying to understand where we might be at risk/off track, or highlighting where we have bright spots to replicate across teams.

Dashboards

This page is for information regarding the "backend" of the Referral Process.

Adding a Referral to Workday (People Connect Team)

People Connect will review the following guidelines to ensure the correct amount is being awarded with the One Time Payment in Workday.

1. Ensure that the current team member is eligible for a referral based upon the requirements.
1. Review when the referral was submitted in Greenhouse
 - Job > Application Review > Applied On YYYY-MMM-DD
 - Our current referral bonus amount as of 2023-11-20 is listed here.
 - For candidates referred multiple times, the referral date is determined by the date the referral was submitted for the position the candidate ends up accepting.

Transferring Referral Submissions to Greenhouse

Per the current Referral Submission Process, Team Members will submit referrals through Greenhouse if the vacancy is posted externally and via Issues if the vacancy is only open internally. When a new Issue appears, please do the following:

1. Assign the Issue to yourself (upper right corner).
 - Recruiting Operations & Insights is responsible for assigning the appropriate Sourcer(s).
 - The appropriate Sourcer(s) is determined by referencing the Hiring Team page of the requisition.
1. Check to make sure the Issue is marked as Confidential.
 - Recruiting Operations & Insights will ensure this setting is enabled.
1. Check to see if the vacancy is posted on the external Job Board and if it is, tag the Referrer, comment that they'll need to submit their referral directly in Greenhouse per these instructions, and close the Issue.
 - Recruiting Operations & Insights will check to make sure the vacancy is only posted internally.
1. If the vacancy is only open internally, go to your Greenhouse dashboard and click + > Add a Referral.
1. Reference the Issue to see what should be entered in the following fields:
 - Job
 - If a specific requisition is not specified, follow-up with the referring Team Member to determine the appropriate role as "general" referrals are not accepted.
 - First Name - Required
 - Last Name - Required
 - Email - Required
 - Social Media - Required
 - e.g. LinkedIn
 - Resume - Optional
 - Relationship - Required
 - If "Relative" is selected, please confirm how they're related and add that to the Family Relationship field on the Additional Details tab.
 - Location - Required
 - Add the provided location to the Location field on the Additional Details tab.
 - Referral's Email - Required
 - Work History - Optional
 - When We Reach Out - Optional
 - Referral Notes - Optional
1. Click Add this referral to submit them.
1. Go to the candidate's profile, click the Details tab, and scroll down to the Source & Responsibility section.
1. Hover over Source and click the Pencil icon, then edit Who Gets Credit with the name of the Referrer and click Update Source.

1. Send a email to the referred candidate. Select Email REFERRALNAME in the right column and select the Default Referral Confirmation Receipt email template.

- Make sure that the email is sent from the no-reply@gitlab alias.
- Add the referring Team Member to the CC field.
- Click Send Email.

1. Follow-up in the Issue and confirm that the referral has been submitted and please mention that the Team Member will be able to follow their referral in the My Referrals section of their Greenhouse dashboard.

1. Close the Issue.

How to Respond to Referral Update Requests

Our Inbound Sourcing team runs point on responding to questions related to referrals in the talent-acquisition slack channel and ensures that the referrer is credited as the source of a referred candidate.

The Talent Acquisition Team uses the a GitLab Service Desk to track incoming emails to the referral@gitlab email. These emails will, in turn, show up as Issues.

To set-up notifications for the Referral Service Desk Project, please do the following:

1. Click on the Bell icon in the upper right corner (next to Star and Clone).
1. Go to Custom Settings.
1. Click New Issue.
1. Close the window.

To take action on Issues in that project:

1. Click Issues in the left menu bar.
 - This is where incoming referral@ emails will be; any open Issues here will need to be addressed.
1. Click on the new Issue.
1. Assign it to yourself (upper right corner).
1. Read the Issue.
1. Add the appropriate label(s).
1. Look-up the candidate in Greenhouse, if applicable.
1. Respond to the Issue by commenting and please be sure to do so just as you would with any other GitLab communication.
 - e.g. "Hi, NAME. Thank you for reaching out about the status of your referral. Per our SLA, please allow us 5 business days to review the submission. @RECRUITER is responsible for this role and they'll provide the candidate with an update soon."
 - e.g. "Thank you for the referral. @RECRUITER is responsible for this role and will provide you with an update soon."
1. Please be sure to @-mention the responsible Recruiter so that they're aware an update is being requested.
1. If one comment addresses the entirety of the message, comment and close the Issue. If further information is needed, comment and leave the Issue open.
1. The Recruiter will reassign the Issue to themselves once they pickup the communication. They may also add any applicable labels.
1. The Assignee will close the Issue when communication is complete.

Referral Roundup Sessions

Our Talent Acquisition Team occasionally organizes Referral Roundup Sessions.

The objective of these sessions are to gather referrals, region-specific information about where you're based, and teach you skills related to sourcing and Greenhouse.

Each session will have a corresponding Issue linked and in that, we ask that you please add information regarding appropriate companies to source from, local meet-up groups, conferences, job boards to advertise on, and any other information you believe will be beneficial to our hiring efforts in your area.

A Talent Acquisition Team Member will attend these sessions, so they be able to address any questions that arise on sourcing, LinkedIn, or Greenhouse.

SECTION: hiring/referral-process.md

Defining a Referral

·Referring· and ·endorsing· are different activities. Please read each definition below and note that bonuses are granted to referrals only.

Referral - Someone you have worked with in the past, or have developed a close personal relationship with. This person should align with our values and the requirements of the role, and be someone you would choose to work with based on what you know about their skills and values alignment.

Endorsement - Endorsements are not referrals, but a recommendation you can make on behalf of a candidate who has shown interest in an open role at GitLab. Examples of an Endorsement include:

- Someone you've previously worked with reaches out about another person they know who has applied, and they recommend them.
- An acquaintance or friend of a friend reaches out to you about an open position here and you can't speak to their character or skillset.

To endorse a candidate, check who the Recruiter is on the Internal Job Board and contact them via Slack after a candidate has confirmed that they've applied directly. You should include:

- The candidate's full name and the role they've applied to
- Please provide a description of how you know the candidate and why you think they are aligned with the role.
- Confirmation that the person knows you are endorsing them.

A Referral is not

- Someone the Talent Acquisition Team has already sourced, screened, or been in contact with for the same requisition or job family. If you have questions about whether or not someone is already active in an interview process, please reach out to TA in the talent-acquisition Slack

channel.

- Someone you do not know and would not be able to speak about confidently.
- Someone who applied via a unique link you shared from Greenhouse on a social site.
- A former Team Member
- Contract or temporary roles, including Internships, are not eligible for referral bonuses.
 - However, if the Intern is converted to a Team Member for the same/similar role, then the referring Team Member will receive a referral bonus per the referral bonus guidelines upon transitioning to the new employment status.

Expectations of Referrer

1. Check alignment with the role and its requirements
 - While they don't need to meet all requirements, alignment with the majority is essential.
2. Confirm a candidate lives in a location we can hire in by checking the Country Hiring Status page in the Compensation Calculator.
 - If the country is not listed or is marked as Not Open for Hiring, we unfortunately will not be able to move forward.
3. Please remember that GitLab does not offer any form of work or study sponsorship anywhere in the world other than support for highly skilled candidates in certain countries, where a candidate is already based in that country. We also do not offer any form of support to transfer an existing work permit. Please refer to the Visas handbook page and DM the recruiter if any clarification is needed.
4. Inform the candidate you are referring them, and receive their approval.
5. Refer the candidate through Greenhouse with a detailed referral description and please complete all mandatory fields and provide as much information as possible about how you know the candidate and a comprehensive outline of why they are qualified for the role.
 - If the candidate is interested in more than one open role, please refer them to the position they are most interested in and note the others they're open to.
6. Note: If this person has already applied and their application has been reviewed and progressed by TA, this is considered an endorsement.

How to Submit a Referral in Greenhouse

1. Login to Greenhouse and click the Add a Referral button in the top menu bar.
2. Fill in all the required fields (designated by a red asterisk) and as many of the non-required fields as possible.
 - We recommend uploading a current version of the candidate's resume to ensure the relevant recruiting team(s) have all information available to evaluate the candidate. If no resume is available please include a link to their LinkedIn profile.
 - When selecting a Job from the dropdown, make sure that an Office is not selected.
 - If you don't see the desired vacancy there, please remove all filters and try again. If the position is not listed, it is not available externally either because we received a high enough volume of applications, it is not ready for posting, or it is available to internal candidates only.
 - While the Social media field is not required, we highly encourage that the referral's LinkedIn URL is provided.
3. Click Add this referral and you'll see the referral in the My Referrals section of your dashboard.

Things to Note

- A referral must be submitted to a specific requisition - general referrals are not accepted.
- If you see CURRENT TEAM MEMBERS ONLY - before a requisition, please note that the requisition is for Internal Team Members only; please do not submit a referral.
- Please keep in mind that it is ultimately at the discretion of the Recruiter and/or Hiring Manager to proceed with your referral once submitted, depending on the candidate's skills, experience and alignment with the role.
- Your referral is classified as your referral for 6 months (from the date TA receives the referral) for jobs within the same job family.
 - If your referral applies to an open position 6 months after they were initially referred for a similar role, they will then be classified as an applicant vs referral. Please stay in touch with your referrals if you want to refer them in the future.
- If you'd like to refer someone for an open position with a different job family, you will need to submit a separate referral.
- If someone has interviewed for a role with GitLab (and has made it to team interviews) as a referral and is not selected, we recommend waiting 6 months to refer them again so they're able to build deeper experience and skills related to the role.
- R&D only: While GitLab hires globally, we apply different Location Factor guidelines for each role we recruit for. This geographical compensation approach not only aids in cost reduction but also enables us to tap into a broader spectrum of talent, extending beyond our traditional recruitment areas. While we don't publicize the Location Factor attributed to the role, your referral could be rejected due to their current location even if we can legally hire in that country.

Referral Statuses

- You can stay up-to-date on the status of your referral(s) in the My Referrals section of your Greenhouse dashboard.
- If you have any questions regarding your referral, please send an email to referrals@gitlab.com or post in the talent-acquisition Slack channel and the relevant Recruiter will DM you.
- Please note that the Talent Acquisition Team is unable to provide candidate-specific feedback to Referrers (i.e you); only to the Candidate themselves at later interview stages according to our typical feedback process. Due to the volume of submissions we receive and to treat all candidates fairly, we are unable to provide feedback on resume submissions; only post-interview.
- You can expect Referrals to be reviewed by the Hiring Team within 5 business days of their submission.

Expectations of Recruiter

As a way of ensuring a consistent and positive experience with both the candidate and team member, it's important that the Talent Acquisition team follows these steps:

1. Ensure referral notifications are turned on in Greenhouse for your roles.
2. Referrals should be reviewed and actioned within 5 business days of submission
3. If the Referral has expressed interest in multiple roles, please flag their profile with the relevant Recruiters to confirm which role aligns best (if any)
4. Actions to be taken:
 - Reject: If the referral isn't suitable, reject using the referral rejection email template.

- Move to Qualified for:
 - Additional Hiring Manager review. This should only be done to gather a second opinion, not as a gate for all candidates.
 - The referral aligns to the role however there are late stage candidates in process already, inform the referral via email and referrer via DM.
 - If we don't proceed with current candidates in final stages, revisit the referral and progress if appropriate.
 - If the role is filled, ensure the referral is rejected and sent the 'Position Filled' email template from your personal email address.
 - If the referred candidate is aligned to a role but we proceed with another candidate, an option is for the Recruiter to set up a networking call to keep the candidate in mind for future roles, although this may not be offered due to bandwidth
- Progress to screening: Referral is aligned to the role
- Move candidate to 'Screening' and reach out for an initial conversation.

Additional Considerations for the Talent Acquisition Team

- Review and action any outstanding candidates in the Weekly Referral Report.
- The first tab shows a summary of all referrals in Greenhouse by Recruiter. Pay close attention to referred candidates that have been sitting for 5+ days indicated in yellow, orange and red.
- If the candidate is attached to multiple requisitions in Greenhouse then disposition the candidate in Greenhouse using the rejection reason Moved Forward In Different Role > click Reject and Don't Send Email

Common Referral Situations

- Your Referral was referred by someone else.
 - In the event that your claimed Referral was submitted by someone else, the first Team Member to have submit the candidate will be considered their Referrer.
 - In the event multiple Referrers have submitted a candidate and they are hired, TA will work with People Ops to split the bonus.
- If the Referrer is part of the Hiring Team they'll recuse themselves from interviewing the candidate and the Hiring Manager will choose a replacement Interviewer.
- When a Referral is from a Referring Manager they:
 - May choose to move the candidate on in the interview process, even if the candidate received a 'no' from a fellow Interviewer - we don't operate on a single-veto basis
 - Will review all information and feedback about the Referral (giving both positive and negative feedback fair consideration) and will make the final hire or no hire decision based on all team feedback.

Expectations of Hiring Team

Although we place special emphasis on Referrals, we treat Referral interviews the same as we do non-Referrals. Referral interviews should not be more or less demanding than any other interview. To prevent wrongful hires, Referrers need to keep their bar high. Interviewers and Hiring Managers should avoid bias based on the Referrer's status. There should be no favoritism based on previous experience working with a Referral after the candidate is hired.

Referral Bonus Eligibility

All GitLab team members are eligible for the Referral Bonus, except in certain circumstances.

Referral Bonus Payout and Processing

For details regarding the Referral Bonus Payout, please visit [this page](#).

For process instructions on how to process referrals, please visit the Referral Operations [page](#).

For any additional questions, please post in the talent-acquisition Slack channel.

Cold LinkedIn Outreach

If someone you do not know and/or you have not worked with reaches out requesting to be referred for an open role, please let them know you are unable to refer them due to our referral policy, but encourage them to apply directly to any open roles via the Jobs page. The appropriate recruiter will then review their application as soon as they can!

SECTION: hiring/sourcing.md

Purpose of Sourcing

The speed with which we can grow our team is dependent on the rate at which we find qualified candidates. We believe that embedding strategic sourcing in our Talent Acquisition practice allows us to not only provide an accurate snapshot of the total addressable market before we make a hire, but also, it is our opportunity to be intentional around building representation into the top of our funnel. It allows us to grow GitLab and build an even more diverse team in the most efficient way possible, while also sustaining our culture.

Our Candidate Sources

- Applications - a person who has actively applied to one of our open roles through a job advertisement/posting or an event.
- Referrals - a person has been referred by a current GitLab team member.
- Sourced (aka Passive) - a person who is found during sourcing (searching) efforts by the TA team with or without the help of the hiring team (Source-a-thon). This person is of interest, but has not interacted with the Talent Acquisition (TA) team or Hiring Manager yet.

Prospects vs. Candidates

- Prospect - a person is qualified for a potential future or current role at GitLab, but has not yet formally engaged with moving forward to enter the interview process. There is basic information available (LinkedIn, Blogs, Conference Talks, etc.) and are housed in our CRM talent community.
- Candidate - a person that is interested in an active position at GitLab and is engaged in the interview process (which starts with a recruiter phone screen). These individuals are then tracked in our Applicant Tracking System to engage through the interview process.

Our Top of Funnel Commitment

GitLab uses the term "underrepresented" and it is meant to be a way of recognizing that we need more of what we do not have in all aspects of our business. There are many studies that have focused on understanding the benefits of representation in the workforce, and one worth noting is a McKinsey & Company study from 2020. This study found that companies in the top quartile for ethnic and cultural diversity were 36% more likely to have above-average profitability than companies in the bottom quartile. The study analyzed data from more than 1,000 companies in 15 countries.

As a Talent Acquisition team, we are in a unique position to impact the future of GitLab through intentionally building inclusive hiring practices. One of the key elements of that is the application of thoughtful sourcing strategies to build a balanced top of the funnel. This is not the only thing we are doing to ensure we set ourselves up for success, but it is a main focus for FY24.

- McKinsey & Company. (2020). Diversity wins: How inclusion matters.

Why focus on top of the funnel?

Statistically, our application and referral candidate pools look very similar to our current team member community. For Talent Acquisition, we know our biggest, direct opportunity to impact our mission toward building a representative workforce is in our sourcing efforts. We are committed to building a sourcing strategy for every search to provide a balanced top of the funnel that is representative of the talent market. In order to measure these efforts, we have introduced a new metric: the sourcing rate %.

How will we measure the impact of our efforts?

Sourcing rate % is a metric that depicts the total number of candidates sourced using a sourcing strategy that has a high probability of reaching underrepresented talent. This gives an indication of the % of time each of our recruiters spend focused on sourcing underrepresented talent, while also ensuring we are not making any assumptions on how someone may identify. When a recruiter runs a search that is designed to have a greater chance of identifying candidates who are underrepresented at GitLab, they will utilize tags within Greenhouse to enable this metric for us to goal to as a team. Each quarter, we will set team and individual sourcing rate % goals and measure regularly.

- Sourcing Rate % Calculation: candidates sourced using DIB strategy / divided by the total number of passively sourced candidates.

The Sourcing Rate % Metric

What is Sourcing rate %: Defined as the total number of candidates sourced utilizing a 'diverse sourcing strategy' divided by the total number of candidates (passive, applicants and referrals) in a given pipeline. It is one of our key performance indicators for both sourcers and recruiters on the Talent Acquisition team.

How does it work: Per the definition above, we are measuring our sourcing strategy and it's effectiveness in building representation in our pipelines.

How to Source Candidates

For Talent Acquisition Team Members

At GitLab, we consider each of our recruiter team members on the Talent Acquisition team 'full life cycle' which means, sourcing is a skill and part of the craft in what we do. In order to ensure we are able to bring a snap shot of the total addressable market for each role that we hire against, cultivating a passive pipeline of talent is an essential part of that process. It is also our opportunity to get very intentional when it comes to building representation into our pipelines.

In accordance with our values of Diversity, Inclusion and Belonging, and to build teams as diverse as our users, Talent Acquisition provides a collection of sourcing tools here to expand our hiring teams' candidate pipelines. If you have any questions on how to implement these resources into your current sourcing strategy or have suggestions for new tools, please reach out to the Talent Acquisition team.

Our strategy to building representative teams is rooted in our top of funnel strategy. At a high level, our approach and expectations for recruiters and sourcers is as follows:

1. At the beginning of every role, recruiters are responsible to build a DIB first approach to their sourcing strategy. We believe healthy pipelines show a balance between source types (applications, referrals, passive talent and internal talent) in order for our hiring teams to have an adequate view of the talent market before making their hiring decision.

- As a best practice, Recruiters will focus on screening internal candidates, referrals, and sourced candidates for the first 5 business days a req is open.

1. Recruiters run targeted searches leveraging some of our internal resources and sourcing tools (ex: LinkedIn Recruiter and our CRM)

1. For each candidate that is sourced in step 2 utilizing a DIB sourcing strategy (ie: leveraging HCBUs in a boolean string, utilizing GraceHopper resume books, etc), apply the appropriate tag.

IMPORTANT NOTE These indicators are not assuming or identifying an individual's gender, race, or ethnicity-we cannot be certain of this information from a search and do not want to make any assumptions without self-identification.

Our sourcing rate % is meant to provide a data point to ensure we are taking the appropriate steps, and taking the needed time as a TA team to create a representative top of the funnel. These metrics will not be considered in any hiring decisions. Our sourcing rate % is intended to build more representation into the beginning of the process which we believe will result in more representation at GitLab. We are using coded names in order to further anonymize this information from our hiring teams.

We will set functional sourcing rate % goals that align to the business needs and reach our aspirational hiring rate % goals set quarterly.

Our Tags

Tag	Description
-----	-----
Project Fig	Searches focused toward candidates that may identify as women globally
Project Maple	Searches focused toward candidates that may identify as one of our race/ethnicity URGs (Underrepresented Groups: Black or Hispanic/Latino, Indigenous/native Alaskan, Hawaiian/Pacific Islander) in the United States

Calculation of the Metric: We will measure this throughout the course of the quarter at an individual, team, and functional level. Each quarter, along with our hiring and starts goals, our Talent Acquisition Directors will set sourcing rate % goals for their teams. These goals will be influenced by our aspirational hiring rate % goals per function, health of our pipelines and domain. These goals are a [key performance indicator] (<https://internal.gitlab.com/handbook/people-group/talent-acquisition/key-performance-indicators/>) for our team members and progress to goal is housed in our Tableau Productivity Dashboard.

Our Sourcing Tools and Enablement

LinkedIn Talent Insights

Our Talent Acquisition team has three seats for LinkedIn's Talent Insights product. Talent Insights is a platform that is specialized in answering business questions regarding workforce planning, talent pools, competitive hiring analysis, and more from its database that exceeds 705 million members, 50 million companies, 20 million jobs, and 90,000 schools. The use of this tool is helpful in determining the diversity of a talent pool (LinkedIn's best guess based on provided profile information), regional talent availability, and competitor analysis. To request such insights, please submit an Issue here using the Li
