

LinkedIn Talent Insights Request template.

Once a report has been run, it can be exported in either a .PDF or .CSV format; the latter allowing you to filter and segment the data. All reports will be uploaded to the LinkedIn Talent Insights Reports project. If there's a report in that project that you'd like refreshed, please submit a new request Issue.

LinkedIn Sourcing

View LinkedIn Training slide to understand the Boolean logic.

Greenhouse Sourcing

1. Candidates -> Application Type -> Candidates + Prospects only -> now exclude active people (so you can see also those who haven't been checked yet)

1. Filter by job -> All reqs

1. Search with specific keywords/skills in the top left search bar. Turn on the "Full Text Search" function to get more results.

1. Search using tags as filters. Profile details -> Candidate Tags

1. Here is the Video (internal team members only)!

How to source our Greenhouse database through LinkedIn

Simply add all your filters as described above in the LinkedIn Recruiter sourcing section. After setting up your search parameters, add one extra: "In ATS" - here add Greenhouse. This will show you all the people who match your search and are in our database and also have a LinkedIn profile.

Bonus Greenhouse sourcing tip

You can download several profiles in bulk in an XLS file and you can run your searches in the spreadsheet. For this, click on the blue "Export" button on the top of your search results in the "All candidates" section of a search result tab.

Greenhouse CRM

In today's talent market, a CRM enables us to efficiently and quickly engage with talent that opted into learning and potentially growing at GitLab. Learn more about how to use our Greenhouse CRM here.

DIB Enablement

Examples of searches:

1. A search of all sororities in the United States

1. A LinkedIn search including "she" or "her" pronouns

You cannot search for race or gender on LinkedIn, but you can search for associations.

(Examples would be NSBE OR "Black engineer" OR NSMBA OR "Black MBAs" OR AAWIT OR "African American women in technology" OR NAACP OR "Black chamber of commerce" OR "African American chamber")

1. Sourcing Library (available to internal team members only) coming soon

Pitch Pages

Pitch Pages are a Guide-like experience, intended for prospective candidates that have yet to dive into learning about the experience of working at GitLab, or for current candidates who are in the process and interested in learning more. Pitch Pages are a great sourcing tool aimed to help convert a prospect into a true candidate, or to provide more insight about our company for those currently in the process.

To help form a strong and meaningful relationship with both passive and active candidates, Recruiters can leverage a unique Pitch Page built specific to their departments including Sales, Engineering, UX, G&A, Product, or our General Pitch Page. Pitch Pages will highlight GitLab's achievements, life at GitLab, our values, culture, benefits, and working on a specific team! Recruiters may choose to send the Pitch Page via Inmails, LinkedIn messages or use it in any strategy for sourcing by sharing this link with candidates.

The Candidate Experience Team will be the DRI for Pitch Pages. If you have any questions or suggestions please reach out to CES at ces@gitlab.com.

Re-engagement

The recommended process of re-contacting candidates:

1. Re-contacting a candidate for the same/another position if the candidate failed in the previous interview process: we suggest other TA member re-contact them after 6+ months from the time of their last interview. Please consult with the other TA member who contacted/recruited them previously and discuss the case, if needed.

1. Re-contacting the candidate for the same/another position if they haven't responded to the past inmails: the recommended time to contact the candidate again is around 3 months. Please consult with the other TA member who contacted them previously and discuss the case, if needed.

Rehires

If a former GitLab team member is identified by the Hiring Manager, Recruiter, or a current team member as a potential rehire, the Recruiter should contact People Connect directly via HelpLab using the Greenhouse email template titled Rehire Eligibility Request before approaching the candidate. People Connect will conduct a review of possible performance concerns or other factors that may have impacted the candidate's departure from their role at GitLab. People Connect will inform the Recruiter directly if the candidate is eligible for rehire and the recruiter will add a private note of the decision to the candidate's Greenhouse profile (i.e. "eligible for rehire" or "not eligible for rehire"). Note that rehires are not eligible for referral bonuses.

For GitLab Hiring Managers and Team Members

If you are a Hiring Manager on a open role, your recruiter will partner with you to ensure you have a good action plan for building a passive candidate pool for your role.

Sourcing vs. Referrals: If you know a candidate from school, previous companies, seminars...

even among your neighbors or family members - the best next step is to submit them as a referral by creating an Issue in the Referrals Project. More information about the Referrals can be found on the Referral Process page.

For anyone that you do not have a personal relationship with, please add them as a Prospect in Greenhouse. Talent Acquisition will be able to engage prospects during the interview process by leveraging information in Greenhouse.

Here's how to do that:

1. Check if the prospect/candidate already exists in our ATS (Applicant Tracking System) by searching for the candidate's name in Greenhouse. Pay attention to the activity history both in Greenhouse (in Activity Feed), LinkedIn (Messages), or any other professional networking sites.
1. Click the "Add" button, then click Add a Candidate
1. Switch to the Prospect tab and complete the intake form
1. After receiving confirmation from a Prospect about moving forward with a vacancy, you can convert them into a Candidate

Step by Step Example

I've found someone who might be suitable for our Backend Engineer role, simply use their name or email address to check in Greenhouse to see their status

--> Add them as a Prospect in Greenhouse --> Once they replied with interests, please convert them into a Candidate in Greenhouse.

You can also check out our Greenhouse Tips and Tricks document to find more information on Greenhouse usage.

About Sourcing Channels

The most efficient way to source candidates for any vacancy is to search through a professional network, such as LinkedIn, AngelList, etc.

Professional networks make it easy to scan a person's skill set and professional background quickly and efficiently and are designed to present their best impression to potential employers.

We encourage our team members to think out of the box and source creatively! For some positions, other networks may prove useful as well -

for example, we are looking for someone who has public speaking experience combined with specific tech expertise.

You can go on YouTube and search for candidates who have spoken at seminars or professional conferences, try to search for the person's name and look for suitable ways to contact them.

About Reaching Out to Candidates

When you have identified someone as a good potential candidate, send their profile along with any requested information to the TA member so they can reach out to the candidate and add them to Greenhouse. You can check the Talent Acquisition alignment here.

If you want to reach out to a sourced candidate directly, you should discuss your communication

strategy with your recruiting partner beforehand in order to avoid duplication and/or poor candidate experience.

Take a look at the Content library - life at GitLab for the latest team member count, employer awards, blog posts, and more facts about working at GitLab. These resources are meant to help guide your outreach to potential candidates.

Upgrading Your LinkedIn Account to Hiring Manager

Hiring Managers and hiring team members are able to request a LinkedIn Hiring Manager Seat. To upgrade your seat, please add your GitLab email to your LinkedIn profile by following this process: {+ Login to LinkedIn > click Me > Settings & Privacy > Sign in & security > Email addresses > add your GitLab email address and verify it. +} Next, submit an Access Request Issue using the LinkedIn Access Request template within the Technology and Insights project.

- A Hiring Manager seat allows a user to collaborate on projects, where they can share and review profiles and provide feedback on prospective candidates.

New to LinkedIn? Please reach out to your TA partner for tips.

Please note, we won't be able to reimburse any LinkedIn seats purchased at your own expense.

If you're locked out of your LinkedIn account with no way to confirm your identification via 2 Step Verification, you are able to turn off 2 Step Verification.

SECTION: hiring/candidate-faq/_index.md

The GitLab Candidate Handbook is a space for recent applicants and candidates progressing through the interview process. We encourage every prospective job seeker to spend time learning more about the work we do, our culture & values, and what to expect during our hiring process.

The goal of curating these resources is to outline what hiring looks like at GitLab. We share the latest information about our processes and practices to ensure you have the information you need to feel confident during the interview process. The resources referenced here offer guidance on what to expect during each step of the interview process, where we hire, best practices for virtual interviewing, and other useful information.

Interview Stages

The interview process consists of the following stages:

1. Application Process
1. Screening Call
1. Assessment (required for certain roles)
1. Technical Interview (required for certain roles)
1. Team Interviews
1. References & TMRG Connection
1. Offer & Background Screening

Application Process

How to submit an application

{{% details summary="External applicants" %}}

All of our open positions can be found on our jobs page. You can view jobs by department and/or location. Click on a job that interests you and select the "Apply Now" button at the top of the page to fill out an application.

{{% /details %}}

{{% details summary="Internal applicants" %}}

Interested in another role internally? Review internal mobility eligibility here.

If you are a current team member and are interested in applying for a current vacancy, please follow the steps below.

1. Log in to your Greenhouse account

1. If you are a GitLab team member who signed in to Greenhouse you can access the Internal Job Board. If you do not yet have a Greenhouse account, you can activate yours by clicking the Greenhouse tile in Okta.

1. You can also access the internal job board under the "Helpful Links" section. For more information (and screenshots!), feel free to read the Greenhouse help article.

1. Click on the position title that interests you.

1. You will be redirected to the vacancy description and application form, where you will be asked to fill out basic personal information, provide your resume, LinkedIn, GitLab username, and/or cover letter, and answer any vacancy-specific application questions, as well as answer a voluntary Equal Employment Opportunity questionnaire if the position is open to US applicants.

1. Once you have finished, click "Submit Application" at the bottom.

{{% /details %}}

Who can apply?

{{% details summary="Equal Opportunity Employer" %}}

GitLab is proud to be an equal opportunity workplace and is an affirmative action employer.

GitLab's policies and practices relating to recruitment, employment, career development and advancement, promotion, and retirement are based solely on merit, without regard to all legally protected classes, including, but not limited to: race, color, religion, ancestry, sex (including pregnancy, sexual orientation, or gender identity), national origin, age, citizenship, marital status, gender identity, disability and genetic information (including family medical history), and any other status protected by federal, state or local law. GitLab will not discriminate on the basis of disability or veteran status.

{{% /details %}}

{{% details summary="No solicitations" %}}

At GitLab, we do not accept solicitations from recruiters, recruiting agencies, headhunters, or outsourcing organizations. If you email us about this type of opportunity, we'll reply with a link to this paragraph to indicate that we'd like to be removed from the contact list.

{{% /details %}}

I applied for a job on your careers page. What's next?

Thanks for your interest in GitLab! Our team will reach out if they need more information from you. In the meantime, read about what you can expect during the interview process below.

If your experience is a good fit for the role, we will be in touch soon. Please note that it's not possible for us to respond to every candidate, but we aim to review every application.

A recruiter reached out. How do I know they're real?

Scammers often target job seekers by impersonating companies like GitLab, using the GitLab name and GitLab team member names. Scammers have been observed requesting job seekers pay thousands of dollars for "technology equipment" after job seekers completed an in-depth, fake job application interview process.

Check out the "What to know about a fake job scam impersonating GitLab" blog post for warning signs and tips on how to protect yourself.

Screening Call

Screening Call expectations

If it is determined that you qualify for continued consideration, the assigned Recruiter will conduct a screening call with you. Calls can last anywhere between 30 and 40 minutes (some specialist roles require more time), depending on the conversation. The Recruiter will wait 5 minutes for you to show up to the appointed video call, which is always shared via email. If you do not show up to the interview, or do not reach out in advance to reschedule, you will be classified as a no show and be disqualified. We will unreject when circumstances beyond your control cause you to miss a scheduled call.

You, the recruiter or the hiring manager can terminate the discussion at any point during the interview if either party determines that it isn't a fit. Be as transparent and honest as possible and provide feedback.

Depending on the outcome of the call, the talent acquisition team or manager may either reject or move you to the Team Interview stage.

{{% details summary="Example Screening Call questions" %}}

1. Why are you interested in GitLab?
1. What are you looking for in your next position?
1. Why did you join and leave your last three positions?
1. What is your experience with X? (for each of the skills listed in the position description)
1. STAR Method questions and simple technical or skills-related questions
1. What is your current location and do you have any plans to relocate? (relevant in context of compensation, country-hiring guidelines, and in case an offer would be made)
1. Do you require visa sponsorship or a work/study permit to work for GitLab? Or do you require the work permit to be transferred to GitLab? If the answer is yes, we will not be able to proceed, unless you currently hold a work permit in the Netherlands. You can refer to the Visa and Sponsorship handbook section for further clarity.
1. What is the notice period you would need if you were hired?
1. Is this salary range in line with your expectations? At GitLab, we are committed to paying

competitively and equitably. Therefore, we set our offers based on market pay rather than a candidate's pay history. We walk through the Compensation Calculator with each candidate so that we can address any gaps in expectations early on. Only candidates who are in the team interview stage or later can access our compensation calculator by following applicants sign up.

At the end of the screening call, the Recruiter will tell you what the next steps will be, if any. There should be time for you to ask any questions you may have.

{{% /details %}}

Team Interviews

Team Interviews expectations

After the Screening Call, a candidate will move into the Team Interviews stage if the Recruiter decides that the candidate is fit for the role. Team Interviews may consist of behavioral, panel and/or technical interviews (certain positions).

Feel free to ask your Recruiter which type of interview you can expect.

Optional TMRG Connection

During the reference stage in the interview process, candidates will get the option to speak with a GitLab team member who is a member of our Team Member Resource Groups (TMRGs) to learn about what it's like working at GitLab from someone who they can relate to.

When you receive a reference form, you will have the option to opt-in for a conversation with a member of the TMRG of your choice. Our Candidate Experience team (CES) will then reach out and coordinate this Zoom call for you. You can also read about how we field this request.

Interview Process FAQs

{{% details summary="How to request for a reasonable accommodation" %}}

At GitLab we pride ourselves on ensuring that everyone can contribute. To make certain that everyone's interview experience is a positive one, we encourage those who require a reasonable accommodation to successfully carry out the interview process, to reach out to ces@gitlab.com. The Candidate Experience team along with Talent Acquisition leadership will work with you to define and accommodate those needs. This could include but is not limited to the following:

- Translation Services
- Use of additional services or assistive technologies
- Assistance in setting up Closed Captioning for interviews

{{% /details %}}

{{% details summary="I've started the interview process at GitLab, but haven't heard back from anyone recently. What do I do?" %}}

Feel free to send an email to your Recruiter to get a status update on where you are in the interview process.

{{% /details %}}

{{% details summary="Can I have the hiring team's email addresses so I can send them a note?" %}}

If you'd like to send a note to the hiring team, please send it to your Recruiter and they will forward it on.

{{% /details %}}

{{% details summary="Can I interview for multiple roles at the same time?" %}}

In the event that you are interested in more than one opening, there is no limit on the number of roles you can apply for but keep in mind the following:

1. You will have to complete a full interview process for each role you apply to, so be mindful of the time commitment for each application you submit.

1. Due to capacity, the recruiting team will only process 3 of your applications at a time based on which ones you decide to prioritize. Any other applications outside of the 3 will be processed after the prioritized roles's interviews are completed.

1. In the effort to be as transparent as possible and avoid sending multiple competing GitLab offers, there will be an added step to the process after your final interview where you will discuss with your recruiter which role you're interested in before any official offer documents can be sent.

1. If you already have interviewed with us, you can apply for a different role again, but please take note that there may be a cooldown period of 6 months or more if it's a similar role, depending on the reason for not moving forward which is communicated by the recruiter.

Example of dual Interview process outline

1. Application Process

1. Screening Call

1. Assessment (required for certain roles)

1. Technical Interview (required for certain roles)

1. Team Interviews

1. Discussion with your recruiter on which role you're interested in

1. References

1. Offer sent for role discussed in step 6 & Background Screen

For internal candidates only (in addition to the above guidelines)

1. If you are interviewing for two roles within the same job family and job grade, the offers will be the same.

1. If you are interviewing for two roles in different job families the offers may be different.

{{% /details %}}

{{% details summary="I've been rejected, when can I reapply?" %}}

If your application is rejected because you are insufficiently qualified for the role, you are welcome to reapply to the same position once 6 months have passed. If you gain the skills, experience, or knowledge we outlined in our feedback to you, you are welcome to reapply at any time.

{{% /details %}}

{{% details summary="I already passed the technical interview, will I need to repeat that stage if I reapply?" %}}

If you are reapplying to a role in R&D and have already completed interviews following a technical interview, your technical feedback also remains valid for up to 6 months as long as you are applying to the same job family. The recruitment team will aim to run a reduced interview process in this scenario, however, if you are reapplying outside of the 6 month window or applying to a different job family, you will be required to restart the interview process with us again.

{{% /details %}}

Inclusive interviewing

The GitLab team understands the importance of inclusive interviewing, and we strive to ensure our hiring team is well versed in every aspect of diversity, inclusion, and cultural competence. A positive and comfortable candidate experience is our priority.

How we conduct remote interviews on a global scale

{{% details summary="How we work during holidays" %}}

As an all-remote, global company, GitLab gives all team members the flexibility to determine their time away from work, including the holidays they observe.

There will likely be holidays that our candidates observe that a Recruiter, Hiring Manager, or CES may not.

If there's a time during the year when a significant portion of the company will be taking time off, we'll be sure to send a communication to all active candidates to let them know of a possible delay in communication.

Please note that not every member of the team will be observing that holiday, so you may still receive emails from them.

{{% /details %}}

{{% details summary="How we schedule interviews on a global scale" %}}

1. Once you have completed a screening call with the recruiter and are ready to be scheduled for the Team Interview stage, you'll receive an email requesting availability. To move through this process as quickly as possible, please give us many different days and times spread across at least 2 weeks. This will prevent us from having to reach out again asking for more availability, as some interviewers could be across many different time zones. Sometimes if the interviewer has a schedule that is difficult to fit interviews into, we'll suggest specific times and dates via your availability link.

1. After receiving your availability, we will compare it to the interviewers' working hours. If we find a match, we will schedule an interview and send you a link to a Guide and invite in your time zone to download to your computer. If we do not, we will reach back out and work with you to find an alternative. Sometimes there is a very small overlap between time zones, so we appreciate your patience as we identify alternatives!

1. If you need to reschedule, follow the special instructions in your confirmation email if the interview is within 24 hours. You can also email ces@gitlab.com anytime.

{{% /details %}}

GitLab's interview recording policy

As part of our commitment to creating an open and comfortable interview environment, interviews

may not be recorded in any format. This policy helps ensure authentic conversations and protects the privacy of all participants.

References

How references are conducted

References will be collected towards the end of the interview stage and they must be checked before or as an offer is made. The Hiring Manager or hiring team will contact your references. These reference checks will be performed in accordance with the applicable law of the jurisdiction. Where applicable, a reference check can also be used in the final decision for making an offer. The reference check is not the sole factor for a decision to hire or not hire an individual. However, in conjunction with the interview scores and the interview team feedback, all of these factors go into the hiring decision.

Three references will be requested and at least one needs to be a past manager. If you have only had 1 manager, and it is at your current company, it is okay to skip the manager reference (though at least two total references will still be required).

Offer & Background Screening

Depending on your location, a background screen will be initiated at the same time as references or once an offer has been extended.

Where does GitLab hire people?

At GitLab, we hire people from all over the world and all walks of life. Diversity, Inclusion & Belonging is one of our core values. As an all-remote company we do face challenges with hiring in certain countries. Each country has unique and complex rules, laws, and regulations, that can affect our ability to conduct business, as well as the employability of the citizens and residents of those countries. It unfortunately affects the employability of the citizens and residents of those countries. We are growing and continuously exploring our hiring capabilities in a variety of geographies. At present we are focusing our hiring in countries where we have entities & PEO's (Professional Employer Organization).

{{% details summary="Take a look at the countries where we currently hire below." %}}

Please refer to a specific job listing to see if the position is hiring in the country where you are located. You check our handbook for more in-depth information

Country or PEO	Employed through an Entity

What Personal Data Does GitLab Collect About You?

Information You Provide Directly

We may collect the following personal data from you when you apply for a position:

- Contact Information such as name, email address, physical address, telephone number;
- Employment Background Information such as resume/CV, employment history, academic and professional qualifications;
- Work eligibility and citizenship information;
- Demographic Information such as gender, race or ethnic origin for government reported statistics when permitted by law or with your consent.

Information We Collect from Other Parties

We may collect personal data from other parties as part of the recruitment process. For example:

- Information provided from agencies performing background checks or right to work verifications;
- Information from public sources and social media sites;
- Information from recruitment agencies that you have asked to support you in finding a job;
- Information provided by GitLab team members who have referred you for a job.

How does GitLab Use Your Personal Data?

We may collect and use your personal data for the following purposes:

- To communicate with you about your job application and potential future job opportunities;
- To administer, support, and manage the job application process;
- Where necessary to comply with applicable legal or regulatory requirements;
- To evaluate and report the demographic makeup of our company's recruitment efforts where allowed by law; and
- For other purposes as described to you at the time we collect your personal data.

When Does GitLab Share Your Data and Who are the Recipients?

As part of the recruitment process, GitLab may disclose your personal data in the following circumstances:

- Internally with GitLab team members, contractors, and vendors who require the information to administer and manage the recruitment process;
- To third-party service providers which process personal data on our behalf to provide certain services, such as background checks and predictive analytics;
- To third-parties with whom you instruct GitLab to share your personal data;
- We may share your personal data if we believe it is reasonably necessary to comply with valid legal process (e.g., subpoenas, warrants) or protect the rights, property, or safety, of GitLab, our employees, or users;
- If GitLab is acquired or transferred (including in connection with a bankruptcy or similar proceedings), we may share your personal data with the acquiring or receiving entity.

Legal Basis for Processing Your Personal Data

If you are located in the European Economic Area (EEA), United Kingdom, or Switzerland, we collect and process your personal data on the following legal bases set out by applicable law:

Consent: We may ask you for your consent to process your personal data. You can withdraw your consent at any time, which will not affect the lawfulness of the processing before your consent was withdrawn.

Legitimate Interest: We process certain personal data for our legitimate interests. These legitimate interests include, for example, administering the recruitment process and managing applicants effectively.

Performance of a Contract: We process personal data to perform steps that are necessary prior

to entering an employment contract with you, where you are considered for employment.

Compliance with Legal Obligations: In some cases, we may have a legal obligation to process your personal data, such as to meet our legal requirements or in response to a court or regulatory order. We also may need to process your personal data to protect vital interests, or to exercise, establish, or defend legal claims.

International Data Transfer

Your personal data may be processed in the United States, the country where you have applied for a job, or any other country where GitLab or its subcontractors have team members or operations.

GitLab may transfer, store, or process your personal data in a country outside your jurisdiction, including countries outside the European Economic Area ("EEA"), Switzerland, and the United Kingdom. If we transfer personal data from the EEA, Switzerland, or United Kingdom to a country outside it, such as the United States, we will enter into EU standard contractual clauses with the data importer, or take other measures to provide an adequate level of data protection.

Security

Access to your personal data is controlled and GitLab maintains a comprehensive information security program using administrative, physical, and technical safeguards.

Data Retention

Your personal data will be retained until the end of the employment application process plus a reasonable period thereafter. If your job application is successful and you accept a position, the personal data collected during the recruitment process will be added to your human resources file and retained for the duration of your employment.

Your Rights and Choices

You may access, correct, or delete your personal data at any time. You may also withdraw your consent, or object to the processing of your personal data when based on our legitimate interests. To submit a deletion request, please complete this form. To submit an access request, please complete this form. To correct your personal data, withdraw your consent or object to the processing of your personal data please contact us as recruiting@gitlab.com.

Due to a high volume of Candidates, GitLab uses automated decision-making to filter Candidates based on responses to our application questions. When certain criteria is met regarding visa sponsorship, work permits, hiring country, and other employment restrictions, our software will reject your application. This is because GitLab cannot legally hire or sponsor workers in a number of jurisdictions, or in certain cases other legal requirements are in place that prevent hiring. We will continually update which responses will result in a rejection of your application as our legal requirements change. Once rejected, your application will not move forward in our recruitment process.

Our use of automated decision-making enables us to enter into an employment contract with the

selected Candidate by providing a manageable list of possible candidates. If you object to our use of automated decision-making for the reasons stated above, please contact us at recruitingops@gitlab.com to request a separate review of your application by one of our trained recruitment specialists. After this separate review, we will contact you with an explanation of our decision.

Policy Changes

GitLab may change this Privacy Policy from time to time. If we decide to make a significant change to this Privacy Policy, we will post a notice of the update on this site. We encourage you to periodically review this page for the latest information.

Contact Information

If you have questions or concerns about the way we are handling your data, please email us with the subject line "Privacy Concern" at DPO@gitlab.com.

The controller of your personal data is the GitLab affiliate who is hiring.

Policy Updates

This policy was last updated on 2025-01-30.

SECTION: hiring/interviewing/_index.md

As an interviewer, you play a significant part in creating a seamless, candidate-centered experience for all applicants here at GitLab. Keeping an up-to-date calendar and setting up your specific interviewer preferences is essential to help reduce interview cancellations or declines and the need for rescheduling. This page will provide links and examples on how to adjust your calendar and interviewer preferences as well. We urge you to visit this Handbook page for a deeper understanding of how GitLab candidates are moved through the interview process. DRI: Candidate Experience Team

To provide you with the knowledge and skills necessary to conduct effective and equitable interviews and to make informed hiring decisions, please visit this handbook page.

Inclusive Interviewing

At GitLab we strive to ensure our hiring teams are well versed in every aspect of diversity, inclusion, and cultural competence. A positive and comfortable candidate experience needs to be our priority. As an interviewer at GitLab, we urge you to be committed to creating a welcoming and inclusive environment for all candidates.

We do not ask for the candidate's pronouns in the application form. This information is "sensitive information" according to GDPR and other applicable privacy acts. We encourage our interviewers to utilize Zoom's Pronoun feature and you're welcome to disclose your pronouns in any way you feel comfortable doing so.

Tips for keeping your Google Calendar up to date

Ensure your working hours are documented correctly. Update your OOO in a timely manner. Communicating with the recruiters in advance about anything that impacts your availability to interview candidates is appreciated. This can include:

- Public holidays
- Friends and family days
- PTO/ vacation time off
- Company offsites/ travel
- Block the time you are "On Call"
- Special business needs (QBRs/SKO)
- Please make adjustments to the timezone in Google Calendar when you are traveling outside the country.
- Set a free calendar appointment for 1-2 days after you return from vacation indicating "No Interviews" if you would prefer not to interview during that time.
- Set up designated time blocks on your calendar and name them as "Interviews Only" or "Hold for Interviews" in the anticipation of upcoming interviews. Our Candidate Experience team can book interviews within that time slot.

How to decline interviews

CES uses your Google calendar to schedule interviews. Our scheduling tool, ModernLoop will provide us with open times during your working hours to schedule. This is why it is incredibly important to maintain your calendar. Declined interviews prolong our recruiting process and negatively impact the experience of our candidates and hiring teams. Please only decline an interview invitation for an extenuating circumstance, such as an emergency, illness or childcare. We urge you to attend any scheduled interview to avoid a negative candidate experience. Please see best practices below when needing to decline and reschedule an interview.

- If absolutely necessary, please decline interview calendar invites within 24-48 hours of receiving it. To decline, click "No" on the calendar invite. This will alert CES to work on rescheduling the interview and notifying the candidate in an acceptable amount of time.
- When applicable, please provide a reason for declining the interview. (For example: if you're feeling too ill to conduct the interview or if you were scheduled for another mandatory meeting, etc.). Then click Send.
- Declining the calendar invite allows our automated system to pick up the request, triage accordingly and bring it to the notice of the respective CES. All declined interviews will be considered urgent and CES will be prioritizing it accordingly.
- If you need to decline an interview within 48 hours of the scheduled time and you are able to provide CES a replacement interviewer, that would be preferred.
- Special Note: Please do not add anyone else to your interview. If you need to swap with another interviewer or you would like to add a shadow, please tag @ces in your respective hiring channel or email ces@gitlab.com and we will happily make the adjustment to the invite.

ModernLoop

ModernLoop is the scheduling tool that the Candidate Experience Team uses to book interviews. Modern Loop is integrated with Greenhouse, Google Workspace, Zoom and Slack.

Logging in to ModernLoop

To log in, go to the ModernLoop Okta tile and log in with SSO.

Set your ModernLoop preferences

Within ModernLoop interviewers can set the following:

Once you log in to the platform, navigate to "your account" and select "Go to Interviewer Portal". We encourage you to upload a photo, create a bio and set your interviewer preferences so we can provide a great candidate experience.

You can also use this function to update the following:

- Interview load capacity: Limits of hours or interviews you can participate in.
- Interview availability: This is when you are available to interview in your timezone.
- Basic information including profile image, job title & pronouns.
- Contact information. Note: you can not change your email address.
- Calendar Keywords.

Greenhouse

Greenhouse is our Applicant Tracking System. To activate your greenhouse profile, simply log into Greenhouse through Okta. This will launch the application and activate your profile. If you do not have a Greenhouse tile in your Okta account, please reach out to IT and submit an AR to have this added.

Once CES schedules you for an interview, you will have access to the candidates interview kit and be able to submit your scorecard/feedback after the interview concludes. Interviewers can find a scorecard link on their Greenhouse dashboard for any upcoming or past interviews.

Most common open roles in Customer Support

- Support Engineer
- Support Engineering Manager

Tips on how to prepare for your Support Engineer interview

What is it like to interview for the Support Engineer role at GitLab? Here are some tips and general guidelines for the recruitment stages:

1. Application

Before submitting your application, read through our Employment Solutions page to review the list of countries we are currently hiring in.

When applying for the Support Engineer role at GitLab, make sure to upload the resume that will

highlight your skills and experience, so that you are noticed! Review the role's description carefully to understand if this is a good match, not only in terms of your technical skills but also in terms of your expectations from the role. It's a customer-facing role, so you should be comfortable when interacting with people daily. If you like solving puzzles, love helping people, have a passion for DevOps and open source, if you feel confident in your Linux skills and if the role excites you, it's probably a good match!

A well-written resume or a detailed LinkedIn profile will increase your chances to be selected for this role. Read the requirements carefully and make sure that some of those specific areas are outlined in your resume/LinkedIn profile. In the Support Engineer role, we especially pay attention to your experience/knowledge of:

- Customer support
- Linux systems administration
- Git version control
- CI/CD
- Rails/PostgreSQL console (or experience with MVC frameworks/scripting)
- DevOps methodologies

If you don't have the experience with all the desired areas that are mentioned in our requirements, don't worry! We would like to encourage you to apply nevertheless. We look for candidates that have a diverse blend of experience with the above, and one thing that all our successful Support Engineers have in common is resourcefulness. Mindset goes a long way! As long as you feel confident in your Linux skills and you enjoy interacting with customers, there are chances it could be a good match.

While cover letters are optional, they are an amazing opportunity for you to show your motivation for joining GitLab and the Support team. Cover letters don't have to be lengthy or overly detailed, but they should show your sincere motivation. We do love reading them!

It is important to us to create an accessible and inclusive interview experience. While applying, please let us know if there are any adjustments we can make to assist you during the hiring and interview process.

Now it's time to get excited! Here are some links that might help you understand our company and the role even better:

- Values
- GitLab Company Culture
- Informal Communication in an all-remote environment
- Support Team Handbook
- Support Engineer Responsibilities
- Support Workflows
- Support Team Member Time Off
- Jobs at GitLab - Frequently Asked Questions
- Working for GitLab - A Support Engineer's perspective
- A series of blog posts by Cynthia, our Staff Support Engineer

2. Take-home assessment

If you are selected for the role, you will be moved forward to the next step. The first step of the recruitment process is the take-home assessment, which is written and asynchronous. You can expect two emails sent out to you simultaneously:

- A welcome email from the Recruiter
- An email with the take-home assessment attached.

The purpose of the assessment is to verify the basic requirements for the role to make sure you'll be successful in the Support Engineer position at GitLab. You will have 6 calendar days to complete it and submit your answers back to us, but in case anything unexpected comes up and you require more time, please communicate it to us.

Take your time to work on your answers, as the take-home assessment is a very important step in the recruitment process for this role. Make sure to:

- provide details in your answers (in a way that they are still relevant to the questions)
- address all the areas that you're being asked to consider
- double-check if your scripts run correctly
- proofread to make sure you did not make any errors (including grammar and punctuation)
- write the answers in your own words if you use external sources
- cite your external sources
- submit your answers in the desired format via the link provided in the take-home assessment email.

After you submit your answers, we will take 1-3 days to grade your assessment and reach out to you with feedback.

3. 40-Minute Screening call with a Recruiter

The purpose of this call is to learn more about you, your expectations and your experience. On our part, we endeavor to learn how well we align in terms of: us being able to support your growth and aspirations if you join GitLab; how your skills, both technical and soft, match our needs in Support Engineering and at GitLab; how we can meet your expectations.

This is more of a general conversation during which we would like to learn more about your professional experience and your motivation for joining our GitLab Support Team, but you might expect a few technical questions as well. We will also discuss your hiring eligibility and availability, and we will go over our compensation calculator.

Don't forget to prepare questions for us, we love them! This goes for all the interviews that happen as the next steps, too. Feel free to ask us about anything Support or GitLab-related.

You might expect to hear back from us via email within three business days from the Screening call.

4. 90-Minute Technical Interview with a member of the Support team

Successful candidates will be moved to the next step: Technical Interview.

The Technical Interview will involve live break-fix/bug-fix scenarios, as well as customer scenarios. You will need to have access to a terminal with Bash or similar. You will also need

to have an SSH key pair loaded locally so you can connect to the server. Windows users must have 'Git Bash for Windows' installed prior to the call.

If you're unable to install software on your computer you may be able to use the free tier of a cloud provider. See a video one of our Support Team preparing Google Cloud Shell for the Support Tech Interview.

It is important to have knowledge of the GitLab product. We recommended getting some hands-on experience before your interview. Spend time installing and using GitLab to get more familiar with the software and how to use it. Read through documentation and tutorials on using/configuring/troubleshooting GitLab.

- Read the Intro to GitLab
- Install GitLab locally and explore the product
- Have a look at common issues
- Read through the online forum to see what errors stand out
- Read over some useful commands when logging in locally to your GitLab installation

Review and practice:

- Basic Linux Commands
- Basic SSH Commands
- PostgreSQL
- Git

Familiarizing yourself with these will help with your communication through the hiring process, as well as prevent any roadblocks, and keep you focused on the tasks asked of you.

Remember to stay calm and do your best! We appreciate that everyone gets the interview jitters and we are not here to be intimidating. Practice makes perfect, so try and set aside some time to practice/study to be as best prepared as you can be. If you get stuck along the way, try searching on the forum to see if you are able to find a solution to your troubles! Google can also be a great resource, which you are able to use even during your interview. Knowing how to find the answer is just as important as the knowledge you already have.

Feel free to ask for clarifications in case the instructions/end-goals of a task are not clear. Together with that, you are welcome to prepare any questions for our Support Engineers!

You might expect to hear back from us via email within three business days of the Technical Interview.

5. 60-Minute Behavioral Panel Interview with Support Engineering Managers

Successful candidates will be moved to the next step: Behavioral Panel Interview.

When a candidate gets the opportunity to interview with more than one member of the hiring team at once, this is called a panel interview (as they speak with a panel of interviewers). For candidates, this can be a benefit as they get to meet with more members of the team in a shorter time frame, which means they spend less time scheduling and attending interviews. For interviewers, this means that they get to work together to learn more about a candidate and can

benefit from each other's viewpoints and experiences.

At this stage, you will meet with two of our Support Engineering Managers. Panel interviews are conversations, not tests. You might expect more specific, behavioral-based interview questions that will be about your experience, history, and opinions. If you'd like to feel prepared, we would recommend you familiarize yourself with a STAR method of interviewing.

GitLab appreciates cultural diversity instead of cultural conformity, thus the managers assess values fit, rather than culture fit.

You might expect to hear back from us via email within three business days of the Behavioral Interview.

6. 60-Minute Interview with a Senior Manager or Director of Support

Successful candidates will be moved to the next step: Senior Manager/Director Interview.

You made it this far - congratulations! This is the last interview that will be similar to the previous one, which means that there will be more behavioral-based questions. At this point, try to relax and continue being your true self that got you to this stage - the most difficult part of the interview process is already behind you.

You might expect to hear back from us via email within three business days of the Senior Manager or Director of Support Interview.

7. Reference Checks

Successful candidates will be moved to the Reference Checks.

We will reach out to you and ask for three professional references to contact about your professional experience.

- One of your references should be your past or current supervisor or manager.
- You do not need to provide a reference at your current position if you do not feel comfortable.
- If any of your references are not proficient in speaking or writing in English, we will take that into consideration when contacting them.

If you don't have a long history of professional employment (E.g. if you've only held one position in your entire career) and are unable to provide us with some of the references, please let us know and we can always work around it to find a solution.

After you provide us with your references, now it's time to relax! The hiring manager or the hiring team will contact the references you share with us. It will take us some time to gather the information and it depends on how soon we hear back from your references. Don't worry if you don't hear back from us for a couple of days. If we run into any roadblocks, we will definitely inform you. We will keep you updated at least once a week so that you know what the status is.

8. Offer

Successful candidates will subsequently be made an offer. Once the offer is ready, the Recruiter will reach out to you to schedule a Zoom call to discuss its details.

Most common open roles in Infrastructure

- Backend Engineer
- Site Reliability Engineer
- Database Reliability Engineer
- Engineering Manager

Tips on how to prepare for Infrastructure interviews

What is it like to interview for roles in the Infrastructure department at GitLab? Here are some tips and general guidelines for the recruitment stages:

1. Application

When applying for roles at GitLab, make sure to upload the resume that will highlight your skills and experience, so that you are noticed! Review the role's description carefully to understand if this is a good match, not only in terms of your technical skills but also in terms of your expectations from the role.

If you choose to, you can learn even more about the infrastructure department and its various subdivisions in the handbook. Group pages offer a breakdown on teams Mission, Targets, Team Members and Approach to Work.

Infrastructure at GitLab

- SaaS Platforms
 - Delivery Group
 - Scalability Group
 - Dedicated Group
 - Production Engineering group with Ops and
 - Foundations

A well-written resume or a detailed LinkedIn profile will increase your chances to be selected for this role. Read the requirements carefully and make sure that some of those specific areas are outlined in your resume/LinkedIn profile. In Infrastructure Engineering, we especially pay attention to your experience/knowledge of:

- Linux systems administration
- CI/CD
- Programming/scripting experience with languages such as Ruby or Go.
- Monitoring and Observability

- Cloud technologies and container orchestration
- On call and incident management

If you don't have the experience with all the desired areas that are mentioned in our requirements, don't worry! We would like to encourage you to apply nevertheless. We look for candidates that have a diverse blend of experience with the above.

It is important to us to create an accessible and inclusive interview experience. While applying, please let us know if there are any adjustments we can make to assist you during the hiring and interview process.

Now it's time to get excited! Here are some links that might help you understand our company and the role even better:

- Values
- GitLab Company Culture
- Informal Communication in an all-remote environment
- Incident Management
- Coding at Scale

2. 30-Minute Screening call with a Recruiter

The purpose of this call is to learn more about you, your expectations and your experience. On our part, we endeavour to learn how well we align in terms of: us being able to support your growth and aspirations if you join GitLab; how your skills, both technical and soft, match our needs in Infrastructure and at GitLab; how we can meet your expectations.

This is more of a general conversation during which we would like to learn more about your professional experience and your motivation for joining our GitLab Infrastructure Department, but you might expect a few technical questions as well. We will also discuss your hiring eligibility and availability, and we will go over our compensation calculator.

Don't forget to prepare questions for us, we love them! This goes for all the interviews that happen as the next steps, too. Feel free to ask us about anything Infrastructure or GitLab-related.

You might expect to hear back from us via email within three business days from the Screening call.

3. 90-Minute Technical Interview with a member of the Infrastructure team

Successful candidates will be moved to the next step: Technical Interview. The Technical Interview varies depending on the team and position that you are applying for. We will share more information about what to expect and what to prepare ahead of this round if required. If there is prep work, it will be limited to about an hour.

The technical interview will require a GitLab account, if you are not yet familiar with GitLab we recommend getting some hands-on experience with GitLab before your interview. See Intro to GitLab for a general introduction. If you don't have an account, you can create one on the sign-up page.

While not necessary for the interview, the following links will help you to understand a bit

more about the responsibilities of the Infrastructure team:

- Incident Management
- Change Management
- Production Architecture
- Infrastructure Runbooks
- Production Readiness
- Open and closed incidents for GitLab.com

To help you understand more about the team you are interviewing with, we share information about your interviewer (including their GitLab profile) ahead of each team interview via Guide.

Feel free to ask for clarifications in case the instructions/end-goals of a task are not clear. Together with that, you are welcome to prepare any questions for our Engineers! You might expect to hear back from us via email within three business days of the Technical Interview.

4. 60-Minute Hiring Manager Interview

Successful candidates will be moved to the next step: A behavioral or scenario based Manager interview.

At this stage, you will meet with the hiring manager for the position you are applying to. Generally speaking for Engineering roles this would be the Engineering Manager. For management positions this might be a Senior Manager or Director instead. During this call you might expect more specific, behavioral-type interview questions that will be about your experience, history, and opinions. If you'd like to feel prepared, we would recommend you familiarize yourself with a STAR method of interviewing and reminding yourself of previous success stories, learnings and achievements. GitLab appreciates cultural diversity instead of cultural conformity, thus the managers assess values fit, rather than culture fit.

You might expect to hear back from us via email within three business days of the Behavioral Interview.

5. 60-Minute Peer Interview with a member of the team

Successful candidates will be moved to the next step: A behavioral / scenario based peer interview, with a member of the team that you are interviewing to join.

Similarly to the Engineering Manager interview, this call will be focused on further discussion about your past experience, background and opinions. Worth noting this round is a great opportunity to ask your own questions and dig into what life is like here with someone that is in a similar position to the role you are interviewing for!

You might expect to hear back from us via email within three business days of the Peer Interview.

6. Leadership Interview

Successful candidates will be moved to the next step: Senior Manager/Director/VP Interview.

You made it this far - congratulations! This is the last interview. You should expect more behavioral and scenario based interview questions so your preparation for this call can be similar to the previous two rounds. At this point, try to relax and continue being your true self that got you to this stage - the most difficult part of the interview process is already behind you.

You might expect to hear back from us via email within three business days of the Leadership Interview.

7. Reference Checks

Successful candidates will be moved to Reference Checks. We will reach out to you and ask for three professional references to contact about your professional experience.

One of your references should be your past or current supervisor or manager. You do not need to provide a reference at your current position if you do not feel comfortable. If any of your references are not proficient in speaking or writing in English, we will take that into consideration when contacting them.

If you don't have a long history of professional employment (E.g. if you've only held one position in your entire career) and are unable to provide us with some of the references, please let us know and we can always work around it to find a solution.

After you provide us with your references, now it's time to relax! The hiring manager or the hiring team will contact the references you share with us. It will take us some time to gather the information and it depends on how soon we hear back from your references. Don't worry if you don't hear back from us for a couple of days. If we run into any roadblocks, we will definitely inform you. We will keep you updated at least once a week so that you know what the status is.

8. Offer

Successful candidates will subsequently be made an offer. Once the offer is ready, the Recruiter will reach out to you to schedule a Zoom call to discuss its details.

Panel Interviews {panel-interviews}

When a candidate gets the opportunity to interview with more than one member of the hiring team at once, this is called a panel interview (as they speak with a panel of interviewers). For candidates, this can be a benefit as they get to meet with more members of the team in a shorter time frame, which means they spend less time scheduling and attending interviews. For interviewers, this means that they get to work together to learn more about a candidate and can benefit from each other's viewpoints and experience.

In order to maximize the effectiveness of our panel interviews, we observe the following guidelines:

1. Panel interviews are best done by video call. In-person panel interviews can be intimidating because you sit across from a group of people. Video calls are easier to keep conversational.
1. Start with an explanation and introductions. Walk the candidate through the interview, roughly how long each stage will take. Introduce yourselves briefly, then ask the candidate to do the same.
1. No difficult or "trick" questions. Panel interviews are conversations, not tests. If the candidate needs to prepare for the interview or will be put on the spot with a question designed to test their knowledge, they should have the opportunity to do that with a smaller audience. Panel interviews work best when they are oriented around questions about a candidate's experience, history, and opinions.
1. Interviewers, be prepared. Have a list of sample questions ready to draw from to keep the conversation moving. Know when it is your turn to ask questions. Communicate in Slack or similar if you need to make adjustments. Turn off notifications or any other distractions so you can stay focused. Taking turns asking questions is not an excuse to multi-task.
1. The goal is to get to know the candidate. Because panel interviews are so conversational, it's really easy for interviewers to spend time talking to each other instead of the candidate. Be diligent about keeping the focus on the candidate and give them the space to be the star in the interview.
