

hiring process includes a technical interview.

This technical interview revolves around a merge request to a small application created for the interview, tailored to the position you've applied for.

You will receive a link to the merge request at least 72 hours before your scheduled call. We encourage you to dedicate up to an hour to review it, approaching it much like you would any contribution to a project. The merge request is self-contained, eliminating the need to search for additional context within the project. To ensure your interviewer has sufficient time to evaluate your progress before the interview, please complete your review at least 24 hours prior to the scheduled time. Additionally, kindly leave a note on the platform indicating when you have completed your asynchronous contributions.

This technical interview is a 90-minute video call and screen-sharing session with the interviewer(s), where they will ask you to walk them through your review and where you will also write some code to improve the merge request. The purpose of this interview is to see how you communicate asynchronously, your knowledge of the technology, and how well you collaborate with a member of the team. You can expect questions to center around the qualifications listed for the role, whether it is a backend role or a frontend role.

We know live coding can be stressful, so it is recommended that you review code review guidelines and contact your recruiter or CES team member with any questions you have ahead of your scheduled interview.

#### Alternative Assignment Considerations

If a candidate desires an alternative assignment or test to the one detailed above, or if they object to what they perceive as unpaid work, we should be open-minded. Seek to understand their discomfort with the assignment and respond appropriately. Most of our candidates respond positively to the test and feedback, and this is not a way to get free contributions. In fact, the technical interview can be quite costly for us.

It's also worth noting and making the candidate aware that we no longer request that they work on live or "real" issues as part of the technical interview. As described above, the merge request we send is self-contained and drawn from a curated bank of technical exercises.

#### Becoming qualified to conduct technical interviews

If GitLab team-members are interested in becoming qualified to conduct technical interviews, they can read more about the process in the interviewing best practices page.

## SECTION: hiring/talent-acquisition-framework/acquisitions.md

## Talent Acquisition Process Framework - Acquisitions {framework-acquihires}

### What is an acquisition hire?

An acquisition hire (or acquihire) is any hire which was made as a direct result of acquisition of a company as per our acquisitions approach. This page outlines the process for all parties privy to the acquisition on the recruiting aspects.

### The Process

1. All relevant people will be added to p-(acquisition project name)-people with specific details on the confidential nature of the acquisition once read-in.
1. Notify the Talent Acquisition Manager of the need to process candidates as part of the acquisition at least 2 weeks before (where there are 2+ candidates) the final decision on the candidates needs to be made.
1. Provide the details of the team they will be potentially joining, the interview process if different from our Standard Interview process, the Hiring Manager, Director and VP responsible for the process. For engineering candidates, the process is an abbreviated one to our standard process as described in our acquisition process
1. Talent Acquisition Manager to be provided a dummy [GHP ID] by FP&A Business Partner (/handbook/finance/financial-planning-and-analysis/single-source-of-truth-ssot-headcount-forecast-and-hiring-plan)
1. Talent Acquisition Manager will open a confidential requisition in Greenhouse (sometimes individually for the Founders) that will house all the acquisition candidates. Ensure the Corporate Development team is added to Greenhouse so they can review all scorecards.
1. Talent Acquisition Manager to ensure the Interview Preparation Direction doc is completed and all interviewers are aligned before organising the next steps.
1. Talent Acquisition Manager to then reach out to the Founders and/or team to introduce themselves, set expectations for the next stage, ask for their availability and offer to answer any questions.
1. Talent Acquisition Manager will manage the end to end interview process including scheduling initial Founders interviews before a team member from CES is read-in.
  1. Select a private room in Zoom and add to the invite.
  1. For Senior Director/VP level leaders, we can engage with their EBA to organise interviews.
  1. Assign scorecards to the interviewer
1. Ensure all Resumes or LinkedIn Profiles are downloaded so they can be processed in Greenhouse.
1. Talent Acquisition Manager will gather details specific to the offer letter for each candidate from the Dir. Corp Dev as per our acquisition handbook
1. When an acquisition candidate has completed their interview/s, the Talent Acquisition Manager responsible will update the Slack Channel with a summary and highlight any action items.
1. Once complete we will follow the standard process of background checks, offer approvals and offer process as outlined here Hiring
1. There are some edits that may be allowed in a acquisition contract, however, must be approved by GitLab's CFO and Legal team. The CES will be told explicitly that these can be added to the contract.

---

## ## SECTION: hiring/talent-acquisition-framework/coordinator.md

The CES team utilizes GitLab Service Desk and ModernLoop to track all incoming requests to the CES team. If you are a GitLab team member and you have a request or question for the Candidate Experience team, email [ces@gitlab.com](mailto:ces@gitlab.com) and an issue will automatically be created within the CES Service Desk. Please see the alignment page to learn more about which CES team member will be working on your requests. Our team leverages ModernLoop for interview scheduling, seamlessly connecting with our existing calendar and ATS.

### How the CES Team will run the Service Desk

1. Under this CES Service Desk Project set up the proper notifications
  - Click on the bell icon on the top right next to Star and Clone
  - Go to Custom Settings
  - Check "Issue is Created"
  - Close out the window
1. On the left-side menu bar click Issues
  - This is where all our incoming CES emails will create an issue. You'll get an alert when someone sends an email to the CES email alias. Any "emails" that need to be addressed will be an open issue listed within this project.
1. Each CES will begin their workday by triaging issues within the Service Desk and their personal Board by adding the appropriate label to the issue.
  1. Click on the new Issue
  1. If unassigned, assign it to yourself or the responsible CES on the right-side toolbar
  1. Read the Issue message
  1. Labeling - each issue will need to be labeled with at least one appropriate label.
  1. If you need to respond to the "email" by adding comments to the issue, be sure to enter comments as you would an email to the candidate. Always assume that a candidate could be included in any email.
  1. If no action is needed and the issue has been solved, you may close it. Do not close issues until you have resolved the problem you are solving.
1. Board Creation - to view and manage assigned issues in one place
  1. Under ·Plan· on left hand menu, click ·Issue Boards·
  1. Click name of Team Member that is the current board view (e.g. ·Alice·)
  1. Click ·Create new Board·
  1. Title new board as the name of the new team member or appropriate board label
  1. Uncheck ·show closed list·
  1. Next to ·Scope· click ·Expand·
  1. Under ·Assignee· section, click ·Edit· and choose the appropriate assignee
  1. Click ·Create Board· to create the board
  1. To add columns/specific label list, click ·+ New List· next to open issues column
  1. Under ·Scope·, ensure that ·Label· is selected.
  1. Under ·Value·, choose the appropriate label for the desired list
  1. To change the order of the lists on the board, click and drag the lists

### Team Interviews

- When a candidate is ready for a team interview, the recruiter will request availability in ModernLoop. Once availability is requested, it will create a task for CES to schedule.

- If there are shorter timelines for roles as defined by the hiring team, CES needs to be made aware of those timelines for when interviews need to be scheduled. We will default to scheduling interviews at a minimum of 48 hours out to leave time for interviewer prep.
- Reminder: When tagging @ces in Greenhouse, do not tag anyone other than the team in the same ping as it will add those users to the Service Desk project.
- If no response is received within 24 hours, CES will send a follow up request for availability and set the due date of the issue to 24 hours after the next email to check for availability again.
- After the 2nd email to the candidate with no response, the CES will make the Recruiter aware of the no response and no longer attempt to receive availability.
- After availability is received, CES will schedule interviews based on the interview plans in Greenhouse/ModernLoop.
- CES will be using the Zoom integration with ModernLoop for interviews
- After the candidate has provided the availability, as an optional step the CES team members can send the Candidate First Touch Email from Greenhouse if there are scheduling challenges.
- This email is sent to inform the candidates that their interview scheduling is in the process and to ensure better engagement with the candidates.
- If CES sees an alert to merge applicant profiles, and those profiles are a match (candidates' email address, phone number, or resume matches), they will merge the applicant profiles. Visit the Candidate Hygiene section of the home page for instructions.
- CES will send interview confirmations via ModernLoop
- CES will not automatically schedule next interviews based off of scorecards
- The Recruiter or Hiring Manager will need to follow the same scheduling procedures as above in ModernLoop to request scheduling assistance on the next round of interviews.
- Any candidates who receive a no or definitely not scorecard should be discussed with the Recruiter and the Hiring Manager before declining.

### Technical Interview Scheduling

Certain positions require technical interviews (i.e. Ruby on Rails, Golang, Frontend, etc) where candidates are asked to demonstrate their knowledge and skills. Technical interview requests can be identified within the scorecard title in ModernLoop as recruiters will utilize the following format: "Technical interview, level & coding language pool - 90 mins".

### Important to Note:

- These interviews are 90 minutes in duration
- Candidates must submit a GitLab username before CES can schedule their interview
- Interviewers and candidates need time to prepare prior to the interview, therefore interviews will be scheduled 3.5-4 business days out as the merge request will be sent by the interviewer 3 working days (or 72 hours) before the interview.
- Interviewers must be the same job grade or above to the candidate. An interviewer can not interview a candidate for a higher job grade than theirs.

To schedule a technical interview, CES should follow the process outlined below:

- When a candidate successfully reaches the Team Interview stage the recruiter will send the availability request email to the candidate. This action will initiate a scheduling task for the CES in ModernLoop.
- If the candidate did not submit a GitLab username during the application or screening

stage, the recruiter will also send the GitLab Username Form (this will be found in the Team Interview Stage or Evergreen stage). This generates an email to the candidate requesting they fill out the form with their GitLab Username.

- CES will receive a separate ticket to the CES service desk:
  - The completed GitLab Username form. This will only come into the service desk once the candidate replies to the email, and the username will automatically be added to the Details tab of the candidate's profile under Details > Other. CES should check that the GL username is valid and ensure that the GL username is in a URL format.
  - CES will add the tag "GL Username received" to the candidate's technical scheduling task in ModernLoop.
- Once CES has received and confirmed that the candidate's GL username is valid, the CES team member can proceed with scheduling the interview in ModernLoop.
  - Note: when you send the interview invite to the interviewer, select the template 'Technical Interview with MR'.
- CES will then send the candidate their confirmation through ModernLoop as well.
  - When emailing the candidate their interview confirmation, CES will select the appropriate (Ruby, Golang) ModernLoop email template. This provides the candidate with additional information about what they can expect for their technical interview.

#### No Work Submitted on the MR 24 hours Before Interview?

- If the candidate has not submitted any work on the MR 24 hours before the scheduled interview, the interviewer will notify the CES team.
- The CES team member will cancel the interview, and email the candidate the 'Email to candidate - MR Not submitted' template in Greenhouse. CES will also leave a note on the candidate's Greenhouse profile notifying the recruiter.
- CES will not reschedule the interview until they have received direction from the recruiter.

#### Executive Interview Scheduling

The process below outlines the steps to be followed by the CES team in scheduling executive interviews while partnering with the Executive Business Administrator(EBA) team and executive recruiters. The Candidate Experience team and EBA team will adhere to a 24 hour working day SLA response time for scheduling interviews. Interview requests coming from Executive recruiters are to be scheduled in the executive calendar only.

1. The recruiter will create a scheduling task in ModernLoop and which will populate into the CES "My Tasks" list in ModernLoop

- CES refers to the EBA cheat sheet doc for executive interviewer preferences and contacts the respective EBA with interview details in the EBA-team-interview-requests channel.
- To request an interview in this channel, click ·Workflow· and fill in the appropriate information in each field.

1. CES adds the "Pending EBA" label and Slack link to the EBA scheduling task to the interview task in ModernLoop while awaiting response.

Note: Follow up SLA is 24 hours to check for time conflicts delaying scheduling. If the times do not match, CES may contact the candidate requesting more availability or suggest some times that works for the interviewer.

1. Once the EBA confirms the best time and date for the interview. CES sends the interview confirmation email through ModernLoop to the candidate.

1. CES will schedule the interview through ModernLoop & send the calendar invite to the interviewer. Make sure the invite is always marked private.

1. CES notifies EBA of scheduled interviews in the original slack message with a green check mark emoji and close the ticket.

This process not only applies to executive requisitions, but any reqs or interviews that include executive team members supported by EBAs. Please note that not every executive team member has EBA support and they may be scheduled directly in ModernLoop following the usual CES scheduling process.

Note:

- If the candidate needs to reschedule, notify the appropriate EBA in the slack channel and share the candidate's updated availability and greenhouse profile.
- The EBA and CES team will communicate any interview changes or concerns in the slack channel. Other requests such as flagging an offer, completing an interview scorecard, or regarding the executive's schedule may be communicated in this channel as well.

#### Candidate accessibility and accommodation request process

At GitLab, we are committed to fostering an inclusive environment where everyone has the opportunity to contribute.

The following steps outline the workflow for the Candidate Experience team to process any accessibility and accommodation requests submitted by candidates. The accommodation request form is included in the candidate availability email, which recruiters send when transitioning candidates from the screening stage to the initial interview stage.

If the candidate submits the form, all the CES team members will receive an email stating that a response has been received via the Google form.

1. Forward the form to CES desk (ces@gitlab.com).
2. Label the ticket as 'accommodation request' and assign to the respective CES. Type in 'accesschecktodo' in the comments section of the issue so the next steps are listed.
3. The CES assigned to the requisition will process the request by reviewing the response and determining the accommodation need. Candidates can submit three types of accommodation requests: Closed captioning for video interviews and Multi-Day interviews.
4. Schedule the interview based on the recruiter's scheduling request.
5. In the interviewer invite, next to 'accommodation requested:' use TE snippets "zoomclose" for zoom closed captioning. If the candidate has requested a multi-day interview, please schedule the interviews accordingly.
6. Please leave a tag 'Project Equispace' in the candidate's GH profile for easy reference so we can adequately track and address accommodation needs as the candidate progresses through the hiring process.
7. If CES receives a written request from a candidate for an accommodation not currently listed on our form, CES will notify TMR for advice and respond accordingly with how we can accommodate. CES will follow steps above to ensure interviewer is advised on how to proceed with the interview.

8. CES will save email communication with candidate in the event they are hired. If so, CES will upload communications into the hires Workday profile.
9. Close the issue once the scheduling is completed.

## ModernLoop

ModernLoop is the scheduling tool that the Candidate Experience Team uses to book interviews.

### Logging in to ModernLoop

To log in select the ModernLoop tile in Okta and use SSO.

Please ensure you have the ModernLoop Chrome Extension installed on your Chrome Browser.

### How to schedule interviews via ModernLoop

- Go to 'My Tasks' using the task bar on the left
- In the 'Action required' bucket, click on the candidate who has the label 'ready to Schedule'
- A side window will open, scroll down and click the 'Schedule now' button. The page will open to the candidate's availability. On the right press 'Next: Setup Interviews' button.
- Check the information for the required interview to schedule (time, interviewer, scorecard etc), then click 'Next: Find Schedules'
- ModernLoop will create a list of interview options. To see an interviewers calendar you can click on the interviewer or the 'view' option on the top right of the card.
- To select a schedule option click on 'use schedule' on the top right corner of the option card.
- The location will be automatically selected as Zoom and a zoom room selected. Please check with the CES team to understand which Zoom room to use. Each CES member is assigned a particular zoom room to use when scheduling to avoid overbooking a room.
- The calendars section when scheduling in ModernLoop refer to the internal calendars that will populate once an interview is scheduled. They are 'Candidate Interview Calendar' for candidate events and 'Interview calendar' for Internal events. These calendars should auto-populate in this section.
- Select the Email to candidate template from dropdown list.
- If the interview requires a brief, you can include this by selecting 'Add attachment'
- For the interviewer invite, select the correct template from the dropdown list
- Review all details and then press 'Confirm and send'
- If you only wish to send the invites to the interviewers before sending the candidate invite, select 'Send internal only'. This will send the interviewer invites and move the candidate into the Pending section of My tasks. When you wish to send the candidate invite you can go into the candidate profile and click 'finish and Send'.

### How to schedule internal interviews

- When receiving a scheduling task in ModernLoop from a recruiter for an internal candidate, confirm that the 'internal candidate' tag has been applied to the task.
- If it is missing, add the "internal candidate" tag to the ModernLoop task yourself for tracking purposes.
- Unlike with external candidates, recruiters do not request availability from internal

candidates via email. Instead, they create a scheduling task for CES to arrange interviews directly, without waiting for candidate-submitted availability.

- The recruiters will inform the candidate that CES will be making use of their GitLab calendar to schedule the interview.
- CES should proceed directly to scheduling the calls without waiting for candidate availability submission.
- Access the Google Calendar to view both the interviewer's and internal team member's calendars in tandem.
- Once a suitable time slot has been identified, schedule the interview and send the internal candidate confirmation in ModernLoop.

#### How to add or replace an interviewer for a scheduled interview

- If you wish to replace or add an extra interviewer to a scheduled interview, in 'My tasks' go to scheduled, click on the scheduled interview.
- When the side page opens with the interview details, click on the 3 dots on the interview tile and select 'Edit Interview'.
- To add an interviewer select 'add interviewer' and type in the name of the new interviewer.
- To remove an interviewer select the three dots next to their name and select remove interviewer.

#### How to set up Interviewer Modules (Interviewer pools & training plans)

A module in ModernLoop is an interviewer pool, which also allows for trainees to move through shadows/reverse shadows.

To set up a module take the following steps:

- Go to Modules on the task bar on the left
- Click on 'New Module'
- Give the Module a name, select the training plan (typically 2 shadow and one reverse shadow), and select role-by-role, then create
- Click on add interviewers and then type in the names of the Trained interviewers for the module. Then select fully trained and the interviewers will be added to the module.
- To add the trainees click on 'Add interviewers' in the top right corner. Type in the names of the trainee interviewers and then select 'Trainee'

To delete a Module, click into the Module, then go to settings and delete module.

To assign a module to an interview plan:

- Go to jobs and select the job which you want to use the interviewer module for.
- Select the stage tab and select the interview stage required.
- The interview plan will pull up the interviews in this stage from Greenhouse. Click on 'Add Interviewer' and then in the box type the name of the module you want to use.

#### How to schedule a technical interview

- If the technical interview requires a interviewer module, check in the job interview plan that the correct interviewer module is selected.

- Continue to schedule the interview using the same steps as for a 1:1 interview.
- For the candidate email select the template 'Technical Interview - Candidate confirmation' and add in the technical instructions using the correct text expander snippet.
- For interviews which have an MR, select the 'Technical Interview with MR' for internal invites for interviewers.
- If there is a shadow interviewer from a Module, ModernLoop will automatically add in a paragraph to let the interviewers know who is the lead and who is the shadow.
- Select finish and send.

### How to update Organization wide settings

NOTE: Only Admins can change organizational settings.

Organizational settings can be found in the menu on the left hand side of the homepage.

### If a Candidate Withdraws from the Hiring Process

If a candidate emails the CES Service Desk stating they would like to withdraw from the interview process, the CES should respond to the candidate's email (not the Service Desk ticket) and cc the recruiter (if the recruiter isn't already on the email). The CES response should not say anything definite as there may be a chance for the recruiter to reel the candidate back in. A basic response is below:

> Hi Candidate Name, thank you for your email. I have cc'd your recruiter in this email and if there are any additional questions, they will be in touch.

The CES should also tag the Recruiter in the Greenhouse profile of the candidate who withdrew.

The only exception to this should be for executive roles. Please just forward the withdrawal email to the Executive Recruiter and they will handle any follow-up.

### Non-Disclosure Agreements

To send a Non-Disclosure Agreement (NDA) to a candidate, Recruiters should ping @ces in Greenhouse.

CES can then log into DocuSign, select "start" and "use a template", and then access shared templates.

Once the NDA has been returned, upload the document in the "details" section of Greenhouse. Download this document from DocuSign as separate files, and only use the NDA itself (the summary is not necessary).

### Background Screenings

GitLab will obtain references and complete a criminal records check with employment verifications.

- If the candidate is located in Belgium and the role is not Grade 9 or higher, the CES or Recruiter (whoever kicks off the reference check process) should send the job requisition to the legal team via the legal Slack channel during Reference/Background screening phase to determine whether or not the role is a position of trust.
- The recruiter should select "Email the team" and send the "CES Start Contract Request" email

to CES to initiate the offer letter and background screening processes after the verbal offer has been made.

- The Candidate Experience Specialist will initiate a background screening and start the contract process for the candidate.
- Background screening results will be received by the Senior Background Check Specialist and escalated to Team Member Relations and Legal where appropriate

For additional information on reviewing Background screenings see this page.

#### Initiating a Background Screening through Greenhouse

1. Log in to Greenhouse and go to the candidate's profile.
1. Click the Application tab.
1. Click Export to Sterling.
1. Click Complete Report, which will redirect you to the Sterling website.
1. Click Invite, and then follow the steps below starting at the second step.
1. If the candidate is located in New York City and you have already initiated Step 1, please order NYC Step 2 instead of a traditional US check.

#### Initiating a Background Screening through Sterling Talent Solutions

1. Log in to Sterling and E-invite the candidate by inputting their email address.
1. Under "Applicant Information" enter in the candidate's first and last name, as well as their email address to confirm.
1. Select the candidate's location. You will need to include City and State for US candidates.
1. Next, select "GitLab" from the "Job Position" drop down menu.
1. Next, select the name of the country where the candidate is located. If the country is not listed, choose Global Screening
1. Finally, scroll to the bottom of the page and click "Send"
1. Make a note in the Greenhouse profile that the Background Screening has been started

#### Reference Check Forms

Prior to giving an offer, Recruiters are required to request references and other offer-related information by sending a form in the Reference Check stage. There are a few versions of this form available on every job based on the country where the candidate is located. When CES receives a form in the Service Desk, there are 3-4 fields to look at: NYC status, PIAA (Employee Invention Assignment Agreement), Outside Work disclosure, and TMRG requests.

#### NYC Location

USA Reference Check forms only:

It's important to note that the USA Reference Check form should be sent to the candidate and Step 1 should be completed before presenting a verbal offer. If the candidate selects "Yes" to indicate that they are located in NYC or its 5 boroughs (They will be listed as Brooklyn, Bronx, New York (Manhattan), Queens, or Staten Island), you will need to complete a two-step background screening process:

Please note that Long Island is not part of NYC and this process does not apply to residents there.

1. CES service desk receives a ticket indicating that the candidate has submitted Reference Check Process Information - USA form. CES notes that the candidate has selected "Yes" for the NYC location question.

1. CES will add the text expander snippet refchecktodo into the ticket to help guide them through the process. CES will add the "NYC BGC" label.

1. CES will go to <https://sterlingcheck.app/dashboard//dashboard/>. It is important to use this version of Sterling because it allows us to edit the email template that is delivered with the check.

- Select NYC Step 1 screening package. You will need to fill out the Location of Employment field as San Francisco, and the Projected Salary field with the candidate's salary (this range can be found in the "Approvals" tab of the candidate's GH profile). Click "next".

- On the next page, under "Email Content", in the drop down, select "NYC Step 1" template.

- Scroll to the bottom of the page and input the candidate's full name and email address.

Send Invite.

1. CES will add the "Pending" label and due date on the ticket. Create a follow-up reminder in Greenhouse 1 business day out to check if there is an ETA.

- Once an ETA is set in Sterling, create another follow up reminder in greenhouse for that ETA date. Please note that the results may come in earlier than the ETA.

- Please contact the Senior Background Check Specialist for any BGC escalations. e.g "Status: Unperformable" or "Status: Consider"

1. This process has been added due to NYC law, which separates the employment verification from the criminal check. Keep an eye on the status of the Step 1 screening results in Sterling.

While we are waiting for Step 1 to be cleared, the recruiter can provide the candidate the verbal offer, begin creating the offer in Greenhouse and going through the approval stages.

Recruiters can send the contract request ticket to CES when they are ready, although, CES cannot send a written contract to the candidate until Step 1 has been cleared.

Tip: when the CES desk receives the contract ticket, add the NYC BGC label immediately to remind yourself and your team members that this candidate is undergoing the NYC two-step background screening process.

- When checking BGCs in Sterling initiated by other team members, be sure to select "Entire Organization" in the top left section of the Sterling dashboard.

1. Once the recruiter has sent CES a contract ticket, CES will then complete NYC Step 2 of the background screening through the Greenhouse integration. Once in Sterling, select the NYC Step 2 screening package and send.

Troubleshooting Tip: If you receive an "expired" error when initiating Step 2 through the Greenhouse Sterling integration, you can navigate to the Sterling Direct dashboard. On the right hand side, under "E-Invite Applicant to Background Check", enter in the candidate's email address and select "Invite".

- Fill in the applicant's information

- Under "Order Information", select GitLab as the Job Position and under "Screening Package" select NYC Step 2.

- Then scroll to the bottom right of the page and select Send.

## Outside Work and PIAA Process

In the form, you will find that candidates are required to disclose whether or not they have any outside work, side projects, Inventions, etc. If they state "none" or "n/a", you can skip this step. If the candidate discloses any information in either the Outside Work section or the PIAA section, CES will take the following steps:

1. CES will visit the TA Candidate PIAA and Outside Work Disclosure Group
1. CES will click "New Project" in the upper right corner of the page
1. Select "Create from template"
1. Select "Group (1)" tab and click on the blue button "Use Template"
1. For Project Name - create a title as the Candidate Name
1. Leave all other fields as is and click "Create Project"
  - NOTE: Once the project is created, you will then be brought to a page where you can create an issue within that project. This is where we will provide all information about the disclosure and loop in HMs, TMR, the Recruiter and Director.
1. Click on "Issues" on the left side of the page and select "New Issue."
1. For Issue Name - create a title using the candidates full name along with the type of disclosure received.
1. Under the Description drop-down - select piaaoutside workdiscussion template
1. Fill in all pertinent information.
  - Candidate Name along with the Greenhouse Link
  - Copy/Paste the disclosure made by the candidate underneath the CES checkbox
1. Assign the issue to yourself, and at the bottom, click "Create Issue"
1. Once the issue is created, click on "Manage" in the left toolbar and select "Members".
1. Click "Invite Members" - type in HM's name, Director's name, and recruiter name; leave them as a Guest and click "Invite" (These will only be invited in at the "issue" level and therefore will only be able to see the issue they are tagged in. They will not have visibility into the other projects created)
  - IMPORTANT NOTE: For ALL disclosures, Director Level approval is ALWAYS required.
1. Go back into the issue, click Edit and in the info box tag the recruiter, HM & Director, then click save
  - These team members will be notified by email when tagged.
1. In the Comment section of the issue request participants review the disclosure(s) by using TE snippet "discreview"
1. CES will remove the appropriate label once confirmed approvals are received in the comments.
1. If Legal review and approval is required, TMR will invite the appropriate Legal member into the issue and request their review
1. Once fully approved, please add the "Fully Approved" label and close the issue.
1. Proceed to the candidate's GH profile and select "Email (Candidate's Name)". Select the "Disclosure Confirmation" template, copy/paste the disclosure the candidate made into the blank space, and Send. The email will CC you and the recruiter.
1. Download the email from your inbox and upload into the "Pre Hire Documents & Changes" folder in the candidate's Workday profile.

## TMRG Conversations

Our hiring process includes an optional step where candidates can request to meet with a TMRG team member. We will offer this to a candidate when they complete their interview process before an offer is made. Whether or not the candidate decides to take us up on this offer will have no impact on our overall hiring decision.

All current TMRGs have agreed to take part in this process. You can find the group list here.

When a candidate requests to meet with a TMRG team member via the Reference Check Form, the Candidate Experience Specialist will do the following:

1. Reach out to TMRG volunteers for this call in the dedicated candidatetmrg-call slack channel.

- Select Shortcuts button - looks like a plus sign with lightening bolt
- Fill in appropriate details
  - Which TMRG would this candidate like to speak with?
  - Where is the candidate located?
  - What role is this candidate interviewing for
- Click Submit

1. Once submitted, the request will ask volunteers to reply with their Calendly link and LinkedIn Profile (optional) for us to share with the candidate.

1. Once a volunteer has been found the Candidate Experience Specialist will email the candidate the 'TMRG - Reviewed' email template in Greenhouse. The CES will update the template with the Team Members name, Calendly Link and LinkedIn profile if provided and then send to candidate.

1. If a volunteer has not been found within 24 hours the CES team member will reach out to the TMRG in their dedicated TMRG Slack Channel.

1. If a volunteer still has not been found within 24 hours of the second request, the CES will reach out to the TMRG lead(s) and request assistance with scheduling. If a volunteer has not been found within 3 business days of the request, the CES will ask the TMRG lead to take part in the conversation.

As a GitLab team member taking part in these calls, we advise you to start with a short introduction to you and your role here at GitLab. From here, we advise you to let the candidate lead the conversation as the goal is for you to answer their questions and offer insight into how we work.

These calls don't require you to submit a scorecard in Greenhouse. If a candidate mentions something that you see as a red flag (e.g. they outline a past action of theirs that goes against our values) or shares something that would help us set them up for success, we advise you to share the details of this with the hiring manager for the role they're interviewing for. It will be the responsibility of the Hiring Manager to review this and decide whether we need to alter the hiring or offer process for the candidate.

Send contract

See Candidate Experience Specialist Contract Processes section of the handbook

The Candidate Experience Specialists will prepare the contract. While the Candidate Experience Specialist will prioritize a contract above other tasks, the expected turn around on the task is 1 business day. If the contract is time-sensitive, please provide context for the rush. If the Candidate Experience Specialist cannot meet the 1 business day they will inform the recruiter and CES manager via Greenhouse and will provide context.

Recruiters should make themselves familiar with the basic knowledge of the contract processes that can be found on the CES Contract Processes page and the Contracts, Probation Periods & PIAA page, as well as the Employment Contracts page in the internal handbook.

1. Check all aspects of the offer:

- Do we have the new team members' legal name in their profile?
- Check the candidate's Reference Check form to confirm their legal name is correctly

reflected in GH

- It is extremely important to enter the team member's full legal name (as much as it is known before visually seeing a legal ID). Full legal name should be provided for the background screening process. It is important to be as accurate as possible, including the person's full legal name as well as any accents used for their name.
- Is the new team members' address listed on the details page?
- What contract type and entity are required based upon location and offer details?
- Is all necessary information (start date, salary, location, etc.) up to date?
- Is the start date one that is not a "no start date" and provides an adequate amount of time for People Connect and IT to have sufficient notice? Ideally, we are providing 10 days notice, but the teams can work with less if we let them know.
- Has the signatory been determined by the Candidate Experience Specialist and updated?
- Has the Entity been selected based on the New Hire's location? If the job title has Federal or PubSec included, please check with the Recruiter if they set up the contract as Inc rather than Federal LLC to confirm.

1. Generate the contract within Greenhouse using a template based on the details found in the offer package, paying attention to whether OTE, draw, and bonuses are included in the offer details.

1. Contact the recruiter or new team member to gather any missing pieces of information (note: candidate's address can be found in their Reference Check Form).

1. If the contract was created outside of Greenhouse, ensure that the contract has been reviewed and approved by a member of the Legal team.

1. Stage the contract in DocuSign from within Greenhouse to email the correct signing parties. In the 'To' field, type the name and select the pre-determined signatory. CC the recruiter and the hiring manager in the CC field.

1. Before marking the candidate as hired the Candidate Experience Specialist will reject the candidate from any other active roles including roles for which they are a prospect (without sending a rejection email). NOTE: If this step is skipped, the profile will not be exported to Workday when the candidate is marked as hired.

1. Before marking the candidate as hired on all candidates, the CES will make sure that the profiles were merged (for internal candidates, this will be indicated if the candidate shows their original Hired inactive role). View candidate merge instructions in the Candidate Hygiene section. NOTE: If this step is skipped, it will create problems with privacy and increases the possibility of a new hire seeing their own Greenhouse profile.

1. Before marking the candidate as hired the CES will ping the recruiter and give them 24 hours to contact/reject all other active candidates. Once this is complete, the CES can proceed with hiring in GH (if candidates are still present in req, select the "keep open" option when setting candidate to hired. This will trigger a new opening to ensure candidates are still present in req)

1. Before marking the candidate as hired the CES will verify if the listed Recruiter and Coordinator in the Details > Source & Responsibility section of the candidate's profile is correct to ensure accuracy in reporting.

1. The CES will mark the candidate as "Hired" in Greenhouse: when prompted, select the option to close the req. Please note, the new hire's Workday profile will be generated automatically.

1. The Candidate Experience Specialist will email the new team member the Welcome Email from Greenhouse with a cc to IT Ops, the Hiring Manager and the Recruiter. Send the appropriate Welcome Email based on the candidate's location and whether the candidate will need to procure a laptop themselves.

- Instructions on the Laptop Ordering Process are included with this email.

1. Should the start date change after the welcome email is sent please see the required steps here.

1. Exception to the start date and onboarding date alignment: If a new team member requires a specific start date for legal reasons (cannot have break in employment) but onboarding on that specific day is restricted (because of Public Holiday, Family & Friends Day, etc.), the Candidate Experience Specialist can notify the People Connect Team in the private Slack channel people-connectces. The Contract, Greenhouse and Workday should reflect the same start date regardless of the actual onboarding date.

The last part of the Candidate Experience Specialist's responsibilities with a candidate is to hire them into the system and pass them on to People Connect. The hire-in process includes more complexities, so CES created the following guidelines to clarify start date exceptions and confidentiality around new hires.

**SETTING GREENHOUSE REMINDERS** - CES make use of the due date feature in the GitLab issue to keep track of the start date and maintain consistent communication with the recruiters to ensure the candidates in the requisition are cleared completely. CES can make use of the "Need to hire into Workday" label and set due dates in the GitLab issue to track as well.

The People Connect team has an SLA period of 10 working days to onboard an entity/PEO-based team member. In the event of an exception, the minimum notice required for the People Connect team is 5 working days.

**PROACTIVE COMMUNICATION**- It's essential that CES promptly notify in the peopleconnect-ces slack channel when they experience a delay or issues with the contracts generated and mark a team member as hired. If there's an urgent hire with less than 10 days to the start date, please use the TE snippet ·ltlaprequest· in the people-connectces channel to confirm that a laptop can be delivered on time. Only after receiving this confirmation can we confirm the start date with the recruiter.

**NEW HIRE EXCEPTIONS** - For any confidential hires that necessitate a public announcement, please inform Alissa Meeks or Melody Patel about the specific scenario. Additionally, loop them in any communication related to the role to keep them in the loop. This will also be considered as an exception.

**VERIFYING GLOBAL HOLIDAYS** - CES should verify whether the proposed start date coincides with a holiday in the new hire's location. It is the responsibility of the recruiter to check with the Hiring Manager to ensure that the new team member has a support/ onboarding buddy on the first day of onboarding.

**START DATE EXCEPTION EMAIL FOR URGENT HIRES** - This email seeks a required explanation and business justification for the proposed changes in the start date. The People Connect team will review this on a case-by-case basis. Urgent hires refer to situations where the HM requests an earlier start date than the previously agreed upon one, and the new start date does not adhere to the standard 10 working day SLA period for candidate onboarding. Important: an exception will not be made without a minimum of 5 working day notice to the People Connect team.

Prominent reasons for urgent hires are Critical Skill Gap / New business opportunities, Equity

vesting grant options and Unexpected departures or backfills. CES can access this email under the "Email the team" option in the candidates' Greenhouse profile.

## CES Contract Processes

Assuming that the hiring process went smoothly, now it is time to prepare the applicable contracts. Once the verbal offer is made, an issue will be created via the "email team" option in Greenhouse. The CES will send the contract to the applicant, using DocuSign in Greenhouse. On rare occasions, the CES may have to create the contract outside of Greenhouse using Google Docs; if this is the case, the CES needs to have a manager review the contract for accuracy before sending it out for signature.

First, be sure to validate the following:

1. The candidate has been moved to the "offer" stage before sending the contract. CES can adjust this, but it's important to inform the Recruiter because this is a step that should be done when they are ready to make their verbal offer.
1. The start date is not a no-start day, and is more than 10 days from your sent date. People Connect requires at least 5 days to process a new hire, but requests 10 days when possible. Recruiters need to be prepared for the time it takes for both parties to sign the contract as well as reject all remaining candidates and should prepare for this.
1. The candidate lives in a country we are able to hire in. The SSOT for all country hiring is [here](#).
1. The currency listed in the offer package in Greenhouse should normally be the local currency of the new team member unless approved by Total Rewards. This needs to be confirmed and approved by Total Rewards prior to making the offer, as any changes to the currency will require complete reapproval in Greenhouse, regardless if it is the same amount just in a different currency.
1. Confirm through which entity the team member would be employed or contracted. If the title of the position includes "Public Sector" and they are located in the US, they may need a Federal contract. The Recruiter should confirm with the PBP if there's any questions.
1. If the candidate is located in Belgium the CES or Recruiter should be aware of two further things to address: i. there are strict language/translation requirements in Belgium so the CES or Recruiter should confirm which region of Belgium the candidate is located in and let legal know, to ensure the right contract, in the right language is used, and so that a translation can be arranged if necessary; and ii. if the role is not Grade 9 or higher, the CES or Recruiter should send a link to the role and the job requisition to the legal team via the legal Slack channel once the candidate is at offer stage (before anything is sent out!) to determine whether or not the role is a position of trust.
1. The recruiter should select "Email the team" and send the "CES Start Contract Request" email to CES to initiate the offer letter and background check processes after the verbal offer has been made.

## Entity Contract Signatories

This chart reflects the available signatories for each of GitLab's entities. They are listed in order of preferred signatory first. This chart should only be used for new hire contracts where GitLab has entities. This is not for internal moves such as contract renewals, job change letters, or relocations.

| Entity | Signatory |

|-----| -----|

| GitLab Inc | All Recruiting Leads (Jake Foster, Marissa Farris), Jess Dallmar, Rob Allen, Other People Group Team Members who are employed by Inc. and of the appropriate grade to sign the document. JCLs can be signed by Morgan Wilkins |

| GitLab Federal LLC | Bob Stevens |

| GitLab BV Belgium, Dutch & English | Marissa Farris, Jake Foster|

| GitLab BV, Netherlands | Marissa Farris, Jake Foster|

| GitLab Canada Corp | Simon Mundy |

| GitLab France S.A.S. | Jake Foster, Rob Allen |

| GitLab GK, Japan | Jess Dallmar, Rob Allen & Jack Connors Backup: Simon Mundy|

| GitLab GmbH | Marissa Farris, Rob Allen |

| GitLab Iberia S.L (Spain) | Jake Foster, Rob Allen. Backups: Jim Gladen & Simon Mundy |

| GitLab Ireland LTD | Marissa Farris, Rob Allen, Jake Foster, Jack Connors |

| GitLab Israel LTD | Jim Gladen, Simon Mundy|

| GitLab IT BV | Marissa Farris, Jake Foster, Jack Connors |

| GitLab PTY Ltd, Australia | Jess Dallmar & Rob Allen, Jack Connors. Backup: Jim Gladen|

| GitLab PTY Ltd, New Zealand | Jess Dallman & Rob Allen, Jack Connors. Backup: Jim Gladen|

| GitLab South Korea | Jess Dallmar, Jack Connors & Rob Allen |

| GitLab Singapore PTE. LTD. | Jess Dallmar, Jack Connors & Rob Allen. Backup: Simon Mundy |

| GitLab UK Ltd | Marissa Farris, Jake Foster, Rob Allen |

| JCLs | Choose signatory from the list above. For the US, Morgan Wilkins can also sign. |

| PEOs | The Candidate Experience Specialist processing the offer. For JCLs, choose Morgan Wilkins or Marissa Farris |

## How to add a contract into Greenhouse

1. In the internal GitLab Handbook, you'll navigate to this link as a SSOT for all contract templates. Only the People Group, Finance, and Legal should have access to this folder.

1. Navigate to the correct entity of the contract you're attempting to update on the handbook page.

1. Click the link to the contract you're wanting to upload and it will open the Google Document.

1. Navigate to File, click Download and select Microsoft Word.

1. Log in to Greenhouse and go to "Configure" by clicking the gear at the top right corner, then choose "Offer Templates".

1. Navigate to and click the Upload New button (located underneath All Offer Sections).

1. Enter the template name (The convention is typically "GitLab Entity employment-type, with/without bonus", e.g. GitLab Inc full-time, with variable bonus/commission).

1. Click Choose File and choose the document you've downloaded and click Save Template.

1. Greenhouse will upload the document and it will appear at the bottom of the page. There will be a Test button next to it; click this, and it will validate that all of the Greenhouse tokens are correctly inputted. If there are any errors, it will notify you. You will then need to go back to the template in Google Docs and correct the errors, redownload it, and reupload it to Greenhouse (after deleting the original one with mistakes). If all of the tokens are functioning properly, there will be green checkmarks, and you're ready to use this template for contracts!

1. Check all of the token/fields to ensure they are formatted correctly ({{ }}). For each of the fields with curly brackets ({} ) in the template on Google Drive, find and replace that field (including the curly brackets) with the corresponding Greenhouse tokens (including the

curly bracket). For example, {Contributor Name} in the Drive template will be replaced with {{CANDIDATENAME}}.

1. To delete a contract template from Greenhouse, click the three dots ... to the right of the template name, then click delete and confirm.

The SSOT for the contract templates are on this handbook page updated by Legal and People Connect. Any updates to contracts will be done there first, and then the talent acquisition team needs to be pinged to be made aware of the changes so they can update the corresponding Greenhouse template.

These steps are executed by the People Connect and Legal teams when contracts are being updated, but for reference, if any changes need to be made to the templates, these tasks can be referenced below:

1. Some fields that are not necessarily clear are the compensation fields as there are separate fields for the vacancy and for the candidate; we want the candidate fields for the contract, so in Greenhouse, the appropriate token for salary is {{CURRENCY}}, bonus is {{BONUSAMOUNT}}, and stock options is {{STOCKOPTIONS}}. Another field that is easily confused is the title; the {{JOBNAME}} is the name of the vacancy, which is not always necessarily the same as the title the candidate will have; to make sure it is always correct and includes the appropriate level and specialty for the candidate, use the token {{FULLTITLEINCLUDINGLEVELANDSPECIALTY}}.

1. The one exception to the curly bracket find and replace process is the Belgian contract. The fields that need to be edited are highlighted.

1. When removing optional clauses, take care that the paragraph / section numbering still makes sense.

1. Double check that each field that needs to be filled out is replaced with a Greenhouse token. Sometimes it is not always obvious, as the curly bracket might be regular brackets by mistake.

1. For each signature section, the following tokens must be on their own line in the document, with nothing else on the line: {{CANDIDATESIGNATURE}}, {{CANDIDATESIGNATUREDATE}}, {{COMPANYSIGNATURE}}, and {{COMPANYSIGNATUREDATE}}. Find each signature page, then hit enter to create the new line after the "Signature", "Name", "Title", and "Date" sections, then copy the corresponding Greenhouse tokens. These can be easy to miss, so double check each signature section has the appropriate Greenhouse tokens, each on their own line.

1. Most contracts will have various versions that need to be created, e.g. one that contains bonus language for variable bonus/commission, director/executive bonuses, or signing bonuses. Best practice is to create the contract containing all of the additional information and title it accordingly, then once you are done go to "File" in Google Docs and choose "Make a copy". Then remove the information as needed and rename the new document and continue the steps below. You can view other documents in the Greenhouse Templates folder for examples.

1. For contract templates with variable bonus/commission plans, replace all paragraphs with the token {{VARIABLEBONUSTYPEOFFERSECTION}} which will tell Greenhouse to automatically choose the correct bonus type based on the offer package created in Greenhouse.

1. To change or update a contract that has already been created and uploaded into Greenhouse, return to the corresponding Google Drive doc in the "Greenhouse Templates" folder, open the templates that need to be updated (there may be multiple that need to be changed, since there are different varieties of each contract to accommodate bonus structures, full-time/part-time, etc.), then update each accordingly. If you need to add new tokens to accommodate the change, be sure to follow step 5.3 in the above instructions. Once you have

finished making any updates, click "File" in Google Docs, then "Download as" and "Microsoft Word (.docx)". Then go back to the "Offer Templates" section in Greenhouse. Find the contract that you are replacing, copy the name of it so you can maintain consistency, then click the three dots ... to the right of the template name, then click delete and confirm. Then click "Upload New", paste the name of the template, and upload the new version. Click "Test" to validate that everything translated correctly (per step 9 above), and you are ready to use the new template.

## How to Send a Family Member Relationship Acknowledgment

Consistent with GitLab's policy governing Hiring Significant Others or Family Members, GitLab is committed to a policy of employment and advancement based on qualifications and merit and does not discriminate in favor of or in opposition to the employment of significant others or family members. Any new hire that has a family member relationship that is currently employed at GitLab must sign this acknowledgment along with the GitLab team member. This process is done in conjunction with sending out the contract.

1. If you have not been notified by the recruiter that there is a family relationship in play, there is now a field in the 'Offer Details' that will show whether a relationship exists. There should also be a Family Member tag on their profile. It, however, will not show who that family member is.

1. The Recruiter will post the name of the family member in the Private Notes within the Greenhouse profile. If not there, the CES will reach out to the recruiter to find out who the current GitLab team member is.

1. Once the family member is identified, you will send the Family Member Relationship Acknowledgment via DocuSign to the new hire as well as the GitLab team member for signing.

1. Drag and drop the Family Member Relationship Acknowledgement form on DocuSign.

1. Add recipients using the following order:

- 1 GitLab Team Member (needs to sign)
- 2 New Hire (needs to sign)
- 3 CES (receives a copy)

1. After all parties have signed, upload a copy into the new hire's Workday profile.

1. Upload Family Member Relationship Acknowledgement form into Workday.

- Sign into Workday
- Search the new hire's name
- Click on the Personal Link on left side of screen
- Select "Documents"
- Select "Add"
- Click "Select Files" and choose appropriate saved PDF
- Select "OK"
- Under "Document Category" select "Pre-hire documents & Changes"
- Under "Comment" write "Family Member Relationship Acknowledgement"
- Click "OK" to upload
- Repeat same steps above this time finding the GitLab team member in Workday

1. Lastly, please open a General People Team request in HelpLab asking them to upload the acknowledgement into the existing family members Workday profile. You will need to attach the acknowledgement in the request and provide them the team members name.

## How to Update a Start Date After the Contract is Signed

To change a start date after a GitLab entity contract has been signed and the new team member has been "hired" in GreenHouse the Candidate Experience Specialist will complete the following steps:

1. Once the recruiter notifies CES of the start date change, CES should send the 'Start Date Change Confirmation' template in Greenhouse under 'email the team' and ensure all necessary fields are filled in.

1. After receiving confirmation from both the Hiring Manager and the New Hire, save the confirmation email as a PDF file for upload into Workday.

1. Update GreenHouse:

- Offer Details
- Click the edit pencil next to the start date
- Select the new Start Date
- Save
- In the "Make a Note" section in Greenhouse state the old start date and the new state date, and tag the person on FP&A (typically the second approver) who approved the offer.
- Save

1. Update Entity Payroll Provider (Netherlands) of any changes to the start date via the email templates in Greenhouse.

1. Update the People Connect Team in Slack Workflow.

- Open private Slack channel peopleops-alerts-private
- Click Shortcuts button in the bottom left corner (looks like a lightning bolt)
- Click "New Start Date Workflow"
- Fill in Team Member Name with the New Hire Name
- Fill in Original Start Date (YYYY-MM-DD)
- Fill in New Start Date (YYYY-MM-DD)
- Fill in Reason For Change. This is to inform the People Connect Team of the reason for the new date (i.e. Public Holiday, New Hire request, Hiring Manager request, etc.).
- Optional: Fill in Any other changes.
- Click Submit

1. Upload start date change comms into Workday.

- Sign into Workday
- Search the new team member's name
- Click on the Personal Link on left side of screen
- Select "Documents"
- Select "Add"
- Click "Select Files" and choose appropriate saved PDF
- Select "OK"
- Under "Document Category" select "Pre-Hire Documents & Changes"
- Under "Comment" write "Start Date Change"
- Click "OK" to upload

To change a start date after a PEO contract has been signed and the new team member has been "hired" in GreenHouse the Candidate Experience Specialist will complete the following steps:

1. Confirm the start date via email with the new team member, the recruiter, the hiring manager, and the Candidate Experience Specialist.

1. Forward the email to the contact at the PEO.
1. The PEO will generate a new contract and send to the new team member.
  - The Candidate Experience Specialist will need to follow-up with the PEO contact to ensure the new contract is signed.
1. Update GreenHouse:
  - Offer Details
  - Click the edit pencil next to the start date
  - Select the new Start Date
  - Save
  - In the "Make a Note" section in Greenhouse state the old start date and the new state date
  - Save
1. Update the People Connect Team in Slack Workflow.
  - Open private Slack channel peopleops-alerts-private
  - Click Shortcuts button in the bottom left corner (looks like a lightning bolt)
  - Click "New Start Date      Workflow"
  - Fill in Team Member Name with the New Hire Name
  - Fill in Original Start Date (YYYY-MM-DD)
  - Fill in New Start Date (YYYY-MM-DD)
  - Fill in Reason For Change. This is to inform the People Connect Team of the reason for the new date (i.e. Public Holiday, New Hire request, Hiring Manager request, etc.).
1. Upload start date change comms into Workday.
  - Sign into Workday
  - Search the new team member's name
  - Click on the Personal Link on left side of screen
  - Select "Documents"
  - Select "Add"
  - Click "Select Files" and choose appropriate saved PDF
  - Select "OK"
  - Under "Document Category" select "Pre-Hire Documents & Changes"
  - Under "Comment" write "Start Date Change"
  - Click "Ok" to upload

#### How to Update a Start Date for an internal candidate after the Job Change Letter is Signed

To change a start date after a Job Change Letter (JCL) has been signed and the internal team member has been "hired" in GreenHouse, the Candidate Experience Specialist will complete the following steps:

1. Once the start date change request comes through, CES will advise the recruiter to collaborate with the hiring manager or PBP to raise a HelpLab ticket for the People Connect team to make these changes in Workday.  
The hiring manager or PBP should provide confirmation of the new start date via the HelpLab ticket.
1. CES can update GreenHouse:
  - Go to Offer Details
  - Click the edit pencil next to the start date
  - Select the new Start Date
  - Save
  - In the "Make a Note" section in Greenhouse, state the old start date and the new state date, and tag the person on FP&A (typically the second approver) who approved the offer.

- Save

## How to Update a Start Date After a French or Spain contract has been signed

Please follow the normal start date change process, thereafter, please follow the following steps:

1. Make a copy of this Start Date Amendment letter
1. Edit all the highlighted details and save the document on your desktop
1. In Docusign, create a new envelope and set the signing order as follows:
  - 1 - GitLab France or Spain Signatory (sign)
  - 2 - The candidate (sign)
  - 3 - Alessio Spaggiari (copy)
1. Use the TextExpander ·StartdateFS· in the body of the email in Docusign
1. Request the signatory in the contracts Slack Channel contracts-to-sign to sign the letter
1. Once the document has been signed, load it onto the candidate's profile in WorkDay

## How to Void a Contract Before a Candidate Signs

In rare cases, we may rescind our offer before a candidate signs the contract. Work with the Recruiter, Hiring Manager, People Business Partner, VP of Talent Acquisition, and Contract Employment Counsel on ensuring uniform communication. Once the candidate has been informed verbally and via email by the talent acquisition team, follow these steps:

1. Ensure the email is exported into the Activity Feed in Greenhouse.
1. Void the contract in DocuSign utilizing the same communication that was emailed.
1. Reject the candidate in Greenhouse. Be sure to select 'Reject and Don't Send Email.'

## How to Void a Contract when the candidate declines the offer and not marked as hired in the system

In cases where the candidate has declined the offer verbally or via email to the talent acquisition team or CES, follow these steps once the recruiter confirms it is okay to void the contract:

1. Go to the docusign portal, under the " waiting for others" tab, click on the candidate's name whose contract needs to be voided.
- 1.
