

elect Add a Category, and add the name of the category. In the category you can add additional attributes.

1. The only required category is Values, which should never be deleted. The values are listed in such a way to match how the values are listed on our contracts. You will always have this added for you because it is part of every job template.

Update the Interview Plan

1. Update the Interview Plan after the Kick-off Session.

1. Every opening should have an Get to Know Us stage. This is also known as Application Review by the Greenhouse Milestone.

1. Some vacancies have an Assessment as the second stage in the process.

- If your opening requires an assessment but there is no assessment stage already added, scroll to the bottom of the page and click Add a Stage.

- From there, you can either click Copy from another job? at the bottom of the pop-up and select an opening you know has an assessment. Click on Assessment, then Add.

- If you're not sure of another opening that has an assessment, you can scroll to the bottom of the pre-populated list and select Take Home Test, then Add.

- Once added, hover over the new stage and click the pencil next to the stage name and change the text from Take Home Test to Assessment. Then hover over the second Take Home Test on the right of the stage and change the text again.

- The assessment stage must be added using one of the two methods above, or it will not appear in our metrics. If you have any questions about this, please reach out to the Enablement team.

- Once your assessment stage is created, click Edit in the stage. You'll then want to select any attributes you want the grader of the assessment to focus on.

- Scroll down to Email to Candidate. This is where you'll include the actual assessment questions. The "From" should be {{MYEMAILADDRESS}}. In the Body, craft an email and insert your assessment questions. Below the body, make sure that the link for candidates to submit tests is ON. You can also add any attachments below that field if necessary.

- Scroll down to Grading Instructions and include any specific items you want your graders to look out for when they review the candidates' answers. You can copy this section over from another job if applicable.

- Under Custom Questions, be sure that there is either a Full Notes custom question or that you add one. To add it, simply click Add Custom Question, title it Full Notes, choose Text as the answer type, and click Add Custom Question. If there are any other specific questions you want your graders to answer when reviewing the assessment, feel free to add them here. They can be required or not, depending on your preference.

- Under Graders and Notifications, search for members of your team who can grade the assessments. You can select multiple people at this point, and when the assessments are actually sent out to candidates, each grader will appear and the person sending the assessment can delete extras so it is only sent to one person. You can also select who you want to be notified when the test is received; the test graders should absolutely be selected, and it's recommended for the recruiter to be notified as well. You can select any additional people to be notified as well if desired.

- Finally, under Additional Settings, check This interview requires scorecards to be submitted and leave unchecked Hide candidate name and details from grader.

- Then click Save.

1. The next stage is the Screening call stage, which should be standard across the organization. Click Edit on this stage, scroll to the bottom, and choose the recruiter as the

default interviewer and set interview duration to 30 minutes. It is important for this stage to be named the same across the organization for reporting purposes.

1. The next stage is Initial Interview, where the R&D candidates usually have their technical interview and all other departments usually have a hiring manager interview. Under this stage, you usually will only have one interview. They are typically called "Topic of interview, Interviewer, length of interview". For example: Technical Interview, Harry Potter (60 mins). This will help CES know what to schedule. Please note that this stage operates independently, so you cannot collect availability for a different stage's interviews while in this stage, and you cannot collect scorecards after you've left the stage. Never move a candidate out of this stage while they have a planned interview. Please see the stage below for additional guidelines.

1. The next stage is Team Interview, where the candidates will meet with peers and the hiring manager. Under this stage, you should see multiple interviews. They are typically called "Topic of interview, Interviewer, length of interview". For example: Technical Interview, Harry Potter (60 mins). This will help CES know what to schedule.

- The Team Interview stage should be laid out according to the order the interviews must take place.

- The interview plan should be defined during the intake call to include what attributes from the scorecard each interviewer is addressing as well as standard questions each interviewer should ask. You should always know the interview plan prior to beginning any candidate screens.

- The interview plan should be duplicated in the hiring process repo.

- The interview plan should also be defined on the job family page under the Hiring Process section.

1. For each interview, click Edit.

- Select the appropriate attributes to focus on in that interview.

- To the right of Interview Prep, choose how long the interview should take (e.g. 30 minutes, 45 minutes, 50 minutes, etc.).

- Include the purpose of the call and questions the interviewer should ask. You can copy this over from another opening if applicable

- Under Custom Questions, be sure that there is a Full Notes custom question in addition to the interview specific questions.

- To add additional questions, click Add Custom Question, title it Full Notes, choose Text as the answer type, and click Add Custom Question. Each interview topic should use consistent questions between candidates, so the Recruiter should collect those from interviewers and enter them before the interview process begins.

- The two Additional Settings should both be checked.

- Click Save.

1. For Go to Market (Sales and G&A) positions, the next stage is Debrief. This is a holding space where candidates should go after all scorecards have been submitted and interviews complete. We use this stage to measure the length of time it takes to make a decision after interviews are complete, and help Recruiters easily identify a candidate who should be kept warm.

1. The next stage is Background Check & References, where you will see Reference Check forms. Do not remove or change these forms without speaking to Enablement.

1. For R&D roles, the next stage is the Debrief stage. The interview within this stage is called Justification and should include three questions below. It is not an actual interview, but a space where hiring managers are able to explain their rationale for recommending an offer.

- In what specific way(s) does this candidate make the team better?

- What flags were raised during the interview process?
 - How do we intend on setting this candidate up for success?
1. The last stage is the Background Check and Offer stage and cannot be edited or removed.

On occasion, there may be additional or fewer stages than represented here, but these stages should be consistent as much as possible in order to maintain data integrity for reporting. The interviews within the stages can be adjusted as needed.

Update the Hiring Team

1. Update the Hiring Team after the Kick-off Session.
1. The Hiring Team is where you select who will be working on this opening and what access they should have.
 - Scroll to the Who's responsible for this job? to assign the Hiring Managers, Recruiter(s), Coordinator(s) and Sourcer(s).
 - Scroll to the Who can see this job? section to set permissions to the team members who will need access. Search for someone's name, click the pencil and select the correct access level from the drop-down.
 - Ensure that only necessary team members have Hiring Manager access. Filter the bottom section by Job Admin: Hiring Manager and ensure the only people with that level of access are Hiring Managers. Interviewers do not need advanced access and should be removed.

Publish the Job: Careers Page & LinkedIn

Once a job has been setup in Greenhouse and posted to the GitLab public job board it will be automatically posted to the Careers Page.

Choosing the correct location for your published job

The location field in Greenhouse will dictate where a particular job ends up being listed geographically.

There are set location options in Greenhouse to make this possible. Recruiters can choose from one of the following locations and that will ensure the job shows up on LinkedIn in the countries highlighted below

Location selection in Greenhouse	Countries where the associated job will post on LinkedIn
-----	-----
Remote	United States, Canada, United Kingdom, Netherlands, Ireland, Australia, India
Remote, Global	United States, Canada, United Kingdom, Netherlands, Australia, Ireland, India
Remote, Americas	United States, Canada, Mexico, Chile, Costa Rica
Remote, EMEA	United Kingdom, Netherlands, Germany, Ireland, South Africa, Belgium
Remote, Europe	United Kingdom, Netherlands, Germany, Ireland
Remote, APAC	Australia, New Zealand, South Korea, Singapore, Japan, Phillipines
Remote, Asia	Singapore, Phillipines, South Korea, Japan
Remote, US	United States
Remote, US-Southeast	Georgia, North Carolina, South Carolina, Florida, Virginia
Remote, Canada	Canada
Remote, Chile	Chile

Remote, Costa Rica	Costa Rica
Remote, North America	United States, Canada
Remote, France	France
Remote, India	India
Remote, Japan	Japan
Remote, Germany	Germany
Remote, Netherlands	Netherlands
Remote, New Zealand	New Zealand
Remote, Philippines	Philippines
Remote, Sweden	Sweden
Remote, United Kingdom	United Kingdom
Remote, Australia	Australia
Remote, Singapore	Singapore
Remote, Europe-North/Central	Austria, Latvia

If you have a job that needs to show up in a different subset of countries, you can choose the most appropriate location tag and manually adjust the countries where that job shows up by following the instructions under the "Publishing jobs to LinkedIn" section.

Preventing a job posting from appearing on LinkedIn

To prevent a job from ever being posted on LinkedIn, include the tag LI-DNI somewhere in the job description. This will indicate to the LinkedIn job wrapping system to ignore this job and it will not be posted on LinkedIn.

Adding additional job posting rules for LinkedIn postings

If you need additional rules set for a job post or set of posts on LinkedIn you can assign your own rules by following these steps.

Publishing jobs to LinkedIn

All jobs created in Greenhouse are setup to be automatically posted to LinkedIn using their job wrapping feature.

As mentioned in the "Choosing the correct location for your published job" section, the location field in Greenhouse dictates where a particular job ends up being published.

Common issues that may need to be addressed for a job to correctly publish on LinkedIn:

- If the option to Publish to Free Job Boards within Greenhouse is selected, this information will override the location information. You should unselect the option Publish to Free Job Boards.

Removing unwanted source code that will cause errors on LinkedIn

Prior to 2022 we used a more complex system to post jobs to various locations. If your job is showing up in places it should not, you may need to remove existing code from the source code in Greenhouse. To do this, follow these steps:

- Click on the < > on the menu bar in the description text box to open the source code
- Scroll to the bottom of the pop-up
- Remove the following HTML if it is present in the source code `<div><span style="font-size: xx-small;"><span style="color: white">Remote-XXX</span></span></div>` anywhere in the job ad
- Click "Ok", then "Save"

Taking ownership of your LinkedIn job posts as a GitLab recruiter

With some recent changes to the way greenhouse connects with LinkedIn, we're now able to give each of our recruiters access to edit their job posts on LinkedIn as needed. If you need to change the country or countries that a particular job shows up in or correct something about the listing you can do that by following these steps:

1. Each recruiter has a custom job wrapping tag assigned to them. This is typically a hashtag consisting of LI- followed by FirstNameInitial, then LastNameInitial, and a number. You can look up your hashtag by logging into LinkedIn Recruiter and following these instructions.

1. Each GitLab recruiter has 50 job slots assigned to them in LinkedIn. Jobs will randomly be assigned to those job slots until all 50 slots are utilized by tagged jobs.

1. Once you've identified your job tagging hashtag you simply add this to the bottom of the job setup in greenhouse.

1. With the custom recruiter hashtag added to the bottom of the job setup in greenhouse, these roles will then be assigned to correct recruiter on LinkedIn.

1. You can then view all of your published roles and make changes on LinkedIn by visiting the All Jobs page. Please note you must have an active LinkedIn Recruiter license with GitLab to access that page.

1. To make changes to your jobs on LinkedIn, you can click the "edit job" button.

If you run into problems, you can reach out to the talent-brand channel for support.

How jobs are categorized on our careers site job board

Greenhouse data is fed into our custom jobs page located at <https://about.gitlab.com/jobs/all-jobs/>.

Each department in Greenhouse has a specific department ID associated with it. Those department ID's can be found in our Greenhouse API feed.

Specific departments are coded to show up in various categories, this is defined in the openings.js file that can be found in the folder source / javascripts / openings.js.

When new departments are created, we will need to add those to the openings.js file so that they appear correctly on our job board.

If new categories are needed on the <https://about.gitlab.com/jobs/all-jobs/> job board we also need to update that index file.

Publishing jobs to Indeed and Glassdoor

Our jobs are now set up to automatically go to Indeed and Glassdoor and be posted as remote roles on both sites.

Recruiters should unselect or leave unselected the option in Greenhouse to "publish to free job boards" as this requires us to input city, state, and country data that overrides the remote job listing. There is an automation in place to automatically send jobs to Indeed and Glassdoor.

Publishing Vacancies on External Job Boards

Sometimes we need to post vacancies on specialist job boards to attract talent. The budget for this will come from the Department with the open Req, and department leaders will need to approve the necessary budget.

Creating an Evergreen Requisition

- After securing approval from Jess Dallmar, Follow the Req Creation process found [here](#). In addition, please be aware of these added steps:
 - Start the Req title with "Evergreen" followed by the name of the req (example Evergreen - Sales Development Representative)
 - Select "Evergreen" when selecting opening Type
 - Set the GHPID to "EVERGREEN". Both of the steps to label the job as an Evergreen help ensure they do not show up in some reporting.

Hiring a Candidate from an Evergreen Requisition

- It is important that before a candidate can be hired, there must be a separate, team-specific req that is tied to the approved headcount and lists the appropriate GHP ID required to hire a candidate. This approved, team-specific headcount req is not posted for applications.
- Once a candidate is identified in the Evergreen req and you have an approved, team-specific headcount req to move the candidate to, proceed with the following steps:
 - Once interviews are completed, BEFORE you move the candidate to the offer stage, click "Add, transfer, or remove candidates jobs."(NOTE: It is important that all interviews and scorecards are completed before you take any action to move a candidate from an Evergreen req. Interviews and open scorecards will not transfer once the candidate is moved.)
 - Select "Transfer to a Different Job"(NOTE: Please be sure to select "Transfer" as opposed to "Add")
 - Once a candidate is Transferred to the approved headcount req, you can move to offer in that req.

Sourcing Candidates for an Evergreen Req

- When sourcing passive candidates for an Evergreen Req, it is important that you add the prospect to the Evergreen req, as opposed to the approved, team-specific headcount req associated with the Evergreen req. Adding prospects to the Evergreen req will ensure that the prospect follows the appropriate interview process and that the appropriate data will be captured.

SECTION: hiring/talent-acquisition-framework/req-overview.md

Purpose: The Talent Acquisition Process Framework provides guidance on the hiring process for the talent acquisition team, hiring manager, and hiring team to efficiently hire top talent and create a positive candidate experience when it comes to hiring to a REQ.

Variations: It's understood that variations to the process may occur given particular situations that make sense to a specified hiring team or need.

The communicated Talent Acquisition Process Framework specifically focuses on approved REQs and candidates who are moving forward. It is understood that candidates who will be declined will be done so in a timely and respectful manner.

Search Team

- **Hiring Manager:** The Hiring Manager is the individual who is hiring for the particular REQ. In most situations, the person hired into this REQ will report into this individual.
- **Hiring Team:** The Hiring Team is a group of people the Hiring Manager asks to be involved in the interview process. The Hiring Team will assess candidates for a given req based on what is defined in the REQ Kick-off Issue and the Hiring Repo.
- **Recruiter:** The Recruiter is the main point of contact for the Hiring Manager, Hiring Team, and all candidates associated with the REQ. The Recruiter will directly source for prospects as well as partner with their Sourcer and Candidate Experience Specialist throughout the process. For more information on what role a Recruiter may play, please visit the Recruiter Job Family.
- **Candidate Experience Specialist (CES):** The CES partners with the Recruiter and Sourcer on all scheduling, background check, references and offer needs. For more information on what role a CES may play, please visit the CES Job Family.

Step 1: Identify hiring need

The Hiring Manager will determine the need for an opening and ensure it is an approved headcount (confirm with your finance business partner if you are not sure). Once confirmed, the Hiring Manager will notify the Talent Acquisition Manager/Lead specific to their org utilizing the steps provided on the req creation process.

Step 2: Create opening in Greenhouse

The Recruiter will create the opening in Greenhouse following the req creation guidelines. The assigned Recruiter, CES, and Sourcer should receive an email notification from Greenhouse when the req is approved.

Step 3: Complete kick-off session, agree on priority level, & complete a sourcing session

The kick-off session provides an opportunity to gain alignment on the requirements, hiring process and, perhaps most importantly, the expectations and responsibilities of the Recruiter, Sourcer, CES, Hiring Team, and Hiring Manager. Recruiters should come prepared for the kick-off session with insights - such as the size and geographic distribution of the talent pool - and should act as a talent advisor. Such information can be pulled from LinkedIn Talent Insights. To request this report, please submit an Issue here using the LinkedIn Talent Insights Request template.

The Recruiter will schedule the kick-off session and must open a REQ Kick-off Issue ahead of

the kick-off session so the Recruiter and Hiring Manager can contribute to it ahead of time. A link to the REQ Kick-off Issue should be included in the invite. The Recruiter should include the Hiring Manager, Internal Recruiter, and CES team on the kick-off session invite. Everyone involved in hiring for the REQ should be tagged into the issue so everyone understands the requirements, process, and individual accountabilities. To ensure that Recruiting has complete details regarding role, skillset, and interview panel, Hiring Managers must complete the Kick-Off Issue within 5 business days of a job being approved in Greenhouse and posted to the GitLab jobs page.

Recruiters may schedule a Sourcing Session after the kick-off session to help support identifying passive talent.

- The Recruiter will discuss with Hiring Manager who should participate in the Sourcing session.
- The Sourcing Session is focused on finding outbound candidates outside of our Talent Community.
- Our recommendation is to have at least the Hiring Manager and Interviewers participate in a Sourcing Session.
- The Sourcing Session should be scheduled within 5 business days after the kick-off call. (For the "evergreen" and "volume" roles we recommend having regular Sourcing Sessions every month.)
- All Sourcing sessions that include team members outside of the Talent Acquisition team should be set up for 30 minutes by default and could be done live or in an async way.
- We don't require a specific number of profiles to be added by every participant, however, the Recruiter should aim to identify 20 qualified profiles for the role.

Step 4: Identify & Engage Top Talent (Prospects)

4.1 - Source prospects

The Recruiter and Hiring Manager will partner in finding top talent using different sourcing avenues to find candidates, with LinkedIn and GitLab Talent Community being the most used and efficient ones. (It is possible that other Recruiters, and/or members of the CES Team will provide additional sourcing support.

4.2 - Add prospects to Greenhouse

All approached prospects should be added in Greenhouse as prospects. Greenhouse is the source of truth. Every sourced prospect should have the name of the person who sourced them in the Source field. If a Prospect was sourced by a Talent Acquisition Team Member from the Talent Community, that user will need to manually update the candidate's source information.

There are multiple ways to add the candidates, as follows:

- LinkedIn
- Greenhouse plugin
- Maildrop
- Enable LinkedIn Recruiter System Connect (RSC) so you can export candidates in one click as prospects

Keep in mind, a candidate could have the source, Applied through your website's jobs page or Jobs page on your website, if they signed-up to the Talent Community prior to the correct tracking link being associated with the in-take form. In that situation, please change their source to Talent Community.

If a candidate is moved from one requisition to another by a Talent Acquisition Team Member and the candidate did not apply recently, then please update their source to Greenhouse Sourcing.

How to add prospects to REQs:

- From Greenhouse Talent Community Video Walkthrough
- From LinkedIn Video Walkthrough

4.3 - Reach Out

Use our reach out templates or create your own messaging for reaching out to candidates

Sourcing Support

Anyone on the Recruitment Team can provide sourcing support for priority REQs. The focus should be P0 and P1 REQs. If you want to help with a specific REQ, please engage with the Recruiter directly to verify the REQ is in fact a priority. If the REQ is a priority, use the REQ kick-off Issue and the Hiring Repo to learn more about the REQ.

If you are helping a Recruiter source for an open REQ please verify the prospects you find are best qualified before reaching out to them. Share added prospects in bulk with the Recruiter vs. sending multiple one-off pings to the Recruiter. This can be done by sending the Recruiter a Greenhouse link to the candidate pool using filters (applied on DATE, source NAME, role title).

- The Recruiter has a 7 day SLA to review the prospects you share
 - If the prospect is not qualified, the Recruiter will select the option to "stop considering as a prospect"
 - If the prospect is qualified the Recruiter will ask you to engage the prospect
 - If the prospect responds and is NOT interested, select the option to "stop considering as a prospect" in Greenhouse
 - If the prospect does not respond before the REQ is filled, the Recruiter should reject all prospects in bulk and select the option to not send an email.
 - If the prospect responds with interest, the person who found them will select the option to "convert to candidate" in Greenhouse and will work to schedule a screen between the candidate and the Recruiter.

Assists

What is an Assist?

- An Assist is hiring credit given to a Recruiter who sourced or otherwise advanced a candidate through an interview process, and then handed off to another Recruiter resulting in a Hire.

Characteristics of an Assist:

- You have sourced a passive candidate and/or completed a Recruiter Screen with a candidate
- You have made an introduction between the candidate and the hiring Recruiter
- Candidate is Hired to GitLab

What is not an Assist?

- Applicants from other pipelines that have not yet been screened

How to record:

- Greenhouse:
 - Navigate to Job Setup -> Hiring Team
 - Locate Recruiter field -> add the Recruiter receiving the Assist after your own name -> save
 - Note: The person with Recruiting Tasks next to their name will be the Primary Recruiter.
- Record the Assist in your team's hiring tracker document (ie. PodSquad for Engineering)

FAQs:

</details>

<details><summary>Click to expand</summary>

What is the purpose of an Assist?

- Assists are a great way to maintain activity during times of reduced hiring in your own business unit. They also provide an avenue to be rewarded for sourcing and interview activity if your own role fills or closes.

Who is responsible for documenting the Assist?

- The Closing Recruiter is expected to document the Assist when closing the role in Greenhouse, once the candidate has signed and all other candidates have been dispositioned. As a best practice, keep a record of candidates that have been handed off to you to maintain data integrity and proper credit. Assisting Recruiters may also follow candidates in GH after the handoff to keep notified of their status.

Will my hiring goals be affected as a result of this change?

- No, hiring goals will remain the same. Any Assists will contribute to your overall performance.

Will the Recruiter responsible for hiring the candidate also get credit?

- Yes, both the Recruiter who made the introduction and the Recruiter who closed the candidate will receive credit for this hire. This is similar to a Sourcer/Recruiter dynamic.</details>

Reporting:

- Run: Greenhouse -> Reports -> Essentials Library -> Reports -> All Jobs Summary -> customize filter fields as desired -> Apply
- Result: Primary Recruiter = Closing Recruiter, Secondary Recruiter = Assist

Use Greenhouse to track prospects

- Use the Follow button to get timely updates on the candidate's status.
- Follow-up Reminders to resend the assessment, availability or for any other important updates.
- Tags: The most common tags used are "Location sourcing" and "diversity sourcing". You can also create your auto tags
- Greenhouse Candidates Filter: Similar to LinkedIn, Greenhouse has filters to track your pipeline. Under the candidates section, you can check any team members and your candidates tagged under a specific job, interview stage, location and so on. The most commonly used are Source, Profile details, Jobs and Location. Example - Filter Candidates by Custom Job Fields

For more information about Greenhouse and it's tips & tricks, please refer to this document

Step 5: Interview Stages

- When the prospect responds with interest and we have a matching requisition, select the option to "convert to candidate" in Greenhouse.

EEOC Questionnaire

- All candidates that are evaluated for a requisition in the United States or globally (including the United States) must be sent the EEOC Questionnaire. Candidates evaluated for requisitions outside of the United States will not be sent the EEOC Questionnaire. For requisitions that are posted externally, where a candidate would apply, the candidate will automatically be presented with the optional survey in the application. If a candidate comes from a source where they wouldn't have necessarily applied (e.g. via an Agency or were Sourced or Referred), then the candidate will receive an automated email from Greenhouse when they reach the Assessment milestone. In the case of the requisition not being posted externally, then the EEOC Questionnaire will need to be sent manually. Information about checking the status of that questionnaire and how-to send it can be found [here](#).

Screening

During the screening stage, it is important we capture the following information in Greenhouse and be able to pull data from this information when required. Please refer to the following check list when conducting a screening call:

1. Locality

- Instructions: Navigate to the Details tab in the candidate's profile > Navigate to the Additional Details section > Select the candidate's location in the Locality drop down menu. Please note this is mapped to the location factors as provided by the Total Rewards Team and may not be their specific location.

1. Do you have a significant other or family member that is currently a GitLab team member?

- Instructions: Navigate to the Details tab in the candidate's profile > Navigate to the Additional Details section > Select an option in the Family Relationship drop down menu. Select N/A if the candidate answers no. Add the 'family member' tag to their Greenhouse profile if there is a relationship to be aware of. The CES will need this to process a disclosure in conjunction with the contract at the time of offer.

1. Notice period (if the candidate is currently employed)

- Instructions: This information is captured in the Screening call Scorecard.

1. Salary expectations

- Instructions: This information is captured in the Screening call Scorecard as a Private Note.

If at any time during the interview process a candidate is declined due to compensation, you must add compensation information to the profile as this is used for reporting purposes. To do so, navigate to the Private tab in the candidate's profile > Navigate to the Other Details section > Fill out the Currency and Compensation Expectations fields.

1. It is the Recruiter's obligation to check the candidates right to work in the country they are applying to before going further in the process

- Instructions: This information is captured in the Screening call Scorecard. If a candidate requires any form of visa sponsorship, the Recruiter will let the candidate know that we are not able to move forward in the process per our Visa policy.

1. Are you subject to any employment agreements and/or post-employment restrictions with your current employer or a past employer?

- Instructions: This information is captured in the Screening call Scorecard.

Assessment

- As determined previously in the kick off session with the hiring manager, if there is an assessment involved in the initial interview process, send candidates the assessment through the provided Greenhouse template. The assessment grader is to be added to the appropriate location on the template email to ensure a notification will be sent to them once the applicant has completed the assessment.

Team Interview

- Once a screening call is completed and a candidate is still determined as top talent, team interviews will be scheduled. To do this, the recruiter will send an "Email the Team" template called CES Scheduling Request Form through Greenhouse to CES with specific communication on what interview(s) need to be scheduled. The CES team member will then schedule team interviews.
- The number of team interviews and order will vary from opening to opening. An example of what a Team Interview may look like is:
 - Round 1: 50 minute interview with Hiring Manager
 - If applicable, Round 2A: 25 minute interview with a Hiring Team member
 - If applicable, Round 2B: 25 minute interview with a Hiring Team member
 - If applicable, Round 3: 50 minute Executive Interview
- The Recruiter should confirm focus areas have been assigned to the interview team. This should have been taken care of in the REQ kick-off Issue
- Interviewing is only available to full time GitLab team members. Under no circumstances should a contractor or outside third party be invited to interview a candidate or to shadow an interview.
- The candidate should be provided clear expectations of the process, location of interviewers, timeline to hire, etc.
- When Team Interviews have completed, follow up with the hiring manager on next steps. Depending on the level of the role and outcome of interviews, next steps may include additional interviews including an executive interview or moving to reference checks.

If you have a candidate who's interested in multiple openings please follow these guidelines:

1. Inform the candidate they will need to go through a full interview process for each role and outline the time commitment that may entail (for example, if a candidate is in process for 2 roles they may need to make time for 10+ interviews).

1. There is no limit on the amount of roles a candidate can apply to but due to recruiter capacity we will only process 3 applications at a time, and will ask the candidate to choose the 3 that are highest priority.

1. We want to avoid a situation where we have competing offers from multiple teams within GitLab. In order to prevent this, there will be an added step after the final interview stage where the recruiter discusses with the candidate which role they're most interested in. Only one offer will be sent to the candidate after the final interviews.

Step 6: References

Once a Hiring Manager has determined they want to move forward with a candidate, the Recruiter will send the appropriate form to the candidate that is found in the Reference Check stage. If no forms are listed, please contact the Enablement team to get them added. The form will request their references' contact details as well as details that will help with an offer letter such as Legal name and background check.

If you would like the Hiring Manager to receive an email when the form has been received, you can go to the job setup for that req, select 'Forms' and edit the individual form you plan to send. The Recruiter, individual CES assigned to the candidate, and CES@gitlab.com will all automatically receive an email when the form is completed.

During this time, you will also submit your offer for approvals.

If the candidate for the position is internal, you should wait until you've presented an offer to merge the applicants' profiles. Please visit the Candidate Hygiene Instructions for details.

If there are any special circumstances regarding a known relocation for the candidate, this information should be included in the Compensation Details. Details should include originating location and salary, as well as the new location and new salary details to ensure it is communicated as part of the approval.

Step 7: Verbal Offer & Contract

Once references are completed or are in progress, and the offer has been approved, the Recruiter will move the candidate to offer stage to show that they are ready to present a verbal offer.

For details about these final stages, please visit the Job Offer Process page.

SECTION: hiring/talent-acquisition-framework/talent-community.md

Purpose: The Talent Acquisition Process Framework for Talent Pools provides guidance on the talent pool process so the talent acquisition team can efficiently build a talent bench before we need it.

Full Process

Step 1: Identify pooling needs

Anyone on the Recruitment Team can provide sourcing support for talent pools. The focus should be P3 and P4 Pools. (P0, P1, and P2 are reserved for active REQs) You can review active talent pools [here](#). You may engage with the Recruitment Leads/Managers to verify pool priorities. If the Pool is a priority, use the Hiring Repo to learn more about the Pool profile.

Step 2: Add prospects to talent pool(s) in Greenhouse CRM

Talent Acquisition Team members should add potential matches to the appropriate Talent Pool in Greenhouse and make use of the appropriate tags to ensure the ability to easily filter prospects for specific job profiles, locations, etc. By default, all new prospects will land in prospect stage "no stage specified".

You are encouraged to find top talent using a variety of different sourcing avenues, with LinkedIn and GitLab Talent Community being the most used and efficient ones.

While LinkedIn projects can be used, all approached prospects should be added in Greenhouse as prospects. Greenhouse is the source of truth. Every sourced prospect should have the name of the person who sourced them in the Source field. If a Prospect was sourced by a Talent Acquisition Team Member from the Talent Community, that user will need to manually update the candidate's source information.

There are multiple ways to add the candidates, as follows:

- LinkedIn
- Greenhouse plug-in
- Maildrop
- Enable LinkedIn Recruiter System Connect (RSC) so you can export candidates in one click as prospects

How to add prospects to Talent Pools:

- Sourcing Page Written Walkthrough
- From Greenhouse Talent Community Video Walkthrough
- From LinkedIn Video Walkthrough

Step 3: Qualify Prospects

If you are helping source for a talent pool please verify the prospects you find are best qualified before reaching out to them.

The assigned Recruiter(s) to the pool have a 7 day SLA to review prospects in prospect stage "no stage specified".

- If the prospect is not qualified, the Recruiter will select the option to "stop considering as prospect" and provide the talent acquisition team member who added the prospect with feedback on why we are not continuing.

- If the prospect is qualified, the assigned Recruiter will change the prospect stage to "Qualified" and will ask you to engage the prospect

Step 4: Reach Out to Prospects

Once added to the appropriate talent pool and marked as "Qualified", the Talent Acquisition Team member who found the prospect should engage the prospect and change the prospect stage to "Contacted". The message should clearly indicate that we do not have immediate opportunities, but are looking to start a proactive relationship.

Use our reach out templates or create your own messaging for reaching out to candidates

Reaching Out to Prospects in the Talent Community

If you are reaching out to a pool of prospects, please be sure to check for duplicate prospect profiles prior to sending out mass communications. Duplicate prospect profiles occur when candidates join the Talent Community on multiple occasions. Although duplicate prospect profiles are automatically merged by Greenhouse, if they are still being considered as a prospect for multiple submissions, they will be sent a communication for each of their submissions. Be sure to select Stop Considering as Prospect for any duplicate prospect profiles that are identified prior to sending out mass communications.

To send out a mass communication to the general Talent Community

1. In the "Pools & Stages" section of the Greenhouse CRM, navigate to "GitLab Prospects" pool and select the member icon listed next to the number of prospects in that pool. Keep in mind, to view this entire pool, one must have Admin permissions enabled.
1. Next, once all prospect applications are in view, navigate to the top right and select Bulk Actions > Select All > Edit Selected > Email.
1. Once the email window populates, select the CRM email template that you're intending to send.
1. Once a CRM email template is populated, select 'no-reply@gitlab.com' in the 'From' section.
1. Scroll to the bottom of the window and select the box to Update Prospect Pool and Stage
1. Ensure the Prospect Pool field is "GitLab Prospects"
1. Change the Prospect Stage field to the stage of the email you're actively sending.
1. Select Send.
1. Capture the number of emails sent on the CRM Metrics sheet.

Step 5: Convert Prospects to Nurture

If the prospect responds with interest, the person who found them will collect the prospects email address and will update the prospect stage in Greenhouse from "Contacted" to "Nurture".

It is required we capture the following information in Greenhouse for all prospects converted to the "Nurture" stage.

- [] Email Address
- [] Current Resume or PDF of LinkedIn Profile
- [] Locality
- Instructions: When making an assumption, default to a higher location factor. Reminder:

this needs to be updated during the screening call if our assumption was incorrect.

Keep in mind, Tags can take care of other key pieces of information we may want to include on a prospect's profile.

If the prospect wants to talk with someone at GitLab to learn more about future opportunities, the person who found them will send them the Calendly link of the assigned Recruiter for the Talent Pool so a brief 15-20 "career conversation" call can be set up. Not all prospects who get moved to "Nurture" have to complete a call.

The person who completes the "career conversation" call will add brief notes to the prospects profile in Greenhouse and add the tags "Check Activity Feed" and "Had Video Chat" to the prospect's profile. If the person who completes the "career conversation" call considers the prospect to be great overall match to GitLab they will add the "Top Candidate" tag as well. If the prospect should no longer be considered as a prospect after the call, select the option to "stop considering as a prospect".

Step 6: Nurture Prospects

Prospects whose prospect stage in Greenhouse is "Nurture" should receive a monthly message from GitLab.

SECTION: hiring/talent-acquisition-framework/triadprocess.md

The Triad process exists to connect the various functional representatives from the PBP group, Finance and Talent Acquisition together to ensure seamless collaboration, reporting and metrics tracking.

Roles and Responsibilities

This group meets once a week to audit the centralized headcount report for their area. This centralized report captures a weekly download from both Adaptive and Greenhouse. Separate sheets should be avoided in order to drive towards a single source of truth so that we can ensure transparency and predictable financial planning.

DRI: The relevant TA leader is the DRI in the meeting based on the fact that they are ultimately responsible for TA metrics and reporting for their group. TA leaders will drive the conversation to ensure three key outcomes (1) our planning and recruiting tools are aligned (2) our hiring forecasts are current and (3) all requisition changes are communicated and updated in Adaptive through sharing the Triad Interlock Weekly Audit Report.

Contributors: The remaining triad members (inclusive of both People Business Partners and Finance Business Partners) will be key contributors for the interlock meeting. Finance Business Partners are responsible for providing context where needed and ensuring Adaptive reflects all influenced inputs (ie: target start month, requisition changes, etc.). People Business Partners are responsible for collaborating with FP+A and TA to help enable the partnership with business leaders.

1. Finance Business Partners are responsible for providing context where needed and ensuring Adaptive reflects all influenced inputs (ie: target start dates, requisition changes, etc.).

1. People Business Partners (PBPs) are responsible for collaborating with FP&A and TA to help enable the partnership with business leaders. PBPs should be leading discussions around organizational design with their client groups, leveraging relevant inputs from TA and FP&A. Discussions around organizational design include the correct job level for roles given the job responsibilities and skills required. If a discussion around organizational design happens without a PBP present, TA and FP&A team members should collaborate with the PBP to ensure alignment with the outcome and the business strategy. PBPs should bring insights on changes or trends in the organization to the triad relevant to accurate reporting and headcount planning.

Outcomes and Goals

1. Collaborative Partnership throughout Quarter: A successful outcome of the Triad meeting is aligned reporting, and data hygiene between systems and G&A parties. We will continue to have one source of truth for requisition status, hiring plan and hire data information enabled by this collaborative effort between TA, FP&A and PBPs.

1. Headcount Validation Support: We will work together to ensure incremental improvement in how we support business readiness to hire as according to financial forecasts and planning. See Quarterly Headcount Validation below for more information on this process.

Timeline

Mondays - 12pm PT: FP&A and TA delegates refresh inputs to weekly report

- Weekly - Triad Reviews live hiring plan and makes any updates needed for Adaptive/GH in shared Interlock sheets by cost center - Sales/CRO, Marketing, G&A and R&D. Weekly snapshot is shared to Finance and People Senior Leadership.

TA Leadership Enablement for these sheets can be found [here](#).

Wednesdays - 5pm PT: TA Directors (DRIs) run audit and surface inconsistencies. Action where available and drive conversation at interlock meeting when needed.

Thursday - 5pm PT: FP&A Partners update Adaptive as needed for aligned division.

Friday: Weekly Snapshot sent to Senior Leadership.

Headcount Releases: All net new headcount is released in annual fiscal year plan. Backfill headcount will remain fluid throughout the quarter and all incremental net new headcount will be released through the RLoA Process that runs each quarter as according to financial quarterly and monthly cycles.

Quarterly Headcount Validation Exercise

Our headcount management is a fluid process through the fiscal year. Starting with our annual plan, we will have changes throughout the quarter based on backfill activity, top down incremental releases, and our quarterly RLoA process.

Once roles are released, FP&A partners collaborate with Talent Acquisition leadership to set a

forecasted start month. We use these forecasted start month to project our bottom line headcount projections through the course of the quarter, set hiring goals and manage headcount spend. Our goal is to come up with the most accurate forecast possible, and essential to doing that is business readiness to recruit on roles as we progress through our hiring plan.

To support business readiness, we are introducing a Quarterly Headcount Validation exercise in our G&A, Marketing and R&D teams. The goal of this exercise is two-fold: (1) provide a structured point in time review of open headcount for the next quarter ahead of recruiting kick-offs, (2) reallocate resources as business needs change with the understanding of financial impact and (3) to collect all the necessary information needed for Talent Acquisition to drive efficiency and kick off roles in a timely fashion.

Process Outline

| DRI | Process | Timing |

| --- | ----- | ----- |

| TA Directors | VALIDATION: Create point-in-time data pull of all upcoming quarter headcount for business review [VP level audience] to share asynchronously with leaders. Data source for the pull should be the working Interlock sheet by cost center that we work through with FP+A, PBPs and the business each week. PBPs to advise and partner with leaders to work through exercise of reviewing and validating: All details on open requisitions - hiring manager, title, grade, location and start date. Provide information on likelihood of internal vs. external placement | Month 2 of Quarter |

| TA Directors | STARTS REVIEW: Any start month adjustments rolled up to reviewed by TA and Finance | Month 2 of Quarter |

| FP&A Partners | ADJUSTMENT APPROVAL: Approve all requested updates to start dates for following quarter and upload into Adaptive/Interlock sheets. | Month 2 of Quarter |

| Hiring Managers | Hiring Managers with upcoming headcount needing new job families creation begin the process early to create necessary documentation ahead of recruiters being allocated to requisitions. | Month 2 of Quarter |

| TA Manager+ | ROLE ALLOCATION: Allocate roles to recruiters for all net new roles. Recruiters to kick-off with hiring managers| Last Month of Quarter|

| Recruiters | OPEN ROLES: All roles to be opened in Greenhouse | No later than First week of Quarter |

SECTION: it/_index.md

We are now part of the CorpSec Team

The IT End User Services (EUS) team is now part of CorpSec. This move allows us to better align ourselves with GitLab's security goals and provide faster and better support to all GitLab members.

Please visit our updated pages [here](#).

Of course, you can also still reach out to us in the ithelp Slack channel or via our email address it-help@gitlab.com.

<!-- Old IT Landing page below

> The IT Department is part of the Business Technology organization in the Finance division.

Mission

The IT Department provides or supports the following functions:

- Access requests and role-based access control (RBAC)
- Account password reset and lockout support
- Audit and compliance
- Change management
- Collaborate with Business Technology, People, and Security to implement and support organization-wide best practices for IT and Security related needs.
- Laptop endpoint management and security
- Laptop hardware procurement and repair support
- Laptop software support
- Identity and access management (IAM) and Single-Sign On (SSO)
- Infrastructure management and provisioning
- Onboarding provisioning and new hire support
- Offboarding deprovisioning and data migration
- Software development for internal IT automation
- Security support for Legal, People, and Engineering Security
- Tech stack compliance and oversight
- Team member support for organization-wide technologies with 24x5 timezone coverage

We also provide support for our cross-department system owners for our tech stack applications.

How Can We Help?

This handbook page focuses on how our department operates internally and the initiatives that we are working on.

Are you looking for help with your access requests, infrastructure, laptop, tech stack applications, etc? Please visit our IT Self Service Knowledge Base at /handbook/it.

Not finding what you're looking for? Please ask in the ithelp Slack channel.

Department Structure

IT Compliance

<details>

<summary markdown="span">IT Compliance</summary>

Handbook Page

The IT Compliance team works collaboratively with multiple functional teams throughout the GitLab organization. We partner with our Security and Legal teams to identify and manage privacy, data protection risks, and compliance requirements to help meet stakeholder expectations. We also partner with Management, Business Teams, and our Data Team to implement solutions.

</details>

IT Security Operations

<details>

<summary markdown="span">IT Security Operations</summary>

Handbook Page

The IT Security Operations team focuses on reducing the threat landscape and improving our security posture across our tech stack applications while ensuring privacy, data protection, and compliance framework requirements are met. We collaborate closely with the Security department that focuses on the broader scope of the GitLab product and our GitLab.com SaaS offering.

The best practices and policies for team members can be found on the security practices handbook page.

</details>

IT Engineering

Handbook Page

The IT Engineering sub-department is focused on designing, developing, and implementing automation efficiencies using software and systems to improve GitLab's business processes, software systems, and cloud infrastructure. Our team members have one or more specialties that they focus on.

<details>

<summary markdown="span">Access Management and Single-Sign On (SSO)</summary>

Handbook Page

The IT Engineering team implements Okta SSO for our tech stack applications. You can learn more on the Okta handbook page.

The IT Support team handles access requests for the tech stack applications that IT manages. All access requests are created in the same issue tracker project,

regardless of which System Owner is responsible for provisioning your user account.

The IT Development team also focuses on Identity and Access Management (IAM) and Role-Based Access Control (RBAC) automation. We are developing GitLab Access Manager (GLAM), a custom application that will replace access request issues and manual provisioning with a streamlined custom web UI and API integration with most of our tech stack applications for user and role provisioning.

</details>

<details>

<summary markdown="span">IT Development</summary>

Handbook Page

The IT Engineering Development team develops custom software applications, automation, APIs and integrations that support internal IT automation for business efficiency and processes managed by the IT department.

Many of our projects focus on providing self service access request provisioning to our tech stack applications and supporting IT Infrastructure services including the Demo Systems and Sandbox Cloud.

We are in the process of creating GitLab Access Manager (GLAM) to provide the next-generation of access request automation across most of our tech stack applications.

</details>

<details>

<summary markdown="span">IT Infrastructure</summary>

Handbook Page

Issue Tracker

The IT Infrastructure team manages AWS and GCP infrastructure that is not related to GitLab.com SaaS production infrastructure and provide managed infrastructure services for other departments, including most ephemeral sandbox infrastructure needs across the company. We also handle access requests for cloud infrastructure and DNS/domain name requests.

We collaborate with the Reliability Engineering (SRE) and Infrastructure Security teams to provide Infrastructure Shared Services for all AWS, Azure, and GCP related requests and support across the organization.

We also provide escalation engineering and triage support for the Security Incident Response Team ("SIRT") and Security Red Team when security anomalies, events, or incidents require AWS/GCP subject matter expertise.

Our focus is on organizational policy management, access request provisioning, and services that are outside of the Reliability Engineering scope of hosting the GitLab.com SaaS service, such as the provisioning of demo/sandbox/test infrastructure for team members.

The Demo Systems provide an always-on shared sandbox environment for demo and experimental use cases that aren't intended for or supported on GitLab.com and don't need dedicated infrastructure to be provisioned for your use case.

The GitLab Sandbox Cloud, powered by HackyStack, automates the provisioning of AWS accounts, AWS IAM users, GCP projects, and GCP users. This has allowed us to automate a large portion of our AWS and GCP access requests.

</details>

<details>

<summary markdown="span">Tech Stack Application Implementation and Support</summary>

Handbook Page

We provide implementation engineering and support for 3rd party tech stack applications that are managed by Business Technology and other non-engineering departments. We usually classify this work as "Engineering Operations" (EngOps).

</details>

IT Support

> This is also referred to as IT Helpdesk, Team Member Enablement, or Analyst team.

IT Self Service Knowledge Base

Handbook Page

The IT Support team focuses on providing helpdesk support for all of our team members globally with the technologies that are used across the entire organization. These include our collaboration tools (GitLab.com, Google Workspace, Slack, Zoom, etc.), security and compliance tools (1Password, Okta, Jamf, SentinelOne, etc.), laptops and hardware (MacBook Pros, Linux machines, etc.), and most software applications that run on MacOS.

Initiatives {initiatives}

OKRs {okrs}

You can see our OKRs in the Business Technology OKR issue tracker.

Initiative Codenames {initiative-codenames}

Our department manages technical projects with a lot of depth and/or breadth that may have a very long descriptive title. This is similar to a confidential project name, however usually has minimal usage outside the IT department and is only for internal initiatives (in collaboration with security teams) to quickly refer to a project as part of our team's morale since we get excited and rally around codenames.

All issues related to these projects exist in internal only projects by default due to security risks. Any public information is linked in the handbook.

We use animated movie and theme park references. We are careful to avoid trademarks and verify wider adoption in the industry.

| Initiative Codename | Description |
|---------------------|---|
| ----- ----- | |
| FastPass | Implementation of next-gen access request automation with GitLab Access Manager (GLAM) and migration of existing access request processes, baseline entitlements, and job role entitlements |
| Scare Floor | Offboarding Scripts and monitoring alerts |
| | |
| Teacups | RBAC architecture for Job Family and Department Group with Google Drive permissions |
| Hercules | SSO/SCIM migration for tech stack applications |
| | |
| Wristband | Separate IAM user accounts color-based classifications for contractors, team members, service accounts, elevated admin accounts, etc. |
