

erism has been proven to be an effective strategy for boosting engagement, improving employee retention, and strengthening relationships at work. Volunteering with GiveLab supports team members in fostering connections, building trust among one another and embodying our CREDIT values while positively impacting our communities.

Virtual Volunteering

Celebrate Earth Month by joining our 1-hour virtual event in support of Citizens of the Reef on 2025-04-09. This Australian organization combines people-power, AI, and science to protect marine ecosystems around the world threatened by climate change. Volunteers will analyze underwater photographs to identify priority coral reefs for conservation efforts. No experience required; event hosted by Goodera, a GitLab volunteer partner.

Local Volunteering

Connect with local team members by signing up for an environmental volunteer event in your area, and share the opportunity in your local Slack channel to organize a group outing.

This is a fun opportunity to spend the day outside while making a positive impact on the planet and building relationships with team members.

Team members who volunteer are eligible to expense local travel (mileage, train, taxi/rideshare), parking for the event, and meals during the event (up to \$25 limit). All expenses must comply with GitLab's Travel & Expense Policy.

If you're volunteering locally, share your volunteer efforts with us here so we can celebrate the collective impact of our team members.

Important Volunteering Notes

- When volunteering with GiveLab, volunteer activities must align with the GitLab Philanthropy Policy, including ensuring that the organization being supported is a registered 501c3 (or jurisdictional equivalent) Nonprofit Organizations in good standing that aligns with our Values.
- All participation is voluntary and should not interfere with work commitments
- Time off for volunteering must align with GitLab's PTO policy
- International travel is not permitted for this program
- To request volunteer time off, follow the Paid Time Off procedures in our handbook

About GitLab Climate Action

GitLab is committed to doing our part to minimize our environmental footprint, including working to reduce greenhouse gas (GHG) emissions associated with our operations. GitLab's stakeholders, including customers, investors, regulators, and team members expect the company to operate sustainably and to do our part to reduce our environmental footprint.

Many of GitLab's customers have GHG reduction targets and as a vendor, GitLab's carbon emissions contribute to our customers' emissions footprints. To remain easy to transact with, GitLab needs to meet the expectations of our customers by taking action on climate change.

Read more about the four pillars which guide our Climate Action strategy [here](#).

Questions or Contributions

For more information or to share ideas on about GitLab's Earth Month, please reach out in the sustainability-esg or givelab Slack channel, or contact the Sustainability Team.

SECTION: legal/esg/team-member-sustainability-guide/_index.md

Please contribute your ideas to this guide [here](#).

Introduction

Welcome to the first iteration of GitLab's Team Member Sustainability Guide. As a fully remote workforce without daily commutes or physical offices, we don't have the typical environmental footprint that many other companies have, but that doesn't mean we don't have an environmental impact.

Climate Action and Greenhouse Gas (GHG) Emissions are key focus areas identified in GitLab's ESG Materiality Assessment. Through our annual GHG inventory, we measure four emissions sources from our business; purchased goods and services (our suppliers), cloud services, business travel, investments, and emissions associated with remote work.

Working remotely comes with its own sustainability challenges and opportunities. For example, our laptops, monitors and lamps use energy that generates carbon emissions. The meals we eat during our work day generate waste that may end up in a landfill. The purpose of this guide is to provide actionable steps for team members to take at home to reduce individual environmental impact.

We know that part of doing responsible business means minimizing our environmental footprint. That's why we're committed to analyzing and publishing our emissions along with any steps we're taking to reduce our footprint in our annual ESG report.

We are a global team, and we know there are sustainability initiatives and offerings specific to where you live. Many of you have developed sustainable practices at home, and we would love to know more about them! Please contribute here and help us crowdsource ideas for other team members in your area! Please share any feedback or questions in the issue or in slack Sustainability-ESG.

Electronics

1. Unplug devices at the end of the day. You can save anywhere between \$100 and \$200 each year by unplugging devices not in use.¹
2. Use sleep mode instead of a screensaver. Screensavers might actually use more energy than

not using one.²

3. Repair devices instead of replacing. ifixit provides manuals for how to fix a variety of electronic and other household items. For GitLab laptop repairs, follow the steps listed in the handbook.

Lighting

1. Switch to LED lights. LED lights use up to 90% less energy and last up to 25 times longer than incandescent bulbs.³

2. Take advantage of daylight - if you can, place your desk near a window and turn off overhead lights as much as possible during your work day.

Heating & Cooling

1. Conduct an energy audit - hire a professional or DIY. Energy audits are helpful for better understanding where your home is losing energy and where you should prioritize upgrades/fixes. In the U.S., take advantage of the new Home Energy Audit Tax Credit, introduced as part of the Inflation Reduction Act. Check out the full list of energy efficiency home improvements that qualify for a tax credit in the U.S. If you aren't based in the U.S., check to see if your municipality offers financial incentives/support related to energy efficiency improvements in your home.

2. Replace traditional heating systems, such as furnaces, boilers and baseboards with a heat pump. Heat pumps are 2-3x more efficient than traditional heating systems.⁴

3. Turn your thermostat down. You can save as much as 10% a year on heating and cooling by simply turning your thermostat back 7°-10°F for 8 hours a day from its normal setting.⁵

4. Insulate your home. A leaky home is expensive! You can cut your utility bills by \$500 - \$1,000 just by sealing leaky windows and doors.⁶ One easy way to do this is to use weather strips to seal windows and doors to prevent energy leakage. Check out this guide from Energy Savings Trust for more information on other ways to insulate your home.

5. Consider switching to a tankless water heater. Consult a professional to understand your options for a tankless water heater based on your house size, hot water needs, and energy source. ⁷

Waste

1. Reuse. Before throwing something away, consider if you can reuse it at least one more time.

2. Reduce single use plastics. For example, opt for a reusable water bottle instead of a plastic water bottle. Bring a reusable bag to the grocery store. Swap out plastic food storage bags for reusable ones, like these.

3. Reduce food waste. When food waste ends up in landfills and rots, it generates methane, a greenhouse gas 28x more potent than carbon dioxide.⁸

4. Compost your food waste instead of throwing it away. Use a countertop compost bin to make it easy to collect food scraps. Take advantage of curbside composting programs if your municipality offers one. If not, research options for compost pick up in your area (this will likely include a fee) or check to see if there's a local composting facility where you can drop off your food scraps. Alternatively, set up your own composting system at home. If you don't have access to space for traditional composting, explore alternatives like vermiculture.

5. Recycle. Recycling reduces the amount of waste sent to landfills and reduces greenhouse gas emissions generated by landfill. Before throwing something away, check to see if it's

recyclable. Take advantage of curbside recycling programs if your municipality offers one. If not, research options for recycling curbside pick up in your area or check to see if there's a local recycling facility where you can drop off your recyclable materials.

Water

1. Reduce your water consumption by making small changes to your daily routine, such as turning off the tap while you brush your teeth or shortening your shower.
2. Upgrade to low flow appliances, such as aerated shower heads and dual-flush toilets.

Food

1. Choose plant-based foods to reduce your meat and dairy consumption. Animal-based foods have a significantly higher carbon footprint than plant-based foods. For example, producing one kilogram of beef emits 60 kilograms of greenhouse gasses. In contrast, peas emit just 1 kilogram per kilogram produced.⁹ Check out this visualization that shows GHG emissions from 29 food products · from beef at the top to nuts at the bottom.

Transportation

1. Use public transit instead of driving or using ride hailing services like Uber or Lyft. If you're part of the GitLab, Inc. entity, check out Commuter Benefits to learn how to use pre-tax dollars for transit passes.
2. For inter-city trips, use train or bus transportation instead of flying in order to reduce carbon emissions.¹⁰

Renewable Energy

1. Consider installing solar panels on your roof. Check out this Step by Step Guide for homeowners considering solar. Assess your roof's solar potential using Project Sunroof. Don't own a home? Here are some ideas for how renters can benefit from solar power.
2. Check to see if your local utility offers a 'green power' or 'green tariffs' program. Many utilities make it easy for customers to support green energy. Here's a U.S. example for reference: Seattle City Light Green Up Program.

Calculate Your Personal Carbon Footprint

1. If you're curious about your personal carbon footprint, check out The Nature Conservancy's carbon footprint calculator.

Get Involved

1. Join the Great Global Cleanup and find a volunteer event near you.
2. Take a look at EarthDay.org's individual action toolkit.

SECTION: legal/ethics-compliance-program/_index.md

Mission

GitLab Inc. (collectively with its subsidiaries, "GitLab", "we", "our") is committed to lawful and ethical behavior in all we do and expects members of GitLab's Board of Directors ("Board") and officers, employees, and contractors (collectively, "Team Members") to conduct business ethically, with integrity, and in accordance with all applicable laws and regulations.

GitLab's culture is based on our VALUES, which are reflected in and reinforced by our Code of Business Conduct and Ethics and various supporting policies, such as our Anti-Fraud Policy and Anti-Retaliation Policy (collectively, "Compliance Standards"). Because GitLab is made up of individuals who are aligned with our VALUES and who are accountable to our customers, shareholders, and each other, we have designed this Ethics and Compliance Program (the "Program") as an operational framework for our team members. This Program is dedicated to (among other things) making sure GitLab's Compliance Standards are current, complete, and readily accessible. Team Members are educated on these Compliance Standards, through continuous training, awareness campaigns, required annual reviews and acknowledgments, and additional resources, including compliance-legal.

While compliance is certainly a company-wide effort, it is as importantly the individual responsibility of each and every GitLab team member. By embracing our Compliance Standards, together we will maintain our good standing and instill our customers and the wider community with confidence when they place their trust in GitLab.

Compliance Standards, Guidelines & Other Resources

Policies

Listed below are GitLab's policies and procedures, as well as guidance and other resources. This list will be updated, as needed, in order for GitLab to address the constantly evolving worldwide regulatory landscape, and partner with GitLab customers to allow them to meet their own regulatory requirements.

- Acceptable Use Policy
- Anti-Corruption Policy
- Anti-Fraud Policy
- Anti-Harassment Policy
- Anti-Retaliation Policy
- Authorization Matrix
- Code of Business Conduct and Ethics
- Corporate Communication Policy
- Employee Privacy Policy
- Entity-Specific Employment Policies
- Events Code of Conduct
- Gifts & Entertainment, Political Activities & Contributions, and Charitable Contributions
- GitLab Federal Code of Ethics
- Insider Trading Policy
- Internal Acceptable Use Policy
- Partner Code of Ethics
- Privacy Statement
- Record Retention Policy
- Record Retention and Disposal Standards
- Related Party Transactions
- SAFE Framework
- Social Media Policy
- Third-Party Risk Management Process
- UK Modern Slavery Act Transparency Statement
- Whistleblower Policies

Policy Translations

Certain policies are now available here in Dutch, French, and German.

Guidelines and Other Resources

- Conflicts of Interest Disclosure Form
- Gifts & Entertainment Inquiry Form
- AI Ethics Principles for Product Development
- Data Classification Standards
- Designated Insider Pre-Clearance Process and FAQs
- External Materials Compliance Tips
- Insider Trading Policy FAQs
- IP Public Materials Guidelines
- GitLab Federal Collaboration Guidelines
- Learning Content Accessibility Guidelines
- Materials Legal Review Process
- Trade Controls relating to Russia, Belarus, and Ukraine - Sales
- FAQ

Policy Change Management

We anticipate the need for policy amendments and new policies and procedures, as GitLab continues to respond to the ever-evolving laws and regulations that our policies are designed to address. Team members who wish to implement new policies and/or amendments to policies identified here must document all necessary approvals (including DRI and Board, when necessary) using this issue template prior to that policy's implementation. Using this process allows GitLab to drive consistency across our policies and procedures and maintain approvals in one central location.

Training

Compliance training is critical to GitLab's success and the success of its team members. Effective training helps team members achieve a more meaningful understanding of what our Compliance Standards require and puts them in a better position to recognize and escalate (as required) unethical and unlawful behavior when they see it.

All team members are required, as part of their onboarding, to complete compliance training within 30 days of starting at GitLab. This training addresses key compliance topics such as anti-harassment, security, data privacy, and insider training, and must read and acknowledge GitLab's Code of Business Conduct and Ethics. Laws and regulations are constantly evolving, which is why GitLab also provides annual and refresher training as appropriate. Currently, training is provided through NavexEngage and Level Up. GitLab's General Security Awareness Training is provided through Proof Point. Additional information about Navex and the courses available there can be found [here](#). The refresher training schedule for the current year is reflected in the GitLab Team Member Calendar.

We recognize that some team members are subject to additional or heightened compliance requirements as a result of their roles and responsibilities or the geographies in which they operate. Depending on these factors, those team members may receive additional training. As an example, team members employed by or working closely with GitLab Federal, our United States public sector entity, must complete a training course titled Government Contracting: Gifts, Gratuities, and Bribery.

Reporting

We recognize that unlawful and unethical behavior could happen despite our best efforts. We encourage and require team members to promptly report unlawful and unethical behavior, potential or suspected violations of GitLab's Code of Business Conduct and Ethics or supporting policies, and any other violations described in GitLab's Whistleblower Policy or any applicable country-specific whistleblower policy, and any concerns involving team member relations. GitLab offers several different ways for team members to report these concerns:

Reporting Misconduct (Anonymously OR Non-Anonymously)

Team members should use EthicsPoint to report unethical and unlawful behavior, and violations of the Business Code of Conduct and Ethics and policies in support of the Code. Reports can be anonymous or non-anonymous. Reports can be made using the platform online or by using EthicsPoint's hotline, which is available 24 hours a day, 365 days a year. The toll-free hotline number for the USA is 1-833-756-0853. Direct access phone numbers for other locations

can be viewed on the EthicsPoint website by using the country location drop-down menu. In the alternative, misconduct may be reported in any manner described in GitLab's Whistleblower Policy or applicable country-specific whistleblower policies.

Reporting Workplace Harassment (Non-Anonymous Only)

Team members who are comfortable doing so may report workplace harassment concerns, non-anonymously, using GitLab's Harassment Complaint Form. Simply complete and send it to our Team Member Relations Specialists at <teammemberrelations@gitlab.com>. Read our Anti-Harassment Policy to understand the different shapes that harassment may take and to understand the alternative reporting avenues that are available, such as GitLab's Chief People Officer, GitLab's Chief Legal Officer, the Team Member Relations Team, or a People Business Partner.

Reporting Concerns about Team Member Relations (Anonymously OR Non-Anonymously)

Team members who would like to anonymously report workplace harassment concerns or who would like to, anonymously or non-anonymously, report other concerns involving team member relations should use Lighthouse Services. Topics may vary but could include, for example, wrongful discharge or disciplinary action, discrimination, alcohol and substance abuse, or threats.

Reports can be made using the platform or through the following avenues, which are available 24 hours a day, 365 days a year.

- A toll-free hotline number for the USA and Canada: 833-480-0010.
- Direct access phone numbers for other locations, available [here](#).
- E-mail: <reports@lighthouse-services.com> (must include company name with report)
- Fax: (215) 689-3885 (must include company name with report)

Team members may, in the alternative, report concerns about team member relations, including violations of GitLab's Anti-Harassment Policy, to GitLab's Chief Legal Officer, Chief People Officer, the Team Member Relations Team, or a Business People Partner.

Manager Roles and Responsibilities

Team members should report misconduct, workplace harassment, and other concerns about team member relations to their manager if they are comfortable doing so. Managers who receive a report (verbal or written) or otherwise become aware of misconduct, workplace harassment, or other concerns, must ensure that the misconduct is immediately reported to the relevant People Business Partner or through one of the reporting avenues described above.

Investigations

GitLab takes allegations of misconduct very seriously and want an opportunity to resolve them. Reports submitted through any avenue described above will be reviewed promptly and addressed in accordance with GitLab's Whistleblower Policy and Anti-Retaliation Policy. Potential instances of non-compliance are taken seriously, and unethical behavior and/or violations of GitLab policies may lead to termination of employment.

Ethics and Compliance Program Charter

Purpose

The Ethics and Compliance Program is intended to help GitLab team members achieve and maintain a culture of compliance with GitLab's Code of Business Conduct and Ethics and supporting policies, and all applicable laws and regulations. To accomplish that goal, the Program strives to:

- Promote a culture of compliance and ethical decision-making, consistent with GitLab's values;
- Ensure that Compliance Standards and avenues for reporting potential instances of non-compliance are widely available to team members and are effectively communicated through training and awareness programs; and,
- Encourage and facilitate appropriate risk assessment, due diligence, and remediation, to deter, detect, and address unlawful, unethical, and discriminatory conduct.

Program Governance and Responsibilities

Board of Directors

The GitLab Inc.'s Board of Directors, through its Audit Committee, is responsible for administering the Code of Conduct and for addressing material issues and risks concerning Compliance Standards and applicable laws and regulations.

Chief Legal Officer

The Audit Committee has delegated day-to-day responsibility for administering and interpreting the Code of Conduct to GitLab's Chief Legal Officer ("CLO"). The CLO shall reasonably administer the Program and, among other things, will:

- Allocate resources to the Program and delegate authority to its key stakeholders as needed to implement, maintain, and strengthen the Program;
- Ensure that reasonable steps are taken to respond to potentially unlawful behavior and criminal misconduct;
- Ensure that GitLab's Compliance Standards are reasonably designed to prevent and detect misconduct, are widely available and accessible to team members, and are regularly assessed for potential updates and improvements;
- Maintain awareness and encourage the use of mechanisms for reporting potential instances of non-compliance;
- Collaborate with GitLab's Internal Audit team and key stakeholders to ensure that the Program is implemented across GitLab, is monitored and assessed periodically for effectiveness, and that findings and observations are used to promote continuous improvement; and,
- Consider recommendations to the Program itself or which are proposed in response to significant risk assessment or audit findings, instances of non-compliance with laws and regulations, or weaknesses in the Program, and shall advise the Audit Committee as needed.

SECTION: legal/ethics-compliance-program/ai-ethics-principles.md

GitLab is dedicated to integrating Artificial Intelligence ("AI") throughout the software development lifecycle by responsibly incorporating AI into our comprehensive DevSecOps

platform. We believe that AI features will further our Efficiency value and continue to bring significant benefits and opportunities to re-shape the way we, and our customers, work. However, we also recognize that, without guardrails, AI features may give rise to ethical concerns.

We created these principles to guide our decision making as we continue to build AI features into GitLab and to ensure that these features properly embody our core CREDIT values.

We're publishing these principles to stay true to our core Transparency value. We're continuously working to build and improve our AI features, so, as with AI itself, these principles may change based on what we learn over time. We will continue to review these principles and iterate as necessary to reflect the best practices in responsible development.

1. Avoid unfair bias

Diversity, Inclusion, & Belonging ("DIB") is fundamental to the success of GitLab and is one of our core CREDIT values. We include DIB in every way possible and in all that we do. This handbook page explains how GitLab thinks about DIB and what measures have been taken so far to foster DIB at GitLab.

DIB is a critical consideration when thinking about ethical AI since there is evidence that AI systems may perpetuate human and societal biases by recommending and driving decisions based on race, gender, biological sex, and other bases. This bias can be introduced in many ways:

- Training data for machine learning models may reflect societal or historical inequities;
- Training data may contain statistical correlations that are undesirable or even illegal;
- The way · consciously or unconsciously · in which humans select data; or,
- The way · consciously or unconsciously · in which humans apply algorithms.

To avoid biased outcomes, GitLab should aim to continue to prioritize DIB when building features powered by AI systems and:

- Incorporate DIB into the development process whenever and wherever possible;
- Question whether the AI system is prone to unfair bias and, specifically, whether the AI system has already exhibited instances of bias or skewed data;
- Test for bias in AI systems before the deployment of AI features; and
- Refuse to deploy AI features if bias is apparent.

2. Safeguard against security risks

GitLab is a DevSecOps platform · we aim to integrate security throughout the software development lifecycle. AI brings many security benefits but can also create security risks, like data breaches, model poisoning, and other attacks. In order to mitigate these risks in our AI features, we should strive to:

- Be aware of the latest security trends and best practices;
- Be mindful that some of our AI security features may require human supervision;
- Monitor our AI features for unusual patterns of behavior that might signal security breaches; and,
- Adhere to GitLab's testing and deployment standards to ensure that our AI features are robust

and will withstand adversarial threats.

3. Prevent potentially harmful uses

Results are one of our core CREDIT values and we are focused on delivering AI features that improve the results that both GitLab and our customers achieve. We should aim to do this responsibly and without causing overall harm.

We've discussed some examples of the harm AI features can do above, but we know there are still many other AI-related harms · including those that have yet to be identified · that we should strive to address as well. Harm can arise in many different circumstances and includes, but isn't limited to AI-generated output that promotes illegal activity, is misleading or deceptive, or is harassing, violent, or hateful. Our Acceptable Use Policy provides further examples on prohibited, harmful uses of our AI features.

We should strive to grow our AI features responsibly and consider whether or how our AI features could be misused or abused by others. We should aim to carefully evaluate the possible consequences of our AI features, and refrain from launching features that are likely to cause or allow others to cause overall harm.

4. Consider what data AI features use and how they use it

We should aim to carefully evaluate the data that the AI features we build use by considering:

- What data is being used;
- The purposes for which we're using this data; and
- Who owns the intellectual property and other rights in the data.

We should also ensure that our AI features' processing of users' personal data is in line with the GitLab Privacy Statement, including our commitment to processing data only in approved locations and for limited purposes.

5. Hold ourselves accountable

GitLab believes in our core Iteration value and is dedicated to continuous improvement. AI systems are developing rapidly and so will the ways in which we leverage AI systems and mitigate related risks. GitLab's development of AI features are conducted by team members with the relevant expertise in the technology, and its benefits and risks. We believe it is important to ensure our AI features are subject to human review and intervention.

We also strongly believe in our core Collaboration value, and it is GitLab's mission to make it so that everyone can contribute. We welcome feedback from GitLab users and members of the public about our externally available AI features. We are committed to ensuring that feedback mechanisms are clear and consistent. We should also strive to share our AI ethics-related findings with others in the industry where possible.

We should aim to remain self-critical and continue to educate ourselves on AI developments. The AI landscape is changing rapidly, and we should work to ensure that these principles are continuously updated to reflect the industry's latest risks and best practices.

SECTION: legal/ethics-compliance-program/learning-content-accessibility-guidelines.md

Overview

GitLab is committed to compliance with all applicable laws and regulations, including, the Americans with Disabilities Act of 1990. We believe that our Diversity, Inclusion, and Belonging value provides the foundation for our commitment to create an environment that enables everyone to contribute to and co-create the software that powers our world. To support these beliefs and commitments, GitLab encourages team members to make learning and development experiences as accessible as possible to the entire GitLab community. In order to facilitate this, GitLab aims to conform to level AA of the World Wide Web Consortium (·W3C·) Web Content Accessibility Guidelines (·WCAG·) 2.2, which is the most widely accepted set of recommendations for making web content more accessible.

GitLab's Ethics and Compliance Program and the Accessibility Working Group have collaborated to create the following guidelines to help GitLab team members create accessible web learning experiences (whether internal or external) training platforms used by GitLab, in keeping with the WCAG recommendations. To do this, the guidelines outline the different types of content you are likely to use or design, the potential challenges that each can create for your user, and what you can do to prevent or mitigate those challenges.

These guidelines are meant to be a starting point but throughout the guidelines links are provided to additional resources so that you can explore the WCAG recommendations in more detail and achieve a deeper understanding of what compliance may entail. Any questions about these guidelines or the compliance that it promotes may be directed to The Ethics and Compliance team via the ethicscompliance Slack channel. Separately, please refer to the GitLab Content Style Guide for guidance on brand voice, tone, grammar, and punctuation. Any questions about the Content Style Guide may be directed to the Marketing team via the brand Slack channel.

An accessible experience

What does it mean to provide a more accessible learning experience? Simply put, this means that no user's access to content and functionality is limited in any consequential way. This may involve making content available in multiple forms and may involve considering the different ways that users consume and interact with course content.

Platform

Before we discuss content, let's talk about learning and development platforms. A learning and development platform is the delivery method for course materials and contains the functionality to navigate, read, watch, and interact with the content. A platform that isn't accessible or lacks certain features is going to create a barrier to some users and may prevent them from fully engaging with the course or absorbing the information that it is meant to convey.

GitLab's primary learning management system, LevelUp (referred to as ·GitLab University· externally), is from Thought Industries. Before you consider using a different learning and development platform, do some research to understand whether that platform provides an

accessible learning experience. Many companies will also provide an accessibility statement of compliance that outlines their intentions and ways to remedy issues. Some even go further by providing a Voluntary Product Accessibility Template (VPAT®) that explains how the related technology satisfies accessibility requirements.

Plain language

Communicating, in written or verbal form, in plain language, can be an important element of an accessible experience. Consistent use of plain language benefits every form of media and all users.

From plainlanguage.gov:

> Plain language (also called plain writing or plain English) is communication your audience can understand the first time they read or hear it.

Considerations

People absorb information differently, so we must recognize that language that is plain to one set of readers may not be plain to others. We can, however, consider the following themes and attributes that are common to plain language:

- The language is familiar to all users and written at an appropriate comprehension level;
- Explanations or definitions are provided for technical terms, unusual words, or abbreviations;
- Content is edited to address grammar and spelling errors;
- Headings follow a logical order (using heading levels 1-6) to create a scannable and structured outline for sighted and screen reader users;
- Headings clearly communicate what users can expect in the section that proceeds; and
- Calls to action are clear and unambiguous. For example, ·Discover more about pipelines· instead of ·Read more·.

Written material is in plain language if your audience can:

- Find what they need;
- Understand what they find; and
- Use what they find to meet their needs.

Guidelines

While much of the success criteria from WCAG 2.2 applies to content in some form, the following are most related to the concept of plain language and the presentation of text:

- 1.3.1 Info and Relationships (Level A): Information, structure, and relationships conveyed through presentation can be programmatically determined or are available in text.
- 1.3.2 Meaningful Sequence (Level A): When the sequence in which content is presented affects its meaning, a correct reading sequence can be programmatically determined.
- 1.3.3 Sensory Characteristics (Level A): Instructions provided for understanding and operating content do not rely solely on sensory characteristics of components such as shape, color, size, visual location, orientation, or sound.

- 1.3.5 Identify Input Purpose (Level AA): The purpose of each input field collecting information about the user can be programmatically determined under the appropriate circumstances.
- 1.4.3 Contrast (Minimum) (Level AA): The visual presentation of text and images of text has a contrast ratio of at least 4.5:1., unless an exception described in the criterion applies.
- 1.4.4 Resize Text (Level AA): Except for captions and images of text, text can be resized without assistive technology up to 200 percent without loss of content or functionality.
- 1.4.10 Reflow (Level AA): Content can be presented without loss of information or functionality, and without requiring scrolling, within the dimensions/pixelation described in the criterion.
- 1.4.12 Text Spacing (Level AA): No loss of content or functionality occurs by setting the appropriate text style properties.
- 2.4.4 Link Purpose (In Context) (Level A): The purpose of each link can be determined from the link text alone or from the link text together with its programmatically determined link context, except where the purpose of the link would be ambiguous to users in general.
- 2.4.6 Headings and Labels (Level AA): Headings and labels describe their topic or purpose.
- 3.1.1 Language of Page (Level A): The default human language of each web page can be programmatically determined.
- 3.1.2 Language of Parts (Level AA): The human language of each passage or phrase in the content can be programmatically determined.

Images

A text alternative for images is important for conveying non-text content to a user who may not be able to see or understand the image for any variety of reasons. There are three types of images; simple, complex, and decorative.

Simple Images

A simple image is one that can be described in a few words or a short sentence. Examples might include a product screenshot or a photograph of people having a conversation. Simple images are most commonly described with `alt` text, which gets its name from the `alt` image attribute in code. `Alt` text looks like this: `<img alt="text alternative">`. The `text alternative` describes the image in a text-based format that screen readers can read out loud, which helps the user understand what the image is meant to convey. Writing the text alternative can be challenging and sometimes subjective. Compare the following examples to understand how to make `alt` text more descriptive:

- Poorly-written `alt` text: ``
- Well-written `alt` text: ``

In both examples, the `alt` text alerts the user to the use of an image but the first does not describe the image, while the second describes what the image is meant to convey (four team members discussing a project). Here is another example:

- Poorly-written `alt` text: ``
- Well-written `alt` text: ``

Both examples mention a ·dog· but the poorly-written alt text does not describe the dog in any way, while the well-written alt text describes the dog in enough detail to provide the user helpful context. Read this Alternate Text guide from WebAIM to learn more about how to craft meaningful alt text.

Complex images

A complex image is a visual that is more informational in nature and requires more than just a simple explanation. Examples might include a flow chart or data visualization. Similar to a simple image, a complex image requires alt text, which serves as a brief description, but also a long description that explains, in more detail and using more text (aka ·long text·), the essential information contained in the image. If the complex image consists of data, consider using a text table of the data rather than long-form text. Learn more about the W3C's long description methods [here](#).

Data visualization, which is the graphical representation of information and data, should use colors with sufficient contrast and labels within the chart, so that the user does not have to rely solely on color to understand what is being conveyed. Look at the data visualization color palette documented in the Pajamas Design System for GitLab or read *An Accessibility-First Approach To Chart Visual Design*, by Kent Eisenhuth and Kai Chang, to understand other ways to consider data visualization while creating accessible learning experiences.

Decorative images

A decorative image has no meaningful content value and doesn't need to be announced by a screen reader. Examples might include background patterns or an icon that is used as a visual anchor. Use an empty alt attribute for decorative images so that they are not unnecessarily announced.

Considerations

- All images should have an alt attribute, even if the alt attribute is empty (alt=··).
- Use longer text and/or tables to describe complex images.
- Leverage high-contrast colors, labels, and other data visualization techniques, when visualizing data.
- Try to avoid text within an image, but if present, make sure it's also available in plain text, which is text consisting of characters without special formatting.
- Avoid using animated GIFs since a user can't control the playback.

Guidelines

The following success criteria from WCAG 2.2 apply to images:

- 1.1.1 Non-text Content (Level A): All non-text content that is presented to the user has a text alternative that serves the equivalent purpose, unless otherwise noted in the criterion.
- 1.4.5 Images of Text (Level AA): If the technologies being used can achieve the visual presentation, text is used to convey information rather than images of text, unless otherwise noted in this criterion.

Video and audio

Video and audio recordings should have an alternate way to obtain the content. This allows a user who is hard of hearing or deaf to read the content using captions or text transcript while a user who is visually impaired may use a screen reader or other assistive technology.

Captions

Captions are the text version of spoken audio and sounds and should be provided for all videos, when possible. Closed captions can be turned on and off by the user, where open captions are always present. There is no size requirement for captions (sometimes they will scale with the player), but they must be readable and have sufficient contrast. A caption benefits someone who can see the video, but either by impairment or choice can't use the audio. If using automated captioning, review them to ensure they accurately reflect the spoken content; especially for technical terms like `DevSecOps` or `Kubernetes`.

Audio descriptions

Audio descriptions provide information about visual elements in a video. For example, describing the scene, actions and gestures, or expressions. They are announced between dialogue. Watch an example. An audio description benefits someone who can listen to the video audio, but either by impairment or choice can't use the video.

Transcripts

A text transcript should be provided for audio-only media and prerecorded video. The transcript can be included on the same page, linked to, or available as an accessible document. A transcript benefits a variety of users, from those who prefer to read, to those who obtain the text content through a screen reader or other assistive technology.

Text and data visualization

Since both text and data visualization (charts) are essentially embedded in a video with no way for a user to control their appearance, ensuring they are clear and discernable at the outset is key. Discernable means text or data visualization that can be seen, perceived, and understood by users.

Text should have sufficient contrast against the background. If it's meaningful content, the text content should also be included in the audio track.

Charts in videos should utilize patterns and textures (such as lines, dots, or crosshatching) instead of relying solely on color. Here, as an example, is a chart that uses patterns and textures:

This helps viewers distinguish different segments or lines in a chart, even if they cannot differentiate the colors. During the video, consider highlighting or enlarging specific areas of the chart when discussing them to focus attention and help all viewers, particularly those who might struggle with smaller, detailed graphics. Provide a verbal description of the key elements of the chart as they appear in the video. This description should accompany the visual display, explaining what is being shown, including any patterns or textures used.

Considerations

- A text alternative should always be provided for audio and video media.
- Do not autoplay video or audio content. Doing so can be confusing if a screen reader is also making announcements.
- Captions and transcripts should accurately reflect the original content.
- Use tools like the WebAIM Contrast Checker to ensure sufficient contrasting colors for text and graphics in video.
- When using charts, use patterns and labels along with colors to convey information.
- Avoid flashing content, which is content that flashes or blinks rapidly.

Guidelines

The following success criteria from WCAG 2.2 apply to images:

- 1.1.1 Non-text Content (Level A): All non-text content that is presented to the user has a text alternative that serves the equivalent purpose, unless otherwise noted in the criterion.
- 1.2.1 Audio-only and Video-only (Prerecorded) (Level A): All non-text content): For prerecorded audio-only and prerecorded video-only media, an alternative for time-based media is provided that presents equivalent information for prerecorded audio-only content and/or an alternative for time-based media or an audio track is provided that presents equivalent information for prerecorded video-only content.
- 1.2.2 Captions (Prerecorded) (Level A): Captions are provided for all prerecorded audio content in synchronized media, except when the media is a media alternative for text and is clearly labeled as such.
- 1.2.3 Audio Description or Media Alternative (Prerecorded) (Level A): An alternative for time-based media or audio description of the prerecorded video content is provided for synchronized media, except when the media is a media alternative for text and is clearly labeled as such.
- 1.2.5 Audio Description (Prerecorded) (Level AA): Audio description is provided for all prerecorded video content in synchronized media.
- 1.4.2 Audio Control (Level A): If any audio on a Web page plays automatically for more than 3 seconds, either a mechanism is available to pause or stop the audio, or a mechanism is available to control audio volume independently from the overall system volume level.
- 2.2.2 Pause, Stop, Hide (Level A): There is a mechanism for the user to pause, hide, or stop blinking, scrolling, or continuously updating activity, under the right circumstances.
- 2.3.1 Three Flashes or Below Threshold (Level A): Web pages do not contain anything that flashes more than three times in any one second period, or the flash is below the general flash and red flash thresholds.

Interactive content

If content is interactive (separately from the learning management system controls), ensure that all actions and content can be accomplished using a keyboard alone. Examples might include elements that flip to reveal information or that open embedded windows with more content. Many assistive technologies emulate keyboard behavior, so ensuring that all interactions can be done with a keyboard is critical for a wide variety of users who take advantage of a wide variety of input methods.

Considerations

- All content and interaction should be able to be done with only a keyboard.
- There should be no keyboard traps that a user can't get out of, which happens when a keyboard user can't move focus away from an interactive element.
- Focus order (the order that a keyboard traverses interactive elements) should match visible reading order.
- When an element has focus, there must be a visible focus indicator, which is a visual marker that shows which interactive element on a web page is currently focused and ready for user input.
- Elements that can receive focus can't be obscured by other elements.

Guidelines

- 1.4.13 Content on Hover or Focus (Level AA): Where receiving and then removing pointer hover or keyboard focus triggers additional content to become visible and then hidden, the additional content remains visible until the additional content is dismissed or the pointer is moved.
- 2.2.1 Keyboard (Level A): All functionality of the content is operable through a keyboard interface without requiring specific timings for individual keystrokes, except where the underlying function requires input that depends on the path of the user's movement and not just the endpoints.
- 2.1.2 No Keyboard Trap (Level A): If keyboard focus can be moved to a component of the page using a keyboard interface, then focus can be moved away from that component using only a keyboard interface, and, if it requires more than unmodified arrow or tab keys or other standard exit methods, the user is advised of the method for moving focus away.
- 2.4.7 Focus Visible (Level AA): Any keyboard operable user interface has a mode of operation where the keyboard focus indicator is visible.
- 2.4.11 Focus Not Obscured (Minimum) (Level AA): When a user interface component receives keyboard focus, the component is not entirely hidden due to author-created content.

Summary

Web accessibility is becoming increasingly important as more and more business, learning, and communication takes place online. Accessibility is especially important for GitLab and its mission, as universal access to information (especially learning content) helps ensure that everyone can contribute. When we start by considering accessibility, we are also more likely to deliver a more inclusive and engaging experience for all users.

By doing a bit of learning ourselves, we hope that GitLab and its team members will be better prepared to consider the various ways that people consume the information we provide, and whether or not we're creating the best experience possible. In addition to these guidelines, which should be used by team members to create more accessible learning experiences, we also encourage team members to explore the links provided throughout this document in order to better understand and comply with the underlying WCAG guidelines.

Open Source Program Agreement

Deprecated to Legacy: 2022-08-19

This Open Source Program Agreement ("Agreement") is between GitLab Inc. with offices at 268 Bush Street, Suite 350, San Francisco, CA 94104 (or the applicable GitLab Affiliate as agreed to between the Parties), ("GitLab"), and the Open Source Organization (as defined below) signing or electronically accepting this Agreement ("Member"). This Agreement is entered into on the earlier of, (a) Member clicking "Agree" or "Yes" to the terms of this Agreement to gain initial access to, or use of, the Software or (b) Member is given access to the Software pursuant to the requirements of the GitLab for Open Source Program (as defined below) ("Effective Date"). GitLab and Member each shall be referred to as a "Party" and collectively as the "Parties".

1. DEFINITIONS

"Affiliates" means, with respect to a Party, any entity that directly or indirectly controls, is controlled by, or is under common control with such Party, where "control" means at least fifty percent (50%) ownership of the outstanding shares of the entity or the ability to direct the management of the entity by contract or otherwise.

"Commercial Terms" means the GitLab Subscription Agreement located at <https://about.gitlab.com/terms/>, which shall only be applicable in the event: (i) Member wishes to purchase the GitLab Software, or (ii) Member uses the GitLab Software in any manner other than the Acceptable Purpose (as set forth in Section 2 below).

"Community Edition Software" means the publicly available, community-developed open-source software and components which may be provided with the GitLab Software.

"Confidential Information" shall have the meaning ascribed in Section 6 (Confidentiality).

"GitLab for Open Source Program" means the program guidelines and overview as found at <https://about.gitlab.com/handbook/marketing/developer-relations/community-programs/opensource-program/-gitlab-for-open-source-program> as updated from time to time, which include directions, rules and requirements for participation in the GitLab for Open Source Program. For the avoidance of doubt, GitLab (at its sole discretion) shall decide a party's ability to participate in the GitLab for Open Source Program.

"GitLab Software" means software, and other branded offerings sold by GitLab, including but not limited to, the self-managed and/or SaaS version of GitLab's "DevOps Lifecycle Application Platform".

"Intellectual Property Rights" means all intellectual property rights throughout the world, including, without limitation, patents, copyrights, Trademarks, trade secrets and contractual or other rights in confidential information, moral rights, rights of privacy and publicity, and any other intellectual and industrial property and proprietary rights including registrations,

applications, renewals and extensions of such rights worldwide.

"Open Source Organization" means an organization, individual, entity, or institution which, (i) creates, develops, and/or manages (the development of) Open Source Software (as defined below) (ii) does not seek to make a profit from the sales / provision of the Open Source Software, or any services related to such Open Source software, and (iii) the Open source software provided by Member must be made publicly visible and available as set forth in documentation found at <https://docs.gitlab.com/ee/publicaccess/publicaccess.html>. Unless otherwise agreed to in writing between GitLab and Member, Open Source Organization shall not include any federal and/or state institutions or departments.

"Open Source Software" means software licensed pursuant to an applicable open source license as defined by the Open Source Initiative at <https://opensource.org/licenses/category>.

"Member Content" is all software, information, content and data provided by or on behalf of Member or made available or otherwise distributed through the use of the GitLab Software.

"Trademarks" means a Party's corporate name, primary logo, and primary "button" or "icon" for use within others' software to indicate an available integration, and any other logos, service marks, trademarks and certification marks that one Party expressly authorizes the other Party to use under this Agreement in writing.

2. PURPOSE

2.1 Subject to the terms of this Agreement and the GitLab for Open Source Program, GitLab grants Member a non-exclusive, limited, revocable, worldwide, non-sublicensable and non-transferable right for Member to use the GitLab Software solely for the purposes of developing, creating, promoting and managing Open Source Software ("Acceptable Purpose"). For the avoidance of doubt, the Acceptable Purpose shall only apply to Member to the extent Member maintains the requirements of an Open Source Organization, and shall not extend to any third party, including but not limited to Affiliates of Member.

2.2 Provided that Member's use of the GitLab Software is in accordance with the terms of this Agreement, GitLab for Open Source Program (and its stated requirements) and the Acceptable Purpose, Member shall not be obligated to pay for any such use of the GitLab Software. GitLab Software shall be provided without support, however, Member may use the GitLab Community Forum for assistance. For the purposes of clarity, GitLab shall have no obligation to render any "Support" (as defined in the Commercial Terms) unless and until Member purchases GitLab Software. Member may be entitled to purchase GitLab Software at a discounted rate as agreed to between the Parties.

2.3 Notwithstanding any other terms stated within this Agreement or the GitLab for Open Source Program, in the event Member uses the GitLab Software for any purpose other than the Acceptable Purpose, Member shall be obligated to pay for such GitLab Software in accordance with the Commercial Terms. For the avoidance of doubt, Member shall be obligated to pay for all such use of the GitLab Software, including for any periods of use prior to the discovery of such usage outside of the Acceptable Purpose.

3. REGISTRATION & USE RIGHTS

3.1 Member shall follow the registration or credentialing requirements (if any) established by GitLab within this Agreement and the GitLab for Open Source Program.

3.2 Member shall only be entitled to participate in the GitLab for Open Source Program provided that it remains an Open Source Organization. If at any time, at GitLab's sole discretion, Member no longer meets the requirements to be an Open Source Organization, GitLab shall provide thirty (30) days written notice to Member of its finding(s), and this Agreement and Member's ability to participate in the GitLab for Open Source Program shall terminate.

3.3 In accessing and using the GitLab Software and GitLab for Open Source Program materials, Member agrees to comply with the terms of this Agreement and the guideline(s) found in the GitLab for Open Source Program. Member agrees not to (and not to authorize any third party to): (a) use the GitLab Software and GitLab for Open Source Program materials except for the Acceptable Purpose and in accordance with the GitLab for Open Source Program; (b) modify or create any derivative works of the GitLab Software and GitLab for Open Source Program materials; (c) take any action that would subject the GitLab Software and GitLab for Open Source Program materials to any third party terms; (d) copy, distribute, sell, sublicense, rent or lease the GitLab Software and GitLab for Open Source Program materials, including any access key provided by GitLab, or use such items for hosting, service provider or similar purposes; or (e) access the GitLab Software and GitLab for Open Source Program materials for competitive analysis or disseminate performance information (including uptime, response time and/or benchmarks) relating to the GitLab Software.

3.4 Portions of the GitLab Software are governed by underlying open source licenses as described at <https://docs.gitlab.com/ee/development/licensing.html>, including but not limited to the Community Edition Software. This Agreement establishes the rights and obligations associated with the GitLab Software pursuant to the GitLab for Open Source Program and is not intended to limit Member's right to software code under the terms of an open source license.

4. OWNERSHIP RIGHTS & TRADEMARKS

4.1 Except as expressly set forth herein, GitLab (and its licensors, where applicable) will retain all Intellectual Property Rights relating to the GitLab for Open Source Program, GitLab Software and any suggestions, ideas, enhancement requests, feedback, or other recommendations provided by Member, its Affiliates, students, users or any third party relating to the GitLab for Open Source Program and GitLab Software (herein referred to as "Feedback Materials"), which are hereby assigned to GitLab. For the avoidance of doubt, Feedback Materials shall not include Member Confidential Information or Intellectual Property Rights owned by Member. This Agreement does not constitute a sale of the GitLab for Open Source Program and/or the GitLab Software and does not convey to Member any rights of ownership in or related to the GitLab for Open Source Program and/or to the GitLab Software or any other Intellectual Property Rights.

4.2 Member shall not remove, alter or obscure any of GitLab's (or its licensors') copyright notices, proprietary legends, trademark or service mark attributions, patent markings or other indicia of GitLab's (or its licensors') ownership or contribution from the GitLab Software.

5. TERM & TERMINATION

5.1 The initial term of this Agreement shall commence on the Effective Date and shall expire one (1) year later (the "Initial Term"). After the Initial Term, this Agreement shall

automatically renew for successive one (1) year renewal periods (each a "Renewal Term") unless terminated as described below . The Initial Term and any Renewal Terms (if any) shall be the "Term."

5.2 Following the Initial Term, either Party may terminate this Agreement upon sixty (60) days' prior written notice to the other Party. Either Party may immediately terminate this Agreement upon written notice if the other Party breaches its obligations under this Agreement and fails to cure such breach within thirty (30) days following receipt of notice from the non-breaching Party. A Party that provides notice of breach must include in the notice a description of the alleged breach in reasonable detail. In addition, either Party may immediately terminate this Agreement upon written notice to the other Party in the event that the other Party becomes the subject of a petition in bankruptcy or any proceeding related to its insolvency or any assignment for the benefit of creditors.

5.3 GitLab may also suspend Member's use of GitLab Software and GitLab for Open Source Program materials or terminate this Agreement immediately if GitLab is: (a) required to do so by law; (b) if Member is no longer deemed an Open Source Organization; or (c) if GitLab determines that continuing under this Agreement could result in legal or business liability or cause harm to its products, services, reputation or users.

5.4 Upon any termination of this Agreement, Member's rights to use GitLab Software and GitLab for Open Source Program materials (including related access keys and credentials) will immediately terminate and Member will cease all such use, but all other provisions of this Agreement will survive. GitLab will have no obligation or liability resulting from termination or suspension of this Agreement, as permitted herein.

6. CONFIDENTIALITY

6.1 "Confidential Information" means the terms and conditions of this Agreement, and any other non-public technical or business information of a Party, whether provided orally or in writing, that is designated in writing as "Confidential" or "Proprietary" at the time of disclosure or that due to the nature of the information the receiving Party would reasonably understand it to be confidential information of the disclosing Party, including information relating to a Party's techniques, ideas, concepts, algorithms, source code, methodologies, workflows, implementation processes, current and future products and services, research, engineering, designs, financial information, procurement requirements, customer lists, business forecasts, roadmaps, marketing plans, pricing, discounts and proposals.

6.2 Confidential Information shall not include any information that: (a) is or becomes generally available to the public through no fault of or breach of this Agreement by the receiving Party; (b) was rightfully in the receiving Party's possession at the time of disclosure without an obligation of confidentiality on the receiving Party; (c) is independently developed by the receiving Party without use of the disclosing Party's Confidential Information; (d) is rightfully obtained by the receiving Party from a third party not under a duty of confidentiality to the disclosing Party and without restriction on use or disclosure; or (e) the receiving Party is permitted to publicly disclose under another provision of this Agreement.

6.3 Neither Party shall disclose Confidential Information of the other Party to anyone or shall use Confidential Information of the other Party for any purpose, except in either case as

necessary to exercise its rights or obligations under this Agreement ("Permitted Purposes"). Each Party shall use at least the same degree of care (but no less than reasonable care) to prevent the unauthorized use, dissemination and copying of the other party's Confidential Information as it uses to protect its own Confidential Information of a like nature. Each Party shall limit the disclosure of such Confidential Information to those of its employees, consultants, Affiliates, advisors and contractors with a bona fide need to access such Confidential Information solely for the Permitted Purposes, and all such employees and contractors must be subject to binding disclosure and use restrictions at least as protective as those set forth herein. Each Party shall be responsible for any breach of this Section 6 by its employees, consultants, Affiliates' employees, advisors and contractors, as if they were that Party's own employees.

6.4 The obligations of confidentiality under this Section 6 shall expire three (3) years after that Confidential Information is disclosed hereunder. The receiving Party shall promptly return or destroy (or in the case of electronic data, use commercially reasonable efforts to delete or render practicably inaccessible by receiving Party) Confidential Information disclosed by the other Party upon its written request.

6.5 This Agreement shall not be construed to prevent the receiving Party from disclosing the disclosing Party's Confidential Information to a court or governmental body pursuant to a valid court order, law, subpoena or regulation, provided that the receiving Party: (a) gives reasonable notice (or such shorter period as is the maximum notice permitted under applicable law) before making the disclosure, unless prohibited by law; (b) provides reasonable assistance to the disclosing Party, at disclosing Party's expense, in any lawful efforts by the disclosing Party to resist or limit the disclosure of such Confidential Information; and (c) discloses only that portion of the disclosing Party's Confidential Information which is legally required to be disclosed.

6.6 The Parties agree that the receiving Party's disclosure of Co
