Understanding what drives those to whom we sell

Enterprise IT & their challenges

- Digital Transformation - IT expected to enable faster delivery of customer led innovation.
- Continuously deliver high quality end user experience - quality with speed.
- Excessive complexity across IT architecture and infrastructure.
- Lack of full metrics and visibility across the entire process.
- Compliance - prove compliance with IT controls and industry regulations.
- Security - IT teams are under pressure to reduce risk, prevent and mitigate leaks.
- Culture and collaboration issues in the workplace - legacy organizations and silos.
- Budget constraints limit their options.

Related Reading:

- 4 digital transformation success stories
- The CIO's Dilemma: Innovate AND Cut Costs
- Complexity a killer when it comes to digital transformation success - 5 Big Challenges CIOs face
- 9 forces shaping the future of IT
- 10 biggest issues IT faces
- Survey: Compliance Drives IT Security
- Financial Services Regulatory Compliance
- Collaboration key to achieving business goals

Who cares about what? What pains do they have?

1. CxO

Key initiatives focused on (1) Digital Transformation (2) Moving to the cloud (cloud native) (3) Speed time to market without impacting risk

Defining key trends and terms:

- What is digital transformation - Read Forrester Digital Rewrites the Rules of Business (INTERNAL only)
- Why is cloud native important to digital transformation
- Speed time to market without impacting risk

CIO or VP IT - Business focus, strategic, long-term, transformation, budget

1. Persona reference: VP IT video, VP IT Slide Deck

1. Value Prop:

- GitLab's single application enables more rapid development (see GitLab stats as an example) to meet time-to-market business challenges.
- Unite workflows around a common tool to reduce friction and cost of IT.
- Reduce or eliminate your costly DevOps tool chain (or avoid this investment in one).

1. Resources:

- GitLab Pitch Deck
- GitLab home page
- ROI
- Product page
- Comparison page
- Solutions page, depending upon unique challenges/interests

CISO and VP Security - Risk, Security, Compliance, protecting the business

1. Value Prop:

- You no longer must choose between velocity and risk.
 - 1. With GitLab, you can test ALL of your code, on every commit, automatically
 - 1. Because it's not an incremental cost per app or per user (beyond using GitLab Ultimate for your entire SDLC), you can test every code change, not just critical apps or annual scans.
- Better leverage your scarce security resources by putting app sec tools, that are meant for the developer, into the hands of the developer, so they may remediate more, earlier than possible with traditional app sec tools. (Enable TRUE shift-left via single application and single source-of-truth.)
- Improve visibility while at the same time reducing friction between processes and tools used by dev and app sec teams.

1. Resources:

- DevSecOps
- Comparison
- Current Security Deck - Deprecated Security Deck
- Regulatory Compliance

CTO - Technology focused, today and in the future. Focus can vary from company to company.

1. Persona reference: Chief Architect Video, Chief Architect slide deck

1. Value Prop:

- GitLab's single application enables more rapid development (see GitLab stats as an example) to meet time-to-market business challenges. It positions your enterprise for maximum flexibility and speed.

- Unite workflows around a common tool to reduce friction and cost of IT.

- Reduce or eliminate your costly DevOps tool chain (or avoid this investment in one).

- Improve visibility while at the same time reducing friction between processes and tools used by development, operations, and application security teams.

1. Resources:

- GitLab Pitch Deck

- GitLab home page

- ROI

- Concurrent DevOps

- Cloud Transformation

- Software-defined Infrastructure

- Visibility and Velocity

- Geographically distributed teams

- High availability development

- DevSecOps

- Product page

- Comparison page

- Solutions page, depending upon unique challenges/interests

1. VP Level

VP Apps/Development/Engineering - Helping to meet business demand for innovation, updates, and capability. This role is typically bonused/compensated on velocity, time to market and alignment with the business.

1. Value Prop

- GitLab's single application that supports the entire DevOps lifecycle is of significant importance. The DevOps tool chain crisis is real and there is a lot of 'bubble gum and duct tape' going on in and around integrating all these point DevOps tools in order to convey the full story of what's really happening.

- Finding new areas across the SDLC to automate is top of mind to this role. GitLab's Auto DevOps will be a competitive differentiator

1. There are several critical challenges that application development leaders are facing.

- Cycle time - how to improve velocity

- How deliver secure Applications

- How to navigate hybrid cloud and not lock in.

1. Resources:

- GitLab Pitch Deck

- GitLab home page

- ROI

- Concurrent DevOps

- Software-defined Infrastructure
- Visibility and Velocity
- Geographically distributed teams
- High availability development
- Auto DevOps
- CI/CD
- Product page
- Comparison page
- Solutions page, depending upon unique challenges/interests

VP Ops - Keeping the business running efficiently. Uptime, recovery are important. The role is typically bonused/compensated on uptime and SLAs back to the business.

1. Value Prop:

- GitLab's single application that supports the entire DevOps lifecycle is going to be important for this role. Shifting left monitoring, testing and security earlier in the SDLC is valuable to the VP Ops to reduce the risk of downtime in production. Auto DevOps will be of interest here as well.

1. Resources:

- GitLab Pitch Deck
- GitLab home page
- ROI
- Concurrent DevOps
- Auto DevOps
- Geographically distributed teams
- High availability development
- DevSecOps
- Product page
- Comparison page
- Solutions page, depending upon unique challenges/interests
- Security Deck
- Regulatory Compliance

VP/Dir DevOps or Enterprise Architect - VP/Director of DevOps is a fairly new role. Enterprise Architect role is expanding with more and more control. Leading the execution of the transformation. Ensures the business and technology are in alignment. Focuses on best practices and processes as well as assists with documentation. Evangelist of DevOps best practices.

1. GitLab persona reference: Director DevOps video, Director DevOps slide deck

1. Value Prop:

- GitLab's single application enables more rapid development (see GitLab stats as an example) to meet time-to-market business challenges.

- Unite workflows around a common tool to reduce friction and cost of IT.
- Reduce or eliminate your costly DevOps tool chain (or avoid this investment in one).

1. Resources:

- GitLab Pitch Deck
- GitLab home page

- ROI
- CI/CD
- Concurrent DevOps
- Cloud Transformation
- Google Cloud Platform
- AWS
- Software-defined Infrastructure
- Geographically distributed teams
- DevSecOps
- Product page
- Comparison page
- Solutions page, depending upon unique challenges/interests

VP Security - Large enterprises will have this but others go straight to Manager of Security.

1. Value Prop and Resources = see CISO

VP Shared Svcs - Common services for IT (Project Mgt, Portfolio Mgt, Resource Mgt, perhaps QA, etc) - for enterprises with microservices model

- 1. Value Prop - Project & Portfolio Mgmt, Testing (QA)
- 1. Resources - future vision

VP PMO / EPMO - Gathering and managing business projects/demand, execution, on-time, on budget

- 1. Value Prop - Issues, issue boards, etc but of interest to their Directors
- 1. Resources - future vision

1. Directors

- 1. Service Mgt - Service Desk, Incident mgt, responding to outages, recovery
- 1. Release Mgt - managing change and configuration of the IT systems
- 1. DevOps? - transformational role or maybe re-branded from 'release mgt'
- 1. "Business XYZ" - they own the applications for a specific business unit. Typically they own the outcome / business results of e investment. Manage demand, dev, delivery
- 1. Portfolio Mgr/Director - manages a business unit's portfolio of projects/initiatives. On-time, on budget
- 1. Testing / QA - Quality and Testing - plan testing, provide resources, execute tests, track quality
- 1. Security - establish policies, procedures, and processes to secure IT.

- Application Security - a specialty within Security that focuses on finding and removing vulnerabilities in software.

- Security Operations - may manage a Security Operations Center (SOC) or Security Information and Event Management (SIEM) system or service to identify and correlate security events in order to prioritize threat risk. Seldom do they focus on application security.

1. Risk and Compliance - usually reports separately from the IT org that may be creating the

risks. May even report to CEO.

1. Managers

- 1. Dev Team Manager - leads development team for a specific business function/system
- 1. QA Manager - Test Leads, Automated Testing, Performance Testing, Test Environments, Test Data. Traditionally the QA manager does not engage in application security testing.
- 1. Project Manager - plan, organize, and execute projects so they deliver on time, on budget
- 1. DevOps - Probably 'release manager'
- 1. Release - Running day to day release management, documenting changes, ensuring approvals, etc
- 1. Incident / Service Desk - Responding to problems/incidents from end users, restoring service
- 1. Configuration - ensuring the configuration of environments is documented, controlled and managed
- 1. Application Security - a specialty within Security that focuses on finding and removing vulnerabilities in software. They establish policies, procedures, and processes to test application software for security vulnerabilities.

Navigating roles to get a qualified lead

1. For prospects not yet using GitLab, focus on:

- CxO or VP - single app story. efficiency, time to market.

Ask: Are you challenged by Digital Transformation? (e.g. moving to the cloud, DevOps, etc.) Are you wanting to speed time-to-market while balancing constrained resources?

- Director or Manager - repository and CI/CD are best-in-class. Benefits of single application, less friction.

Ask: are you trying to increase the velocity of your software development? Are you stitching together a diverse tool chain to manage your code repo, CI/CD, and more? Do you need modern tools to help you with modern architectures like containers and cloud?

2. For prospects using GitLab, up-sell to Ultimate by focusing on:

- Cxo (including CISO) or VP - test more of your apps to manage more risk without hiring additional /scarce security pros.

Ask: Are you running security scans on all of your applications today? If not, do you worry about the risks? Do you wish you could find vulnerabilities earlier without adding security staff and costly security tools?

- Director or Manager - test more apps without increasing cost of tools or security staff.

Ask: How do you test applications for security vulnerabilities today? Are you testing ALL of your applications? Do you wish you could find vulnerabilities earlier without adding security staff and costly security tools? Are you wanting to 'shift left' but haven't found tools that will truly help you do that?

SECTION: marketing/brand-and-product-marketing/product-and-solution-marketing/events_travel.md

As a team, we need to help our team maintain a healthy work/life balance. We often face multiple requests for support for various events and activities around the world. The following priority list will help us make hard decisions about events that we can support and those that we may have to decline.

Travel Priorities

1. Speaking opportunities - Large industry events (over 1000)
1. Speaking opportunities - Mid size events (200-1000)
1. Customer Meetings - Large enterprise
1. Customer meetings - Commercial
1. Sales Quick Start / Enablement / SKO
1. GitLab Commit
1. Campaigns/Roadshows -
1. Speaking Opportunities - Small events (under 200)
1. Attend Industry Conference (research)
1. GitLab Connect
1. Booth support - large
1. Booth support - mid size
1. Booth Support - small
1. Customer Meetings - SMB

Other scenarios / situations to think about:

- Partner events (same priority as industry events?)
- CAB (same as large Customer meetings)
- QBR
- Offsites / In person planning meetings
- GitLab Contribute

Other factors / considerations:

- Relationship building - customers, analysts, GitLab Leaders
- Mentoring / enabling Strategic marketing team
- Mentoring / enabling other key GitLab teams (marketing, sales, etc)

SECTION: marketing/brand-and-product-marketing/product-and-solution-marketing/market-insights.md

Market Insights

Market Insights at GitLab

Market Insights is a function of the Market Strategy & Insights team in Product Marketing.

What is the Market Insights Program?

We are a business partner who:

- Provides deeper market knowledge and understanding, clarity through fresh perspectives, and recommendations for effective business decision-making (innovation initiatives, pricing, messaging, benchmarking, etc.)
- Interprets data in narrative form that adds value and/or incites specific action
- Uses a wide range of data streams and a multi-disciplinary approach to identify near and long-term (1-3 years) growth and innovation strategies as well as a clear path to implementation
- Constantly searches for the "Why/What next?" for the company

Questions We Seek to Answer:

- What business-level objectives do enterprise customers need to satisfy? How does this translate into desired product functionality?
- What is the next industry analyst category we need to create/influence? What is the next big thing after the DevOps Platform Era?
- What do enterprise customers really value? Are there areas beyond DevOps where we can play?
- What might enterprise customers want in the future? How are market needs/trends evolving?
- To what extent are customers getting this need fulfilled from GitLab? Do we currently deliver it? (Is it on the roadmap? Should we add it?)
- How can we expand enterprise customer usage of GitLab?
- What adjacent audiences/markets can we identify/address?
- Which levers can we pull to improve product performance and perception relative to competitors?

Mission of the Program

To identify, qualify, and activate new avenues of pursuit and profitability for GitLab (range: 1-3 years)

Our big picture:

ELEVATE: We seek to grow our value proposition beyond benefits/features--or even value drivers + use cases--to enable our customers' business outcomes

IDENTIFY & ARTICULATE: We look to leverage research & insights to identify blue ocean strategy opportunities

OPERATE: We will function as the company's think tank, helping GitLab to become our customers' recognized and essential catalyst for success

How Our Work Supports the Organization

Deliverables that feed into and/or support the needs of other GitLab functions:

- New market identification & use case expansion / Blue Ocean Strategy thinking
- Industry vertical identification, prioritization & planning for implementation
- Research (support primary/ lead secondary) on current and future Enterprise IT trends
- Thought leadership speaking & content (whitepapers, web pages, case studies, conference presentations, sales enablement sessions, and executive presentations)
- Determining new opportunities among existing clients, and participating in new business

initiatives

- Collaboration with GTM leaders in strategic planning and investment efforts
- Industry analyst briefing participation & inputs
- Regular Market Insights Team briefings

How can Market Insights benefit your team?

Market Insights deliverables can be used to (and/or augment your efforts to):

- Find new revenue sources
- Ensure messaging is reaching the precise customers for which it was tailored
- Develop marketing campaigns and pricing strategies
- Measure current performance against market potential
- Monitor brand awareness and customer sentiment
- Learn how our target customers actually use GitLab on a daily basis, as well as their thought process during the buying process
- Understand what draws businesses to purchase from our competitors
- Create customized interactions or predict future actions using previous buying patterns or behaviors

Market Insights Responsibilities

- Conduct research on current and future Enterprise IT trends through written reports, surveys, interviews and interactions with market analysts, industry conferences, self-study, and interactions with our customers to develop key insights for GitLab
- Help GitLab develop a deep knowledge and understanding of enterprise buyers including their challenges and goals that help them drive success for their companies
- Assess the DevOps ecosystem to distill the trends that influence GitLab's addressable market
- Contribute to a consumable deliverable (in-person discussion, presentation, written report)
- Evaluate, analyze and present research results in a consumable and actionable format (whitepapers, web pages, case studies, conference presentations, sales enablement sessions, and executive presentations)
- Help build and grow GitLab as a thought leader in the DevOps space by translating market insights into actionable recommendations for Product investment and GTM
- Participate and help prepare for industry analyst briefings as required
- Collaborate with GTM leaders (e.g. Sales, Channel, Sales Ops & Strategy) in strategic planning and investment efforts

The Market Insights Process & Potential Market Approaches

METHODOLOGY

1. Research & Data Gathering: Collect information and data points, conduct and lead research, and build internal and external relationships to determine priorities and support the program.
1. Analysis: Synthesize and correlate data to develop fresh perspectives and innovative concepts.
1. Validation & Iteration: Incorporate feedback into insight, recommendations, and deliverables. Adjust research direction as necessary.
1. Develop & Present Deliverables: Translate insights and recommendations into consumable publications.

1. Create Insights & Recommendations: Distill insight into actionable ideas.

RESEARCH PROCESS:

1. Topic identification (internally decided or by stakeholder request)

1. Determine required business objective

- Research--primary or secondary (technology/market/trend/topic/industry/vertical/solution or use case, user or persona, etc.)

- Data review & interpretation with recommendations

- Customer/prospect call participation

- Event speaking

- Thought leadership content creation/review

- Other

1. Articulate the WHY this deliverable is needed (problem statement). What is currently happening? What is the pain that is being experienced and who is experiencing it? Why now? What will happen if the status quo continues?

- What is your business objective and underlying rationale for this research?

- Define the questions that must be answered

Alternatively, is there an emerging technology or solution that we need to explore? What could the intersection of the tech/solution and the GitLab proposition be? Is this tech/solution being used (or could it be used) by our current customers or by potential, non-traditional GitLab users?

1. Create the hypothesis - Develop an explanation, argument, or analytical supposition about the topic.

1. Create the appropriate issue(s)/epic(s) and link to source materials and related issues.

1. Data gathering from appropriate sources: Collect information and data points, conduct and lead research. Sources include but are not limited to:

- Primary or secondary research (e.g. IDC or Forrester we commission)

- Social media and SEM analytics (e.g. HackerNews, LinkedIn, internal reports from SEO/SEM team)

- Mainstream media and industry articles / reporting (Wall Street Journal, Washington Post, New York Times, BBC News, DevOps.com, Government Executive Media Group publications, etc.)

- Market growth statistics (from industry analysts, DevOps media sources)

- Channel / partner input

- Internal Sales trends & reports

- Sales feedback and QBRs

- Customer meetings, calls & Chorus, SFDC

- Analyst publications, conversations & presentations (e.g. Gartner, Forrester, IDC, 451 Research, etc.)

- Competitive intelligence reports

- CAB (product & C-level) feedback

- Peer review comments (e.g. G2)

- Wider future market trends and tech & business-focused reports from industry leaders (e.g. Accenture, Deloitte, McKinsey, HBR, etc.)

- Industry conferences

- Internal collaborative issues / topic & research requests

(Please share any interesting data sources, articles, etc. we'd find helpful in the market-insights Slack channel.)

1. Analyze data: Synthesize and correlate data to develop fresh perspectives and innovative concepts

- Use tools from the Market Insights Tool Chest to process and analyze data, current conditions, forecasts, trends, etc. to develop strategic recommendations.

1. Validate & Iterate: Incorporate feedback into insight, recommendations, and deliverables. Adjust research direction as necessary.

1. Create Insights & Recommendations: Distill insight into actionable ideas and suggested activities.

1. Develop & Present Deliverables: Translate insights and recommendations into consumable publications. Specific deliverables may include:

- An Innovation Play
- A business case/rationale for investment or course of action
- A report or summary assessment
- A discussion
- A presentation, whitepaper, case study, sales enablement, or executive presentation
- A speaking engagement
- An analyst briefing

PROCESS FOR MARKET OBSERVATION OF INDUSTRY TRENDS & EVENTS:

1. Identify an event (virtual, webinar, in-person) for attendance or an industry deliverable to consume.

1. Register and attend or read/watch content piece.

1. Take notes with appropriate screenshots. Insert links to relevant related content/sites.

1. Add GitLab-relevant insights and recommendations.

1. Download slides and/or deliverable to the Market Insights REPORTS & PUBS folder and post the notes in the NOTES folder. Make sure to link the replay and any login credentials in the top section of the notes document.

1. Highlight any essential learnings on the Monthly Bulletin and inform stakeholders in the market-insights slack channel of any action items.

GENERAL PROCESS FOR INNOVATION ACTIVATION:

What market approaches might GitLab take based on the identified opportunities?

After a topic has been researched (see "RESEARCH PROCESS") and a recommendation for the business has been identified, Market Insights will help the DRI and team with next steps for activating the recommendation. (See "POTENTIAL MARKET APPROACHES".)

Recommendations for potential market approaches based on the results of the data assessed fall on the following spectrum of activity, ranging from the easiest level of effort, Solution or Use Case Development, to Innovation Play/Campaign to Roadmap/Feature Development to Category Creation to finally the most difficult and investment-intensive, Market/Industry Repositioning.

Based on the most appropriate approach for the opportunity, Market Insights will provide activation assistance to ensure that recommendation activities are sufficiently ramped up and owned by the DRI/ stakeholder(s).

In certain cases, this may entail creating or supporting the development of a full business

case for E-Group presentation and approvals. In other cases, some recommendations may initially be best activated in an experimental manner, allowing data to be collected that can serve as real-world proof points for further analysis and recommendation.

Based on business priorities and constraints including executive direction, level of effort, cost, time, and other factors, we may choose to:

- Create a new solution/use case
- Develop an innovation play or campaign
- Add a feature request to the roadmap
- Pursue creating a new category
- Reposition ourselves in the market

BUYER PERSONA DEVELOPMENT PROCESS:

1. Gather research requirements. Define anticipated usage of research deliverable (persona profile).

1. Define the buyer journey for the persona and understand all of the corresponding organizational touchpoints.

1. Define research factors/dimensions and obtain stakeholder buy-in.

1. Perform a secondary research market analysis using: publicly available materials (Google search), analyst briefings/reports/primary research results, etc. to construct an initial understanding and framework of the identified persona and to identify what is missing to complete a full persona profile.

1. Develop the survey research instrument. Review with stakeholders and the UX team to validate. If feasible, test externally in a small setting and iterate based on feedback. Use Qualtrics as the survey tool.

1. Field the survey with internal and externally obtained target audiences. Use third party vendors to provide a blind experience, if possible.

1. Perform analysis and synthesis of the survey responses.

1. Using respondents and/or third party vendors, recruit for and plan the interview portion of the study.

1. Conduct approximately (10-30) one-on-one interviews with a wide demographic of the targeted audience(s). Use Zoom and record the calls. Note: It is important to obtain written permission to record in advance from the participants. Email is sufficient; however, ensure a double opt-in and add a line in that confirmation that they "may withdraw their consent" by informing you via email "at any time."

Resources:

- Buyer persona discussion/interview guide
- Buyer Persona Interview Summary Template
- Market Insights Buyer Persona Interview Recording Consent Form Request

1. Perform analysis and synthesis of the interviews.

1. Optional: Conduct messaging research interviews to determine how specific personas relate to products/branding/messaging, validate research from the first round of interviews, and fill in any gaps.

1. Create the persona profile.

- Add to the Product Marketing Buyer Persona Matrix
- Use an online tool (E.g. Hubspot) to create the profile visual
- Record a video

1. Execute an enablement plan:

- Share via the Handbook
- Share on Slack channels
- Hold an enablement session for Marketing/Sales

BUYER PERSONA INTERVIEW OUTREACH:

Resources:

- Example discussion guide
- Template for outreach to people who completed a survey and volunteered for future research opportunities:

> Hi {name},

>

> At this year's <conference>, you kindly participated in our GitLab booth survey and indicated that you are open to further discussion on DevOps topics. Would you be willing to speak with me within the next two weeks for approximately 30 minutes regarding your DevOps work and how you are doing your job-related tasks?

>

> If you are interested, I'd like to set up a recorded Zoom call with you at your earliest convenience. I've provided my Calendly link below to share my availability for this important conversation. As a thank you for your time, we are offering <incentive>.

>

> Please reach out with any additional questions.

FOCUS GROUP (IN-PERSON) PROCESS

1. Gather research requirements and determine objectives/topic of focus group.

1. Determine audience.

1. Create recruitment and incentive plan. Develop screener questions.

- Recruitment sources may include:
 - Past conference attendees
 - Previous survey respondents who said they would participate in future research
 - Social media outreach
 - Booth visitors or general tradeshow attendees

1. Select moderator and co-moderator/recorder.

1. Coordinate video recording and logistics.

1. Coordinate venue.

1. Create discussion guide.

1. Develop materials to review with participants.

1. Execute recruitment plan.

Collect the following info from recruits as we get volunteers:

- Name
- Organization
- Title/Role (classify into Persona Group to attempt persona diversity)
- Phone number
- Email

- Send confirmation email/text with logistics info
- Send reminder (1) hour before session

1. Conduct session. Ensure consent forms are signed, recorded, and stored.

- If necessary, provide Uber gift cards (\$10) to participants (send after the session)
- Pick up drinks and light snacks to have in the room
- Verify TV/monitor connections for room
- Determine needed signage
- Assign handlers/guides (if necessary)
- Collect addresses and sizes for swag distribution

Things to Bring:

- Laptop with loaded presentation of materials with connection cords
- Include swag photo slide
- Business cards
- Refreshments
- Tabletop signs for names
- Markers
- Extra masks (optional)
- Printed video recording consent forms

Sample agenda:

- Welcome & Topic Overview

Our Marketing team has asked us to help them understand more about what our customers and prospective customers similar to you like, what you don't like, and how our messaging might be improved. We are having discussions like this with several groups both in person and virtually.

- Introductions

Name

Role/Title & Company

Where you live

If you are a current customer / user

- Icebreaker

What is your favorite place in the world and why?

- Ground Rules

- Discussion Prompts

- Wrap Up & Thank You

1. Create transcripts (use the Rev tool).

1. Moderator and co-moderator debrief.

1. Create initial findings report and share with research team/internal stakeholders for feedback.

1. Prepare final report and post to research issue. Notify stakeholders.

How to Engage with Market Insights

- Please join the discussion in the market-insights channel.
- View topics we are researching on our Market Insight Research Board
- To create a Market Insights topic request, ask for insight into data or a report, make a request for us to join a customer call, or suggest a topic for research, please create an issue using the Market Insights Request Template in the Product Marketing project.

Market Insights OKRs

FY22 Q4 OKR: Enhance the Market Insights/Strategy Program to bring more Awareness to GitLab Product Positioning

1. FY23 Q3 Market Insights OKR 1 - Research/Data Collection at GitLab Events

1. FY23 Q3 Market Insights OKR 2 Buyer Persona Development v2

1. FY23 Market Insights OKR 3 - Q3 Big Rock - Market Segmentation Research & ICP Development

1. FY23 Q3 OKR 4 - Q3 Program Improvement - Continuing Development of Methodology/Processes

How We Measure Our Results

- Number of Product Roadmap issues and/or comments and product direction impact (narrative-driven)
- KCG Share of Voice measurement metric targets increase 20% (baseline measure)

Resources

- See our library of research notes and recommendations
- View our library of source presentations and reports

Market Insights Team

- Traci, Manager, Market Insights
- Laura, Director, Market Strategy & Insights

SECTION: marketing/brand-and-product-marketing/product-and-solution-marketing/market-segmentation.md

Industry verticals

Various verticals and industries face specific challenges as they address their specific market. Ranging from compliance and regulatory pressure to specific market disruptions, IT teams in these verticals are developing solutions to their unique challenges.

- Financial services
- Automotive
- Health care
- Federal / Government / Public sector
- Retail
- Advanced manufacturing (as opposed to automotive)
- Oil & Gas/Energy

More information about Sales Segmentation can be found in our [Go To Market Resources](#) page.

Financial services

| Challenge | GitLab Helps |

| ----- | ----- |

| Security | GitLab's single platform controls and manages access to the SDLC tool chain helping them to increase confidence in their development process. The ability to audit, review and automate security scans as a core part of the development lifecycle further helps to ensure that every application they build is more secure. |

| Aging infrastructure | GitLab simplifies move to modern cloud native (kubernetes) |

| Compliance | A single platform that controls and manages access to the SDLC tool chain. Built in audits, reviews and automation help to create a trusted pipeline. |

| New technology (business disruption / digital transformation) | This will demand rapid and responsive design, development and iteration from the software teams building the transportation as a service platform and infrastructure. GitLab and concurrent DevOps can help teams to dramatically decrease cycle times to ship software. |

Automotive

| Challenge | GitLab Helps |

| ----- | ----- |

| The connected car (over the air updates): As vehicles become mobile computers on wheels, the importance and cost of updating on board software is a key issue. It is expensive and disruptive to require owners to have updates installed by dealers, therefore the industry is moving to an approach that enables over the air updates. | To support over the air updates, automobile manufacturers and their suppliers will depend on rapid and efficient software delivery toolchains that streamline development, testing and even deployment of software changes. |

| Transportation as a Service | In this market transformation, the differentiation will be in the quality, simplicity and adoption of the technology platform that enables transportation as a service. This will demand rapid and responsive design, development and iteration from the software teams building the transportation as a service platform and infrastructure.

(GitLab/Concurrent DevOps) |

| Platform consolidation | In order to reduce manufacturing complexity and waste, platform

consolidation will drive manufacturers to differentiate their products on the underlying technology and consumer services (software). The software will be the differentiator, and will require rapid innovation to keep up with a rapidly changing market. |

Health care

| Challenge | GitLab Helps |

| ----- | ----- |

| Security & Data Protection Ensuring that their systems and data are secure is critical in health care. This is an issue across the entire lifecycle of health care systems from development to production and is a top issue for most all healthcare IT leaders. | A single platform that controls and manages access to the SDLC tool chain. Built in audits, reviews and automation help to create a trusted pipeline. |

| Patient Experience The healthcare market is being dramatically transformed around improving patient experience, making it easier for patients to participate in their care. Ranging from mobile applications to electronic health records and other innovation, healthcare IT leaders are trying to accelerate delivery and iteration are to improve patient experience. | Rapid delivery and iteration are the hallmarks of improving patient experience. Innovation in UX is only possible if IT teams are able to rapidly learn and innovate. Concurrent DevOps and GitLab help to streamline delivery and enable IT teams to focus on improving patient experience. |

| HIPAA | A single platform that controls and manages access to the SDLC tool chain. Built in audits, reviews and automation help to create a trusted pipeline. |

SECTION: marketing/brand-and-product-marketing/product-and-solution-marketing/messaging.md

What are the key customer problems?

Teams across the software delivery lifecycle function struggle with:

- Usage of different tools preferred by each team or individual
- Multiple integrations across the tools to make the lifecycle work
- Multiple configuration challenges
- Different work processes across teams
- Lack of common metrics across teams to measure improvements
- Sequential flow of processes and handoffs that are slow, error prone, and brittle

And they have processes which block reducing time to value, for example:

- Security reviews that are blocking until approved
- Infrastructure that has to be provisioned
- Fixed release windows
- Production teams need to manually approve releases
- legal/compliance sign offs are required
- Long testing cycles
- Separate build, QA, security, governance, and operations teams working in silos
- Hard to diagnose and time consuming to fix production failures

GitLab value proposition

How does GitLab help solve the customer problems?

Short single sentence

GitLab is The DevOps platform.

Single sentence

GitLab is The DevOps platform that empowers organizations to maximize the overall return on software development by delivering software faster, more efficiently, while strengthening security and compliance.

Short message (~50 words)

GitLab is The DevOps platform that empowers organizations to maximize the overall return on software development by delivering software faster and efficiently, while strengthening security and compliance. With GitLab, every team in your organization can collaboratively plan, build, secure, and deploy software to drive business outcomes faster with complete transparency, consistency and traceability.

For more information on messaging The DevOps Platform, please see the DevOps Platform Message House.

Company overview text

The company overview can be found [here](#).

Press release boilerplate

The press release boilerplate can be found [here](#).

Standard Email introduction text

GitLab makes it easier for companies to achieve software excellence so that they can unlock great software for their customers by reducing the cycle time between having an idea and seeing it in production. GitLab does this with The DevOps platform, which combines the ability to develop, secure, and operate software in a single application that is easier to use and leads to faster cycle times. GitLab is fundamentally changing the way Development, Security, and Ops teams collaborate. GitLab helps teams accelerate software delivery from weeks to minutes, reduce development costs, and reduce the risk of application vulnerabilities while increasing developer productivity. An estimated 30 million users across the globe trust GitLab to deliver great software at new speeds.

Key messaging guidelines

GitLab is a product and a platform

GitLab is both a product and a platform. It is a product in that it is a single application that you can buy and use. It is a platform in that it enables multiple use cases, and is a framework on which to build an unlimited number of additional use cases (because most functions are available through an API), supported by an ecosystem enablement group. Users have a fully functional product out-of-the-box, but they are not limited in extending and integrating with other systems. Other examples of products that are also platforms are: the iPhone (which didn't even have an app store when it launched) and Facebook.

While some more traditional definitions of platforms are more limited, there are other perspectives that take a broader view of the definition of platform. Specifically, Adrian Bridgewater explains the Facebook example in this [article](#) and also quotes blogger Jonathan Clarks who says, "Platforms are structures that allow multiple products to be built within the same technical framework" - which, one could argue, describes GitLab very well. Another article by Platform Hunt, a blog that studies platform business models, outlines 9 types of software platforms. GitLab most closely resembles an interaction platform, where identity is the foundational characteristic and the platform facilitates digital interactions. In GitLab's case, those digital interactions are collaborative coding, facilitated through both MRs and Issues.

Referring to GitLab as a platform, delivered as a single application, does nothing to diminish the key competitive differentiation of GitLab, as a single application approach has many benefits. Referring to GitLab as a platform also increases the potential CSM (total available market) for GitLab, and decreases potential confusion, as some might think that 'single application' refers to SCM only.

Minimize Git and Git-Only related concepts when talking about the company

We want to focus on the 'The DevOps platform, delivered as a single application' message. Since "Git" is in our company name, we do not need to re-enforce that we are a Git-based SCM in our messaging. We should always default to the 'The DevOps platform, delivered as a single

application' messaging, and, at a minimum, message multiple stage solutions.

Headline copy is different than messaging

Sometimes, we will use headlines with the purpose of grabbing someone's attention on a billboard, banner ad or blog post. Headlines can be more experimental, and sometimes use different words than official messaging. This is acceptable, as long as they are truthful and authentic. For example, our advertising headlines might be different than our value driver language. This is an appropriate use of different messaging for the purpose of engagement and experimentation.

Messaging to avoid

1. Don't use terms like "first" and "only". They are extremely difficult to prove with evidence so they lack credibility. Additionally, our partners often have policies that explicitly forbid this type of messaging so whenever we do joint marketing (press release, event sponsorship, etc.) they ask us to change this wording.
2. Don't use the term "integrated". Yes, GitLab is an integrated product, but Atlassian can claim the same thing even though their product suite is made up of many different apps in different code bases with even the prem and cloud versions for the same app being written in different programming languages. Instead use, "single application", "built from the ground up", or "built in" to describe GitLab's integrated nature.

SECTION: marketing/brand-and-product-marketing/product-and-solution-marketing/metrics.md

North Star Metrics (CEO ask on North Star Metrics)

Every marketing function should have at least one north star metric that they aspire to improve over time to help GitLab's business growth.

Below is a list of metrics by different marketing functions in Product and Solution Marketing.

Team	Primary Metric	Secondary Metric	Eventual Metric Goal
----	-----	-----	-----
PMM	Views	Content Created (pages, docs, talks, blogs, etc)	IACV Attribution
TMM	Views	Content Created (demos, videos, etc)	IACV Attribution
AR	Views	Analyst Coverage (reports, mentions, MQs, Waves, etc.)	IACV Attribution
Cust Ref	Views	Content Created (Case Studies, Quotes, References, etc)	IACV Attribution
Comp Intel	Views	Content Created (Comparison Pages, etc)	IACV Attribution

Working Definitions

- Impressions: A total count of how many people viewed our content.
 - Web pages, this is page views. (source: google analytics?)
 - Downloadable assets, it's downloads. (source:??)
 - YouTube Videos - views. (source: YouTube?...)
 - Webinars, Workshops, etc (Live Views). (source) (note: a webinar becomes a YouTube video and accrues "views").
 - In person events where we are speaking - audience count.
- Content Created: A total count of content that was NEWly created or significantly improved/updated. (source: SM Inventory)
- IACV Attribution: - our contribution to pipeline (source: Sisense - attribution dashboard)??
Note: campaigns contain a Product and Solution Marketing Field which should be used to document our campaign contribution.
- SM Field in SFDC: - a new field has been created in SFDC campaigns to measure our "active contribution" to campaigns. We use the following rubric to determine our contribution:
 - None or Blank: No active Contribution
 - Low: Review content, validating messaging
 - Medium: Revising content and /or customizing existing content
 - High: Developing net new content and / or delivering content (whether new or existing content)

Product and Solution Marketing (Ashish) thoughts on metrics we should consider

Multiple lenses of metrics are needed to build the narrative such as:

1. WHAT do we produce?

- Example: 5 WPs, 16 Demos, 2 customer case studies
- Assign to right category (Outbound, Campaign, Internal)
- Content created vs. curated

1. WHERE does it show up?

- What are the various ways we activate content?
- List of activation methods example: Website, SFDC, Email campaigns, Event booths, Campaign design, Conferences, enablement sessions,

1. How MANY people see (view) it? Frequency

- Example: 3000 website visitors per quarter, 45 sales people/month, 25,000 prospects for demo x in 12 events in a quarter, Handbook views, How many sales/channel got enabled?
- Why: Indicates overall activity for a given asset in a given time frame. It is an indicator about the effectiveness of the Title, description, landing page, and campaigns related to the asset. It does not tell us ANYTHING about the quality or effectiveness of the internal content. What will it tell us: The degree to which a given asset is active or not.

1. What HAPPENS with the content?

- Linear attribution of content in programs?
- How many converted?
- How many MQLs did the asset create?
 - Why - Why: Indicates how an asset is contributing to MQL. This indicates the frequency that a given asset is contributing to overall marketing qualification of leads. MQL What it will tell us: This metric probably does not provide any more insight than Asset Views. MQL simply is a cumulative set of activity by a given lead/contact to reach MQL threshold. MQL may be simply a refined view of Views.

- How many SAOs did the asset create?
- How many opportunities did the asset help create?
- How much \$ (ARR) did the asset help create?

- Why: Indicates that a given asset supported in revenue. We might be able to imply something about the quality of asset content, because end users have consumed the asset and then continued the buying process, however will require more analysis of other data points. What it will tell us: This will help us understand which assets are most connected with generating revenue and should therefore be promoted and re-used.

Challenge: Why do we measure? What are our next steps / actions based on what we learn?

Other considerations:

- Program Budget spend analytics

CMO (Todd) Challenge on how to measure

- View of output metrics:

1. Views/reads - Google Analytics dashboard is great because I can set goals. Some suggested fixes:

- Tagging YouTube and blog content so you can filter
- Changing Use case pages to public website pages

1. Linear Attribution of content in programs and campaigns

1. Value of Product and Solution Marketing to other teams

- Impact to sales (Survey?)
- Rest of marketing (Survey?)

- Other metrics to consider:

- Website first (MRs?)
- Metrics on views, etc.
- Maybe update BOM colors/links at every stand up

Asset Inventory

Product and Solution Marketing tracks an inventory about what it creates and publishes. This inventory originated as part of the Learn@GitLab project but is being extended to other groups, as the more complete our inventory is the more efficient we can be as a company in using them. The goal is to have other groups inside and outside of SM also adding and consuming from this inventory as the SSoT of available assets.

- Product and Solution Marketing Content Inventory Issue
- MVC1 on Google Sheets
- Google DataStudio Dashboard
- YAML based inventory model (MVC) - Details on making additions/changes are detailed in the assetinventory page. If you'd like to add your own team inventory file please follow the information on that page.

Web Traffic Analysis

- Website and handbook pages
- YouTube Metrics

- Learning Links:
 - Shane Rice - YouTube video on how to build such a dashboard
 - Google Analytics for Beginners

Marketing Attribution Model

- Marketing attribution
- Learning: Marketing attribution - quick overview

Customer Reference Analytics

Current metric - number of cases published per month - current target - 2 / month

- Metric not most efficient or in control of customer reference team
 - Number of case studies published not always in control - example, several "completed" case studies stuck in pipeline for reasons such as - hold at pre-publish stage for PR purposes (example - EMEA), still to be approved by customer legal or marketing department
 - Does not reflect true value to business. Examples:
 - References help obtain results in important AR reports - Gartner MQs or Forrester Waves
 - References help close opportunities (sales references)
 - References help generate pipeline (example - customer speakers for webinars or conferences)

Need additional metrics to measure value of customer reference activities and value delivered to the business.

- Ideas to consider:
 1. Overall growth of number of champions/logos included in program
 1. Number of reference requests
 1. Revenue influenced in pipeline
 1. Closed Won revenue influenced

Additional sources of metrics to consider:

- Customer Reference Edge Program
- Monthly Marketing Key Metrics Slides
- Case Studies Tracking Board

Competitive Intelligence Analytics

- Ideas to consider:
 1. Track usage of DevOps Landscape comparisons page
 - Page visits
 - Number of sessions
 - New visitors
 - Return visitors
 - Avg. Time on page
 - Bounce Rate
 - Click Through Rate
 - Conversion Rate

1. Track usage of competitive resources page
 - Number of persons accessing
 - Number of inputs/comments
 - Number of inbound requests
 - Competitive Intelligence Material attribution to sales
1. Impact of competitive resources to sales close - Deal Support and ROI Analysis
 - Number of deal specific enquiries responded to
 - Opportunity value of deal specific enquiries
 - Number of ROI analysis
 - Opportunity value of ROI analysis conducted
 - Opportunity value of deals won that included ROI analysis
1. Outbound (Blogs, videos):
 - Visits (bounce rate, time on page)
 - Engagement (low threshold CTAs clicked)
 - Leads (clicked on a register/signup)
1. Campaign (gated asset)
 - Visits (to landing page) - (isn't this also a valid measure, yes)
 - Leads
1. Internal (tied to sales ops)
 - Opportunities influenced (decks, showing up, ROI, cust ref, etc)
 - Internal views/downloads (enablement)

Analyst References Analytics

What do we measure today?

- Baseline survey data at FY2021 SKO on sales usage of analyst assets
- Gartner reprint info slides, and historical (views, etc.)
- Forrester reprint info (views, d/I, dwell)
- Customer Reference metrics - slide 2 is an example of current metrics (pool and attributes, requests and attributes, starting to measure some revenue attribution/impact, etc)
- Ideas to consider:
 - Analyst Newsletter metrics
 - Number of briefings and inquiries led
 - Coverage heat map - overall
 - Coverage heat map - changes over time
 - Analyst Relations web traffic
 - Impact on sales (pipeline, conversion, win/loss) - SFDC touch points
 - TEI Metrics
 - Satisfaction - a regular internal and external surveying/measurement metric

Examples to consider

- ChangeLog
- Surveys (Sales team)
- Analytics on issues managed - open/closed, internal vs. external
- Pathfactory
- SM Issues Analysis
- SM Budget Spend analysis
- CAB Data (to consider)

- x% that have case studies
- y% are active in sales
- z% are speaking in events (GitLab, industry, etc) for/with GitLab
- a% are active in analyst reference calls
- b% provide messaging, positioning, and persona feedback
- c% "decline" for our requests?
- STRETCH Goal: Can we analyze if we have been able to sell more into these organizations since they joined the CAB

Market Strategy and Insights (MSI) at GitLab

Who We Are

- A Team of Experienced Customer Reference, Market Insights, and Industry Analyst Relations Professionals

What We Do

- Gather & Build - Information & Relationships
- Distill - Impactful Insights
- Activate - Turning Insights Into Action

How We Do It

- Customer Reference Program
 - Customer Advisory Board
 - Customer Case Studies
 - Peer Review Site Management (Gartner Peer Insights, G2, Trust Radius, etc.)
 - Customer Insight Portraits
- Industry Analyst Relations (IAR)
 - Interactions (Briefings, Inquiry, Strategic Advisory)
 - Publications (Comparative Research, Market Landscape, Best Practices, Thought Leadership)
 - View the Analyst Relations Issue Board and AR-Cats Issue Board to see what's currently in progress.

Why We Do It

- Simplify Selling
- Help Build Better Products

- Improve the Customer Experience and Value Realized

Which Market Strategy and Insights team member should I contact?

- Listed below are areas of responsibility within the Market Research and Customer Insight team:

- Ryan, Staff Analyst Relations Manager
- Fiona, Senior Reference Program Manager; Regional Lead: EMEA and APAC; Program Lead: Customer Advisory Board, Customer Speaking Requests, Industry Analyst Relations Requests
- Traci, Principal Market Insights Manager
- Laura, Director, Market Strategy and Insights

SECTION: marketing/brand-and-product-marketing/product-and-solution-marketing/pmm-metrics.md

Objective: Manage and track the velocity of the PMM team

At GitLab, we ship MVC and iterate quickly to deliver value. The true measure of product marketing is in how effectively customers are able to understand how GitLab can help solve their problems. We aspire to measure the value of our activities, but the first start is capturing and tracking our activities. (which hopefully are aligned to business value)

Approach

We intend to use GitLab to capture key PMM activities / deliverables in order to track, visualize, and measure our velocity. We will use labels to clearly tag specific issues as they relate to the following high level PMM activities:

For MVC, we'll start with a handful of exclusive TOP level project labels in the Product Marketing project

Topic	Details	Label
Analyst Relations	briefings, reports, inquiry	pmm::AR
Customer Relations	CAB, case studies	pmm::Cust
Collateral	whitepapers, datasheets, roi models	pmm::Collateral
Enablement	sales,xdr, partner, etc	pmm::Enable
Events	Physical and virtual events: speaking, booth, writing abstracts, etc	pmm::Event
Research	market research, drafting studies, documenting	pmm::Research
Presentation	building, and updating decks pitch deck, product deck, etc	pmm::Deck
PR	briefing, press release, etc	pmm::PR
Sales Support	Specific sales support meetings, slides, etc	pmm::Sales
Web updates	Web content such as: handbook, product page, solution page, blogs, etc	pmm::Web

Reporting and Tracking

1. We have a quarterly milestone to track PMM quarterly work.
1. We also can set up an Insights dashboard using GitLab Insights which will give us visibility into work completed. Such as:

or

The PMM Role

The Handbook's Product Marketing Manager Role Page outlines the key responsibilities of your role. This page will discuss the ways in which you can measure and improve your performance in that role and develop yourself as a Marketer and GitLab Team Member.

Career Development Within Product Marketing

Product Marketing & Solutions Architects

Quarterly Rotation Pilot Program

Context: We want GitLab to be a place where everyone can build their careers and have a big impact for our customers and the business. In this spirit, we are testing a rotation program between the Product Marketing team and the Solutions Architects team. The goals of this program are:

Expose high performing teammates to new skills and experience in different areas of the business.

Enable teammates to apply their experience to a new area, offering diversity of thought and a fresh perspective.

Help teammates see how different roles contribute to unified company goals.

Create cohesion between teams.

Create an onramp to new roles as opportunities arise.

Details:

The rotation program will be scoped at 3 months, starting at the beginning of the quarter in order to reduce disruption.

The rotation may include a percentage of time where the SA still works on their SA tasks · the majority of time, however, should be spent in product marketing

Team member(s) participating in the rotation will be 'em
