MDF Program Introduction

GitLab Marketing Ready partners have access to the proposal-based GitLab Marketing Development Funds (MDF) Program. These funds are intended to support our partners' demand generation efforts.

MDF Investment Objectives

- Demand Generation

- The objective of these activities is to gain net-new end-user customers for you and GitLab. Examples of eligible activities include seminars, workshops, telemarketing or email marketing campaigns, participation in tradeshow, exhibitions, and direct mail.
- Eligible costs may include mailing costs, fulfillment items, lead qualification, distribution, venue costs, food and beverages (excluding alcoholic beverages), speakers' fees, management costs, and lead capturing costs.
- GitLab supports a limited number of partners in the selected regions, please check your eligibility with your regional Partner Account Manager and Channel Marketing Manager.

- To be considered for funding support you must:

- Be a Marketing Ready GitLab Partner. Marketing ready means:
 - partner has an approved business plan with GitLab
 - has a list of focus accounts mapped with GitLab
 - has a dedicated person who manages leads sent to the partner by GitLab (Partner Prospect Admin)

- acknowledges the lead passing and recall process
- has a dedicated marketing responsible person to work on the joint activities with GitLab

GitLab

- has regular calls with the GitLab Channel Marketing Manager
- acknowledges the MDF Policy and requirements for MDF process (Requests and Claims)
- Comply with GitLab Proof of Performance (POP) requirements for the activity
- Meet minimum required MDF request amount of \$1,000 USD
- GitLab will cover up to 50% of the total cost of the activity

Requesting MDF funds

- Marketing Ready Channel partners with marketing plans in place will submit MDF proposals through the Partner Portal, and GitLab approvers will be notified of the request through email.
- The MDF proposal from the Regional Channel Marketing Manager
- Once the MDF request has been either approved or declined the partner will be notified:
 - If declined, the partner will receive a notification informing that their request has been denied.
 - If approved, the MDF Operation's team will open an issue

PTO Process for MDF Request Approvers

Note that, when you have a planned PTO, Marketing Ops will need to add your manager as a secondary approver. Previously, you can do this in Salesforce, however, you'll need to create an issue request for support from MktgOps.

Demand Generation activities eligible for MD

Details are listed out in the MDF handbook.

These activities are captured as Campaign Type Details on the campaign level in Salesforce.com for Partner - MDF Campaign Type only.

Requesting Swag for Channel Events and Awards

We offer Marketing Kit Swag for Marketing Ready partner, these kits consists of:

- Banner stand
- Table Cloth
- 1000 stickers
- 200 Swag items (examples would be: colorful cable set, iPhone stand, bottle opener key chain, etc)

Please work with your Channel Marketing Managers to order your Marketing Kits.

Partner Instant Marketing Campaign

With GitLab Instant Marketing campaign assets, GitLab's Select and Open partners have access to marketing resources to help them quickly, and easily generate qualified prospects for their sales teams. We've developed turnkey, integrated partner campaigns-in-a-box, which we refer to as "Partner Instant Marketing" campaigns, so partners can simply and easily co-brand assets and execute!

These assets leverage GitLab go-to-market motions, such as DevSecOps and Automated Software Delivery, but are modified and expanded (in some cases) for partner use. Campaign assets include: nurture emails, landing pages, short videos, mini-books, social media and paid ads, quick sales guides and sales call scripts. All assets can be found on the GitLab partner portal.

Our modular campaign is designed to be a flexible, self-service model, so partners can download an entire campaign, or a couple of assets, and the materials are customizable and co-brandable. These campaigns are also available in 6 languages: English, French, German, Japanese, Korean and Spanish.

Partners and team members may review current campaigns available to partners by logging into the Marketing Demand Generation section of the partner portal.

Beyond our Team's Scope

- Custom campaigns: Channel Marketing does not currently have the resources to support individual partner campaigns and events. Please encourage your partners to leverage one of our turnkey, and integrated Instant Marketing Campaigns available on the Partner Portal.
- Unique Partner Asset Creation: Channel Marketing is unable to work directly with partners to customize their marketing assets.
- Event speakers: The Channel Marketing team does not have the resources to help locate GitLab speakers for partner events.
- Partner Blogs: The Channel Marketing team does not have the resources to craft unique content

to support a partner blog or content request.

- Public Relations: The Channel Marketing team is not responsible for editing or approving blogs or partner press releases. Please see the Corporate Communications handbook page for more information.
- Sponsored social media posts: partners looking to GitLab to promote partner activities would not route those requests through Channel Marketing. Instead, CAM's obtain the partner's social media channels and create an issue for the Social Media team. This request should include the partner's social media information, detailed description of what we are being asked to promote and target dates.
- Event attendance: The Channel Marketing team does not own a database of contacts by which to drive attendance to partner specific events nor do we possess the resources to support such requests.
- Partner training is managed and supported by the Channel Partner Training, Certifications, and Enablement team.
- Partner portal management: Partner portal administration from the Ecosystem Operations team is managed by GitLab Ecosystem Operations.

Meet the Team

- Daria Polukanina: Channel Marketing Manager for EMEA.
Responsible for Planning, and MDF allocation of EMEA Managed Partners. Works closely with PAMs and PTMs and the Field Marketing Team
- Gabby Chorny: Senior Channel Marketing Manager for AMER and PubSec.
Responsible for Planning, and MDF allocation of AMER Managed Partners. Works closely with PAMs and PTMs and the Field Marketing Team
- SJ Lim: Channel Marketing Manager for APAC.
Responsible for Planning, and MDF allocation of APAC Managed Partners. Works closely with PAMs and PTMs and the Field Marketing Team

The best way to contact our team is through our Slack channel

Operational set up of Partner Marketing Campaigns

The Channel and Alliance share the same operations/process in Marketo. They both require CRM Partner ID in their list import and UTM parameter (form fills).

We have two smart campaigns the filter the CRM Partner IDs by Alliance and Channel Partner lead.

1. Channel Partner - When CRM Partner ID reflects a Channel Partner Account ID (18), then it will populate the Vartopia Partner Account required to sync to Vartopia, mark the leads as marketing suspended, and additional fields to support the Channel Partner lead workflow.
1. Alliance Partner - When CRM Partner ID reflects an Alliance Partner Account ID (18), it doesn't populate the Vartopia Partner Account.

The main difference between Channel vs Alliance partner leads are:

CRM Partner ID (For list import and form fills) Passed to Partners via Vartopia Marketing Suspended Lead Score Responsible for Lead Follow Up			
-----	-----	-----	-----
-----	-----	-----	-----
-----	-----	-----	-----
Channel Partner leads	Yes		Yes
Yes	No	Partner	
Alliance Partner leads	Yes		No
No	Yes	GitLab S/BDRs	

An addition, Interesting Moment also highlights whether a lead participates in a Channel or Alliance campaign.

Example:

> ALLIANCE LEAD with {{my.Partner Name}} visited Booth at {{my.event name}} on {{my.event date}}. Location: {{my.event location}}

and

> CHANNEL LEAD with {{my.Partner Name}} visited Booth at {{my.event name}} on {{my.event date}}. Location: {{my.event location}}

Channel Marketing Campaigns

This handbook page is to walk through the technical and operational setup of different partner campaign types from Marketo · SFDC · Vartopia, including Marketo and SFDC campaign set up for MDF, Joint GitLab and Partner, and Partner Managed Campaigns.

The general steps required for creating a partner campaign include:

1. Clone and update Marketo program template and tokens.
2. Sync Marketo program to Salesforce - if necessary update campaign info.
3. Import the partner lead list.

Email Management

When a lead is passed to a partner, they will be suspended from GitLab marketing unless they opt-in specifically to GitLab marketing after being passed, or the partner returns the lead to GitLab. Read more on the email management page.

Keep in mind, they will still be eligible for operational email sends - which includes most follow up emails. If you want to exclude them, you will need to add a parameter to the smart list of that send campaign to say Prospect Share Status not equal to Pending, Sending to

Partner, Accepted.

Note that the smart list, SSOT - ALL EMAILABLE already excludes partner leads.

Scoring

Leads that are actively being worked by the partner will be excluded from scoring. Once they are no longer being worked by the partner, they will be scored again. More details on the scoring page.

Channel Partner Lead Sharing via Vartopia

Leads generated from Channel Marketing campaigns are shared to Channel Partner in Vartopia where they can accept, reject and action by Partners. There are specific fields that are required to allow leads to sync, to list a few: Vartopia Partner Account, Prospect Share Status and Partner Prospect Status. Learn more, see the Vartopia handbook page.

Note that Channel Partners refer to Vartopia as Prospects in the Partner Portal, as they can only access Vartopia through SSO via the portal.

Partner Recall

The recall process is built to be able to pull back partner leads that are not being actioned in Vartopia. Not all partner leads are subject to recall, only Joint GitLab and Partner campaign leads can be recalled. See the full overview.

CRM IDs for Channel and Alliance Partners

For a running list of Channel Partners and their CRM IDs, which is critical to the channel partner lead flow, [click here](#), while the CRM Partner ID for Alliance Partners can be found [here](#).

Types of Partner Campaigns

Partners have many different type of campaigns that fit into specific categories. Each campaign has it's own ROE for lead routing and email practices. See the campaign flow chart to understand how leads are distributed.

- MDF Campaigns
- Joint Campaigns
 - Events
 - Webinar
 - Partner Sponsored Events
- Partner Managed Campaigns
 - Impartner Program
 - Partner Campaign

Issue first - Partner Pilot

In an attempt to extend our GitLab CREDIT values to our partner ecosystem, the EMEA teams have

decided to run a pilot with partners where the partner will be invited to collaborate in GitLab issues for joint event execution. More info can be found in the Partner Pilot Issue.

MDF Campaigns

MDF campaigns involve financial support or funds provided by GitLab to the Channel Partners to manage a lead generation campaign. These campaigns follow their own processes not found on the campaigns-and-programs page.

.. Quick Links: Lead Routing

Before starting this steps, note you'll need to have already set up the Allocadia subcategory and line item.

Step 1: Setup Marketo Program

1. Clone Marketo Template and update program name: YYYYMMDDMDF000PartnerNameRegionEventName
1. Select the Program Name on the Summary page, this will unlock a description, where you will update description with the links to the SFDC MDF request, Coupa ID and Allocadia ID (if you have it), then Save.
1. Update the Marketo tokens: {{my.Partner Name}} with Partner Name.

Step 2: Sync Marketo Program to SFDC

1. In the Marketo Program Summary page, in Salesforce Campaign Sync, click on Not Set.
1. Salesforce Campaign Sync will pop up, with a Campaign dropdown, select Create New, then Save. This will automatically populate the campaign tag, so you do not need to edit anything.

Step 3: Update SFDC Campaign

1. Under Vartopia Partner Information, select the Partner Account and check Sync to Vartopia for the campaign to sync to Vartopia.
1. Budgeted Cost in SFDC pulls from your plan number, not your forecast number from Allocadia. If you do not have a plan cost in Allocadia then Budgeted Cost in SFDC will remain blank. If this is the case, you will want to add in your Budgeted Cost manually into your SFDC campaign.
1. Under MDF Request, select the corresponding MDF Request to successfully link to SFDC campaign.
1. Once Allocadia has updated the SFDC campaign, you will need to double check Campaign Type and make sure it still says Partner - MDF. If it does not, please update the field.

Step 4: Update List Upload Request Issue

The list import issue will be automatically be created via Allocadia - GitLab issue integration.

Skip to step 2 of the list import instructions for partner leads.

<!-- FY25 GitLab Sales Dev Working Partner Leads

As part of a pilot program in FY25, GitLab Sales Dev team can work on MDF campaign leads agreed

upon by Partners.

We are treating these leads as non-partner leads with Source = Partner Qualified Lead. They will be scored, assigned to BDRs, and have LIM. The source will remain as Partner Qualified Lead as we will use this to track partner ownership, while allowing our GitLab Sales Dev team to work these leads and not lose insight into where the lead came from.

The Marketing team will use FM Marketo template to set up the campaigns, and these MDF campaigns will follow the High Priority routing rules - if the lead is part of an actively working account with BDR assigned, they are assigned to BDR, and if the lead is an MQL, then it will follow the regular lead routing rules. However, if the lead is neither Actively Working nor MQL, they will be shared with the Partner.

Note, that when a lead is already shared with a Partner, it will not go to the Sales Dev team.

Indicators

- Campaign - High Priority = True AND Campaign Type = Partner - MDF
- Lead/Contact - Source = Partner Qualified Lead AND/OR Partner Lead Worked by Sales Dev = True
- Opportunity - Source = Partner Qualified Lead AND/OR Partner Lead Worked by Sales Dev = True

Process

This process requires the following platforms: Allocadia, Marketo, Salesforce, Traction and Vartopia.

Flow Chart >

<iframe style="border: 1px solid rgba(0, 0, 0, 0.1);" width="800" height="450" src="https://www.figma.com/embed?embedhost=share&url=https%3A%2F%2Fwww.figma.com%2Ffile%2F6LFKq2rQaw16Yd%2FSales-Dev---Partner-Sales-Collaboration%3Ftype%3Dwhiteboard%26node-id%3D0%253A1%26t%3Dzu4zZQVPbHpeR8S0-1" allowfullscreen></iframe>

1. Allocadia - Create the subcategory and line item in Allocadia.

1. In the details panel, update Worked by Sales Dev to True on the subcategory (required)
2. Open GitLab epic and issues using the GitLab issue - Allocadia integration. The GitLab epic and issues will include an issue template called, Partner Sales Campaign - BDR Collaboration Template. The purpose of this issue is to communicate how the Sales Dev team is expected to follow up with the campaign.

2. Follow the instructions to set up Marketo Program and SFDC Campaign.

1. Setup in Marketo
 1. Clone the appropriate FM program template
 2. Go to the Program > My Token - Fill out the Tokens
2. Add Allocadia Subcategory ID to Marketo Program/SFDC campaign description, then sync to Salesforce Campaign

3. Update Salesforce Campaign

1. Update Is the Channel Partner Involved? = Yes (Automated with Allocadia integration)
2. Update Channel Partner Name with Partner Name (Automated with Allocadia integration)
3. Mark campaign as High Priority.
4. Campaign Type changes to Partner - MDF (Automated - Updated in Minutes).
5. Sync the campaign to Vartopia so it shows in the GitLab Marketing Campaign field dropdown. (Automated - Every Hour).

3. Import

1. Change the CRM Partner ID column to say Partner.
2. Add Partner Lead Worked by Sales Dev = True column.
3. Once imported, if the lead is net new, the source will be changed to Partner Qualified Lead.

4. Traction Routing

1. Since it's a High Priority campaign, only MQLs and Actively Working Accounts will be routed to BDRs/SDRs.
 2. If the lead is not MQL nor Actively Working, then Vartopia Partner Account will be added and Lead Acquisition Source if blank = \ MDF Campaign and reassigned to the Partner Queue.
 5. Marketo - Leads that are sent back to the partner will be updated with the partner fields ie. Partner Consent, Do Not Email = Partner Lead, Marketing Suspended, etc (Automated).
- >

Joint GitLab and Partner Campaigns

When GitLab and Partners participate in campaigns together including events, webinars and more.

.. Quick Links: Lead Routing

NOTE: For Vartopia sync, the campaign field, Is Channel Partner Involved? = Yes.

First, use the general set up, found in campaigns and programs page. The partner steps are nested in the typical Marketo program templates to clone. Once the campaign is cloned, follow the steps below in addition to the other setup steps found on the campaigns and programs page.

All Marketo templates will have 2 tokens added to them that the campaign owner should update, {{My.Partner Name}}.

- Partner Name: Does not need to be official, it will be used on the form consent language and interesting moments, so needs to be customer facing. Example: By registering for this GitLab and {{My.Partner Name}} event....
- Partner ID: All partner IDs can be found here.

Online Campaign - Lead Capture via Form/Landing Page

The following instructions is for joint campaign run with one partner, and must be completed prior to launch.

1. Update the Marketo tokens: {{my.Partner Name}} with Partner Name.
1. Update Registration Landing Page to use FORM 3146: Partner + GitLab Joint Event with Token
 - To update the page:
 - Right click Registration Landing Page, edit draft.
 - Under Elements, find Custom Form and double click on the form.
 - Update Edit Form Settings, select: FORM 3146: Partner + GitLab Joint Event with Token and click Swap.
 - Top right, Landing page Action select for the dropdown menu, then click Approve and Close.
1. Processing Registration Smart Campaign
 1. Processing smart campaign's Smart list must reference the landing page used in Program.
 2. Schedule, Activate smart campaign.
1. Set up asset expiration as described here, if needed.
1. (no setup needed) Marketo will process.
 1. If there is a CRM Partner ID,
 1. Set Vartopia Partner Account
 1. Set Partner Consent = True.
1. (no setup needed) Interesting moments will dynamically change if there is a partner involved to reflect that.
1. (no setup needed) Traction picks up from there, and the lead is routed accordingly to either GitLab or the Partner in Vartopia.

Running a Joint Campaign with Multiple Partners?

The process above will work for an event with multiple partners driving to it. Make sure they have their UTM Parameter URL correct when sending traffic to the registration page. You can use the Form 2432: Partners which doesn't require the use of tokens, and provides a generic partner consent messaging that can apply to all partners.

Offline Campaign - Lead Capture via List Upload

If a form/landing page isn't available to capture registrations, see List Import for Partner Leads.

The process above will work for an event with multiple partners driving to it. Make sure they have the partner ID properly appended to each person on the list. You still need to fill out the token, but only one value will be accepted. Please decide ahead of time who the default partner is that will receive the leads they did not source.

Partner Sponsored Events

GitLab allows Channel Partners to sponsor our owned events. The leads acquired by the Channel Partner will be shared regardless of their Lead Status and BDR Prospecting Status and will not be applicable to the recall process despite Lead Source = Owned Event and not Partner Qualified Lead.

Lead Acquisition Source needs to be manually updated to Partner Sponsored Event in the Marketo program flow. To do so, the steps below must be followed.

Step 1: Should there be any Partner sponsors, the Partner Marketing team specify to Marketing

Operations team which campaign/program and Channel Partners are the sponsors.

Step 2: Marketing Ops team will need to update the program flow.

Step 2a: Update the smart campaign flow according to the lead creation method:

- For online lead creation via form submission, update 01b - Registration
- For offline lead creation via list import, update 02b - Manual Upload Processing

Step 2b: Update the data change value from:

> If Vartopia Partner Account is not empty, Lead Acquisition Source change value to Owned Event

to

> If Vartopia Partner Account is empty, leave blank (Do Nothing).

Step 2c: Add Choice: If Vartopia Partner Account is equal to Account ID of the Partner Sponsor (s), Lead Acquisition Source change value to Partner Sponsored Event

Partner Managed Campaigns

Partner managed campaigns are marketing activities organized and leads generated are owned by partners.

Partner Campaigns

Note that this type of campaign are not generated by MDF.

Step 1: Setup in Marketo

1. Clone the Marketo program template: YYYYMMDDPartnerNameEventNameRegion
2. Update the Marketo tokens: {{my.Partner Name}} with Partner Name.

Step 2: Sync to Salesforce Campaign

1. In the Marketo Program Summary page, in Salesforce Campaign Sync, click on Not Set.
1. Salesforce Campaign Sync will pop up, with a Campaign dropdown, select Create New, then Save. This will automatically populate the campaign tag, so you do not need to edit anything.

Step 3: Update Salesforce Campaign

1. Update Campaign Type Details

1. Change the Campaign Owner to your name

1. Update Start Date to the date of launch

1. Update End Date to when the campaign concludes

1. Update Budgeted Cost - If cost is \$0 list 1 in the Budgeted Cost field. - NOTE there needs to be at least a 1 value here for ROI calculations, otherwise, when you divide the pipeline by 0 you will always get 0 as the pipe2spend calculation.

1. Update Region and Sub-region if you have the data available
1. Update Is a Channel Partner Involved? = Yes
1. Update Channel Partner Name
1. Click Save.

Step 4: List Import

Follow the steps in List Import for Partner Leads.

Distributor Campaigns

Carahsoft

Campaigns Without Leads

The purpose of this use case is to allow Value-Add campaigns to be available in the Distributor Marketing Campaign dropdown to track ROI, which doesn't require a lead list.

1. Carahsoft - Add the Event/Activity Name and Campaign Code to the Carahsoft Marketing Plan spreadsheet
1. Gabby - Assign Salina to the Campaign Code column
1. Salina - Create the SFDC campaign and add Campaign Name and Campaign Code to the Smartsheet. This will allow the Campaign Name to be displayed on the Distributor Marketing Campaign.
1. Salina - Add SFDC Campaign ID, SFDC Campaign Link and confirm the campaign name has been added to the Smartsheet under the Added to smartsheet column.

Campaigns Worked by Sales Dev

This is not an MDF campaign, as referenced in the name, it's a value-added where the leads will be worked by the Sales Dev team. Video recording available

1. Setup Allocadia
 1. Create a subcategory and line item
 1. Update Worked by Sales Dev to True on the subcategory (required)
 1. Open GitLab epic and issues using the GitLab issue - Allocadia integration. The GitLab epic and issues will include an issue template called, Partner Sales Campaign - BDR Collaboration Template. The purpose of this issue is to communicate how the Sales Dev team is expected to follow up with the campaign.
 1. Tag the Public Sector Business Development & AMER SDR on the Partner Sales Campaign BDR issue for visibility.
1. Follow the instructions to setup Marketo Program and SFDC Campaign.
 1. Setup in Marketo
 1. Clone the appropriate FM program template
 1. Go to the Program > My Token - Fill out the Tokens
 1. Sync to Salesforce Campaign
 1. Update Salesforce Campaign
 1. Update Is the Channel Partner Involved? = Yes (Automated with Allocadia integration)
 1. Update Channel Partner Name with Partner Name (Automated with Allocadia integration)
 1. Mark campaign as High Priority
1. Spreadsheet - Assign Salina to the Carahsoft Marketing Plan spreadsheet to Add Salesforce

Campaign to Smartsheet (Interim process until the next iteration)

1. Upload lead list via Google Drive

1. Include CRM Partner ID

1. Add Partner Lead Worked by Sales Dev = True column

1. Once imported, if the lead is net new, the source will be changed to Partner Qualified Lead (Automated)

Alliance Marketing Campaigns

This section is to walk through the technical setup of webcasts hosted by GitLab and/or Alliance Partner. Unlike Channel leads, Alliance leads follow the regular lead and contact statuses and scoring model.

<!-- Alliance Partner Lead Sharing via Impartner

Leads generated from Alliance Marketing campaigns can be shared to Alliance Partners through Impartner. They will only see the lead list of the campaign members - unlike Vartopia, they do not need to accept or reject the leads.

Note, we can only sync lead records on the lead object.

The field requirement for leads to sync to Impartner include:

1. Partner Account (ImpartnerPRMPartnerAccountc)

2. Partner Contact (ImpartnerPRMPartnerContactc)

More information can be found on the Impartner page. -->

Webcast Setup

All Marketo templates will have 2 tokens added to them that the campaign owner should update,{{My.Partner Name}}.

The CRM Partner ID can be retrieved by identifying the Account ID (18) of the Alliance Partner - refer to this list.

First, use the general set up found in campaigns and programs page. The partner steps are nested in the typical Marketo program templates to clone. Once the campaign is cloned, follow the steps below in addition to the other setup steps found on the campaigns and programs page.

<!-- On24 Webcast Hosted by GitLab - Lead Capture via Form

GitLab can drive webcasts with Alliance Partners using On24. To incorporate the steps required for partners, follow these additional steps.

Step 1: Setup in Marketo

1. Update the Marketo tokens: {{my.Partner Name}} with Partner Name.

1. The registration landing page must have the following:

- FORM 3299: Alliances with a hidden field that captures utmpartnerid.

- The URL must include the utm parameter with the CRM Partner ID to the landing page to

lead to be associated with the Alliance partner.

1. Activate 01a Registration Flow (single timeslot)
1. Activate 00 Interesting Moments and interesting moments will dynamically change if there is a partner involved to reflect that.
1. (no setup needed) Marketo will process.
1. If there is a CRM Partner ID
 1. Set CRM Partner ID (Look up)
 2. Set Partner Type = Alliance Partner (by Salesforce)

Step 2: Update SFDC Campaign

1. Update Campaign Type Details
 1. Change the Campaign Owner to your name
 1. Update Start Date to the date of launch
 1. Update End Date to when the campaign concludes
 1. Update Budgeted Cost - If cost is \$0 list 1 in the Budgeted Cost field. - NOTE there needs to be at least a 1 value here for ROI calculations, otherwise, when you divide the pipeline by 0 you will always get 0 as the pipe2spend calculation.
 1. Update Region and Sub-region if you have the data available
 1. Update Budget Holder
 1. Update Is an Alliance Partner Involved?
 1. Update Alliance Partner Name
 1. Click Save.-->

Webcast Hosted by Alliance Partner - Lead Capture via List Upload

NOTE: Upon list import, ensure the Google sheet column for CRM Partner ID is populated, this will help associate the partner lead with the Alliance partner.

If a form isn't available to capture registration, follow these additional steps:

Step 1: Update Tokens in Marketo

- Update the Marketo tokens: {{my.Partner Name}} with Partner Name.

Step 2: Update SFDC Campaign

1. Update Campaign Type Details
 1. Change the Campaign Owner to your name
 1. Update Start Date to the date of launch
 1. Update End Date to when the campaign concludes
 1. Update Budgeted Cost - If cost is \$0 list 1 in the Budgeted Cost field. - NOTE there needs to be at least a 1 value here for ROI calculations, otherwise, when you divide the pipeline by 0 you will always get 0 as the pipe2spend calculation.
 1. Update Region and Sub-region if you have the data available
 1. Update Budget Holder
 1. Update Is an Alliance Partner Involved?
 1. Update Alliance Partner Name
 1. Click Save.

Step 3: Update CRM Partner ID Column in Google Sheet

- In the list upload, include the CRM Partner ID value in the spreadsheet column. If the lead is not associated with an Alliance partner, leave the column blank.

Step 4: Update List Upload Request Issue

- Please follow the list import criteria and guidelines.

Webcast Hosted by Alliance Partners - Leads Shared via Labra

Note: You need access to the Labra Leads object in Salesforce to be able to view the leads

Step 1: Setup in Marketo

1. Clone Marketo Template: YYYYMMDDExternalWebcastVendorNameTopicRegion
2. Update the Marketo tokens: {{my.Partner Name}} with Partner Name and {{my.CRM Partner ID}} with Account ID (18).

Step 2: Update SFDC Campaign

1. Update Campaign Type Details
2. Change the Campaign Owner to your name
3. Update Start Date to the date of launch
4. Update End Date to when the campaign concludes
5. Update Budgeted Cost - If cost is \$0 list 1 in the Budgeted Cost field. - NOTE there needs to be at least a 1 value here for ROI calculations, otherwise, when you divide the pipeline by 0 you will always get 0 as the pipe2spend calculation.
6. Update Region and Sub-region if you have the data available
7. Update Budget Holder
8. Update Is an Alliance Partner Involved?
9. Update Alliance Partner Name
10. Click Save.

Step 3: Export Leads from Salesforce

1. Duplicate Salesforce Labra Leads Report
 1. Update AWS Campaign Name with the desired campaign name
 2. Export report as a CSV

Step 4: List Import

1. Clone Google Sheet template.
2. Add Labra Leads to the spreadsheet.
3. Add CRM Partner ID Column in Google Sheet.
 1. Notes, in the list upload, include the CRM Partner ID value in the spreadsheet column. If the lead is not associated with an Alliance partner, please leave the column blank.
4. Follow the general list import criteria and guidelines for the list import spreadsheet.
 1. Ensure the Countries, States and the Program Member Statuses are an exact match to the picklist values.

2. Leads should not be marked as Opt-In, unless they specifically opted into GitLab emails.
5. Once the spreadsheet is completed, proceed with self service list import steps 3-6.

List Import for Partner Leads

1. Create a list import issue using the issue template found in the Marketing Operations project titled general-list-import-request.
1. For the list import spreadsheet (found in the list import issue), be sure to follow the general instructions.
 1. For specific instructions related to Partner, here what you need to know:
 1. Ensure the CRM Partner ID column is populated with the Account 18 (ID)
 1. Lead should not be marked as Opt-In, unless they specifically opted in to GitLab emails.
 1. Phone number is mandatory for Vartopia sync, make sure that field is populated.
1. Once spreadsheet is completed, proceed with self service list import instructions.
1. (no setup needed) Marketo will process.
 1. If there is a CRM Partner ID that equals to a Channel Partner Account ID (18),
 1. Set Vartopia Partner Account - if CRM Partner ID is associated to a Channel Partner.
 1. Set Partner Consent = True
 1. If CRM Partner ID equals to a Alliance Partner Account ID (18),
 1. Do nothing.
1. (no setup needed) Interesting moments will dynamically change if there is a partner involved to reflect that.

UTM Parameter URL

The UTM parameter URL plays a huge part on partner lead routing and reporting. We utilize utmpartnerid in the UTM parameter URL to capture the Account ID (18) of the Partner Account, which populates into the CRM Partner ID. This process is embedded as a hidden field in all our partner-related Marketo forms. Each page must have the utmpartnerid in the URL, otherwise we cannot pass to the partner.

You can use the Partner UTM Builder to create your URLs.

- utmmedium = partner (never changes)
- utmsoure = partner (never changes)
- GTM = x (never changes)
- Partner Name - utmpartnerid is a dropdown show all Channel Partners, and two Alliance Partners (AWS, and GCP). Select the partner you are working with.
- Fill out the rest of the UTM parameters

Field Glossary

Below are the glossary of fields used for Channel and Alliance partner campaigns and workflows.

|
 | Channel Partner | Channel Partner | Distributor | Distributor | Alliance Partner | Alliance
 Partner |
 |

-----	-----	-----	-----	-----	

Leads	Records	Leads	Records	Leads	Records
Alliance Record					
X					
Channel Record		X		X	
CRM Partner ID	X		X		X
CRM Partner ID (Look Up)	X		X		X
Lead Acquisition Source	X				
Partner Consent	X		X		
Partner Managed	X				
Partner Manager	X				
Partner Type	X		X		X
Subscribe - Partner					
X	X		X		
Vartopia Partner Account	X				

Go to the Vartopia page to review fields that are relevant to Vartopia.

Alliance Record

This field shows when a record belongs to an Alliance Partner meaning they are an employee of said Alliance Partner. When this field is checked = true, the record will be suppressed from general marketing communications.

Channel Record

This field shows when a record belongs to a Channel Partner meaning they are an employee of said Channel Partner. When this field is checked = true, the record will be suppressed from general marketing communications.

CRM Partner ID

This field is populated with the Salesforce Account ID (18) of Partner Account used for both Channel and Alliance.

For a running list of Channel Partners and their CRM IDs, which is critical to the channel partner lead flow, [click here](#), while the CRM Partner ID for Alliance Partners can be found

here.

CRM Partner ID (Look up)

The lookup field retrieves the name of the partner account associated with the Account ID (18) used for both Channel and Alliance.

Lead Acquisition Source

This field records the source type of the partner lead. The biggest driver for this field is to isolate the source type that applies to the recall process including Owned Event, Service Management.

The reason why Initial Source isn't used for this use case is because the field value must equal to Partner Qualified Lead to be attributed to and sourced by Partner.

Partner Consent

This field indicates when a lead has granted consent to allow their information to be shared with a Partner. This only applies to Channel Partners because Alliance Partners are not enrolled in the lead-sharing module.

Partner Type

This field specifies when a partner lead is associated with a Channel or Alliance Partner account.

Partner Managed

This field marks when a lead is managed by a Channel Partner via Vartopia. Vartopia Partner Account must be populated and their Prospect Share Status and Partner Prospect Status must have a status that suggests they are being worked on by a Channel Partner.

- Partner Prospect Status = Qualifying, Qualified or Converted to DR, or
- Prospect Share Status = Sending to Partner, Pending or Accepted.

Partner Manager

This field reflects the Account Owner, Channel Account Manager or Partner Account Manager associated to the partner account.

Subscribe - Partner

This field records when a lead has opted-in to Partner communications. Subscribe - Partner resides only in Marketo.

SECTION: marketing/channel-marketing/hyperscalers.md

Hypercaler Campaign

Naming Convention Requirements

When working with hyperscaler partners like AWS and Google Cloud, it's important to follow specific naming conventions and configuration procedures. This guide explains each component of this process in detail.

Every campaign involving a hyperscaler partner must specify the Hyperscaler Partner Name after the date:

> YYYYMMDDHyperscalerNameCampaignCampaignTypeRegion

Examples:

- 20251202AWSAWSreinventBooth
- 20250409GCPGoogleCloudNextBooth
- 20241114AWSsdevops.comModernizingFinServeemeaamer

If there are Hyperscaler Funds involved, ensure you include the type of Funds are applied to the Campaign after the Hyperscaler Name.

- MDF: Market Development Funds for 50% coverage
- CR: Credits for 100% coverage

Examples:

- 20250307AWSMDFCampaignCampaignTypeRegion
- 20250307GCPCRCampaignCampaignTypeRegion

Reference the Campaigns and Programs page for naming conventions for specific campaign types.

Salesforce Configuration Requirements

When setting up these campaigns in Salesforce, you need to take two critical actions:

1. Set the field Is Hyperscaler Involved? to True - This flags the campaign as a partnership activity.
2. Select the appropriate partner under the Hyperscaler field - Choose either:
 1. Amazon Web Services
 2. Google Cloud (Partner)
3. Select the Fund Type under Will there be Hyperscaler Funding?
 1. MDF
 2. Credits

This configuration ensures proper attribution and tracking of partnership activities. Note that, Hyperscaler MDF is only in reference to AWS MDF, as that is currently the MDF that's available for GitLab.

Campaign Types Covered by These Guidelines

These naming conventions and configuration requirements apply to all activities where hyperscalers are involved, including:

- Exhibition booths at hyperscaler-hosted events (such as Google Cloud Next or AWS Summit)
- Presence at major corporate events (like AWS reInvent)
- Joint webinars with hyperscaler partners
- Digital marketing campaigns including content syndication and advertising
- Any events or activities that utilize AWS MDF (Market Development Funds) or Google credits

Special Instructions for Content Syndication Teams

If you work with content syndication, you have an additional step: You must update the Asset Name in the Marketo token of the Content Syndication Folder to include the Hyperscaler Name.

This ensures consistency across all platforms and makes reporting and attribution more accurate. The Marketo Program Description field has been recently updated to include a reminder about adding hyperscaler partner names to campaign names whenever these partners are involved.

Following these guidelines carefully ensures proper tracking, reporting, and compliance with partnership agreements, while also making campaigns easier to find and manage across systems.

Hyperscaler Funded Campaign

Hyperscaler funded campaign represent a strategic partnership mechanism through which cloud hyperscalers like Amazon Web Services (AWS) and Google Cloud Platform (GCP) provide financial support to partners like GitLab for joint marketing initiatives.

Presently, the Hyperscaler funds are only available to the Field Marketing team. We will be working in iteration to support additional marketing teams.

These funding programs operate under different models that reflect each hyperscaler's partnership approach:

- AWS MDF Program: Follows a matching investment model. This means for every dollar AWS contributes, GitLab must match with its own dollar.
- Google Credits Program: Unlike AWS, Google offers 100% reimbursement for approved marketing activities. This model allows GitLab to execute campaigns and receive full reimbursement upon providing proof that the activities were completed successfully.

From GitLab's perspective, these funds enable more expansive marketing campaigns than possible while strengthening strategic partnerships with major cloud providers. The partnership creates a "better together" narrative that helps customers understand the enhanced value proposition of GitLab running on these cloud platforms.

Key Roles in the Hyperscaler MDF Ecosystem

1. Program Owner (Francine): Primary contact with Hyperscaler Partners

1. Oversees the entire MDF program
2. Reviews internal MDF request entries with Hyperscalers
3. Submit MDF request, when approved, we'll receive a PO
4. Request an invoice from AR team provide the PO and MDF Approval Email via issue
5. Submit claim with proof of performance (receipt) to the Hyperscaler portal

2. Fund Requesters: Initiates funding requests

1. Fill out the appropriate spreadsheet with campaign details
2. Provides Target MQL and Target Pipeline Goals

3. Partner Marketing Manager (Gabby): Administers fund allocation

1. Set up the Allocadia activity
2. Create the GitLab Hyperscaler Funds issue assigned to the requester

4. Campaign Owners/Operations (Fund Requester can also be a Campaign Owner)

1. Create their own Asana project to manage their campaign
2. Manages execution and setup for Marketo and Salesforce
3. Open Zip request
4. Send Program Owner receipts for Proof of Performance

Application Process

1. Complete the Google Sheet:

1. AWS: Marketing calendar - spreadsheet
2. GCP: Marketing calendar - spreadsheet
3. Complete all required fields, including:

1. Strategic Alignment
2. Region
3. Activity Type and Description
4. Proposed Start and End Date
5. Total Cost
6. Amount Requested
7. Target MQL
8. Target Pipeline

2. Submit for Review:

1. Tag Francine for approval in the Google spreadsheet
1. Include any supporting materials that strengthen your case (past performance of similar activities, customer interest data, etc.)

Approval Process

1. Initial Screening: Francine will review your application to ensure it meets basic requirements and aligns with strategic priorities.

2. Hyperscaler Partner Approval: Upon preliminary approval, Francine will review and seek approval for the activity and confirm funding amount from the Hyperscaler Partner.
3. System Configuration: Once approved by the Hyperscaler Partner,

1. Channel Marketing Manager will open the Allocadia activity and Hyperscaler Funded GitLab issue

2. Campaign Owner will be responsible for creating the Marketo campaign and sync to Salesforce using the Allocadia Subcategory ID (found in the Hyperscaler Funded GitLab issue)

Set up

Allocadia

The Channel Marketing Manager will be responsible for opening the Allocadia activity under the Regional Marketing > AMER > Hyperscaler plan.

1. Create subcategory and line item

1. Different accounting approaches apply based on the hyperscaler. AWS campaigns show both the positive contribution and the matching negative amount, while GCP campaigns show the full reimbursable amount.

2. Details panel

1. Planning:

1. New FO or Growth
2. Target MQL (syncs to SFDC Planned MQL)
3. Target Pipeline (syncs to SFDC Planned Pipeline)
4. Sales Dev Onsite Support
5. Sales Dev Invite Support
6. Subcategory (FM)
7. GTM Motion
8. Start Date
9. End Date
10. Triple Play
11. Embedded Systems
12. Is Hyperscaler Involved? = True
13. Hyperscaler
14. Will there be Hyperscaler funding?
15. Hyperscaler Funding Amount
16. SA Support
17. Segment
18. Geo
19. Country

2. Wishlist/Cancelled

1. Cancelled

3. Campaign Details

1. Existing Salesforce Campaign
2. Campaign Link
3. Campaign Owner
4. Campaign Type
5. Budget Holder = Hyperscaler

4. GitLab Issue Details

1. Operational Program Owner = Francine
2. Partner User Handle = @fanthony2
3. Requester User Handle
4. GitLab Issue Template = Hyperscaler
5. Official Event/Campaign Name
6. GitLab Marketing Issue Link (Auto-populated)
7. GitLab Issue URL Reference (Manual entry)

3. Action: Create GitLab Hyperscaler Funded Issue in the Field Marketing GitLab Project

GitLab Issue

The GitLab Hyperscaler Funded Campaign issue will be used as an intermediate step prior to syncing to Asana.

1. Channel Marketing Manager will be responsible for entering the details include region and activity quarter labels to GitLab Hyperscaler Funds issue.
2. Program Manager will request for invoice from AR using the finance issue, including PO and payment terms. MDF - Example
3. Once the GitLab Hyperscaler Funds issue details are complete, Channel Marketing Manager adds the Asana-Sync-Project to the GitLab Hyperscaler Funds issue and ping the FMM and FMC to start the Plan to WIP process
4. Channel Marketing Manager will add the Asana project link to the Resources section above

Asana Project

To accommodate the Field Marketing process in Asana, we have integrated the steps for Hyperscaler Funded Campaigns into the Plan to WIP.

Pre-Event

1. Create Marketo/ SFDC campaign with add the Hyperscaler Name and Hyperscaler Fund Type after the date in the Campaign Name - reference a handbook for naming convention. Examples:
20250307AWSMDFActivityTypeActivityNameRegion;
20250307GCPCRActivityTypeActivityNameRegion
1. Create Marketo program under the Hyperscaler Funded Campaign folder
2. Sync the Marketo program to Salesforce using the Hyperscaler Funded Campaign Allocadia Subcategory ID
3. Update the links to Marketo and Salesforce in the Asana Project Overview

2. Opens the Zip request

1. Acquire Contract/Invoice for the Marketing Activity
2. Select the appropriate purchase type: ·What are you looking to purchase?· (Ensure not to select MDF)
3. Enter the amount of the total contract cost
4. In the Allocadia ID, specify the Line Item ID (positive value) of the Hyperscaler Fund Allocadia activity in the Zip request
5. Add Francine as a follower to the Zip request
6. Update the link to Zip request in the Asana Project Overview

Post-Event

1. Attach Proof of Payment (POP) to the Asana Project and tag Francine

1. Third-party receipts showing actual costs are required for cash reimbursement. It should clearly show a date, after the fund requests approval and the paid amount.

Understanding Data Flow: From Lead to Opportunity

One of the most complex aspects of hyperscaler campaigns is tracking the customer journey from initial interest to closed business. This journey involves multiple handoffs:

- Lead Identification: When a lead comes from a hyperscaler campaign, it's tagged with the appropriate CRM Partner ID and campaign information.
- Lead-to-Opportunity Conversion: As leads convert to opportunities, the system maps partner and campaign information to maintain attribution.
- Notification Systems: Automated notifications alert Cloud ESMs (Ecosystem Sales Managers) and regular ESMS are involved when new opportunities arise from hyperscaler campaigns.
- Co-Sell Integration: Labra facilitates referrals between GitLab and Hyperscalers for co-sell opportunities, creating a structured engagement process.

Understanding this flow helps teams recognize that not all Hyperscaler campaign leads will become co-sell opportunities, but tracking remains important to demonstrate overall program impact.

SECTION: marketing/channel-marketing/mdf-operations-process.md

Planning

Step 1: Planning with Partners

1. In CMMS· regular cadence with Partners, they discuss the date of event, event/campaign details, and requested amount.

1. They review the information that will be entered into the Funds Request forms by the partners in Impartner on a PowerPoint

1. The campaign details will be tracking on their individual spreadsheet

Step 2: Create Allocadia Items

1. Create subcategory with name convention: Partner Activity Name Location. ie: GitLab Demo Partner DevSecOps World Tour Paris
 1. Add Start Date
 1. Add End Date
 1. Is a Channel Partner Involved?
 1. Channel Partner Name
 1. Is Alliance Partner Involved?
 1. Alliance Partner Name
 1. Will there be MDF Funding
 1. Partner MDF Region Budget
 1. Customer Speaker?
 1. Geo
 1. Country
 1. User Handle
 1. Campaign Owner
 1. Campaign Type
 1. MDF Campaign - Type Details
 1. Operational Program Owner
1. Create line-item with name convention: MDF 000 Partner Activity Name Location. ie: MDF 000 GitLab Demo Partner DevSecOps World Tour Paris
 1. Add the forecast amount in that month's plan column
 1. Select the Create/Update MDF Issue at the bottom of the details panel

Step 3: Update the Issue

1. Update the campaign details including location, event website, DR goals, budgeted costs, total cost of campaign, and sales territory
 1. Add labels:
 1. Add FY25-Q4 (Label for the FY-Q)
 1. Add Region-XXXX
 1. Add Pending MDF Approval - to seek issue approval from Manager (automated)
 1. Once approved, update: MDF-Approved
 1. Tagging stakeholders for visibility: ESM, marketing, field sales for visibility
 1. Once the campaign details have been populated and all the necessary approvals have been attained, sync the GitLab issue to Asana by adding the label: Asana-Sync-Project

Please ensure your issue is in its final state before applying this label, as any subsequent changes will need to be manually updated in both GitLab and Asana separately.

When you activate the sync, an Asana project with corresponding tasks will be automatically created. The GitLab issue description will populate the Asana overview, and tasks will be automatically assigned. Note that only one assignee can be designated per task. Additional team members can be added as collaborators to maintain visibility without changing the primary assignee.

Step 4: Update the Tracking Sheet

1. Region, MDF Amount, Issue Link, Line Item ID, End Date, Status

Step 5: Partner Submits Funds Request

1. At this point, Partner will submit the Funds Request in Impartner

Pre-Activity

Marketo

Step 1: Create the Marketo Program

1. Go to Marketing Activities
1. Go to ·Active Marketing Program· > ·Partner Programs· > ·MDF Campaigns· > ·Templates - MDF Campaigns Folder·
1. Right click "YYYYMMDDMDF000PartnerNameEventNameRegion" and hit "Clone"
 1. Clone to - select Campaign folder
 1. Name - paste the Campaign Name from Allocadia
 1. Folder - insert the FY- Q - MDF Campaigns
 1. Example, if the campaign was during FY25 Q4, the folder you'll want to select is FY25 - Q4 - MDF Campaigns
 1. Description: Allocadia Line Item ID and issue link
 1. Example: 2271710 <https://gitlab.com/groups/gitlab-com/marketing/-/epics/4420>

Step 2: Update Marketo Tokens

1. Go to the Marketo Program
1. Go on the My Tokens tab and update the Partner Name (listed in the issue)

Step 3: Sync Marketo Program to SFDC

1. Go to the tab showcasing the Marketo Program Name
1. In the Summary, under Settings session, Salesforce Campaign Sync, click not set
1. Under Campaign, click on the dropdown and select Create New
1. In Description, paste the Allocadia Line Item ID and save

Step 4: Update Tracking Sheet and Issue

1. Add Marketo program to issue and tracking spreadsheet.

Zip

Step 1: Save MDF request in Impartner as a PDF

1. Go to the MDF Funds Request
1. Ensure all sections are not collapsed
1. On the Google Chrome Browser, select the three dots on the most right
1. Click on Print
1. Change the Destination to ·Save as PDF· then save.

Step 2: Create a new Zip Request

1. Go to Zip > Create a ·New Request·

1. Select a ·Request a Purchase· and upload the MDF PDF at the end of the Zip submission

```
<table>
  <tr>
    <td>Questions</td>
    <td>Answer</td>
  </tr>
  <tr>
    <td>Provide a Short Description of the purchase</td>
    <td>Insert the epic name</td>
  </tr>
  <tr>
    <td>What are you looking to purchase</td>
    <td>Marketing Programs</td>
  </tr>
  <tr>
    <td>Which detailed category best describes your purchase?</td>
    <td>Channel Partner Rebates</td>
  </tr>
  <tr>
    <td>Is this an MDF Request?</td>
    <td>Yes</td>
  </tr>
  <tr>
    <td>Is the request related to the funds covered under the Master Partner Agreement?</td>
    <td>
      <ul>
        <li>Yes - if it's a 50/50 split.</li>
        <li>No
          <ul>
            <li>If there is a contract or not a 50/50 hit No </li>
            <li>If there is not a contract, but it's not a 50/50 split you'll write a note once the Zip is created that says ·Not a 50/50 split and need legal to confirm if GitLab contract is needed·.</li>
            <li>Also if no contract but not 50/50 upload MDF req here so that it lets you move on</li>
            <li>If there is a contract upload here</li>
          </ul>
        </li>
      </ul>
    </td>
  </tr>
  <tr>
    <td>What type of purchase is this?</td>
    <td>New</td>
  </tr>
  <tr>
    <td>Will a Virtual Card be used to pay this vendor?</td>
```

<td>No</td>
</tr>
<td>What's the Name of the vendor?</td>
<td>Type in the Partner's name - if this is a new Partner they will need to be onboarded in Coupa - the partner name may be unique (i.e. TD SYNEX Indonesia) and more complex to find</td>
</tr>
<td>What subsidiary is this purchase for?</td>
<td>GitLab inc.</td>
</tr>
<td>How much budget will you need for this purchase?</td>
<td>Insert the requested amount</td>
</tr>
<td>What is the desired start/end date?</td>
<td>Insert date(s) of the activity</td>
</tr>

Please enter the line item breakdown:	

Line Type	
Amount	
Commodity	
Channel Partner Rebates	
Allocadia ID	
Insert the Allocadia Line Item ID Number	
Is this prepaid?	
No	
Amortization Schedule	
Blank	
Department	
Regional Marketing	
Coupa Class - GitLab Inc	
Blank	
Do you have any supporting documentation	
None	
Will the vendor have access to any of the following data or information?	
None of the above	
Does this request involve the use of a system to collect, store, or transmit GitLab data?	
No	

Step 4: Add Zip link to Tracking Sheet

Step 5: Add Issue Link to the comment section of Zip

1. If legal has any questions tag CMM to answers
1. If there is a contract involved, go ahead and approve it when it gets to your queue.
1. When the Coupa req is created, tag Renz Santos and tell him to hold the PO until you've approved POP / ROI. He'll still send contract out but this way they won't be at risk to be paid before mdf is complete

Salesforce

Step 1: Search for Campaign in SFDC by typing in MDF number

Step 2: Check for the Allocadia Sync

1. It can take up to 5 minutes for Allocadia to sync with Salesforce. Don't edit the SFDC campaign until the sync. If you make changes in the SFDC campaign before the sync, it will break the sync.

1. When the sync has taken place the following will happen:
 1. Campaign Owner will be updated to the CMM
 1. Type Details, Start/End Date, Is a Channel Partner Involved?, Will there be MDF Funding?, Channel Partner Name, Region, Sub-Region will be updated.
 1. Last Modified By will show Allocadia Integration

Step 3: Add MDF Request on the Salesforce Campaign

1. Edit the Salesforce Campaign to add the MDF Request. This is the foundational step that ensures MDF request data flow between Salesforce, Allocadia and GitLab system during the nightly sync.

1. Field Sync to Allocadia - the system automatically transfers four key metrics from Salesforce to Allocadia details panel each night:
 1. MDF Request Number
 1. Target Number of Contacts
 1. Expected Number of Deal Registration
 1. Estimated Pipeline Created (USD)
1. Automated Line Item Name Updates
 1. When Partner Marketing uses "MDF 000" as a placeholder
 1. System automatically replaces it with the actual MDF number
 1. Updates MDF number in the GitLab issue name
1. GitLab Integration Features - the system automatically populates GitLab issues with:
 1. Salesforce campaign name
 1. Salesforce campaign link
 1. Target Number of Contacts
 1. Expected Number of DR
 1. Estimated Pipeline Created (USD)

Step 4: Update Tracking Sheet and Issue

1. Add Fund Request to issue and tracking spreadsheet.

Canceled

At any time an MDF campaign has been canceled, we want to ensure all programs created get

marked as cancelled or deleted.

Allocadia

1. In the Sub Category details panel, update ·Campaign Cancelled· to Yes
1. Add the Sub Category, Line Item, and Campaign Name with ·Cancelled· to the beginning of the name

Salesforce

1. Add [CANCELLED] to the beginning of the campaign name
1. Update the Status to Aborted
1. Remove the "Partner Account" and uncheck the "Sync to Vartopia" checkbox

PRM MDF Request

1. Update the Status to Cancelled under the MDF Request Details - By doing so the Partner will receive an automated email informing the Funds Request initially submitted has been canceled or denied.

Marketo

1. Ask mktgops to delete the Marketo Program

Zip

1. If applicable delete the Zip req and comment that the MDF has been canceled.

Coupa

1. If applicable, CMM to ping procurement and finance in the Coupa req to notify them that the MDF has been canceled.

GitLab Issue

1. Inform all stakeholders that the MDF campaign has been cancelled, add Cancelled label to issue and close the issue.

Post Activity

This is not applicable to distributors with the exception of Carahsoft.

Step 1: Partner submits MDF Claim

PRM MDF Claim

1. Partner will attach the POP and Lead List in the MDF Claim
1. Verify the POP, then update the Approval Status to Approved

Step 2: List Import

Google Sheet/Drive

1. Clone the List Import Template

1. Paste the information to the spreadsheet - don't forget Marketo Program Name, First Name, Last Name, Email, Company Country, Province (only USA/Canada), Member Status, CRM Partner ID are mandatory.

1. For Distributor: In the CRM ID, add each individual partner CRM ID that each leads corresponds to.

1. Download the .csv file: File > Download > .csv

1. Drop the .csv file to Google Drive Folder

Slack

1. You will receive a notification from eventlistupload reporting the status of your list import

1. Review the report link if there are any failed record

Check the Status column for details on why the import may have failed.

Salesforce Campaign

1. Check the campaign members to ensure all has synced to Salesforce with the Status = Responded

1. If the Status remains in Member, complete the following steps:

1. Go Marketo Program

1. Select the Processing smart campaign

1. In Smart List, add Program Status = Partner - MDF > Member

1. In Schedule, run now.

GitLab Issue

1. In the Post - Event, check list import task

Tracking Sheet

1. Check "POP and Leads Uploaded" on the tracking sheet

Step 3: Create Coupa Req and PO with the Support for the Procurement team

When	Action
Tracking Sheet Updates	
----- -----	
----- -----	
----- -----	

POP is received and approved	Approve the MDF Review step in Zip for Coupa Req to be created If there was a contract involved this step has already happened so you'll open the coupa req and tag Renz Santos and ask him to process the PO Check "Zip Approved"
Coupa req is created	Check on the status until the PO has been created
Update Coupa Req	

| PO is created | Email Partner the steps to have them upload their invoice
| Check PO Created and Informed Partner about invoice |
| 24 hours after the invoice is uploaded | Approve the invoice. You'll do this by going to your Coupa inbox and clicking on the line item. It will take you to a new screen and double check the amount is correct and click Approve button (it's in green) | Check "Invoice Approved Coupa" |
