What marketing services are available to our channel partners?

Channel partners have several programs and tools available to help them market and sell GitLab easily. The following are a few of the programs currently being offered; additional programs will be added periodically so bookmark this page to ensure you always have the latest information.

- Partner Instant Marketing Campaigns - We've developed a full suite of GitLab marketing assets for partners, including ebooks, infographics, videos, digital ads, social media posts, and more. They can select what they need, customize the piece with a logo, and deploy as they see fit. These assets are also available for partners through our Partner Microsite program. To get started, partners just login to the GitLab partner portal.

- Concierge Marketing Program - Get the information you need to expand your customer base, build brand loyalty, and grow your business. Our Concierge Program will deliver marketing solutions tailored to your team's unique needs. To participate in this program, partners should

contact partner marketing.

- Marketing Development Funds - Select partners can access marketing development funds (MDF) to acquire new GitLab customers, drive demand within an existing mutual customer base, or help educate GitLab teams. GitLab MDF can support multiple marketing efforts, including participation in trade shows, sales incentives, direct mailing costs, training, and more. To request funds, log into the GitLab partner portal and follow the instructions under "Submit an MDF Request."

SECTION: marketing/corporate-communications/_index.md

Welcome to the Corporate Communications Handbook

Mission Statement

We serve as strategic advisors to GitLab executives and cross-functional teams on issues that impact team members, customers, partners, and other business-critical parties.

We exist to positively influence the perception of GitLab by reaching economic buyers, technical champions, community contributors, advocates, investors, and industry analysts. We do this by developing and implementing strategic external communications plans that protect the brand, and generate awareness and preference for GitLab.

This page is the single source of truth for corporate communications objectives/goals, contact information, messaging, PR/social media guidelines, approval processes, strategy and more.

What We Do

The GitLab Corporate Communications team is responsible for the following activities and communications channels:

- Media relations (print/broadcast/podcasts)
- Media sponsorships
- Contributed article placement
- Executive visibility
- Awards
- Incident Communications (separate handbook page)

Team Norms

- Celebrate individual wins, along with team wins
- Support each other professionally and personally
- Hold each other to a high standard
- We have short toes and welcome collaboration, feedback, and feedforward
- We strive for excellence

Contacting GitLab's Corporate Communications team

Please use the external-comms Slack channel.

Speaking on behalf of GitLab

Speaking on behalf of GitLab via a public channel such as a media interview (in-person or via phone), on a podcast, in a public issue on GitLab.com, on a forum, at a conference/event (live or virtual), in a blog or an external platform requires prior approval by the Comms team and must follow GitLab's SAFE framework. To make a request, please use the external-comms Slack channel.

Spokesperson Criteria

Being a designated company spokesperson is a responsibility that should be taken with the utmost seriousness.

Spokesperson Criteria:

- Subject matter expert
- Business requirement for your expertise
- Approved by Comms as a spokesperson
- Trained by GitLab media trainer
- Manager approval
- Good company standing

If you are new to being a spokesperson for GitLab, the Corporate Communications team may ask you for video examples of past speaking engagements (events, webinars, tutorials, etc.) for assessment.

Media mentions, incoming media requests and interviews (including podcasts)

Team members may be approached by reporters, podcasts hosts, etc. to comment on the company and/or conduct interviews. If you are asked to be quoted or to provide commentary on any matter as a spokesperson of GitLab, please provide detail of the opportunity to the Corporate Communications team in the external-comms Slack channel before engaging.

While team members may have established relationships with reporters, podcast hosts, etc., engagement on any matter related to GitLab should go through the Corporate Communications team. You can reach the team in the external-comms Slack channel before engaging.

Speaking Opportunities (conferences, meetups, webinars and other events)

Developer Relations Speakers Bureau

The Developer Relations Speakers Bureau includes GitLab team members who participate in community/user meetups and deliver technical talks. Participation in the Developer Relations Speakers Bureau is distinct from media and analyst relations overseen by the Corporate Communications team.

Invited to Speak

If you are asked to speak on behalf of GitLab at an event, on a webinar or at a Meetup, please contact the Corporate Communications and Developer Relations teams to ensure that the

opportunity aligns with GitLab objectives and key narratives. Inquiries should be initiated in the external-comms Slack channel before you accept the speaking invitation. Please allow 5 business days for evaluation. Opening an issue under Corporate Marketing to further collaborate on the opportunity may be requested.

Submitting to Speak

If you are planning to submit an event CFP or request to participate as a speaker for a webinar or Meetup, please ensure the opportunity aligns with GitLab objectives and key narratives. If you are unsure, please reach out to the Corporate Communications and Developer Relations teams. If accepted to speak, please notify the Corporate Communications and Developer Relations teams via the cfp Slack channel w/link to the accompanying issue and ensure the teams have 7-10 business days to review your final presentations.

Pursuing Speaking Opportunities Separate from GitLab

We know GitLab team members are multi-faceted, and there may be opportunities to speak publicly that don't overlap with your role at GitLab. In these cases, it is okay to do that, assuming the opportunity will not be in conflict with GitLab's Code of Business Conduct & Ethics.

In these instances, it's necessary to keep your role at GitLab and affiliation with the company separate from the presentation. Additionally, you should not use GitLab branding, resources, or time allocated to your work at GitLab to prepare or deliver your presentation. Please add these views are my own to your comments, presentation, or social media.

If you're considering a speaking opportunity, which includes participating in podcasts or developing your podcast, that could be perceived as being associated with GitLab even if it is not; please share the opportunity with your manager and external-comms for review before accepting it to avoid any potential conflicts.

Event Booth Staffing

If you are staffing the GitLab booth at an in-person or virtual event, you are representing GitLab. Please follow the company's SAFE framework when engaging with booth visitors and event attendees.

Event Support Requests

The PR team supports corporate-sponsored industry shows such as RSA, Black Hat, KubeCon NA, Google Cloud Next, and AWS re:Invent, where we make announcements and/or an e-group member attends.

Our media strategy focuses on technology publications, business media, and vertical media only if we have a brand-name customer who will speak to the press or a product announcement tied to a vertical.

The full criteria for PR support at events includes:

Spokesperson Availability: An e-group member or designated delegate is confirmed to be onsite and available for interviews.

Geographic Alignment: The event is held in a country or region the corporate communications team currently supports (US, UK, Germany, France, Japan, Australia).

Media Presence: At least three journalists from GitLab Top Media will be present at the event.

News Hook: The event aligns with a compelling news hook related to a product announcement, significant partnership, or major industry trend for media or analysts in attendance.

Additional considerations include:

Customer Availability: At least one customer approved to speak with the media on behalf of their brand about their GitLab experience is confirmed to attend. Customer contact information must be provided to the PR team 6 weeks in advance.

Analyst Alignment: At least three analysts covering GitLab's primary markets will be present at external events.

Vertical Industry Support Requests

GitLab Corporate Communications takes a strategic approach to vertical industry support in alignment with the broader company strategy. Currently, our focus includes the public sector - a well-established area of our business. Specific support for finserve and telco or other verticals will be considered when there are referenceable customers who are willing to speak with the media and the PR team has allocated the appropriate resources. This ensures that our efforts are aligned with key business objectives.

Research-oriented requests

Analysts

For analyst research-oriented requests, please consult the Analyst Relations handbook section and direct questions to the analyst-relations Slack channel.

Media

All media inquiries and requests must go through the corporate communications team via the external-comms Slack channel.

Honorariums

If you are approached by external parties seeking to provide payment for a GitLab team member's time, please contact the corporate communications team via the external-comms Slack channel to discuss the opportunity and approval process.

Social Media

Please consult the Social Media team (@social on Slack) for guidelines on representing GitLab on your personal social media platforms. If you are contacted on a social media platform and asked to share/retweet or provide commentary as a spokesperson of GitLab, please reach out to the social media team to provide details about the opportunity in the socialmediaaction Slack channel.

Writing about GitLab on your personal blog or for external platforms

It is necessary to keep your role at GitLab and your affiliation with the company separate from your personal blog or other external platforms. Additionally, you should not use GitLab

branding, resources, or time allocated to your work at GitLab to prepare materials for personal projects. If you would like someone to check the draft of your personal work that could be perceived as being associated with GitLab even if it is not, please share it with your manager and the Corporate Communications team who will be happy to review it for potential conflicts before it is published. Please post it in the external-comms Slack channel with a short summary and allow 5 business days for review.

Public GitLab Issues

Posting in and discussions occurring within a public GitLab issue should follow the same guidelines as if you were posting about GitLab on social media, engaging with community members in a forum or conducting an interview with a media outlet. You are externally representing and communicating on behalf of GitLab.

When representing and/or communicating externally on behalf of GitLab, please follow the SAFE framework. Being mindful of how you say things within open issues will help keep the company SAFE. We all represent the company.

Sharing Media Coverage

Some media outlets (including these ~14,000 newspapers and magazines) require GitLab to hold a license to share (and do the various other things noted below with) extracts, quotes or headlines of print and online articles - both internally (eg. via slack, email or in confidential GitLab issues) and externally (eg. on GitLab's social media channels). The sharing of bare hyperlinks to articles (without extracts, quotes or headlines) does not require a license.

A license may be required to do any of the following with extracts, quotes or headlines of print and online articles:

- Photocopying, faxing, scanning, emailing or copying;
- Saving on an internal or external intranet or shared drive;
- Printing, photocopying, emailing or distributing material received from a media monitoring organisation or PR agency;
- Posting material on internal or external websites or social media accounts.

If you are interested in doing any of the above with a media article (or an extract, quote or headline) internally or externally beyond just sharing the bare hyperlink, please reach out to the Corporate Communications team via the external-comms slack channel before proceeding to confirm if a license is required.

Requests for External Announcements

Please reach out via external-comms in Slack if you have a request.

Partner Requests for External Communications Support

Any use of GitLab's name, brand, or logo requires prior email approval by GitLab according to the process outlined below.

Partner-led Blog Posts: GitLab is proud of its collaborative partner program, and we encourage partners to showcase their solutions, capabilities, and customer success stories through partner-led blogs. Please send all blog posts, including GitLab, to the GitLab Corporate Communications team at press@gitlab.com or external-comms in Slack for review and approval.

Press Release Criteria and Approval Process: Partners seeking to issue a press release that includes mention of their partnership with GitLab must meet the criteria outlined below and in the GitLab Partner Portal.

Partner public relations participation criteria:

- A signed contract as a Select partner

- Minimum 10 joint customers and/or a strategic business plan

- New partners: please reach out to your account representative for guidance.

Note that GitLab requires up to 6 weeks of lead time to support external communications requests.

Please email your account representative for guidance on the approvals required and copy the GitLab Corporate Communications team at press@gitlab.com.

GitLab account representatives: Any requests for public relations support requires approval from your executive sponsor, Nick Cayou. Please reach out via external-comms in Slack if you have questions about this.

GitLab Vendor Reference Requests

If you receive a vendor request for GitLab to act as a reference (case study, blog post, GitLab logo on their website, press release, etc.) for the product, service, and/or technology that your GitLab team is using, please refer to the process outlined on the Brand Strategy team's handbook. For partner-led blogs or press releases, please refer to the Partner Requests for External Communications Support section of the handbook. Note that due to the volume of requests, GitLab rarely writes joint press releases.

SECTION: marketing/corporate-communications/incident-communications-plan.md

If you need review from the corporate communications team on a potential incident, gather information in an issue or link us to the Slack discussion by message the team in the corpcomms Slack channel and we'll work with the Security Communication Manager on Call to determine next steps

Incident Communication Plan

We use our incident plan and communication escalation process enables the entire organization to understand actions/inactions to take when an incident occurs. Consider it like "tiers", where when a specific tier is communicated to the team members, all appropriate departments know what actions to take/not take.

What is an Incident?

A contentious issue that undermines a critical attribute of our company's brand and challenges its reputation. And/or an incident which impacts, or has the potential to impact the safety and well-being of our team-members.

Defining the scope/severity of a potential incident

When determining the need for communication escalation, it is important to first determine what the immediate issue is and determine what caused said issue. After collecting this information, review Tier 1-4 to determine the severity and subsequent action plan

Tier 4 - Event

A Tier 4 event is something we already have a process for like a security incident or a customer support request via Zendesk. In the case of a Tier 4, please follow the established company process.

Tier 3 - Rapid Response

A Tier 3 is a rapid response needed to address industry changes, competitive moves, news about the company, and other opportunities to provide comment/opinion or thought leadership. In the case of a Tier 3, please follow the Rapid Response directive.

Tier 2 - Incident (process below)

A Tier 2 incident is a current issue, gray area communication or planned sensitive company communication that could lead to loss of customers, team members or market trust in the company. An incident has short term impact, but is high risk. Examples include; hiring policy, implementing unwelcome product changes, executive changes, being disingenuous to company values. If it meets the criteria for an incident, please initiate the below process.

Tier 1 - Escalated Incident

A Tier 1 escalated incident is a significant reputational or financial risk to the company with long-term impacts. Industry examples include class-action lawsuits, highly public litigation (IP infringement or sexual harassment lawsuits), board removal of executives, etc. Please follow the Escalated Incident response team and process.

Tier 2 Process

If a Tier 2 communication escalation arises, please use Slack or a text message to alert:

1. The Head of Corporate Communications and Internal Communications
1. If the former is unavailable, the Head of Corporate Marketing and CMO

The head of corporate communications will propose a recommendation on how to best proceed with an external company message and recruit the resources to accomplish the plan (this becomes the 1 priority for each resource, unless physically impossible or their manager provides a replacement). A template for a Tier 2 communication escalation action plan can be found [here](#).

The head of corporate communications will assess the request within 1 HOUR (6amPST-6pmPST).

Urgency will be assessed and will be determined to be 3 HOURS (ASAP) or 24 HOURS turnaround, and the communication escalation action plan will be scoped accordingly - with a bias towards releasing an MVC as soon as possible, and iterating as more news becomes available.

Core Communication Escalation Response Team Roles and Responsibilities

- Corporate Communications phone tree - This team will coordinate external communications efforts according to the communication escalation action plan and liaise across the extended GitLab teams to ensure all parties are activated, updated and aligned. This team is also responsible for social media.
- Internal Communications - This team will coordinate internal communications efforts according to the action plan.
- Developer Relations phone tree - This team is responsible for community response situations, monitoring, and enforcing the GitLab Code of Conduct on the relevant GitLab.com discussions.
- CLO - The Chief Legal Officer will provide legal input on the action plan, as well as all written external and internal communications.
- CMO - DRI on final external message. Any disagreements on urgency or action will be escalated immediately to the CMO for a final decision.

Extended team roles, responsibilities and points of contact

Social Media

Monitor Across Channels with Social Listening (All Tiers)

While monitoring takes place on a regular (if not several times a day) basis across social channels from both the Developer Relations team and the social team, it's particularly important to monitor channels on a more frequent basis during this time. There is a need to have many instigators (that may be different per channel) and it's critical to try and understand this information in order to best evaluate the actions to be taken for communication escalation.

Social Listening could take place in the existing GitLab brand health monitor inside of Sprout Social. Because listening is always on (and Sprout backfills data, it is not an immediate need to set up a new topic.

What a tier 2 incident looks like on organic brand social channels

Tier 2 incidents could either be addressed publicly without further interruption or be cause for a temporary pause on outbound organic social media from our brand channels. In either scenario, inbound responses (replying to folks directly rather than a new message from GitLab) should be included as part of the response. Generally, Developer Relations and support teams use canned messages for product service interruptions to communicate with customers and the community, especially if the incident is product or service-related.

When the incident is not caused by our product and is not service-related, the need to coordinate with support teams may not exist. However, working with the Developer Relations team helps to address core and niche social media channels.

To learn more about pausing social media / going dark during an incident, review the social

media handbook.

Community Response

The Community Operations Manager will work through existing frameworks for tiers 3 and 4. For a tier 2 incident, the director of Developer Relations and the community operations manager will be looped into the existing e-group led response.

For tier 2 incidents, the community team follows their responsible portions of the comms-reactive-tier-2-incident-checklist template.

Communicating Internally with Key Stakeholders

Coordinating communication between people working on the communication escalation action plan.

Create Coordination Slack Channels

- A communication escalation coordination channel with all DRIs and stakeholders. The traffic here will be low to medium volume and focused on coordination, mitigation and strategy. Invite one person designated as the representative from the core team listed above, as well as, a representative of each specific area of business that is central to the incident. RADCIE will inform our value of Collaboration.
- A communication escalation discussion channel, open to anyone at GitLab. Everyone at GitLab can provide their input, and some discussions or topics will be escalated to the incident coordination channel. The traffic here will be high volume and focused on enabling GitLab team members visibility on particular topics or developments related to the incident.

All Slack channels related to the incident should contain a link to the issue and a link to the communication escalation action plan in their channel description

Create a New Issue For Each Incident

Open a new issue in the corporate marketing project using the comms-reactive-tier-2-incident-checklist template. Be sure to confirm that the issue is marked as confidential, as it pertains to work prior to releasing communications. Use the issue as our project center, assigning to-do's and accomplishing tasks. Updates including links to external messages from the community should also be added as a comment in the issue, we should look to reduce the volume and locations of chatter on the topic into a singular location, since we will always need to corral several slack threads to the issue.

Our values guide our actions: our sense of urgency under Results and our value of not waiting under Iteration and RADCIE will under our value of Collaboration.

Internal Response

Where possible when dealing with an incident, we want team members to hear about it internally first. Depending on the incident though this may not be possible. However as soon as communication has happened externally we should aim to respond quickly internally - even if it's just to acknowledge we are aware/and are preparing a statement/ or looking into the details of the issue and will update team members as soon as we have more information.

Internal Communications Channel

- Company-FYI
- diversityinclusionandbelonging
- external-comms

Communicating Externally

Centering Communications on GitLab Values + Research - In "Incorporating Social Media in Risk Communication," it's recommended that we handle communication escalation through:

- Communicating with honesty, candor and openness while acknowledging risk
- Collaborating and coordinating with credible sources
- Accepting uncertainty and ambiguity
- Meeting the needs of the media and remain accessible
- Communicating with compassion, concern and empathy

A number of these recommendations directly or indirectly align with GitLab's Values.

Additionally, we need to be sure we:

- Communicate early and often, as much as necessary
- Always use the GitLab brand voice

Meet Stakeholders Where They Are

Communications intended to alleviate the incident should be delivered to owned and earned channels alike.

Only addressing an incident in a blog post, and telling the community and the media to click a link may work, but that demands moving into our arena first. GitLab should be comfortable with hybrid communications - e.g. updates via blog, but turning the email into a threaded Tweet where the first tweet also includes a link to the blog. Other places to consider posting or adding a link include: GitLab forum, footer of Support and Sales emails, and Help Center docs.

In order to have maximum reach, we'll need to consider alleviating the incident for the community at every possible step in their journey with GitLab communication (some folks would click the blog link right away, others would follow an issue comment - in both cases we captured a higher reach because we gave both options).

Make messages distinguishable from one another, depending on the audience. Consistency does not need to be homogenous.

The specific makeup of this mix will change depending on the incident.

Don't Over Communicate

It's important to use listening (either a tool or manual research) to understand where the incident is emerging. More often than not, most incidents will originate on 1 to 3 channels (HackerNews, Twitter, Reddit, GitLab issue, news article, etc.), and it is entirely possible to

manage the incident by communicating on these same channels only.

If an incident is not properly analyzed, GitLab runs the risk of over communicating and inviting the issue to be more severe.

Decide Which Communication Will be the Last to Go Out

At some point on managing an incident, planned external communication is to be thought of as our "last response" to our stakeholders and the greater GitLab community. This is identified when the company feels that we've addressed everything we can in the communication, we've taken ownership of any mistakes made, and we've committed to our stance.

Once we've identified this last communication, it is best to stop addressing the issue in the public square. No more broadcasts to stakeholders across any other channels. Always direct those with follow up questions to our last communication. In most "small" to "medium" incidents, the last communication may be our first communication.

After the Incident

Determine that the incident is actually over

We'll know when the heat starts to die down naturally as our inboxes and notifications across channels begins to return to normal levels. However, we shouldn't go by instinct only. In most cases, we should use a listening tool or review @mentions and non @mentions across channels to quantify the incident being over, e.g. determine that the volume of messages are decreasing and/or sentiment returning to what we determine is a normal level.

depending on the tool, sentiment analysis can be an inaccurate view of actual sentiment. In some cases, manual tweaking may be necessary to accurately capture.

Create a retrospective

Once we determine that the incident is over, move to reporting mode. Narrate the story of Why the incident happened, where and when it took place, who was affected by the incident initially and are there any long-term effects, Who was talking about the incident externally, what the team did, and How the incident was resolved and How we can prevent this from happening in the future.

It's important to include data analysis and "the story" of stakeholders, community members, and GitLab team members. Neither the numbers nor "the story" express the entire picture. Use screenshots of positive and negative feedback from the community.

Optional: Deliver the retrospective issue to the entire team after feedback and updates are made, and invite all GitLab team members to a post mortem AMA to discuss more about the incident and invite an open Q&A. Always be sure to close this meeting with a link to the final talking points in the event GitLab team members need to answer this incident in their own conversations.

After retrospective is shared, archive designated incident Slack channels.

(Optional) Public Retrospective- In the case of a severe product- or service-related incident, publishing a summary of the communication escalation process should be considered. A summary of the incident in the days or weeks following could include scope, impact, timeline, root cause, resolution, and planned improvements.

Stick with the Final Talking Points

As discussed when deciding which communication will be your last, it's best to finalize your communications and end new talking points. We're likely to still be asked about the incident even after it's over.

It is important to stick to the final talking points and direct everyone to our last communication. If this is a blog, a tweet thread, or a moment in a YouTube video, we should be ready to direct those that ask.

<!-- DO NOT CHANGE THIS ANCHOR -->

Responsibilities {responsibilities}

<!-- DO NOT CHANGE THIS ANCHOR -->

Global Campaigns Managers are responsible for building integrated marketing campaigns including the strategy, execution and analytics. They work in a cross-functional manner to gain alignment with internal stakeholders and inter-departmental dependencies. Building a Global Campaign may consist of the following: Target Audience segmentation, campaign journey, asset and content recommendations, marketing message, email nurture, recommended marketing channels for promotion (both organic and paid), top funnel events (virtual and in-person), and Alliance partnership (Technology Partners).

Regional campaigns managers are responsible for localizing and activating global campaign bundles, prioritizing program mix and delivery channels to support regional revenue goals. They partner with paid digital, ABM, lifecycle, field marketing, product marketing, customer marketing, SDR/BDR and regional sales teams to create integrated go-to-market plans.

Read the job family here >>

Goals {goals}

<!-- DO NOT CHANGE THIS ANCHOR -->

The goals for new first-order MQLs and SAOs are derived from workbacks of sales pipeline

projections. These differ by segment and geo, and can be discussed internally.

Demand Generation Key Metrics {key-metrics}

<!-- DO NOT CHANGE THIS ANCHOR -->

- North Star Metric: MQLs (New First-Order Logo)
- Efficiency Metric: Cost per MQL (New First-Order Logo)
- Business Impact Metric: CWA/Spend (closed-won attribution)
- Supporting/Activity Metrics: SAOs, Attributed Pipeline

OKRs {okrs}

<!-- DO NOT CHANGE THIS ANCHOR -->

Meet the Team {meet-the-team}

<!-- DO NOT CHANGE THIS ANCHOR -->

Agnes Oetama Manager, Marketing Campaigns

- Team Prioritization: plan prioritization of campaigns, related content and webcasts, event support, and projects for the team
- Hiring: organize rolling hiring plan to scale with organization growth
- Onboarding: create smooth and effective onboarding experience for new team members to ramp quickly and take on responsibilities on the team
- Transition of Responsibilities: plan for and organize efficient handoff to new team members and between team members when prioritization changes occur
- Campaigns DRI for Sisense attribution reporting (working closely with Marketing Ops)

Shari Rances Sr. Marketing Campaign Manager

- Campaign strategy for Automated Software Delivery (AutoSD) Global Campaign
 - Partner with campaign core team (Product Marketing, Developer Advocacy, Content, Analyst relations, Design) to develop and deploy Automated Software Delivery integrated marketing campaigns bundles
 - Host monthly enablement sessions on Automated Software Delivery global campaign updates and new LIVE assets
 - Produce half-yearly Automated Software Delivery global campaign performance reporting and optimization plan
 - Project manage and run top-funnel global campaign webcasts (e.g: Quarterly release webcasts, Forrester TEI webcast, DORA webcast)
- Host monthly enablement sessions on global campaign updates and new LIVE assets
- Campaigns DRI for integrating Alliances motion into global campaigns

Eirini Panagiotopoulou Sr. Marketing Campaign Manager

- Campaign strategy for DevSecOps Platform and Security & Compliance (S&C) Global Campaigns
 - Partner with campaign core team (Product Marketing, Developer Advocacy, Content, Analyst relations, Design) to develop and deploy DevSecOps Platform and Security & Compliance integrated marketing campaigns bundles
 - Host monthly enablement sessions on DevSecOps Platform and Security & Compliance global campaigns updates and new LIVE assets
 - Produce half-yearly DevSecOps Platform and Security & Compliance campaigns performance reporting and optimization plan
 - Project manage and run top-funnel global campaign webcasts (e.g: Quarterly release webcasts, Forrester TEI webcast, DORA webcast)
- Host monthly enablement sessions on global campaign updates and new LIVE assets

Timothy Tran Marketing Campaign Manager

- Campaign strategy for All Sales Segments, APAC
 - Plan, organize, implement, and optimize campaign strategy for all segments in APAC
 - Analyze and share results/findings of full-funnel attribution reporting for all segments in APAC
 - Organize execution schedule, timeline, and DRIs for tactics aligned to top-funnel APAC campaign plans, including email nurture, virtual events, digital ads, etc. aimed primarily at driving Inquiries + MQLs (with consideration of SAO attribution)
 - Support email marketing initiatives with Lifecycle Marketing focused on email marketing
 - Campaigns DRI for localization (translation of assets with Smartling)

Indre Kryzeviciene Sr. Marketing Campaign Manager

- Campaign strategy for All Segments, EMEA
 - Plan, organize, implement, and optimize campaign strategy for all segments in EMEA
 - Analyze and share results/findings of full-funnel attribution reporting for all segments in EMEA
 - Organize execution schedule, timeline, and DRIs for tactics aligned to top-funnel EMEA campaign plans, including email nurture, virtual events, digital ads, etc. aimed primarily at driving Inquiries + MQLs (with consideration of SAO attribution)

- Support email marketing initiatives with Lifecycle Marketing focused on email marketing
- Campaigns DRI for localization (translation of assets with Smartling)
- Campaigns DRI for UTM strategy
- Campaigns DRI for Weekly tech demo series

Meilynda Herbst Sr. Marketing Campaign Manager

- Campaign strategy for All Segments, Americas
 - Plan, organize, implement, and optimize campaign strategy for all segments in AMER
 - Analyze and share results/findings of full-funnel attribution reporting for all segments in AMER
 - Organize execution schedule, timeline, and DRIs for tactics aligned to top-funnel AMER campaign plans, including email nurture, virtual events, digital ads, etc. aimed primarily at driving Inquiries + MQLs (with consideration of SAO attribution)
 - Support email marketing initiatives with Lifecycle Marketing focused on email marketing
 - Campaigns DRI for Content
 - Campaigns DRI for Drift Chat Bot Strategy
 - Campaigns DRI for Tier 2 Referral Sites: Trust Radius, Gartner Digital/Capterra

Each team member contributes to making day-to-day processes more efficient and effective, and will work with marketing operations as well as other relevant teams (including field marketing, content marketing, and product marketing) prior to modification of processes.

Communication {communication}

<!-- DO NOT CHANGE THIS ANCHOR -->

In line with GitLab's overall communication guidelines, campaign managers work through MRs first and issues second (in order to preserve documentation), and our slack channel marketing-campaigns is used for team updates and quick questions.

The marketingintegratedmarketing channel is used for weekly check-ins and interaction with the larger integrated marketing team.

In between bi-weekly Campaigns Team Connect calls:

- Updates should be added to MRs when possible
 - Add to marketingprograms Slack
 - Begin with UPDATE: <brief description> (i.e. UPDATE: Marketo segmentation live for sales segment)
 - Include link to MR (preferred) or issue
- Topics that need input should be added as an MR when possible, with issues as a secondary option, and pinged in Slack with DISCUSS
 - Add to marketingprograms Slack
 - Begin with DISCUSS: <brief description> (i.e. DISCUSS: Marketing tool champions)
 - Include link to MR (preferred) or issue

Out of office team coverage

Whenever team members are out of the office for more than 7 business days, they are required to

create an ooo coverage issue outlining the coverage needed and assign that to their team counterpart providing coverage. The same process and issue template can optionally be used when team members are out of the office for less than 7 days but requires coverage for time sensitive project(s).

Half-yearly Field Marketing & Campaigns Planning Workshop

Every 6 months, Regional campaigns managers will conduct a joint planning workshop with their Sr Manager/Manager, Field marketing counterparts (below):

Region	Campaign Manager	Sr Manager/Manager, Field Marketing
-----	-----	-----
AMER	Meilynda Herbst	Ginny Reib
EMEA	Indre Kryzeviciene	Kristine Setchin
APAC	Timothy Tran	Kate Baker

Collaboration Timeline/Deliverables

- X week before planning session: Manager/Sr Manager of field marketing shares next quarter planned field marketing events with regional campaign managers.
- By planning session: Regional campaign manager to pull invite list for each planned event.
- During planning session: Manager/Sr Manager of field marketing & campaign manager reviews invite list. If invite list for a particular planned event is too small, collectively decide if FMM should change the event venue or work with their regional campaign manager on a strategy to grow the invite list via paid or organic channels.

Meeting Cadence {meeting-cadence}

<!-- DO NOT CHANGE THIS ANCHOR -->

Most of our team meetings are recorded and can be found here.

- Bi-weekly - Campaigns Team Connect Call (every other is AMER/EMEA and EMEA/APAC)
- Monthly - Marketing All-Hands (all marketing)

The Handbook {handbook}

<!-- DO NOT CHANGE THIS ANCHOR -->

Is our single source of truth (SSoT) for processes and relevant links

- Individual teams should link back to these SSoT sections to avoid confusion
- Collaborative tactics contain their own handbook pages
- The handbook will be iterated on as we establish and optimize processes for optimal efficiency

Project Management {project-management}

<!-- DO NOT CHANGE THIS ANCHOR -->

Prioritization {prioritization-boards}

<!-- DO NOT CHANGE THIS ANCHOR -->

1. Campaigns Team - Prioritization

- At start of milestone, ensure that issues are in the proper category of prioritization.

Align them to the priority definitions.

- Consider the time you have available in a 2 week period, recognizing meeting commitments and planned PTO.

- Only add issues to account for 70% of your available work hours. Don't max out at 100% since there will likely be things that arise and need immediate attention throughout milestone.

- Ask yourself: considering realistic time this milestone, am I overcommitting? The first to drop from a milestone should be "Low" priority issues based on definitions.

- Discuss milestone with Agnes and if need help determining what to drop and how to communicate (potentially) to issue requestors.

1. Campaigns Team - Current Milestone

- Minimize the "Low" and "Medium" columns. Your focus should first be on the "Top" and "High" priority issues.

- Prioritize completion of "Top" priority issues, then "High" priority issues.

Labels {labels}

<!-- DO NOT CHANGE THIS ANCHOR -->

Prioritization labels {prioritization-labels}

<!-- DO NOT CHANGE THIS ANCHOR -->

- DG-Priority::Top: Immediate action needed, aligned to OKRs, GTM motions/sales plays, or segment/region MQL generation. This category will be limited because not everything can be a priority. Timeframe: Immediate action needed.

- DG-Priority::High: Not requiring immediate action, but aligned to OKRs, GTM motions/sales plays, or segment/region MQL generation. Timeframe: Within weeks.

- DG-Priority::Med: Requests submitted that align to OKRs, GTM motions/sales plays, or segment/region plans. Process improvements to fix broken processes, or improve campaign team efficiency. Timeframe: Within months.

- DG-Priority::Low: Requests submitted that would be helpful, but can be pushed for higher priority issues. Nice-to-have improvements for campaign team processes. Timeframe: No specific timeline.

- DG-Priority::ToBePrioritized: Requests that have not yet been prioritized by Demand Gen.

Team labels {team-labels}

<!-- DO NOT CHANGE THIS ANCHOR -->

- mktg-demandgen: DRI is in Demand Gen team

- dg-campaigns: DRI is in Campaigns team

- dg-request: Issue requesting Demand Gen support (did not originate from DRI team)

Status labels {intake-labels}

<!-- DO NOT CHANGE THIS ANCHOR -->

- mktg-status::wip: the issue is assigned and moved into appropriate time-based milestone
- mktg-status::review: the work (or build) has been done, and is ready for Quality Assurance (QA) Review
- mktg-status::scheduled: issues related to Marketo (email, landing page, form, automation) have been scheduled and are ready to deploy
- mktg-status::complete: work (or build) is complete and the issue can be closed
- mktg-status::blocked: there were insufficient details in the issue for work to be completed
- mktg-status::plan: this is used for work that is in an earlier stage of planning and a specific request has not been made (backlog issues)
 - This will likely be used mainly by campaign managers on issues that are not high priority but there is a desire to capture the idea/notes.

Campaign Team Issue Templates {campaign-issues-templates}

<!-- DO NOT CHANGE THIS ANCHOR -->

The following issue templates are used by the Campaigns Team to organize their work, with appropriate labels applied for project management.

- campaigns-manager-wip
 - to be used by Campaign Managers ONLY for simpler project management for their own initiated issues
 - puts straight in WIP status with pre-set for current milestone and assignment to the person opening the issue
- campaigns-add-to-email-nurture
- campaigns-landing-page-copy
- campaigns-mural
- campaigns-pathfactory-track
- campaigns-pf-buyer-journey
- campaigns-post-webcast
- campaigns-program-tracking
- campaigns-reporting
- campaigns-remove-from-email-nurture
- campaigns-sdr-enablement
- campaigns-translation-review
- campaigns-webcast-dryrun-host
- campaigns-webcast-dryrun-sched
- campaigns-webcast-live-host
- campaigns-webcast-prep

Request Issue Templates {request-issue-templates}

<!-- DO NOT CHANGE THIS ANCHOR -->

We ask that teams request work using the following issue templates in the campaigns project. These templates more clearly indicate what information and details are required in order for the request to be triaged.

Note on timelines: The Campaigns Team is focused on campaign strategy, execution, and optimization. Team member milestones focus on work to drive MQLs and SAOs, and requests will be committed to as bandwidth permits at discretion of Campaign Team Manager.

- request-email-followup - these will triage to Verticurl
- request-email-invitation - these will triage to Verticurl
- request-email-newsletter - these will triage to Verticurl
- request-email-reminder - these will triage to Verticurl
- request-email - only for general email requests these will triage to Verticurl. For customer communications, please work with Marketing Ops.
- request-mkto-landing-page - should mainly be used for pre-set processes where epic code includes need for landing page.
- request-pathfactory-track - creation of pathfactory tracks for one-time use is responsibility of owner. If used for demand generation prescriptive buyer journey, it will be triaged.
- request-pathfactory-upload - the content owner is responsible for uploading to Pathfactory.
- request-pathfactory-upload-bulk - issue to discuss more efficient process with MOps
- request-resource-page-addition - issue to discuss leveraging pathfactory for the resources page)
- request-sales-nominated - process should be used sparingly
- ~request-zoom-license-date~ - please use this issue template with Field Marketing (owner of Zoom)
- request-webcast-dryrun-sched
- idea-campaign
- idea-webcast

Fundamental principles of issue requests {fundamentals}

<!-- DO NOT CHANGE THIS ANCHOR -->

The following issue templates are used by the campaigns team to organize their work, with appropriate labels applied for project management.

- /assign @ - issues should have only DRI based on who will complete the work in the issue. If work needs to be completed by multiple people, consider breaking into separate issues with clear deliverables and due dates. (example: /assign @jgragnola)
- /due 2021- - add due date based on workback schedules (example: /due 2020-07-13 or /due tomorrow or /due 07/13/2020)
- /milestone % - add milestone based on the due date of the issue (example: /milestone %"Mktg:)
- /weight - add weight between 1-5, with 1 being easiest (between 1-4 hours of time) and 5 being most complex (a full week of work). The majority of issues should fall into 1-2. If estimation is weight of 3+, break into separate issues for more manageable pieces to fit into milestones. (example: /weight 1)
- /epic - add epic of the overarching campaign or project to keep things organized. In almost all cases, there is a larger initiative that the issue relates to, so it is best practice to associate issues to the most relevant epic for visibility. (example: /epic <https://gitlab.com/groups/gitlab-com/marketing/-/epics/370>)

<details>

<summary>

Intake process daily/weekly steps (RETIRED)

</summary>

Team manager completes daily review of issues in triage assessing the following standards:

- Are all details in the Submitter Checklist sufficiently complete in order to begin work?
 - if yes, check that due date is at least 5 business days from date submitter details provided, move to mktg-status::wip, assign based on triage diagram, and put in current milestone (to be adjusted as needed by assignee)
 - if no, comment to requester and move to mktg-status::blocked
- Does the request align to FY21-22 segment marketing plan?
 - if no, consider realistic timeline given priorities (and share with requester in comments, set up time to discuss if needed)

</details>

<details>

<summary>

Shortcut issue comments for project management (RETIRED)

</summary>

When a team member is picking up an issue from the backlog:

text

/label ~"mktg-status::wip"

/assign @

/milestone %Mktg:2021-

This will change the status to wip (work in progress), allow quick assignment and add to the appropriate milestone.

</details>

Milestones {milestones}

<!-- DO NOT CHANGE THIS ANCHOR -->

The campaigns team uses the overall 2-week marketing milestones (format of Mktg: YYYY-MM-DD) to organize, prioritize, and balance campaigns, projects, and requests.

- The date in the milestone name is the END date of miltesone (Sunday)
- Note: Use of milestones was introduced to the campaigns team as of 2020-07-21.
- If issues in a milestone are not closed out by end of milestone, they are pulled to the next milestone. We will document total issues and total weight moved, to understand relative commitment levels and avoid overcommitment as we begin using milestones.

FY24 Marketing Milestones

- To be added

Campaigns Team Backlog Milestones:

- DG-OKRs - holds issues that are KRs in OKR initiatives
- DG-Backlog:Requests - holds issue requests to be triaged, typically related to Marketo (landing pages, emails, etc.)
- DG-Backlog:Ideas - holds issue requests related to campaign and webcast ideas submitted to demand generation
- DG-Backlog:Documentation - holds issues related to needed documentation (handbook, issues, etc.)
- DG-Backlog:General - holds general issue backlog that don't fit into request, ideas, or documentation/process

Tips & Tricks {tips-tricks}

<!-- DO NOT CHANGE THIS ANCHOR -->

Creating a MacBook shortcut for repetitive statements {macbook-shortcuts}

<!-- DO NOT CHANGE THIS ANCHOR -->

Example: in an issue to update all of MPM, instead of typing out every name, I have added a shortcut in my computer to populate all of the MPMs GitLab handles when I type asdf + Enter.

How to:

- On your Mac, choose Apple menu (ever-present top left logo)
- Go to System Preferences
- Click the Keyboard section
- Click Text on the top nav options
- Click the + at the bottom of the option list
- In Replace column, add the shortcut that you would type in to populate the repetitive text
- In With column, add the repetitive text that you want to populate when you type in the shortcut

SECTION: marketing/demand-generation/campaigns/content-in-campaigns.md

Overview {overview}

<!-- DO NOT CHANGE THIS ANCHOR -->

This page documents ways in which content is leveraged in campaigns, including in-house created content, analyst relations content, and downloadable competitive content.

In an effort to best engage our technical audience, we are pursuing an ungated content journey that leverages Pathfactory tracks, rather than gated landing pages. This allows viewers to preview content before signing up to view in its entirety. We have flexibility about when and how the forms display, and will test to deliver the best experience with proven results. This process will also be more efficient to launch new content so time can be focused on how to leverage the content in campaigns.

The epic code in each section below outlines the necessary issues to open in order to "check off" the list of action items to launch a new piece of content. While this page exists within the Campaigns Team handbook page, it is meant to be contributed to by all teams in marketing. If you see an update needed, please submit an MR and assign to @aoetama.

- Jump to ungated content journey (Pathfactory) setup process
- Jump to gated content (Landing Page) setup process - being phased out

Types of content in campaigns {content-types}

<!-- DO NOT CHANGE THIS ANCHOR -->

- Content for use in marketing campaigns: we leverage the content in our marketing channels (website, email nurture, paid digital, organic social, etc.)
 - Internal GitLab-created content: We created and developed the content in house
 - External content (i.e. Analyst Relations): We have bought the rights to use the content from an external vendor (analysts or publishers, for example) or received the content from a partner
 - On-Demand Webcasts
- Content syndication (under Digital Marketing): We have promoted our content through a third-party vendor, but do not drive people back to our website. In these cases, we often have given them the resource to make available for download to their audience, and receive the leads to be uploaded.

How to pick content for campaigns {picking-content-for-campaigns}

<!-- DO NOT CHANGE THIS ANCHOR -->

Search the entire Pathfactory Content Library

<https://gitlab.lookbookhq.com/authoring/content-library/content>

Filter by one or multiple of the following:

- Topic
- Content Type
- Funnel Stage
- GTM Motion (Business Unit in Pathfactory)
- Language

View reports to see what works

- Key metric to analyze: Engagement Time
 - "Why not total views?" Engagement time is a better indicator of content effectiveness than views, which can be a self-fulfilling prophesy; the more views, the more it is used, the more it continues to climb in comparison to other content.

Internally-Created Content (i.e. eBooks, Guides) {internal-content}

<!-- DO NOT CHANGE THIS ANCHOR -->

The below process should be used for all new content (ebooks, guides, whitepapers, etc.). Creating the epic and related issues is the responsibility of the Campaign Manager to make sure that when the content is ready, the teams involved in putting into Pathfactory (MOps) and the teams involved in activating (Campaigns, Digital, ABM) are able to take action immediately.

Epic code and issues - Internal GitLab Content {epic-issues-internal-content}

<!-- DO NOT CHANGE THIS ANCHOR -->

Watch this video overview of the process

Watch this video overview of the process >>

If you have any questions on this process, please contact @aoetama in the marketing-campaigns Slack channel. This process has been iterated since 2018 for efficiency and to fit all teams' project management practices, and is meant to continually updated as needed!

1. Internally-Created Content Epics: Campaign Manager aligned to the integrated campaign creates epic (using code below) and associates to campaign epic
1. Related Issues: Campaign Manager aligned to the integrated campaign creates the issues as designated in the epic code, and associates to the content epic

:calendar: As a guide in developing timeline, please view the workback timeline calculator
