Externally-Created Content (i.e. Analyst Relations) {external-content}

<!-- DO NOT CHANGE THIS ANCHOR -->

External content can be sourced from Analyst Relations, partners, and other vendors with whom we work. Some examples would be vendor comparisons (i.e. Gartner/Forrester) or industry/market analyses (i.e. DevOps Institute).

When a GitLab team member (i.e. AR) is evaluating a potential content for sponsorship, they are responsible for working with the GTM Motion teams to discuss how to leverage the content and if it makes sense for us to sponsor. They can do so by opening a decision matrix issue (see step by step process below). The campaign manager will evaluate the decision matrix inputs and give the final go/no go on sponsorship decision. If the decision is to sponsor the external content, the campaign manager will create the content activation epic and associated issues to request work of all relevant teams (outlined below to try to make it efficient, comprehensive, and repeatable!).

All external content should be planned in advance of purchase with at least a 30 business day time to launch date. This allows time to plan activation into existing and future integrated campaigns and GTM Motions.

The decision matrix

The purpose of the decision matrix is to gather cross-functional feedback whether a new analyst

report will be a lucrative investment to solidify GitLab's positioning in the market. It will also outline the campaigns and persona it is aligned to as well as the channels where it will be activated.

Step by step decision matrix process

1. Analyst relations will open a decision matrix issue and assign to relevant Campaign Manager.
1. Campaign Manager to tag relevant product marketing, sdr enablement, and field enablement counterparts on the decision matrix issue and comment to submit their inputs by agreed upon SLA date. | SLA: 1 Business Day
1. Product Marketing, SDR Enablement, Field Enablement to fill out their portions for relevant channels, campaign, persona. Tag relevant technical counterparts for input. | SLA: 3 Business Days
1. Campaign Manager fills out the suggested channel for promotion and makes the go/no go decision on sponsorship, tagging analyst relations | SLA: 3 Business Day

Decision Matrix end to end decision timeline (SLA): 7 Business days

Epic code and issues - External Content {epic-issues-external-content}

<!-- DO NOT CHANGE THIS ANCHOR -->

Watch this video overview of the process

Watch this video overview of the process >>

If you have any questions on this process, please contact @aoetama in the marketing-campaigns Slack channel. This process has been iterated since 2018 for efficiency and to fit all teams' project management practices, and is meant to continually updated as needed!

1. External Content Epics: Campaign Manager creates epic (using code below) and associates to primary GTM Motion epic
1. Related Issues: Campaign Manager creates the issues as designated in the epic code, and associates to the external content epic

Adding new content to the Resources page {add-to-resources-page}

<!-- DO NOT CHANGE THIS ANCHOR -->

Video walkthrough of adding a resource to <<https://about.gitlab.com/resources/>> by using the CMS (Contentful).

<iframe width="560" height="315" src="https://www.youtube.com/watch?v=G8NZV75H7lw" frameborder="0" allow="autoplay; encrypted-media" allowfullscreen></iframe>

Step by step instructions below

1. Go to the Resources page entry in Contentful
1. Click on the "Browse all resources" section of page content
1. Scroll waaaaay to the bottom and select + Add Content -> Card
1. From here, it might be helpful to open an existing card and make sure the same fields are filled out, but the gist is:

- the Title goes in both Internal Name and Title
- the Language goes in Subtitle
- the Teaser goes in Description
- the Topics go in List (hit enter after each topic)
- the Solutions go in Pills (hit enter after each topic)
- the Type of resource goes in Icon Name
- the URL goes in Card Link

Publish that card, drag it to the top of the list if you want it to appear first, and publish that section too!

If you want to edit other parts of the page the process is similar, just follow the existing pattern of the other cards! The only section to watch out for is the Featured resource - the one you want to feature has to be first in that list, and has to have an image.

Note: For ungated journeys, the URL drives to the PF asset/track, instead of a landing page.

TYPES to choose from (select one)

- eBook
- Report
- Webcast
- One-pager
- Whitepaper
- Demo
- Comparison
- Assessment

LANGUAGES to choose from (select one)

- English
- Korean
- Japanese
- Spanish

TOPICS to choose from (add all that apply):

Note from @aoetama: let's see if we can align this with topics in Pathfactory for efficiency (if we don't go the route of Pathfactory explore page).

- Agile
- CD

- CI
- Cloud infrastructure
- Continuous Delivery
- Continuous Development
- Continuous Integration
- Cloud Native

SOLUTIONS to choose from (select best aligned)

- Accelerated Delivery
- Deliver better products faster
- Executive visibility
- GitLab & AWS
- GitLab & Pulumi
- GitLab & Terraform
- GitOps
- Google Anthos and GitLab
- GitLab & AWS
- Improve operational efficiencies
- Project compliance
- Quality
- Security
- Security and quality

How to extend analyst assets {extend-analyst-assets}

<!-- DO NOT CHANGE THIS ANCHOR -->

At times, we will extend the rights to an asset if it is heavily used by sales or performing in campaigns. In that case the decision is indicated in the Expiration Issue.

Follow the steps outlined in the Pathfactory Content Library Handbook.

How to retire analyst assets when they expire {retire-analyst-assets}

<!-- DO NOT CHANGE THIS ANCHOR -->

An Expiration Issue will be opened by the Campaign Manager DRI for each analyst asset, and related to the overarching Epic (with due date for when the asset is set to expire). When the decision is made to expire the asset, the teams involved will check off their respective action items in the issue.

Retire Marketo landing page {retire-marketo-page}

<!-- DO NOT CHANGE THIS ANCHOR -->

First you will remove the form from the page and add a "no longer available" message

- In the Marketo program, click "edit" on the Registration Page
- On right rail under "Variables" (below "Elements"), find 2column Visibility and switch to "Hidden"
- On right rail under "Variables" (below "Elements"), find 2column Sidebar and switch to "No Sidebar"
- On right rail under "Variables" (below "Elements"), find flex1 Visibility and switch to "Visible"
- In flex1 section, double-click then click to edit in HTML > add the code below into the section and save
- Approve Landing Page and test live. You should no longer be able to see the form or paragraph text, and only see the notice about resource no longer being available.

html

<h1>This resource is no longer available.</h1>

<p>Thank you for your interest in this resource, but it is no longer available for download. Click here to visit our industry analysts page to view other reports and best practices!</p>

Remove from Intelligent Nurture {remove-intelligent-nurture}

<!-- DO NOT CHANGE THIS ANCHOR -->

Please follow the process outlined in the Emails/Nurture Handbook.

Remove from Pathfactory {remove-pathfactory}

<!-- DO NOT CHANGE THIS ANCHOR -->

Please follow the process outlined in the Pathfactory Handbook.

Marketo automation and setup for gated landing page {steps-gated-landing-pages}

<!-- DO NOT CHANGE THIS ANCHOR -->

!!! REMINDER: We are using ungated content journeys via Pathfactory. This process should only be used for specific scenarios, and used sparingly.

Watch the video tutorial >

:exclamation: Dependencies: delivery of final asset, completion of final landing page copy, and final asset added to pathfactory and placed in a track must be complete before setting up the Marketo program.

The TL;DR of what you'll do:

- Create Marketo program, tokens, and SFDC campaign sync
- Edit registration page and thank you page URLs
- Edit and Activate smart campaign(s)
- Update SFDC campaign
- Test live registration page and flows
- Add new content to the Resources page (separate issue)

Create Marketo program, tokens, and SFDC campaign sync {steps-gated-mkto-sfdc}

<!-- DO NOT CHANGE THIS ANCHOR -->

- Clone the Marketo Gated Content Template and name new program using naming convention (YYYYTypeAssetName, i.e. 2020reportGartnerVOCARO)
- Create SFDC program (Program Summary > Salesforce campaign sync > click "not set" and choose "Create New" from dropdown) - leave the name as auto-populates, and add the epic url to the description and "Save"
- Update Marketo tokens (Program Summary > "My Tokens" tab)
 - {{my.bullet1}} - bullet copy with approved character limits
 - {{my.bullet2}} - bullet copy with approved character limits
 - {{my.bullet3}} - bullet copy with approved character limits
 - {{my.bullet4}} - bullet copy with approved character limits
 - {{my.contentDescription}} - 2-3 sentences with approved character limits, this will show up in page previews on social and be used in Pathfactory description.
 - {{my.contentDownloadURL}} - skip updating in initial registration page setup (update during on-demand switch), Pathfactory link WITHOUT the https:// NOR the email tracking part (lbemail=)
 - Example of correct link to include: learn.gitlab.com/gartner-voc-aro/gartner-voc-aro - the code in the Marketo template assets will create the URL https://learn.gitlab.com/gartner-voc-aro/gartner-voc-aro?lbemail={{lead.email address}}&{{my.utm}}
 - Note that both parts of this url include custom URL slugs which should be incorporated into all pathfactory links for simplicity of tracking parameters
 - {{my.contentEpicURL}} - no longer used in automation, but helpful for reference
 - {{my.contentSubtitle}} - content subtitle to display to viewer (throughout landing page, emails, etc.)
 - {{my.contentTitle}} - content title to display to viewer (throughout landing page, emails, interesting moments, etc.), with approved character limits
 - {{my.contentType}} - content type to display to viewer (throughout landing page, emails, interesting moments, etc.)
 - {{my.contentTypeSFDC}} - pick from following list (critical to avoid Marketo > SFDC sync errors): whitepaper, report, video, eBook, general
 - {{my.emailConfirmationButtonCopy}} - leave as Download (but can be updated if needed)
 - {{my.formButtonCopy}} - leave as Download now (but can be updated if needed)
 - {{my.formHeader}} - leave as Free Instant Download: (but can be updated if needed)
 - {{my.formSubhead}} - form subhead (not currently used for gated content landing page to try to keep form shorter)

- {{my.heroImage}} - image to display above landing page form (options in Marketo here)
- {{my.introParagraph}} - intro paragraph to be used in landing page and nurture email, with approved character limits
- {{my.or}} - leave as ? (but can be updated to & if during Pathfactory upload, the custom URL slugs were not applied to both the asset and the track). If this is not correctly applied and there are multiple ? question marks in the URL, it will break. WATCH THE VIDEO EXPLAINER
- {{my.socialImage}} - image that would be presented in social, slack, etc. preview when the URL is shared, this image is provided by design/social, leave the default unless presented with webcast specific image.
- {{my.utm}} - this should match the aligned campaign utm
- {{my.valueStatement}} token with the short value statement on what the viewer gains from the webcast, this ties into the follow up emails and must meet the max/min requirements of the character limit checker

Edit registration page and thank you page URLs {steps-gated-registration-page}

<!-- DO NOT CHANGE THIS ANCHOR -->

- Right click the landing page object > "URL Tools" > "Edit URL Settings"
- Input new Registration Page URL (format: resources-type-name-of-asset, i.e. resources-ebook-ci-best-practices)
- Input new Thank You Page URL (format: resources-type-name-of-asset-thank-you, i.e. resources-ebook-ci-best-practices-thank-you)
- For both, leave "Throw away" existing url selected and click save

Edit "resulting page" from the form submit {steps-gated-resulting-page}

<!-- DO NOT CHANGE THIS ANCHOR -->

- the cloned program will automatically reference the Marketo program template Thank You Page
- Right click the registration landign page > "Edit Draft"
- On the right rail of the edit mode, under Elements right click on the Form Custom element and click "Edit"
- Next to Follow-up page, clear out the automatic reference to the template, and start to type in your program name - the approved thank you page should show up. Choose your thank you page
- Click "Swap" button at the bottom
- At top left of page, click Landing Page Actions > "Approve and Close"

Activate smart campaign(s) {steps-gated-activate-smart-campaigns}

<!-- DO NOT CHANGE THIS ANCHOR -->

- Click to 01 Downloaded Content smart campaign
- Click on Smart List
- Confirm that the first trigger for Fills out Form is set to Form Name is any, Web Page is (the name of your landing page). This should already be set properly.
- the second trigger for Fills out Form should be set to Form Name is "Form 2074: PF General". In Referrer contains, enter the Pathfactory asset name slug. For example guide-to-devops.
- the third trigger for Fills out Form should be set to Form Name is "Pathfactory Webhook". In Referrer contains, enter the Pathfactory asset name slug. For example guide-to-devops.

- Filter 1 - Filled Out Form should already be set properly. This will be Form Name is any. Web Page is (the name of your landing page).
- Filter 2 - Filled Out Form should be set to Form Name is "Form 2074: PF General". In Referrer contains, enter the Pathfactory asset name slug. For example guide-to-devops.
- Filter 3 - Filled out Form should be set to Form Name is "Pathfactory Webhook". In Referrer contains, enter the Pathfactory asset name slug. For example guide-to-devops. Date of Activity should already be set to in the past 1 hour.
- Filter 4 - Pathfactory Engagement Time greater than 60 is set as the default. 60 is the Pathfactory view threshold for eBooks and Whitepapers. If your content falls into this category, no updates are necessary. Any other content types should be updated with the threshold outlined under Pathfactory Scoring. For example, if you are creating an analyst report, you will enter 120 instead of 60.
- Advanced filters will be set to 1 or 2 or (3 and 4)
- Flow: it's all set! For your first few, feel free to review the flows (but they are all using tokens, so it should be ready to go automatically)
- Schedule tab: click "Activate" (note: the settings should be that "each person can run through the flow once every 7 days" - this is to avoid bots resubmitting repeatedly)

Update SFDC campaign {steps-gated-update-sfdc}

<!-- DO NOT CHANGE THIS ANCHOR -->

- Navigate to [<https://gitlab.my.salesforce.com/701?fcf=00B61000004NY3B&page=1&rolodexIndex=-1>] campaigns in Salesforce
- Campaign Owner should be the campaign creator
- Active field should be checked
- Description must include the epic url, best practice to include the registration page URL
- Start Date should be date of launch
- End Date should be one year later
- Budgeted Cost is required, if cost is \$0 list 1 in the Budgeted Cost field - NOTE there needs to be at least a 1 value here for ROI calculations, otherwise, when you divide the pipeline by 0 you will always get 0 as the pipe2spend calculation.
- Bizible Touchpoints Enabled leave this blank (because this would be an online touchpoint)

Test live registration page and flows {steps-gated-testing}

<!-- DO NOT CHANGE THIS ANCHOR -->

- Click to the landing page object and click "View Approved Page"
- Final QA of all copy
- Submit the form
- Final QA that the form submit brings you to the thank you page
- Final QA that the link on the thank you page sends to Pathfactory with- the tracking for the email address (&lbeemail=[email submitted in form])
- Check that you received the follow up email
- Final QA of confirmation email copy
- Final QA that the confirmation email link sends to Pathfactory with the tracking for the email address (&lbeemail=[email submitted in form])

Potential backup process {retire-marketo-page}

<!-- DO NOT CHANGE THIS ANCHOR -->

To be completed by the content owner if Pathfactory access is granted. If no access, please open an issue in Campaigns team based on epic category above.

Add to /downloads/ repository (only available and recommended for assets under 2 MB size)

The purpose of this step is to make it possible to flip the autoresponder if Pathfactory were to have an outage, at which point, we would still have the PDF version available in Marketo for a quick turnaround.

1. Save the pdf to your computer with naming convention [asset-type]-short-name-asset, ex: ebook-agile-delivery-models

1. Navigate to the (de-indexed) resource/download directory

1. Where it says www-gitlab-com / sites / marketing / source / resources / +, click the plus drop down and select "Upload File"

1. Upload the file you've saved to your computer with the naming convention above

1. For commit message, add Upload [Asset Type]: [Asset Name], check box for "create new merge request", name your merge request, and click "Upload file"

1. Add description to MR, complete the author checklist, assign to @aoetama and click "Submit Merge Request"

1. In your Marketo program, for the pdfVersion My Token, add the naming convention above which will be available when the MR is merged. (the token should look like <https://about.gitlab.com/resources/downloads/add-file-name-here.pdf>)

SECTION: marketing/demand-generation/campaigns/direct-mail.md

Overview

This page focuses on direct mail as a tactic used within marketing campaigns, including account centric campaigns.

If you are interested in running a content syndication campaign, then please reach out to the Demand Generation team. If you are in Field Marketing, please see this page for Field Marketing epic details.

Process in GitLab to organize a direct mail

The project owner is responsible for following the steps below to create the epic and related issues in GitLab.

1. Project owner creates the main tactic issue

1. Project owner creates the epic to house all related issues (code below)

1. Project owner creates the relevant issues required (shortcut links in epic code below)

1. Project owner associates all the relevant issues to the newly created epic, as well as the original issue

1. Project owner sets due dates for each issue, based on agreed upon SLAs between teams for each task, and confirms accurate ownership for each issue

Note: if the date of a direct mail changes, project owner is responsible for changing the due dates of all related issues to match the new date, and alerting the team members involved.

Code for direct mail epic

SECTION: marketing/demand-generation/campaigns/landing-pages.md

Best Practices

Landing Page Conversion Best Practices

To be removed and linked to Brand & Digital best practices page when created

1. "Don't make them think." - Steven Krug

1. Header should be 3-7 words max

1. The header, optional blurb, and image should directly tie to inbound context (e.g. ad they clicked)

1. Use plain, value-oriented and action-oriented language

1. Use "first date" content to put our best foot forward

Let's not tell them about how cool we are and how amazing our stamp collection is. Make it about them, and drive the desired action of a form fill.

Landing Page URL Best Practices

For about.gitlab.com pages: The H1/page title will be the slug of the URL

The H1 should be concise and focus on keywords for the campaign

For Marketo and PathFactory landing pages, follow the landing page naming convention. Utilize the Content URL Builder.

Resources and related issues

Character Count Checker

Documentation of Modular Marketo Landing Page

Related Brand & Digital Issues:

Create a new Marketo landing page template phase 1

Marketo Landing Page Phase 1 - KPIs & Validation

Marketo Landing page template design, phase 2

Update Marketo forms (design + copy) to improve conversion on existing and new landing pages

Landing page creation options

We create landing pages in several locations. Marketo is the most efficient option, using tokens and automation pre-built into programs for more speedy and consistent execution. The events.yml creates landing pages when specific code is included. Gated content pages are created in Marketo and then added as listings in the /resources/ yml. Campaign pages are currently created on about.gitlab.com.

Marketo landing pages (general)

Note: this requires a Marketo license with access to make and approve landing pages.

The following section point to more detailed processes for Marketo landing pages based on landing page type, plus general information for knowledge sharing on creation process.

> To build the most advanced and efficient landing page processes in Marketo, we utilize My Tokens in our Marketo program templates along with character limits based on conversion best practices to write copy.

Graphics

Our current Marketo landing page template uses a charcoal background with a small image on the right side of the header. A custom image can be used by putting the link to the design studio image in the Hero1 Image variable when editing the landing page. You can change the background to white by entering highlight-white in the Hero1 Color variable.

If you require a custom header (one that cannot use the charcoal or white background), the approximate dimensions required are 1920 x 600 px; the graphic dimensions are 500 x 250 px, centered vertically and with 100 px padding along the right edge. You will put the link to the design studio image in the Nav Background Image Path variable. There should be no entry in the Hero1 Image variable. To remove the black line below the custom image, change Hero1 Color to "highlight-white".

Marketo landing page instructions, character limits, and workback timelines

Curious how to estimate when a landing page due date should be set? We've tried to make it easy with a workback, so that you can also clearly see the dependencies for a landing page to be created (including landing page copy, which is a separate issue template).

Gated content (in-house content, analyst content, and competitive content)

- Content URL Builder

Event meeting request or general info pages

- Handbook page to reference for process and details (YML)

General Marketo landing page creation instructions

1. In Marketo, you will have already cloned the correct template for your campaign type and followed the standard process for Marketo program creation and SFDC campaign creation via sync.
1. In your Marketo program, fill in the appropriate Marketo tokens (Marketo program > My Tokens) for the template you are creating
1. In the Assets folder, left-click Landing Page > Edit Draft
1. In most cases, the Marketo landing page copy will include the My Tokens referenced above, with then does not require any edits to the landing page.
1. Use the approved copy that meets the character limits to update the landing page. Please ensure your copy meets conversion best practices.
1. When the landing page is finished, click Preview to ensure all tokens are correctly applied and the page appears as intended (copy, design, etc). Click Preview Actions > Approve and Close.

Note: if you see tokens instead of the desired text, you may need to troubleshoot. Make sure your token code in the page exactly matches the Marketo program token name.

1. Update URL by clicking Landing Page Actions > URL Tools > Edit URL setting. The new URL should reflect our landing page naming convention
1. Edit any related emails, such as confirmation or sales alert and approve the edits
1. Review flow steps and activate related smart campaigns
1. Test your landing page using the QA Review Steps
1. Once tested and any necessary updates made, comment in the relevant issue to alert other approvers to review and approve
1. When the page is live, do final QA on live version to test all flows are working appropriately via Marketo
1. Enter the URL of the landing page in the landingpageURL token. You will need to remove the https:// before page.gitlab.com in the token for use in emails as this will cause issues with Marketo tracking. Our email templates are coded to have the https:// hard coded so you do not experience a problem if you properly use the token.
1. When using the URL in emails or other uses with utm values, Marketo page URLs (starting with page.gitlab.com) should not have a / at the end of the page URL before the ?. This will likely cause the page to redirect. (Correct example: https://page.gitlab.com/webcast-example?{{my.utm}}). Note that about.gitlab.com pages should use a /.

Specific landing page instructions

Event landing pages (events.yml) - See Events Handbook Page (for now)

Gated content landing pages - See Gated Content Handbook Page

Webcast landing pages - See Webcast Handbook Page

Landing page naming convention

Marketo landing pages should use the following naming convention:

type-monthddd-shortcampaignname-region (no region for global)

For joint partner events, include partner in the short name

If the landing page is for gated content or an evergreen asset (such as a webcast that will be offered on-demand for more than a year), leave the date off. Utilize the Content URL Builder.

The 'type' is outlined in the table below. If your type is not listed, please use program-.

The short name should be descriptive so when a person lands on the page, it is clear what they are registering for. Short names such as "emeawebcast" are not acceptable and should reference the topic of the webcast instead. A few examples are: webcast-march15-techdemo-ciooverview, event-march19-connect-day-paris-emea, ebook-may23-connect-melbourne-apac

This standardizes our page names for use in reporting and systems such as our ABM tool. Details related to this naming convention can be found in this issue.

| Type | URL Path: https://page.gitlab.com/[first word below] |

| ----- | ----- |

| Webcasts | /webcast- |

| Workshops | /workshop- |

Owned, in-person events	/event-
Owned, virtual events (that don't fall under webcasts - like wine tastings, cooking, etc)	/event-
Gated content - ebook	/ebook
Gated content - demo	/demo
Gated content - video	/video-
Gated content - all others	/resources
Meeting requests	/event-
Executive roundtables	/event-
Survey	/survey
Interest forms	/interest-
Contact us forms (localized, for example)	/contact-
Direct Mail	/direct-
Catch-all (doesn't fit in any of the above)	/program-

QA process for about.gitlab campaign landing pages

When the landing page pipeline has passed, click to the review app and navigate to your new landing page

Review the grammar, spelling, and design elements

Fill out the form (using a personal email address) and test that the resulting success message and flows take place:

If a webcast, check that the success message displays properly

If a Pathfactory experience, check that the link includes the correct code to (&lemail=<email-of-user>) that will ensure Pathfactory recognizes the individual as a known lead, and track the activity back to the lead/contact record.

Check that you receive the confirmation email and run through all the flows by reviewing the Add to Campaign smart campaign in your Marketo program (note that if you are using your @gitlab.com email address, you will be removed from the flows to avoid inflating program totals for employee form fills)

When using the URL in emails or other uses with utm values, about.gitlab.com page URLs (starting with about.gitlab.com) must have a / at the end of the page URL before the ?.

Omitting the / can cause the form not to display on the page. (Correct example:

<https://about.gitlab.com/webcast-example/?{{my.utm}}>). Note that Marketo pages should not use a /.

Landing page QA review steps

Go to the page you are going to test:

For Marketo landing pages, open an incognito window and go to the URL of the page you are testing

For landing pages in an MR, when the pipeline approves, go to the review app and navigate to the page you are testing

Check for spelling and grammatical errors (note: these should ideally be caught during copy review prior to landing page creation)

Check that conversion best practices are met

Fill out the form and ensure all flow steps in Marketo trigger appropriately (i.e. you receive confirmation email, interesting moment applied, program membership updated, alert sent if applicable, etc.)

Confirm correct location is arrived at post-form submit (i.e. correct form success message or

a resulting thank you page)

Reporting: Why URL Structure Is Important

Automated Content Reporting

The Content Performance dashboard in Tableau reports on web and pipeline metrics from multiple sources: Google Analytics, Marketo Measure (Bizible), and Salesforce. A single piece of content may have several associated web pages & Salesforce campaigns, including Marketo form pages and multiple PathFactory tracks. A consistent URL structure enables the dashboard to automatically map pages across page.gitlab.com, about.gitlab.com, & learn.gitlab.com as well as Content Syndication. This process lets the dashboard accurately show Content Name and Type variables. To ensure your page and content are automatically captured in Tableau reporting, please use the Content URL Builder.

Manual Process

For legacy content where URLs don't follow the current structure, the Marketing Analytics team manually maps content, web, and campaign variables using this contentkeystone.yaml file.

SECTION: marketing/developer-relations/_index.md

<i class="fas fa-bullhorn fa-fw color-orange font-awesome"></i> Welcome to the GitLab Developer Relations Handbook
{.h1}

<i class="fa-regular fa-lightbulb"></i> What is DevRel?

Developer Relations (short: DevRel) operates at the intersection of technology, community, and advocacy, serving as the voice and ears of GitLab in the wider tech world. Their core mission revolves around nurturing and sustaining a vibrant, engaged community of developers, contributors, and users. This involves a multifaceted approach that includes creating educational content, organizing events and workshops, developing programs, and providing platforms for knowledge exchange and collaboration. The team not only focuses on promoting GitLab's features and capabilities but also actively listens to and incorporates feedback from the community to inform product development and improvements.

<i class="far fa-newspaper" id="biz-tech-icons"></i> Our mission & vision

Developer Relations drives platform awareness and adoption by enabling GitLab customers, connecting through community, and engaging developers where they are. GitLab engages with more than 3000 developers every month on GitLab.com alone, and receives more than 250 contributions every month, giving us a unique level of influence in the DevSecOps space and helping accelerate our innovation. Our ultimate goal is to raise awareness of GitLab and drive customer success by winning the hearts & minds of developers through best-in-class technical enablement and an active community of contributors.

In Developer Relations, we align our mission and vision with the company's three year strategy.

We believe that everyone can contribute. To help GitLab reach this goal, we aim to double outreach and engagement, strengthen our community presence, and support a healthy community of contributors. Ultimately, these goals boost awareness, adoption, and power our dual flywheels.

Our Strategy

Our operational strategy is documented in our internal handbook but is classified as confidential due to business sensitivity, customer impact, and to foster a psychological safe environment for our team members. Below you can find our strategic plans that are open to the wider community and where the Developer Relations team welcomes collaboration.

- Contributor Program Unification & Growth Plan
- Co-Creation Initiative

Meet the Team

{{< team-by-departments "Developer Relations" >}}

How to reach us

Chat with us

- Developer Relations team members use three Slack channels:
 - developer-relations: for all GitLab-related discussion (ex: questions about an issue, announcement of an upcoming event)
 - developer-relations-hangout: for all social discussion and updates shared via the Community Catch bot (ex: plumbing problems, weekend plans)
 - developer-relations-confidential: (private) for discussion of confidential topics that cannot be shared in a channel with people from outside GitLab (ex: discussing a topic that was shared in company-fyi-private among our team)
- GitLab team members and others with Slack access can reach us by visiting the developer-relations Slack channel, or by tagging the @devrel-team group handle.
- Members of the wider GitLab community can connect with us in the public Discord rooms

Teams within Developer Relations are reachable in these Slack channels:

- dev-advocacy-team: the Developer Advocate team shares content updates, thought leadership & product ideas, and support community responses, CFPs, etc.
- community-programs: for all inquiries regarding GitLab Community Programs (EDU/OSS/Startups)
- contributor-success: for all inquiries regarding Contributor Success

Email us

- Please use the e-mail address specific to each program

File an issue

- File an issue to work with us: See our project management section to find program-specific workboards where you can file an issue

Emergency contact

- Developer Relations emergency contacts
- Incident management roles
- Relevant Slack channels for incident/infrastructure: incidents, infrastructure-lounge

<i class="fas fa-tasks" id="biz-tech-icons"></i> How we work

Community Interest

If you are working on changes to the company, product, or pricing that are expected to have a meaningful impact on members of the wider GitLab community or the GitLab brand, we encourage you to use the label ~Community Interest so that the Developer Relations team can represent the interests of the wider GitLab community in the planning process.

All members of the Developer Relations team should be subscribed to this label in both the gitlab-com and gitlab-org projects.

Team touchpoints

Our team has a few weekly events that we use to stay connected and aligned on our work:

- Team meeting (bi-weekly)
 - Team meetings are recorded via Zoom and recordings linked to the corresponding date in the meeting notes.
- 1:1 meeting between each team member and their manager.
- Question check-in via Geekbot in Slack for each team member. The responses are shared in the developer-relations-hangout Slack channel.
 - Monday (weekend social, plans for the week)
 - Thursday (reminder to share achievements, thoughts, blockers, etc.)
- End of week updates: Results and wins, search for Developer Relations - End of Week updates in Google drive.

<i class="fa fa-calendar fa-fw color-orange font-awesome"></i> Our calendars

We use team-wide calendars for collective notification and to manage team logistics and events. Additionally, specific teams within Developer Relations may maintain calendars specific to their programs (such as the Developer Advocacy team calendar).

- Developer Relations Team
- Community Events
- Developer Advocacy Team

Developer Relations OKRs

Every quarter, we work on team Objectives and Key Results (OKRs) that align with company OKRs.

OKRs we seek to align with:

- company OKRs
- Marketing OKRs

DRI Responsibilities

For each quarterly objective and key results, the Developer Relations team will assign a DRI. For our team, we have responsibilities that build upon the GitLab guidance on achieving and updating. Typically, People managers are the DRIs for objectives while ICs are the DRIs for key results.

- Objective DRI Responsibilities

- Own strategy for achieving objectives including supporting the DRIs for key results that will help to achieve our objectives.
- Collaborate with the owners of the key results that contribute to your objective to set a plan to deliver on the KRs and objective.
- Maintain communication with KR owners - synchronous or asynchronous - throughout the quarter as needed.
- Provide bi-weekly updates in the epic and in the Developer Relations bi-weekly team meeting agenda on the objective including completion percentage and status. We recognize that there will be no change from the previous report at times.
- Present overview and status updates in team business reviews.
- Escalate any urgent needs to your manager.

- Key Results DRI Responsibilities

- Create and manage strategy for achieving the key results. Manage dependencies, set actions, and define how your items will be scored.
- Provide bi-weekly updates in the issues in the GitLab OKRs project including completion percentage and status. The issues are the single source of truth for your KR. We recognize that there will be no change from the previous report at times.
- Ensure key result information is up-to-date for team business reviews.
- Escalate any urgent needs to your manager.

How we update our OKRs

To update our list of current OKRs:

1. Follow the OKRs in GitLab handbook

1. Create OKRs, and KR items.

1. Add the following labels: Division::Marketing, Department::Developer Relations, OKR.

OKR Health: We use issue health indicators to help people understand an OKRs status at a glance. These status indicators are:

- on track
- needs attention
- at risk

Progress: Edit the progress attribute in KRs to indicate how much progress has been made.

Developer Relations KPIs

The Developer Relations team monitors several Key Performance Indicators and related Performance Indicators.

```
{{< kpi "developerrelationsdepartment" >}}
```

<i class="fas fa-vector-square fa-fw color-orange font-awesome"></i> Team Logos

GitLab Developer Relations team logos can be found in .png and .svg formats by searching for gitlab-devrel-logo in Google Drive.

<i class="fas fa-receipt"></i> Team Budgets

Learn more on the Developer Relations budget page

<i class="fas fa-globe fa-fw color-orange font-awesome"></i> Community Diversity, Inclusion, and Belonging

In alignment with GitLab's core value of Diversity, Inclusion, and Belonging (DIB), the Developer Relations team seeks to purposefully design DIB into every facet of its programs and operations. We seek to foster DIB at GitLab and within the wider GitLab community.

DEI Strategies

As DEI (Diversity, Equity and Inclusion) allies in the open source community, GitLab's Developer Relations team is committed to the following DEI efforts within our contributor communities:

- DEI project badging:
 - Partner with community-wide initiatives to establish a mechanism to recognize, support and promote DEI efforts through a badging system.
 - Highlight the DEI values and inclusion efforts of GitLab's projects.
 - Encourage open-source projects hosted on GitLab to do the same.
- First-time contributor inclusion:
 - Perform user research studies on first-time contributors to learn and improve the experience.
 - Improve documentation from perspectives of first-time contributors.
 - Improve community onboarding for newcomers.
- DEI group participation:
 - Track DEI group participation among GitLab team members, beginning with the Developer Relations team.
 - Encourage team members to attend open-source DEI working groups and events.
 - Poll team members quarterly to track participation.
 - Expand from Developer Relations to Marketing and then across GitLab.
- Swag/contributor points coupons at qualifying events:
 - Offer GitLab swag and GitLab contributor points coupons at qualifying events.
 - Incentivize community members and potential contributors with coupon codes.
- GitLab contributor resource groups:
 - Form GitLab contributor resource groups similar to GitLab Team Member Resource Groups

(TMRGs).

- Include mentoring/coaching opportunities.
- Consider groups for non-contributing developers or for Developer Relations team members.
- Consider hosting events/days for specified underrepresented groups.

Planning Events and Activities

This section is meant to document tips and best practices that the Developer Relations team, and GitLab team, should keep in mind as they plan events and activities.

- Images: We seek to promote the use of images that represent a diverse group of users, customers, and community members. When we see a lack of diverse representation, we speak up and actively help update those images when possible.
- Speakers: As event organizers and participants, we seek to include a diverse set of speakers in events that GitLab organizes or touches.
- We are open-minded: We actively seek feedback and keep an open mind about our current policies. We are open to change and are willing to make structural changes to ensure that we continue to foster DIB among our team and the wider GitLab community.
- We retain a growth mindset and keep learning: We read articles, attend workshops, and participate in trainings that help educate us about how to foster DIB in our community and how to be inclusive ourselves.
- We encourage a diverse set of community members to participate in research: We recognize the product inclusivity is important and that we need to build with our community, not just for them.
- We promote the GitLab Diversity Scholarship program: This scholarship supports Diversity, Inclusion, and Belonging-focused events financially.

 Communities who inspire us

We take inspiration from the great work being done by other communities. Some of the communities who we take inspiration from:

- Linux Foundation - A large, engaged community that act as custodians for important open source technology.
- CNCF - A large, engaged community that act as custodians for important open source technology.
- FINOS - A large, engaged community that act as custodians for important open source technology.
- Debian - A large, engaged community that act as custodians for important open source technology.
- GNOME - A large, engaged community that act as custodians for important open source technology.
- KDE - A large, engaged community that act as custodians for important open source technology.
- Fedora - A large, engaged community that act as custodians for important open source technology.
- Drupal - A large, engaged community that act as custodians for important open source technology.
- Wikimedia Foundation - This community is a champion for free information with a large, engaged community.
- Kubernetes - This community consists of a large network of user groups and champions that

serve to help each other grow and better utilize Kubernetes.

- AWS - This community consists of a large network of user groups and champions that serve to help each other grow and better utilize AWS.
- Dev.to - This community creates a welcoming place for the tech community, particularly newcomers, to learn and share content.
- Hacker News - This community is known for its engaging discussion of the latest tech news and trends.
- Google Summer of Code - This community inspires us through their work to make the tech community more diverse and inclusive and create new opportunities for people new to tech.
- Outreachy - This community inspires us through their work to make the tech community more diverse and inclusive and create new opportunities for people new to tech.
- Grace Hopper Community / Sisters - This community inspires us through their work to make the tech community more diverse and inclusive.
- Lesbians Who Tech - This community inspires us through their work to make the tech community more diverse and inclusive.
- Techqueria - This community inspires us through their work to make the tech community more diverse and inclusive.
- Latinas in Tech - This community inspires us through their work to make the tech community more diverse and inclusive.
- Women in Tech - This community inspires us through their work to make the tech community more diverse and inclusive.
- Women Who Code - This community inspires us through their work to make the tech community more diverse and inclusive.
- Rails Girls - This community inspires us through their work to make the tech community more diverse and inclusive.

<i class="fas fa-book" fa-fw color-orange font-awesome></i> Community Learning Pathway

The Community Learning Pathway is a course built to educate the community on how the Developer Relations team works, the different community programs and how to contribute the GitLab. Members of the Community and GitLab team members who complete the course will earn a badge.

<i class="fas fa-book" fa-fw color-orange font-awesome></i> Community Building Reading Group

The Community Building Reading Group is for GitLab team members interested or engaged in building communities at GitLab. Hosted by members of the Developer Relations team, this learning-focused group examines various principles and practices related to imagining, designing, building, nurturing, growing, and supporting communities. Potential topics of study and discussion include:

- Leading and conducting community activities
- Welcoming new contributors
- Managing relationships in and with communities
- Negotiating community authority and power relations
- Architecting and enforcing community codes of conduct
- Cultivating community cultures
- Measuring community health and success
- Converting community participants into community contributors
- Encouraging community mentorship
- Building community-powered innovation and business models

- Assessing community infrastructure and governance models
- Understanding community value propositions and exchanges

By collaborating as part of this group, members aim to:

- Hone their craft. Working with communities requires thoughtful and skillful practice. This group provides a space for collectively reviewing, assessing, and learning from materials that help members become better practitioners.
- Create space for support and growth. Working with communities requires emotional labor, and people who undertake it often benefit from spaces to discuss the work's challenges with like-minded collaborators. This group would function as one such space.
- Generate and share resources. Working with communities is easier with knowledge of best practices and trusted frameworks. By reading and reviewing materials on the state of the art, members generate a knowledge commons others can access and from which they can learn.

Any GitLab team member interested in community-building practices is welcome to participate in and contribute to the group. Unlike typical GitLab book clubs, this reading group:

- is an ongoing effort rather than a discrete and time-delimited event
- is focused on a series of works rather than a single one

The reading group operates on a cadence group members determine together. Group members also collectively determine the material—for example, a book chapter, a white paper, a research report, a presentation recording, or a case study—they'll cover each week.

1. Group members propose materials for the group to study and discuss by opening an issue in the Developer Relations team's Community Building project using the reading-group template, then attaching the Reading Group::Proposed label to it.

1. Group members can then browse one another's suggestions and collectively select what to study.

1. When they determine what they'll read, they re-label the issue Reading Group::Up Next.

1. When they begin reading and studying proposed material, they re-label the issue, applying the Reading Group::Now Reading label.

1. And when they've finished a selection, they apply the Reading Group::Finished label to the associated issue. A project board tracks all selections.

As they read, group members share notes and impressions asynchronously via files stored in the Community Building project. When they have completed a selection, they polish these notes and update the Community Building wiki accordingly.

In each cycle, a group member (typically the person who proposed the materials) acts as "leader." Group leaders pose some basic discussion questions or thought-generating insights to guide the group's reading and frame its discussion. Group members meet at regular intervals for live, synchronous discussion of the reading materials (suggested time for discussion meetings: 45 minutes). Recordings of these meetings are available, but because discussions often contain personal details and sensitive issues, these recordings are only access to GitLab team members via an internal Google Drive.

SECTION: marketing/developer-relations/community-pathway.md

Community Learning Pathway

The Community Learning pathway is a course on the GitLab Learn platform, designed to educate GitLab team members and the community about GitLab's community programs, our commitment to the community and how to engage the community team. At the end of the course, learners earn a badge showing they have a good understanding of the GitLab community and how to engage.

Course Objectives

At the end of this course, we expect team members to:

1. Understand the value of community to GitLab and how important it is to our strategy
1. Take away best practices around how to interact with our community
1. Understand the various programs we run and where to find more information about them
1. Understand how and when to collaborate with us

The GitLab Community is also able to:

1. Understand GitLab's business model and how it differs from competitors
1. Learn about all of the programs and resources we have to support them
1. Learn tips for how to interact in our community
1. Learn how to collaborate and where to find more info
1. Understand who to reach out to and when

Course Outline

1. Introduction
1. How community fits into GitLab's strategy
1. GitLab's community programs
1. Open source community best practices
1. Join us

How community fits into GitLab's strategy

GitLab is the DevOps Platform, made possible by contributions from the community. The GitLab community is composed of our paid and free users, contributors, team members and anyone in the general community who has interacted with GitLab in whatever form. Learn more about our strategy in the links below.

GitLab's strategy & open core model

- Dual flywheel strategy and the value of community
 - Dual Flywheel strategy
 - MRARR
 - Percent of MRs from Community
 - Unique Wider Community Contributors Per Month
 - Percent of Feature Community Contributions
 - Wider Community merged MRs per release
 - Developer Advocate Monthly Impressions

GitLab's community programs

How our community is structured

Ensuring everyone can contribute requires a conscious effort to ensure the community is enabled and supported with the right tools they need, that's where the Community team at GitLab plays a crucial role with programs that target different parts of the community. From the Open source community to the academia, startups and individual contributors, the team supports them in various ways. You can learn more about the individual programs in the section below.

Community Programs

Free community programs:

- OSS
- Developer Evangelism
- Education Program
- StartUps Program
- GitLab Diversity Scholarship program

Education Program at GitLab

</figure>
```

Open source community best practices

Building an inclusive and transparent community is a top-most priority for the Community Team and we live by our GitLab values, which includes Diversity/Inclusion & Transparency. Below, we maintain a living list of community best practices for the GitLab Community and from other communities.

- Fostering DIB in our community
- Transparency and openness
- Kubernetes Community Values
- Building Leadership in an Open SOurce Community
- Participating in Open Source Communities
- Measuring your Open source Program success
- The Value of Open Source

Mozilla Community Guidelines

Join us

The community team has always partnered with internal and external teams to empower the community and we are always seeking collaboration to do more. Every community program has an Issue board where you can create an issue to kickstart a collaboration of if you are a GitLab team member and unsure of where to start, you can always drop by the developer-relations channel on slack.

Content Effectiveness

The Developer Relations team creates content on varying topics and in different formats, these include videos, blog posts, conference talks, demos, etc. This handbook pages details how we measure the effectiveness of the content, the tools we use, and how they work together. First, we will review the different components.

How we measure Content Effectiveness

The key measure of content effectiveness for the Developer Relations team is how the content we create or the campaigns we contribute to influence revenue. This is done by ensuring every content item we create has an impact on the experience of GitLab users and customers. Impact is achieved by listening to the community and creating content that meets the needs of the community with relevant calls to action. We also impact the experience of users by collaborating with other teams and contributing content or thought leadership.

The Metrics we measure

- Blog Views: These are impressions generated from blog posts published by the team on the

GitLab blog.

- Video Views: Videos are uploaded to the Official and the GitLab Unfiltered channels on YouTube. We also include Shortened links with Relevant UTM codes.
- Campaigns: The Developer Relations team use the devrel UTM Campaign name to track engagement with our content or activities shared on external mediums.
- Influenced Campaigns: These are campaigns owned by other marketing teams that we contribute to, we track the result of our influence on the Marketing Campaigns Dashboard and in the Marketi
