

For incoming questions and involving more experts, Developer Advocates can help in Slack in dev-advocacy-team.

Release Management

Example tweets for GitLab 12.9:

- Pick a nice title and encourage everyone to try to create a new release: Have you created your first release through the in @gitlab yet? Let's do this!
- Go to your demo environment and create 1-4 screenshots, including guiding steps (make this a mini tutorial)
- URL to the release blogpost should be included
- Mention @gitlab with the @ before the username
- Use hashtags gitlab releasemanagement

Package

Example tweets for open-sourcing the registries:

- Pick a cool title to encourage users to solve a use-case for them: Unstable npm mirrors no more: @gitlab got you covered - the NPM registry will be open sourced.
- Go to your demo environment and create 1-4 screenshots, including guiding steps (make this a mini tutorial)
- URL to the release blogpost should be included
- Mention @gitlab with the @ before the username
- Use hashtags: gitlab packages registry

SECTION: marketing/developer-relations/developer-advocacy/workflow.md

Team Workflow

Welcome to the Developer Advocate team workflow page. Learn how the team works and how to work with the team. We primarily use the Developer Advocate Meta issue tracker. We own the team label developer-advocacy and all of our other labels which are located at the gitlab-com group level. You can add the labels as necessary to any issue under this group for our team to track.

Overview Video

The Workflow overview video showcases the different components of the workflow in detail. The video is internal only due to confidential issues shown in workflows. If you would like to jump to the specific chapters of the video, see the links below.

Video Chapters:

- Introduction
- Creating Issues
- Labels Overview

- Issue Boards
- Issue Triage & DevRel-Bot Rules

How the Developer Advocacy Team work

Every activity of the team is tracked as an issue in the Developer Advocacy Meta project or in the issue trackers of other teams the team collaborate with. Activities fall into 3 categories Content, Events & Other Activities. To make creation of issues easy, the team use issue templatea pre-populated with relevant placeholders and labels. Here are the direct links to the Issue templates and their shortlinks.

Activity Type	Issue Template	Shortlink
-----	-----	-----
Content	Template	https://go.gitlab.com/new-content-issue
Event	Template	https://go.gitlab.com/new-event-issue
Release Evangelism	Template	https://go.gitlab.com/new-release-issue
Others	Template	https://go.gitlab.com/new-activity-issue

Issue Boards

Issue boards are the single source of truth for activities of the Developer Advocacy team. Developer Advocates are asked to keep the columns of issue boards arranged by due date. This will help our stakeholders who use the boards to keep track of the Developer Advocacy team's work.

Issue Board	Shortlink
-----	-----
Issues by Assignee	https://go.gitlab.com/da-assignees
Content by Quarter	https://go.gitlab.com/da-content-quarter
Content by Types	https://go.gitlab.com/da-content-type
Events	https://go.gitlab.com/da-events
Issue Triage Board	https://go.gitlab.com/da-issue-triage

NB: All the Shortlinks on this page can be managed at <https://campaign-manager.gitlab.com/campaigns/view/114>.

How to work with the Developer Advocate Team

Opening an issue is the best way to get a conversation started. The developer-advocacy label is at the gitlab-com group level, which means it can be added to any issue or merge request in the group's structure.

The developer-advocacy label is required, other labels are optional. The DevRel-Bot or a team member will do the triage and add the necessary labels. To reduce noise in the comments, please add the DA-Type::Consulting and the relevant Consulting team labels yourself.

You can use the request a Developer Advocate issue template to submit a request. It provides a guide to collect the required information to triage the request.

CFPs

CFP epics should not be created to avoid clutter on the Roadmap, instead the CFP label should be added to the corresponding event's epic. If no related event epic exists, create one and add the CFP issue to it.

Labels

The Developer Advocate team workflow is supported by labels, which help determine the type of issue, its status, and other relevant information. The team's primary label is developer-advocacy. All issues the team owns, are a part of, or needs to be aware of, should be tagged with developer-advocacy. Other Labels are listed below:

General labels

CFP Labels	Description
developer-advocacy	Used to label issues that are related to the Developer Advocacy team
DevRel-Influenced	Used to label issues that are influenced by DevRel, Developer Advocacy in particular.
DA-Ops	Used to label issues related to the Developer Advocacy Ops in DevOps theme
DA-Dev	Used to label issues related to the Developer Advocacy Dev in DevOps theme
DA-k8s	Used to label issues related to the Developer Advocacy Kubernetes theme

Issue management

General Workflow Labels

Label	Use
DA-Status::ToDo	Issues that are planned for the future
DA-Status::Doing	Issues the team is currently working on
DA-Status::Done	Issues that have been completed
DA-Status::OnHold	Issues that are for whatever resume pending
DA-Status::Cancelled	Issues that have been cancelled, either by the team or the requestor in the case of a consulting request
DA-Status::FYI	Issues the team needs to be aware of but no action is required

The default flow is from ToDo -> Doing -> (OnHold) -> Done. Issues with FYI don't go through any workflow, as they are owned by another team and will go through a different workflow.

Content Workflow Labels

For content specific workflow, we use the following labels:

Label	Use
DA-Content::New	Newly created content issue, this is automatically added when the content issue template is used. The DevRel-Bot sets the general workflow status for an issue to DA-Status::ToDo when this label is encountered
DA-Content::In-Progress	Issues where content is in progress. DevRel-Bot sets the general workflow status for an issue with this label is set to DA-Status::Doing. This label is

automatically applied to existing content issues with now Content workflow labels. |

DA-Content::In-Review	Content is currently in review, general workflow status remains DA-Status::Doing
DA-Content::Awaiting-Publication	Content has been completed and queued for publication, general workflow status moves to DA-Status::OnHold
DA-Content::Done-Metrics-Pending	Content completed and published but waiting to collecting metrics, general workflow status moves to DA-Status::OnHold, once metrics collection is completed, content author is required to close the issue. DevRel-bot will change the label to DA-Content::Published
DA-Content::Published	Content has been concluded, DevRel-bot will close any issue with this label

Issue Types

These labels help identify the type of activity documented in an issue. These are useful for the team to understand where time is spent and assign appropriate DRIs.

Label	Use
DA-Type::Content	Issues for Content creation, this can be any type of content
DA-Type::Evangelist	Issues for the Evangelist program
DA-Type::Process	Issues for operational activities of the team
DA-Type::Response	Issues for Community Response activities
DA-Type::Consulting	Issues requested by other teams, more details below
DA-Type::Events	Issues for Events the team is tracking or participating in
DA-Type::Response	Issues used for Community Response activities
DA-Type::analysts	Work for analysts

Content Types

When the DA-Type::Content is selected, a DA-Type-Content label is required to identify what type of content it is.

Label
DA-Type-Content::adoption
DA-Type-Content::blog
DA-Type-Content::cicd-component
DA-Type-Content::demo
DA-Type-Content::documentation
DA-Type-Content::event
DA-Type-Content::keynote
DA-Type-Content::narrative
DA-Type-Content::product-tour
DA-Type-Content::quickstart
DA-Type-Content::talk
DA-Type-Content::tech-webinar
DA-Type-Content::tutorial

Consulting Labels

Requests from other teams for the Developer Advocates to own, participate or collaborate on activities are classified as consulting, and these requests are usually labeled based on the team requesting. These are teams in the company that the Developer Advocate team collaborate with often, here are their labels:

- DA-Consulting::Alliances
- DA-Consulting::CorpComms
- DA-Consulting::CorpEvents
- DA-Consulting::Community
- DA-Consulting::Engineering
- DA-Consulting::FieldMktg
- DA-Consulting::GrowthMktg
- DA-Consulting::Product
- DA-Consulting::Sales

These labels are required where an issue has DA-Issue-Type::External and DA-Type::Consulting, aside the team label developer-advocacy and DA-Status scoped label. If your team is not listed, you can still submit a request and it will be triaged appropriately

Issues created for Consulting count against team quarterly budgets, you can learn more in the Request budgets section below.

Region-based Labels

These labels are used to identify the region associated with an issue or activity:

Label	Use
Region-AMER	For activities related to the Americas region
Region-APAC	For activities related to the Asia-Pacific region
Region-EMEA	For activities related to Europe, Middle East, and Africa region
Region-LATAM	For activities related to Latin-America
Region-Global	For activities that are not region-specific or span multiple regions

Bot Labels

These labels are automatically assigned by the DA-Bot for triaging purposes.

Label	Use
DA-Bot::Auto	Issue is automatically created by DA-Bot and will be closed after a period, usually 2 weeks from creation
DA-Bot::Hold	Issue is currently on hold and should not be triaged by the DA-Bot except where it has been in the Hold status for too long.
DA-Bot::Skip	The DA-Bot should not perform any action on issues with this label
DA-Bot::Triage	Issue has been silent for a while and needs to be triaged
DA-Due::AddDate	An Issue needs a due date
DA-Due::N/A	Due date is not needed because the team doesn't own the issue or a due date is not applicable
DA-Due::Past	Issue is past its due date

| DA-Due::Soon | Issue is due soon |

CFP Labels

These labels are used to track workflow of the CFP submissions.

Label	Use
CFP	Identifies CFP labels, this is needed
CFP::Upcoming	Identifies CFPs that will be open soon
CFP::Open	Identifies Open CFPs
CFP::Closed	Identifies Closed CFPs
CFP::Cancelled	Identifies Cancelled CFPs
CFP::Submitted	Identifies that submissions were made for the CFP
CFP::Accepted	Identifies if any submission was accepted for a CFP
CFP-EDU	Identifies CFPs that are relevant to the Education team
CFP-OSS	Identifies CFPs that are relevant to the Open Source teams
CFP-Submitted::{0..7}	This is used to note the number of submissions that were made for metrics purposes
CFP-Accepted::{0..7}	This is used to note the number of acceptances for metrics purposes

Triage Labels

These labels are used by the DevRel bot to identify issues that need a review.

Label	Use
DA-Triage::no-due-date	Issue is missing a due date
DA-Triage::past-due-date	Issue is past its due date
DA-Triage::no-issue-type	Issue is missing a DA-Type label
DA-Triage::done-not-closed	Issue is still open while having a DA-Status::Done label
DA-Triage::onhold-too-long	Issue is has the DA-Bot::Hold label and has not been updated in the past 90 days
DA-Triage::no-update-60days	Issue has not been updated in the past 60 days, i.e. 60 days since the last comment.
DA-Triage::no-consulting-team	Issue has a DA-Type::Consulting label but missing a consulting team label
DA-Triage::cfp-due-submission	CFP issue has a CFP::Open label and its past submission due date
DA-Triage::cfp-due-notification	CFP issue has a CFP::Submitted label and its past notification due date
DA-Triage::cfp-due-presentation	CFP issue has a CFP::Accepted label and its past presentation due date

Other Labels

Label	Use
DA-Release-Evangelism	Release Evangelism issues, often auto created and closed by the DA-Bot

| DA-Issue-Type::External | Issues created by Other teams |
| DA-Issue-Type::Internal | Issues created & owned by the DevEvangelism team |

Issue Triage

The DevRel-Bot uses the GitLab Triage project to ensure appropriate & consistent usage of labels. The Bot also helps to triage issues based on label usage. Here are the current policies used by the Bot:

Rule Description	Condition	Action
Issues where DA team member is an assignee outside DA-Meta project i.e. DevRel-Influenced Assignees include members of the gitlab.com/gitlab-da group, Issues are not in the developer-advocacy-meta project and does not have a developer-advocacy label	Add developer-advocacy, DA-Bot::Skip, DevRel-Influenced label	
Issue by DA team member missing developer-advocacy label Issue author is a member of the gitlab.com/gitlab-da group and does not have a developer-advocacy label	Add developer-advocacy label	
Issue missing DA-Type label Issue does not have a DA-Type label	Add DA-Bot::Triage & DA-Triage::no-issue-type label	
Content Issue missing DA-Type-Content label Issue has a DA-Type::Content label but missing a DA-Type-Content label	Add DA-Bot::Triage & DA-Triage::no-content-type label	
Missing Due Dates Issue is missing a due date	Add DA-Bot::Triage & DA-Triage::no-due-date label	
Past Due Dates Issue is past its due date	Add DA-Bot::Triage & DA-Triage::past-due-date label	
Issues On Hold Issue has the DA-Bot::Hold label and has not been updated in the past 90 days	Add DA-Bot::Triage & DA-Triage::onhold-too-long label	
Issues Not Updated Issue has not been updated in the past 60 days, i.e. 60 days since the last comment.	Add DA-Bot::Triage & DA-Triage::no-update-60days label	
Consulting Issues Missing Consulting Team Issue has a DA-Type::Consulting label but missing a consulting team label	Add DA-Bot::Triage, DA-Bot::Hold & DA-Triage::no-consulting-team label	
Issue is done but still open Issue has a DA-Status::Done label but is still open	Add DA-Bot::Triage, DA-Bot::Hold & DA-Triage::done-not-closed label	
Close Old DA-Bot created Issues Issue is older than 2 weeks and has the DA-Bot::Auto label	Close issue	
Missing Request Type Label for DA team members Issue author is a member of the gitlab.com/gitlab-da group, has a developer-advocacy label and missing DA-Requester-Type::Internal label	Add DA-Requester-Type::Internal label	
Missing Request Type Label for non DA team members Issue author is not a member of the gitlab.com/gitlab-da group, has a developer-advocacy label and missing DA-Requester-Type::External label	Add DA-Requester-Type::External label	
CFP Issues Missing due date Issue has a CFP label but missing a due date	Add DA-Bot::Triage & DA-Triage::no-due-date label	
CFP Past Due date for submission Issue has a CFP::Open label and its past submission due date	Add DA-Bot::Triage & DA-Triage::cfp-due-submission label	
CFP Past Due date for notification Issue has a CFP::Submitted label and its past notification due date	Add DA-Bot::Triage & DA-Triage::cfp-due-notification label	
CFP Past Due date for presentation Issue has a CFP::Accepted label and its past		

presentation due date | Add DA-Bot::Triage & DA-Triage::cfp-due-presentation label |

CFP Workflow

The CFP workflow is based on the CFP labels explained above.

```
plantuml
start
: CFP, CFP::Upcoming;
: CFP, CFP::Open;
if (CFP submissions) then (yes)
    : CFP, CFP::Submitted, CFP-Submitted::{0..7};

    if (CFP is Accepted) then (yes)
        : CFP, CFP::Accepted, CFP-Accepted::{0..7};
    else (no)
        : CFP, CFP::Closed;
    endif;
elseif (No submissions) then (missed)
    : CFP, CFP::Closed;
else (cancelled)
    : CFP, CFP::Cancelled;
endif
stop
```

Example CFP workflow using quick actions:

1. Planning to submit, or when you have submitted already:
 1. Create a new CFP issue.
 2. The issue template already sets the ~"CFP" ~"CFP::Open" labels.
 3. Set the due date to the CFP submission due date.
2. Submitted 1 talk:
 1. Change the label to ~CFP-Submitted ~CFP-Submitted::1
 2. In case you have submitted multiple talks, adjust the ~CFP-Submitted:: scoped label to reflect the correct number.
 3. Update the submissions section in the issue. Comment on the issue for visibility.

```
text
/label ~CFP-Submitted ~CFP-Submitted::1
```

3. After the CFP closed, set the CFP::Closed label and update the due date to the CFP notification date listed in the issue.

```
text
/due <cfp notification date>
```

4. CFP notifications come in, and at least 1 talk was accepted.

1. Change the label to ~CFP-Accepted ~CFP-Accepted::1
2. In case you have multiple talks accepted, adjust the ~CFP-Accepted:: scoped label.
3. Comment on the issue with the talk titles for visibility.
4. Set the due date to the event date, and ensure all speakers are assigned.

text

/label ~CFP-Accepted ~CFP-Accepted::1

5. When the event is done, update the issue with feedback and results.
 1. Add talk videos to the YouTube playlist, if existing.
 2. Mark the issue as DA-Status::Done and close it.

text

/label ~DA-Status::Done

/close

If no talks were accepted, only close the issue shown above.

If the CFP closed without submission, add the CFP::Closed label. In case the CFP was planned to submit, and decisions were made otherwise, add the CFP::Cancelled label.

Request budgets

In order to prevent burnout, prioritize requests appropriately, and ensure we successfully deliver on the requests to which we commit, our team has created budgets for our internal stakeholders. These budgets encourage team members to prioritize their requests, ensuring our team addresses the highest priority needs for GitLab.

These request types fall into the following categories:

1. Event requests
1. CFP requests
1. Content requests

Ongoing activities including team-driven content creation and speaking opportunities that supports our goals and OKRs, release support, and social media monitoring, including Hacker News, do not count towards any team budgets.

Event requests

Event requests include both event attendance (ex: attending client meetings, event staffing, attending dinners or social events, monitoring events for news) and speaking engagements at events such as demos and presentations.

CFP (Call for Proposals) requests

CFP requests include asking a Developer Advocate to submit a proposal for an event or media opportunity or support a fellow team member in submitting to an open CFP.

See Requesting a Developer Advocate to submit a CFP to request a Developer Advocate to submit to a CFP for a corporate, field, or partner event.

Content requests

Content requests include blog post, podcasts, media interviews, or any request that involves engaging a Developer Advocate in a media opportunity.

Scoring requests

Request Type	New / Existing Content	Budget score
Event	New	3
Event	Existing / No content	1
CFP	New	2
CFP	Existing	1
Content	New	2
Content	Existing	1

Each team listed below is allocated 15 points per quarter for requests:

Team	Team Label
Corporate Events	DA-Consulting::CorpEvents
Corporate Communications	DA-Consulting::CorpComms
Developer Relations	DA-Consulting::Community
Growth Marketing	DA-Consulting::GrowthMktg
Field Marketing / ABM	DA-Consulting::FieldMktg
Sales / SDRs	DA-Consulting::Sales
Alliances	DA-Consulting::Alliances
Product	DA-Consulting::Product
Engineering	DA-Consulting::Engineering

If your team is not listed above, we will handle your request based on our availability.

Managing requests

This process covers any content request, Webcast, Interview, Meetup, etc. The process involves the following:

- Requestors should assign a label that identifies their team and a weight correlating with their budget score to allow us to track each team's budget consumption.
- A member of the Developer Advocate team will triage the issue and provide all necessary details and directions
- The necessary labels are applied to the issue as actions are taken on the request
- Once the request is complete, the issue is assigned back to the requestor to provide the necessary metrics generated as a result of the before it is closed.

SECTION: marketing/developer-relations/leading-organizations/index.md

Overview

GitLab's mission is to make it so everyone can contribute.

The GitLab Leading Organization program supports this mission by recognizing and incentivizing organizations and individuals who are among our most active contributors. This initiative rewards and encourages co-creation. Through this program, we seek to strengthen the open source ecosystem. Leading Organizations drive their company's innovation and employee retention through contributions while influencing GitLab's product trajectory.

Our goal is for 10% of GitLab customers to be Leading Organizations by FY25Q4. This supports our strategy to grow to 1000 contributors per month.

Qualification

Definition: A company or individual that reaches 15 merged merge requests or more over a trailing three full calendar month basis. See more about qualification Leading Organizations in the code review section.

Continued program membership for existing Leading Organizations will be reviewed quarterly.

Why

Open source is eating the world. The organizations that will stand out as leaders in the next decade are those who understand, embrace, and contribute to open source - building cultures where everyone can contribute.

Increase Hiring and Retention

Lack of developer talent is one of the biggest threats to businesses. Contributing to open source enables your company to be competitive in a tight market.

1. Highly skilled developers often participate heavily in open source projects and seek out companies with an active open source presence.

1. Public recognition builds employer brand and incentivizes individual employees.

1. Employee satisfaction increases through skill building, training, and knowledge sharing.

Reduce Cost & Improve Innovation

80% of companies expect to increase their use of enterprise open source software for emerging technologies.^[1]

1. Paying employees to contribute to open source can double the company's productivity, when compared to non-contributing competitors.^[2]

1. Open source saves time and money while increasing efficiency.^[3]

1. Consistent contributing enables organizations to replace point solutions faster while reducing technical debt.

Program Benefits

Leading Organizations receive:

- Faster time to review service level objective from GitLab team members
- A quarterly dialogue with the Contributor Success team to discuss features important to you and define next steps
- Public recognition with special Leading Organization badge visible on LinkedIn and other social channels
- Opportunities to increase employer brand visibility through blog posts on GitLab.com, contributor stories, and social media
- A shared Slack channel between your organization and GitLab to provide guidance and answer questions using direct communication lines with GitLab team members including, but not limited to, Contributor Success Engineers, Merge Request Coaches, Product Engineers, Product Managers & Developer Relations Team
- General guidance on the legal considerations of contributing to open source and open core software projects

Enrollment

To apply to join the Leading Organization program:

1. Schedule a workshop, [click here](#).
1. Once accepted into the program, you'll receive a welcome e-mail
1. Schedule an onboarding workshop

Workshops

GitLab hosts workshops with organizations interested in increasing their contributions and becoming eligible for the program. The Leading Organization team will reach out directly to organizations that either meet or are close to meeting the qualification requirement. For organizations interested in starting to contribute, please fill out this form.

Types of Workshops

1. Program Workshop - Program Overview and Benefits
 1. Audience: Business Stakeholders, GitLab: Leading Organization Team and CSM/Account Executive

<object data="/pdfs/marketing/developer-relations/leading-organizations/leading-org-workshop-handbook-page.pdf" type="application/pdf" width="100%" height="500px">
<p>Unable to display PDF file. Download it instead.</p>
</object>
2. Onboarding Workshop & Technical Deep Dive
 1. Audience: Technical Leadership, Engineers interested in contributing, GitLab: Contributor Success
 1. Content: This is typically performed in two stages:
 1. Meet with Contributor Success cohort and receive a high level technical overview of contribution. As a part of this session, an exploration of the contributing organization's

GitLab usage is performed. This is typically a hands on session, the purpose of which is to uncover potential itches that could be used as a starting point for future contribution. From this session, a number of issues are potentially surfaced for exploration in a follow-up.

1. In this session, the process of contribution is covered in a practical fashion.

Concrete steps are covered including development environments, repository forking and getting started. This is a hands on session, where the Contributor Success engineer will then proceed to explore one of the previously surfaced issues in a live code exploration. From this session, there could be an MR raised, or potentially a path unlocked to the creation of one.

Tips from GitLab on how to accelerate your organization's contribution rate

- Ensure your contributions are being counted by entering your organization's name into your GitLab profile details
- Enable employees to make their first contributions
- Join Monthly Hackathons
- Allocate dedicated time for employees to contribute back to open source
- Address legal questions about contributing with this FAQ

SECTION: [marketing/developer-relations/meetup-checklist/index.md](#)

This guide is intended to help Meetup organizers run events that their community will love. Our aim is to be as comprehensive as possible to enable everyone to become an organizer, regardless of experience. Happy planning!

Why Should You Get Involved

The reasons for getting involved in a meetup community include:

Connecting with your community - Meetups tend to bring together folks with similar interests and values. Meeting and networking with like-minded individuals helps build lasting professional relationships.

Expanding your skill set - Whether you're new to tech or looking to develop new skills, meetups are an opportunity to develop core skills needed for success - particularly communication and collaboration.

Pursuing your passion - If you're passionate about a technology or programming language, meetups are a way to grow interest in those topics, increase your influence in their community, and help advocate and champion them.

Planning an In-Person Meetup

What to Do ASAP

Find speakers - Reach out to potential speakers and confirm their availability and topics.

Find a venue - Cafes, community centers, coworking spaces, and local tech companies are common venues for meetups.

Set the date - This requires confirming availability of both venue and speaker.

Set up an event page - Create a detailed event page with all relevant information.

Apply a Code of Conduct - Ensure the safety and comfort of all participants. GitLab's Code of Conduct is a good option.

Promote the event - Share with your target audience through appropriate channels.

What to Do One Week Before Your Event

Confirm all plans - Check in with your speaker(s) and venue. Discuss presentation requirements:

- What type of laptop will they use?

- What ports are available?

- Will they need adapters?

- Does this match venue capabilities?

Recruit volunteers - Find help from your network or community for the day of the event.

Send reminders - Contact guests about the event and encourage them to help promote it. Include a simple request: "Share this with your colleagues, friends, and on social media".

What to Do the Day of Your Event

Send final reminders - Before 12:00 local time, send information including:

- Directions

Agenda
Building access requirements
Arrival time guidelines

Prepare the venue:

Post directional signs for the room and restrooms
Brief volunteers 30 minutes before start time
Test all AV equipment
Keep backup cables, adapters, and batteries
Set up refreshments and materials
Consider recording for future promotion

Run the event:

Welcome guests
Share updates
Review agenda
Thank hosts
Introduce speakers

Post-event tasks:

Clean the venue
Return equipment
Send thank-you notes to attendees
Request feedback
Promote next meetup

What to Do the Day After Your Event

Send personalized thank-you notes to:

Venue hosts
Co-organizers
Volunteers
Speakers
Other contributors

Tips to Enhance Your Meetup

Create Atmosphere:

Engage early arrivals in conversation
Make introductions between guests
Consider background music
Encourage networking

Signage Strategy:

Post welcome signs at entrance
Include directional signs
Display WiFi password
Show agenda in visible location

Speaker Appreciation:

- Provide special swag for speakers
- Consider custom stickers or memorabilia

Planning a Virtual Meetup

What to Do ASAP

Choose format - Consider various options:

- Discussion groups
- Workshops
- Presentations
- Interactive sessions

Select platform - Consider features like:

- Recording capabilities
- Livestreaming options
- Breakout rooms
- Attendee limits
- Meeting duration restrictions

Basic setup:

- Set the date
- Create event page
- Apply Code of Conduct
- Begin promotion

What to Do One Week Before Your Event

Confirm with speakers:

- Test internet connection
- Verify software installation
- Practice using platform features
- Review presentation plans

Send reminders - Include promotion requests and event details

What to Do the Day of Your Event

Pre-event preparation:

- Send morning reminders with agenda
- Test with speakers 30 minutes early
- Check AV and connections
- Record session if planned

Opening the event:

- Review Code of Conduct
- Make introductions
- Request camera usage
- Share updates

- Present agenda
- Introduce speakers

Platform guidance:

- Explain relevant features:
 - Breakout rooms
 - Chat functionality
 - Hand-raising
 - Question submission
- Share resource links early
- Encourage interaction

Post-event:

- Thank attendees
- Request feedback
- Promote next meetup

What to Do the Day After Your Event

Send thank-you messages to all contributors:

- Co-organizers
- Speakers
- Support staff

Tips for Virtual Success

Early Engagement:

- Display welcome slides
- Start conversations early
- Encourage networking

Recording:

- Utilize platform recording features
- Share recordings with community
- Use for future promotion

Community Building:

- Enable group applause moments
- Facilitate connections
- Provide speaker recognition

Security Measures for Virtual Events

Important: Never post direct meeting links on social media. Share only with registered attendees.

Zoom Security Settings

Pre-meeting setup:

- Enable passcode requirement
- Activate waiting room
- Set "Mute participants upon entry"
- Enable authentication requirements
- Add co-hosts as needed

Meeting start:

- Disable screen sharing
- Prevent participant renaming
- Control annotation settings

Managing Disruptions

Chat disruptions:

- Disable chat features
- Remove disruptive participants
- Report serious violations

Audio/Visual disruptions:

- Mute all participants
- Disable self-unmuting
- Remove problem users
- Lock meeting if necessary

SECTION: marketing/developer-relations/strategic-plans/contributor-program-unification.md

Goal

As GitLab has grown, various teams have developed several programs and initiatives to engage and recognize the wider GitLab community. These include programs like GitLab Heroes, Core team, MVPs, and Contributors. We propose combining aspects of all these programs to create a single, unified contributor program that more adequately recognizes the wider community contributions that are vital to GitLab's success.

By consolidating contributor programs as part of GitLab's Developer Relations team, we now have the opportunity to take a more consistent and strategic approach to community programs by aligning requirements, recognition, incentives, and rewards. This will help us foster a more dynamic and engaged community of GitLab contributors and evangelists. To that end, we plan to:

- Consolidate existing initiatives into a single contributor program with clear requirements and benefits
- Leverage the new achievements feature developed by the team (<https://gitlab.com/groups/gitlab-org/-/epics/9429>) to ensure community recognition (one goal is to award achievements to at least 150 contributors)
- Partner with product/engineering to drive a programmatic approach to engaging with key members of our community

We propose the following phases of work consolidating existing initiatives into a single program with clear requirements and benefits:

- Establish a consistent method for measuring activity value, including non-code contributions
- Determine a reward and incentive plan based on member's value to GitLab, including product marketing
- Increase diversity & inclusion of our Wider Community
- Address recognition gaps
- Grow public meetups
- Increase repeat contributors by promoting recent contributions instead of historical value

Current situation

Developer Relations is currently responsible for overseeing five programs, each with its own goals, means of encouraging contributors to reach those goals, and forms of recognition and rewards for achieving those goals.

Name of program	Goal	Benefits & Rewards	Handbook Page
Heroes	Evangelizing GitLab by speaking, demoing, giving talks, writing blogs, ·	Invites to GitLab events, Ultimate licenses, Swag	https://handbook.gitlab.com/handbook/marketing/developer-relations/evangelist-program/gitlab-heroes
Meetup Organizers	Support meetup organizers so that GitLab can be evangelized & GitLab Heroes have a stage to talk from.	Meetup Expenses, Swag	https://handbook.gitlab.com/handbook/marketing/developer-relations/evangelist-program/meetups
Code Contributors	Hackathon, MVP, 1st MR Merged code contributors	Support & grow the number of code contributors as described in our company strategy in order for our dual-flywheel to go faster. Swag	https://handbook.gitlab.com/handbook/marketing/developer-relations/contributor-success
Leading Organizations	The GitLab Leading Organization program supports this mission by recognizing and incentivizing organizations and individuals who are among our most active contributors. Consultant Contributor for organizations > 100K ARR, SLO on review time, Legal Advice, Certificate of achievement		https://handbook.gitlab.com/handbook/marketing/developer-relations/leading-organizations
Core Team	The mission of the core team is to act as a steward for the wider GitLab community and help GitLab live up to its mission and values.	Limited Slack Access, Developer Role in gitlab-org, Team Page listing, Ultimate license, JetBrains license, GitLab event sponsored access, Swag	https://about.gitlab.com/community/core-team

Gaps

The current configuration of programs currently offers no clear, predictable path for community members to recognize and reward non-code contributions. Such contributions may include:

- Reviewing code
- Collaborating on existing merge requests
- Evangelizing GitLab on social media
- Assisting in forum moderation
- Volunteering at events
- Triageing bugs and responding and working with the wider community (including GitLab team members)
- Reviewing issues
- Validating stale issues

Recognizing such contributions is critical for building a well-rounded and engaged community. As Klint Finley writes:

> It's also crucial to elevate and appreciate non-code contributors. This not only helps keep current contributors motivated but also helps attract new contributors.

Fostering these contributions is also important for building a more resilient and innovative project and community. As John E. Picozzi writes:

> For example a marketing person will likely have different experiences and perspectives than a developer. Every effort moves open source forward in some way-that's why non-code contribution is essential.

Simply put: without these activities, we would not have a thriving community. But currently we have no clear way to measure community activity, score this activity, and follow up on it from a single source of truth.

Another non-trivial gap is the lack of an explicit diversity and inclusion incentive within the contributor community. We should experiment and develop ideas to increase diversity in our community, attract and retain top contributors from underrepresented groups, and promote a safe and inclusive community.

Phase 1: Establish a consistent method for measuring activity value, including non-code

We aim to keep the spirit of the code contributor program, the GitLab Heroes, Meetups and others, while removing the unique processes around them and unifying those in a single program. Additionally, we are adding support for recognizing non-code contributions.

How will we measure these activities?

- Merge Request
 - Author
 - Comment
 - Git Commit
 - Review
- Issue
 - Author

- Comment

Tactics: Contests & Awards

Contests are used as a way to scale outreach and increase the amount of contributions. Awards are used to increase the perceived value of a contribution.

Award: Contributors of the month

- Replaces the MVP program
- Includes any activity and is elected in a similar fashion as the MVP is today
- Not limited to a single contributor if we decide to award more than 1 for a justified reason
- Can explicitly include what we considered as GitLab Hero activity in the past, not just code contributors

Contest: Hackathon

- Once a quarter

Contest: Backlog Cleansweep

- Focus on triaging and validating existing backlog issues

Contribution Points

1. Scope: <https://gitlab.com/gitlab-com>, <https://gitlab.com/gitlab-org>, <https://gitlab.com/gitlab-community>, <https://gitlab.com/components>

1. Value: For this iteration, a merged code contribution holds more weight than other activity, to incentivize bias for action & accelerate innovation

1. Cadence: We can assign additional credits monthly to those that we think deserve additional recognition, such as social media attention or other significant activity

- Merge request created: 20
- Commit merged: 20
- Merge request merged: 60 (30 additional bonus points if the merge request has a linked issue)
- Issue created: 5
- Issue/merge request comment: 1

Contributor Levels

Note: The points, levels & status can still change.

| Contributor Levels | Requirements | Benefits & Rewards |

| --- | --- | --- |

| Level 1 | 25 Contribution Points | Achievement on profile, 5 credits for the Contributor
Success store |

| Level 2 | 500 Contribution Points | Achievement on profile, 50 credits for the Contributor
Success store |

| Level 3 | 2500 Contribution Points | Achievement on profile, 150 credits for the Contributor
Success store |

| Level 4 | 7500+ Contribution Points | Achievement on profile, 300 credits for the Contributor Success store, 1 GitLab Ultimate License for personal use |
| Core | After approval (election process) | Achievement on profile, 300 credits for the Contributor Success store, 1 GitLab Ultimate License for personal use, Slack Access (Requires an NDA to be signed), Developer Permission for GitLab projects |

| Contributor Achievements | Requirements | Benefits & Rewards |

| --- | --- | --- |

| Contributor of the month (MVP) | Elected by GitLab Team Members | Achievement on profile, 150 credits for the Contributor Success store |

| Contributor of the quarter (MVP) | Elected by GitLab Team Members | Achievement on profile, 150 credits for the Contributor Success store |

| Hackathon 1st place | First place in the hackathon | Achievement on profile, 200 credits for the Contributor Success store |

| Hackathon 2nd place | Second place in the Hackathon | Achievement on profile, 150 credits for the Contributor Success store |

| Hackathon 3rd place | Third place in the Hackathon | Achievement on profile, 100 credits for the Contributor Success store |

| Hackathon participant | At least one Hackathon merge request merged | 50 credits for the Contributor Success store |

| Bugsmash 1st place | First place in the bugsmash | Achievement on profile, 150 credits for the Contributor Success store |

| Bugsmash 2nd place | Second place in the bugsmash | Achievement on profile, 100 credits for the Contributor Success store |

| Bugsmash participant | At least one bug smashed | 50 credits for the Contributor Success store |

Examples, according to the activities

- A community member decided to organize a meetup with other volunteers in their region and creates an issue to track this behavior.

- Each speaker gets 1 point
- Each organizer gets 1 point

- Developer that gets an MR merged

- Issue closed

- Issue is credited to all participants that have commented in that issue or were assigned to it, each participant is credited 1 point

- Merge Request merged

- Merged merge requests credited to all content participants that have commented in that issue or were assigned to it

- Merged merge requests credited to all code participants, each participant was credited 5 Contribution Points

- A community member validates a bug

- Issue labeled as ~"Issue Validation::<FYQ>"

- Validation credited to participant who commented in issue explaining what they have validated and requested label be applied

- Writing blog posts

- Issue created & closed with the reference to the blog post
- Issue is credited to all participants that have commented in that issue or were assigned to it, each participant was credited 1 point
- Merge Request merged
- Merged merge requests credited to all content participants that have commented in that issue or were assigned to it, each participant was credited 2 contribution points
- Merged merge requests credited to all code participants, each participant was credited 5 Contribution Points

Recognizing organizations that contribute

An organization's contributions are calculated as the sum of user contributions grouped by the organization configured in their GitLab user profile.

Phase 2: Rewards and incentives based on member's value to GitLab, including product marketing

When looking at our total community, we want to cheer for those that spread the word & promote our cause (formerly known as GitLab Heroes & Meetups program), in combination with contributions that happen on GitLab.com. Combining the offline & online contributions in a single program is challenging but necessary.

Similar to "MVP" or other award ceremonies, we will select wider community members on a monthly basis that went above and beyond in community participation. This could go from speakers at large events to moderators in our forum or other activities. Individuals that positively talk about & evangelize GitLab and have a large reach, should be awarded and recognized. This is comparable to the (former) GitLab heroes program. In time, we should strive for automation where possible.

The portal through which we will review this data will be Common Room. Activities reviewed could be, but are not limited to:

- Forum Activity
- Discord Activity
- Twitter Activity
- Other channels

Examples

- A user tweeted extensively about GitLab and has 2000 followers
- After a manual review, GitLab awarded this user 10 Contribution Points

Phase 3: Draft - Increase diversity and inclusion of our wider community

Due to the sensitive nature of this phase, we're looking for feedback on these ideas from multiple angles over at <https://gitlab.com/gitlab-org/community-relations/contributor-success/team-task/-/issues/248>

Phase 4: Address recognition gaps

Award: Organization of the month

- Addition to the contributor of the month
- Is granted Swag
- Includes & combines activity of all users tied to that organization.
- Highlights GitLab partners or customers that contribute to GitLab publicly

Award: "The Sid Sijbrandij award" - Yearly

- A very special title only a select few can hold. Mostly driven around being going above and beyond while upholding the values of GitLab
- Sid is presented with a shortlist of 5 contributors & what they achieved
- Winner gets a unique message from Sid, social message, swag & award statue.

Phase 5: Draft - Grow public meetups

Wider community members that hold a public event with > 20 participants or speak at an event about GitLab can request swag to be sent to their location. We will compile a package in advance and ship these in the same automated way as we ship our swag today (coupons). In the past this required manual hand holding, and was fairly slow. By streamlining this and providing 2 tiers for public gatherings, we should be able to save a considerable amount of time processing these requests.

- Tier 20 (0-20 people) - value of \$250
- Tier 40 (20 people or above) - value of \$500

This phase needs further discussion and validation if meetups are still the preferred way to grow the grassroots movement.

Phase 6: Draft - Increase repeat contributors by promoting recent contributions

As contributors start to accumulate points, we need to reward active and recent behavior instead of the historical value. On the user profile you should be able to see the current score of the person as it relates to the last 3 completed months. Another section should exist to show the total history.

Open Questions or further iterations

- Using this point system & having organizations combine their users to more easily "level-up"
 - We can start to introduce a public organizational ranking. Leaderboards of both users & organizations can be built, similar to <<https://www.drupalcontributions.org/>> or
 - We are blocked to execute on that and need to solve <https://gitlab.com/gitlab-org/gitlab/-/issues/368130> to proceed.
- Recognizing organizational support for the contributors is critical.
 - We should start to recognize partners that contribute
 - Give benefits to those partners & customers
 - Spoke with Honora Duncan and she was very excited about such a possibility.
 - We should bias those that contribute more, similar to the example over at <https://www.drupal.org/drupal-services> (contribution count is publicly displayed)
- The system could be tweaked in favor of certain projects in certain months, allowing us to shift focus on certain areas such as AI experiments, Terraform, GitLab CLI, or other ways to slice and dice our contributions automatically and hand out more or fewer rewards to these

areas.

- Do we want a 1:2 ratio between "code contributions" and "non-code contributions"?
- Given we have always biased & measured towards code contributions vs others in the past, I think it's fair to start from that point and learn.
- It is rather risky to set them as equal from the start, as we do not know what the impact of it will be.
- Code contributions are per definition positive, harder to assess from comments or other activity.

Team overview

Our purpose (Why)

The Technical Marketing team's purpose is twofold. Externally, we aim to help prospects make informed decisions when seeking solutions and comparing vendors. We showcase the technical capabilities of our product as valuable solutions to our target audiences, guiding them towards making the right choice. Internally, we also play a crucial role in helping individuals within our organization understand our product better and enable them to better position our product in the market from the technical perspective.

Our process (How)

We do this by teaching and enabling our audiences about modern software delivery methods and how it can be valuable to them, introducing them to new concepts which can help them achieve their goals, and by showcasing the capabilities of the product for the use cases which our audiences care about.

Our output (What)

We produce and deliver demos, videos, workshops, webinars, tutorials, blog posts, white papers, articles, conference presentations and lightning talks, demos to analysts, speak at events and more.

Working with the Technical Marketing Managers

What are we currently working on?

View the Developer Relations roadmap and Technical Content plan (team members should search for Google Sheet titled "Technical Content" in Google Drive) to see what the TMM team is working on.

Where to find our work

You can find the content we create in the following places:

1. Highspot - Highspot is a sales enablement tool we use to gather, categorize, and share

content within GitLab and externally to our customers. Any content that can support our customers or sales teams should be added to Highspot. More info on how we use Highspot can be found in the Highspot section of this page.

1. Content Library - this houses some of the assets our team has created in the past. This can be helpful for historical context but our most recent resources will be available in Highspot.

1. GitLab Snapshots YouTube playlist - this playlist houses technical videos created by Technical Marketing Managers.

Request support from Technical Marketing

To make a request of the Technical Marketing team please follow the content request process for the Developer Relations team.

Prioritizing work

Our work is mainly driven and prioritized by the following Marketing defined Core DevOps Solutions and can be tracked on the Solutions Go-to-market. Specifically, our deliverables contributing to this effort are sorted by priority below (subject to change).

Analyst Demos/Analyst Evaluations

Core Solutions Demos

Tech Webinars

Field Marketing Workshops

Technical Blogs

Sales Support

Technical Enablement (Internal)

Workshops

Content

Types of content we create

Demos

One form of output is demo videos to help show the value GitLab can bring to customers.

Learn about our demo creation and publishing practices

Updating demos

1. Can we update a current video with new features? \nYes we can, however. . .

1. What is the process for updating videos when new features come out? \

. . . because of the end to end data trail that flows throughout the product, it can be difficult sometimes to just add new parts into existing demos, depending on what's being shown, and so sometimes requires extensive, if not complete, redo. Because of this and the high frequency of changes we don't make updates for EVERY new feature/change. We look for when there are significant enough features/changes that affect the value we are demonstrating. We watch ourselves, but also look to PMM and PM and sales to indicate that updates should be done. \

Anyone can open an SM request for us to update a demo. If there are significant enough changes then we will put the update into the backlog and work with stakeholders to set the right priority to get it completed.

1. Can we update/create a new video to address a different persona/theme? \

Switching a demo to a different persona usually should mean a new demo/video, as changing the target persona should result in changes in the pain points and story, and hence likely the video/screenshots that are shown. It is certainly possible that the existing footage can fit a new persona's story, or that we can change the story to include multiple personas. But more likely than not, if this is easy to do to an existing demo then it is probably because it wasn't properly focused on a persona in the first place.

Presentations

Presentations are prepared and delivered at conferences, meetups, or any relevant event, often in the form of slides.

Lightning talks

Fast-paced presentations that last for a few minutes to spark new conversations and collaborations. These are commonly requested for the GitLab booth at conferences sponsored by the Corporate Events team. Where slides are used, they are often not more than 5 slides.

Blog posts

Blog posts are informative or descriptive articles that present an idea or viewpoint. Blog posts are mainly for awareness, without necessarily going into the details of how the idea presented can be achieved. Blog posts are published on the GitLab blog, third-party blogs or personal websites.

Webinars/Webcasts

Presentations delivered to an audience online, who can be customers or prospects. Webinars are typically lead by the Campaigns team. Webinars are often demonstrative in nature.

Click-through demos

Click-through demos are content that visually walks users through the features of a product. They are used to educate prospects and customers at events or self-paced.

Tutorials (self-paced or instructor-led)/ How-to's

A tutorial is a step-by-step demonstration of the process to complete a workflow or task. It

not only informs the reader but teaches by example and supplies the information needed to complete a certain task. A tutorial can be delivered interactively online or physically, in a long-form blog post, or a video.

Chat, say hi, quick question

Slack channel: dev-advocacy-team

Content requests

To request content from our team, please follow the content request process which starts by opening an issue using the Developer Relations content request template.

Content distribution

Content we create is distributed internally and externally to our stakeholders, customers, and community. We follow the content distribution process from the Developer Advocacy handbook page.

Which Technical Marketing Manager?

Each TMM is listed with their areas of primary responsibility, but all TMM's should be able to help in other areas of the product as well:

Itzik Gan-Baruch - CI, CD, Software Delivery Automation, Value Stream Analytics, WebIDE, Workspaces.

Fernando Diaz - DevSecOps, Security, Continuous Software Security Assurance, Continuous Software Compliance.

Cesar Saavedra - CD/GitOps/IaC, Software Delivery Automation, DORA, GitLab agent for Kubernetes, GitLab Flow, Feature Flags, advanced deployment techniques, Progressive Delivery, Developer Experimentation.

Technical Marketing Howto's

Creating a Demo Environment.

Examples of StoryBoarding (make a new template).

Links Technical Marketing GitLab page with actual demos.

Making better videos

With the internet's attention span, the more successful videos are short form. GitLab Marketing's has adjusted it's video strategy to focus on short form, educational videos. With that move we've begun to learn about how to make better videos. The "Making better videos" page covers our research and pointers we are going to do our best to follow.
