

to you.

1. Close the Navigation Release Issue

If you see "Please Choose a version of be-navigation from this list:", this means that there is an issue with the npm package version you specified. You should double check that your package was published and that the package.json contains the correct be-navigation version

Using Navigation in Other Repositories

To update the navigation in the repositorys that consume it, for example www.gitlab.com, or [buyer-experience](http://buyer-experience.com):

- Go to package.json, find the be-navigation line item, and increment to the latest version
- run npm install to update the package
- commit your changes so that you can do extensive testing in the review app
- Once the review app is built, check the following for bugs or strange behaviour. Remember that this component is on every page, sitewide:
 - Click all top level navigation headers. Do their menus show up properly?
 - Tab through all items in one of the navigation sections using your keyboard
 - Check that the Close, Login, and Support buttons all work as expected
 - Check that the logos in Alliance Partners look alright, and that Resources -> Get Started icons are aligned
- Scroll down to the footer and click on a regular link, and Cookie Preferences, and Edit in Web IDE to make sure they work as expected
- Go to mobile view and click through all links
- Does anything seem off? If it's breaking, hotfix it in the navigation repo and release a new version. If it's a minor bug, create a new issue to be triaged.

Major Release Navigation Checklist

You can use the MR template in the buyer experience repo titled "navigation change". It contains the following checks, for a thorough runthrough of the navigation:

Chrome

- [] Test a link in each dropdown of the desktop header (Especially login/free trial buttons)
- [] Test a link each section of the desktop footer (Especially Edit in IDE/Page source links)
- [] Test a link in each section of the mobile header
- [] Test a link in each section of the mobile footer
- [] Test search on desktop
- [] Test search on mobile
- [] Test tabbing through header links
- [] Test tabbing through footer links

Safari

- [] Test a link in each dropdown of the desktop header (Especially login/free trial buttons)
- [] Test a link each section of the desktop footer (Especially Edit in IDE/Page source links)
- [] Test a link in each section of the mobile header
- [] Test a link in each section of the mobile footer

- [] Test search on desktop
- [] Test search on mobile
- [] Test tabbing through header links
- [] Test tabbing through footer links

Firefox

- [] Test a link in each dropdown of the desktop header (Especially login/free trial buttons)
- [] Test a link each section of the desktop footer (Especially Edit in IDE/Page source links)
- [] Test a link in each section of the mobile header
- [] Test a link in each section of the mobile footer
- [] Test search on desktop
- [] Test search on mobile
- [] Test tabbing through header links
- [] Test tabbing through footer links

Note: You will have to visit pages built by that repository in order to see your navigation changes. For example, the website homepage is built in Buyer Experience, so you can visit the homepage in your review app to see your navigation changes. However the handbook is built by [www-gitlab-com](https://www.gitlab.com), so you'll need to go to a handbook page in order to test your navigation changes in the [www review app](#).

Major 5.0.0 navigation release

This version has some major updates like:

- Updated Vue library from 2.6.x to 2.7.x
- Now you can check the project bundle size by accessing <http://localhost:YOURPORTNUMBERHERE/stats.html> in local environment.
- The project bundler is now Vite instead of Webpack, which has reduced the bundle size by 90%.
- There were some minor changes that can be viewed [here](#)
- We updated the `nuxt.config.js` in the BE repository. The line `be-navigation/dist/be-navigation.css` has been changed to `be-navigation/dist/style.css`.
- When running this new version of the Navigation repo, we encountered an issue with the `dist` folder not updating its content if the user already had an older version of the repo installed. To fix this, you need to delete the `'dist'` folder and run `'yarn'` again
- From this version onward, we will no longer support the `nav` project in the `www-repo` anymore. This means that [www-gitlab-com](https://www.gitlab.com) must stay pinned to major version 4. You will need to move your page over to Buyer Experience by opening an issue if having the most up-to-date navigation is a concern for your content.
- In the Buyer Experience repository the `nav` updates will follow the current instructions.

How to update the navigation on the [www-gitlab-com](https://www.gitlab.com) repository

In order to update `www` and Buyer Experience separately we created a new main branch in the navigation repository.

- Create a new MR on the Navigation repository, forking from `legacy-navigation-main`
- Finish your updates and merge them to the `legacy-navigation-main`, or ask someone with permission to merge it for you.

- After the legacy-navigation-main is ready with all the issues merged, update its version on the package.lock file.
- Publish the version for our npm by running npm publish or ask someone to do it for you
- Open a new MR on www repository updating the navigation version on the package.lock
- Run the yarn command in order to generate the yarn.lock file, commit both the yarn.lock, and package.lock files.
- Ask for review/merge

Note

The package version for the www repo should not be major, which means it can't be anything higher than 4.x.x

Detailed local review before a nav release with yarn link

If you want to review locally changes made to the navigation:

1. Cd into the navigation folder
1. Build /dist roject locally by running yarn build.
1. Link the built package to yarn by running yarn link.
1. Cd into the repository you want use the navigation
1. Run yarn link be-navigation.
1. Install packages and start the project by running yarn && yarn dev

Changes made to the navigation should be available in the BE or Dub repo for testing extensively on your local environment.

Semantic Versioning and releasing alpha versions

When we release larger versions of the navigation (beyond simply adding a link), we recommend using the semantic versioning alpha directive

For example, if you are looking to release verion 1.1.0 of the navigation, consider releasing version 1.1.0-alpha instead. You can then bring the alpha version into the consuming repositories, such as Buyer Experience, and test it out.

If there are problems, you can make changes in the navigation repo, release those changes as 1.1.0-beta or 1.1.0-alpha.1, test them, and so on, continuing to release "unstable" alpha versions until you're happy with the release.

Once the bugs are fixed, re-release the same code to npm as version 1.1.0, and merge everything in.

Although this means re-releasing identical code as a new version to npm, it saves us from incrementing multiple minor versions in one release.

Running an A/B Test on the Navigation

We use LaunchDarkly as our AB testing tool. Because of the way the navigation is bundled and pulled into other repositories, we can't target specific items in the Navigation repo for

testing. If we want to test something in the Navigation, we need to create a duplicate of the entire navigation component, make the changes in that duplicate version, and release two entirely complete navigations. If we're running an ABC test, we need to duplicate the navigation a third time.

This adds a layer of complexity, since we need to keep two or more distinct navigations up-to-date with any changes. It also takes a fairly lightweight package and doubles it in size. Due to this, when we run navigation tests, they should be testing genuine, burning questions the team has - we should run test for which we really need the data to drive a decision (i.e. Could this change be a "just do"?)

Once the two navigation components have been released, they can be used in the Buyer Experience repository like so:

text

```
<LaunchDarkly feature-flag="some-ab-test-id">
```

```
  <template control>
```

```
    <SlpNavigation />
```

```
  </template>
```

```
  <template experiment>
```

```
    <SlpNavigationB />
```

```
  </template>
```

```
</LaunchDarkly>
```

You may need to add click events on elements in the navigation, depending on the data you're looking for. Questions about this can be directed to the digital-experience-team slack channel. We are not set up to run tests in the www-gitlab-com repository at this time.

SECTION: marketing/digital-experience/engineering/onetrust-cookie-consent.md

Why OneTrust?

The Digital Experience team uses OneTrust as a tool for cookie consent.

This implementation is on about.gitlab.com specifically, but if added to the top-level gitlab.com domain it will propagate down to all subdomains. This allows visitors to any GitLab domain to configure their cookie preferences once across all GitLab tools.

The OneTrust Tool

Within OneTrust, we have access to a variety of controls:

- Dashboards showing the rate of consent and declines in various regions
- Categorization of all cookies (ie. Functional vs Performance cookies)

- The test scripts and production scripts that should be placed in the <head> of the GitLab website
- The design of the banner and modal (button colors, logo)

To request access to the OneTrust tool, please reach out to mktgops in slack. Note that we cannot change regions or types of consent without legal review.

UX

The look of the modal and banner are currently managed within OneTrust. There are options for colors and logo, as well as how to add a button that is always present on the webpage (such as our Cookies Settings button in the about.gitlab.com footer). Alternatively, there is a default OneTrust button (blue checkmark in the bottom left corner) that can be ever-present on all pages.

Note: There are legal requirements around having the banner appear for certain regions, and having those regions' cookies set too "off" by default.

Any changes to the UX and other configurations should be published within OneTrust by going to OneTrust > Cookie Compliance > Scripts > gitlab.com > Publish. The changes could take up to 4 hours to appear. After clicking publish, we also have the option of re-triggering the cookie consent banners even if viewers have already dismissed it. Please do not make changes to the design of the banner or modal without Digital Experience UX team review.

Implementation

OneTrust is implemented with a <script> tag in the <head> of the webpage, above other scripts since consent is necessary before other scripts load and potentially set cookies.

Test Script

OneTrust provides a test script to use on staging environments:

js

```
<script type="text/javascript"
src="https://cdn.cookie law.org/consent/{{ID}}-test/OtAutoBlock.js" >
</script>
```

```
<script src="https://cdn.cookie law.org/scripttemplates/otSDKStub.js" type="text/javascript"
charset="UTF-8" data-domain-script="{{ID}}-test" >
</script>
```

```
<script type="text/javascript">
function OptanonWrapper() { }
</script>
```

{{ID}} should be replaced with the specific domain ID for GitLab (Found in OneTrust > Cookie Compliance > Scripts > gitlab.com)

Production Script

To be used on live pages in place of the Test Script above:

```
js
<script type="text/javascript" src="https://cdn.cookie law.org/consent/{{ID}}/OtAutoBlock.js" >
</script>

<script src="https://cdn.cookie law.org/scripttemplates/otSDKStub.js" type="text/javascript"
charset="UTF-8" data-domain-script="{{ID}}" >
</script>

<script type="text/javascript">
  function OptanonWrapper() { }
</script>
```

Again, {{ID}} should be replaced with the specific domain ID for GitLab (Found in OneTrust > Cookie Compliance > Scripts > gitlab.com)

Adding a button to the footer

We should always provide an option for users to re-configure their cookies. We can do this by either using OneTrust's default (floating blue checkmark button on all pages) or turn off that checkmark and add a link in the footer like so:

```
html
<button id="ot-sdk-btn" class="ot-sdk-show-settings">
  Cookie Settings
</button>
```

This button can be styled as needed with custom css.

JavaScript

The cbextras.js file handles how elements of the static site are displayed in the case that their cookies have been blocked. Currently, the elements that could have limited functionality are the following:

- YouTube (as well as video thumbnail images pulled from YouTube)
- Vimeo
- Sched
- Marketo

The way the cbextras.js file handles each of these tools can vary, but typically it will search for instances of that element on the page (such as an iframe with YouTube as the source) and if cookie consent has not been given, it will display a message telling the user they may need to allow cookies.

Note: YouTube videos on the marketing website should not use the youtube-nocookie url. The nocookie URL will place cookies once the user hits the play button, even without their consent
More info here.

Whenever a new element is added to the marketing site with the potential to invoke tracking or marketing cookies, its behaviour should be tested with all cookies declined. Marketing Operations (mktgops) should also be contacted to trigger a re-scan of the website in OneTrust, which will help detect and categorize new cookies.

SECTION: marketing/events/_index.md

Events at GitLab

This page outlines details for in-person events. For virtual event information, please visit the Virtual Events Page.

There are 3 groups within marketing who handle external events. Each group has a specific purpose. Please review each page for specific details.

- Developer Relations
- Corporate Events
- Field Marketing

Legal verbiage that should be included in all event contracts

- This language is what we should be adding to supplier agreements (when agreeing on their template):
 - "Termination for Convenience. GitLab may terminate this Agreement, any SOW or Order, or all at any time, for no reason or for any reason, upon notice to Vendor. Upon receipt of notice of such termination, Vendor shall inform GitLab of the extent to which it has completed performance as of the date of the notice, and Vendor will collect and deliver to GitLab whatever Work Product then exists, if applicable. GitLab will pay Vendor for all Work acceptably performed through the date of notice of termination, provided that GitLab will not be obligated to pay any more than the payment that would have become due had Vendor completed and GitLab had accepted the Work. GitLab will have no further payment obligation in connection with any termination. Upon termination or expiration of this Agreement, Vendor shall return or destroy any GitLab Confidential Information and provide certification thereof."
 - In the event that any supplier does not accept the termination for convenience language here, then, we can follow up with this option
 - "Neither party shall be liable to the other for delays or failures in performance resulting from causes beyond the reasonable control of that party, including, but not limited to, acts of God, labor disputes or disturbances, material shortages or rationing, pandemics, riots, acts of war, governmental regulations, communication or utility failures, or casualties ("Force Majeure").
 - In the event of a Force Majeure impact on the performance of either party, then the parties are immediately relieved of obligation to perform. From notice to supplier, GitLab is relieved of the payment obligation. As soon as is practical, but not more than sixty (60) days from GitLab's notice to supplier, GitLab shall receive from supplier a pro-rata refund of, any fees

previously paid, from the date of notice to supplier to the end of the term."

- Required details for leads shared include: first name, last name, company, title, email

Which events is GitLab already sponsoring?

- Internal tracking of in person events, please add our Events and Sponsorship Calendar to your calendar.
- Internal tracking of virtual events can be found here.
- External facing event tracker can be found at <https://about.gitlab.com/events/>

Interested in attending an event we are already sponsoring?

- If your primary interest in the event is attending sessions and networking with folks at the conference, you should likely attend said event as a training opportunity rather than as part of our official event sponsorship. Next steps for you would be to get your manager's approval to book. Send them your requested budget for travel and the event ticket to get approval. We suggest a budget of \$300-\$500 a day depending on the location. Once you have your manager's approval, you can book a pass and expense.
- If you want to attend to practice your pitch, meet customers/prospects or work the booth then it sounds like you would benefit from attending as part of our sponsorship. People who attend an event as part of a sponsorship should expect to spend at least 80% of their time at a show dedicated to specific sponsorship activities. You will be on booth duty or something similar most of the day and doing GitLab networking events in the evening. Do not expect to go off on your own to explore a new city or meet up with friends in the area. You can come early or stay late or see option above if that is what you are hoping for.

Suggesting an Event

To determine who would handle the event, please refer to our events decision tree. If it is not clear who should own an event based on the decision tree, please email events@gitlab.com.

Note: If a GitLab team member receives an inbound request for sponsorship, please direct the requestor to this section of the handbook so that person can determine the best course of action.

Please only request event support/sponsorship if your proposed event fits the following criteria:

- The event will further business aims of GitLab.
- The event has an audience of 250+ people (the exception being meet-ups (which are run by our community team) or is part of an Account Based Marketing activity.
- The event is a more than a month away.

If your event fits the criteria above and you would like support from marketing, create an issue in the appropriate marketing project.

- Developer Relations - We are unable to support inbound requests for sponsorship of community events for the remainder of FY23.
- Corporate Events - use the "Event-Request" template
- Field Marketing

Please Note: These requests will be reviewed by the appropriate regional Field Marketing Manager. Even if the event is free or low-cost, all requests must be approved by Field Marketing prior to any commitment to ensure the event or tactic aligns to the marketing strategy, meets SAO objectives and Field Marketing can properly execute to maximize GitLab's future success. - To suggest a Field Marketing event (in-person or virtual) or other tactic for review, please open an EventTacticRequest issue and follow the instructions.

Be sure you review the issue template and provide all necessary information that is asked of you in the issue.

Event Execution

Step 1 - Issue Creation

1. Corporate Marketing Event Owner creates issue using the Corporate Event Request Template in the Corporate Marketing project. Field Marketing Event Owner creates issue using the appropriate Field Marketing Event Issue in the Field Marketing project.

1. Add as much information about the event as possible. For the event to move into contracting, we will specifically need to know the cost and ROI.

Step 2 - Allocadia ID or Campaign Tag Creation

Please see this handbook page for details on how Marketing sets up Allocadia IDs and Campaign Tags.

Ancillary Events

If the overarching event includes a speaking session, workshop, dinner, and/or happy hour (anything that requires a separate SFDC campaign and list upload), please follow the steps below and abide by the SLA guide to give necessary time for work to be complete.

- SLAs for section to be filled out for an ancillary event before moving to WIP:
- 45 business days: if the ancillary event will require Marketo invitation.
- 20 business days: if the ancillary event will only need tracking and follow up email.

The purpose of creating a new issue for each ancillary event is to better facilitate the needs for each event, to clearly indicate the timelines, and to clarify the DRIs which may be different for the different events. For example, if there is a speaking session hosted by a GitLabber at a larger conference, and the speaker is planning to write the email copy after the event, the timeline and DRI would be different from the timeline and DRI for the general booth follow email.

Steps for Ancillary Events:

1. DRI to create a new issue for each ancillary event that corresponds to the main Field/Corporate Event (ex: Dinner + Date - Event Name as shown on the original issue) and assign it to event DRI.

- Note: All copy (both for the overall event and the ancillary events) is kept in a single copy doc and linked from the Event Epic

1. Corp DRI will add the related necessary execution issues as indicated by the required section in the issue. This section must be complete before the issue moves to status:wip.

- Ex: Landing Page - Dinner + Date - Event name as shown on original issue)

1. Corp DRI will add as a new line item for each ancillary event in the FY23 All-Marketing Calendar

Step 3 - Contract Completed - FMM

1. Please reference the Plan to WIP process here.

Step 3 - Contract Completed- Corporate Event DRI

1. For Corporate Event DRI, when contract has been signed the DRI will begin event epic creation process.

- Below is the tactical process DRIs take to organize actions and timelines for field and corporate events.

Step 4 (Corporate Marketing): DRI creates the event epic

- DRI creates epic for the event

- please note that this epic should only be used for in-person events Use the sponsored virtual conference epic for virtual conferences

- Naming convention: [Event Name] - [3-letter Month][date], [Year]

- DRI copy/pastes epic template below into the epic description.

- In "Issue Creation" section, DRI deletes any pieces that aren't necessary.

- The DRI will also associate any issues opened for the event to the Epic. Link the Original Field or Corporate marketing issue (some may refer to this issue as "META")

- Booth number (should be included in Epic name)

- Any other high level information that will be relevant to anyone attending

NOTE: The Epic is the main hub for all event information. All issues associated with the Event must be linked to the Epic!

Epic Template

markdown

Main Issue - Link main event issue here

Allocadia ID: enter ID

Copy for landing page and emails >> - template: <https://docs.google.com/document/d/1ek6A9fFPxHzPDTGs24oKM-5J5eQPLQ5CIGD0zu7ul/edit#heading=h.6vgpxnyb4dh1>

Alliances/Partner Marketing involved - (if yes, must designate a DRI)

Will this event include use of Marketing Development Funds (MDFs)? YES/NO

Requesting MDF Funds: <https://handbook.gitlab.com/handbook/marketing/brand-and-product-marketing/product-and-solution-marketing/analyst-relations/channel-marketing/requesting-mdf-funds>

Issues to be created

- ☐ [Program Tracking - Corp DRI creates, follow instructions in issue
- ☐ [Write Copy Issue - Corp DRI creates, assigns to Corp DRI - use this copy doc template for copy
- ☐ [Marketo Landing Page - Corp DRI creates if necessary, follow instructions in issue
- ☐ [Email Invitation Issue - for tier 1 events only - Corp DRI creates one for single invitation, assigns to Corp DRI, Lifecycle Marketing DRI, and follows instructions in issue
- ☐ [Add to blog newsletter issue - for tier 1 events only - Corp DRI creates one for tier 1 events, assigns to Blog team (@sgittlen)
- ☐ [Follow Up Email issue - Corp DRI creates, assigns to Corp DRI, Lifecycle Marketing DRI, and follows instruction in issue
- ☐ [List Clean and Upload - Corp DRI creates, follow instructions in issue
- ☐ [Optional: FM Pathfactory Asset Upload and Track Creation Issue - Corp DRI creates, assigns to Corp DRI
- ☐ Optional - use only if target list is not requested on Email Invitation Issue or if a complex list is required: [Request target audience for email send - Corp DRI creates, follow instructions on issue

Corporate Marketing: Issue best practices

- During these issue creations, DUE DATE is required to be added by issue creator.
- Issue creator associates all issues to the event epic.
- IF there are ancillary events associated with the main event, the DRI will have created a separate event issue for each ancillary event. Each ancillary event will need it's own YES/NO checklist to create related necessary issues (ex: Landing Page - Happy Hour - Event Name).

.. Tip: DRIs use this document to auto-populate timelines / SLAs for events. They will add the event as a new row when it is created with a status of Plan, add the start and end date, and

look at the resulting due dates for each action item.

Step 4- DRI Event Admin Tasks

1. Add the event to Events Cal and Events Page.

- How to add an event to the events page.

1. Start an event DRI issue and start checking off the necessary tasks. Some things to note as you go through process in template:

- Start an event specific slack channel.
- Once team member staffing has been selected invite them to the channel in addition to other Field Marketing or Alliance team members that will be involved.
- Do not link anything but the Epic in the slack channel.
- Share the planning sheet for team members to add their contact and travel information.
- Instruction everyone to book travel and lodging ASAP.
- The planning sheet is used to track all details for travel, meeting setting, booth duty, speaker list, networking events, PR, etc.

1. If the event needs a speaker, start an issue with the Speaker Request issue template.

1. If a customer speaker is required for this event, assign the Speaker Request to your regional Customer Reference lead. The Customer Reference lead will work with the Event Managers and the Sales team in identifying and engaging with customers to speak at events.

1. Landing Pages for Events (detailed instructions)

- Corporate event landing pages are generated from the events.yml - Detailed instructions
- The Corp DRI will create an issue for content to be provided working with Alliances &/or Product Marketing team on copy.
- A collaborative decision will be made to include a form on the landing page.
- Owned events will use a landing page generated by the events.yml OR a Marketo landing page. (Detailed instructions) Marketo will be used if ALL of the following criteria are met:
 - The event is owned by Field Marketing
 - The event will cost GitLab less than \$50,000 USD (or your country's equivalent)
 - Promotion of the event will be no longer than 1.5 months

1. Schedule

- Event kick off call scheduled approx two months out from event will include all people involved in planning
- Final event check in meeting including everyone attending, involved Alliance team members and Developer Advocate team who created demos to review content with team.
- Event recap will include all planners and stakeholders.

1. Copy needed

- Landing page copy
- Email invite copy - 3 to 4 weeks in advance of event - must be approved by lifecycle before email build
- Post Event Email copy - 1 to 2 weeks in advance of event

1. Social

- Start issue using the Social Request template for general social awareness posts and any social ads that need to be created.
- For complete instructions on how to obtain social support at your event, please review the social requests instructions.

1. PR

- Start issue using the announcement template in the Corporate Marketing project for any company, partner or product news that is expected to be announced/timed around the event. More details on the Request for External Announcements process can be found in the Corporate

Communications handbook here.

1. Design

1. For the latest approved booth design & messaging, please see here.

1. Open issue in the Corporate Marketing project for booth design. Assign to Design team and provide booth spec and due date. Provide as much notice as possible.

1. For any content or major layout changes, tag Product and Solution Marketing and Design in the related booth design issue created in the Corporate Marketing project.

1. Digital

- Coordinate all digital marketing requests with the digital marketing team. See Requesting Digital Marketing Promotions for more info.

1. For Corporate events - Meeting Setting

1. All leads gathered through meeting setting must be tracked in their own campaign which will be set up by our Marketo agency and associated to the main event campaign.

1. We generally provide a small give (under \$50 USD or country equivalent) for anyone who takes a meeting with us.

- NOTE: We share these prep documents with the client. The document is intended to provide everyone attending the meeting with background information on the prospect &/or customer. The document should also include any objectives or topics to cover in the meeting.

1. All on-site meetings must have a meeting prep doc, which will be linked in the master planning sheet.

- The event spreadsheet will be locked 24 hours before the event starts.

- Any changes need to be submitted by making a Comment on the spreadsheet and assigning it to the Field Marketing DRI.

1. Most Corporate events will have an onsite meeting setting initiative tied to the event goals.

1. If any Executives are attending, all meetings scheduled for them will be coordinated through the designated EA for that event.

1. Meetings are tracked on the master event spreadsheet.

1. Demos, booth decks and documentation

- Product Marketing helps make all displayed collateral at events.

- The standard demos should be preloaded on the event iPads.

- If you need something specific for an event, start an issue in the Product Marketing project.

1. Swag

- Decide appropriate giveaway for the event and audience.

- Coordinate ordering with one of the preferred swag vendors.

- Order extra storage at the event if all swag will not fit within the booth.

1. Leads and Campaign Setup

- Field Marketing DRI is responsible for pulling, cleaning and sharing the lead list with MktgOps within 24 hours of event close or as soon as received by event coordinators.

- If the event had multiple parts (booth, happy hour, meetings, etc) each will have its own Salesforce campaign and Member status progressions.

- Use template to standardize the data following the list import guidelines.

Securing a hotel room block

Should the event organizer offer a hotel room block option at a discounted rate and the GitLab event DRI would like to secure this room block, there are two options you can take to secure the contract:

1. An actual contract is offered and GitLab will put down a corporate card to secure the room block, but the individuals checking in will ultimately pay for the hotel (and then expense the hotel back to GitLab) - the event DRI should open a virtual card request via Coupa.

1. A full contract is not offered, but a request for a credit card authorization is requested for GitLab to secure a room block, but the individuals checking in will ultimately pay for the hotel (and then expense the hotel back to GitLab) - the event DRI should open a request in the legal project outlining the information that is being requested. Please include the discounted room rate, cut-off date, and the total amount anticipated in the unlikely event the full amount would be charged to the credit card if the event were to be cancelled.

Ancillary Events

If the overarching event includes a speaking session, workshop, dinner, and/or happy hour (anything that requires a separate SFDC campaign and list upload), please follow the steps below and abide by the SLA guide to give necessary time for work to be complete.

- SLAs for section to be filled out for an ancillary event before moving to WIP:

- 45 business days: if the ancillary event will require Marketo invitation.
- 20 business days: if the ancillary event will only need tracking and follow up email.

The purpose of creating a new issue for each ancillary event is to better facilitate the needs for each event, to clearly indicate the timelines, and to clarify the DRIs which may be different for the different events. For example, if there is a speaking session hosted by a GitLabber at a larger conference, and the speaker is planning to write the email copy after the event, the timeline and DRI would be different from the timeline and DRI for the general booth follow email.

Steps for Ancillary Events:

1. DRI to create a new issue for each ancillary event that corresponds to the main Field/Corporate Event (ex: Dinner + Date - Event Name as shown on the original issue) and assign it to event DRI.

- Note: All copy (both for the overall event and the ancillary events) is kept in a single copy doc and linked from the Event Epic

1. Corp DRI will add the related necessary execution issues as indicated by the YES/NO section in the issue. This section must be complete before the issue moves to status:wip.

- Ex: Landing Page - Dinner + Date - Event name as shown on original issue)

1. Corp DRI will add as a new line item for each ancillary event in the FY23 All-Marketing Calendar

Timelines for Corporate Marketing

In this timeline, BD = Business Days, and incorporates US public holidays and T = start date of the event.

- T-70 BD: Final landing page copy and invitation 1 copy due by Corp Mktg
- T-65 BD: Final landing Page launched
- T-30 BD: Invitation 1 is sent
- T-20 BD: Final copy for invitation 2 due by Corp Mktg

- T-15 BD: Invitation 2 is sent
- T-10 BD: (Optional) Final copy for invitation 3 due by Corp Mktg
- T-5 BD: (Optional) Invitation 3 is sent
- T-5 BD: Final copy for reminder email due by Corp Mktg
- T-3 BD: Final copy for follow up emails due by Corp Mktg
- T-1 Day: Reminder Email is sent Note - not business day
- T+2 BD: Follow up email(s) are sent

Changes to Offline Events dates

Sometimes, it becomes necessary to change the date of an offline event. Once the FMM has identified that the date will change, the FMM will:

- Update the event date and the campaign tag on the main event issue and in the Budget Document.
- In the main event issue, ping the GL Accountant (@GGGONZALEZ) with the old campaign tag to be removed from NetSuite and the new campaign tag to be added in NetSuite.

If the change in the date is related to COVID-19, the FMM will:

- Remove the line item from your region tab in the budget document.
- Complete the COVID-19 Cancellations Tracker - FM Only - ONLY if we have made a payment against the cancelled event, as this is where Finance and Accounting will go to track the refunds we may need to account for.

If the date changes after the Corp DRI set up the issues, epic, and tracking for the event, the Corp DRI must make the following updates:

- No Registrations Received: If no registrations have been processed for the event (even if members have been added to the campaign as "Marketing Invited"):
 - SFDC: Change the ISO date in the SFDC Campaign name to the new date.
 - Marketo: Change the ISO date in the Marketo Program to the new date. Update the tokens and confirm landing pages, confirmation emails and invites are updated.
 - GitLab: Update event date in epic and issues. Update due dates and email deployment dates.
- Registrations Received: If registrations have been processed for the event:
 - SFDC: Change the ISO date in the SFDC Campaign name to the new date.
 - Marketo: Change the ISO date in the Marketo Program to the new date. Update the tokens and confirm landing pages, confirmation emails and invites are updated.
 - GitLab: Update event date in epic and issues. Update due dates and email deployment dates.

Offline Events turned Digital

When Owned Offline Events turn to Virtual Owned events

FMM determines format of this virtual event from documented options. FMM lets interested teams know that the event has switched to digital, the existing landing page is no longer accepting registrations and sales-nominated flow has been stopped (if applicable).

- If this is a self-service ZOOM Meeting with promotion:
 - FMM: create the new epic, issues needed (e.g. list upload) and ZOOM meeting.

- FMM: provide new campaign tag (if applicable).
- FMC: create new marketo program under Virtual Events cloning YYYYMMDDHostNameTopic (External Webcast Template) template and save to the GitLab Webcasts folder. If you are using the same campaign tag as the original live event, add "OLD" to the beginning of the existing live event Marketo program as Marketo will not allow two programs with the same name.
- FMC: create a new folder in the GitLab Webcasts folder for the virtual event.
- FMC: create new SF campaign by syncing new marketo program to SFDC.
- FMC: update links in Epic to new SFDC and Marketo links. Update the utm if applicable.
- FMC: follow standard processes with tokens, program activation, etc.
- FMM: set up Zoom Meeting and provide Zoom link and ID to FMC.
- If this is a GitLab Hosted ZOOM Webcast:
 - FMM: provide new campaign tag (if applicable).
 - FMC: If Epic wasn't created, create the epic with the Virtual Event Epic code. If Epic was created, change it to the Virtual Event Epic Code.
 - FMC: Create new marketo program under Virtual Events cloning YYYYMMDDWebcastTopicRegion (Single time slot) or YYYYMMDDWebcastTopicRegion (Multiple Time Slot) template and save to the GitLab Webcasts folder. If you are using the same campaign tag as the original live event, add "OLD" to the beginning of the existing live event Marketo program as Marketo will not allow two programs with the same name.
 - FMC: create a new folder in the GitLab Webcasts folder for the virtual event.
 - FMC: create new SF campaign by syncing new marketo program to SFDC.
 - FMC: update links in Epic to new SFDC and Marketo links. Update the utm if applicable.
 - FMC: follow standard processes with tokens, program activation, etc.
 - FMC: set up ZOOM Webcast
- Existing event Marketo program FMC tasks (applies to both types):
 - Move the existing event marketo program under the new folder you have created and add OLD at the beginning of the title.
 - Deactivate the Registration and Interesting Moments smart campaigns.
 - Deactivate any invitations (ex: sales-nominated) smart campaigns that are live and stop all promotions.
 - If you want to create a new landing page for the virtual event and the initial landing page has already been promoted:
 - Add a note about how the virtual event is collecting registrations. Suggestion: We've gone virtual! Please register the virtual event page [link to new page] to register for this event.
 - Remove the form
 - If you want to keep the same landing page URL as the offline event:
 - Delete the landing page from the newly created program
 - Move the old landing page into the new program
 - Update the page copy with virtual event details
 - If the landing page has not been promoted: Unapprove the landing page.
 - When the new campaign is completely set up (landing page, Zoom, etc), use the Reminder Email smart campaign from the original event program to send a note to those that have already registered with directions about how to re-register for the virtual event.
- Salesforce FMC tasks (applies to both types):
 - Change the existing SF campaign to status: aborted

When Offline Field Events & Conferences turn to Virtual

These will be Virtual Sponsorships with booths (not just a sponsored webcast).

- FMC: if Epic wasn't created, create the epic with the Virtual Event Epic code. If Epic was created, change it to the Virtual Event Epic Code.
- FMM/CMM: let interested teams know that the event has switched to digital and sales-nominated flow has been stopped (if applicable).
- FMC: Add [Virtual] to the beginning of the epic and all supporting issues.
- FMM/CMM: Add a note to the epic and the main issue: This event has changed from live to virtual. Original date [2020-xx-xx], New Date: [2020-xx-xx], This [epic/issue] reflects information for the virtual event. Date can be left off if it is the same.
- FMM/CMM: provide new campaign tag (if applicable).
- FMC: Create new marketo program under Virtual Events cloning YYYYMMDDVendorVirtualConfName (Virtual Conference Template) template and save to the Virtual Sponsorships folder. If you are using the same campaign tag as the live event, add "OLD" to the beginning of the existing Marketo program as Marketo will not allow two programs with the same name.
- FMC: create a new folder in the Virtual Sponsorships folder for the virtual event.
- FMC: create new SF campaign by syncing new marketo program to SFDC.
- FMC: update links in Epic to new SFDC and Marketo links. Update the utm if applicable.
- FMC: follow standard processes with tokens, program activation, etc.
- FMC: For conferences: update event YML with event's virtual details (change location to virtual, update copy dates if needed)
- Existing event Marketo program FMC tasks:
 - Move the existing event marketo program under the new folder you have created and add OLD at the beginning of the title. If the original Marketo program wasn't being used yet (no invites, no members, only linked to SFDC) it can also be deleted or moved to an archived folder.
 - Deactivate the Interesting Moments smart campaign.
 - Deactivate any invitations (ex: sales-nominated) smart campaigns that are live and stop all promotions.
- Salesforce FMC tasks (applies to both types):
 - Change the existing SF campaign to status: aborted

Cancellation of Offline Events

Once the DRI has identified that an event is cancelled, the FMM will:

- Update the event issue with [Cancelled] in the event title.
- Tag the relevant internal contacts for the event in a comment to notify them that the date has changed.
- Close the main Field/Corporate Marketing event issue.
- Remove the calendar invite from the internal Sponsorships and Events calendar

The FMC will:

- Remove the event from our external facing events page - about.gitlab.com

If an offline event is cancelled after the set up of the issues, epic, and tracking for the event, the DRI will:

- Field Event and Conference:
 - SFDC: Change the event campaign status to Aborted. No other changes.
 - Marketo: No changes

- GitLab: Comment in related issues and slack channel that the event was cancelled and close the issues. Update the epic with [Cancelled] in the event title.
- Owned Event:
 - SFDC: Change the event campaign status to Aborted. No other changes.
 - Marketo: Update landing page to reflect the cancellation and remove the form. Create a cancellation email for registered attendees.
 - GitLab: Comment in related issues and slack channel that the event was cancelled and close the issues. Update the epic with [Cancelled] in the event title. Work with the FMM/ DRI to send a cancellation notice to registered attendees.

Event Types

For a full breakdown of our various types of events, please review this list.

Important Planning Note

The above planning list is not exhaustive - see planning issue template in field marketing project for most up to date list of tasks.

How We Decide Who Attends Which Events?

- The event DRI determines how many staffers we need at the event and is responsible for ensuring the staffers are all set to attend the event.
- If the event is more enterprise-focused we try to send more marketing/sales. Regional Sales Managers in partnership with FM select team members based on who has the most potential contacts in the area or going to an event.
- If the event is more user-focused we will lean towards sending more technical people to staff and fewer sales.
- Suggestion for staffing: Field Marketing will evaluate GitLab team members who live in the area who might be a good fit for the audience.
- We lean towards those who might be thought leaders, specialists, or more social for a specific show - i.e. if we are sponsoring an AWS show, we would like for a GitLab + AWS expert to staff the event.
- We aim to bring minimal team members to keep costs and disruption to normal workflow low. We take into account what value everyone will provide as well as coverage balance. Please check with the event DRI if you personally would like to attend or if you would like to suggest someone participate in an event.
- Once you have agreed to attend an event, you are not able to back out unless there is a customer facing obligation you need to tend to. We have this in place to avoid unnecessary rework on the event DRI's behalf.
- A lot of times a technical sales resource needs to also be assigned to attend an event. In order to do so, please review the SA handbook for instructions on how to secure one of our awesome SA's. Tag the issue with technical-staff::required and once staffing attained change to label technical-staff::complete.
- All those attending will need their manager's approval.
- If you have been approved by the DRI and your manager to help staff an event, all your travel will be included during the time for the event/ expo days. You need to be onsite and ready to help out as soon as the first expo hall shift opens up and you may book travel any time after the expo hall closes. We will cover the night of lodging before the expo hall opens through to the night it closes. Any additional nights will need to be covered by the individual.

- Event staffing list will close 2 weeks for field events or 3 weeks for corporate events before commencement of the event.
- If you are not officially involved in the event as part of the sponsorship, we would still like to know you will be attending so we can include you in any activities surrounding the event. Please comment in the event specific slack channel notifying the Field or Corporate Marketing team of your plans to attend after obtaining approval from your manager. Please add a comment in the Event epic as well.

Requesting Technical Staffing

Some events require technical staffing (Solutions Architects and/or others from the Customer Success team). To request technical staffing, please follow this process.

COVID-19 Event Outreach

It is important that we are communicating with our customers and prospects that we are monitoring COVID-19. Please include the following in all email outreach for hosted events.

- GitLab is taking extra precautions to ensure the safety of our attendees including adopting a no-handshake policy at the event and is asking attendees to practice respiratory hygiene (wash hands often and cough into your elbow instead of your hand).
- For the safety of everyone, we ask that anyone who is feeling ill skips the event and substitutes a colleague in their place. We apologize to those attendees whom this affects and hope you understand that we are enacting measures we feel are necessary to ensure the safety of all attendees. Thank you in advance for taking these precautions and we look forward to welcoming you to our event.

Event Outreach

It is important that we are communicating with our customers and prospects when we are attending an event. This is done through a targeted email sent through Marketo & also through BDR & AE/SAE outreach.

- Most of the time we do not receive a pre event attendee list, but if we do, that will be shared in the issue.
- We recommend BDRs & AE/SAEs contact customers and prospects before event using talking points provided by content DRI with the goal of setting up meetings/ demos at the event. Invite them to anything specific we have happening at or around event.
- If there is not an attendee list process is as follows:
 - Target speakers for outreach.
 - Utilize previous years attendee list that can be found in SFDC. That person may not be attending, but their colleague might be. Ask for intros.
 - Follow event hashtags to see who will be attending.
 - Join local meetup and pre event events (this works well for large events like AWS).
 - Join LinkedIn Groups and slack channels dedicated to event.
 - Download event app and engage with attendees via app.
 - You can search for relevant talks and see who has registered for talks that might apply to potential customers.

Email alias usages for outreach

We use several email aliases for pre and post event outreach. Below are guidelines as to which one should be used based on the event

- Corporate events (all communications): info@
- Field marketing events (invitations and follow up emails): <amer,emea,apac,uspubsec>field@gitlab.com
- Field marketing event day before reminders: <amer,emea,apac,uspubsec>field@gitlab.com

Pre-Event Registration Tracking & Reporting

Dietary Restrictions

During the registration process, it is important to track any potential dietary concerns. Please note that there is no longer a separate field in the registration form for dietary restrictions and this information is not tracked in SFDC. The FMM will need to include a note on the LP copy doc, instructing registrants to email with any specific dietary restrictions. It is up to the FMM if they would like to utilize their personal @gitlab.com email address & cc regional@ alias.

Example Verbiage for LP:

At GitLab we aim to make our events accessible to everyone, regardless of disability or special needs. We vet all of our venues for accessibility. If you have a disability, special needs, or specific dietary restrictions, please reach out to us by responding to this email to let us know and we will follow up with you pre-event. This information will be kept private and will be distributed only to the individuals who need it to complete your accommodation request.

Registrant Communication

If the FM DRI for an event needs to reach out to someone prior to the event, they will do so leveraging their personal @gitlab.com email address & cc regional@ alias.

Sales Nominated process

The sales nominated process allows for records to be added to the campaign in order for the record to receive an invite to the event

- SAEs/SDRs should add members to campaign to be invited to event, using the appropriate Campaign Status:

- Sales Invited = You have personally invited the person to the event.
- Sales Nominated = Marketing will invite the person on your behalf. They will receive invitation email pre-event plus any confirmations/reminders if they register. Video training on how add is also available.
- Any other Status = Do not assign any other status to records. The campaign members will be updated by FMC/Marketing Ops or automated through registration.

Employee Booth Guidelines

- Perfect your Pitch
- Most people have two ears and one mouth. Successful pitching is two parts listening to one

part talking. Be engaged and interested in folks that visit. Be genuinely curious about their story. Understand them first before you start telling them about us.

- A great way to start is to offer a welcome and say,
 1. "Hi, my name is [yourname]"
 1. "Hi I'm [theirname]"
 1. "[theirname, are you familiar with GitLab?"
 1. "Yes"
 1. "Thanks for using us, I'm curious which aspect of the DevOps platform you're using?"
 1. "No" - "Great, in a nutshell we <140 character description> - for example, what company do you work for?"
 1. "Company X"
 1. And what's your role at company x?
 1. "Title X"
 1. Tailor your pitch to their specific experience. Ask about what tools they are using today, what they like or dislike about those tools.
- Working at the booth is a great place to try out different ways of explaining technology and trying out different value propositions to see what resonates the most.
- Know some stock answers
- You can ask them which talk they've heard so far has been the most interesting.
- Close the deal
 - Figure out what the next step for this person is. Are they a decision maker at a large org?
 - If a conversation is running long, get their info and schedule a time to chat or follow up at a later time outside of the booth. The goal of the booth is to make initial contact and connections.
- Give a personal follow up
- Stand at the front of booth facing the crowd.
 - Don't make folks walk into the booth and seek you out. Stand out at the front. Make eye contact and smile at folks walking by. If they stop or pause you can ask them, "Are you familiar with GitLab?"
- Hangout outside the booth.
 - Too many GitLab team-members in the booth discourages other folks from coming by. The booth can be a great place to meet up, but don't hang out there. Move the conversation to a near by lounge or social area.
- When you are at the booth keep conversation with your coworkers to a minimum.
- When you are at the booth focus on serving the attendees.
- Do not do normal daily work in the booth - the booth is not a place for taking calls, or responding to emails. When you are at the booth you are on booth duty and that is it.
- Be prepared to schedule follow up meetings
 - To make it easier for our prospects and customers to continue conversation initiated at the event (considering all of the vendor follow-ups and the need to catch up on missed days of productivity following events), please have your computer handy (in a safe and secure location within the booth) to schedule Initial Qualifying Meetings when appropriate.
 - Some example verbiage to facilitate this would be: "Let's schedule some time to follow up on your conversation with us today in a setting that is a little less hectic so we can answer any questions that you may have"
- Keep an abundant tidy stash of swag out
 - During slow times, restock swag and tidy up booth.
- Keep the booth clean.
 - The booth should be clean and organized at all times.

- Avoid eating meals in booth, please keep lids on beverages and out of sight.
- If we have the bandwidth or the traffic is slow do not be afraid to walk around to other booths and talk to people. Make friends we could partner with, create interesting content with, or just have friendly beers.
- If press comes to the event feel free to put them in contact with our press team.
- Engage the competition.
 - Be friendly and polite to competitors to come by the booth.
- Don't forget your business cards.

Scanning Best Practices

- Be an active but polite Badge Scanner
 1. Don't reach for the badge without first asking if you can scan someone's badge and don't lead a conversation with "May I scan you." Ask folks politely, "Would you appreciate a follow up email?" or "Mind if I scan your badge?" Many folks will say, "yes." If they say, "Not really." You can say, "Great, we don't want to clutter up your inbox. You can always go online to about.gitlab.com if you'd like to check back in with us."
 1. Trade scans for all swag if the attendee consents. If we have the space and staff, someone should be in charge of distributing and organizing swag, and scanning folks who come by for swag.
- Take good notes:
 1. Your initials (This way the email can be more personalized to say, "We saw you chatted with [name] in the booth.") Add your initials + "follow up" if you personally can send them an email within a week of the conference.
 1. The tech stack (what tools they are using)
 1. Any specifics needed in the follow up (schedule a call, send docs for X, interested in Y, etc.)

Suggested Attire

- Wear at least one piece of branded GitLab clothing. If you prefer to wear something dressier than the GitLab branded items available that is also acceptable. Feel free to wear our sticker on your clothing.
- GitLab branded lanyard, to be provided to you by the event DRI.
- If the conference is business casual try some nice jeans (no holes) or dress pants.
- Clean, closed-toed shoes please.
- A smile.

Booth Set Up

- Bring:
 - Generic business cards
 - Stickers + any other swag
 - Events laptop (for slideshow) + HDMI cable + charger + dongles
 - Backup power banks
 - Mints & hand sanitizer
 - One pagers + GitLab cheat sheets - don't bring too much paper though.
- An in person pre-event booth meeting is to be scheduled by event DRI the day before or morning of the event and is to be held within the booth. All event attendees should be in

attendance. The event DRI should have this added as a calendar invite on the attendees calendar and should include the event venue, address, booth number, and link to the event issue within the calendar invite.

Booth presentation material

- Standard pitch deck
- What is GitLab Video with captions
- Generic Marketing Reel
- Video asset with demo
- Visual of DevOps stages - please confirm in the product-marketing slack room if this is up to date before using
- What is GitLab?
- GitLab Infomercial Video
- Ebook - Scaled-CI-CD
- Ebook - Remote Playbook
- Whitepaper - Reduce Cycle Time to Deliver Value
- The Forrester Wave - Cloud-Native Continuous Integration Tools
- Ebook - 2020 DevSecOps Report
- Video - Making the case for CI/CD in your organization
- Use Case - NVIDIA - How GitLab Geo supports NVIDIA's innovation
- Solution Brief - GitLab on AWS
- Solution Brief - GitLab on GCP
- A Seismic Shift in Application Security whitepaper
- DevSecOps Solutions Page
- GitLab · A single application for your entire software development lifecycle

- Hardened Containers: The Right Application Platform Can Help DoD Develop Its DevSecOps Culture
- VPAT Template
- What is GitLab? Speed. Efficiency. Trust
- A Beginner's Guide to GitOps

Quick Booth quality check

- Check on cleanliness of booth
 - Monitor(s) there and in right place
 - Printed materials in good supply and in right places
 - Are badge scanners and other rental items accounted for?
 - Swag is orderly
 - Remove any personal devices on booth surfaces and securely store them
 - Remove any open containers or food waste
 - Do we have too many or not enough people staffing?
 - Post a picture of the booth to your social profiles

Day of Booth Staffing

- Ideally booth shifts will be around 3 hours or less.
- A calendar invite is to be added to all booth staff's calendar by the event DRI. The calendar invite should include: the name of the event venue, address of the venue, booth number, and link to the event issue within the calendar invite
- Staff more people during peak traffic hours.
- Avoid shift changes during peak hours.
- Aim to staff the booth with individuals with a variety of expertise and backgrounds- ideally technical and non-technical people from various departments should be paired.
- Send out invites on the Events & Sponsorship calendar to booth staff with the following information:
 - Time and date of event, booth, and shift
 - Any instructions on using or locating lead scanner
 - Any relevant event set up or clean up

Post Event

- Add event debrief to event issue. The debrief should include the following if applicable:
 - Was the event valuable?
 - Would you go again? If yes, what would you do differently to improve on current experience?
 - Did we get good leads/contacts? What was the audience profile like?
 - Best questions asked and conversations. Trends in questions asked.
 - Was our sponsorship/involvement successful? Did we go in at the proper sponsorship level?
 - How was the booth set up?
 - How was the booth staffing?
 - Did the booth get enough traffic?
 - Booth location and size
 - How did our swag go over?
 - Did we have enough/too much?
 - Contests
 - Did the contest(s) effectively build our brand and connecting with our target audience?

Lead list

1. List received by event DRI from event organizers
1. Event DRI reviews and cleans up list following the guidelines for list imports
1. We now use an automated list import process, described on the link above and in the list clean and upload issue.

- Marketo will match based on Email Address to existing records regardless if LEAD or CONTACT object.

1. Marketo will sync to SFDC automatically. Traction assigns records based on Territory ownership.

1. Event DRI will notify Marketing Ops in the email follow-up issue that the list has been loaded.

1. The import bot will update the eventlistupload channel upon list upload.

1. Event DRI follow up on leads to make sure expected followup completed and lead status changed.

Common lead questions:

- Record ownership will be assigned using the Global Ownership rules
- All followup needs to be tracked in SFDC
- List upload needs to be done before follow up is done so we can ensure proper order of operations & attribution is given correctly
- Record Owner and/or SDR doing follow up need to be sure to update the Contact Status on the record as follow up is done.
- Campaign type & meaning of Campaign Member status can be found in the Marketing Ops handbook

Onsite registration form & landing page

For FIELD events that don't have badge scanners onsite, the FMM event owner can request an onsite registration form and landing page which can be used to collect names at the booth. The landing page (including the form) can be accessed by a unique URL via iPad, mobile phone or laptop and should only be used by staff at the booth and deactivated post-event by Marketing Ops.

How to create an onsite registration form

- FMM to request the creation of the onsite registration form & landing page via the Marketo Landing Page & Automation Issue - FMC creates, assigns FMM (issue will be triaged) This form can be utilised ONLY when there are no badge scanners available onsite.
- FMC to navigate to the Marketo program for the event and find No Lead Scanner - Onsite Reg landing page under assets. Update the URL to be relevant to the event.
- FMC to navigate to the Marketo program for 03 No Lead Scanner - Onsite Event Reg Campaign and check that Smartlist and Flow are set up correctly for the relevant landing page. FMC then to ACTIVATE this campaign.

How to use the onsite registration form

- FMM to share the landing page URL with booth staff (and with booth staff only).
- GitLab reps at the booth can use the landing page & form to add the details of booth visitors that they had a conversation with.
- Depending on whether GitLab reps added or didn't add notes on the notes field of the form, then the program member enters the Salesforce campaign as indicated below:
 - - If the Notes field has notes > campaign status = Follow Up Requested > lead status = MQL
 - - If the Notes field is empty > campaign status = Visited Booth > lead status = Inquiry
- Booth staff will have 24hrs post-event to go to the event salesforce campaign and add any further notes they have about a campaign member.

- Once the event has ended, FMC should notify Marketing Ops via the Onsite registration form & Landing Page issue to de-activate the form and landing page.

Marketo Check-in App

For OWNED events, the Marketo program is pushed to the Marketo Check-in app that allows the FMM team to be self-sufficient when it comes to updating an event registration list.

User Experience Flow (Registration & Check-In) With System Actions

- Individual registers for the event via landing page (Marketo form)
- [system] individual added to the Marketo program and Salesforce campaign as Registered
- Individual attends the event and FMM checks them in using the app
- [system] when FMM syncs the data to Marketo, individual is flipped from Registered to Attended
- [system] automation is set to automatically flip anyone still in Registered status to be No Show 12 hours after the event

.. Important! FMM must check-in all individuals and sync to Marketo within 12 hours of the start time of the event so that automation can flip the correct records to No Show.

How to activate the Marketo Check-in App

1. FMC to navigate to the Marketo program event
1. At the top of the page, change View: Summary to View: Schedule
1. You should see the event on the right side of the calendar
 - ^ Events are displayed initially based on the program created date, not the event date
1. Double click your event, u
