

pdate date,end, and event times (remember all times are based on the FMC's timezone setting in Marketo)

1. Click the slide bar to change event from tentative to confirmed. Slide bar will change from gray to orange when done correctly.

The event will not be visible in the Marketo Check-in app until 7 days prior to the event

Using App for Event Check-in

If FMM is unsure they will have internet at venue, it is very important to fully sync program while connected to the internet before event.

1. Sign into the Marketo app.

1. Locate the event from the list displayed, press the blue "Sync" button that appears across the top menu bar.

- This will ensure all late registrations are fully synced to the app

1. All program members with Status = Registered will show in the list on the left side of the app.

1. As people arrive, search using the search bar or scroll alphabetically by Last Name through the list.

- You could also have the iPad available for people to check-in themselves

1. Select person to check-in & press the large blue button that says "Check-in"

- If the person's contact details need to be updated click "edit" (top right) and make changes. - When the program re-syncs the contact details will be updated as well

1. To ADD a person to the event at the door, click the "person+" button in the bottom left corner of the app.

- Blank form will appear

- All fields are required except Phone - Click green "Done" in top right corner - Complete checkin by clicking blue "Check-in" button

1. As people are checked in there will be a red numeric icon over the "Sync" button, this will remain until the app is synced to Marketo

1. Once event is over, FMM presses blue "Sync" button to send all the records to Marketo

1. The Marketo program will immediately be updated with Campaign Member Status = Attended and the sync to SFDC will begin

1. Notify the Ops team via List clean & upload issue to verify status of records & request the remaining Registered -> No Show status

1. Ops will verify Bizible attribution has been applied correctly.

If you need support, use the mktgops slack channel.

Swag for Events

All information on swag can be found in the swag process handbook. For event-related swag and tracking purposes, we utilize the tags swagcorporate and swagcommunity.

For all details regarding Field Marketing Swag and Event Assets, please visit the Field Marketing page [here](#).

Specifics for Developer Relations

GitLab's Developer Relations team reviews and manages our community events (typically an event with less than 250 attendees that is targetting end users of GitLab). The Developer Relations handbook has additional information on the events the Developer Relations team will support.

Specifics for Corporate Events

- See Corporate Events Handbook

Specifics for Field Marketing Events

- For events where a field marketing representative cannot be present, the FMM DRI will assign an onsite lead. The DRI will be responsible for coordinating with this person and providing them with any info they will need to help run the event in their absence. This person will be the venue point of contact as well as responsible for set up and tear down.
- FOR EMEA: We must ensure we are gathering GDPR compliant leads - Lead devices scanning follow up needs to be in event T&C. If GDPR is not in the T&C, we are not allowed to follow up on the leads. Scanning a lead is not automatically GDPR compliant if visitors have not agreed to it.

QR Codes for Events (Field Marketing and Corporate Events)

Field Marketing utilizes the QR Code Generator so that FMMs can follow the instructions below to print and display QR codes at events for raffles, contact info collection, etc. In AMER, tabletop signs to display the QR codes are available in the Boundless portal under the Event Assets section.

Corporate Events utilizes QR Code Generator to create specific QR Codes to track how many people are visiting CTA weblinks. We promote through different pieces of collateral passed out at the booth and signage we have created promoting registration for an on-site ancillary or virtual event. Other use cases such as people scanning to attend onsite virtual activities such as coding challenges or UX surveys.

Login for the QR Code Generator

QR Code Generator

Both Field Marketing and Corporate Events utilize the same login found in the Marketing 1pass vault under QR Code Generator - Field Marketing and Corporate Events.

Pausing or Deleting QR Codes After an Event

Due to our current account subscription only allowing 50 active QR codes, please proceed to Pause or Delete the QR Code when the event has concluded or the QR code is no longer in use. To do this, navigate to the Active tab, locate the QR code and click Details, select the three dots below the Download button, and click Pause or Delete.

Steps to Generating a QR Code

For video instructions, please see [here](#).

1. Make a copy of the GitLab branded Google Form. Ensure you are logged into your GitLab Google

account in order to access the form.

1. Proceed to fill in all required information including:

- Event title
- Event description (optional)

1. Proceed to fill in all required information you'd like to collect from participants. If you are using the QR code for lead collecting purposes, please include the following fields (remember to make all fields mandatory):

- First Name
- Last Name
- Email Address
- Phone Number (optional)
- Title
- Company
- Country
- State/Province for US and Canada only (if you are not located in the US or Canada, please respond with n/a)

1. If you are collecting addresses for a swag or raffle send, please make sure to add the following verbiage to your form - By giving us your address, you are giving us permission to mail items to your home or office. We will not use this data for any other purposes.

1. Integrate your Google Form with your planning spreadsheet

- With an established Planning Spreadsheet for your event (preferred method)
 - Navigate to the responses tab of your Google form
 - Select the 3-button stop sign icon
 - Click Select response destination
 - Click Select existing spreadsheet
 - Choose the established Planning Spreadsheet from your Google Drive
 - Select Ok
 - Now the established Planning Spreadsheet will be linked to your Google form
- Without an established Planning Spreadsheet
 - Navigate to the responses tab of your Google form
 - Select the 3-button stop sign icon
 - Select Create a new spreadsheet and title the spreadsheet
 - Click Create
 - Now the newly created spreadsheet will be linked to your Google form

1. Create your QR Code and link your Google Form

- Navigate to the QR Code Generator website and log in using the password found in the Marketing 1Pass

- In the upper right-hand corner of the screen select Create QR Code
- Select your QR Code Type
- Click Next at the bottom of the page
- Fill out QR Code Title & Description

1. Create your QR code with the following design specs:

- Frame: If adding a frame, enter 171321 (Charcoal) for the frame color.
 - This color ensures proper contrast (other brand approved colors can be used, but no need to get fancy with gradients or anything)
- QR code: Select More Options.
 - Code color: Enter 171321 for the code color and FFFFFFF for the background color.
 - Shape style: Select the dotted code (third selection from left).
 - Edges: Select the option with two curved corners (fourth selection from the left on the top row). Adjust the outer and inner color to 171321.

- Logo: Select the solid Charcoal tanuki. This tanuki has a transparent background and should be the only logo placed for the center of the QR code.

- NOTE: Keep the design/shape of the QR code within the brand aesthetic (no odd or unorganized shapes).

- NOTE: When placing the QR code into your collateral, the design team advises that it should be no smaller than 1" x 1" for efficient scanning.

1. Add in URL link to CTA. Example CTAs listed below:

text

1. Survey Links
2. Gated Collateral Piece
3. GitLab landing pages
4. Video
5. Code Challenge landing page
6. Eventbrite Registration Page for ancillary event

1. Generate and save as a PDF, jpg, or ai file

1. Test QR Code personally and send to at least 1 teammate to confirm the QR Code is live and analytics are being collected in the QR Code Generator portal.

1. Due to our current account subscription only allowing 50 active QR Codes, please proceed to Pause or Delete the QR Code when the event has concluded or the QR code is no longer in use. To do this, navigate to the Active tab, locate the QR Code and click Details, select the three dots below the Download button, and click Pause or Delete.

AMER Field Marketing Badge and Event Check-In Process

Items to Purchase

When purchasing badges, make sure to check the badge holders you wish to purchase to see if they include badge paper. Many kits do, but some do not. If purchasing paper separately, make sure your badge paper is the same size as your badge holder (generally 3x4). Please note these items do not need to be purchased through Avery directly, cheaper purchasing options include stores like Staples, Amazon, and Office Depot.

- Badge Carrying Case for 3x4 badges - Optional
- Speaker Ribbons - Optional
- Badge Paper and Badge Holder Options (3x4)
 - Avery Badge Paper Only
 - Avery Magnetic Badge Holders with Badge Paper
 - Amazon Magnetic Badge Holders (with 1 clip lanyard option as well) WITHOUT Badge Paper
 - Avery Clip Badge Holders with Badge Paper
 - Avery Badge Holders for 1 Clip Lanyards WITHOUT Badge Paper
 - Avery Badge Holders for 2 Clip Lanyards with Badge Paper

SFDC Registration Data Pull

- Log into SFDC, click Reports and search for Name Tag Export in the Field Marketing folder, or go to this link.
- Update Select Campaign by clicking the lookup next to the field
- Find the campaign that has members you need to export
- Click Run Report
- This generates a report with everyone who has registered for the event.
- Click Export Details
- Under the Export File Format field, select either Excel Format or Comma Delimited (whichever works best on your laptop)
- This will create a downloaded file of registered members. From here, copy and paste into a Google sheets document and make any corrections to capitalization, spelling errors, etc. This document will be utilized when creating the badge template so remember to also filter alphabetically by last name. If you will be checking off attendees utilizing this spreadsheet, remember to add a check-in column as well.

Avery Template

- Go to avery.com and log in with the events login found in the Marketing 1pass
- Under Templates select Avery Design & Print
- Click Start Designing
- Under Quick Search, type in the badge number found on the box of your previously purchased Avery paper (links provided in Items to Purchase above)
- Select either one-sided or two-sided (if you intend to print on the back of the badge) and click Select this Template
- At the top of the page select Apply from a Saved Project
- Click Select and Customize on the horizontal orientation option
- Select the GitLab Connect template option with our standard Tanuki logo and click Apply this Design
- On the left side of the page, click Import Data Mail Merge
- Select Replace Spreadsheet and Browse for File
- Select your previously downloaded event spreadsheet and click on the fields you would like to include in the badge template (generally first name, last name, organization). Remember to unclick the first row if it contains your headers.
- Click Next and then drag and arrange fields to your preference and click Finish
- The top right Navigator section will allow you to format and make changes to all badges or individual badges
- Format badges accordingly and check all badges for any errors. If you have not purchased a speaker ribbon and would like to indicate speakers on individual badges, this is the stage where you can add details as needed.
- When ready, click Preview and Print and Print it Yourself
- If everything looks correct, click Get PDF to Print
- Remember to save your design to the account or your personal computer
- Click Open PDF and print utilizing the Avery badge paper previously purchased
- Separate individual badges, stuff in clear holders/clips that come with the badge paper, and arrange in badge carrying case

Spreadsheet Check-in for Event

- Pull the list of attendees the day of the event using the SFDC Registration Data Pull instructions above.
- Add a column to your spreadsheet for attended/no show.
- Check off attendees on the spreadsheet as they check-in.
- Upload lead list after the event using your spreadsheet information.

Marketo Check-in App on iPad for Event

- Please review the Marketo Check-in App Instructions
- In order to use the Marketo Check-in App, you must have a wifi connected device.
- Before the event, use your personal Marketo login to log in to the Marketo Check-in App on the iPad and make sure it is working properly and that your event is displayed. NOTE: Your event is pulled into the app 7 days before the event begins and will not show up before this time.
- The Marketo Check-in App will pull attendees in alphabetical order unless the first letter of the attendee's name is not capitalized. Those attendees will show up out of order at the very bottom of the list of names. As a result, it is often faster to check attendees off as attended in a spreadsheet as they come in (see below instructions) and then check them in on the Marketo App after registration.
- A lead list is not required when using the Marketo check-in app as leads are synced directly to the Marketo program.

Field Marketing Venue Search

For venue search requests, the FMM can open an issue utilizing the VenueSearch template. Follow the instructions to provide event details and assign to the regional FMC.

Lightning meetings with CXO

At GitLab owned events we will sometimes host 10 minute lightning meetings with the GitLab CXO(s) in attendance. We do this to facilitate many interactions with our leadership in a short amount of time.

Process

- Written & verbal announcement is made to audience either prior to the event in the know before you go email or the announcement is made onsite at the event.
- The location should be clearly communicated to the audience as well as the 10 min time limit.
- The DRI for these meetings is responsible for writing down the attendees name and company as attendees arrive to form the queue of folks who will be meeting with the CXO.
- This should be done in the shared google sheet event briefing in a separate tab.
- The DRI can either stay in the room for the duration of the meeting or can step out to continue checking other attendees in.
- With 8 mins left, the DRI should begin to bring the meeting to a close by sensing the flow of the conversation and politely interrupt stating there is time for 1 more question.
- At the 10 minute mark, the DRI will politely cut the meeting off.
- The DRI walks out the attendee and then brings in the next.
- This process continues until the time limit has been reached.

Space considerations

- If possible there should be a location separate from the meeting space where the attendees can wait their turn to meet with the CXO.
- Consider offering light snacks and beverages as people wait.
- Have CXO and meeting attendee on the same level, physically, vs. one party sitting higher or standing and vice versa.

Things to consider

- If people would just like to meet the CXO and don't need to take the full 10 mins for the meeting that is great! The max time is 10 mins.
- There is no agenda for the 10 min meeting. The DRI for the meetings should quickly research the company via SFDC (if you don't have the SFDC app on your phone, this is a great use case for why it's useful!) gather as much info as quickly possible and relay this info to the CXO. As an example, if there is an enterprise customer next in-line to meet with CXO, let the CXO know. Short brief info, as you won't have much time to relay this info.
- Notes should be taken by the DRI or a designated delegate in the room so the CXO can focus on the meeting. These notes should be added within 48 hours to the person record in SFDC by the DRI note taker. If any next steps were discussed and an action was assigned to someone not in the room, be sure to tag the person who was assigned!

How to add events to about.gitlab.com/events

In an effort to publicly share where people can find GitLab for virtual events and events in-person throughout the world, we have created about.gitlab.com/events. This page is to be updated by the person responsible for the event. This page is now managed through Contentful. To add your event to the page or make any changes to existing events, please see the instructions [here](#).

Creating a Marketo Landing Page

This has been moved to the Landing Page handbook page to focus on conversion best practices and add details for page creation

Email Process for Events

For corporate conferences, we will send emails in accordance with the standards set here and summarized below:

- Tier 1:
 - 1 pre-event email
 - 1 post show follow-up email
 - Customer newsletter blurb
- Tier 2:
 - Built-in generic event newsletter blurb
 - 1 post show follow-up email
 - IF ancillary event: 1 pre-event email
- Tier 3:
 - Built-in generic event newsletter blurb

- 1 post show follow-up email (if we get leads back)

Please see Emails & Nurture handbook page for in-depth details on email marketing

Speaking at events

If you're looking for information about speaking at an events head over to our Corporate Communications page for complete details.

Paying for Speaker travel

At times, GitLab may offer to pay for a person's travel if they will be speaking about their usage of GitLab at an event.

There is no contract that needs to be in place in order for payment to happen. The GitLab team member should do the following:

Option A

1. Ensure that the expense is accounted for in a line items within Allocadia. The spend type should default to what was selected at the Sub-Category level.
1. Open a Coupa virtual card for the amount of money you believe will need to be on the card to account for the trip.
 - Take into consideration airfare, car service, hotel stay, and dining.
 - Ensure you've added the correct Allocadia ID to the virtual card.
1. Once the virtual card has been created, share the card number with the speaker and ask that the speaker use this card for all travel related items where possible.
 - Also recommend to the speaker to add the virtual card to their digital wallet that will allow them to tap and pay from their mobile device without having a physical card.
1. Supporting documentation - could be an email that confirms this person will travel for GitLab - should be uploaded for the Coupa card to be created.

Hotel stay

While we would like for the hotel to be secured using the Coupa Virtual Card as well, at times a hotel may ask for a physical card to be provided upon check-in for incidentals. The speaker may either present their own card and then apply for reimbursement OR a GitLab team member may provide their own credit card.

If the GitLab team member provides their own card, then the expense should be accounted for in the following way upon submitting the expense report:

1. Category = Marketing Field Events OR Brand Marketing - depending on if you are in Field Marketing vs. another group in marketing - by selecting one of these categories, it puts the expense in the program spend bucket vs. the employee travel bucket within the financial systems.
1. Classification = MUST add the Allocadia ID that has been created in NetSuite for this event

Option B

The speaker would like to pay for everything themselves and would like for GitLab to reimburse them.

In this case the speaker will need to complete a reimbursement form and submit with receipts back to GitLab. GitLab will pay immediately upon receipt.

Virtual Events

- See virtual event best practices guide. Includes best practices for running a virtual event, tips for speakers, attendees, partners, and speakers.

SECTION: marketing/events/event-requirements.md

GitLab's data requirements for third party events and programs

In order for GitLab to help justify investments related to event and program partnerships, we must maintain a quality standard for the prospects we obtain as a result of those partnerships. While it's understandable that each partnership has its own unique goals, the Marketing Team's primary goal is to maintain a steady flow of quality prospects for the Sales team. The following is a series of requirements the Marketing team has determined must be understood by both parties before finalization of any program contracts:

Lead data we deem overall mandatory across events and programs

First and Last Name

Email Address (work email is best, but obtain what is possible)

Job Titles

Name of Employer

Country of Residence

State/Province of residence (United States and Canada only)

Communication agreement : Has the lead agreed to be contacted by first party and or third party, or at all?

Lead data we deem "nice to have", but not mandatory across events and programs

Employer's employee count (An integer or range is acceptable. GitLab's target company ranges are 1-99, 100-499, 500-1,999, 2,000-9,999 and 10,000+)

Lead's city of residence

Lead's work phone number

Requirements of different event and program types

In-Person Events and Programs

What is the expected timeline to distribute lead data to partners?

What is the guaranteed number of registrants being pursued?

What are the targeted business personas/roles being pursued for registrants?

Is there a guaranteed compliance with specific and or global privacy laws, e.g. GDPR?

Virtual Events and Programs

What is the expected timeline to distribute lead data to partners?

If not a one-time data delivery, what is the expected cadence of additional data?

What is the guaranteed number of registrants being pursued?

What are the targeted business personas/roles being pursued for registrants?

Is there a guaranteed compliance with specific and or global privacy laws, e.g. GDPR?

What are the SEO guidelines being utilized by the team to develop a steady stream of registrant activity?

Content Syndication Programs

What is the expected timeline to distribute lead data to partners?

If not a one-time data delivery, what is the expected cadence of additional data?

What is the guaranteed number of registrants being pursued?

What are the targeted business personas/roles being pursued for registrants?

Is there a guaranteed compliance with specific and or global privacy laws, e.g. GDPR?

What are the SEO guidelines being utilized by the team to develop a steady stream of registrant activity?

SECTION: marketing/field-marketing/_index.md

Field Marketing Mission

The mission of Field Marketing at GitLab is to strategically support the Large, Mid-Market & Public Sector go-to-market teams at a regional level through in-person and virtual interactions (quality vs. quantity) as well as serving as the voice of the regional go-to-market teams to the wider marketing team, and being the voice of marketing into the go-to-market teams we support, in order to create, accelerate, and expand the sales pipeline with our direct sellers and partner ecosystem. In alignment with the marketing mission of being New First Order focused, Field Marketing also supports the expand motion with customers.

Field Marketing Vision

We want to be the most innovative and pipeline centric team within the marketing organization that uses data to make informed decisions while also continuing to invest in ourselves to promote career growth and opportunities.

Field Marketing Goals

- Sales Acceleration
 - Engaging with existing customers
 - New growth opportunities
- Demand
 - Unique inquiries
 - Influence of sales accepted opportunities
 - Influence of sales pipeline
 - Both direct and channel driven

- Market Intelligence
- Test out new messaging or positioning

Countries of Focus

In alignment with the FY25 Marketing strategy, Field Marketing focuses on specific countries. Details can be found here in our internal handbook.

Cities of Focus

Tier 1 Cities

A Field Marketer should have no more than 5 cities - cities with the largest LAM - that you want to build a ground swell in and be physically present at least 2 per quarter.

Tier 2 Cities

A Field Marketer should have no more than 3 Tier 2 cities - cities you want to be physically present in at least 1/quarter.

FMMs should work with Large & MM sales teams to determine these cities.

Types of Programs Field Marketing Runs

GitLab Owned Field Events

GitLab Connect

GitLab Connect is a full or half day event with both customers and prospects in attendance sharing stories & lessons learned about GitLab. SAE's will be responsible for asking customers to speak and Marketing, through a combination of SDR outreach, database and ad geotargeting will drive attendance to the event. If you would like to propose a GitLab Connect in your city, please follow these instructions for requesting an event. Interested in seeing a GitLab Connect in action? Check it out.

Field Marketing Owned Virtual Events

For information regarding process, epic codes, templates and more, please visit our Field Marketing Owned Virtual Events page.

Executive Roundtables

Executive Roundtables can be run virtually or in-person, and be organized through a 3rd party vendor or GitLab. These events differ from webcasts/events mainly due to the size of the audience and the interactivity level. A roundtable is run as an open discussion between the host (usually 3rd party vendor), GitLab presenter and the audience. The host would open with an introduction of themselves and the topic for the session, then introduce the GitLab presenter and have them give an overview of GitLab followed by the host asking questions directly to specific people in the audience for them to openly answer and discuss. The advantage of a roundtable is that you can document the meeting more closely and understand more about an

organization's pains and problems.

Below are best practices when running a roundtable:

- Content creation - FMM to work with Sales Managers to decide on most relevant or hot topics in the region
- Speaker request - Put through a Product and Solution Marketing Support Request and fill out the template
- Example of scripts for host and GitLab presenter
- Example of meeting notes to document conversations during the session
- Ensure questions are prepared between host and GitLab presenter beforehand to lead the conversations within the session
- Assign notes of each delegate to list leads for upload onto SFDC
- Pre-analysis of delegates - check to see if their organization is currently a user of GitLab, whether they're CE or EE customers. This could be a great way to start or dig into deeper conversations with the delegate.
- Ensure you have familiarised yourself with the White Glove Event Follow Up process for this type of event.

3rd Party Events

We will sponsor regional 3rd party events in an effort to build the GitLab brand and also to gather leads. Different types of 3rd party events include, but are not limited to:

- Agile Events
- City run technology meetings
- Customer/prospect run DevOps events on invite
- Executive relationship building events via companies like Apex Assembly & Argyle Executive Forum

Meeting Setting

Meeting Setting occurs when the Corporate Events team sponsors a large conference and requests the Field Meeting team manage setting up on-site meetings during the event. As for all Corp Events, the Marketing Operations team will set up the overall Conference Marketo program and SFDC campaign as well as the Meeting Setting Marketo program and SFDC campaign for Field Marketing. Meeting Setting is not its own campaign type and is categorized as a Conference, so the Conference progression statuses should be utilized. The overall Conference is owned by the Corporate Events team, but Marketing Ops will set up the Meeting Setting SFDC campaign as FM-owned.

Other Tactics

Being the marketing experts for the region, GitLab Field Marketers are also responsible for using other tactics to help generate leads to build pipeline. We have options such as survey tools, both of current employees and past employees based on the 3rd party vendor we use, webcasts, direct mailings, and also various digital tactics.

Regional Marketing Content

Current regional marketing content and presentations can be accessed here.

Content is classified into 2 groups: Economic Buyer and Technical Buyer. Choose the content category that aligns best to your audience needs - Economic Buyer for those focusing on business aspects, and Technical Buyer for those interested in technical details or specifications.

Field Marketing Managers are responsible for adding new content for Own Events and Executive Engagement Tactics to this folder on an ongoing basis. NOTE: Naming convention of the folder should reflect the SFDC Campaign name for easier tracking.

Digital Tactics

- To run plays where we are targeting a specific geography or where we would like to propose content syndication, we work through our Digital Marketing Programs team. Please create an issue utilizing DMPs Paid Digital Request Issue Template if you'd like them to do work for you.
- To run plays where we are targeting a specific list of accounts, we utilize 6sense.

Tracking success of digital tactics

Please ensure you are using our UTM tracker (look up Google Analytics Campaign Tagging Tool - UTM generator for tracking in the Gdrive to find doc). In order to identify which campaigns are from the Field Marketing team, you must add the letters fmm at the end of your campaign name in column E. All lowercase with no spaces or special characters. This allows us to pull ROI reporting, so please don't leave these letters out or else you will lose reporting from a dashboard standpoint.

Confidentiality in GitLab Issues and Epics

When working in GitLab issues and epics, please remember that due to GitLab's value of Transparency, many of our issues and epics are, by default, public. Best practice is to avoid including any PII or login details in issues and epics directly. If posting details of this nature is a necessity, please remember to always make your issue or epic Confidential when doing so. Please also be diligent in your issues and epics regarding comments made by other team members as well. If you notice another team member has posted details that should not remain public, immediately make the issue or epic Confidential. Other options to allow our issues to remain public, are including PII in a spreadsheet or document posted in the issue or epic that are only accessible by certain people. If logins need to be shared, please utilize the Marketing Vault in 1Password.

For more information regarding confidentiality levels and compliancy, please visit this handbook page.

Global Field Marketing Vendor Feedback

This feedback epic/spreadsheet is only open to GitLab team members. FMMS and managers to keep details in this spreadsheet regarding both positive and negative experiences with various event vendors for team reference.

How Regional Marketing utilizes Claude

Claude is the GitLab-approved AI tool utilized across the company. Below are just a few ways in

which Field Marketing integrates Claude into our day-to-day business processes.

- Venue searches (example here)
- Lead list cleaning (Asana project here)
- Using Claude to evaluate Tableau reporting for better visibility into ROI and to provide new ideas for strategically implementing company initiatives into our regional event tactics
 - Claude can also be utilized to create a Markdown file of Tableau's data (see example here) to then be transferred to Google sheets for easier filtering and analysing
- Content creation for event asset copy, as well as general spelling and grammar checks
- Use Claude to analyze meeting and offsite notes (such as the request for Claude to analyze territory review notes here)
- Utilize Claude for account research, such as the example the SA team created here
- Use Claude to pull specific information for executive roundtables to provide a structured summary based on company information and attendees (see below examples)
 - Company Overview
 - Persona Role
 - Opinion on roundtable topic sourced from relevant articles on the web
 - How GitLab aligns with companies' DevOps and AI strategies
 - Give discussion points on data residency, AI regulations, and implementation
- Using Claude to help create short fun quiz questions to be used at events. A quiz can be a great way to increase engagement, enhance learning, foster interaction, and create memorable experiences that extend well beyond the event itself. An example here of the prompt and quiz questions here

Field Marketing Campaign Issue Templates, Epic Codes and Progression Status

Field Marketing utilizes the below issue templates and epic codes for virtual events and other campaign tactics.

Conference (In-Person)

Event Lead Collection Should-Knows

Not every field event or lead are the same. There will be times when meeting/scanning leads and notetaking for the interaction will require a tweaked processing procedure. A few examples are below:

High Priority leads: There are situations where GitLab leadership wants extra attention placed toward a prospective lead/account, assuming the right criteria is met for that lead/account. These leads are referred to as High Priority and utilize the high priority process. This label not only means its namesake, but it also means the lead will circumvent our normal lead routing and MQL processes to be sent immediately to SDR/BDR for strategic outreach. There are a few reasons why a lead would be marked as High Priority, but for this particular handbook page there are two primary definitions to focus on:

- **High Priority Campaign:** This lead was acquired during a high priority event. While strategizing for the quarter and year, Sales and Marketing leadership discuss what upcoming field events will be important based on GitLab's current and future goals. If a field event is determined to fit the criteria, all leads collected from this event will be marked as high priority and quickly routed for follow up. Leadership will communicate what campaigns qualify
- **White Glove:** A white glove lead needs strategic outreach and will involve the SDR, Account Executive and maybe more. Generally, these leads were highly engaged in conversation about GitLab, have detailed event notes about the engagement and or were engaged with specific GitLab team members during the event. White glove leads can exist within a high priority campaign, so use best judgement on which label is most appropriate between the two

Recording high priority status for either of these types is simple and included in the spreadsheet used for self-service list uploads under the High Priority Reasons? column - as a dropdown option. The reason feeds into Marketo's High Priority Reason temp field, which then processes the lead for early lead routing.

Post event lead flow for each campaign

After Field Marketing has executed a campaign, the Field Marketing Manager is responsible for ensuring that the campaign has been fully operational to include the following:

- he campaign DRI reviews and cleans up the list following the guidelines for list imports
- SDRs should not be asked to follow up leads before they are added to Salesforce
- If a follow-up email was to go out to all attendees and no-shows, the FMM is responsible for ensuring that emails were sent.
- Did the campaign respondents receive the correct amount of MQL points they should have received the activity they participated in?
 - Person scores are available for viewing in our Custom Links section of each SFDC campaign. This allows you to view the MQL score of the campaign members, whether they be a lead or contact, all within one view.
- Did a lead/contact hit our MQL threshold and have the SDRs followed up with this record and moved them beyond the MQL stage?
- Update all the relevant tabs in the field marketing campaign event planning sheet.

ROI tracking for Field Marketing

For complete instructions on FMM ROI, please see [here](#).

Adding SFDC Campaigns to Leads for Attribution

For instructions on how to add a SFDC campaign to a lead for attribution, please watch this two minute instructional video (you must be signed into GitLab Unfiltered to view).

Field Marketers within SFDC

To help with reporting within SFDC, each Field Marketing Manager is assigned the accounts based on SAE/AE assignment. Field Marketing has decided to align with the SAE/AE vs. 100% geo focused in an effort to foster collaboration.

Routing for geo reps is done through zip codes worldwide. Named accounts and the US Public Sector are manually handled differently. Sales Ops will run monthly audits to update PubSec and Named accounts. Field Marketing Management works with Sales Ops to keep this information up to date.

Should you come across an account you believe should be owned (or perhaps NOT owned by you) please follow these steps:

1. Within the account in SFDC, please chatter @sales-support and provide reason why this account should be updated
1. If more than 10 accounts need updated or if a FMM changes regions, then please open a sales ops issue requesting the update be made.

Complete details on how GitLab Sales handles rules of Account Engagement can be found [here](#).

PathFactory

Via our Marketing Operations team, Field Marketers can request Author Role access to PathFactory to upload and curate assets into tracks that are then disseminated for use in Marketo, about.gitlab.com, and other campaign-related channels. Field Marketing currently has Reporter level access. To view the difference in user roles, head over to the PathFactory page.

The Benefits of having Author Role Access

1. Efficiency gains: It takes more time to create a request issue for the Campaigns Team and wait for the request to be processed than it takes to upload an asset or create the track yourself.

1. Ownership: Having author role access to PathFactory will allow Field Marketing to have control on asset uploads and content tracks to ultimately personalise the PathFactory experience according to region, country and target accounts.

1. Optimisation: Viewing each asset/track's performance can help Field Marketing refine and optimize the content with monthly or quarterly refreshes.

Getting Started

Visit the user role section of the PathFactory page to learn more about the author role.

Required Training

Please review the Pathfactory Training videos (specifically the author role training) before submitting an AR to request author role access.

This section will continue to be fleshed out as we rollout to the global Field Marketing team.

Asana

The global Field Marketing team is working with the Marketing Operations team to implement Asana as our new project management tool.

Asana Handbook Page

- Asana

Asana tips and best practices

1. If you do not need a task, please delete all subtasks and then the task itself. This will remove the task from the view of everyone involved and is less confusing. Changing the task status can be overwritten by the rules we have set in place, so it's better to delete if you aren't using it. Examples of tasks that should be deleted if you are not using them: Build Landing Page, Email tasks, Build Target List.

1. Do not make any changes to or delete the 'Host Live Event' task (or the task that just has the name of the event on it). This is used for the SSOT Marketing Calendar. It will auto-populate, no action required on your part.

1. When you complete a task that is assigned to you, please be sure to click 'Mark Complete'. You can find the 'Mark Complete' button at the top of the task. We have several rules to automate the task status field, but they depend on tasks being marked complete when they are done to move to the next step of the workflow.

1. You have subtasks on emails called 'Email approved by DRI' and on landing pages called 'Landing page approved by DRI'. If you approve the sample/page, please be sure to click 'Approve' on these tasks. This will record your approval and trigger the next step in the workflow (push live, schedule to send, etc).

1. If you copy new Email tasks from the template, please be sure to change the subtasks from

·(template)· to the email number (as well as the main task). This will help avoid confusion in notifications and on My Tasks.

1. We have added boards for MOps and Lifecycle to track their tasks. Relevant subtasks for these teams will be automatically added to the respective projects upon project creation. If you create a new task (or subtask, in the case of emails, landing pages, etc) after the project is created, please be sure to add the MOps subtasks to: OP - Marketing Operations Support and the Lifecycle subtasks to: Lifecycle Marketing - Email Approvals.

Process for moving events from Plan to WIP

The following is the process for when a Field Marketing event moves from the draft/plan phase to becoming finalized and actively managed in Asana (WIP).

SLAs

Please plan your timelines accordingly based on the below SLAs. Keep in mind these SLAs must also include additional time for any Friends & Family Days or holidays.

- Contract Requests: 3 business days for the FMC to enter into ZIP
- Plan to WIP - 3 business days for the FMC to complete, once the FMM completes the FMC Checklist and Ecosystem Involvement tasks in the Asana project
- Marketing Operations Requests - 5 business days

Moving from Plan to WIP

Please note that this is an interim process while the Regional Marketing team begins utilizing Asana. Automations are still being implemented, so there will be many iterations to the below instructions as all global teams move to Asana.

Step-by-Step

- FMM pings the FMC in the main Field Marketing issue and requests the FMC create the Asana project
 - NOTE: The FMM will not fill out any additional information in the GitLab issue. All work will be managed in the Asana project.
 - FMC reviews the Allocadia sub-category and line item panel details, as well as checks that the forecasted cost is in the correct month (according to the prepaid policy) for the tactic and makes any changes necessary
 - FMC to make sure the correct FMM and FMC are listed in the Allocadia panel for the event. The team members listed in Allocadia will sync to the GitLab issue and then to the Asana project (Asana tasks will be assigned based on these roles as well).
 - FMC creates a new project in Asana by following the below steps:
 - FMC adds the Asana-Sync-Project label to the GitLab issue. Adding this label will trigger the Asana project to be created utilizing the GitLab > Asana sync.
 - In Asana, please give the system a couple of minutes to pull all of the details through. You receive a notification when the Asana project has been created.
 - The BT Bot will also comment in the GitLab issue that the Asana project has been created and will provide the project link.
 - When the Asana project is created, the project will also be automatically added to the FY26 All Marketing SSoT Calendar.

- An integration with our Google calendar is coming soon, but for now, the FMC will still need to manually add the event to the appropriate Google calendar by completing that specific task provided in the Asana template for each event.
- FMC to then copy the body of the FMAAsanaTemplate and paste it into the project Overview section in the Asana project
- FMC to fill in Event Details from the GitLab issue to the project Overview
- FMC to add the GitLab issue link to the Asana project in the Overview
- FMC reviews the list of tasks and adjusts any past due tasks accordingly. If new dates are not available yet, please remove both the due date and task owner until they are available to add back in. If this step is not taken, other team members will receive notifications about tasks being past due, which will lead to confusion. Please keep your projects as updated and current as possible!
- FMC then pings the FMM in the GitLab issue that the event has been moved to Asana and is ready for the FMM to work through their tasks in Asana

Important Notes for FMMs

- The FMM must fill in and complete the FMC Checklist task before the FMC will be notified to move the project to WIP.
- Please always hit the complete button for each task, once the task is finished. We have many dependencies built into our Asana template and if you do not complete a task, the next steps will not be triggered for other team members.
- Please add any appropriate sub-region or country tags to your project. NOTE: The main region categories (AMER, APAC, EMEA, PubSec) will be automatically associated. Many tags are already created in Asana, please utilize these tags and do not edit any existing tags.
- If you need a new tag created, please request your tag in this Tag Request Form.

Closing out Asana Projects

- Once the event is over, the FMM will confirm the lead list has been processed and any remaining tasks for the event have been completed. NOTE: You must complete or delete all open tasks in a project or they will still show up in your assigned tasks (see how to bulk complete tasks here). The FMM will then go to the top of the page and click Set status and select Complete.

Plan to WIP Recorded Training

TBD for new Asana process

Rescheduling or Canceling Events

Rescheduling or Canceling a Webcast or Virtual Workshop

Please note that the process for rescheduling or canceling a webcast or virtual workshop involves additional steps. For details regarding these instructions, please see below.

Please see process here for rescheduling and here for canceling.

For all other event types (including in-person workshops), please see instructions below.

Rescheduling Events

FMM Tasks

- FMM to ping the FMC and staff/DRIs in the main Field Marketing issue to communicate the updated date(s).
- FMM to obtain an addendum/updated contract from the venue with the new date(s) (if applicable). The FMM will then re-open the original contract request and ping the FMC with new date(s) and addendum/updated contract.
- FMM to update the date with any additional vendors (such as Boundless, PizzaTime, etc.).
- If utilizing their personal Zoom for the event, FMM to make the date change in the Zoom account where the event was set up. Make sure to check the Notify registrants about changes to this meeting checkbox so registrants get the date change email notification with their unique join link from Zoom.
- If there are registrations for the event, please either notify the registrants of the date change directly, or ask your FMC to create a date change email issue and provide copy in the copy doc. Note that this email must follow the MOps SLA.

FMC Tasks

- FMC to update the new date(s) in the Allocadia sub-category and adjust the forecasted amount (if over the prepaid \$5k threshold and if the new date falls in a new month).
- The FMC will update the date(s) in the appropriate Google calendar for the event invite.
- The FMC will update the epic details and sub-issue due dates (and issue titles), as well as make the necessary changes to any upcoming asset send dates. If there are any emails scheduled to send, the FMC will ping MOps specially in those issues to have them unschedule the sends first.
- The FMC will re-open the Marketo LP issue and request the date be changed in the LP. This will most likely change the LP URL as well, in which case, the FMC will update the LP link in the epic and notify the FMM of the changed link (to communicate to the sales team).
- The FMC will follow these instructions to update the date of the event on the Events Page (if applicable).
- Allocadia: FMC to change the ISO date in the SFDC campaign name to the new start date.
- SFDC: FMC to change the ISO date in the SFDC campaign name to the new date and update the start and end date fields.
- Marketo: FMC to change the ISO date in the Marketo program to the new date and update the event date and UTM tokens. Also update asset expiration.
- If the FMM has submitted an addendum/updated contract, FMC to submit a PO change request via Zip.

Canceling Events

FMM Tasks

- FMM to ping the FMC and staff/DRIs in the main Field Marketing issue to communicate the cancellation and close out the issue.
- FMM to update the cancellation status with any additional vendors (such as Boundless, PizzaTime, etc.).
- If utilizing their personal Zoom for the event, FMM to delete the event from the Zoom account where the event was set up. Make sure to check the Send meeting cancellation email to

registrants checkbox so registrants gets the cancellation email notification from Zoom. You will also be able to edit the cancellation message in the body of the email.

- If there are registrations for the event, please either notify the registrants of the cancellation directly, or ask your FMC to create a cancellation email issue and provide copy in the copy doc. Note that this email must follow the MOps SLA.

FMC Tasks

- FMC to update Allocadia showing the event as canceled by going to the event sub-category panel and selecting Yes to the Campaign Canceled? dropdown. FMC to also add in CANCELED to the event sub-category title and to the Official Event/Campaign Name field so the title in the main issue stays updated.
- FMC to remove any planned/forecasted costs in Allocadia accordingly.
- The FMC will delete the Google calendar invite in the appropriate calendar.
- The FMC will follow these instructions to delete the event from the Events Page (if applicable)
- The FMC will comment regarding the cancellation in all open sub-issues and close out the issues. If there are any emails scheduled to send, the FMC will ping MOps specifically in those issues to have them unschedule the sends first.
- If applicable, FMC to ping procurement and finance in the Coupa req to notify them that the event has been canceled.
- If the FMM is not sending their own cancellation email to registrants and would like to send a Marketo cancellation email, create an issue for the request and triage to Marketing Ops. Please Note: This email must be scheduled and sent BEFORE the rest of the steps below can be completed.
- Once all sub-issues are closed, the FMC will also note the cancellation in the epic and close the epic.
- SFDC: Add [CANCELED] to the campaign name and select Aborted in the Campaign Status dropdown.
- Marketo: Add CANCELED] to the program name. Go to the Salesforce campaign sync field and click on the linked campaign, select None from the dropdown and click Save. This removes the SFDC and Marketo sync for the program. Deactivate any [activated smart campaigns.
- FMC to ping MOps with the Marketo program link in the mktgops Slack channel and request the program be deleted (FM does not have access in Marketo to delete programs). Please Note: Once the Marketo program is deleted, the Marketo LP will also be deleted and not accessible by anyone with the registration link.

Process to Close Marketo Landing Pages and Landing Page Forms

Marketo Asset Expiration

Please follow the instructions found on the campaigns and programs handbook page to set expirations on program assets during program set up.

Options for Closing LPs and LP Forms

There are two options for closing Marketo landing pages:

1. Closing the LP registration form (which removes the registration form from the LP so registrations can no longer be accepted) and updating the LP to explain why the registration form is no longer available (either the event has reached capacity or the event has occurred).

2. Closing the entire LP. If someone clicks on the LP link, it will take them to our about.gitlab.com page instead of a registration LP. This option is now done automatically during the Marketo Asset Expiration process. Asset expiration occurs 4 weeks after the event date, so it is important to close the registration form and update the LP verbiage once an event reaches capacity or has occurred so the LP does not remain open and active during this time.

The FMC will track all open Marketo LPs and will be responsible for requesting the LP form be closed by Marketing Ops once the event occurs or if an event reaches capacity.

To close the LP registration form, the FMC will re-open the Marketo LP issue and request Marketing Ops follow one of the below processes (depending on campaign type, as Marketo program templates vary across different tactics). In the LP issue, the FMC will request Marketing Ops remove the registration form and will provide Marketing Ops specific verbiage for the top of the LP page. Please see standard verbiage options below. If the event is a workshop that was listed on the demo/workshop page, the FMC will also request Marketing Ops remove the listing. The FMC will update the due date of the issue.

If an event has reached capacity

- The FMC will follow the above instructions to close the LP registration form and update the verbiage to specify the event has reached capacity.
- If there are remaining invite issues open once registration is closed, the FMC will note this in the issue(s) and close them. If an invite is already scheduled to be sent, the FMC will ask Marketing Ops to unschedule the send before closing the issue. The FMC will update the due date of the issue.
- If a LinkedIn campaign was run, the FMC will request the ABM team close the LinkedIn registration form in their ABM issue.
- There is no need to remove the event listing from the Events Page if an event has reached capacity. Having a sold out event listed could create more excitement over the event and encourage future attendees to register for events sooner.

Standard verbiage for closing a Marketo LP after the event has occurred

The below verbiage can be utilized/sent to Marketing Ops when closing a Marketo LP form after an event has occurred.

Thank you for your interest in this [insert event type]. This event has concluded and registration is now closed, but GitLab has a number of hands-on events and educational programs scheduled at any given time. Please visit our [events page for more information on upcoming events and dates.

Standard verbiage for closing a Marketo LP if an event is at capacity

The below verbiage can be utilized/sent to Marketing Ops when closing a Marketo LP form if an event is at capacity.

Thank you for your interest in this [insert event type]. The event has reached capacity and registration is now closed, but GitLab has a number of hands-on events and educational programs scheduled at any given time. Please visit our [events page for more information on upcoming

events and dates.

Closing a Marketo LP Form

These instructions explain how to close a Marketo LP form and how to update the LPs verbiage at the top of the page. The page and the information on it will still be visible to visitors, but there will no longer be a form to fill out for registration.

Closing a Webcast Marketo LP Form

See instructions [here](#).

Closing a Workshop Marketo LP Form

See instructions [here](#).

Adding and Removing Workshop Postings on the Regional Workshop Demo Pages

We market our workshops on both the GitLab events page and via the below EMEA regional workshop/demo page (the AMER and APAC demo pages have been deprecated). The GitLab events page listings require an MR to add new events (see instructions [here](#)) and events will automatically drop off the page once the event date passes. But the regional workshop/demo pages require manual adjustment. When an EMEA workshop LP is created by Marketing Ops, they will add to the EMEA workshop/demo page once the LP is approved. When the workshop is completed and the FMC requests that Marketing Ops closes the LP, Marketing Ops will also remove the listing from the regional workshop/demo page.

- EMEA Workshop/Demo Page

Regional Workshop Demo Pages - Instructions for Marketing Ops

Marketing Ops will add EMEA workshops only to the EMEA Tech Demos and Workshop page.

For more information regarding the regional workshop/demo pages, please visit this [handbook page](#).

Closing a Marketo LP

These instructions are standard across all campaign types and will close down the entire LP and re-routes visitors to our [about.gitlab.com](#) page. If you have set up asset expiration previously, this step will occur automatically.

- Sign into Marketo
- Click into the Marketo program for the landing page you wish to close
- Click into Assets
- Click Registration Landing Page
- At the top of the page click Landing Page Actions
- In the drop down list click Unapprove
- Click the orange Unapprove button in the pop up box
- Go to your landing page URL and make sure the landing page is no longer active (the site that

should pop up is about.gitlab.com)

- Go to the 01a or 01b Registration Flow and deactivate the smart campaign

Adding a Registrant after Marketo LP Reg Form is Closed

If you have closed a Marketo LP registration form because your event has reached capacity but need to add in an important registrant after the fact, please follow the below instructions.

IMPORTANT NOTE: Field Marketing does not have access for the below actions. Please ping Marketing Operations in the mktgops Slack channel to add registrants when needed.

Important context: The landing page and form themselves have no bearing on whether or not someone is synced. The sync relies solely on Program Members and their statuses. Thus, a person can fill out a form, but if their program member status is never updated to Registered, they will never sync over into the webcast in Zoom. Likewise, we can update someone's status to Registered without any form ever being filled out, and they will still successfully sync to Zoom.

1. Navigate to the Database tab in Marketo

1. In the quick find box, type in the person's email and click the magnifying glass to search (If they do not exist, click NEW in the upper ribbon and add a new person. It will take up to 10 minutes for them to then show in the lead database)

1. It will take you to a screen with everyone matching your query. Once you find the correct person, click them to highlight.

1. Once highlighted, you can right click or select Person Actions from the upper ribbon

1. Hover over Programs and click on Change Program Status...

1. Search for the program you want to add them to (it should be the main program, not an invite send, etc) and select the status of Registered

- Check how many people this will affect. It should just be 1 (or the number you highlighted)

1. Click RUN NOW to execute the action

1. A status box will appear on the top right and tell you when the action finishes processing

- Once added as Registered scoring will trigger for the registrant

- Once the registrant is synced to zoom (within 30 min or so), the registrant will receive a confirmation email automatically from Zoom.

You can use these steps to add anyone to a Marketo program.

Registration Problems on a GitLab Landing Page

If a registrant is having issues registering for an event on a GitLab landing page, please have them first try the below fixes. If these still do not work, open a bug issue with Marketing Ops to help determine if there is a problem with the landing page.

- Ask what browser they are utilizing and if there are any plugins potentially blocking the registration page.

- If they have not already, have them try registering utilizing Chrome.

- Have them try registering using Incognito Mode.

Owned Tactics that Involve Collecting Addresses

There are times that Field Marketing will run campaigns that involve building a landing page in Marketo in order to collect addresses for shipping swag. Examples of these instances are a 5k run, GitLab-hosted tasting event, direct mail campaigns, etc. When collecting addresses, please follow the below instructions for ensuring PII compliancy.

Landing Page Verbiage

When collecting addresses on our Marketo landing pages, make sure to always include the following verbiage on the page - By giving us your address, you are giving us permission to mail items to your home or office. We will not use this data for any other purposes.

Pulling Addresses for Swag Sends

Please note that due to PII compliancy, addresses collected in Marketo landing pages are not synced to SFDC. As a result, Marketing Ops support is required to pull the address list from Marketo (Field Marketing does not have this level of access in Marketo).

Removing PII from Marketo

Once the report is downloaded (or the event/tactic has ended and all swag has been sent), Marketing Ops will then also delete the PII information directly in Marketo. To request this support, please review this page and open an export request issue to specify when a list pull and PII deletion is needed. Also remember to delete PII from any order spreadsheets once swag has shipped.

Field Marketing Swag

Brand Details for Swag and Event Assets

For information regarding Brand support, please visit the Brand Design Handbook Page. Templates for requesting design/brand support are located here. You can also watch this video (must be logged into GitLab Unfiltered) regarding Brand templates and repos for previous and current brand designs.

AMER Field Marketing Swag

The AMER Field Marketing team utilizes GitLab's swag and fulfillment vendor Brilliant for all of our swag and event asset requirements. Brilliant is available to produce, ship, and store swag and event assets.

Brilliant Store Portal

Field Marketers are responsible for accessing the Brilliant store portal utilizing their individual logins to order all swag and assets for their events.

Brilliant Store Portal Training

Watch Training Video Here (Note: You must be logged in to GitLab Unfiltered to view)

Brilliant Support

For Brilliant support, please see email addresses below. For any questions or concerns, please reach out to @krogel.

- gitlab@brilliantmade.com for net-new orders
- support@brilliantmade.com for order/shipping support in North America
- international.support@brilliantmade.com for order/shipping support in EMEA, UK and APJ

Specialty Swag Orders, Invoicing, and Brand Approval

- If you would like to order specialty swag for a specific event, please reach out to gitlab@brilliantmade.com and provide the following details:
 - Item you are looking to source
 - Any links or pictures for reference
 - Budget
 - In-hand ETA
 - Where swag will be shipped (if swag is to be stored in the warehouse, please include @krogel on correspondence)
- PLEASE NOTE: Every new swag order requires a PO number before Brilliant will submit the order to production. Please make sure to build this approval time into your overall timeline!

Approval Process through the Brilliant Store Portal

- Brilliant will send the FMM an order estimate through the Brilliant store portal (FMM will receive an email notification). FMM to go to the order estimate and save the order to PDF and submit a contract request to the FMC.
- FMC to route the order through the procurement process.
- Once the PO number is obtained, the FMM will log back into the Brilliant store portal, go to the order estimate, and click approve. An additional screen will pop up where the FMM will include the PO number and then submit.
- Once the order is approved in the store portal, Brilliant will submit the order to the vendor.
- All new swag artwork (including logo placement) will be reviewed and approved by the Brand team.
 - If the swag item chosen only requires a GitLab logo to be added, Brilliant will provide a proof to the FMM through the store portal (FMM will receive an email
