

a report and sorting by the Registered field). Note that due to potential delays with the sync between Marketo and SFDC, it is recommended to check the Registration number in Marketo.

Closing Registration

- Once capacity is reached, the FMC will follow these instructions.

Instructions for Closing Registration for a Workshop

Note: Instructions for closing registration landing pages varies, depending on the campaign type/Marketo template. Please only utilize the below instructions to close a workshop LP.

Please reach out to Marketing Ops to shut down the landing page, or if you have an urgent request after hours, please follow the below instructions.

In order to cap registration, we remove the registration form on the Landing Page in Marketo. To do this:

Closing Registration in Marketo Instructional Video

This video has been uploaded as a private video in GitLab Unfiltered. You MUST be logged into Unfiltered to view the video. Instructions on how to log into GitLab Unfiltered can be found [here](#).

Instructions:

- Click into your event's Marketo program
- Click into Assets
- Click into Registration Landing Page
- Click "Edit Draft" on the landing page in Marketo
- Under "Variables" on the right side panel, toggle Hero 2 Visibility to "Visible". This adds the language that the event is at capacity.
- If you need to change the copy of the text, double click on the content on the left side of the screen and you can manually change the verbiage. When done, click "save."
- Toggle 2column visibility to "Hidden". This removes all existing content, including the form, from the page.
- Toggle flex 1 Visibility to "Visible". This adds the landing page content back onto the page, without the form.
- Click "Preview Draft" to make sure everything looks accurate.
- Click "Preview Actions" > "Approve and Close" to save your changes. If you need to make additional edits, click "Edit Draft". Be sure to select "Approve and Close" when you are finished.
- Check your live landing page to make sure the content displays correctly and the form has been removed.

Field Marketing Process: How to Execute a Virtual Workshop

Pre-Event Set Up

DRI: FMM and FMC

1. Review the current workshops and identify if what is offered meets your criteria or if a new workshop needs to be created to meet your objectives.

Current available Workshops can be found [Here](#)

1. Identify if a workshop is currently planned that might support your needs. Click [here](#) to view calendar of scheduled events.

1. Work with Customer Success team (SAs) to identify the lead instructors/presenters. You must have your lead instructor identified at this time and work together to select a date.

1. Once a date has been confirmed, Lead SA must coordinate with the Demo Engineer (Logan Stucker) to obtain the demo environment redemption code and discuss SLAs to ensure demo meets code requirements.

1. If the audience is account centric, if you are not doing paid social media, or need your own workshop due to your account goals, consider running an Owned Event utilizing your personal Zoom account. Sales can run on their own, or with field marketing. If not, then it would qualify as a Webcast. Click [here](#) for virtual events decision tree for more information.

1. Work with the Sales Team to identify who your Moderator (MC) will be; recommend this be one of your SAs. Moderator will set the tone for the workshop as well as introduce presenters throughout the event and announce poll questions/answers.

1. Create a Zoom License Request

- The date reservation request must be submitted no less than 32 business days prior to event date for existing copy and content and 45 days prior to the event date for new copy and content.

- For workshops, the moderator and lead SA must be secured in order to reserve the date.

- The FMC will assign/confirm the date of the webcast according to this process.

1. Once you have obtained a Webcast date, create a Field Marketing issue for a virtual workshop utilizing the Virtual Workshop Template.

1. FMM will ping FMC to create epic and sub-issues (linked in epic code).

1. Once the FMC has created the sub-issues they are responsible for (broken out in the epic code), they will then ping the FMM to create any of the optional sub-issues they may require (also broken out in the epic code).

1. FMC and FMM will assign the due dates for their appropriate sub-issues according to the SLA workback schedule

1. Once Marketing Ops creates the landing page, they will ping the FMM to review. Once the landing page is live, the FMM will ping the FMC to add the workshop to the GitLab Events Page utilizing this step by step guide. FMC also to make sure the landing page is linked in the epic.

1. FMM to create the Template for Certification of Completion

1. Note about Optional Issues:

- For workshop design requests, you have the option of opening a Marketing Design Request or utilizing Canva in a self-serve capacity (see below for Canva instructions and templates).

1. Review Marketing Copy Doc - Update copy for landing page, emails, update the times, dates, redemption code in the 1-week reminder emails. Note that changes to the landing page or email copy will require the 45 day SLA noted above for new copy/content.

- If new content: Work with Presenters/Instructors to create presentation slides, labs, demos, as well as copy for landing page and emails.

- If existing content: Work with Presenters/Instructors to update presentation slides.

1. FMM DRI to work together on developing the script for MC within the Dry Run document utilizing the Dry Run Template.

- FMM also needs to compile Presenter's Bio's to include in the script for MC to announce as a brief introduction during the workshop before they begin their portion.

- For more details, please review the Workshop Dry Run and Q&A Section below.

1. FMM to fill out Dry Run Template with roles/responsibilities/quick links and more.
1. FMM will need to create the Intro and Transition Slidedeck and Lead SA to create remaining Workshop slides and update content in the Workshop Google drive here.
1. Update/Create Post event survey questions and google form. Click here for an Example
1. Create/Review polling questions for the event in the Prepare for Webcast Issue the FMC has opened. Reference the parent epic for suggestions/previous polling questions/when to launch and more. Once you have your polling questions finalized, ping the FMC in the issue to let them know.
1. Sales Nomination Information: The Sales Nomination process is critical to the success of the workshop as a sales tool to nudge accounts across the finish line or create conversation points. Video instructions on how to Sales Nominate can be found here. Best practices can be identified in the epic but the FMM will need assign due dates in the invite issue according to the workback schedule to request the email is ready at least two weeks prior to the marketing email invites.
1. Once a date is set with the Lead SA and FMM, continue to work with the Customer Success/SA teams to confirm who will lead each session, confirm 2-3 additional SAs for Q&A and provide the complete team in the Dry Run Scheduling Issue.
 - Please note for the Advanced CI/CD workshop you really need three (3) dedicated Q&A SAs to support the level and number of questions in addition to the presenters and two (2) FMMs are needed and must support transferring Q&A from the zoom webcast to the slack QA channel and back to the answers.
1. Create Event Slack Channel for the team to discuss details, logistics, etc.
1. FMM Create Q&A Slack Channel for the event (example channel: 2020-virtual-workshop-qa) to triage questions/responses from the event.
1. If you have budget and would like to host a virtual raffle, please follow the following process: Select the items (recommend 3 prizes total) you'd like to give away. Include the items in the Transition Slide Deck to have the MC announce at the beginning of the event and at the end. For those who attend the entire event will be eligible for the raffle. You will need to provide the attendees with a code word at the end of the event via the Chat feature in Zoom Webcast during the beginning of the Closing / Final Q&A portion of the event along with the URL to the post-event survey. In addition to adding a question at the end of the Post-Event Survey (click here for example of post-event survey) that allows the attendees to enter the code word.

Canva

DRI: FMM

- Use GitLab's Virtual Events Promotional Templates on Canva.
- Follow the directions on the first slide of the template.
- Once your image is made, click the "share" button, followed by the "download" button, and you've made your promotional image!

If you are uncertain about formatting and/or layout due to varying copy changes based on different workshops, please drop a note in the Slack channel marketing-design.

FMM Shared Canva Login

The Field Marketing team utilizes a shared Canva Enterprise login. The account is linked to the fieldmarketing@gitlab.com google group & the password can be found in the shared marketing 1pass account.

Workshop Pathfactory Tracks

DRI: FMC

Overview

We have 4 workshop Pathfactory track templates, one for each workshop. To navigate to these templates, go to Campaign Tools - Target - Field Marketing folder - Workshop Templates sub-folder. The FMC will clone the appropriate workshop track and add in the presentation deck from that particular workshop. This Pathfactory track will then be included in the follow-up email sent out after the workshop.

Pathfactory Training References

- Pathfactory Handbook Page
- Pathfactory Author Training
 - Adding Content: 5:50 min mark
 - Cloning Tracks: 16 min mark for target track (workshop tracks are set up as target tracks)

Uploading the Presentation Deck

Once you have the final workshop presentation deck, follow the below instructions to add that content to Pathfactory.

1. Click on Add Content button in upper right corner of the screen
1. Upload your presentation file
1. Add a Title for your content (example - CI/CD Workshop 1/12/21 Presentation Deck)
1. Duplicate the name you created in the Title field in the Name field further below under Internal Configuration. These two fields should match.
1. Add brief Description
1. Leave SEO Title blank
1. Content Type will be Presentation (this auto-populates the Funnel Stage and Estimated Cost fields)
1. Custom URL Slug should always be created for an asset (example - CICDWorkshop-1/12/21). No spaces, each word should be separated by a dash and try to keep slug as short as possible.
1. Don't adjust Scoring
1. Adjust to the appropriate Language utilized in your content
1. Business Units is the GTM Motion associated with the piece of content. Every asset should be tagged and aligned to a GTM motion.
1. Personas is WIP and does not currently need to be added
1. Industry can be left blank but if you do have a specific industry you would like to tag, you can do so.
1. Expiry Date should be left blank (this field is mostly used for analyst reports)
1. External ID should be left blank
1. Move to the right-hand pane and add any appropriate topics for your content. Important: Do NOT select any topics marked as Smart Topics. Usually content will have 1-5 topics. Example - for a CI/CD workshop can you tag with CI/CD Continuous Integration and Continuous Delivery
1. Extracted Text is not used so you can leave whatever pulled through
1. You can also change the thumbnail by clicking on the thumbnail for more options
1. Click Done

Cloning Tracks

Note: Cloning a track will pull over all settings from that initial track. All workshop tracks are set up appropriately and should not require any adjustment.

1. Click into the track you would like to clone
1. At the top left corner, you will see a double screen icon that indicates you wish to clone the track. Click on that icon.
1. Follow these naming conventions to name your new track
1. Parent Folder - Select the Workshop Tracks folder
1. Labels - Add Email
1. Click Clone Track
1. On the left hand side bar under Track Settings click on Custom URL and add descriptive slug (example - CICDWorkshop-1/12/21). No spaces, each word should be separated by a dash and try to keep slug as short as possible. Custom URL should always be created. All content tracks should be set up with custom URL slugs to prevent any future changes to the track from breaking the link and thus, the user experience. This will also lock in your Pathfactory track URL so your URL will always stay the same, even if you switch out content within your track.
1. To remove the existing presentation deck, click on the deck and in the bottom right hand corner, click on the trash can icon. Confirm that you would like to delete the content from your track. Note: Do not delete content from the Pathfactory library, only delete from your individual track.
1. Click Add Content to find/add in your previously uploaded presentation deck
1. Since this is a target track, you are able to move around the pieces of content in any order
1. Refresh any changes you make
1. Add your new track to the Changelog

Adding the Track to Marketo Token and Checking Follow up Email

1. When you are in your newly cloned Pathfactory track, go to the top left corner and click on the Get Share URL icon. Copy the URL link. You do not need to add a Query String.
1. Click into your campaign's Marketo program tokens and update {{my.pfslidelink}} with your new Pathfactory track by following these instructions.
1. Helpful Hint: Once you receive final slides from the FMM and add to the Pathfactory track, it's a good idea for you both to go back to your follow up email test (email also available to preview in the Marketo program) and make sure the presentation link button in the email is taking you to the correct Pathfactory track with updated presentation.

Workshop Dry Run and Q&A

DRI: FMM

- Q&A for the Virtual Workshops is handled via the Q&A feature of Zoom, due to the volume of questions received. We will tell attendees multiple times throughout the event to direct questions to Q&A.
- We do not use chat for attendees to communicate on this event. However, the Host will push webcast specific details via chat
- What we found works best is to have a person who coordinates the questions and answers. This person will copy questions from Q&A into the Slack channel determined during the dry run and any available SA will answer it in a thread. The Q&A coordinator should be someone from the SA

team who can identify questions that are best to answer live, best to answer offline, and best to answer in writing.

- A coordinator makes it so we avoid answering over each other. We also have some canned responses that can be copied and pasted in.
- The Q&A coordinator should be determined on the dry run and recorded in the dry run document.

Details on Slack Question Management

DRI: FMM

- Coordinator will copy all questions into Slack.
- If a question looks good to answer live, mark it as "Answer Live" in Slack (so no one else starts work on it), then in the Q&A window.
- Only the Q&A Coordinator should enter answers into the Q&A box in Zoom. SAs will answer in the thread and indicate the answer is ready to give to attendees using the emoji system noted in the channel.
- If a question is marked to answer live, do not touch it until AFTER it is read and fully answered.
- Q&A support will respond in threaded comments while using the following emoji:
 - Working: :thumbsup:
 - Answered and ready to be posted into Zoom: :heavycheckmark:
 - Answer has been posted in Zoom: :whitecheckmark:
 - Need Help Answering: :sos:
 - Answer Live: :microphone:
- Questions may be held in queue until the coordinator wants them answered. For example, a question may come up during the basics presentation that makes more sense to answer during the CI/CD session. The question will sit unanswered in the queue until then.
- Be comfortable with questions not being answered right away. It is up to the coordinator to determine when to answer and who will answer.
- Follow-up with attendees who we say we'll follow-up with. The person responsible for follow-up will be determined during the dry run.
- Questions asked by attendees are not visible to other attendees until the answer is written. Answer live questions are visible.
- You may also dismiss questions by hovering over them and hitting "Dismiss"

During Event

DRI: FMM

Note: The FMM/DRIs are not to pause the workshop/webcast presentation. Pausing the workshop/webcast will negatively impact the final recording and follow-up email SLA.

FMM DRIs during the event are not only responsible for day of event coordination (virtually) but are also designated time keepers and hosts of the event.

For more information about hosting a virtual hands-on workshop, please watch this training video.

Day of Event Coordination

DRI: FMM

- Field Marketing is the Host of the workshop and runs pre-event check, ensuring all speakers are able to properly display slides and are heard. This time is also to address any last minute questions from the team executing the event.
- Field Marketing helps support by placing questions in the designated slack channel for Question Coordinator (Lead SA) to assign SA's to answer the question. The slack channel allows other SAs to jump in if they have some free time in their day and it allows an easier point of discussion. Once a question is answered, the Question Coordinator (Lead SA) will place the answer in the Q&A section of the Zoom webcast queue.
- FMMs will at times need to update the Introductions & Transitions Slide Deck with the accurate time of the break. This can be updated in advance but the presentations before the Break slide in the deck can run long or short due so advise for the FMM to update in real-time.
- FMMs will need to list the following in the Chat feature of the Zoom Webcast live during the beginning of the Closing / Q&A section of the event once the MC announces the raffle prizes:
 - Shortened URL of the Post-Event Survey
 - Code word to list in the Post-Event Survey for the attendees to be eligible to win one of the raffle prizes
 - Add promotion of upcoming workshop dates

Time Keepers

DRI: FMM

FMMs will need to keep a close eye on the time. Notify the team and the next presenter when there time is nearing an end in the event's slack channel (not the Q&A slack channel for the event)

Workshop Communication to Attendees During Event

DRI: FMM

- Each presenter will present from their own computer and share their screen.
- The moderator will show the agenda slide with demo instructions during the intro and welcome.
- When we go live, the host (person running the technical side of the webcast) will push the demo instructions to chat throughout the first two presentations. The exact copy is available in the dry run agenda because the specific demo code must be entered.
- Throughout the presentation, the host will also push a Q&A reminder to chat: "If you have any questions or technical issues, please use the Q&A function to submit your question."
- At the end of the session, the host will push the post-event survey through chat. The copy is available in the dry run agenda as the specific post-event survey link must be provided.

Post-Event

DRI: FMM

- Close out reporting
- Raffle award closing
- Close issue
- Deactivate Marketo registration campaigns

- Under "Schedule" on the 01a Registration Flow (single timeslot) or 01b Registration Flow (Multi-timeslot) smart campaign, click Deactivate once the webcast has completed.

Logging in to the Zoom Webcast Account

For many post-event tasks, you must be logged in to the Field Marketing Zoom Webcast account. To do this:

- Navigate to zoom.com on your web browser
- Click on My Account which will log you into your personal Zoom account
- Click on your account picture at the top right hand corner
- Click Sign Out
- Click Sign In and utilize the Zoom Webcast Login that is saved in the Marketing 1pass
- You will then be signed in to the Zoom Webcast Account
- Remember to log out of the Zoom Webcast Account when you are done and sign back in to your personal Zoom account

Downloading the Recording from Zoom

DRI: FMC

- Please see this section for detailed instructions on how to download a Zoom recording.

Closing out Workshops

DRI: FMM

Now that the event is over, it is important to consolidate all of the information points and upload them into Salesforce to streamline our sales follow up. The FMM DRI is responsible for consolidating the data from each of the attendees into the lead sheet. Consolidate data and include it in the Notes column to complete list clean and upload. This requires obtaining:

- The attendee list with contact information (see instructions below)
- The Post Event Survey results
- The data from Zoom Q&A queue (FMMs to pull this data utilizing the below instructions)
- Workshop recordings should be posted to the shared drive and to the main issue.

Pulling attendee report, Q&A report, and recording

- In the webcast account, click Webinars > Previous Webinars
- Select the webinar you would like to pull reports for.
- Scroll down to the bottom of the screen and click View Attendee Report
- Select the live workshop date (you will see two, one for the dry run, one for the live event). You'll know it is the correct one because it will have more attendees.
- Click Generate CSV Report
- From the same screen, select Q&A Report
- If your event does not pull into the display automatically, enter the webcast ID OR enter the date of the event
- Select the workshop you would like the Q&A report for
- Click Generate CSV Report

How to Consolidate the Data

DRI: FMM

1. Attendee Report: While you are already logged into the webcast account, download a copy from SFDC. The email address will be the key to consolidating the data. Load into the field marketing event template
2. Post Event Survey: Create a new worksheet in the Event template and put the Post event survey responses in a new worksheet
 - Consolidate the data points with Concatenate formulas. The formulas need to capture the question and the individual responses. For example: =CONCATENATE(\$C\$1&": "&C2&" | "&\$D\$1&": "&D2&" | "&\$E\$1&": "&E2&" | "&\$F\$1&": "&F2) This will capture a summary for each question
 - Note: Sometimes google sheets can only build two or three questions before it stops working so you often need to build a few of these to capture all of the data points. If this happens build a final summary to put all of this together.
 - When this is complete, copy and paste values of the final answer, into an empty column adjacent to the email address.
3. Transfer Consolidated Post event Survey into Attendee list:
 - To do this you are matching email addresses, and adding the values of the concatenated formulas from the Q&A sheet and entering it into the attendee sheet
 - Move the values of the final concatenate formula from the last column to a column next to email addresses
 - In the attendee worksheet, use this vlookup by going to the cell in the attendee sheet you want to populate and place this formula: =VLOOKUP(C2,'Q&A'!E:F,2,False) NOTE: you may need to adjust - Column E is email address, Column F is the consolidated data (in the Q&A sheet). The number 2 is the cell you want to upload into the attendee spreadsheet, and put False.
 - Copy the value of the answer into the next column and mark as Q&A Value
4. Q&A Report: In the event customers asked questions in the chat room, refer to the Q&A report to get the email, full name, question and answer
 - Add this report as a new worksheet to the event spreadsheet
 - Begin building consolidating the questions/answers for each line using a Concatenate formula
 - Check if a customer asked multiple questions and consolidate all of their Q&A into one line
 - When you have all of the data for each attendee you are ready to bring it over to the attendee workshop
 - In the attendee workshop use the same vlookup function as you did with the Survey data. Build in a column and bring the Q&A into the attendee report
5. Consolidate: Consolidate all of the information into the notes column and submit a clean list upload issue noting that the attendees already exist in the system this is just to add data points.

Raffle Awards Closing Process

DRI: FMM

1. At the completion of the event, take the number of attendees and add them to a random number generator to select your winner(s). You can choose how many times you would like to randomize, but usually 3 or 4 times will do it. Select the number of winners based on your prizes from the top of the list.

1. Once the winner(s) have been selected, send an email (click here for template) to the winner(s) to notify them that they've won and collect an address to ship the prize to. Option to CC the SAE who is tied to the account to allow them visibility / allow for possible follow up meeting.

1. Once you have the responses from the winner(s), ship the prizes, delete the email with the address and if possible do not save the shipping address in your Amazon/Best Buy account or delete immediately after delivery.

Event Close Process

DRI: FMM

Normal FM close process: Send follow-up email, gather recap information from the team and close the issue.

Proposing New Workshops

If you have a new workshop idea/topic, you can build out a Parent Epic for that workshop utilizing the epic code below. Please note that the first time you set up the new workshop, it will run as a -45 SLA with all new content. If you decide you would like to repeat the workshop in the future, you will need to work with the Marketing Ops team to build out the new workshop's backend templates in Marketo. Please open an issue with them here to work through setting up the new workshop. You would also then need to add all finalized details and link to the new workshop throughout these handbook page instructions, as well add the new workshop details to the FM Workshop Template.

Owned Events Hosted on Personal Zoom Accounts

Capacity

DRI: FMM & FMC

Note that our capacity for events run on personal Zoom accounts is 200 attendees. With our attrition rates, that means you should plan on shutting down registration at around 400 registrants. The FMC is responsible for tracking the registrations via the Marketo program.

Epic

Please see the Owned Events epic code here

Logistical Setup

Logistical Setup

DRI: FMM

Things to Remember

- Note that we do not have an integration set up with Marketo and Zoom for events run on personal Zoom accounts, so the process is different from the Webcast/Workshop process hosted on our Zoom webcast license where we do have an integration in place.
- Since the Marketo LP is not integrated with the platform, this means when attendees register on the Marketo LP, that does not register them on the Zoom platform. Instead, we send every registrant a confirmation email that includes the sign in URL so they can log into the event.
- It is recommended you also include the sign in URL in the Marketo reminder email in case registrants have lost their confirmation email.
- If you plan on sending a Marketo reminder email to attendees, you do not need to set up the reminder email in Zoom.

In order for your FMC to triage your Marketo LP issues, you must have your Zoom event set up in advance and link your URL in the FMC Checklist section of your FM issue.

SECTION: marketing/growth/_index.md

Growth Section Overview

The GitLab Growth section is dedicated to making it easier for teams to find value and increased efficiency within the GitLab platform. We work across stages within the product experience to make the product as easy as possible to adopt and use.

The Growth section lives within Marketing & Strategy to ensure we're aligned in our go-to-market strategy and we're as efficient as possible in finding the right prospects, convincing them to become product users, and assisting in converting them into paying customers. Since the work within the section occurs within the product experience our engineering and user experience counterparts are within the Development division. This approach ensures that we have proper alignment on our priorities from a go-to-market and business perspective while ensuring our development team is set up for success to operate within the development division.

Growth Section's Principles

The Growth team works cross functionally within the organization to increase user and business value. We ground ourselves in four core principles.

1. Partner with stakeholders in Marketing, Sales, and Product to establish metrics informed by quantitative and qualitative data that meet the business needs while supporting our users
2. Empower teams to find value efficiency in the GitLab platform
3. Enable teams to quickly and intuitively adopt multiple stages with multiple users
4. Empower teams to find enterprise value within features that live in our Ultimate offering

Core metrics, findings & experimentation results

Metrics

Acquisition - Valuable signup

Internal team members can view this metric [here](#)

Activation - Team activation

Internal team members can view this metric [here](#)

Findings and experimentation results

Our core findings and experiment results are considered non-public information. Internal team members can reference the internal handbook growth page for a detailed review of our findings.

Vision

Our vision is to make it seamless for teams to find, adopt, and discover value along with increased efficiency in the GitLab platform.

This includes

Aligning internally with signups we want to prioritize as a business

Ensuring the signup experience is balanced by collecting the information required for the business while collecting the needed user information (JTBD) to provide a tailored product experience

Assisting users in finding product value (ah-ha moments) as quickly as possible including increasing access to enterprise value

Assisting users in their product adoption experience that aligned with their defined JTBD

Providing users with the purchase experiences that align with their business

For SMBs this means uncovering the value in the paid tiers through in-product experiences including trials married with related marketing and sales content related to their usage

For larger businesses, this encompasses empowering namespaces owners to understand what features their teams are using and which paid features they are requesting access to. While also providing them with the ability to connect directly with their dedicated point of contact within sales. This could include in-app messaging, and the ability to book time on their point of contact calendar directly within the app.

Groups

The growth division is currently grouped under the Acquisition team that contains a shared growth backlog while we actively hire additional team members to build out a activation team.

Acquisition

Team description, dedicated handbook page and specific vision is a work in progress.

Activation

Team description, dedicated handbook page and specific vision is a work in progress.

Product ownership

The Growth section owns the following areas of the product experience.

The free user and trial registration experience

The new user onboarding experience

GitLab Experiment Gem (also referred to as GLEX)

Instance review

Product Qualified Leads

While we own these areas our work is not limited to these specific areas as the teams work cross-functionally with other product and business teams to improve the user experience the most efficient way possible.

Engineering

Growth engineering handbook pages.

Growth Coffee & Learn Sessions

Growth requires constant learning, and many companies face similar challenges or go through similar journeys. At GitLab, we believe hearing from growth experts and practitioners with diverse background is the best way to learn, and we want to share that with the community as much as possible. Therefore, we started a growth Coffee & Learn series since 2020. Below is a list of experts we invited to share their wisdom with us. We appreciate their time and insights, note that some videos/notes are viewable by internal team only.

Expert	Background	Topic	Video	Notes
--------	------------	-------	-------	-------

Expert	Background	Topic	Video	Notes

Growth Definitions

Sign-up Experience: Registering to be a user of GitLab. It generally starts on about.gitlab.com and ends when the user is registered and can log in to the application. We have free, trial and direct to paid sign-up options.

Registration Flow: The "happy path" flow a new user goes through when registering for GitLab and landing in the app for the first time. This is a more confined user flow, as we narrow down options so they can experience GitLab without being overwhelmed by all the other features. It starts at about.gitlab.com and ideally ends with them using Create features.

Trial Experience: The experience of selecting and starting a trial, as well as testing/trialing features in GitLab.com or a self-managed instance during the trial. This could be done by net new users of GitLab, or existing users of GitLab who are interesting in exploring paid features.

User Onboarding: A general term that refers to experiences we create to support users during their first 90 days, or any time they engage with a new stage.

Continuous onboarding: Specifically our onboarding experience that allows users to choose when and if they want to continue onboarding tasks. It starts with simple tasks and builds to more complex ones.

Onboarding Emails: Refers to emails that are sent to SaaS and self-managed users intended to drive stage adoption via the email service the instance sets up.

SaaS Purchase Flow - We consider the SaaS purchase flow (or "funnel") to begin with the first screen of the checkout experience (the first page that displays the total cost of their GitLab subscription) and continues through the payment sequence with the last step of the flow being the successful first-time purchase of a GitLab paid tier. A potential customer can enter this experience directly within the SaaS app from the [/billings](#) page or on about.gitlab.com/pricing.

Growth Shared Calendar

We use Growth PTO shared calendar to ensure all time off events are visible to everyone on the Growth team. To enable syncing your PTO from Time Off by Deel with this calendar follow these instructions:

1. In Slack open app Time Off by Deel
1. Ensure you are on Home tab and select Calendar Sync from the dropdown menu
1. Under the section Additional calendars to include? click Add calendar
1. Copy & paste this calendar ID:
`c5e5a9e4df8718fb25c518f165ca78fbccd42a7b6e1437a3caa6650e8e8dffbea@group.calendar.google.com`

Congratulations! :tada: From now on all your PTO events will be automatically synced to our shared calendar!

Inbound Marketing Overview

Inbound Marketing exists to build, grow, and protect the business value created at the top of GitLab's marketing funnel. Through organic engagement with our content, both on the GitLab website and through other channels, we work to establish mindshare and relationships with existing and potential GitLab customers.

Measuring Progress

Website Pageviews

Cumulatively increase pageviews on the GitLab Marketing Website by 20% year-over-year.

Fiscal Quarter	Cumulative Pageviews Goal	Actual
-----	-----	-----
Q1FY22	23.4M	24.4M
Q2FY22	47.3M	TBD
Q3FY22	69.6M	TBD
Q4FY22	93.8M	TBD

GitLab team members can view the internal dashboard

Inbound Inquiries

Fiscal Quarter	Inquiries	Actual	Pace
-----	-----	-----	----
Q1FY22	33,400	41,000	----
Q2FY22	43,000	29,300 as of 2021-07-01	44,190
Q3FY22	45,200	TBD	----
Q4FY22	47,500	TBD	----

SSoT: GitLab team members can view the live internal dashboard for inquiries and trials

Definition

An inquiry is defined as:

- a unique email address
- submitted within the past 180 days
- From one of the following Sisense sources:
 - Trial - Enterprise
 - Trial - GitLab.com
 - Inbound

Planning

Inbound Marketing planning activities are organized in this epic. We currently plan on an annual and quarterly cadence, and are moving toward planning two quarters in advance for H2 FY22.

Objectives & Key Results

Inbound Marketing sets quarterly OKRs, and also maintains a backlog of future OKR candidates for consideration.

Q2 FY22 Inbound Marketing OKRs

Past OKRs

- Q1FY22 OKRs
- CANDIDATES Q2FY22

Brand and Design Issue Templates

The brand and design team is now the Brand Activation team under Corporate Marketing. Please see their Handbook page for requesting support.

Inbound Marketing Issue Templates

- Request a redirect
- Request keyword research

Video Issue Templates

- Requesting a new video
 - Use this template only for requesting new videos that haven't been produced yet
 - If you are looking for edits to existing content that has been filmed, use the video editing request
- Process documentation link placeholder
- Requesting a video edit
 - Use this template for editing existing content that has been filmed
 - DO NOT use this template for new videos
- Process documentation link placeholder
- Requesting a video upload
 - Process documetation link placeholder

How we use GitLab

Boards

Overarching Inbound Marketing Boards

Triage Board

Triage Board

- GOAL: Weed out issues that superfluous or don't contain extra information
- ACTIONS: Move to either
 - Move to either mktg-status:PLAN which puts into the Sprint cycle or;
 - [mktg-status: blocked] and comment why it is being blocked

Sprint Board

Sprint Board

- GOAL: Assign issues to milestones to be worked on then based on due dates, weights, priorities, resources

- ACTIONS:

> HANDOFF: This is where the handoff to Inbound Marketing Teams takes place to run their processes

- Move to a specific week taking into consideration the above

- Backlog if:

- It doesn't fit into current goals or priorities

- We don't have the time or resources currently

- It is just a cool idea (some of these may be labeled for future review for upcoming strategies & tactics)

- Comment why it is backlogged

- Never backlog PR issues without prior discussion

Inbound Marketing Leads Overview

Inbound Marketing Leads Overview

- GOAL: An overview of the work on each of the Inbound Marketing Teams during the current Milestone Sprint

- ACTIONS:

- Review and help prioritize

Labels

Labels are important because they help populate the boards and make them work. The minimum viable usage is using mktg-inbound and using a scoped mktg-status label as shown below.

Meanings and usage

Team Labels

- mktg-inbound

- Means it is for the Inbound Marketing Team

- Used to help pull in boards

- Is not a label to denote the status of an issue

- [Team Labels within Inbound Marketing] mktg-search, mktg-content

- Denotes it could be part of a Inbound Marketing Group scope

- Is not a label to denote the status of an issue

- [Sub-team Labels] content marketing, editorial, digital-production, UX-Design, Web-Dev

- The sub-teams within Inbound Marketing Teams

- Is not a label to denote the status of an issue

Status Labels

- mktg-status::triage
 - Triage is for requests that come from outside Inbound Marketing
 - Is used to denote the status of an issue as being reviewed to go into the working pipeline
 - Does not denote the timeline it will be worked on
- mktg-status::plan
 - Is used to denote the status of an issue as having being reviewed for all details needed
 - No milestone nor assignee attached to the issue
 - Does not denote the timeline it will be worked on
- mktg-status::WIP
 - Is used to denote that an issue has been assigned to a sprint and assignee and will be worked on
 - Minimum Viable Usage includes using the following:
 - Milestone Fri: MONTH DAY
 - Weight
 - A weight of one is half a day
 - As weights start to get bigger than 4, we recommend chunking it down further
 - One Assignee
 - We actively encourage only assigning one person to an issue. You may tag other affected parties within the issue itself by using @username within the issue thread.
- mktg-status::blocked
 - Is used to denote the status of an issue as not having enough information to proceed
 - Does not denote the timeline it will be worked on
 - This should ONLY be used in the Triage process or if an issue becomes so blocked it needs to be re-scheduled.
 - If an issue is blocked it goes back into the Triage process and is scheduled from there
- mktg-status::review
 - Is used to denote the status of an issue as in the peer-review process.
 - Does not denote the timeline it will be worked on

Projects

Additional Labels

- IM-Support
 - Denotes if this is support provided to another team outside of Inbound Marketing
 - Will be used to help quickly view how many issues Inbound Marketing supported each year to provide as references for budget and resources requests.
- IM-Review-Future
 - Will be reviewed by InboundMarketing for potential future strategy

Milestones

Meanings and usage

- Fri: MONTH DAY
 - Denotes which week an issue will be worked on
 - Worked on = will be broken down into smaller Issues or Issue will be completed and closed
- Inbound Marketing Backlog
 - Denotes that this not fit into current goals, time, or resources - can be reviewed later for informing future goals

- Does NOT mean the issue request is cancelled
- Case Study
 - ONLY for Case Studies
 - Created because they span multiple months and teams and timelines cannot be accurately assessed until towards the end
 - New issues with sprint milestones will be made for publishing the case study
- INFORMATION GATHERING
 - Denotes issues used to gather information, but do not have set deliverables

Epics

This is how we use Epics to organize our projects. We aim to include the highest level information at the top level and specific information in lower-level epics. This is to keep a SSoT and avoid duplicative placement of information that would need to be updated in multiple places

- Top Level Epic
 - Quarterly OKRs
 - OKR structure iteration
 - Links to the yearly strategy that contains themes
- Second Tier Epic
 - Stores the team or channel strategy/improvements broken into phases
 - Includes
 - Current state
 - Stakeholders
 - Metrics - Baseline and Target
 - Desired state - Key audience + Intent and Key company goals
 - Improvement Roadmap - broken out by quarter if it will cross multiple
 - Phases - per quarter and includes:
 - The Problem
 - The Solution
 - Why this Effort
- Third Tier Epics
 - Epic per phase - one epic per phase
 - Contains:
 - Scope of project
 - Roles & Responsibilities Chart if different than the parent epic
 - Relevant Documents
 - High-level epic production only - All production for individual issues should be placed in those issues to avoid redundancy
- Fourth Tier Epics
 - MVCs for project - one epic per MVC
 - Contains:
 - Scope of MVC
 - Relevant Documents
 - High-level epic production only - All production for individual issues should be placed in those issues to avoid redundancy
- Fifth Tier Epics
 - Production issues

Issues

Issue Types

This is how we work with Issues and their scope

External

(outside of Inbound Marketing)

REQUEST ONLY ISSUE

- This is for complicated projects (example: campaign).
- This type of Issue is submitted by a team OUTSIDE of Inbound Marketing.
- This serves as a brief to us.
- For each type of request we have a corresponding Request [Type] Issue Template that should be filled out to begin the process.
 - Requesting Support
- Actions taken on issue:
 - Reviewed for all information and label changed to mktg-status::PLAN if all there or mktg-status::blocked if not all info is there
 - Assigned to a team member to execute on
 - Assigned to a Sprint week to be worked on (worked on= broken down into Production Issues)
 - Issue is added to a child Epic and execution issues are made for creating
 - Assignee will comment and close the Request Issue and deliver the work in the Child Epic

REQUEST AND PRODUCTION ISSUE

- This is for a simple ask (example: single asset)
- This type of Issue is submitted by a team outside of Inbound Marketing and will contain relevant information for the project AND;
- Execution Items/Production Checklists for the Inbound Marketing Teams.
- For each type of request we have a corresponding Request [Type] Issue Template that should be filled out to begin the process.
- Actions taken on issue:
 - Reviewed for all information and label changed to mktg-status::PLAN if all there or mktg-status::blocked if not all info is there
 - Assigned to a team member to execute on
 - Assigned to a Sprint week to be worked on (worked on = deliverables created)
 - Assignee will follow the production checklist and deliver work within the original Issue

Internal

(inside of Inbound Marketing)

PRODUCTION ISSUE

- This is an Issue we use internally to create and execute on the request/brief.
- These are only used by people inside of Inbound Marketing
- For each type of request we have a corresponding Production [Type] Issue Template that should be filled out to begin the process.

- The teams will deliver the individual pieces to these Issues, but not the completed ask. That should be delivered into the Child Epic created

Issue Templates

External

(outside of Inbound Marketing):

Issue Author

- Pick template based on Handbook directions
- Template tags will be automatically added:
 - mktg-inbound
 - mktg-status::triage
 - The relevant Group Label: design, content marketing, or mktg-analytics
 - IM-Support
- Template contains specific information to help fill out including directions for picking a due date
- Template has auto-assignees
- Links to Handbook page for additional information

Internal

(inside of Inbound Marketing):

Assignees of Issues:

- Pick template for breakout of brief
- Template tags:
 - Keep existing above EXCEPT if we start the project then we remove MG-Support
 - Add your team's process tags
- If the ask (External brief Issue) requires one ask:
 - Re-assign as need, make sure it is in a sprint week and follow documented processes
- If the ask (External brief Issue) requires more than one ask:
 - Create an Epic to hold project
 - Copy and paste markdown into Epic Description and use header: "External Brief"
 - Associate Issue with Epic
 - Comment Close Issue that the project epic has been created
 - Build out necessary Issues in project, Associate with Epic, assign Issues and update Epic Description as needed with additional brief information

Process

Video Playlists

In an effort to make async communication and collaboration as effective as possible, below are relevant playlists created by the Inbound Marketing teams. We welcome suggestions for additional playlists and videos that would help your team. Please request in our slack channel

- Weekly Inbound Marketing Recap and Demo
- SEO Update
- Marketing Metrics
- Digital Experience Playlist
- Global Content Updates

Budget

Budget Management

- Allocadia is our SSoT for the budget
- The budget is quarterized per team

Vendor Management

Vendor recruitment

If you know of a brand or digital vendor, whether "an agency of one" (aka freelancer) or agency, please share the contact with your manager for further consideration.

Vendor on-boarding

1. Manager creates Access Request issue for relevant GitLab projects and Slack channels
1. Manager creates Intro to GitLab issue
1. Intro call with Manager, Vendor, and Vendor Buddy to set expectations, outline workflow, share relevant handbook links, and introduce first project(s).
1. Vendor completes Intro to GitLab issue, including standard and design and or dev on-boarding tasks (depending on vendor type).
1. Help any developer vendors if they have trouble setting up their code environment and please familiarize them with our codebase.
1. Questions about on-boarding, please see handbook, your manager, and or the [marketingbrandcontractoronboarding](#) channel.

Vendor project management

Team

- Assigning Issues to Vendors
 - Assign the vendor and team member who will be the vendor's buddy.
 - Ensure following labels are on the issue:
 - vendor
 - Assign the issue to a milestone, as appropriate.
 - Confirm the issue appears on the vendor board.
 - Capture opportunities to improve vendor management in the vendor management epic.

Vendor buddy

- Managing Vendor Work
 - Ensure you and vendor are assigned to the issue.
 - Check-in regularly to ensure progress and clear blockers.

- Ensure projects to which you're assigned are maintained on the vendor board, just as you maintain your own projects.
- Communicate with vendor in issues and or the vendor-contract slack channel, brand-contractors, per GitLab's async communication best practices. Also be aware GitLab's async model may be new to contractors. Be open to synchronous meetings as vendors acclimate to async work.
- Meet standard GitLab and Brand and Digital work practices, including open and inclusive design and weekly status updates.
- Review vendor deliverables for quality assurance.
- Addressing Concerns
 - Should issues arise, provide vendors feedback in private. Be specific on the concern, how it can be resolved, and set a date for when it will be resolved.
 - Share critical concerns or patterns of issues with your manager.
 - Immediately report urgent concerns to your manager, such as significant project delays or poor quality of work.

Vendor invoicing, payment and reporting

Vendor buddy

- Ensure you know enough about the invoicing process to assist when directing invoicing questions from the vendor to the appropriate party.
- Please don't drop the ball, we want vendors to be happy and get paid.
- Please follow any questions from start to finish to keep things moving along.
 - Ex: "I'm having trouble with Coupa, who can help me?" (Accounts Payable Team)
 - Ex: "Do I need a purchase order number for my invoice?"

Managers

- Vendor contracts - Negotiate and execute vendor contracts, with Director's approval. Goals are to maximize value delivered within our allocated vendor budget.
- Invoicing - Ensure vendors:
 - Successfully onboards themselves in Coupa
 - Adhere to GitLab's invoicing standards
 - Invoice all remaining hours by the end of month
- Monthly vendor work report
 - Provide director with end of month report of vendor projects, including projects in progress and those completed within the past month.

Director

- Approve invoices
 - Approve invoices in Coupa throughout the month and at end of month.
 - Validate vendor invoices and deliverables with Brand and Digital managers.
 - Ensure projects are billed to the appropriate budgets.
- Approve contracts
 - Engage vendors in alignment with brand and business objectives.
 - Manage overall budget spend.
- Monthly vendor work report
 - Add spend to Monthly Vendor Work Report and distribute to stakeholders for awareness.

Stakeholders include Inbound leadership, Finance, and Marketing team leads working with vendors.

Search Marketing

The Search Marketing team focuses on helping grow revenue for GitLab by increasing traffic to GitLab public websites and improving conversion paths for visitors to become MQLs (Marketing Qualified Leads). We use research and data to help improve organic discovery and make sure our offers match visitor expectations across about.gitlab.com.

Meet the Search Marketing team

Niall Cregan

Title: Search Marketing Manager

GitLab handle: ncregan

Slack handle: @Niall Cregan

Hanif Smith-Watson

Title: Search Marketing Manager

GitLab handle: hsmith-watson

Slack handle: @Hanif Smith-Watson

Areas we focus

Organic discovery

- site health for about.gitlab.com

- keyword research

- search architecture

Marketing website analytics

Testing changes to improve conversion

- on page CTAs (call to action)

- A/B testing

Total conversion rate

The Search Marketing team focuses on growing revenue for GitLab by increasing traffic that generates new accounts for sales and our self-service workflows. To arrive at our total conversion rate we divide unique form submit events by unique pageviews on about.gitlab.com.

We publish our total conversion rate monthly in dataStudio.

<iframe width="600" height="450" src="https://datastudio.google.com/embed/reporting/0f5619db-31e3-4a48-8942-5c997367849d/page/4dMdB" frameborder="0" style="border:0" allowfullscreen></iframe>

Tools we maintain

Google Analytics: Google Analytics lets you measure your advertising ROI as well as track your Flash, video, and social networking sites and applications.

Hotjar: Hotjar is a powerful tool that reveals the online behavior and voice of your users. By combining both Analysis and Feedback tools, Hotjar gives you the 'big picture' of how to improve your site's user experience and performance/conversion rates.

Google Optimize: Google Website Optimizer was a free website optimization tool that helped online marketers and webmasters increase visitor conversion rates and overall visitor satisfaction by continually testing different combinations of website content.

Sitebulb: Sitebulb is a website auditing tool for search engine optimization.

Organic discovery

Most people entering gitlab.com and all sub-domains start their journey on a search engine. Our team's goal is to help them discover the most relevant and accurate match for their query.

We don't engage in any dark patterns to trick people or search engine bots. We focus on improving the technical signals our site sends by limiting broken pages, adding redirects, updating metadata, removing duplicate content, and providing relevant research to teams across GitLab. The rest of this page is devoted to the processes we follow to improve overall organic discovery.

SEO slack channel

If you notice something in search and have a question about why it is happening, bring your questions to seo-improvement. The Search Marketing team is active there and happy to investigate search issues.

Setting canonical URLs

When search engines crawl multiple versions of a page they see them all as duplicates, unless you set a canonical version. On about.gitlab.com we use canonicalpath to add this tag to pages. To add this to a page add canonicalpath to the frontmatter with the page path. It should look something like this

yaml

```
canonicalpath: "/sub-folder/page/"
```

In the past we set canonicals automatically across all of about.gitlab.com, but this led to some problems when a page moved. We saw lots of issues in the handbook because a page moved, but the canonical for the content was still set as a different page. This is why we manually manage canonicals for now. As we move the monorepo project forward and split out the blog and handbook from the marketing site we may add more automated canonical management.

Links on about.gitlab.com

We should link to resources that will help our readers. Be sure to include links to blog posts, guides, and other reference material. You can also include links to company or product websites if they are relevant to your topic. These links do not need to be "nofollowed" if they are informational.

However, we should use Google's guidelines on nofollowing links when we exchange a link for a product or service. It's also a best practice to ask for a nofollow link when we sponsor and disclose our links to sponsored content.

Website Health Check

Regular website health checks should be performed. These checks are meant to ensure that there are no issues with the website that could cause issues with traffic to the site. These are the following things to check to ensure the health of the site:

Google Search Console
Google Analytics

Issues to look for in each of these tools:

Google Search Console: Check the dashboard and messages for any important notifications regarding the website. Also check under Search Traffic > Manual Actions for any URLs that have been identified as spam or harmful content. Forward security warnings to the Abuse team and follow the DMCA complaint process with the support team.

Google Analytics: Compare organic site traffic from the most previous week compared to the previous week and look for any large fluctuations.

Using robots metadata to manage search index

There are times we need to keep pages out of search indexes. For example, we might duplicate most of a page to improve conversion for an ad campaign. It's relatively rare to use this, but it's an important tool that helps us increase organic reach and paid advertising efficiency.

All pages are set to meta name="robots" content="index, follow" by default. To exclude a page from the index add noindex: true to the frontmatter, and this will set the robots metadata to meta name="robots" content="noindex, follow".

about.gitlab.com redirects

Occasionally we need to change URL structures of the website, and we want to make sure that people can find pages they need. We use 301 redirects to send people to the right URL when it's appropriate.

about.gitlab.com redirect policy

We will redirect URLs included in Google's search index. A simple test to see if a page is indexed is to search for the URL with a site modifier, site:url, using Google.

We want to reduce the number of internal redirects, which means we need to update links across about.gitlab.com when we change URLs. When you request a redirect please indicate whether or not you were able to search across about.gitlab.com and update the links for a page you're moving.

Request an about.gitlab.com redirect

The Digital Marketing Programs team can set up and manage all redirects for about.gitlab.com.

To redirect an outdated page, open an issue with the set up a new redirect template in the Growth Marketing project. You'll need to provide the following:

Old URL that needs to be redirected

New URL where users should now be sent

Were you able to update existing links to the old URL across about.gitlab.com?

If you have any questions or concerns regarding your redirect request, ask for help in the inbound-mktg channel on Slack.

Redirect process documentation

The Digital Marketing Programs team uses these technical details for the redirect process on about.gitlab.com.

SECTION: marketing/inbound-marketing/search-marketing/analytics.md

Our marketing team uses analytics tools to understand how people discover and use our marketing website. The Inbound Marketing team manages the analytics implementation for our public websites, including about.gitlab.com and docs.gitlab.com. Our tools include Google Tag Manager, Google Analytics, and Google dataStudio.

If you would like direct access to these sources, please make an Access Request

We use this page to document and share our process.

Website analytics dashboards

We use Google dataStudio to create an easy to share and repeatable process for sharing analytics data for about.gitlab.com. dataStudio allows us to combine data from Google Analytics, Google Ads, and a variety of other sources to create reports with key data for any GitLab team.

When we connect data from Google Sheets everyone on the DMP team needs to be able to access and edit data as needed. To accomplish this we add all Google Sheets used in dataStudio to the Shared Drive in the dataStudio sub-folder. Be sure you only share your Google Sheets in the shared drive because dataStudio does not currently support sharing data sources from shared drives.

Self-serve Website analytics dashboards

Google Analytics traffic: If you would like to check the traffic, referrals, or clicks off of a page hosted on the marketing site (about) just enter your page URL or URLs into the Page field in this dataStudio report Page-level Google Analytics data. To check traffic for a page hosted on the docs site, use the Looker Studio report for docs.gitlab.com.

Google Search results keywords and URLs: If you would like to check the keywords and/or URLs from a specific about.gitlab.com page in Google search, just enter your page URL into the Landing Page field and/or your keyword into the Query field in this dataStudio report Google Search Console lookup

Active dataStudio dashboards

Marketing metrics dashboard TODO: [Update Link](#) · Used to generate data for our monthly marketing metrics deck. A few elements update manually, ping the Digital Marketing team in digitalmarketing if you need updated numbers.

Blog dashboard TODO: [Update Link](#) · Blog content reports, primarily used by the content team to track traffic to the blog, page visits, new and returning users, and conversion.

Just Commit dashboard TODO: [Update Link](#) · Tracks progress of Just Commit integrated campaign.

Job pages dashboard TODO: [Update Link](#) · Provides context around job page interactions.

Security releases dashboard · Website analytics data for security release blog posts.

about.gitlab.com CrUX dashboard TODO: [Update Link](#) · Public See Chrome User Experience Report for definition of report dimensions. This dashboard shows CrUX data for about.gitlab.com, assembled with PageSpeed Insights and Public Google BigQuery.

Google data administration

We use Google Analytics 360 and purchase this through an analytics partner agency, Empirical Path. They help us maintain a few systems for our analytics configuration. These include:

Google Marketing Platform

Google Tag Manager

Google Analytics

Empirical Path helps us execute advanced Google Tag Manager and Google Analytics work, including adding custom dimensions, creating events for video plays and forms, and many other optimizations.

We also use supplemental tools to improve our understanding of how peo
