

o::00: Requested

4. Business process owner (Amy or Christine) will review, and if they approve of the request from a business standpoint, they will check the appropriate box and add the MktgOpsPrio::01: Approved label. If not, the request will stay in MktgOpsPrio::00: Requested status until blockers or outstanding questions are resolved.

5. Once approved, requests will be added to the prioritization queue by the business process owner to review with Sales Systems or the PMO and labeled MktgOpsPrio::02: In Queue - Mops

6. Once Systems or PMO has agreed to take on work, the request will be added to a Temp holding milestone for further prioritization, and labeled MktgOpsPrio::03: In Queue - Systems

7. Once a milestone is added and the issue is discussed, the label will be updated to MktgOpsPrio::04: Actioned by the MktgOps representative that is in the prioritization call.

- Once the label has been updated to MktgOpsPrio::04: Actioned, follow along with the Sales Systems labels for next steps.

8. Systems will work on the issue and push any updates to the Staging environment first

9. Once systems build, it is the responsibility of the Business Owner to test and accept. The Business Owner must show proof (such as a testing plan, or screenshot) that the solution is working correctly in the staging environment. This is an important step that represents acceptance of the solution, its testing, and the authority to change the related process. The issue will stay in MktgOpsPrio:: 05: Business Owner UAT during this time.

10. Once ready to deploy, Systems manager will add SFDCReleaseHelp to flag to release managers it is ready for production release. Marketing Ops label should be updated to MktgOpsPrio::05: Pending Release

11. Once in production, MktgOps should confirm again that the field/update in SFDC and corresponding/impacted systems is working as anticipated. Label updated to MktgOpsPrio::06: Completed

12. Issue is closed and completed.

Working with the Integrations team on Workato related issues

Workato is a low-code/no-code tool used to for automations and integrations across different teams at GitLab. We frequently work with the Integrations team to build, test and deploy some of the processes in Marketing Operations. The best way to work with the Integrations team is by opening an issue, depending on the scenario, there are two ways to go about that:

1. Request the creation of a new automation/integration

- For types of request that involve building something from scratch and you require assistance from the Integrations team

1. Open an issue in the Integrations Work and follow the instructions in the issue template.

2. If the issue relates to marketing operations, make sure to tag @mihaiConteanu or @amy.waller

2. Bug fixing or deploying recipes developed in the testing environment

- For fixing issues with currently working recipes or to test and review an independently built recipe before moving it into production. Due to SOX compliance, any change to a recipe in production needs to be accompanied by a change management issue.

1. Open an issue in the Integrations Work Project and depending on your specific need, choose a template for Bug, Change, or Default and follow the instructions in the issue template.
2. Open an issue in the Change Management Project and copy and paste this template in the issue description
3. Follow the instructions in the template, it contains all labels and tags necessary to notify the Integrations Team
4. Set a meeting with Durgesh Thakkar and Karuna Singh to go over and review your changes/recipe/issue.

- How Integrations Team works

Stakeholder Mapping

Stakeholder mapping is a tool to help define roles and to delegate cross-functional responsibilities among the team. Stakeholder mapping connects key functions and jobs across marketing with a primary marketing operations stakeholder, a supporting team of marketing operations team members, and stakeholders outside of marketing operations. The main purpose of stakeholder mapping is to identify and connect the stakeholders involved in setting the strategic direction of marketing operations initiatives.

Stakeholder mapping is NOT a way to gatekeep, nor is it meant to stifle communication, collaboration, or efficiency. A particular function is not limited to communicating only with the strategic partner or supporting team members mapped to that function. Similarly, marketing operations team members who are not strategic partners or supporting team members for a particular function may still support that function in various ways.

Why is Stakeholder Mapping important?

Stakeholder mapping is important because it helps to formalize a process for setting the strategic direction of marketing operations initiatives. Stakeholder mapping will help marketing operations better understand the challenges and opportunities that our stakeholders face, allowing the marketing operations team to be more proactive business partners, and better able to plan for and deliver on strategic projects.

Additionally, Stakeholder Mapping creates tighter alignment between Marketing Operations and our stakeholders. It provides our stakeholders with a specific point of contact and a predictable cadence with which they can collaborate on strategic initiatives.

What does it mean to be a strategic partner?

Strategic partners are the main point of contact for understanding, documenting, and sharing strategic opportunities from the functions to which they are mapped. This can be done by conducting Marketing Operations Discovery research, which typically happens twice per fiscal year.

Findings of Discovery research are then used as inputs for the marketing operations roadmap and backlog.

What does it mean to be a supporting team member?

Supporting team members are typically subject matter experts in a specific use case or area within a function. Supporting team members participate in Discovery research and should feel free to ask questions directed toward their particular focus area in order to capture additional insights. Supporting team members typically take point on note taking during Discovery research calls.

What is Discovery research and how do we conduct it?

Discovery research is a way to learn more about our users. Our users are members of the marketing division who use tier 1 and 2 marketing technology. Discovery research can be conducted through synchronous interviews or asynchronously. When possible, synchronous interviews are preferred because they allow us to build relationships and ask follow up questions in real time. Discovery research calls should happen quarterly, up to the discretion of the strategic partner and the stakeholder.

What will Discovery research insights be used for?

Insights from Discovery research calls will be used to inform the Marketing Operations strategic planning and roadmapping.

Marketing Technology Tiering System

The Marketing Operations team maintains the Marketing technology tiering system in order to prioritize requests, provide support, and optimize processes.

Tools in the Stack

The SSoT for all tools at GitLab is the [Tech Stack Applications](#) page.

We are constantly evaluating new tools to help create efficiency, data accuracy and provide additional functionality. If you have a pain point, or have come across a new technology you'd like to explore further, please let us know by creating a tool eval issue. To see our current list use the label Ops Tool Evaluation or [click here](#). Please also follow process and directions listed in the sections.

As a compliment to the Tech Stack, we created a visual of the Tier 1 and 2 tools in Marketing Technology stack, aligned to our customer journey.

<figure class="videocontainer">

height="569" allowfullscreen="true" mozallowfullscreen="true"
webkitallowfullscreen="true"></iframe>
</figure>

Below are tools in the Marketing Technology stack, organized by tier.

Business Critical Technology - Tier 1

- 6sense
- Bizible / Marketo Measure
- Cognism
- Iterable
- Marketo
- Groove
- Goldcast
- PathFactory
- Qualified
- Traction
- ZoomInfo
- Vartopia - Lead Sharing Module

Operational Technology - Tier 2

- Allocadia
- Hightouch
- LinkedIn Sales Navigator
- OneTrust (DEX)
- RingLead
- Integrate DAP (Digital Strategy - Campaigns)
- Mutiny
- JiffleNow

Management Technology - Tier 3

- Litmus
- Brilliant Gifts
- Google Analytics (Search Discovery/Further) (DEX)
- Terminus Email Experiences

Functional Technology - Tier 4

- Bitergia (Developer Relations)
- Canva (Brand)
- Cision
- Common Room (Developer Relations)
- ContentKing
- Frame.io (Brand)
- Figma (UX)
- Launch Darkly
- MeetUp

- Quantum Metric (DEX)
- SEMRush (Search Marketing)
- EveryOne Social
- Vimeo (Brand)
- Zendesk Community
- Typeform

Requesting access to an existing tool

Most of our tools have been migrated to Lumos for provisioning, so follow that procedure first. If you cannot find the tool in Lumos, please follow the access request process as outlined in the business operations handbook.

If you are working with a contractor or consultant that requires access to a tool in our stack, please follow the professional services access request process as outlined in the procurement handbook.

Tool User Management

Technical owners should perform quarterly, bi-quarterly and, for some tools, monthly user audits. If a team member has not been actively taking advantage of a tool for 45 days (30 days for Zoominfo) or more, they will have access to that tool revoked with 5 business days of notification via email or slack (for Zoominfo). Activity will be determined by user reports pulled by the tools' technical owner. These reports can be found by viewing issues from the Marketing Ops project with the issue label Mktg Tool Audit. The reports will utilize the audit issue template from the Marketing Ops project. To regain access to revoked tools, the team member will need to submit a new access request and follow standard access request procedures. However, user seats will be on a first-come-first-serve basis unless it is determined additional seats should be purchased.

Tech Stack Status Pages

Below is a collection of links leading to status pages of several listed MktgOps DRI tools. Unclickable links did not offer official status pages during the 2023 review of available webpages, but there are several unofficial and unaffiliated websites that offer webpage uptime checking as a service, e.g. www.isitdownrightnow.com, www.downdetector.com and www.downforeveryoneorjustme.com. Feel free to search on these sites during a perceived downtime, but keep in mind it may not be as accurate as an official source.

Renewal process for marketing technology budget owners

- Renewal discussion timing is determined by tier.
- For new software that has been approved create a business case to attach to the Zip Request (example).
- With Procurement submit an RFP every 2 years or for tools over \$50K+.
- POC for any new tools or new features before signing a contract.
- No auto-renewals

Align with Procurement and Finance:

- Work with Procurement to structure and negotiate the contract. As well, look to do an RFP with multiple vendors for competitive pricing.
- Align with Finance to confirm budget is accounted for in FY24.

Marketing Operations role:

- Marketing Operations will help to define requirements and be a trusted advisor.
- Submit an issue (example) for new software evaluations.

MarTech Change Management

New Tool Purchase Process

If you are interested in or would like to request a new tool be added to the tech stack, please submit an issue using the tools eval issue template in the Marketing Operations repository. Marketing Operations should be included in ALL new tool evaluations to account for system integrations, budget, etc. Any new tools desired after the budget is set will be handled by transferring budget from the other department to Marketing Operations. Once an issue is submitted, Marketing Operations will evaluate the request and assign the tool a tier. To see current and previous tool evaluations, please [click here](#).

The process for requesting a new tool is:

1. Tool Eval Request is submitted
1. A Marketing Operations member is assigned to review the request. This person scores the requested tool in order to determine its tier. The business and technical owners of the tool are identified.
1. For tier 1 and 2 tools, once the request has been reviewed, the Marketing Operations manager

will:

- Create a new evaluation Epic, capturing relevant details from the intake issue.
- Assign the new Epic to the business and technical owners
- Update the intake issue description with a link to the new Epic.

1. Tier 3 tools will be handled on a case-by-case basis. If the tool requires extensive evaluation and Marketing Operations support, the above process will apply.

1. The business owner is the DRI for tier 4 tool evaluations and implementations, but still must include Marketing Operations.

Once the evaluation Epic is created, the following evaluation steps should be followed:

1. Discovery - understand the request/problem we're trying to solve

1. Stakeholder identification - build the evaluation team based on the roles and responsibilities outlined below

1. Requirements gathering - document user stories, requirements, impacted processes, and features using this requirements gathering template

1. Evaluation - attend demos and compare features

1. Stakeholder alignment - align stakeholders to select vendor of choice

1. Privacy and security reviews - ensure that the selected tool is compliant

1. Negotiations and procurement

1. Implementation

1. Post-Implementation Review & Retro

Roles and Responsibilities

| Role | Responsibility |

| ----- | ----- |

| Technical Owner | Serve as facilitators for tool evaluations |

| | Establish norms (meeting cadence, status updates, communicating results, etc.) |

| | Ensure that technical requirements are documented and feasible |

| | Document and report any risks or conflicts identified during tool evaluation |

| | Facilitate meetings and support operational efficiencies of the evaluation |

| Business Owner | Complete the tool evaluation issue |

| | Document requirements and user stories, and obtain approval(s) for tool |

| | Review and provide approval to ensure everything is working as expected |

| Leadership Sponsor | Responsible for staying plugged into the project, supporting the leads, and supporting escalations (if required) |

| Peer Reviewer (optional) | Review and ensure requested change has been documented and there are no undocumented downstream impacts |

| Post-Implementation Reviewer(s) (optional) | Review of the change in production after the change is made to ensure everything is working as expected |

Lead Scoring, Lead Lifecycle, and MQL Criteria

For more information about lead lifecycle, visit [this handbook page](#)

A Marketing Qualified Lead (MQL) is a lead that has reached a certain threshold, we have determined to be 100 points accumulated, based on demographic/firmographic and/or behavioral information. The Person Score is comprised of various actions and/or profile data that are weighted with positive or negative point values. You can find more details about the scoring model on the Marketo Page

What are MQL SLAs?

SLA (or Service Level Agreement) is the agreed upon amount of time that a lead which has MQL-d and routed to a Sales Development Representative will be actioned. Right now, the SLA time has been set to 2 business hours. More information on how the SLA reporting functionality works can be found [here](#).

Campaigns and Programs

Campaigns are used to track efforts of marketing tactics - field events, webcasts, content downloads. The campaign types align with how marketing tracks spend and align the way records are tracked across three of our core systems (Marketo, Salesforce and Bizible) for consistent tracking. Leveraging campaigns aligns our efforts across Marketing, Sales and Finance.

Go to the Campaigns and Programs Page to view all of the campaign types, their progression statuses and cost tracking. That page also includes directions for set up in Marketo and Salesforce.

Marketing Ops partners with the Field Marketing and Corporate Events teams to provide Marketo program set-up and configuration, providing these teams with an internal partner to provide advise on the best technical set-up to reach their goals and streamlining more complex program requirements. Visit the Marketo Program/Campaign Support page for additional details.

Email Management

Marketing Ops is responsible for maintaining the email marketing database. Go to the Email Management Page for policies and more detailed information.

Initial Source

Initial Source is the first "known" touch attribution or when a website visitor becomes a known name in our database, once set it should never be changed or overwritten. For this reason Salesforce is set up so that you are unable to update the Initial Source field. If merging records, keep the Initial Source that is oldest (or set first). Initial Source in Marketo is named Person Source, and should only update when empty.

The values listed below are the only values currently supported. If you attempt to upload or import leads or contacts into Salesforce without one of these initial sources you will encounter a validation rule error.

If you want to add a new Initial Source, please ask someone in Mops to Add to this sheet. When a new initial source and bucket are added, they will automatically flow through to our reporting.

Status in the table below means:

- Active = can be selected from picklist
- Inactive = cannot be selected from picklist, but a record may exist with this source

Source	Source Bucket	Definition and/or transition plan	Status
-----	-----	-----	-----
CE Download	core	Downloaded CE version of GitLab	Active
CE Usage Ping	core	Created from CE Usage Ping data	Active
CORE Check-Up	core	Created from In-App Contact us (Handraise PQL/In-App Health Check)	Active
Demo	inbound	Filled out form to watch demo of GitLab	Active
Education	inbound	Filled out form applying to the Educational license program	Active
Email Request	inbound	Used when an email was received through an alias (will be deprecated)	Active
Email Subscription	inbound	Subscribed to our opt-in list either in preference center or various email capture field on GitLab website	Active
Gated Content - General	inbound	Download an asset that does not fit into the other Gated Content categories	Active
Gated Content - eBook	inbound	Download a digital asset categorized as an eBook	Active
Gated Content - Report	inbound	Download a gated report	Active
Gated Content - Video	inbound	Watch a gated video asset	Active
Gated Content - Whitepaper	inbound	Download a white paper	Active
GitLab.com	inbound	Registered for GitLab.com account	Active
Newsletter	inbound		Active
OSS	inbound	Open Source Project records related to the OSS offer for free licensing	Active
Request - Contact	inbound	Filled out contact request form on GitLab website	Active
Request - Professional Services	inbound	Any type of request that comes in requesting to engage with our Professional Services team	Active
Security Newsletter	inbound	Signed up for security alerts	Active
Trial - Enterprise	trial	In-product or web request for self-managed Enterprise license	Active
Trial - GitLab.com	trial	In-product SaaS trial request	Active
Web	inbound		Active
Qualified	inbound		Active
Request - Community	inbound		Active
Request - Public Sector	inbound		Active
Other	Other		Active
6Sense	outbound	Acquired from the 6Sense database	Active
AE Generated	outbound	Sourced by an Account Executive through networking or professional groups	Active
LinkedIn	outbound		Active
Prospecting	outbound		Active
Prospecting - General	outbound		Active
SDR Generated	outbound	Sourced by an SDR through networking or professional groups	Active
Zoominfo	outbound	Sourced by SDR/BDR/AE/SAE/ASM	Active
Cognism	outbound	Sourced by SDR/BDR	Active
Conference	paid demand gen	Stopped by our booth or received through event sponsorship	

Active |

- | Owned Event | paid demand gen | Events that are created, owned, run by GitLab | Active |
- | Virtual Sponsorship | paid demand gen | | Active |
- | Purchased List | purchased list | | Active |
- | Employee Referral | referral | | Active |
- | Partner Qualified Lead | referral| GitLab partner sourced, previously partner or Channel Qualified Lead| Active|
- | Web Chat | inbound | Engaged with us through website chat bot | Active|
- | Word of Mouth | referral | | Active |
- | Existing Client | referral | | Active |
- | External Referral | referral | | Active |
- | Webcast | virtual event | Register for any online webcast (not incl Demo) | Active |
- | Workshop| virtual event | | Active|
- | Web Direct | web direct | Created when purchase is made direct through the portal (check for duplicates & merge record if found) | Active |
- | Investor | outbound | Sourced by our investors (i.e. - GV, Khosla, ICONIQ). The Investor value is coupled with the Investor Name custom field | Active |
- | GitLab DataMart|core| Created by the GitLab Marketing Database data pump. Contains leads from various internal sources|Active|
- | GitLab Subscription Portal|Signed up for customers portal account, but did not upgrade| Active|
- | Free Registration|core| Sign up via Free User registration|Active|
- | Paid Social|inbound|Sourced from Paid Social Campaigns|Active|
- | Vendor Arranged Meetings|paid demand gen| Registered or attended a vendor arranged meeting|Active|
- | Trust Center | inbound | Requested access to the GitLab Trust Center | Active |
- | JiffleNow | outbound | Created by JiffleNow integration | Active |

Source	Source Bucket	Definition and/or transition plan	Status
-----	-----	-----	-----
Startup Application	inbound		Inactive
Consultancy Request	inbound		Inactive
Promotion	paid demand gen		Inactive

Lead and Contact Statuses

The Lead & Contact objects in Salesforce have unified statuses with the following definitions. Also reference Re-MQL workflows for how to move from status to status. To learn more on how we manage our lifecycle including lead/contact status and Lifecycle Classifications, please see [here](#).

Status	Definition
-----	-----
Raw	Untouched prospect, default status
Inquiry	Action was taken by the record to specifically give their contact information to GitLab
MQL	Marketing Qualified through systematic means
Accepted	Actively working to get in touch with the lead/contact
Qualifying	In 2-way conversation with lead/contact
Qualified	Progressing to next step of sales funnel (typically SAO created & hand off to

Sales team) |
Disqualified	Contact information is not now or ever valid in future; Spam form fill-out
Recycle	Record is not ready for our services or buying conversation now, possibly later
Bad Data	Incorrect data - to potentially be researched to find correct data to contact by other means
Ineligible	All leads/contacts that are ineligible to go through the sales process after an initial review

One of the following must occur to have a lead move from Raw to Inquiry

1. Become a member of a marketing program (except no-action/default statuses, nor email)
1. Fill out a form (social or website)
1. Behavior score > 10 pts.

Lead Address Fields

On the lead object we have three types of address information, the local/personal address information for that lead, which is stored on the Person Address (address type field), the Ultimate Parent Account Company information stored on Company Address: [XXX] text fields, and the Zoominfo enrichment address information for both the Contact (local information) and the Company level information:

- Person Address is partially filled in from Marketo Form Fills and is also completed by ZI enrichment when it is missing;
 - This is the address that Marketo references for email lists. It contains the local address of the record, if known through form fill, list upload, or ZI enrichment.
- UPA Company Address - stored on the Company Address: Country, Company Address: State, Company Address: City, Company Address: Street, Company Address: Postal Code text fields. These fields are updated through APEX code through a 3-step waterfall approach.
 1. Account Demographics Fields (i.e: Account Demographics: UPA City) - If the lead matches to an existing account the address is populated through the Account Demographic fields, taken from the account associated with this lead;
 2. Admin Override Fields (i.e: Admin] Company Address Country) - If a lead doesn't match to an account, the Company Address fields are either blank or are populated through step 3 in the waterfall (see below). If the address is blank or the address information from step 3 is wrong, SDRs/BDRs can update the address information themselves using these Admin Override fields. You can see more information about this process in the [Overriding Incorrect Account Assignments section from Sales Dev Handbook or in this video.
 3. Zoominfo Company Address Fields (i.e: [ZI] Company Country) - If the lead doesn't match an account, it was not overwritten using the Admin Override Fields mentioned above and the lead matches to Zoominfo's database, the Company Address fields are populated with Zoominfo Company Address information from the Zoominfo Company Address fields.
- Zoominfo enrichment address information which as can be of two types, personal (local) or company level address;
 1. Zoominfo personal (local) address information can be found in the [ZI] Contact Country, [ZI] Contact State, [ZI] Contact City, [ZI] Contact Street, [ZI] Contact Zip Code fields;
 2. Zoominfo Company Address Information can be found on the [ZI] Company Country, [ZI] Company State, [ZI] Company City, [ZI] Company Street, [ZI] Company Zip Code fields;

Data Cleanliness and Enrichment Process

Marketing Operations has the responsibility for cleaning and enriching our database of leads/contacts with the most complete and up to date information.

The cleaning part of this process is being done with the Cleanse functionality of the lead/contact deduplication tool, Ringlead.

The enrichment part of the process is done using the data appending/enrichment tool, Zoominfo, our SSOT when it comes to account/lead/contact data. Cognism, is another enrichment tool but only for a smaller subset of our lead data. As of now, only the BDRs and Cognism admins have login access. However, Cognism data, can be found in the Cognism fields on the lead/contact layout.

This cleaning & enrichment process has 5 main priorities:

1. Enrich net new Marketo leads with Marketo Webhook - All leads created through Marketo are instantly enriched with ZI data.
2. Instant Enrich for leads - When new leads are created in SFDC, Instant Enrich functionality kicks in and the record's [ZI] fields are enriched upon creation.
3. Enriching net new leads with Scheduled Enrich - As a back-up to the Instant Enrich functionality (in case it fails for any reason), all leads created in the last 24h are enriched through scheduled enrichment, to make sure they contain the most updated information.
4. Existing Database Enrichment - All lead records in SFDC are enriched regularly to make sure that the leads who change roles/companies are updated with the latest information.
5. Assure Data Cleanliness & Accuracy - The Marketing Operations team is following the recommended deduplication order of operations as detailed below:
 - Lead to Lead Deduplication (Paused to fix duplicates being created by different tools)
 - Account Deduplication (This part is currently performed using Openprise by Sales Operations)
 - Converting Leads to New Contacts (This step is skipped in our case since it would impact sales workflow considerably. We will re-evaluate if the sales team is not as heavily focused on leads as we are now.)
 - Contact to Contact Deduplication (Testing unwanted contact merging effects on order processin and open quotes)
 - Lead to Contact Deduplication (This part of the process will start once Contact Deduplication is completed)
 - Deduplication of Custom Objects (Bizible Person IDs - On hold until Contact Deduplication and Lead to Contact Deduplication are completed)

For more information regarding our data deduplication process visit the Ringlead Handbook Page.

Cleaning & Enrichment Frequency: While the enrichment jobs for net new leads, work on a continuous bases, when it comes to enrichment of our existing leads & contacts in SFDC, this is done via scheduled enrichment jobs as follows:

1. All leads are enriched on a weekly basis, last Saturday of the month.
2. All leads created in the last 7 Days are enriched daily to make sure no new leads from list uploads miss enrichment and also to make sure our sales teams have the most up to date information when working them.

3. All contacts in our SFDC instance get enriched weekly, last Saturday of the month.

You can find more details on the enrichment process in our [Zoominfo Handbook Page](#).

Lead List Upload Enrichment

To be able to upload a lead in our SFDC, it is mandatory for the lead to have an email address. Sometimes we do run into situations where the email address is not available.

To bypass this challenge and still be able to upload the leads in SFDC, please create an List Upload - Enrichment Request with this request form, upload the CSV file in the issue and Mops will use the Zoominfo Enhance, Zoominfo ListMatch and Cognism Enhance functionality to enrich these records with the most up to date information (including the email address).

Note: Such records as lead list uploads with no email address, that subsequently are enriched with the email address through Zoominfo/Cognism enrichment, need to be marked as Opt-out as these individuals did not give us the express consent that they can be reached to;

Cleaning Test Leads

Testing processes and automation are critical for quality assurance in our systems.

As a tester, you create test leads to ensure processes work as expected. These test leads are mixed among real records, causing inaccuracies in our reporting. Marketing Operations has created best practices that make it easier to spot and delete test leads.

The next time you test a program, remember set Job Title = Test and they will be removed promptly.

Notice any test leads? Please open an issue with the Marketing Operations team.

Communication Compliance Best Practices

Internal DNC (Do Not Call) Lists

Internal DNC Lists are maintained using the Do Not Call checkbox on the lead/contact record layouts. The sales development organization has a clear process on how and in what context should the box be checked. Please visit the Sales Development Handbook page - Cold Calling Checklist section to find out more about it.

External DNC (Do Not Call) Lists

To be compliant with international DNC (Do Not Call) regulations and minimize the risk of litigation, a process was implemented for making sure the records that appear on external DNC lists are not contacted via phone (this applies to both Direct Dial Phone Numbers and Mobile Phone Numbers).

This information gets passed to us with the help of Zoominfo, which populates the [ZI] Do Not Call - Direct Phone and [ZI] Do Not Call - Mobile Phone fields with the Yes value whenever a phone number is found to be on an external DNC list.

With Marketo automation we are then using these two fields to hide the phone number information on the following fields: [ZI] Phone Number, Phone (standard field - only if it matches the [ZI] Phone Number value), [ZI] Mobile Phone Number and Mobile Phone (standard field - only if it matches the [ZI] Mobile Phone Number value).

For more information, please visit this figjam flow chart.

Do Not Do Business

In some cases, there are companies we do not do business with. If an account is flagged, Mops should take the following steps to ensure they are not included in any of our communications moving forward.

1. Add the customer account to the DNDB campaign in Marketo. Use the SFDC Account ID and update contains with the email domain, if sepcific to that company. Click Schedule > Run once. (This will also run nightly.) This flow updates the lead/contacts to unsubscribe, removes them from Security Distro, marks email as invalid, marks as Do Not Call, updates person status to Ineligible, and marks the reason as ECCN - Do Not do Business
2. No need to check Iterable for the email address. They will be removed via API, as Marketo sends unsubscribes over via webhook to Iterable automatically once unsubscribe = true.

Zoominfo Opt Out Lists

Zoominfo is our SSOT when it comes to data enrichment of our leads/contacts and accounts.

To be compliant with the latest privacy policies and safeguard our database from potential litigation, Zoominfo's recommendation for contacts that have opted out of their database is to:

>If you have downloaded any of these contact records from ZoomInfo or uploaded them to your internal systems, you must remove >them unless you have an independent lawful basis to possess and use such person's personal data.

Note: This only applies for leads/contacts that do NOT currently have an existing business relationship

After collaborating with GitLab's privacy department, it was decided to create a process for removing said contacts from our database.

The current process takes place on a weekly basis and is implemented with the help of a Marketo Program. It takes advantage of the Zoominfo Non-Matched Reason field which is populated by Zoominfo. All leads/contacts that have the OPTOUT value, enter the process and are checked for additional activities that could qualify as independent lawful basis to be kept. If they lack said activities they will be removed from our database.

For more information, please visit this figjam flow chart.

If you have any questions or concerns feel free to open an issue with the Marketing Operations team.

SECTION: marketing/marketing-operations/backblaze.md

About

Backblaze B2 is enterprise-grade, S3 compatible storage used to store and serve data.

Use

Backblaze is used by the digital production team to store and manage their archives of videos.

Access

To request access to Backblaze, please open an access request. Backblaze is not a tool that provides user seats to each user. One account with one login is provided to users who need access to the UI. Please state your justification for needing access - it may or may not be denied as this tool is primarily for the digital production team due to the large amount of data they manage.

Training

1. Quickstart Guide for Transmit and B2 Cloud Storage

Tools for Upload

- 1. Panic Transmit (paid)
- 1. FileZilla PRO (paid)
- 1. Cyberduck
- 1. rclone

PAGE UNDER CONSTRUCTION - NOT ALL INFORMATION IS CORRECT

About Brilliant

Brilliant Gifts will serve as GitLab's "swag" vendor platform (company-branded products) for the public-facing swag shop website.

Storefronts & Warehousing

Brilliant has different warehouses throughout the world to reduce shipping costs and delivery times. Each storefront has their own specific shipping warehouses, as indicated below. We have warehouses in the USA, Australia, UK, EMEA (Netherlands) and APAC.

There are a few different storefronts to meet the needs of each team or group. The storefronts

are:

- Retail (Public facing storefront for purchasing GitLab swag)
- Customer Advocacy 9 (EMEA)
- EMEA Field Marketing (EMEA, UK)
- Corporate Events (US, APAC)
- Contributor Success (US)
- People Experience
- Talent Brand (US)
- Absence Management (US)
- Human Resources (US)

How to use

Swag Requests

Please refer to the Brand Strategy handbook page on swag or to request new items.

Creating New Campaigns

Bundle

1. Enter campaign name e.g. On-Boarding Bundle.
1. Select warehouse. Example: EU for European sends and UK warehouse for UK ONLY sends.
1. Use the drop down to select what items you would like to send. Note you will need to have stock in your inventory first to do this.
1. Add a note. TIP - Make sure you always add a handwritten note to increase response rate.
1. Then click save! This will then appear in your Campaigns tab.

E-Gift cards and reward pass

Gift cards are a great start as there is no sourcing required, cost effective (as you get your money back in 14 days if unclaimed) and instantaneous. Gift cards are sent as an email so ensure you add in a template including subject line and body.

A full list of E-Gift cards are here.

Note - gift cards must be built in the currency of the country you're sending to e.g. Uber Eats GBP only works in the UK not in Germany or Norway etc.

Handwritten Note

Send a personalised note. However there are character limitations

Marketplace

Reachdesk marketplace allows you to choose from a range of confectionary, flowers, cakes and other perishables from approved third party providers so you can send gifts on a 1-to-1 basis as an out-of-the-box feature. All items can be customised to give that personal touch. Items can be viewed here or you can also view items on the campaign build section without actually building the campaign.

Please refer to GitLab's policies related to Gifts and Contributions here

How to send a campaign

1. Please click the 'Send Engage +' button and select the campaign/gift you need to send to a prospect.
1. After selecting the campaign, you need to add personal details, this webpage will be different in case you are sending an e-gift or a physical gift.
1. Check the status of your gifts from the sends tab. E-gifts will be sent out immediately, like an ordinary email. In case of physical gifts you will have a 30 mins window to cancel or edit your orders. After that window expires please reach out to us at support@reachdesk.com in case of further assistance.

Tracking Sends

- On your sends tab in Reachdesk, you'll see a full list of sends and status'.
 - For physical items these are Sent, waiting for address confirmation, address confirmed, shipped, Delivered. You'll also get an email notification when they get delivered.
 - For e-Gift cards these are Sent, Open, Click, Claimed.
- You can also see the status of sends under the contact you've sent to in your chosen CRM.
- Go to the activity of the contact, and see [Reachdesk] status campaign name

Shipping

Brilliant can ship to over 160 countries around the world.

- Europe warehouse (EU-Ireland) ships to: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden.

Also items can be shipped from the Eu warehouse from the countries listed here

- United Kingdom warehouse ships within the United Kingdom only
- Australia Warehouse ships to: Australia, Hong Kong, Indonesia, Japan, Korea, Malaysia, New Zealand, Singapore, Taiwan, Thailand, Vietnam
- North America ships to United States

Project management

Branded banner for the e-gift emails

1. This image should be 600x80 pxl in Jpeg/Png format
1. The branding tab under 'Organization' only needs to be completed once, and is for address confirmation emails

Creating a Triggered Campaign

Trigger Reachdesk sends through Salesforce

1. Go to Triggered Campaign > Create Triggered Campaign. Then under Campaign Trigger, select Connector (Salesforce).
 1. Select Salesforce as your connector and choose Object. This will depend on what you have in your own Salesforce.
 1. Under Field, select Stage. Other options are Status, Opportunity ID, Opportunity Type, Probability, and Close Date.
 1. Under Field, Select Campaign ID (to ensure it is sent to those in that specific campaign), Comparator is Equals. Under Value, copy and paste the Campaign ID from the URL of the campaign in Salesforce. (You have to create a SFDC campaign first with these steps)
 1. Press AND + to add another field. This will then be sent to all members of that SF campaign.
 1. Click Next and Save campaign
- TIP: it's advisable to Pause triggered campaigns until it's ready to go live/active.

Creating a Landing Page

This is one link that can be sent to multiple recipients, and the gifts will be automatically fulfilled via this page. The Landing page can be customised, here are some examples :

1. Create New Campaigns in Reachdesk, choose campaign type Marketplace. For each gift that you intend to offer to the recipient a new campaign will be created.
 1. Search the marketplace by choosing Category and/or Country, choose gift and click build campaign
 1. Add in a unique campaign name, Include logo and note
 1. In CRM Sync - assign Salesforce name and salesforce Campaign
- PLEASE NOTE: Do not tick Ask recipient to confirm their address for campaigns linked to a Landing Page
1. Complete this form to request a landing page

Best Practices when completing the Landing Page form

1. Create campaigns before completing the form and add the links of these campaigns into What campaign(s) would you like to link to this landing page?
1. Complete the form in the language the landing page will be in e.g German, French etc
1. Always state Yes for question Would you like approval on submissions?
1. Revisions will require additional turnaround time, so please allow 5 - 7 days prior to the launch date

Shipping to Events

Brilliant can ship items from our warehouses to events!

1. Submit an event shipping request
1. All requests must be submitted 2 weeks prior to the event - but the more notice, the better! After your request is received a member of the reachdesk team will reach out within 24 business hours.
1. Only merchandise/giveaways can be shipped to events. No booths, signage, or other booth branding items. Items will be limited to a weight limit below 1 pallet.
1. Shipping to events is a one-way request, cannot pick up from an event.

1. Please partner with the reachdesk project manager for any ship to event requests.

How to request an invoice for more credit

1. Go to: Organizations > Balances

1. Click on Add Credit on the top right of the page

1. In the Account & Amount section, select either Company Balance or User Balance and populate the amount of money and currency account you want to top-up.

1. In the Billing Entity section, select which Billing Entity you want the invoice to be addressed. In some cases, there is only one so this should be pre-selected. If there is no billing entity, or you cannot find the right billing entity, please contact support@reachdesk.com so we can add this billing entity to our invoicing system.

All campaigns must have a Salesforce.com attached. If this campaign involves Marketo, please skip to those instructions, otherwise follow directions below.

Integrations

Brilliant will be connected to 3 different systems: Base, Marketo and Salesforce.com (All WIP)

Base Campaigns

This connector is not currently configured, but is WIP.

Salesforce

This connector is not currently configured, but is WIP.

Marketo

This connector is not currently configured, but is WIP.

SECTION: marketing/marketing-operations/campaign-operations.md

Overview

<!-- DO NOT CHANGE THIS ANCHOR -->

The Marketing Operations team provides the Integrated Marketing team with advice around execution strategy and systems set-up. In addition, this function currently supports the Field Marketing and Events teams by creating email marketing and landing page set-up, as well as other tasks in Marketo.

Working with us

Marketo campaign/program creation and support is a function of Marketing Operations, so follow the same guidelines to request assistance. Be sure to add the ~MktgOps-Support label to the issue.

Field Marketing issue templates (used by both Field Marketing and Corporate Events) for landing

page and email requests have been updated with the appropriate labels to route to Marketing Ops.

Additional labels that can be used on issues to track the status of the issue can be found in on the Marketing Operations page.

Team Members

<!-- DO NOT CHANGE THIS ANCHOR -->

| Name | Title | Details |

| ---- | ----- | ----- |

| Bryce Weatherford | Marketing Operations Associate Manager | Process questions, primary execution |

| Jenny Tiemann | Senior Marketing Operations Manager | Issue triage, process questions, Back-up execution |

Process documentation shortcuts

<!-- DO NOT CHANGE THIS ANCHOR -->

- Sales Nominated Invitations
- Marketo Program + Salesforce Campaigns
- Workshop Landing Page and Marketo Setup

Project Management

<!-- DO NOT CHANGE THIS ANCHOR -->

In an effort to avoid manually adding the issues we are working on, Field Marketing will be utilizing labels and boards to manage the work we are working on with MktgOps. All commentary should be done via comments directly within the GitLab issues.

Shortcut list views

<!-- DO NOT CHANGE THIS ANCHOR -->

- Issue Board
- FM Triage Board

SLAs

MktgOps

Please note there is a 5 business day SLA with MktgOps, so please plan ahead accordingly. The SLA begins on the day after the issue is put into ~MktgOps::00: Triage. For example, if the issue goes to triage on Tuesday, day 1 is Wednesday, day 5 is the following Tuesday. Day 5 is the earliest deployment/live date available. Please allow for US holidays and Family & Friends days as well. Using the same example, if day 4 is a US holiday, this will push day 5 to Wednesday.

Anything outside of the standard set-up does not fall under the 5 business day SLA. The most common example of this is the creation of custom forms. For more information about when custom forms are required and the timeline for this work, visit the Marketo HB page.

If you are planning a program that requires anything outside of the standard set-up, bring MOps

in early during your planning process. We can help guide you on the best way to use our available technology to reach your goals and keep your program timeline on track.

Field Marketing

Please see Field Marketing SLAs pertaining to this process [here](#).

Triage Steps

<!-- DO NOT CHANGE THIS ANCHOR -->

1. Field Marketing / Corporate Events: Marketo asset issues are created (in Field Marketing, the FMC will create the issues during the plan to WIP process. When opening issues via the appropriate templates, the ~MktgOps::07: Blocked and the ~MktgOps-Support labels will automatically be associated with the issues. This allows for the issues to be opened in advance and to be available while copy is being finalized.

1. Field Marketing / Corporate Events: If the copy references analyst reports, the FMM must open the Analyst Citation Review issue and associate it to the MOps email request. You do not need to complete the entire issue, but you must link the email issue and the copy doc with your proposed copy. To expedite email approval, you can use the content found [here](#) as it is most likely to be approved quickly. We do not have previously approved landing page copy.

1. Field Marketing / Corporate Events: For Field Marketing, the FMM will ping the FMC in the Write Copy issue to let them know when copy is ready for each asset. The FMC will then review the copy and once ready, move the label from ~MktgOps::07: Blocked to ~MktgOps::00: Triage. For Corporate Events, Event Manager to move the label from ~MktgOps::07: Blocked to ~MktgOps::00: Triage

- At this time, all details must be provided and final (including copy reviewed by relevant stakeholders, and all hyperlinks double-checked and confirmed).

- The requested send date is the due date of the issue. If the requested send date is less than 5 Business Days from the date it is passed to Mktg Ops, the date of the issue may be scheduled 5 business days out to abide by SLAs. This is at the discretion of Mktg Ops based on other work in progress and upcoming. Please note that we do not send invites or follow-up emails on Thursdays.

- If Mktg Ops triage manager finds that all details are not included in the issue, then they will add the label ~MktgOps::07: Blocked and will also comment to the requesting team member what is missing. Once the team member addresses the missing pieces, they then add the ~MktgOps::00: Triage label again to start the review process over.

1. MktgOps: Assign the issue to the appropriate DRI and assign a milestone for the work. For email invitations and email follow-ups, add ~Lifecycle 01 Needs Copy Review label to signal to Lifecycle team the email copy is ready for review.

1. MktgOps: DRI adds email to the Marketing Calendar for the anticipated send date.

- The requested send date is the due date of the issue. If the requested send date is less than 5 Business Days from the date it is passed to Mktg Ops, the date of the issue may be scheduled 5 business days out to abide by SLAs. This is at the discretion of Mktg Ops based on other work in progress and upcoming.

1. Lifecycle: Reviews the email copy and once final and approved, add the ~Lifecycle 02 Copy Approved labels.

1. MktgOps: DRI completes the setup in Marketo, and for email, completes all steps on the Technical Email QA checklist.

1. MktgOps: DRI sends a test email to the "Reviewers/Approvers" listed in the issue and posts a screenshot of the email in the issue.

1. MktgOps: DRI comments into the issue tagging the reviewers/approvers and documenting that the test email was sent to their inbox and changes status label to ~MktgOps::05: Business Owner Review.

1. Field Marketing / Corporate Events: The issue approver must be listed in the issue and complete all steps in the Business Owner Email QA checklist approve email (or provide corrections) via comment in the issue

- SLA: 24 hours from when the test email is sent and comment added to issue). Feedback and approval in a timely manner is critical.

1. MktgOps: DRI makes any necessary corrections. If no corrections needed and approval provided by reviewer, DRI sets the email to send (time for send to be determined in issue description/comments) and adds the ~MktgOps::06: Ready to Deploy.

1. MktgOps: DRI checks that email was sent, confirms in comments (tagging issue requester), adds the ~MktgOps::08: Completed and closes out the issue.

1. Field Marketing / Corporate Events Post event reporting. To Request a full Marketo Recap reporting, please request in the Follow Up email sub issue.

1. MktgOps Once a report is complete please add a link to the main issue into the Planning & Recap Spreadsheet section.

Responsibilities of email requesters

<!-- DO NOT CHANGE THIS ANCHOR -->

- Issue (email) requesters are responsible for submitting all details, including final approved copy, reviewed by all stakeholders, PRIOR to moving the issue to triage.

- Issue (email) requesters are responsible for timely feedback and answers.

- Issue (email) requesters are responsible for FINAL QA (including spelling, grammar, readability, and checking that all links direct to the proper URLs and contain proper tracking parameters). Refer to the QA checklist.

Review Process

<!-- DO NOT CHANGE THIS ANCHOR -->

Unless otherwise stated, only ONE of the people listed as "Reviewer/Approver" and a Lifecycle Marketing Manager need to approve in order for the email to be set.

As stated in "responsibilities of email requesters" section above, the reviewer is responsible for final QA of all copy, grammar, readability, LINKS, tracking, and formatting.

Detailed email QA instructions can be found on the email and nurture handbook page. This checklist should be followed for each email being QAed.

Questions

Note that if questions arise, ask in the mktgops Slack channel.

Email Send Times

Due to nurture protocols, we do not send non-operational emails (invites, follow-ups) on Thursdays.

If the Field Marketer/Event Manager does not provide a specific time, then emails will send at

the following times:

- AMER label: 9 AM ET
- EMEA label: 10 AM CET
- APAC label: 11am AEST

Should a requested send time be missed, MktgOps can schedule the email within 8 hours of the original ask, or the following day if other email sends will reduce the list size of the email. If the send time must go beyond 24 hours of the original send time, MktgOps will discuss options with the FMM in the issue.

Technical set-up - email

- Specialized email headers (not the standard header used in templates) - Typically used for large events such as Commit or DevSecOps World Tour.
 - The images will be requested either by Lifecycle Marketing or the event DRI
 - Image dimensions can be found on the email marketing page.
 - The requested image must be transparent. We cannot use a solid image as it will not render properly in all clients.
 - In the email code (under "Edit Code"), you should use a solid email background (the color will change depending on the design for the event). Example code from the B - Advanced modular template - light mode template (aka Advanced Webcast Template). The variables to edit are `bgcolor=xxxxxx` and `border-bottom: 4px solid xxxxxx`

```
`<tr class="mktoModule" id="bgImagewText4990312b-fd20-449c-a184-d0500cdcc1aa"
mktoname="Background Image with CTA">
    <td background="${heroBackgroundImage}" bgcolor="171321"
valign="middle" style="max-width: 600px; width: 100%; text-align: center; height: 200px;
background-repeat:no-repeat ;background-position: 100% !important; background-size: cover
!important; border-bottom: 4px solid 171321;" width="100%" height="auto">`
```
 - After saving the edits in the code, you can then click on the existing header, and the Variable sidebar will appear. Add the new transparent image to the Hero Background Image section, and confirm the link and button Copy
 - All emails using specialized images must be sent to Litmus for previewing various clients. Refer to the Litmus page for details on what to check.
- When using the URL in emails or other uses with utm values, Marketo page URLs (starting with `page.gitlab.com`) should not have a `/` at the end of the page URL before the `?`. This will likely cause the page to redirect. (Correct example: `https://page.gitlab.com/webcast-example?{{my.utm}}`).
- When using the URL in emails or other uses with utm values, `about.gitlab.com` page URLs (starting with `about.gitlab.com`) must have a `/` at the end of the page URL before the `?`. Omitting the `/` can cause the form not to display on the page. (Correct example: `https://about.gitlab.com/webcast-example/?{{my.utm}}`).
- For localized emails, be sure to use the Localized Email Snippet
- Prior to sending to the business owner review, the email creator must complete all steps in the Technical email QA checklist

Technical set-up - landing pages

SECTION: marketing/marketing-operations/campaigns-and-programs.md

Campaigns

Campaigns are used to track efforts of marketing tactics - field events, webcasts, content downloads. The campaign types align with how marketing tracks spend and align the way records are tracked across three of our core systems (Marketo, Salesforce and Bizible) for consistent tracking. Leveraging campaign aligns our efforts across Marketing, Sales and Finance.

Marketing Ops partners with the Field Marketing and Corporate Events teams to provide Marketo program set-up and configuration, providing these teams with an internal partner to provide advise on the best technical set-up to reach their goals and streamlining more complex program requirements. Visit the Marketo Program/Campaign Support page for additional details.

Campaign Cost Tracking

For information on how Marketing tracks campaign costs, please visit this page.

Campaign Type & Progression Status

A record can only progress one-way through a set of event statuses. A record cannot move backward through the statuses.

i.e. Record is put into Registered cannot be moved backwards to Waitlisted

Conference

Any event that we have paid to sponsor, have a booth/presence and are sending representatives from GitLab (example: AWS re:Invent, DevOps Enterprise Summit). This also includes any virtual event that we sponsor and/or participate in that we do not own the registration but will generate a list of attendees, engagement.

In a virtual conference, GitLab will pay a sponsorship fee to receive a virtual booth and sometimes a speaking session slot or panel presence. Presence of a virtual booth is a requirement due to success criteria. Read more.

For list loads greater than 5,000 attendees, MktgOps will need to confer with the Field Marketing Director on legitimacy of labeling the program members as success as doing so affects Bizible Touchpoints. Follow directions here on how to do this (MktgOps only).

Bizible: This is tracked as an offline channel, because we do not host a registration page, and receive a list of booth visitors post-event. Touchpoints for offline channels are created through our AMM (formerly known as Bizible) campaign sync rules that can be found in this spreadsheet.

| Member Status | Definition | Success |

| ----- | ----- | ----- |

| No Action | default starting position for all records | |

| Sales Invited | Invitation/Information about event sent by Sales/SDR | |

| Sales Nominated | Sales indicated record to receive triggered event email sent by Marketing |

Marketing Invited Marketing geo-targeted email
Waitlisted Holding state if registration is full will be moved to Registered if space opens
Registered Registered for event
No Show Registered but no verification of attendance, presumed no show
Meeting Requested Meeting set to occur at conference
Meeting No Show Scheduled meeting at conference was cancelled or not attended
Meeting Attended Scheduled meeting at conference was attended Yes
Attended Attended the event Yes
Visited Booth Stopped by booth for any reason Yes
Follow Up Requested Requested to be followed up with by sales post event Yes
Attended On-Demand Watched/consumed conference materials post-event on-demand Yes

Content Syndication

White Paper or other content offer that is hosted by a third party.

Bizable: This is tracked as an offline channel. Touchpoints for offline channels are created through our AMM (formerly known as Bizible) campaign sync rules that can be found in this spreadsheet.

Member Status	Definition	Success
-----	-----	-----
No Action	default starting position for all records	
Downloaded	Downloaded content	Yes

Direct Mail

This is when a package or piece of mail is sent out.

Bizable: This is tracked as an offline channel. Touchpoints for offline channels are created through our AMM (formerly known as Bizible) campaign sync rules that can be found in this spreadsheet.

Member Status	Definition	Success	E-gift Card or Physical Gift
-----	-----	-----	-----
No Action	Default starting position for all records		Not applicable
Sales Nominated	Sales indicated record to receive triggered event email sent by Marketing		Not applicable
Processed	Physical gift shipping request is being processed		Physical
Sent	Email with e-gift card has been sent to recipient		E-gift card
Opened	The prospect has opened the Reachdesk offer emailed to them		E-gift card
Claimed	The recipient has claimed the Reachdesk gift	Yes	E-gift card
Clicked	The prospect has clicked the link in the offer emailed to them		E-gift card
Shipped	The recipient's gift has been shipped		Physical
Delivered	The selected gift has been successfully delivered to the recipient	Yes	Physical
Cancelled	The recipient has requested their gift be cancelled		Physical
Returned	The recipient has returned their gift		Returned

Email Send

This program type is used in conjunction with Marketo email programs. This program type is available to sync into SFDC, but should only be synced into SFDC if the email send in question has significant business impact that needs associated opportunity tracking. Please keep in mind that some email addresses will block Marketo's tracking, so these cannot be 100% accurate.

Bizible: This is technically tracked as neither an online or offline channel. Touchpoints are technically not created by the program type itself, but rather the action of an email recipient clicking an in-email link and visiting a Touchpoint enabled website.

Member Status	Definition	Success
No Action	Default starting position for all records	
Member	Added to program. If still in this status after the email send, it can be assumed they were blocked from being sent the email	
Email Bounced	Marketo's email tracking detected the recipient email address bounced	
Email Delivered	Marketo's email tracking detected the recipient email address received the email sent	
Email Opened	Marketo's email tracking detected the recipient opened the email	
Clicked In-Email Link	Marketo's email tracking detected the recipient opened a link found in the email	Yes
Replied to Email	Likely to be unused step as we do not prompt for email replies	
Unsubscribed	Marketo's email tracking detected the recipient unsubscribed from further communications via the in-email preferences link	

Executive Roundtables

This is used for campaigns that can either be organised through a 3rd party vendor or GitLab, covering both in-person and virtual roundtables. It is a gathering of high level CxO attendees run as an open discussion between the moderator/host, GitLab expert and delegates. There usually aren't any presentations, but instead a discussion where anyone can chime in to speak. The host would prepare questions to lead discussion topics and go around the room asking delegates questions to answer. [Read More](#).

Program type is included on the smart campaign meant to clear dietary restriction related fields. 7 days after an event's program statuses are recorded, the fields are cleared automatically.

Bizible: This is tracked as an offline channel. Touchpoints for offline channels are created through our AMM (formerly known as Bizible) campaign sync rules that can be found in this [spreadsheet](#).

Member Status	Definition	Success
No Action	default starting position for all records	
Sales Nominated	Sales indicated record to receive triggered event email sent by Marketing	
Waitlisted	Holding state if registration is full will be moved to Registered if space opens	

Registered	Registered for the event	
Cancelled	Registered, but cancelled ahead of the event	
No Show	Registered, but did not attend the event	
Attended	Attended the Event	Yes
Follow Up Requested	Requested follow up during the event	Yes

Gated Content

White Paper or other content offer.

Bizible: This is tracked as an online channel.

Member Status	Definition	Success
-----	-----	-----
No Action	default starting position for all records	
Downloaded	Downloaded content	Yes

Inbound - offline

Bizible: This is tracked as an offline channel because touchpoints cannot be applied directly via online means, e.g. Qualified and PQL handraises. Touchpoints for offline channels are created through our AMM (formerly known as Bizible) campaign sync rules that can be found in this spreadsheet.

Member Status	Definition	Success
-----	-----	-----
No Action	default starting position for all records	
Requested Support	Took a handraise action to request support from the GitLab team	
Requested Contact	Filled out Contact, Professional Services, Demo or Pricing Request	Yes

Inbound Requ
