

est

Any type of inbound request that requires follow up.

Bizible: This is tracked as an online channel.

Member Status	Definition	Success
No Action	default starting position for all records	
Requested Support	Took a handraise action to request support from the GitLab team	
Waitlisted	Submitted a request to purchase a future SKU	
Requested Contact	Filled out Contact, Professional Services, Demo or Pricing Request	Yes

Operational

This is used for non-traditional list uploads in which we are looking to a) avoid scoring the uploaded leads b) avoid tradition nurture emails c) fulfill some other various operational related task. e.g., educational conference list uploads.

Bizible: This is tracked as an online channel because we participated in an event, where applicable.

Member Status	Definition	Success
Member	default starting position for all records	
Registered	Registered (presumably did not attend)	
Attended	Attended live event	Yes
Attended Virtually	Attended an event virtually. Attendance can be live or post-event	Yes

Owned Event

This is an event that we have created, own registration and arrange speaker/venue (example: GitLab Commit or Meetups). Also considered in this grouping would be 3rd party auxiliary events that are added on to a conference sponsorship (i.e a happy hour or VIP dinner at a conference).

Bizible: This is tracked as an online and as an offline channel because we manage the registration process through our website. Whenever someone registers, a TP will be created based on that online activity while another TP is added based on the campaign sync rules, for the campaign members with success statuses.

Program type is included on the smart campaign meant to clear dietary restriction related fields. 7 days after an event's program statuses are recorded, the fields are cleared automatically.

Member Status	Definition	Success
No Action	default starting position for all records	
Subscribed to Updates	Subscribed to GitLab event updates via form fill	

Sales Invited	Invitation/Information about event sent by Sales/SDR	
Sales Nominated	Sales indicated record to receive triggered event email sent by Marketing	
Marketing Invited	Marketing geo-targeted email	
Declined Invitation	Event invitation declined by recipient	
Waitlisted	Holding state if registration is full will be moved to Registered if space opens	
Registered	Registered for event	
Cancelled	Registered, but cancelled ahead of the event	
No Show	Registered but did not attend event	
Attended	Attended event live	Yes
Attended On-demand	Watched/consumed the presentation materials post-event on-demand	Yes
Follow Up Requested	Requested additional details about GitLab to be sent post event	Yes

Paid Social

Bizible: This program is designated to house leads and programs brought in by social related campaigns (e.g. LinkedIn campaigns) and is tracked as an offline channel. Touchpoints for offline channels are created through our AMM (formerly known as Bizible) campaign sync rules that can be found in this spreadsheet.

Member Status	Definition	Success
-----	-----	-----
No Action	default starting position for all records	
Responded	Took an action related to social campaigns, like a form fill	Yes

Partner - MDF

This is for an activity that our Channel Partner is executing utilizing MDF Funds. We track membership, but the partner, not GitLab follows up with these leads. See more details here.

Bizible: This is tracked as an offline channel. Touchpoints for offline channels are created through our AMM (formerly known as Bizible) campaign sync rules that can be found in this spreadsheet.

Member Status	Definition	Success
-----	-----	-----
Member	default starting position for all records	
Sales Nominated	status for when leads have been sales nominated for the program	
Responded	Attended event or campaign	Yes

Prospecting

This program type is specific to non-event related list uploads, such as partner lists or data upload centric lists.

Bizible: This is not tracked on Bizible.

Member Status	Definition	Success
-----	-----	-----

No Action	default starting position for all records	
Uploaded	Status lead is normally transitioned to upon successful upload	
Do Not Use (Responded)	Not to be used. Included because Marketo requires a success step	
Yes		
Member	Indicative of a special member status for this program type. Meaning of "special" is dependent on use case	

Speaking Session

This campaign type can be part of a larger Field/Conference/Owned event but we track engagement interactions independently from the larger event to measure impact. It is something we can drive registration. It is for tracking attendance at our speaking engagements.

Bizible: This is tracked as an offline channel. Touchpoints for offline channels are created through our AMM (formerly known as Bizible) campaign sync rules that can be found in this spreadsheet.

Member Status	Definition	Success
-----	-----	-----
No Action	default starting position for all records	
Sales Invited	Invitation/Information about event sent by Sales/SDR	
Sales Nominated	Sales indicated record to receive triggered event email sent by Marketing	
Marketing Invited	Marketing geo-targeted email	
Registered	Registered or indicated attendance at the session	
No Show	Registered but did not attend event	
Attended	Attended speaking session event	Yes
Follow Up Requested	Had conversation with speaker or requested to be followed up with by sales post event	Yes

Sponsored Webcast

This is webcast hosted on an external partner/vendor platform. The status of Attended On-demand accounts for GitLab hosted On-Demand and non-GitLab hosted On-demand webcasts. Read more.

Bizible: This is tracked as an offline channel for both types of touchpoints (TPs) mentioned below.

For Sponsored Webcasts we're creating TPs in two ways:

1. Registration TPs, which mimic the TPs created for Owned Events through the online registration method (bizible script on our LPs). However, because for Sponsored Webcasts, we don't own the LP registration, this method is unavailable. Instead, we're replicating these TPs through the Marketo Program membership method.

The Marketo Program membership rule creates a "Registration TP" for all program members housed in Marketo programs that sit in a Marketo folder with the folder's name containing "Sponsored Webcasts". As long as this naming convention is followed, these TPs will be created automatically. The Touchpoint Date for these touchpoints is the Program Membership Date.

1. Responded Status TPs, which are created based on the AMM Channel/Sub-Channel Rules for Offline Touchpoints(Rule on row 19) for responded status campaign members only. The TP Date for these TPs is the Member First Associated Date in the associated SFDC Campaign. Please see below the campaign statuses for the Sponsored Webcasts campaign type:

Member Status	Definition	Success
-----	-----	-----
No Action	default starting position for all records	
Sales Nominated	Used by marketing for invitee tracking	
Registered	Registered for webcast	
No Show	Registered but did not attend event	
Attended	Attended event	Yes
Follow Up Requested	Requested to be followed up with from GitLab	Yes
Attended On-demand	Watched/consumed the presentation materials post-event on-demand	Yes

Survey

A survey that we or a 3rd party sends out. Tracks respondents and new leads we receive.

Bizible: This is tracked as an offline Bizible channel. Touchpoints for offline channels are created through our AMM (formerly known as Bizible) campaign sync rules that can be found in this spreadsheet.

Member Status	Definition	Success
-----	-----	-----
Member	default starting position for all records	
Sales Nominated	Sales indicated record to receive triggered event email sent by Marketing	
Invited	Was invited, but did not participate in survey	
Filled-out Survey	Filled out survey	Yes
Follow Up Requested	Filled out survey and requested to be contacted by sales	Yes

Trial

Track cohort of Trials for each product line (Self-managed or SaaS) to see their influence.

Bizible: In-product self-managed and SaaS trials are tracked as an offline Bizible touchpoint. The self-managed trial utilizing a Marketo form is an online Bizible touchpoint.

Member Status	Definition	Success
-----	-----	-----
No Action	default starting position for all records	
Signed Up	Signed up for Trial	Yes

Vendor Arranged Meetings

Used for campaigns where a third party vendor is organizing one-to-one meetings with prospect or customer accounts. This does not organize meetings set internally by GitLab team members. An example would be a "speed dating" style meeting setup where a vendor organized meetings with prospects of interest to GitLab. Read more.

Bizable: This is tracked as an offline Bizable channel. Touchpoints for offline channels are created through our AMM (formerly known as Bizable) campaign sync rules that can be found in this spreadsheet.

Program type is included on the smart campaign meant to clear dietary restriction related fields. 7 days after an event's program statuses are recorded, the fields are cleared automatically.

Member Status	Definition	Success
No Action	default starting position for all records	
Registered	Registered for the event	
No Show	Registered, but did not attend the event	
Attended	Attended the Event	Yes
Follow Up Requested	Had conversation with speaker or requested additional details to be sent post event	Yes

Webcast

Any webcast that is hosted and held by GitLab. There are a few different groups that run webcasts. Go their specific pages to see additional details on setup.

- Campaign webcasts
- Field Marketing webcasts
- Goldcast webcasts

Bizable: This is tracked as an online Bizable channel as well as an offline channel. We own the registration process so whenever a person registers to a webcast, a TP will be created based on the Bizable snippet that lives on our landing pages, while another TP is created for campaign members with success/responded statuses.

Member Status	Definition	Success
No Action	default starting position for all records	
Sales Invited	Invitation/Information about event sent by Sales/SDR	
Sales Nominated	Sales indicated record to receive triggered event email sent by Marketing	
Marketing Invited	Marketing geo-targeted email	
Registered	Registered through online form	
No Show	Registered, but did not attend live webcast	
Attended	Attended the live webcast	Yes
Follow Up Requested	Requested to be followed up with by sales post event	Yes
Attended On-demand	Watched the recorded webcast	Yes

Workshop

An in-person or virtual workshop where the attendees are guided through an agenda of real life use cases within GitLab.

For logistical setup and more information, go here.

Bizible: This is tracked as an offline Bizible channel. Touchpoints for offline channels are created through our AMM (formerly known as Bizible) campaign sync rules that can be found in this spreadsheet.

Program type is included on the smart campaign meant to clear dietary restriction related fields. 7 days after an event's program statuses are recorded, the fields are cleared automatically.

Member Status	Definition	Success
-----	-----	-----
No Action	default starting position for all records	
Sales Invited	Invitation/Information about event sent by Sales/SDR	
Sales Nominated	Sales indicated record to receive triggered event email sent by Marketing	
Marketing Invited	Marketing geo-targeted email	
Waitlisted	Holding state if registration is full will be moved to Registered if space opens	
Registered	Registered or indicated attendance at the session	
Cancelled	Registered, but cancelled ahead of the event	
No Show	Registered, but did not attend event	
Attended	Attended workshop event	Yes
Follow Up Requested	Requested additional details about GitLab to be sent post event	Yes

SFDC Campaign Instructions

SFDC campaigns have a general set of required fields. This section describes the fields and when you need to populate them. You will do this step after you sync the campaign from Marketo (or when you set-up Content Syndication/Linked In campaigns). Instructions are contained in this section so any changes to required fields are centrally located and instructions do not become out of date.

Updating SFDC fields

- Now go to Salesforce.com and check the All Campaigns by create date view. Sort by create date and your campaign should appear at the top. You may also search for your campaign tag in the search box. Select the campaign.

- Change the Campaign owner to your name
- Confirm that the Active box is checked
- Status should be updated according to the chart in this section. Typically you will use "In Progress"

- Confirm that start date and end date populated correctly (this is automated).

- Update the Is this an in person event dropdown, based on in-person vs virtual type

- Update Budget Holder - Do keep in mind that the Budget Holder field should be updated only if:

- The campaign results in offline Bizible touchpoints based on campaign type (i.e. content syndication, sponsored webcast, etc.) - NOTE: an offline Bizible touchpoint happens when we gather a lead offline and in order for the system to have this name you must go through a list upload process

- Update Is a Channel Partner involved? - You can leave this blank if "No"

- If yes, add the Channel Partner Name

- Update Is an Alliance Partner involved? - You can leave this blank if "No"
 - If yes, add the Alliance Partner Name
 - Update Will there be MDF Funding - You can leave this blank if "No"
 - If yes, lookup the MDF Request in this field: Detailed instructions
 - Update Integrated Campaign if applicable
 - Update GTM Motion if applicable
 - If there will be Sales Dev Invite Support - check this box. Otherwise leave blank
 - If there will be Sales Dev Onsite Support - check this box. Otherwise leave blank
 - Update Is Hyperscaler involved? to Yes if a hyperscaler is involved.
 - If yes, add the hyperscaler partner name after the date in your campaign name. Example using Executive Roundtable: YYYYMMDDHyperscalerPartnerExecutiveRoundtableTopicRegionEventType.
- For more info, see
- If yes, enter the hyperscaler partner name in the Hyperscaler field
 - If yes, select the type of Hyperscaler Funding using Will there be Hyperscaler Funding?, options are MDF or Credits
 - then, update the Hyperscaler Fund Requested Amount
 - Update the event epic
 - Update the description (if any)
 - Enter the Form submission page if you know it. Otherwise, it will need to be added after the landing page is created (if applicable)
 - Update Budgeted Cost - If cost is \$0 list 1 in the Budgeted Cost field. - NOTE there needs to be at least a 1 value here for ROI calculations, otherwise, when you divide the pipeline by 0 you will always get 0 as the pipe2spend calculation.
 - Update Region and Sub-region, if these are local or targeted to a specific region
 - For all SFDC campaign types run by Corporate Events or Field Marketing, please check the High Priority check box on the campaign level.
 - Details on our pilot we ran with the business development team which led us to add this!

OR:

- There were GitLab Dollars spent on the campaign (Field, Digital, Corporate, Community etc.) - can be left blank in the cases when we have campaigns that do not utilize budget; - NOTE: By updating the budget holder, we do NOT run the risk of double counting touchpoints, however, do keep in mind that since the field is not always filled out, it shouldn't be used for measuring each team's performance.
- Click "Save"
- Add the Marketo program link and SFDC campaign link to the epic.

Instructions for SFDC campaign creation when utilizing Allocadia

Using an integration from Allocadia > Marketo > SFDC, the information you've provided in Allocadia will push to your SFDC campaign.

Please Note: You must NOT edit the SFDC campaign until the Allocadia connector has completed the sync. This is normally done near-real time, but if the data does not push immediately, be aware it can take minutes to hours to do so. You'll know the Allocadia connect has completed its work when you see the SFDC campaign owner change from Marketo Integration to the name of the person running the campaign, as well as when all details are populated from Allocadia to SFDC. If you edit the campaign before the connector pushes the data over, it will break the build and you will manually have to edit all of the fields listed. For additional

Allocadia details go here.

- Go to alesforce.com and check the All Campaigns by create date view. Sort by create date and your campaign should appear at the top. You may also search for your campaign tag in the search box. Select the campaign.
- Confirm that start date and end date populated correctly (this is automated)
- Add Budgeted Cost
 - Budgeted Cost in SFDC pulls from your plan number, not your forecast number from Allocadia. If you do not have a plan number in Allocadia, Budgeted Cost will remain blank in SFDC. If you do have a plan amount in Allocadia, that amount will pull through to SFDC in the nightly sync.
 - If the cost of the tactic is \$0 (example - virtual workshop) list 1 in the Budgeted Cost field. There needs to be at least a 1 value here for ROI calculations, otherwise, when you divide the pipeline by 0 you will always get 0 as the pipe2spend calculation.

Parent/Child Campaigns Setup

For some tactics, there are multiple campaigns that occur as a part of a single initiative. Some examples of these could be a conference with speaking session or ancillary event, content syndication, or hybrid events (where in-person and virtual leads will be tracked separately). When this happens, a parent campaign should be created in SFDC and have each child campaign represent the individual tactics.

Two important aspects that need to be avoided when it comes when creating/editing parent campaigns are the following:

1. Do not add any campaign members to the parent campaign as we want to minimize the risk of creating duplicate bizible touchpoints for the same activity.
1. When creating a parent campaign, it should always be named with PARENT at the end of the campaign name. This is so we do not double-report on campaigns.
1. Parent campaigns shouldn't have values in the Actual Cost in Campaign field, while in the Budgeted Cost in Campaign field, do not put more than \$1 value. The true Budgeted Cost & Actual Cost are to be updated only on the child campaigns and not on parent campaigns, as we should not be running any ROI on the parent campaigns.
1. If you are an Allocadia user, you will not include the sub-category ID in the parent campaign. You will only use an Allocadia ID when creating the child campaigns. Since we do not have the same parent/child relationship structure available in Marketo, you will create a folder that will house all of the shared tactics together.

Create a Parent SFDC Campaign

- Create your first child campaign using the below instructions
- When finished, go to the top right of the campaign and click Clone
- Edit the campaign name to include PARENT at the end (example: 20250409GoogleCloudNextPARENT)
- Confirm the Active box is checked
- Remove the Allocadia Sub-Category ID
- Adjust the Budgeting Cost in Campaign to \$1
- Click Save

How to associate a child campaign to a parent campaign in SFDC

- Log in to SFDC and search for your child campaign
- Once in the campaign, click the edit button next to the Parent Campaign field
- Copy and paste the parent campaign name (example: 20250409GoogleCloudNextPARENT) into the field or start typing the parent campaign name and click Save
- Continue to do the same for any additional child campaigns
- You can view your campaign hierarchy in the right-hand panel (clicking View All will provide a full hierarchical view)

An example of a Parent/Child SFDC hierarchy can be found [here](#).

Create a Parent Marketo Program (aka folder)

- Log in to Marketo
- Go to the correct event type folder based on fiscal year and quarter (example - FY26 - Q1 Conference)
- Right click the folder and select New Campaign Folder
- Add the campaign name as the Campaign Folder Name (example - 20250409GoogleCloudNext)
- Hit Save
- All Marketo programs for your event can be nested under this main folder
 - To move any existing Marketo programs to your folder you can simply drag and drop the programs, or right click the programs and select Move and direct to the folder you created.

An example of a Marketo program folder with nested programs can be found [here](#).

Important Notes

1. The Active checkbox must be checked on the SFDC campaign for Marketo to be able to "see" the campaign. This will happen automatically if you follow the process below, but if there is a time you cannot find a SFDC campaign in Marketo, check to make sure that box is checked in SFDC. Additionally, if this box is unchecked, Marketo cannot send leads or update campaign member status for that SFDC campaign.
1. If you are creating a parent campaign, please make sure that the campaign name of a parent campaign reflects the fact that it's a parent, by adding Parent at the end of the Campaign Name. In the event of a mishap, when a parent campaign was setup by mistake to house responded campaign members, adding Parent at the end of the campaign name, makes sure that it gets seen by our campaign sync rules that control the generation of touchpoints for offline campaigns and does not create double touchpoints for campaign members that may be housed in both the parent and child campaigns.
1. If you are creating a campaign that relies on offline touchpoint generation, please make sure to double check that the campaign type is selected appropriately and that the campaign name does not contain words like test, DONTUSE, template, parent, because based on the campaign sync rules that govern the creation of offline touchpoints, these campaigns will not have touchpoints created for them.
1. We have a trigger in SFDC that stamps the start date, end date, reporting date, and fiscal quarter by taking the first 8 characters of the name of the campaign (if they are numbers) and converting that into a date (example: 20210505 == 5/5/2021, so YYYYMMDD). So, campaigns starting with a number must contain a valid date, otherwise you will receive an error.
1. Campaign statuses other than Aborted are automatically set by SFDC workflow based on Start and End Dates.

|Status|Definition|When does it update?|

|-----|-----|-----|

|Planned|The campaign is expected and has been set up, but the start date hasn't happened yet (could also be where its pulled back to if an event is postponed)|Prior to the Campaign Start date - upon Creation|

|In Progress|The campaign has begun |On Start date|

|Aborted|Campaign has been suspended, cancelled, aborted|Manually when campaign is aborted|

|Completed|The campaign took place and has ended|After the Campaign End Date|

Marketo Program and Salesforce Campaign set-up

The Marketo programs for the corresponding campaign types have been prebuilt to include all the possible necessary smart campaigns, email programs, reminder emails and tokens that are to be leveraged in the building of the program.

For LinkedIn Social Ads follow the instructions documented in the LinkedIn section

For virtual events, there are additional set up details on this page.

For all other campaign types, follows steps below. All steps are required.

Steps to Setup Marketo programs and Salesforce Campaigns

Step 1: Clone the Marketo program indicated below

Be advised that some templates are being used for both in-person and virtual events. These templates have been marked as Hybrid template. For these templates, the naming convention is slightly different in that additional campaign information appears in the name. When naming the program, EventType is replaced with either Virtual, In-Person, or Hybrid (if an event will be both in-person and virtual).

If this is to set up a program that involves a channel partner, you must also follow the directions on that setup page. You will still clone the program from the list below to get started.

How to Clone the Marketo program

- Click on the appropriate template for your tactic below (you must be logged into Marketo to proceed)
- Right click on the template in Marketo and select Clone
- In the Clone To field, select A campaign folder
- In the Name field, input the campaign name (this should be the campaign name previously created in Allocadia - example: 20220704BestEventEver) - The date should be the START date of your campaign.
- In the Folder field, select the appropriate folder based on your campaign type. Most folders are also organized by fiscal year and quarter.
- In the Description field, paste your epic URL
- Click Create

Partner Campaign Setup

There are currently several types of partner campaigns including Channel MDF campaigns, Joint GitLab/Partner, campaigns, Hyperscaler Campaigns, and Hyperscaler Funded Campaigns.

Channel MDF Campaign

Channel MDF is when GitLab covers 50% of a partner initiated campaign managed by the Channel Marketing team. All leads generated belong to the Channel Partner and are under Partner Queue ownership. Channel MDF has its dedicated Marketo template, go to this page for campaign setup instructions.

Joint GitLab/Partner Campaign

Joint GitLab/Partner campaigns when GitLab Field Marketing team fully funds and manages the marketing campaign. Leads that are partner sourced will be routed to the channel partner however, if the BDRs/SDRs are actively working the lead then it remains in get lab ownership. If a partner receives a lead but doesn't formally accept it within 30 days (by updating their share status), our system automatically recalls that lead, marks it as "Recycled," and brings it back into GitLab's nurture program. Follow the campaign setup instruction for each campaign type below. For more information about Joint/Partner campaign go here - ensure these steps are completed.

Hyperscaler Campaigns

Hyperscaler Campaigns are strategic marketing initiatives conducted in partnership with our Hyperscaler allies. These marketing activities including Executive Roundtables, Vendor-Arranged Meetings, Conferences, Owned events and more.

For campaign setup, utilize the Marketo templates available in Hybrid and Other Tactic section below.

Example using Executive Roundtable:

YYYYMMDDHyperscalerPartnerExecutiveRoundtableTopicRegionEventType

- When you manage a Hyperscaler Campaign without Funds:

- Add the Hyperscaler Partner name after the date:

YYYYMMDDAWSExecutiveRoundtableTopicRegionEventType.

- When you manage a Hyperscaler Campaign with MDF from the Hyperscaler Partner:

- Add the Hyperscaler Partner name after the date, and "MDF": YYYYMMDDAWS

MDFExecutiveRoundtableTopicRegionEventType.

- When you manage a Hyperscaler Campaign with Credits from the Hyperscaler Partner:

- Add the Hyperscaler Partner name after the date and "CR" for Credits: YYYYMMDDGCP

CRExecutiveRoundtableTopicRegionEventType.

Special Instructions for Content Syndication Teams: Update the Asset Name in the Marketo token of the Content Syndication Folder to include the Hyperscaler Name

Please add a Hyperscaler Campaign, funded by Hyperscaler, to the Hyperscaler Funded Campaign folder in Marketo.

Important Lead Ownership Note: All leads generated through Hyperscaler campaigns remain under

GitLab's excl

usive ownership. These contacts enter our standard nurturing process, accumulating lead score according to engagement metrics. Upon reaching MQL status, they're automatically assigned to the appropriate BDR/SDR team for personalized follow-up.

Hybrid Marketo Templates

- Executive Roundtables - Hybrid template:

YYYYMMDDExecutiveRoundtableTopicRegionEventTypetemplate

- Speaking Session - Hybrid template: YYYYMMDDSpeakingSessionEventTypeTemplate

- Vendor Arranged Meetings (1:1 meetings) - Hybrid template:

YYYYMMDDArrangedMeetingsVendorNameRegionEventTypetemplate

- GitLab Hosted Workshops - Hybrid template:

For virtual workshops, please follow directions in the virtual workshop set-up section. In-person workshops utilize a similar setup, but do not involve the Zoom requirements. If you have a workshop to set up that is not one of the workshops listed below, you can still utilize any of these templates for backend setup and then use a copy doc to indicate all copy adjustments that are required (you will also update the baseline Marketo tokens during the setup process).

- Project Management: YYYYMMDDWorkshopProjectManagementEventType

- Security: YYYYMMDDWorkshopSecurityWorkshopEventType

- CI Workshop: YYYYMMDDWorkshopCIEventType

- Jenkins YYYYMMDDWorkshopJenkinsEventType

- GitLab Duo Enterprise Workshop : YYYYMMDDWorkshopDuoAIEventType

- GitHub GitLab Migration: YYYYMMDDWorkshopGitHubGitLabEventType

- GitLab Basics: YYYYMMDDWorkshopGitLabBasicsEventType

- GitLab Platform Engineering Workshop YYYYMMDDWorkshopPlatformEngineeringEventType

Other Tactic Marketo Templates

- Conference - Virtual: YYYYMMDDYYYYMMDDVendorVirtualConfName1 (Virtual Conference Template)

- Conference - In person: skip to specific setup details here

- Conference - Meetings (FM led) In person: skip to specific setup details here

- Content Syndication: skip to specific setup details here

- Note, if you are managing a hyperscaler campaign, update the Asset Name in the Marketo token of the Content Syndication Folder to include the Hyperscaler Name.

- Direct Mail: YYYYMMDDDirectMailTemplate

- Direct Mail not needing a Marketo Program: skip to specific setup details here

- Gated Content: YYYYTypeContentTemplate

- Integrated Campaign: FY20IntegratedCampaignTemplate

- Surveys - For templates and setup instructions for surveys, skip to specific setup details here.

- Owned Event - Hybrid: YYYYMMDDOwnedEventEventTypeTemplate

Webcasts Marketo Templates

- Zoom GitLab Hosted Webcast: YYYYMMDDWebcastTopicRegion

- Sponsored Webcast: YYYYMMDDExternalWebcastVendorNameTopicRegion

Step 2: Sync to Salesforce

- At the program main screen in Marketo, where it says Salesforce Sync "not set", click on "not set"
- Click "Create New." The program will automatically populate the campaign tag, so you do not need to edit anything.
- If you are a user of Allocadia, you will need to add the Allocadia sub-category ID to the Description field.
- Click "Save"

Step 3: Update Marketo tokens

- Complete the information for each token. Instructions for what to enter for each token are included in the template.
- Note that it is important that all tokens are completed as the "Interesting Moments" Smart Campaigns pushes information to Salesforce based on the tokens. Depending on the campaign, some auto-responders and emails rely on tokens as well.
- Note that the token for Event Location should be filled in with the City for In-Person events and Virtually for virtual events.
- You do not need to update the following tokens upon setup:
 - {{my.email header image url}} - This is optional. You will need this if you had custom images created.
 - {{my.ondemandurl}} - This will be entered AFTER the event date. It is the link to the recorded webcast. You will need to come back after the event and update this token.
- Update the utmcampaign field following the process outlined here.
- Partner Campaigns will need to also to update the {{my.partner name}} for LIM
- For live events, be sure to update the reply email token. This is used in the confirmation email. You need to add the correct email address for cancellations or special accommodations, and update the subject to something descriptive. Keep the %20 between each word in the subject so the subject populates correctly.
- If your program qualifies for Action Streams (currently only available for Security), please update the {{my.Action Stream}} token with the relevant type here. Video instructions - note the instructions are different for Conferences and our outlined in the Conference instructions below.

Step 4: Activate Marketo smart campaign(s)

- Action Stream tagging for programs: The following is relevant for all campaign types, except Content Syndication and LinkedIn Lead Gen forms. Those are handled differently. For webcasts, workshops, events, and gated content, please follow these instructions to properly route leads to Action Streams.
 - Add the relevant stream type to the {{my.Action Stream}} token
 - In the Processing flow, select "Execute Campaign" from the right side panel and drag it into the flow. This should go near the bottom of the flow, before any "Remove from Flow" steps.
 - Complete the Execute Campaign flow step: Executed Campaign: Air Traffic Control Automation.Action Stream tagging (programs), Use Parent Campaign Token Context: True
- If this is a Gated Content campaign, follow the detailed set-up instructions on the content in campaigns page.
- If this is a Vendor Arranged Meeting:
 - Click the Smart Campaigns folder
 - Select the 01 Interesting Moments smart campaign
 - The correct program should automatically apply when cloned, so you don't need to do

anything here. However, you can confirm that the campaign

- If this is Speaking Session follow the below activation instructions:

- Click the Smart Campaigns folder

- Select the 01a Registration Flow smart campaign

- The correct program should automatically apply when cloned, so you don't need to do anything here. However, you can confirm that the campaign tag appears on in the Smart List and Flow. If the name of the template appears anywhere, replace it with the campaign tag.

- Click to the Schedule tab and click Activate

- Select the 04 Interesting Moments smart campaign

- The correct program should automatically apply when cloned, so you don't need to do anything here. However, you can confirm that the campaign tag appears on in the Smart List and Flow. If the name of the template appears anywhere, replace it with the campaign tag.

- Click to the Schedule tab and click Activate

- (NO ACTION) If a list is used to import registrants/attendants, the 03 - Processing - No Shows / Attendees smart campaign will be run after the list is uploaded.

- For Speaking Session also select the 02-Interesting Moments smart campaign, click to the Schedule tab and click Activate

- If this is an Executive Roundtable

- Click on the Campaigns folder

- Click on Interesting Moments, click to the Schedule tab and click Activate

- If you are creating a Marketo landing page for this event, click on 01 Registration Flow, click to the Schedule tab and click Activate. If you are doing a list upload, this step is not necessary.

- If this is Workshop follow the below activation instructions:

- Click the Smart Campaigns folder

- Select the 00 Interesting Moment smart campaign, navigate to the Schedule tab and select Activate

- Select the 01a Registration Flow smart campaign

- The correct program should automatically apply when cloned, so you don't need to do anything here. However, you can confirm that the campaign tag appears on in the Smart List and Flow. If the name of the template appears anywhere, replace it with the campaign tag.

- Click to the Schedule tab and click Activate

- If this is an Owned Event follow the below activation instructions:

- Click the Campaigns folder

- If you have a Marketo registration page for this event, select the 01b - Registration smart campaign

- The correct program should automatically apply when cloned, so you don't need to do anything here. However, you can confirm that the campaign tag appears on in the Smart List and Flow. If the name of the template appears anywhere, replace it with the campaign tag.

- Click to the Schedule tab and click Activate

- Select the 02a - Interesting Moments smart campaign

- The correct program should automatically apply when cloned, so you don't need to do anything here. However, you can confirm that the campaign tag appears on in the Smart List and Flow. If the name of the template appears anywhere, replace it with the campaign tag.

- Click to the Schedule tab and click Activate

- LIST UPLOAD ONLY: If you do not have a registration page and responses will be uploaded via a list load, MOPs will activate the 02b - Manual Upload Processing campaign if necessary.

- For all other campaign types, follow the below activation instructions:

- Click the "Smart Campaigns" folder

- Select the Interesting Moments smart campaign.

- The correct program should automatically apply when cloned, so you don't need to do anything here. However, you can confirm that the campaign tag appears on in the Smart List and Flow. If the name of the template appears anywhere, replace it with the campaign tag.
- Click to the "Schedule" tab and click Activate.
- Select the 01 Processing smart campaign. (Does not apply to Virtual Conference or External Webcast)
- The correct program should automatically apply when cloned, so you don't need to do anything here. However, you can confirm that the campaign tag appears on in the Smart List and Flow. If the name of the template appears anywhere, replace it with the campaign tag.
- Click to the "Schedule" tab and click Activate.
- If you do not see an Interesting Moments campaign, check to see if that step is in 01 Processing or Viewed on Demand campaigns.
- For Speaking Sessions with pre-registration, find the Pre-Registration folder, and activate the 01 - Form Fill step after populating the smart list with the correct form and landing page.

Step 5: Setting Landing Page / Smart Campaign Expiration (Asset Expiration)

As of early 2022, Adobe has introduced a new feature to Marketo called asset expiration, which can be read about in Marketo's documentation [here](#). This applies to smart campaigns and landing pages. For GitLab's use case, we have enabled this feature for the following role permissions: Field Marketing User, Marketing Program Managers and Marketing User. If you do not have these permissions would like this feature enabled, please submit an access request.

Asset Expiration Use Cases

All programs have different necessities so it will be important to determine how asset expiration should be utilized for various program types. Guidance can be supplied by MktgOps, if needed, but utilize this method for the majority of cases:

- Conference, Direct Mail, Executive Roundtable, Owned Event, Speaking Session, Sponsored Webcast (if no on-demand component), Survey, Vendor Arranged Meeting, Workshop: For one-time programs that are completely done after a specific date and will not use an Attended On-Demand member status over time, set the expiration of assets at 4 weeks after the event and at the end of the day, so at 23:55 PST. For example, if a conference or executive roundtable program type occurs on the April 3, schedule asset expiration for end day on May 1.
- Content syndication or Campaigns where the end of the campaign is difficult to pinpoint: there are 2 different options to consider:
 - Set up expiration 12 weeks after the estimated campaign end, again at the end of the day. This is useful for campaigns where a third-party is handling lead collection for us and we are manually uploading lead lists. This also supplies a buffer in the event the SLA is not met on schedule and the campaign runs longer than anticipated.
 - Do not use asset expiration at all. We often have content syndication focused programs that go on indefinitely so expiration does not make sense to utilize in this case. Assets can be discontinued in the future.
- Gated Content: It is not recommended to use asset expiration as these remain in use for long periods of time.
- Webcast: It is not recommended to use asset expiration as these typically have an on-demand component.

Setting Asset Expiration On A Program

- Right click the Marketo program to open the program menu and select Set local asset expiration. Please note, this will not work without the correct permissions.
- A menu with all expiration capable assets will be shown as a segmented list. Example assets that can appear are landing pages, active trigger campaigns and Reoccurring batch campaigns.
- Use the asset checkboxes to select all assets you wish to set an expiration for and select set expiration when ready. Assets that should be expired are landing pages, active trigger campaigns and Reoccurring batch campaigns. Set your date and time and then submit.
 - Prioritize setting expirations on smart campaigns.
 - Be mindful of which smart campaigns are set to expire and when because such an event will disable program registration and on-demand flows.
- To remove expirations at a later date, right click on the program to return to the capable assets and submit changes.

Step 6 Setting up optional self-service cancellation

This option is only available on specific program templates: the Owned Event template and the Executive Roundtable template. Workshop templates may be added at a later time. When a person fills out the cancellation form, their status in the program is updated to cancelled and an alert is sent to the event owner listed in the tokens. If the person cancels using a different email address, they will be added to the campaign as cancelled and the event owner will need to update the original registration to cancelled.

- Self-service cancellation should always be utilized for Field Marketing's Owned Event and Executive Roundtable programs.
- Included in the mentioned templates are 2 landing pages and 2 email templates - in the Self Service Cancellation Assets folder. To provide a self-service option for recipients to cancel their reservation, these landing pages and email templates will need to be updated.
- Grab the URL of the Cancel Page landing page and place it in the token called my.cancellation page. If this is not done, the link included in the registration confirmation email will be broken.
- Activate the 01 Cancellation Flow smart campaign
- For the Send Alert step, determine the preferred internal GitLab email address that will receive the cancellation alert. This flow step alert notifies stakeholders of cancellations. If only one email should be notified, fill in the {{my.event owner email address}} token in the program tokens with the appropriate email. If more than one email should be notified, change the token as previously described - then within the 3 - Send Alert flow step, add each additional email to the To Other Emails field after the token, with each email separated by a comma
- Activate asset expirations for 2-3 days after the event is over for all live cancellation assets

Step 7: Update the Salesforce campaign

Refer to instructions above.

Step 8: Update the Salesforce campaign - Using Allocadia

Please refer to the instructions above.

Training Videos for Setting up SFDC Campaign - Using Allocadia

- Instructional Video
- Sync Results Video

Waitlist processing - Owned Event, Workshop, Webcasts

If you need to change an event from registration to waitlist, or you want to start off with a waitlist, use these instructions.

- Confirm that the email copy you would like to use is set-up in the Confirm - Waitlist email. This email uses tokens and should be set for you, but you can customize as necessary.
- Confirm that the {{my.event owner email address}} is completed in the tokens section. The Waitlist program will send an alert to this email address so you know each time someone is added to the waiting list based on this token.
- Deactivate the 01b Registration Smart Campaign
- Activate the 01a Waitlist Smart Campaign
- Activate the 01c Waitlist to Registered Smart Campaign

You have now activated the waiting list processing. If you need to reactivate Registration, you will deactivate the two Waitlist campaigns, and reactivate 01b Registration.

Moving from Waitlist to Registered - Owned Event, Workshop, Webcasts

Use these instructions to move people from the waiting list to Registered.

- Click on the Marketo program (the name of the campaign)
- Click on Members
- Change the filter to Waitlisted
- Click on the person/people you would like to move to Registered. They will highlight when they are selected.
- Click on Change Status
- Select Registered

Once you click Registered, the status will change and the 01c Waitlist to Registered Smart Campaign will send the Registration Confirmation email.

Post Event Processing for Waitlisted Members - Owned Event, Workshop, Webcasts

In the situations where you have an event that had the waitlist feature turned on and you had hit capacity, follow these steps to process waitlisted leads. After you've processed the No Show + Attended leads you will need to process the Waitlisted leads since they technically are neither Attended or No Show. The important thing here is that we don't want them receiving follow-up emails for No Show or Attended. Please follow these steps to ensure no emails are sent and interesting moments and behavior scores are updated.

- Click on the Marketo program (the name of the campaign)
- Navigate to the Campaigns Folder
- Navigate to the 01c Waitlist to Registered campaign.
- Click into the Flow Steps and remove step 1 Send Email (Registration Confirmation email) to avoid sending communication.
- Navigate back to the Member list for the event.

- Filter Status to waitlisted or click on the person/people you would like to move to Registered. They will highlight when they are selected.
- Click on Change Status
- Select Registered

Once you click Registered, the status will change and the 01c Waitlist to Registered Smart Campaign will now update the Interesting Moments & behavior score and NOT send the Registration Confirmation email. After this is complete and they are moved to a registered status, we can still send them a follow up email, based on the registered status. You will need to complete a no show, attended, and registered (all separate copy) email issues.

Setting up a controller Marketo program for a multi-day event

This is an optional feature for anyone looking to run an event on multiple days while using the same form and landing page for all included days - but with each day having its own Marketo programs/SFDC campaigns. Note this streamlined workflow exists on only 2 templates at the moment but work similarly on both templates: YYYYMMDDEventNameWebcastOn24template and YYYYMMDDWebcastTopicRegion. If there is demand, this can be requested for other program templates via an issue.

- First, determine the number of days needed for your event. If the event requires anything different than 3 days, complete as much setup as possible following the below directions and then ping MktgOps on your current issue so we can finish the setup. The intention here is to allow for use of a tokenized global form rather than individual forms for each program. The form is FORM 1419: WebcastMultipleTimeSlots. If your event requires a different number of days, MktgOps needs to clone 1419 and change the number of days allotted in the dropdown
- Clone the program template you will need for as many days as your multi-day event will require - then clone one more and name the extra program as your controller program - with a name that somewhat alludes to your child programs. Keep all of your programs near each other and within the same Q1/2/3 or Q4 folder, if possible. Be sure to list the programs in play in the issue if you require finishing touches by MktgOps
- In the controller program, add FORM 1419: WebcastMultipleTimeSlots to the Marketo landing page. FORM 1419 is tokenized with these local program tokens: Date 1, Date 2, Date 3, Date 1 Option, Date 2 Option and Date 3 Option. Fill in the Date tokens with the time, date and timezone exactly as they should appear on the dropdown menu on the landing page. The dropdown will appear on the landing page for users to select, so formatting is important. Fill in the Option tokens with a keyword relating to your individual multi-day events. e.g. Day 1 = Aug 23 7:00 and Day 2 = Sept 1 5:00 so Day 1 Option = August and Day 2 Option = September. There cannot be overlapping information on the Option tokens as they are part of some contains logic in the processing smart campaign
- Speaking of that, still in the controller program, move on to the smart campaign 01 Registration Flow (Multi-timeslot). The rest of this setup continues to be similar as a regular program set up. Click on Flow and scroll down to step 3. Change Option 1, Option 2 and Option 3 to match the keywords from the Date 1/2/3 Option tokens. This will add leads to static lists for safe keeping. It will also help monitor for errors. If your events only span 2 days, remove Option 3 and if there are more than 3 days MktgOps will handle adding more days as this requires more logic and tokens
- On Flow Step 4, again change the Option 1/2/3 to match your token keywords. In the Requested Campaign field, find the registration smart campaigns from your child programs and plug them in here. Be careful to select the correct smart campaigns here. Their names will start with the name of the child campaign but they will all have the same or similar smart campaign name of

01a Registration Flow - Form fill

- Note, the registration processing smart campaigns in the children programs need to be activated in order to appear as a request campaign option in the controller program's Multi-timeslot smart campaign
- Note there is an alert that will be set to an email of your choosing if there is something array with the registration flow
- On the controller campaign there is nothing left to set up. Activate the appropriate processing smart campaigns on your child programs (busy as usual), including all needed processings, such as Interesting moments, Attended flows, Follow up Requested, etc. Remember to sync the child campaigns to sfdc, but there is no need to sync the controller program to sfdc as it does not house program members with relevant program statuses

Setting up assets for Late/In-person Registration

This is an optional feature only available for the Owned Event program template. Utilize this feature if a team wants flexibility to register unregistered attendees that have appeared in-person to an owned event but the normal registration process through the landing page form has been previously closed down. The teams in charge of the event should agree on whether to use this feature before the event and setup should be done prior to when the event starts. This allows the landing page/form to be manually added as a bookmark on check-in devices, such as on GitLab owned tablets and laptops.

- Locate the Late Registration Assets sub-folder found in the Assets folder. This only exists in the YYYYMMDDOwnedEventEventTypeTemplate template
- Request in the MktgOps Slack channel that someone with the needed permissions to approve Marketo program assets activate the Late Registration page and Late Thank you page landing pages. These are by default not approved in the program template. Be sure to check beforehand for anything that needs to be changed, such as the included form on the landing page.
 - It's highly suggested to change the landing page URL to something short and easier to type before approving the landing page, e.g. <https://page.gitlab.com/EventNameLateReg.html>
- Take the Late Registration page URL and place it in the program token named {{my.late registration page}}, leaving out the https://. This allows there to be a circular pattern on the registration Thank you page. The Thank you page displays a return link to the late registration page for the next registrant to utilize
- Activate the 01 Late Registration smart campaign to activate the flow
- Right click on the program to set up the asset expiration dates for all late registration assets. These are not meant to be left on and should be set to expire the day after the event ends or when it is estimated no more registrants will be accepted
- Share the late registration page URL with the appropriate team participating in the upcoming event so the page can be added to check-in devices, such as GitLab owned tablets and laptops, where it can be accessed on the event floor with ease

Steps to Setup in-person Conferences

Step 1: Clone this program

- Clone this program
- Use format YYYYMMDDHyperscaler(if applicable)ConferenceEventType
- Note that if you are using JiffleNow for setting Executive Meetings or Booth Demos/Meetings, you will need a Marketo program and SFDC campaign for each type. They are all Conference

campaign types, so you can create the first one following these instructions (including filling out the tokens), then clone that program. That will make it so you don't need to complete all of the tokens each time (you will need to make minor modifications, but they are quicker this way). You will sync each program to SFDC to create the SFDC campaign as described below.

Step 2: Sync to Salesforce

- At the program main screen in Marketo, where it says Salesforce Sync with "not set", click on "not set"
- Click "Create New." The program will automatically populate the campaign tag, so you do not need to edit anything.
- If you are a user of Allocadia, you will need to add the Allocadia ID sub-category ID to the Description field.
- Click "Save"

Step 3: Update Marketo tokens

- Update all tokens as they feed the email and interesting moments
- You do not need to update Request tokens if there are no meetings being set up for the conference
- If you are scheduling in person meetings, be sure to update the reply email token. This is used in the confirmation email. You need to add the correct email address for cancellations or special accommodations, and update the subject to something descriptive. Keep the %20 between each word in the subject so the subject populates correctly.
- If your program qualifies for Action Streams (currently only available for Security), please update the {{my.Action Stream}} token with the relevant type here.

Step 4: Activate Marketo smart campaign

- 00 Send Sales-Driven Invite (optional) can be turned on and scheduled to send on a reoccurring basis if sales and XDRs are going to be inviting people to the conference. This is not required on all campaigns and should be activated after building the Sales-Driven email. After scheduling, Sales can add someone to the campaign in SFDC and that person will be automatically sent an email invite. There is a separate email for sales invites listed in the email folder
- 01 Manual upload processing this will be activated by MOps if a manual upload is required. If you upload using the self-service process, this is not required.
- 02 Add as Marketing Invited should only be used if XDRs are planning to follow up and drive attendance to the event. This should be scheduled AFTER the first email invite is scheduled to send. It will update everyone who had the email invite sent to them as Marketing Invited. They will be updated in the campaign and visible in SFDC. Do not use this unless there is planned event drivers
- 03 Interesting Moments Activate this campaign. This should be turned on before any lists are uploaded.
- 04 Action stream processing If your conference covers a relevant Action Stream topic, be sure you added the Action Stream to the tokens, then activate this campaign.

Step 4a. Meeting Request Processing

These steps are not yet configured. If you are planning to do this for your next event, please

create an issue with the Marketing Operations team.

Step 4b. Set-up Asset Expiration

- Right click the Marketo program to open the program menu and select Set local asset expiration. Please note, this will not work without the correct permissions.
- A menu with all expiration capable assets will be shown as a segmented list. Example assets that can appear are landing pages, active trigger campaigns and Reoccurring batch campaigns.
- Use the asset checkboxes to select all assets you wish to set an expiration for and select set expiration when ready. Assets that should be expired are landing pages, active trigger campaigns and Reoccurring batch campaigns. Set your date and time and then submit.
 - Prioritize setting expirations on smart campaigns.
 - Be mindful of which smart campaigns are set to expire and when because such an event will disable program registration flows.
- To remove expirations at a later date, right click on the program to return to the capable assets and submit changes.

Step 5: Update the Salesforce campaign

Refer to instructions above.

- Add the Marketo program link and SFDC campaign link to the epic.
- If the program is being ran by Digital Marketing, add the SFDC campaign under the parent campaign Demand Gen Publishers/Sponsorships

If utilizing Allocadia, please refer to the instructions above.

Steps to Setup in-person Conference Meetings

The instructions below are designed for meetings led by Field Marketing at large conferences.

Step 1: Clone this program

- Clone this program
- Use format YYYYMMDDHyperscaler(if applicable)ConferenceExecutiveMeetings
- Note that if you are using Jiffenow for setting Executive Meetings or Booth Demos/Meetings, you will need a Marketo program and SFDC campaign for each type.

Step 2: Sync to Salesforce

- At the program main screen in Marketo, where it says Salesforce Sync with "not set", click on "not set"
 - Click "Create New." The program will automatically populate the campaign tag, so you do not need to edit anything.
 - If you are a user of Allocadia, you will need to add the Allocadia ID sub-category ID to the Description field.
 - Click "Save"

Step 3: Update Marketo tokens

- Update all tokens as they feed the email and interesting moments. Don't skip the epic token because it is included in the internal alert.
- Be sure to update the reply email token. This is used in the confirmation email. You need to add the correct email address for cancellations or special accommodations, and update the subject to something descriptive. Keep the %20 between each word in the subject so the subject populates correctly.
- If your program qualifies for Action Streams (currently only available for Security), please update the {{my.Action Stream}} token with the relevant type here.

Step 4: Activate Marketo smart campaign

- 00 Send Sales-Driven Invite (optional) can be turned on and scheduled to send on a reoccurring basis if sales and XDRs are going to be inviting people to the conference. This is not required and the email needs to be updated before scheduling. After scheduling, Sales can add someone to the campaign in SFDC and that person will be automatically sent an email invite. There is a separate email for sales invites listed in the email folder
- 01 Manual upload processing this will be activated by MOPs if a manual upload is required. If you upload using the self-service process, this is not required.
- 02 Add as Marketing Invited should only be used if XDRs are planning to follow up and drive attendance to the event. This should be scheduled AFTER the first email invite is scheduled to send. It will update everyone who had the email invite sent to them as Marketing Invited. They will be updated in the campaign and visible in SFDC. Do not use this unless there is planned event drivers
- 03 Interesting Moments Activate this campaign. This should be turned on before any lists are uploaded.
- 01a Meeting Request Processing Activate this campaign if you have a landing page. Do not activate it if you are only uploading leads.
- 04 Action stream processing If your conference covers a relevant Action Stream topic, be sure you added the Action Stream to the tokens, then activate this campaign.

Step 4b. Set-up Asset Expiration

- Right click the Marketo program to open the program menu and select Set local asset expiration. Please note, this will not work without the correct permissions.
- A menu with all expiration capable assets will be shown as a segmented list. Example assets that can appear are landing pages, active trigger campaigns and Reoccurring batch campaigns.
- Use the asset checkboxes to select all assets you wish to set an expiration for and select set expiration when ready. Assets that should be expired are landing pages, active trigger campaigns and Reoccurring batch campaigns. Set your date and time and then submit.
 - Prioritize setting expirations on smart campaigns.
 - Be mindful of which smart campaigns are set to expire and when because such an event will disable program registration flows.
- To remove expirations at a later date, right click on the program to return to the capable assets and submit changes.

Step 5: Update the Salesforce campaign

Refer to instructions above.

If utilizing Allocadia, please refer to the instructions above.

Steps to Setup Content Syndication in Marketo and SFDC

Use these instructions if you are NOT working through Integrate DAP. For the instructions for campaigns through DAP, go to the section below.

Step 1: Clone this program

Clone this program.

- Do not use this program if your campaign is running through Integrate DAP. See instructions below for DAP.
- Use format YYYYVendorNameofAsset
- If the content syndication is part of a package with an external vendor, promoting several assets or webcasts, keep all of the Marketo programs together in a folder for easy access as part of a single vendor program.

Step 2: Sync to Salesforce

- At the program main screen in Marketo, where it says Salesforce Sync with "not set", click on "not set"
 - Click "Create New." The program will automatically populate the campaign tag, so you do not need to edit anything.
 - If you are a user of Allocadia, you will need to add the Allocadia ID sub-category ID to the Description field.
 - Click "Save"

Step 3: Update Marketo tokens

- Change the Content Title to be the title as it appears in the Content Syndication program
 - If you have multiple assets, you can add additional tokens by dragging the text token into the main window and naming it (for example Content Title2)
- Change the Content Type to be the type of content
 - The only available options are Whitepaper, eBook, Report, Video, or General
 - If you add a Content Type value other than the above, the record will hit an error when syncing to Salesforce because these are the only currently available picklist items for Initial Source

Step 4: Activate Marketo smart campaign

- 02 Interesting Moments If you have multiple assets, you can create different interesting moments to indicate which asset was downloaded. To do this, click on Flow. In step 1 (Interesting Moment), click Add Choice. Choice 1 will appear. Select If Last Event Notes contains [name of asset]. Then, Type: Milestone, Description: Enter the Interesting Moment that you would like to appear. You can do this for as many assets as you have. Activate this campaign. This should be turned on before any lists are uploaded.
- Click to the "Schedule" tab and click Activate. It should be set that a person can only run through the flow once.
 - IMPORTANT: When you do your list upload, you must use the exact same wording in the Last Event Notes field so the automation will trigger. For example, you can say Downloaded Guide to Software Supply Chain Security in the Last Events Notes field. In Marketo, you can use software

supply chain in the choice and the correct Description will trigger. Do not use the same string of words in your choices. You can see an example of the Interesting Moments set-up in the flow of program. Disregard the rest of the processing as our process has changed.

- 01 Manual upload processing - this will be activated by MOps if it is required. It will only be used on a manual upload and is not necessary if you use the self-service upload process.
- When the leads are loaded to the campaign, the leads will immediately have an interesting moment, +15 score, and initial source, person source and person status update as needed.

Step 4a: Set-up Asset Expiration

- Content syndication or Campaigns where the end of the campaign is difficult to pinpoint: there are 2 different options to consider:
 - Set up expiration 12 weeks after the estimated campaign end, again at the end of the day.
- This is useful for campaigns where a third-party is handling lead collection for us and
