

I issues we currently have on our project. |

| Sales Dev Ops Issue Board | The main Kanban board we use to manage our operational projects, look here to see what we have in the pipeline. |

| Flow Creation Board | The board we manage all new, and in-flight, Groove Flows and messaging campaigns. |

| FM Collaboration Board | The board we use to communicate with the Field Marketing team to help support their events. |

| PTO Requests Board | The board we use to submit and manage Paid Time Off (PTO) requests. |

| Sales Systems Issues | This is the Sales Systems issue list, we collaborate closely with them. |

| Marketing Operations Issues | This is the Marketing Operation's team space, we also work closely with them too. |

Our Dashboards

Please find our SSoT in terms of reporting below, for each dashboard you can also review the additional guidance here on how to best use them.

Salesforce and Tableau Dashboards For Team Members

Name/Link	Description
-----	-----

Action Needed: APJ BDR Dashboard outlining items where immediate action is needed for APJ BDR.	
Action Needed: EMEA BDR Dashboard outlining items where immediate action is needed for EMEA BDR.	
Action Needed: AMER BDR Dashboard outlining items where immediate action is needed for AMER BDR.	
Action Needed: SDR Global Dashboard outlining items where immediate action is needed for SDR Global.	
1:1 Dashboards - Accounts: EMEA COMM 1:1 dashboard for accounts in the EMEA COMM segment.	
1:1 Dashboards - Accounts: AMER COMM 1:1 dashboard for accounts in the AMER COMM segment.	
1:1 Dashboards - Accounts: ENTG AMER/LATAM 1:1 dashboard for accounts in the ENG AMER/LATAM segment.	
1:1 Dashboards - Accounts: COMM/ENTG APJ 1:1 dashboard for accounts in the Commercial and Enterprise APJ segment.	
1:1 Dashboards - Accounts: ENTG EMEA 1:1 dashboard for accounts in the ENTG EMEA segment.	
1:1 Dashboards - Accounts: ENTG AMER 1:1 dashboard for accounts in the ENTG EMEA segment.	
1:1 Report - Tableau Self-Managed Instances Database 1:1 Dashboard that breaks down our database in terms of Self-Managed Free Instances.	
1:1 Report - Tableau Inbound Lead Database 1:1 Dashboard that breaks down our database in terms of inbound and existing leads.	
1:1 Report - Tableau Prospecting 360 Database - Master The main 1:1 Dashboard that combines	

multiple datapoints into one consolidation view for you to expand your research. |

| 1:1 Report - Tableau Prospecting 360 Database - Pursuit or First Order Accounts | A pre-saved view of the Prospecting 360 dashboard that identifies accounts with engaged leads in the last thirty days and no open opportunities, giving you a chance to pursue leads that show active interest but haven't yet been captured in the pipeline. |

| 1:1 Report - Tableau Prospecting 360 Database - Qualifying Surging & On Fire Accounts | A pre-saved view of the Prospecting 360 dashboard that highlights accounts with new or engaged leads that are Surging and On Fire in Qualified, helping you prioritize the most promising accounts. |

| 1:1 Report - Tableau Prospecting 360 Database - Qualifying by 6Sense | A pre-saved view of the Prospecting 360 dashboard that highlights accounts with new or engaged leads that are Surging and On Fire in Qualified, helping you prioritize the most promising accounts. |

| 1:1 Report - Tableau Prospecting 360 Database - AWA'd last 30 days | A pre-saved view of the Prospecting 360 dashboard that shows Accounts that have been marked as 'Actively Working' in the last 30 Days. |

| Inbound Interest Feed (Company Level) | A pre-saved view of the Inbound Interest Feed dashboard that shows company-level interest and engagement metrics. |

| Inbound Interest Feed (Lead Level) | A pre-saved view of the Inbound Interest Feed dashboard that shows lead-level interest and engagement metrics. |

Salesforce and Tableau Dashboards For Leaders

Name/Link	Description
-----	-----
Attention Needed: APJ BDR Managers	Dashboard outlining items where immediate action is needed for APJ BDR Managers.
Attention Needed: EMEA BDR Managers	Dashboard outlining items where immediate action is needed for EMEA BDR Managers.
Attention Needed: AMER BDR Managers	Dashboard outlining items where immediate action is needed for AMER BDR Managers.
Attention Needed: SDR Global Managers	Dashboard outlining items where immediate action is needed for SDR Global Managers.
High Level Results Dashboard	The dashboard we use to glance at our bottom-line results.
Pipeline Progression Dashboard	The dashboard we use to measure the progress, or lack of thereof, of opportunities sourced by our org.
Global/Regional Sales Dev Results Dashboard	A Tableau dashboard that breaks down attainment in regions or teams, and current/previous Quarters.
6Sense 6QA Automation Dashboard	This dashboard visualizes all the accounts that were automatically imported to SFDC via our 6Sense Automation.
Global SDR Ops Dashboard	This dashboard shows all of the important activities and opportunities related to the global SDR teams.
Global Activity KPI Dashboard	This dashboard visualises how each region is tracking against the weekly activity KPIs that we have.
FM Events Follow-Up Dashboard	This dashboard shows the progress of leads associated to Field Marketing events.

Dashboard/Report Templates

The list of dashboards below are templates that can be cloned and customized for each team.

Name/Link	Description
BDR Team Dashboard Template	Dashboard template that covers all main functions of managing a BDR team.
Base BDR Team Dashboard Template	Dashboard template that covers all main functions of managing the Base BDR team.
SDR Team Dashboard Template	Dashboard template that covers all main functions of managing the inbound SDR team.

The pages we frequently use

Resource	Description
GitLab LevelUp Training channel	Access to GitLab LevelUp Training channel for additional learning resources.
Sales handbook page	Main handbook page for Sales, providing essential information and resources.
Go to Market page	Resources related to Go-to-Market strategy for Sales.
Sales Development Org job family/levels	Overview of job families and levels within the Sales Development Org.
Enterprise BDR Outbound Process Framework	Framework for the outbound process followed by the Enterprise BDR team.
Sales Development Enablement Videos	Playlist of enablement videos and how-tos for BDRs and SDRs.
Lead Lifecycle Handbook Page	Handbook page detailing different lead statuses and managing the lead lifecycle.
Marketing Resource Links	GitLab whitepapers, ebooks, webcasts, analyst reports, and more for Sales & Sales Development education.
Marketing Events + Gated Content Assets + Webcasts	Resources for BDRs and SDRs to understand marketing assets consumed by prospects.
GitLab Buyer Personas	Resource to help GitLab sellers better understand our buyers and audiences.
Sales resources page	Link to the Sales quick reference guide with links to learn more about the various sales teams & initiatives.
Weekly sales enablement	Weekly sessions for sales enablement, open to BDRs/ISDRs every Thursday.
Sales Training handbook page	Link to GitLab sales training resources.
Command of the Message	"Command of the Message" training and the GitLab value framework.
Most commonly used sales resources	Sales resources page.
Flash Field newsletter	Learn more about the sales weekly newsletter.
GitLab Values	The guiding principles we try to live up to each day.

Our How-Tos for the Inbound and Outbound processes

Where to find your leads and accounts

Inbound leads get automatically imported to SFDC by the Sales Operations team, you can find

links to their handbook pages on our main page.

To find and access your leads, please:

1. Navigate to SFDC's homepage
1. Click on the Leads tab.

You will find the lead views below. These views are split per use-case for your convenience. The KPIs for managing these leads are thoroughly outlined in our SLAs page.

SDR Lead Views

View	Description
S1 - High Priority View	These are leads that are marked as High Priority because of some high Propensity To Purchase indication.
S1 View	These are your net new leads that have scored high enough to reach MQL status.
S2 View	This is a view of your existing leads that also have an associated phone call so you can easily reference your callable pipeline.
S3 View	Qualifying leads. These are leads that you are actively qualifying in a back and forth conversation either by email or through phone calls. Each lead needs to either be active in a follow-up Flow, have an active task, or have a future meeting scheduled which can be seen in a future "last activity" date.

BDR Lead Views

View	Description
FY26 B1 - My Leads, Action Needed	Includes any leads that we have committed to follow up on ASAP. These are our highest converting leads and are a mix between High Priority and MQL's PTP is now part of our scoring so there may be leads in there that have MQL'd due to PTP so you'll have to click into the lead to see more. High Priority leads belong to a High Priority campaign - you can find which one at the bottom of the page in the campaigns section.
FY26 B2 - AWA leads w/ LIM	Includes leads in your name and that match to your Actively Working Accounts. It's best to sort these by Last Interesting Moment Date and consider the Lead Classification Score when deciding which one to add to Groove Flow. We do not surface leads that were added to Flows in the last 14 days.
FY26 B3 - Change Owner AWA's (Clone)	This view however allows you to see leads that may not have been moved into your name because at the time, they did not meet criteria. These could be bc: the leads were in lead statuses of: Accepted, MQL, or Qualifying when you moved the account into Actively Working since leads with those statuses should stay with the owner

currently working them. |

| FY26 B4 - My HT Leads W/ Phone | This view should be used when either you do not have enough daily call tasks in Groove to hit your daily KPI or when your team wants to do a call blitz etc. It allows you to easily pull into Groove and create additional call tasks for your leads currently in high touch flows.

|

| FY26 B5 - My Qualifying Leads | These are leads in qualifying status which means some sort of two-way engagement happened between you two.

|

| FY26 B6 - 6QA Imported Leads | leads in your ownership related to accounts that have just hit 6QA status in this view. 6QA means the account has been shown to have high intent signals and has similar signs to other accounts that have purchased from us. We have brought in appropriate titles from ZoomInfo so that when you move the 6QA account into Actively Working, you have some leads all ready for sequencing.|

| FY26 B7 - AWS Prospecting Last 7 Days | These are leads in qualifying status which means some sort of two-way engagement happened between you two.

|

| FY26 B8 - AWA Leads w/ no LIM | These are leads in Recycle Queue status with Last Interesting Moment dates older than 12 months which means they were previously engaged but have been inactive for an extended period.

|

Contact Views

| View | Description

|

|-----|-----

-----|

| B1 View | Includes MQL's, Hot contacts that require quick follow up. NOTE: Not all of these contacts will be in your Actively Working Accounts list as all contacts where you are BDR Assigned on account are in your ownership, so please ensure that you set the account BDR Prospecting Status to Actively Working if you engage in discussions with the contact so that you can continue working the account and expand your outreach, otherwise any new lead MQLs for the account will route to the SDRs .

|

| B2 View | Contacts related to Actively working accounts that you can choose to add to Flow

|

| B3 View | Active leads in HT Flows that have a phone number - to help with call downs

|

| B4 View | Qualifying leads. Contacts that you are actively qualifying in a back and forth conversation either on email or through phone calls. Each contact in this status needs to either be active in a follow up Groove Flow, have an active task or have a future meeting scheduled which can be seen in a future "last activity" date. |

Account Views

| View | Description

|

|-----|-----

| B1 - My BDR Assigned accounts (clone) | Customize to show accounts where you are the BDR assigned. Use to mass update 'BDR Strategy' and 'BDR Prospecting Status'.
|

| B2 - My Actively Working accounts (clone) | Customize to show "Actively Working" accounts where you are the BDR assigned.
|

| B3 - My Actively Working accounts (clone) | Customize to show "Actively Working" accounts where you are the BDR assigned.
|

| B4 - BDR Recycle Date Past due (Clone) | Show AWA accounts where the Recycle Date is in the past two weeks.
|

| B5 - Mvd to "WorkedinFY" this week (Clone) | Show Worked in FY accounts with a recent Recycle Date. |

How to do Lead Database Management

As part of your SDR responsibilities, you are expected to perform due diligence on each lead you receive. This includes checking the database for duplicate records, as well as referencing against our RoE.

1. Open the lead you want to investigate and press the Find Duplicates on the top of the lead's record.
1. Check through all the records that show up, from leads to Accounts. Make sure to search for Domain and Last Name if the data you have seems incomplete.
1. Check the Matched Account Info section on the lead record.
 1. For SMB leads, if there's a matched account where the type is Customer, please press the Convert button at the top of the lead page and match this lead to the existing account.
 1. If there's not a customer record but you find an existing open opportunity, update the Lead Status to Recycle and Recycle Reasons to Evaluating.
 1. For Universities/Education leads (non-US Pub Sec), work as regular lead if technical contact.
 1. If there's a matched account, check if the field BDR Prospecting Status is Actively Working and, if so, reroute the lead to the team mentioned on the BDR Assigned field.
 1. If the existing account is not marked as Actively Working, check for duplicate leads or contacts and merge if necessary while keeping the oldest Initial Source.
 1. If the Company Address fields on the lead record do not match your research online of the company, please update the Admin Company Override fields that are found in the Lead/Contact Review Admin section. As a further fail-safe step, you'll be asked to verify that this due diligence is done prior to converting this person to a new account.
1. If there's no matched account, but there's another lead at same company that has the MQL status, assign both leads to the owner with the earliest MQL Date.
 1. If there's no matched account, but there's another lead that has the Accepted or Qualifying status, assign the new MQL to the owner of the accepted/qualifying leads.
1. BDRs receiving leads not associated with Actively Working accounts must assign back to SDR team or chatter mktgops support.
1. Qualified leads associated with "Actively Working" accounts are routed to BDR assigned to the Actively Working Account.

Telco and Finserv Routing

For leads that connect to companies that operate in the Financial Services (AMER only) and Telecommunications (EMEA only) industries. We have a separate routing process that supercedes all of our current Rules of Engagement.

Only named TELCO/FinServe accounts are rolling up to the TELCO/FinServe territories. If a new account is a subsidiary of an existing carved company, it will need to be assigned to the AE owning the ultimate account. If it is a totally separate entity then it can be allocated to the regional AE. If a lead comes in that is related to a TELCO/FinServe account, it must be assigned to the BDR assigned on the account.

Company Address Based Routing Information

In this video, a member of the Marketing Ops team goes over the Company address fields and how they are used for Accounting Routing and Opp assignment.

If you need to do edits to the database by merging leads together for any of the above steps, please reference the videos below for an explanation.

SDR Territory Map

Merging Leads

How to Merge Leads Together	
How to Merge a Lead and a Contact Together	

Chatter Guide for Troubleshooting

If you'd like the assistance of another person or team, you can use SFDC chatter on the lead record. Please reference the guide below:

Problem	Who to Chatter
-----	-----

A SMB/MM Contact Request and the account is a customer	Chatter the Account Owner and inform them of the context of the message.
A BDR receives an MQL Lead that is not from an Actively Working Account	Chatter @mktops
If you feel a lead has been misrouted	Chatter @mktops
There is a Duplicate Account	Chatter Sales Support and ask them to merge the accounts.
An Opp has moved into Stage 1 but has Incorrect Data	Chatter your manager who will then reach out to someone in Sales Dev Operations.

Unclear Territory Assignment potential territories.	Chatter an AE from each of the
Requesting SAO Credit on an Opp Director of Commercial Sales Development.	Chatter Sales Dev Ops or the
Account is in Restricted Status to reach out.	Chatter the SAE and ask permission

Cleaning Poor Leads

Lastly, Every so often you may be assigned a lead that has no value to GitLab and is not worth keeping within our database. Qualities that define these types of leads include:

Step	Description
Identify leads with no value to GitLab	Look for leads with characteristics such as incoherent or obviously forged information, or email addresses from temporary domains that self-terminate.
Verify lead removal necessity	Ensure that the leads meet the criteria for removal and are unlikely to provide any value to GitLab.
Add leads to the SPAM DELETION Salesforce campaign	Add the identified leads to the SPAM DELETION campaign in Salesforce. Make sure to be 100% certain about the removal, as this process is irreversible.
Note campaign membership, not status	Remember that only campaign membership matters for this process, so the campaign member status used when adding to the campaign does not affect the removal process.
Understand the permanence of lead removal	Realize that leads removed through this process cannot be recovered by MktgOps, making the removal permanent. Exercise caution when initiating lead removals.
Be aware of the removal schedule and exceptions	Note that the removal process occurs daily at 12:05 am PDT via Marketo. For unscheduled removals, request assistance in the mktgops Slack channel but minimize requests.
Request email domain blocking if necessary	If you observe multiple leads with the same domain, create an issue with Marketing Ops to add the domain to a block list, preventing future occurrences.

How to action your leads

1. Determining High-touch or Low-touch Groove Flow usage:

1. Determine if the lead qualifies for a high touch or low touch Flow.

- High touch Flows are for higher-quality leads and require more personalization and touch points, including phone calls and LinkedIn Connect requests. This should be the majority of your pipeline.

- Low touch Flows are typically automated and run for a shorter period of time. You can use Low-touch for leads where a phone number cannot be found online or in our databases, or where their contact information is incomplete and cannot be enriched by our tools, or through manual

research. Low touch should only be reserved as the last resort.

1. Research the appropriate Groove collections for relevant collateral to be used. Most typically our High-Touch Collection or Low-Touch collections.

Cold-Calling and Email Checkbox

Before calling any Lead or Contact, BDRs must ensure that the Do Not Call box is unchecked. If you speak to any anyone, including prospects and existing contacts, who ask you not to call them again, you must check this box. However, please do not delete the number as we need to know which number requested not to be called again. For any individuals who are opted-in to email, you may ask them if they wish to be called. If they express a desire to be called, you are then permitted to uncheck the Do Not Call box if it was previously checked. Also, if an individual expresses independently via email a wish to be called, you may uncheck the Do Not Call box. This email must be present in SFDC as proof of your authority to uncheck this box. You cannot send email requests to individuals not opted-in to email asking whether they would like to be called.

Our cold-calling best practices typically consist of 4 elements. A pattern interrupt, an elevator pitch and, if required, objection/trap-setting questions and Up-Front Contracts.

To be effective, these need to be customized to the individuals we call as per the logic below:

- Different Geographical Business Cultures
- Personality Type as per the DISC model
- Individual's Role and Responsibilities
- Business' Needs and Objectives

An unsubscribe link must be included on every email sent by a BDR, including responses to a prospect or contact. Please reach out to the Privacy Team via [privacy-team-help](#) for the recommended language that should appear at the bottom of each outbound email.

Do Not Call and Do Not Email Automations

Leads with certain criteria will be automatically labeled as Do Not Call and or Do Not Email shortly after loading into our database. It's understandable this can be frustrating for certain territories. Please keep in mind, the criteria behind this automation has been set in order to follow local law. Please see the Internal GitLab handbook for more information on the triggers.

How to Enroll to Groove by Clari

Groove is a tool used to automate emails in the form of flows. Users can track open rates, click-through rates, and response rates for various templates, and update flows based on these metrics. Groove also helps to track sales activities such as calls. All emails/calls/tasks made through Groove are automatically logged in Salesforce with a corresponding disposition. See below for instructions on how to enroll leads in Groove:

1. Go to your SDR views in Salesforce and select the lead you want to add to a flow.
2. Press Add To Groove Flow.
3. Work from the Groove extension on Chrome to select the flow you want to enroll the lead in

by using the labels feature.

4. Once the first step of a Groove flow is complete, the lead status will automatically change from MQL, Inquiry, or Raw to Accepted, marking that you are actively working on this lead.
5. When a lead responds to your outreach, their status will automatically change from Accepted to Qualifying. Manage these leads from your S3 and B5 lead views.
6. If you are not actively qualifying this lead further, manually change the status to Recycle, so the lead is returned to the Marketing recycle pool and isn't stuck in your My Qualifying view.
7. If you speak with the lead by phone and are qualifying them, manually change the status from Accepted to Qualifying.
8. When reviewing your Qualifying view, add leads with no recent activity, no active tasks, and not currently in a flow into one of our follow-up Groove Flows under the MOTION: Follow-Up category.
9. Tasks and pipeline management can be done via Groove's Actions View.
10. In the Actions View, review the list of leads assigned to you by navigating to the play-icon button for each to start their corresponding action for the day.
11. If a lead completes a Groove flow without responding, the lead status will automatically change to Unresponsive or Recycle after seven days of no response.
12. Manually change the lead status if you do not use a Groove flow to reach out or if you need to disqualify a lead (e.g., for bad data).
13. If you mark a lead as Inactive or a contact as Inactive, signifying that this person no longer works at the company, any running Flow will automatically be marked as finished.
14. If your leads are being reassigned to the Inquiry Queue, it's likely due to a scheduled cleanup job in Traction that updates Status = Inquiry to Inquiry Queue. To resolve this, add your leads to a Groove flow.

- Note: The cleanup job runs daily at 10:30 PM EST/EDT.

Groove Labels

We've organized our Groove Labels into key categories like industry, region, play/motion, or language to help you efficiently retrieve the most appropriate content quickly.

How to Use Groove Labels

On the top-hand of the flows page, access the filter menu and search per label.

1. Industry: Industry-specific labels that group flows per similar sectors.
2. Region: Flows organized by geographical regions, enabling you to target leads with more region-appropriate cadences based on local business culture.
3. Play/Motion: Each label within this category represents a specific sales play or marketing motion. These labels help you align leads with the appropriate strategy based a company's and customer's identified value-drivers.
4. Language: Language-based labels to ensure that you can easily find non-English collateral for our global audience.

Groove Templates

We've organized our Groove Templates in the same way as our Groove Labels ·by industry, region, play/motion, and language to streamline your outreach efforts. These templates provide consistency and efficiency, and need to be created regardless if you're sending one-off

messages or using templates to structure a flow.

We currently have one master SalesDev folder for saving templates, please ensure that any templates that you create are saved under that folder, and tagged with the appropriate collection as per the logic outlined above.

In both cases, it's essential to tag your templates with the appropriate collection name to maintain consistency and help others easily locate them for future use.

New Groove Flow creation

Please follow the instructions on the Groove handbook page [here](#)

Implement Measurement Clarity and Decision Velocity

By dogfooding GitLab we have a structured and simplified cadence of quantifying Flow creation in terms of value and results without limiting agency.

Maintain Equal Contributions in a Shared Reality

By maintaining a Single Source of Truth (SSoT) we give the best possible forum for cross-functional collaboration with specific guidelines

Follow Up Groove Flows

For SDRs and BDRs managing leads in their qualifying views, we've created this video to guide you through using follow-up Groove Flows.

Please visit the Groove Flows page and search for the tag MOTION: Follow-up to review your available options.

White Glove Event Follow Up Flows

For more personal events, such as Executive Roundtables, there may be more detailed Last Event Notes that include a request to involve people who interacted with the prospect at the event. For these situations, we have specialized white glove Flows. These can be found by searching for the tag MOTION: White Glove

The goal of these Flows is to reach out to the prospect quickly and to include our SAEs/AEs in the conversation.

- The first step is to add the prospect to the Flow. Then, customize the first email step to include the individuals mentioned in the Last Event Notes. You can also delay the first email to allow time for feedback from the SAE/AE if needed.
- Next, send a screenshot of the first email step to the SAE/AEs who will be CC'd. Explain that this strategy allows them to engage with more personalized messaging if the prospect remains unresponsive.
- Note: There is a generic task on Day 12 to follow up with the SAE/AE if there has been no engagement. The goal is to keep them informed and work together to engage the prospect.

High Priority Campaigns and Leads

A High Priority Lead is a lead that is related to a high priority campaign. Any campaign checked as High Priority will have any members that relate to Actively Working accounts marked as High Priority regardless of their lead status. These will show up in the BDR's B1 priority view. Check the high priority timestamp and high priority reason fields in salesforce to understand why a lead was marked high priority.

If you need to move a lead out of high priority without contacting them you can use this flow. This flow is one generic task for you to complete that will move the lead to accepted status and remove the high priority check.

Translating Groove Flows

For translating flows to different languages, other than English, the Sales Dev Team will be partnering with our GitLab Localization team. Please follow the grid below to see who the Sales Dev DRI for each language is and the level of support that the localization team can provide. The localization team can provide translations for languages outside of their normal range if given a two weeks heads up. The requestor should know that in these cases, the translation quality may not be as accurate as for the localization team's regularly supported languages. When you are ready to request translations from the localization team please create an issue in the Localization Issue Tracker GitLab Project.

Language	Sales Dev DRI	Localization Team Support?	Localization DRI
Preferences			
AMER Spanish	Kenia Rodriguez	Yes but only International ESP	Vendor Support
AMER Portuguese	Leo Viera	Yes Brazilian PT	Vendor Support
EMEA Spanish	Camilo Hernandez Murillo	Yes but only International ESP	Vendor Support
EMEA Portuguese	Tati Fernandez	No	N/A
Dutch	Marije Konink	No	N/A
French	Erwan Régnaud	Yes	Maud Leuenberger
German	Riko Pfennig	Yes	Hendrik Breuer
Indonesian (Bahasa)	Aletha Alfania	No	N/A
Italian	Francesca Gianfiglio	Yes	Vendor Support
Japanese	Eri Nitani	Yes	Megumi Uchikawa
Korean	Kayla Ko	No	N/A
Mandarin (Taiwan)	Aletha Alfania	No	N/A

How to Change your Email Signature

You must change your email signature in Terminus in order for your signature to save. If you only change your signature in Groove or Gmail your signature will revert back within 24 hours.

Steps to change your signature

1. Log into Terminus using your GitLab Google Account
1. After logging in click on the Terminus logo in the top left corner
1. Next click the menu item for "Email Experiences"
1. From there you can edit your signature and see a preview of it on the right side of your

screen.

How to follow our FO Outbound Process

BDR outbound lead generation is done by prospecting to companies and individuals who could be a great fit for our product. Prospecting is the process of finding and developing new business through searching for potential customers with the end goal of moving these people through the sales funnel until they eventually convert into customers.

BDRs will work closely with their dedicated SAE or AE to choose which accounts move into "Actively Working". Together they will build a strategy for those companies. It is crucial that outreach is very intentional and strategic. When reaching out, we want BDRs to offer value and become a trusted advisor, ensuring a positive impression is left whether there is current demand or not.

The FO Outbound process is split in four phases, which should be followed on a weekly basis to ensure a steady outbound pipeline in alignment with our internal KPIs. To manage this process we use a set of datapoints on SFDC on the account-level that are marked under the section "BDR Comments". Please reference the guide below on an explanation on how they work.

BDR Field	Usage
-----------	-------

--	--

--	--

--	--

BDR Prospecting Status	Denotes whether an account is currently actively being worked, marked queued for future review, is restricted from being worked, or has been worked in the past.
------------------------	--

Actively Working Start Date	Gets populated automatically when an account is moved to Actively Working (AW) Status and the rest of the field is populated, marking it a valid AW account.
-----------------------------	--

BDR Account Research	A space for the BDR to document their research and rationale for prospecting this account. A template is provided in step 5 of the guide below.
----------------------	---

BDR Next Steps	A space for the BDR to use as working notes for the current status of prospecting the account.
----------------	--

BDR Account Strategy	A categorization system that we use to high-level denote what motion or play was used in trying to engage with an account.
----------------------	--

BDR Recycle Date	Automatically populated two months out from the AW date. Can be manually changed if the BDR chooses to continue working an account.
------------------	---

6QA Acceptance Status and 6QA Dispute Reason	When an account has been automatically moved to Actively Working and Showing Intent, as per the 6QA project outlined here, you will need to review the account and change this field to Accepted or Disputed within 48 hours. In case of choosing to Dispute the account you will need to choose a Dispute reason. Use Account in open opportunity if there is an SDR with an active open opportunity. These accounts will be flagged on the 1:1 Dashboard for you to review with your manager and other collaborators.
--	---

Planning Phase (4-5 hours/week)

1A. Create a set of achievable objectives

These goals should be based on what you know you can achieve when focusing on First Order

accounts. It is particularly important to know your equation so you can map your activities to specific outcomes and goals in a predictable way.

The main objective you should be focusing at is to measure and plan what activity is required to achieve or increase the amount of First Order meetings.

1B. Map your objectives to your data

Research your territory to identify the true First Order (FO) accounts, ensuring no other subsidiaries have licenses, verifying there hasn't been a lost renewal in the past 180 days, and confirming there are no open opportunities. The goal here is to vet your TAM (Total Addressable Market) so that you can start matching cohorts of accounts with the objectives that you've outlined in the previous step. Indicatively, you can export these accounts to a Google Sheet, or other SSoT of your preference, for tracking since these accounts will be marked as Actively Working at a future step further down the process.

Utilizing these accounts, create an outreach strategy and plan for the upcoming month and quarter. This strategy should include considerations such as the number of accounts to include in Flows per week and per month, the quantity of prospects from these accounts to add into Flows weekly, whether you intend to target specific personas, if you plan to employ targeted messaging, whether Flows will be used for high-priority targets, and the messaging approach you will implement. As previously mentioned, knowing your equation is important for your planning here. Please refer to the sheet linked above to determine your exact metrics.

Account Research Phase (4-5 hours/week)

During your research phase for accounts to include in your Flows, thoroughly investigate and document pertinent information, which may include the below. You can use the Claude prompt here to help you automate part of this process.

- Identifying new strategic hires - ZoomInfo Scoops, Company Website or LinkedIn
- Discovering recent job openings in DevOps - Company Website or LinkedIn
- Monitoring for security breaches or threats - Tech News Websites
- Scanning for relevant news articles - Tech News Websites
- Gathering intelligence on competitors - ZoomInfo or Cognism Insights
- Examining future plans, such as digital transformation initiatives - ZoomInfo Scoops, Company Website or LinkedIn
- Noting recent company acquisitions - ZoomInfo
- Investigating LinkedIn connections - LinkedIn
- Identifying instances of GitLab usage by employees or as a past customer - SFDC or 6Sense
- Exploring 2nd and 3rd-degree connections - LinkedIn or 6sense Persona Heatmap
- Seeking mentions of DevOps - ZoomInfo Scoops or 6Sense Timeline
- Reviewing relevant 10K reports or financial disclosures - Company Website

This comprehensive research will provide valuable insights for crafting effective outreach strategies further down the funnel. Regarding account research, in addition to our B2B database toolstack, we also use 6Sense to pre-qualify the accounts that should be considered for our pipelines since 6Sense scores accounts based on their market and profile fit.

There are two ways utilize 6Sense:

- Through the SFDC iframe integrated dashboard (mandatory for FY24Q3)
- Through the 6Sense Platform (optional for this Quarter)

2A. Using 6Sense through the SFDC dashboard

1. Navigate to SFDC

1. On the main tab with options (leads, accounts, etc), click on the "+" sign
1. Select 6Sense dashboards, you can also click "customize my tabs" to add the 6sense dashboard to your homepage permanently
1. On the 6Sense dashboard, click the cog icon on the top right
1. On "Search by User" select "BDR Assigned" and add your name
1. On "Other filters" select "Salesforce Account fields" and type "BDR Prospecting Status"
1. On the "BDR Prospecting Status" field, select "Actively Working"

The dashboard will now display the top actively working accounts in your name. Do note that these are only accounts that we currently have on our database, while you can find greenfield accounts by visiting the SaaS platform (instructions in section 2B). Section 3 below explains how you can review and utilize this data.

2B. Using 6Sense through the SaaS platform

Navigate to 6Sense through Okta

On the left-hand bar, click on the Segments tab

You will find all of the relevant resources for BDRs and SDRs on the first 5 folders. These folders can be used as per the table below.

(In each folder you will find a saved template that can be cloned and edited for your individual territories.)

Folder	Usage
1. AWA'd Accounts	These segments will display the top accounts in your current actively working list according to 6Sense intent data. By manually investigating each of those accounts you will be able to uncover further prospect engagement data, and adjust your strategy in converting this account. This report has the same functionality as the SFDC dashboard outlined in step 2A.
2. Non-AWA Greenfield Accounts	These segments will display the top accounts in your territory that we do not have on our SFDC database. These accounts should be manually investigated and considered for adding to your outbound pipeline. Note that we have approx. 15% of our TAM on our SFDC database, while these reports are an automated way to identify great accounts from the other 85% of the TAM in your territory. Please note that the Sales Dev Ops team is here to work with you to generate these reports, as the particularities of our Sales Territories require some editing with the filters. Please don't hesitate to reach out to us so we help you work through these.
3. Non-AWA SFDC Accounts	These segments display the accounts that currently hold on our database that display high 6sense intent scores, but are not part of your actively working list.

After choosing the type of report you'd like to work, please follow the steps below:

1. Select the template in each of the BDR folders that starts with the prefix "-[TEMPLATE]".
1. On the title, add your name or territory as suggested by the naming convention. Please make sure to delete the Prefix "-[TEMPLATE]".
1. Click on "Edit Segment".
1. For folders 1 and 3, you'll see a prompt on one of the filters to add your name to the "BDR Assigned" Field.
1. For folder 2, you'll see a prompt to add your region to the "Address: Region" field. Do note that based on your territory there are other datapoints like "Address: City" or "Address: Country" that can be used.
1. After having done the edits on steps 4 and 5, press "Save Changes". Make sure that you've updated the naming convention accordingly and click "Save As New Segment".

3. Manual Research on Accounts

No matter how efficiently we're trying to use our toolchain, these tools are still prone to error, and manual research is required to best shortlist the prospecting lists that cross-referencing will provide. Manual research will also provide additional context that can be used to hyper-personalize your outreach to your prospects.

For each account that you want to investigate, start with SFDC to make sure that there are no duplicate accounts. The report templates in 6Sense should exclude existing customers or accounts actively prospected, but we cannot automatically exclude accounts that have a different naming or domain on salesforce (ie. GitLab and GTLB)

The importance of diligent manual research will lead to the below efficiencies:

- Better use of time in the long-run by making sure accounts are indeed within your segment and territory, or are not duplicates.

- Avoiding unnecessary RoE conflicts by making sure there are no hidden parent accounts that would cause SAO ownership to be re-assigned to other segments in the future.

1. To double-check the account on Salesforce:

1. Search for the account name on SFDC.
1. Search for the account email domain on SFDC.
1. Search for the account website domain on SFDC.
1. Search for the Account's HQ address, along with any regional business unit address.

2. To hyper-personalize your messaging:

Please follow the steps below to understand how to research the data provided on 6Sense, and to cross-reference this data with our internal knowledge base so that you create your account strategy accordingly.

1. Understand and utilize 6Sense data: Each segment has an accounts tab that displays all the accounts that correspond to this segment. This view can be shortlisted further by using the three analytics tabs as all datapoints in these tabs is clickable.
 - Predictive Analytics filters accounts by their propensity to buy. This data can be used to

split prospecting efforts between high-priority outbound campaigns and low-priority awareness campaigns

- Behavioural Analytics filters accounts by the intent/value-driver that they mostly focused on. This data can be used to split accounts into specific value-driver focused campaigns.

- Profile Analytics filter accounts by the demographic of each company in terms of location or size. This data can be used to run location-specific campaigns.

1. Search for past opportunities on SFDC

1. Check the qualification Questions section

1. Check the unqualified reasons by the AE team

1. Check past email communication on the activity records

1. Search for the account record on SFDC

1. Check Account Rank notes by the AE team

1. Check the PathFactory, ZoomInfo, Marketo integration tabs

1. Check their product usage information (if applicable)

1. Check their LAM Dev Count

1. Search for relevant leads on SFDC:

1. Check for past communication

1. Check for Last Interesting Moment and how it connects to their title and lead source to determine their compelling events

1. Check for Web Activity on Marketo and PathFactory to gauge past interest

1. Cross-reference with External sources

1. Search LinkedIn Insights for company growth, financials and recent news

1. Search company webpage for recent news, career openings or specific technologies used

1. Search online sources like newsletter or crunchbase

1. Cross-reference the above with HighSpot

1. Check for relevant playbooks based on company size

1. Check for relevant messaging based on persona

1. Check for relevant pain-points based on value driver

Execution Phase (5-10 hours/week)

Exporting Accounts and Leads to SFDC, and adding to your Outbound Pipeline.

After having manually shortlisted the accounts that are applicable to your campaign, the next step is to determine the relevant prospects per account and export them to SFDC. It is important to add accounts to your outbound pipeline so that AEs and other SDRs/BDRs know this is an account that is already being touched, and to avoid confusion or multiple people approaching the same prospects. Before moving an account into "Actively Working Status", make sure there have been no MQLs or opportunities created from that account within the past 30 days, and there are no leads from that account in Qualifying status with activity in the last 30 days or with a future task date set. If you are not sure, double-check with the related AE, SDR or BDR.

To determine which prospects to enroll per account, please follow the steps below:

- Identify the idea value drivers to be used for the account's pain-points through your manual research, as outlined above.

- Determine which personas would most benefit from the specific value drivers by using our CoM documentation on HighSpot.

- Run queries for the specific titles on ZoomInfo, and export to CRM.

You should explore the specific personas you intend to target, such as: VPs, Directors, Developers, Security, Architecture, DevOps, DevSecOps, Procurement Officers, and IT Buyers.

Determine the number of prospects you plan to add to Flows, with a minimum of 25 per day. Utilize LinkedIn Sales Navigator, ZoomInfo or Cognism to identify these personas within your target companies.

In Step 7, compile the selected prospects and create LinkedIn Sales Navigator lists for each persona. Save these lists for future use.

To export to CRM, please follow the guidelines below:

- Click the Export to CRM button on ZoomInfo
- That's it
- No, really.

To fill in the BDR fields, please follow the guidelines below:

Use the format found on this template

Copy-Paste the Structure to the BDR Account Research field and populate accordingly.

Populate the BDR Next Step Date to be at the end of the account's Flows length (typically one month out)

6. Maintaining a clean pipeline, and using BDR fields for cross-functional collaboration

To review your current pipeline, along with any leads with next steps, please refer to your segments dashboards by going to SFDC > Dashboards and searching for Watch and Help.

Team specific variants of these dashboard components will also be found on your team's dashboard. These dashboards will give you a bird's eye view of what actions are required from to maintain a clean pipeline, in terms of: i. Accounts with BDR fields past due ii.
Prospects with Flow steps past due
 iii. Prospects that have been moved to Qualifying status but have not had any outreach since.

How to Get SAO Credit and Create Opportunities

Qualification criteria is a minimum set of characteristics that a lead must have in order to be passed to sales and become a Sales Accepted Opportunity (SAO), these are split into Inbound and Outbound Criteria.

As an SDR or BDR, you will work to connect with inbound/outbound leads that you get a response from to obtain the applicable information required. This information is tracked on the qualification criteria on the LEAD, CONTACT, and OPPORTUNITY objects in Salesforce. In order to obtain an SAO, you will need to have the required information filled out on the opportunity including documented 2-way communication on the Contacts in the Opportunity. Professional Services opportunities are not credited to sales development, these need to be passed straight to the account AEs for them to qualify.

The full walkthrough of how to create a SFDC opportunity is listed here.

Please note that, in addition to the main requirements listed on this link, the Sales Dev org

members (both SDRs and BDRs) are expected to fulfill the Initial Engagement Channel as a mandatory qualification field, before being allowed to create an opportunity.

The Initial Engagement Channel field is found in the "Lead/Contact Review Admin" section on leads and will be available when creating an opp for contacts.

When do I create an Opportunity?

1. You have scheduled time with AE/SAE to speak with the prospect:

If you are scheduling time with an AE/SAE to speak to the prospect based on a qualifying conversation you have had with the prospect, an opportunity needs to be created and placed in stage 0. On the opportunity, all "required qualification" fields need to be filled in.

1. You have obtained a commitment/williness from a prospect to discuss further.

If you have a meaningful two-way communication with a prospect, but have not had the required qualification criteria to move to the Sales team, you can create an opportunity under your name so that you better track your warm conversations. These opportunities may also be used for better collaboration with your team, as they can be reviewed and brain-stormed upon during team meetings.

1. If the lead is from a new account confirm their number of employees and HQ location for routing purposes

When you create an opportunity with a new account please confirm the number of employees and headquarters location of the account with the prospect. You can do this through email or in your call notes if you speak to them over the phone. The reason for this is to make sure the newly created contact and account are routed to the correct teams after you convert the lead. Please cross reference the employee count and hq location with one of our data tools (ZI, Cognism, Sales Nav) to make sure what the prospect said was accurate. If the employee count is around 200-300 people be extra diligent as the new SMB to MM employee cut off is 250 employees. We do not want the Sales teams to have to debate whose opportunity it is.

Who owns the opportunity at this point?

1. You have scheduled time with AE/SAE to speak with the prospect.

When you have entered the qualification criteria onto the opportunity, and have received calendar confirmation from all parties for the intro call with sales, you will change ownership to the AE/SAE. After you have saved opp owner, you will add yourself to the BDR/SDR field. The opportunity will remain in stage 0.

1. You have obtained a commitment/williness from a prospect to discuss further.

At this point, the opportunity will be in your ownership but you can not have yourself listed in the Business Development Representative or Sales Development Representative field. There is a validation rule that will not allow the opp owner and the SDR/BDR representative field to be the same member.

When will it be credited as an SAO?

After the AE/SAL meets with the prospect to verify and supplement qualification criteria, they will move the opportunity into Stage 1 Discovery. The AE/SAL is expected to move the opportunity into the correct stage within 48 hours of the meeting reflected in the "Next Step"

date field. The opportunity close date defaults to the last day of the quarter, however it's good practice to set the date at least 90 days out from creation date.

If an opportunity has incorrect data after it has moved into Stage 1 - Discovery, please Chatter your manager about the required changes, they will then Chatter someone from Sales Dev Operations (Ramona, Panos, Ed) once final changes are agreed upon. No one else from Sales Dev can edit opportunities once they are in Stage 1, so please try and ensure you have all the information on the opportunity before you ask the AE/SAL to accept it.

If the opportunity is for a new group of users in a Large account where sales is working on a large "central" opportunity, then your opportunity should be merged to that opportunity for you to get credit for the users you have brought to the deal. See under Stage 8 in the Sales Go To Market Handbook.

Opportunity Creation Workflow

Scheduling IQMs

Creating Opportunities:

1. Identify and Relate Communications: Identify relevant two-way communications with the prospect, such as email exchanges, call records, or LI messages. Ensure that these are properly logged in SFDC associated with the person, company, and opportunity records as needed. To do this:

1. Select the specific activity records highlighting your involvement and press related to
1. Select the corresponding Opportunity and press Save.
1. Select specific activity records highlighting your involvement and press related to
1. Select the corresponding Opportunity and press Select specific activity records highlighting your involvement and press related to
1. Select the corresponding Opportunity and press save.
1. Verify Sales Organization RoE: On ZoomInfo, or other established sources if needed, verify the parent/child segmentation and the HQ of the company or ultimate user.
 - If discrepancies exist, communicate with the appropriate personnel for resolution.
1. Overriding Incorrect Account Assignments
 1. Navigate to the Lead/Contact Review Admin section in Salesforce to input correct information.
 1. After making sure that the information is properly reflected on the Company Address fields (ie: Company Address: Street), please tick the Company Address Checked checkbox on the lead level. If this step is not completed, then you will receive a message to remind you on Salesforce when you try to convert the lead.

If unsuccessful, communicate with the Sales Dev Director for assistance in updating account records.

1. Schedule IQM: For booking meetings, use Groove Meetings to expedite the experience for prospects.

1. Make sure to give a 24 hour notice to the AEs.
1. Having sent a meeting invitation, ask the prospect to accept while on the phone/meeting with them.

1. AE Review: Expect AEs to verify that they reviewed the opportunity beforehand.
 - If needed, review the specifics of the call, responsibilities, and send meeting reminders.
1. Attending the IQM: Please make sure that both AE and SDR show up on time or up to 5 minutes beforehand with Cameras on.
 - Please ensure that the location is quiet and indoors for AE and SDR.
1. Debrief: Have a goal for the AE and SDR to debrief within 24 hours regarding the opportunity being flipped or being disqualified.
 - Ensure that feedback is shared in writing via Slack/email and added to Salesforce by the AE.
1. IQM Notes: SDR adds IQM notes to the Initiative section in the opportunity Title.
 - Include Attendees, Raw Notes, Questions, Summary, and Next Steps.
1. Rebooking no-shows: The SDR's responsibility lies only in rebooking no-shows using a structured Groove Flow.
 - Conduct outreach for 2 weeks. If IQM cannot be rescheduled, AE will unqualify the opportunity.

Trial Extensions and Ultimate to Premium Downgrades

To submit a trial extension ticket for a prospect you will navigate to this internal request form and fill it out the form using the "GitLab L&R internal request for global customers" option and then select extend a gitlab.com trial. Keep in mind it only works for SaaS and not self-managed.

You are also able to downgrade a Trial from Ultimate to Premium through the internal request form. You just have to choose "Change existing GitLab.com Trial plan"

Opportunity Naming Convention

- New Business: [Quantity]
 - [Name of Company]- [Quantity] [Edition]
 - Example: Acme, Inc- 50 Premium
- Add-On Business (seats only):
 - [Name of Company]- Add [Quantity] [Product]
 - Example: Acme, Inc- Add 25 Duo
- Add-On Business (Upgrade from Premium to Ultimate):
 - [Name of Company]- Upgrade to Ultimate
 - Example: Acme, Inc- Upgrade to Ultimate

Monthly Audit Process

In an effort to increase transparency as well as consistency in terms of credit attribution for opportunities sourced by the Sales Development organization, we will conduct on a monthly basis a full audit of all opportunities giving credit to either a Sales Development or a Business Development Representative. Please do note that SDRs/BDRs that are on their ramping quarter are exempt from being auditors.

Participating and completing the audit on time is mandatory.

Guiding principles:

1. All activities must be logged and documented in Salesforce.

1. Timestamps for such activities will be audited and cannot be modified after the fact
- Sourcing cases must be clearly documented.

1. All opportunities associated with a Sales Development team member must have meaningful engagement for Web Directs and full qualifications criteria for Direct Deals.

Mandatory SLA: Audit and XDR response must be completed by the first day of the following month. Rulings will be completed by the management team by the end of the second day. Invitations and pairing will be sent to the entire Sales Dev team the first week of the month. It is the responsibility of the team member to find a backfill to do their audit if they are unable to complete the audit within set timelines.

XDR'S RESPONSIBILITY

1. All activities must be logged in Salesforce.
- Pro-actively flag opportunities with questions or created outside the standard process in the monthly Audit Doc.. Please note that there's a separate audit worksheet specific to the PubSec team that is shared separately for compliance reasons.

Examples: web directs. AE-created. Partner generated (for now), Opp w/no value, duplicate opp

AUDITOR'S RESPONSIBILITY

1. Auditor needs to review all notes and time stamps related to the opportunity
1. Auditor needs to log an activity Audited on the activity record of the opportunity as mentioned below, this way we can track completion of monthly audit.
1. Ensure that relevant activity & products are attached.
1. Ensure that Products match up to Qualification info in Call Connect and/or Meeting
1. For BDRs, ensure account was in AWA status ensuring that the RoE was followed
1. Flag in the monthly Audit Doc, any questions related to the audited opportunities.

AUDIT PROCESS

Each month you will be assigned one of your peers to Audit. We will share a report with all the S1 opportunities created that month. SDRs will audit SDRs and BDRs will audit BDRs. We will do our best to pair people from the same segment however it is possible that you end up auditing someone from another segment.

Once you've audited an opp, you will create a task by logging a call, choose "other" as type, and write "Audited" in the subject line. If an opp needs more research, write "Audited - Pending Review" and add this opp into the Audit Review spreadsheet.

Audit Process Video Walkthrough

AUDIT REVIEW (what to look for)

Action	Rationale	Coaching Opportunity
-----	-----	-----
Opp creator		Our standard is to get to credited for creating opportunities that meet

the qualification criteria. | When you set up a conversation with an AE, you should create the opportunity. If we see that an opp was created by an AE but has the SQS = Sales Dev Generated, there will need to be evidence of meaningful engagement by the Sales Dev rep prior to the opp being created. |

| For Web Direct opportunities, check timestamp and for two way meaningful engagement prior to the purchase | Web Direct opportunities are people that bought directly from the store themselves without necessarily having being influenced by us. | Explain that our role in this company is to directly influence purchasing decisions through positive and purposeful interactions with prospects. Requesting credit when we have not added specific value to a prospect's journey diminishes the credibility of our team. |

| Check to see whether opportunity qualification fields are populated. | Marketing and Sales are expected to collaborate to move prospects down the funnel based on specific qualifiers. When it comes to Stage-0 opportunities these are the opportunity qualification fields. | It's common that in
