Reporting Fields Source of Truth

This section captures and links the most often used fields in reporting so that anyone pulling a Salesforce report can and is using the correct fields and the same fields that are being used in Periscope reports/dashboards.

Note: There is a current transition to move towards the Territory Success Planning fields

Lead

1. Lead Source

1. MQL Date - if this is blank, the record is not counted as a MQL

1. Sales Segment

Contact

1. Lead Source

1. MQL Date - if this is blank, the record is not counted as a MQL

1. Sales Segment - See the Account Sales Segment field.

Account

1. Sales Segment - Using the Account Owner's - User Segment

Opportunity

1. SDR/BDR

1. Closed Date

1. Net ARR

1. Lead Source

- 1. Sales Accepted Date
- 1. Sales Qualified Source
- 1. Stage Name
- 1. Order Type

Dashboard Review Videos

Marketing Metrics

Marketing Metrics

```

SDR Metrics

SDR Metrics

Video Walkthrough (Private Video)

Useful things to know when it comes to Sisense vs. SFDC data

Given the way that our systems are connected and synched, you may see a discrepancy in the data within Sisense vs. Sales Force.com. A few things to note:

- 1. Opportunity amount will be updated immediately within sales force, but will NOT show up in Sisense until the next day, as our data synchs overnight.
- 1. There is about a 7 hour time difference between Sisense and SFDC, so this time lag can also create discrepancies as well.

Field Marketing Metrics

This section will go into specifics on the workflow for a Field Marketer to check their results.

At the highest level, Field Marketing is responsible for helping to progress MQLs and influencing pipeline. Those MQLs will ultimately create Sales Accepted Opportunities by the Sales Development team.

Field Marketing also has an 10X spend to pipeline goal. So if the company gives us \$1, we need to give \$10 in pipeline back.

The Field Marketing Dashboard

Our FMM Dashboard lives in the SAFE space within Tableau and provides an overview on the performance of the Field Marketing programs.

- TD Campaigns Dashboard

Useful Links

This section provides links to relevant reports that may live outside of the Field Marketing Dashboard.

- SAOs accepted by last touch = Field Marketing Campaigns
- Sales Pipeline Report stages 1-3
- Workshop attendance rates - note, if you want to see attendance rates by a different tactic, just modify the report!
- List of campaign members with Outreach stages listed - to help facilitate the FMM<>SDR convo on lead status follow-up. If you are a FMM reading this, then we suggest you add Campaign Owner Name to filter to your specific campaigns. Feel free to play around with the filters and save your own copy as well!
 - AMER FMM Campaign Members
 - APAC FMM Campaign Members
 - EMEA FMM Campaign Members
- FY23 SFDC reporting fields

How to track the ROI of your Digital Tactics

3rd Party digital agency

In order to track engagement for any work we do with on the digital side of the house, a campaign UTM code will be created. For more information on UTM's at GitLab can be found [here](#).

You will follow this process when you are working with our 3rd party digital agency to serve your target audience ads/LinkedIn InMails.

At the highest level, it's interesting to see the spend, clicks, impressions, CPC (cost per click), inquiries, and CPI (cost per inquiry). This is done by going to the Field Marketing Specific digital spend Dashboard via our digital team, linked in the Useful Links section and searching for your campaign using the campaigns UTM code. Here is the report as well, because we know sometimes you just want the link in the exact place you are looking for it in ;) . WW SFDC Field Marketing Digital Report

Inquiries (people who end up registering for your event or engaging with your ad) are the most important to look into and really the status of them attending your event or interacting with your campaign, eventually leading to an SAO and then pipeline!

If you were driving people to register for something, then hop over to your SFDC campaign. Then go down to the Custom Links section and click on the View All Campaign Members report.

You'll then want to sort by Ad Campaign Name (FT), which answers the question "What was the 1st touch ad this record interacted with?" and also the Ad Campaign Name (LC), which answers the question "What ad created this lead?".

If you did not have a specific SFDC Campaign you were driving to, and you wanted to see the success of your campaign, then you would still refer to the WW SFDC Field Marketing Digital Report, add in your campaigns UTM there, using the filter Ad Campaign Name [contains] and add your UTM.

Please note that whilst you can track leads via SFDC campaigns or UTM reports, pipeline generated should be viewed in Tableau only, as SFDCs last touch model is different from our multi touch attribution model.

Channel Marketing Reporting

We track marketing influence on channel opportunities as well as deal registration impact from Market Development Funds.

Report Name	Platform	Description
Link		
-----	-----	-----

Partner Lead Status	Tableau	This dashboard shows the overview of the leads shared with partners via Vartopia. This includes the Share Status by partners, partner leads, campaign and geo.
Partner Sourced Opportunities	Tableau	This dashboard shows the opportunities generated by Marketing campaigns.
Focus Partner Tech Capabilities	Salesforce	This report shows all the focus partner and an overview of their company information.
Partner Marketing Trials Funnel - SaaS & Self Managed	Tableau	This dashboard shows an overview of all the SaaS & Self Managed free trial submissions by partners.
Channel Partner Participation	Salesforce	This report captures an overview of partner program offerings that partners are actively enrolled in.
Partner Recall Leads & Contacts	Salesforce	This report captures the partner leads that have been recalled in the current FY.
Leads	Contacts	
MDF Funds Request with Funds Claim	Salesforce	This report captures a list of the current FY Funds Requests received and their respected. claims
MDF Funds Request with Partner Account	Salesforce	This report captures a list of the current FY Funds Requests with Partner Account name filtered by status.
Instant Marketing Campaigns Asset Report	Impartner	This report captures views, downloads, shares and cobrands of our Instant Marketing Campaigns and assets.

Channel Marketing Tableau Dashboard

This Tableau Dashboard is the SSOT for Channel Marketing Reporting.

Under the Partner Leads & Contacts tab, there may be campaigns with Partner Share Status = No Value. This is the result of two reasons:

1. Distributor do not receive partner leads, so their status will show as No Value.
2. There may be a sync error, and the sync need to be attended. Create a Marketing Operations issue for investigation.

SFDC Report Template - Records Passed to Partners

These reports are used as template for your reference. Please clone and modify the reports based on the campaign name you are wanting to dig into. Reminder that SFDC treats leads and contacts separately, so you'll need both a leads and a contacts report to see full picture.

Note: You need to change the campaign name to the actual name of the campaign you're wanting this report for.

1. Campaigns with Leads
1. Campaigns with Contacts

Back up SFDC pipeline reports

We have 3 reports we use that shows different types of contribution to the GitLab channel program.

1. FMMDPChannelAllCampaigns - Field Marketing Deal Path = Channel. Field Marketing impact on all deal path = Channel. Includes MORE than just channel generated opps & regardless if a specific channel partner was directly involved with campaign.
1. FMMSQSChannelGenerated - Field Marketing Sales Qualified Source = Channel. FMM impact on Deal path = channel AND channel generated opps and regardless if a specific channel partner was directly involved with campaign.
1. FMM CAMPAIGNS specific impact DP channel - Field Marketing Campaigns impact to Deal Path = Channel. Opp Deal path = Channel - Impact from FMM campaigns runs specifically with channel.

The above reports are Bizible attribution reports at the person level, you will need to understand how many unique opportunities are in your report. In order to do this, you will download the report from SFDC, and then upload into google sheets, then use the unique count formula ($=\text{countA}(\text{unique}(\text{B:B}))$), where counta = the bizible touchpoint ID & unique B = the name of the opportunity.

Example SFDC report and an example google sheet with the formula.

- Records passed to partners - As part of our campaigns we run jointly with channel partners, we would like to understand the status of records we've passed to partners, this report give us that insight.

Contribution to sales pipeline

This can be calculated by heading to the Marketing Influenced Pipeline dashboard.

How to trouble shoot your ROI questions

If you have a quick 1 off question on reporting, then please feel free to ask the question in the fieldmarketing slack channel.

If you have several questions or a more robust analysis of data you'd like help with, please open a FMM leadership request and assign it to your manager. Your manager will review and will pull in the Director or other folks as needed.

SECTION: marketing/strategy-performance/third-party-scripts.md

Marketing Third-Party Scripts

A marketing script, pixel, or tag is a small piece of code embedded on a web page by a third-party provider, typically an advertising or analytics platform, to gather data or perform specific functions. These scripts can track user interactions, collect demographic information, or enable targeted advertising by monitoring user behavior. They are often used for website analytics, ad retargeting, conversion tracking, or audience segmentation. While these tools can be valuable for optimizing marketing campaigns and enhancing user experiences, they also need to comply with privacy and security policies, as they may share data with third-party providers.

List of Current Platforms

[Platform]	[Cookie Category]	[Trigger]	[DIR Team(s)]
[:---]:	[:---]:	[:---]:	[:---]:
[Google Ads]	[Advertisement]	[All pageviews, conversions]	[Digital Marketing]
[LinkedIn]	[Advertisement]	[All pageviews, conversions]	[Digital Marketing]
[BidTellec]	[Advertisement]	[All pageviews, engagement]	[Brand]
[Trade Desk]	[Advertisement]	[All pageviews, engagement]	[Brand]
[Facebook]	[Advertisement]	[All pageviews, engagement, conversion]	[Digital Marketing, Brand]
[Reddit]	[Advertisement]	[All pageviews, engagement]	[Brand]
[Campaign Manager (Floodlight)]	[Advertisement]	[All pageviews, engagement, conversion]	[Digital Marketing, Brand]
[Microsoft Ads]	[Advertisement]	[All pageviews, conversions]	[Digital Marketing]
[Google Analytics]	[Analytics]	[All pageviews, engagement, conversion]	[Marketing Analytics, Digital Experience]
[Snowplow]	[Analytics]	[All pageviews]	[Marketing Analytics]
[QuantumMetric]	[Analytics]	[All pageviews, engagement, conversion]	[Marketing Analytics, Digital Experience]
[Adobe Measure (Bizible)]	[Analytics]	[All pageviews]	[Marketing Operations, Marketing Analytics]
[Marketo]	[Analytics]	[All pageviews]	[Marketing Operations]

[6Sense]	[Functional]	[All pageviews]	[Marketing Operations, ABM]
[Mutiny]	[Functional]	[All pageviews]	[Marketing Operations, ABM]
[Qualified]	[Functional]	[Most pageviews]	[Marketing Operations]

Table last updated: 2024-11-15

The Process

To request the placement of a new tag on the website, please first ensure that the platform is listed on techstack.yml, as all platforms must undergo approval by the legal team.

Once the platform has received legal approval, create a new issue under the Marketing Analytics project, utilizing the /scriptonboarding.md template. Complete the "Script Context" sections to the best of your abilities. The issue will be automatically assigned to @DennisCharukulvanich, who will assess the remaining tasks.

Google Tag Manager

The third-party script will be configured on Google Tag Manager, a platform that manages all configurations of third-party scripts. A new tag will be created based on instructions provided in the issue. Each tag will also contain a cookie category condition to ensure the script only fires upon consent. For example, LinkedIn tags will only load if the user consents to Ad Targeting cookies from the OneTrust banner or Preference Center. Review OneTrust geolocation rules in this handbook.

Content Security Policy

The Content Security Policy allow-list will also need updating, otherwise, CSP will block the tag from loading. A series of steps outlined in the issue template are required if the tag is placed on the gitlab.com environment.

SECTION: marketing/strategy-performance/allocadia/index.md

About Allocadia

Say good-bye to multiple spreadsheets, disparate data sets and misaligned marketing plans. The recognized leader in Marketing Performance Management (MPM), Allocadia's budget management and strategic planning platform is the foundation for operational excellence for marketing leaders and their teams. Powered with data-driven insights, marketing leaders can visualize what's working to enable greater planning agility. Learn how to run marketing like a business at Allocadia.com.

- Version purchased: Allocadia Optimize
- Logins are available for Marketing budget holders

High level - how does it work?

- We enter top down departmental budgets into an Investment Target, with annual and quarterly breakdown. These are the amounts that tie out to the board approved plan. Once the board has approved the plan from the CMO, we will lock down these targets which represent the envelope of money available to each department to plan and forecast.
- We enter bottoms up departmental Plans into a hierarchy grid much like you've done in the past within non-head count spreadsheets. Each budget holder can use categories and subcategories as needed to organize their budget, so it makes the most sense for them. This establishes the list of line item expenses they expect to use during the year. If the total

planned doesn't equal the investment target envelope, the department does not lose the funds. Once plans are set, we can lock them for the quarter. More in Allocadia docs.

- We then enter Forecasts into these same line items, adding more details and more accuracy as we learn about the specifics of the events/campaigns/expenses.

Similar to prior year, if we do not use the full envelope provided to Marketing by the end of the quarter, we will lose those dollars.

Allocadia integrates with multiple systems described further below. However, this presentation gives a high level view.

Great links for more details in Allocadia support pages

- Allocadia terms glossary
- Navigating Allocadia
- Navigating the Activities tab
- Searching for your activity/ budget line item
- Understanding Forecast Status Tags
- Switching between activity plans
- Budget Reallocations (transfers)

Partnership with Finance

Marketing and Finance partner together when using Allocadia. The Marketing Finance handbook page lists out:

1. Finance Marketing Allocadia Training
1. Financial terminology as it relates to your view in Allocadia
1. Important dates to be aware of between finance and marketing
1. And more!

Allocadia Internal communication

We have a slack room! Search - allocdiamktg-budget-holders

All budget holders are added and Marketing ops is responsible for granting access.

Home

This section houses the main grid. This section is more for the Allocadia admin, although all budget holders will make use of it for mapping expenses to their line items as the NetSuite uploads are done monthly.

Also in this section, you can see where teams are from a forecast to plan standpoint by clicking into the view-roll up button. Video walk through in GitLab Unfiltered.

Home is also where targets are entered annually by quarter for each of the teams. To do so, find the icon next to the team in the Panel column called Panel (rollup panel when you hover over) and click to open. Scroll down to enter the top down targets/budget into the Qx Approved Target fields for each. This can only be done by an admin.

Activities

The activity planning section is where you add the tactics of your quarterly/annual plan and where you can see quick high level metrics to help you understand your Investment Target and your Plan vs. Forecast. Depending on what view you are in will depend on if you see this data based on the quarter or based on the FY.

View

In the top right hand section of the screen, you will see a drop down of different Views. When making changes to your actual activity prior to the Allocadia plan being locked, be sure you are in a plan view. Once the plan has been locked, you must be in the Forecast view to make any changes. We are locking plans quarterly in line with Finance calendars.

Within the view drop down you have the option to look at your targets by quarter or annually. Use whichever view best helps you run your business.

View Definitions

- FM Forecasting Monthly - will ONLY show line items with forecasted spend - Only available on the FMM activity plans
- FM Planning Monthly - will only show line items that were present at the time the plan was locked - Only available on the FMM activity plans
- My Forecast FYXX - Where you see what's planned to ensure you've added forecasted amounts against the plan
- Q1 team Tracking - shows both plan AND forecasted line items with a start and end date in Q1
- Q2 team Tracking - shows both plan AND forecasted line items with a start and end date in Q2
- Q3 team Tracking - shows both plan AND forecasted line items with a start and end date in Q3
- Q4 team Tracking - shows both plan AND forecasted line items with a start and end date in Q4
- Quarterly Summary - where to see an annual summary of plan, forecast, and actuals broken out by quarter

Activities grid

Metrics

You will notice that there are metrics at the top left of each View that provide you with totals and comparisons between targets, plans and forecast depending on the View chosen.

Buttons

Category and Sub-Category

In the grid below, these are the items that show up in the Hierarchy column. You may organize these however is best for you to run your business.

The same categories (and line items) show up in this grid regardless of whether you are entering your bottoms up Plan for the quarter/year or if you are entering your Forecast as your expenses solidify throughout the quarter.

Line Item

There needs to be one line item for every contract that will be paid. That being said, if you have multiple charges that relate to the same vendor/ will get billed together, those can all show up on the same line item.

Organizing your line items? It's tricky, but if you hold the little three line hamburger to the left of the line item once you add it, you can move it so it falls under the correct category or subcategory. You will need to see the arrow to show that it is rolling up. There is no sorting other than manual. The nice thing is that once you move them to where you want them, they will remain there.

Placeholder

The idea for the placeholder is if you know that there will be an expense but you have very little information about vendor, etc. It allows you to fully Plan your entire Investment Target dollars so that you know what is left to allocate of your tops down budget. Currently, the FM team would prefer not to use the placeholders. Any placeholders will need to be updated as more information is determined.

Delete

This button allows users to delete a line item or category.. The Delete button is only able to be used by Marketing Finance and Marketing Ops admins. If you need a line item, category, or sub-category deleted please reach out to Marketing Finance or Marketing Ops in the allocadia-mktg-budget-holders slack channel and they can delete it for you. If a line item has previous months expense or invoice data, it cannot be deleted.

Request Transfer

This button can be used to request funds from another department. Specific approvers have been set up in Allocadia to be notified by email and can approve or deny the transfer. See more details in the Budget Reallocation link above. Note that on the Home page, the transfer will show in red until it has been resolved.

To see what transfers have been made, from the activity plan you're interested in digging into, click the transfers column and sort by the status you're interested in learnign more about. Video walk through. (Must be logged into Unfiltered.)

Within the grid

- Hierarchy - this is where categories, subcategories and the line items are organized.
- Vendor - this needs to be the name of the Vendor for the expense so that it will match with our eventual PO system, Coupa. We have also added this to the Details Panel (and may remove from the main grid based on input)

For common vendors, it's important to note that you must use the same upper and lower case terminology, as well as spacing to conform to a standard naming convention if you're trying to have the line items pull under the same vendor in any vendor report. A best practice is to visit the vendor's website and use their exact naming convention. Examples of common vendors we use and how they should be written out for reporting:

- 1. Demandbase
- 1. SimplyDirect
- 1. Tenandone
- 1. Reachdesk

As we move to Coupa, that integration will allow us to use their list of standardized vendor names for ones that already exist in the system which should make this easier.

We have just moved the Vendor to the Details panel - for now it shows up in both and can be updated in either place - but we are considering taking it off the main grid if there are no objections.

- Comments - this can be used for any notes about the spend, but it is not reportable, sortable, nor does the budget holder (or anyone for that matter) receive a notification that a comment had been made.
- Months - this is where you enter the dollar amounts by month. You can use the cut and paste feature and tab between months for ease of entry. You can also enter formulas, such as 12000/12 if you have an annual \$12K cost that you want calculating the \$1K per month. Depending on the View, there are columns for your bottoms up Plan and your ongoing 'Forecast'. And then monthly as we load in Actuals from NetSuite, those amounts will show in those columns.

Details panel

You access the Details Panel from the book like icon to the right of the line item name in the hierarchy column. If the book is red, it means that there are missing required details. It turns black once these are completed. The workflow that we've set up in the system once you add a line item should help us capture all the required fields.

Any line items within a category or subcategory default inherit the details from the parent (category/subcategory) AND can also be overwritten at any child line item as needed. Therefore, it makes the most sense to fill out the details panel at the highest category level and then adjust any individual line items that differ.

Details tab

- Spend type - relates to the account code, but slightly more granular detail to help the marketer.
 - Field Marketing (FM) only - using the Allocadia Impact Modeller, the spend type you choose, will spit out the expected ROI based on historical conversion rates.
 - Field Marketing (FM) only: If Spend Type is as follows, then you will be asked a Y/N on if the event is In person.
 - Conferences
 - Executive Roundtable
 - Field Event
 - Owned Event
 - Speaking Session
 - Vendor Arranged Meetings
 - Workshop
 - (FM only) Is a Channel Partner involved? Y/N. If the answer is Y, then you will need to manually enter in the Channel partner name.

- (FM only) Is an Alliance Partner involved? Y/N. If the answer is Y, then you will need to manually enter in the Alliance partner name.
- GitLab Marketing issue URL - a link to the issue where the marketer is managing the activity (not procurement issue - see below); leave blank if N/A
- Region - if the spend is for a specific region, choose it here
- (FM only) SubGeo - allows the field marketer to choose more detailed location
- (FM only) Geo - allows the field marketer to choose more detailed location
- (FM only) Country - allows the field marketer to choose more detailed location; is also tracked for Priority Country analysis
- Campaign Type - should match the type used in Marketo and SFDC; limited based on input in Spend Type above
- Existing SFDC campaign - this is a dropdown that includes all campaigns that align with the hierarchy that have been set up in SFDC; if it does not relate to an actual SFDC event/campaign, this can be left blank.
 - Note: If the SFDC campaign has not been created at the time of the entry you will not need to manually go back and add the campaign in the details panel. Once the SFDC campaign has been created the Allocadia<>SFDC synch will match the Allocadia line item to the SFDC campaign and your campaign will then show up in your details panel.
- Campaign Name to be Created - add the campaign name here that will be used to create the Marketo program and SFDC campaign utilizing the ISO dateevent name structure (example - 20220520TheBestEventEver)
- Payment method - select the type of invoice or Naven Expense. Other will be rarely used.
- Segment - if the spend is for a specific segment or segments, choose it/allocate percentage to them here. If its for all, simply select all and save.
- Start Date - the date the expense begins. This will be used for accruals and can be pulled into reports to show timing of software renewals, etc.
- End Date - the date the expense ends. This will be used for accruals and can be pulled into reports to show timing of software renewals, etc. If you are unsure of what to use for the start or end dates, please reach out to our Finance Business Partners.
- GitLab Procurement issue URL - this will auto populate for you if you've created the issue with a click of a button within Allocadia
- GL Account - will be selected for you based on your input in Spend Type above. Note that we have three different fields for GL Account - one for FMM, one for Contribute and one for the rest of marketing. If there are any problems with the GL account during integrations, remind support of this fact to expedite a response.

Useful tricks inside the Activity Grid

1. Do you find yourself wanting to copy & paste a line item from a different activity plan into your activity plan? If so, then you will need to (right click) Copy/Paste the line item within the same activity plan, and then use the right-click "Move" option to move the line item copy to the correct activity plan. Within the Field Marketing team, we ask FMMs to transfer dollars to the ALL plans for shared activity, vs. having multiple line items for the same activity in multiple activity plans. Those instructions can be found here pt. 12.

Channel Marketing Set up

Category: FY + Quarter

Sub-categories: PartnerActivity Name (no need to add date, it will be listed in the details panel)

Line Item: MDF 000 PartnerActivity Name (000 indicates being 'bookedmarked' once MDF has been approved and the funds request received in SFDC, the MDF Program Owner will change from 000 to the funds request number)

MDF that spans multiple months and quarters

1. If the funding is all in the same quarter, then it put plan, and forecast in one month, regardless of amount, unless there are payment milestones built into the campaign. If there are milestones, then defer to the milestones agreed to.

1. If the campaign is split between more than 1 quarter, then break the plan and forecast numbers out based on what is actually running. As an example, you have digital ads running in Sept, Oct, & Nov. totaling \$12k, then \$8k (\$4k from Sept +\$4k from Oct) would be in the plan and forecast for Sept, and then \$4k would be November.

· GitLab Internal Calendars

Certain groups within GitLab have the ability to create a calendar invite directly from the details panel within Allocadia.

- Groups who have calendar creation access
- Field Marketing
- Brand Activation
- How the calendar process is mapped
- You may ONLY create a calendar invite at the line item level. Meaning you CANNOT create a calendar invite at the Category OR Sub-category level.
- Based on the inputs from the details panel, the logic is built as follows:
 - Question within Allocadia: Is this an in person event?
 - If value is YES it uses the in person events and sponsorships calendar - regardless of spend type, if it's an in person event it WILL show up on this calendar.
 - If value is null or no, check next column
 - Next Column: Spend Type (Campaign Type)
 - If value is Self-Service Virtual Event use the GitLab Hosted Self-Service Virtual Events calendar
 - If value is any of the following:
 - Vendor Arranged Meetings
 - Executive Roundtable
 - Sponsored Webcast
 - Virtual Sponsorship
 - use the External Virtual Events calendar
 - All else, do not create calendar invite and present error message Cannot create calendar invite for this Spend Type.

While Workshops & Webcasts DO require a calendar invite, we intentionally left the auto create calendar invite out of the plug in. We did this because the GitLab Hosted Zoom Webcasts calendar requires Zoom integration work and is a locked calendar, given the technical work required to run the campaign types. For more information on booking a GitLab-hosted Workshop or Webcast, please visit this handbook page.

The calendar invite is set for the entire day. If you would like the event to be on the calendar for a specific time, then you may go in and manually change the time.

Here is a quick video walk through to show you how the calendar invite gets created, if you're more of a visual learner!

Impact Modeller

Today our Field Marketing team is the only team using this function. If you are interested in having this added to your view please open this issue for Marketing Ops.

We have loaded the previous fiscal years worth of influenced conversion data from campaigns run by field marketing for both the MQL>SAO conversion rates as well as SAO>Closed Won data.

If a region did not have a conversion rate for the campaign type (likely because the region did not run that campaign), then the global conversion rate was used. Also, because our MQLs can "skip" MQL status (meaning an SDR can work a lead BEFORE it's actually hit our MQL scoring threshold), we used the MQL Inferred Date field to assume MQLs. We took a snap shot in time data, but the below widgets can be referenced

Live MQL>SAO regional data can be found [here](#) and live SAO>Won data can be found [here](#).

The average deal size by campaign by region can be found [here](#) (you'll have to refer back to dashboard to change the region if you want to see a specific regions data) are also loaded for calculation purposes. If there were less than 3 closed deals then we did NOT use that deal size information, but relied on the ASP from the TOPO model to fulfill that deal size.

A calculation is then done by then taking into account the MQLs, region, segment data and campaign type (specifically the GitLab Issue type) that has been given at the line item level in the details panel.

Video walk through (and yes, you know you need to be logged into Unfiltered to see! ;))

Showing low ROI - what now?

Because we've loaded historical conversion rates into the impact modeller, a marketer should feel empowered to build a business case justifying why an investment should be made even though the impact modeller is showing a lower ROI. The business case could include specific accounts who you will connect with, LAM (landed addressable market) of account, how the pre/post campaign follow-up will be different than in investments past, nuanced facts about the proposed investment vs. historical program, etc. We want to still test out programs, and at times we may fail, and that's ok! Review your overall plan. Do you have a strong ROI built into a few campaigns that can afford a risk in a program you believe in?

· Insights

Most reporting is done within the Insights tab within Allocadia. Reports are built at the highest level and then use a drill down feature so each team does not have to recreate reports.

The reports in Allocadia make use of GoodData. The first time you attempt to access reports, you will be prompted to sign in to GoodData. Also, if you are using Safari as your browser, take note of the following:

Safari for OS X · Disable Blocking of Third Party Cookies

Safari has moved away from their "Block Cookies" section. In order to make it work with the current version of Safari, you must have both "Prevent cross-site tracking" and "Block all cookies" checkboxes unchecked.

Dashboards

This section is where you can see the highest level of detail.

Reports

The reports are broken out in folder format and once you click into the folders, more reports open up.

Reports Field Marketing uses

- To view all videos posted, you must be logged in to GitLab Unfiltered.

1. Insights>Dashboards>1.Investment Planning Summary To understand your regions budget (referred to in Allocadia as Current Target)

- Video walk through - <https://www.youtube.com/watch?v=4hgTgpJLxVQ> - Note this is the most useful ONLY when the plan is open from finance. Once the plan is locked and you're making changes/numbers are becoming real, you'll want to look at this second video.

1. Insights>Dashboards>1.Investment Tracking Summary To understand how much you're on track to invest - Watch this video walk through

1. Insights>Dashboards>2. Pipeline>Quarterly Drill in Details All>Pipeline Plan by Campaign Type - This report allows you to see the ROI data (MQL, SAO, expected pipeline), based on the impact modeller -

- Video walk through

1. Insights>Dashboards>2. Pipeline>Quarterly Drill in Details All>Pipeline Plan by Motion - This report allows you to see how your plans are aligned to the Marketing GTM motions. Please be sure you are filtering by Activity plan, NOT by Region.

- Video walk through -

1. Monthly forecasting report - at the home screen, click into the view roll-up button. Video walk through & select which view you're looking for - i.e. Q1, Q2 etc.

1. Monthly/Qtrly Actuals review - To understand how much you planned for, forecasted for, and then actually spent. At the home screen, click into the view roll-up button. Video walk through & select which view you're looking for - i.e. Q1, Q2 etc.

Reporting folders breakdown

1. Finance - reports the finance team uses

1. Health Check - We aren't using this folder in detail yet. More to come!

1. Investment Planning

1. Target vs. Plan Full - here you can view your target vs. plan in full detail - this is the same information that is reflected in the Investment Tracking Summary.

1. Vendor Plan details - Management uses this section to understand how much we are spending with Demandbase because we open insertion orders (IOs) on a qtrly basis this is essential for us to know how much we need to open. We also use this section to understand the

Back end names of useful fields

We do have a few fields within Allocadia which have a different name on the frontend (i.e. what you see on the screen) vs. what is used in reporting, for various, perhaps unknown reasons. Fields are as follows:

Front end field name	Field name used for reporting
-----	-----
Start Date	Date (Line Item Start Date)
End Date	Date (Line Item End Date)
MQL	Estimated Outcome (First Funnel Level Total)
SAO	Estimated Outcome (Middle Funnel Level Total)
Closed Won	Estimated Outcome (Last Funnel Level Total)

Nuances with fields + reporting

Allocadia comes with a lot of standard fields & definitions associated with those fields. At times our definitions may vary and we may have to create a new custom field. Unfortunately, we cannot delete out the Allocadia fields and only have our current fields available. This causes us to have many similar fields and a creates a need for us to document which field should be used when building reports. The list below should serve as the SSOT for fields when building reports.

1. Campaign Type - should be used when you want to report out on both Spend Type and Spend Type (FM). These two fields have been merged into one in reporting.
 - Do NOT use Campaign Tupe (DNU) OR Campaign Type (SF) as we do not capture data in those fields, therefore nothing will return on your report.

Integrations (behind the scenes)

Allocadia - GitLab Issue Integration

An efficiency we are able to gain by using Allocaida is that we create a GitLab issue and can push information gathered in the details panel directly to that issue. This saves the team's time by not having to reenter information which has already been entered.

How to create a FMM issue from within Allocadia

1. Create a sub-category and fill in all information in the details panel
1. Add AT LEAST 1 line item
1. Go back up to the sub-category details panel and scroll all the way down to the Actions section where you will see a button called GitLab issue - click that - and · - your issue is created

- Video walk through on GitLab unfiltered.

By creating the FMM issue at the sub category level, this still allows the marketer flexibility in terms of how they want to structure their activity plan. Another way to think about this is

that everything under the sub category should align to the same campaign name to be created.

Please be mindful of where you are creating a sub-category. The system will allow you to create a sub-category within a sub-category, and you will realize this because upon creation of the what you believe to be a new sub category, you will notice the details panel is already filled in. Do NOT go through and start changing out the data in the details panel, as you are only allowed to create one FMM issue within the sub-category. What you'll need to do is delete the newly already filled in sub-category and then ensure you're in the category level and create a new sub-category.

FM Issue Date/Name Changes

Should a date on a campaign need to change and the issue has already been created, you can systematically change the date & name. In order to do so, all changes must be made in Allocadia and then overnight will push the change to the GitLab FMM issue. Should you want to manually change both the issue AND Allocadia, you should feel empowered to do so. The automation is there to help you.

Help! The feature to create a GitLab issue is missing from the details panel

You can ONLY create a GitLab issue from within a SUB-CATEGORY. Please double check you have created a subcategory, and a line item as listed in the instructions here.

Video walk through of how to diagnose this problem and then how to also correct the problem if you've created a Category and need to move it to a sub-category.

If you have tried to create from the subcategory and you're still not able to create the issue, please ask in the allocdiamktg-budget-holders slack channel.

How to Create a Channel Marketing Issues from Allocadia

1. Create a new subcategory with a naming convention: YYYYMMDD Partner Name Activity Name
2. In the details panel under subcategory, input the following fields:
 - Spend Type = Partner Rebates
 - Start Date and End Date
 - Is a Channel Partner Involved? = Yes
 - Channel Partner Name = Select Partner
 - Is an Alliance Partner Involved? = No
 - Will there be MDF funding? = Yes
 - Partner MDF Region Budget
 - Campaign Owner = Select CMM
 - Operational Program Owner = Select Operational Campaign Owner
3. Create a Line Item with a naming convention: MDF 000 Partner Name Details Related to Spend

Note, MDF 000 is a placeholder that will automatically be updated once the MDF Request has been selected in the Salesforce campaign.

4. In the details panel under Line Item, scroll to actions and select Create/Edit MDF Issue to create a Channel Marketing issue.

5. In the Channel Marketing issue, update the campaign details, user journey, joint messaging and all sections.

6. Once the MDF request has been submitted and the Channel Partner Marketing team creates the Marketo program and Salesforce campaign, on the Salesforce campaign, the MDF request number must be selected.

7. During the nightly sync, "MDF 000" in the line item will update with the MDF number selected, alongside the MDF fields:

- Target Number of Contact
- Expected Number of DR
- Estimated Pipeline Created (USD)

Watch the video for a step to step walkthrough.

Allocadia - GitLab Issue Integration Summary

- Issue can be created or updated in GitLab through an outbound action button on the details panel
 - Button label: Create/Update MDF Issues
 - Note that action is available in the Partner portion of the hierarchy only
- Issue creation can be initiated at the "Line Item" row level only in Allocadia, and the line item must be within a sub-category
- Fields from the Allocadia details panel are used to populate an Issue template in GitLab
- User is presented with a link to open the new Issue in GitLab after creation
- Once the epic has been created it is automatically tagged back to the MDF Issue URL field on the Allocadia item
- If the MDF Issue URL is populated already, the action is treated as an update rather than creation
- The sync runs twice daily at 10:30 am and 10:30 pm PT

See slides for technical summary and sheet for issue field mapping.

GitLab Issue Creation Details

- The partner issue title is built as follows:
 - <item name> - <Start Date Quarter> - <Start Date (MM.DD.YY)>
 - E.g. MDF 179 Spectrum Groupe Devoux 23 - FY24-Q1 - 2023.04.12
- A pre-defined message template is used for the partner issue Description
- The message template has several placeholders for fields from Allocadia, as well as some fields that are formatted by the integration

Partner Issue Update Details

- If the action button is pressed after the partner issue has already been created then an update action will be applied
- The update is only applicable to the following fields:
 1. Issue title · will be updated if any components of the title have changed (start date or item name)
 2. Issue description · only updates the Start Date / End Date (if they are changed)
 3. Tactic/event type
 4. Allocadia Line Item ID
 5. Estimated pipeline created (USD)

6. Target number of contacts
7. Expected number of deal registrations
8. Campaign Name
9. Salesforce Campaign Link
10. Region

Making changes to the GitLab issues

If you find yourself needing to update a procurement issue template for any of the issues above - please submit an issue for the Marketing Operations team, as this must be done through our Allocadia CSM.

Wrong issue template was pushed...what now?

If you've hit the GitLab issue template button and the wrong issue template has been created, not to fear! Someone with owner or admin rights to your folder can assist you. To determine who has owner or admin rights to your folder from the home screen you would find your folder, click in the Users column that person icon with (number), from there, you see a list of people who have access + their rights. Search until you find Owner or Administrator and then slack that person in the mktg-budget-holders slack room. Video walk through (must be logged into GitLab Unfiltered!).

SalesForce.com (SFDC)

As mentioned above, there is a listing of available FY23 SFDC campaigns to choose from in the detail panel. Once the initial connection has been made between Allocadia and SFDC on a given campaign (which is done by either manually connecting them via choosing a campaign from the drop down or by using your Allocadia sub-category ID to create your SFDC campaign, instructions in pt.2 & 5 here), Allocadia will push over all the fields that have been completed in the details panel.

In addition, we will be sending over planned amounts into the SFDC Campaign Budget field and actuals will synch nightly. This ONLY happens if the connection is there by having a campaign selected in the Existing SFDC Campaign field. If there are multiple line items for a given SFDC campaign, they will be combined for the updated SFDC Campaign Budget, since we use the Allocadia sub-category ID to sync Allocadia to the SFDC campaign.

There may be times when new values for existing fields need to be added to account for changing initiatives. If a new value needs to be added to an existing field that syncs to the SFDC campaign, that value will need to exist in SFDC first. An issue will need to be opened with the Sales Systems team to add the new value. Once the new value exists in SFDC, that matching value can be added in the master settings of Allocadia.

Full detailed instructions on how to set this synch up, which does have to be done campaign by campaign, can be found here.

Influenced MQLs

If entered in, the MQLs entered used in the impact modeller will be pushed to the SFDC campaign to a field called Total Planned MQL in the planning section of the campaign. That data can

then be pushed from SFDC into the company's BI tool and displayed on the SFDC attribution reporting so we can understand how good we are at forecasting MQL impact.

Drop down in details panel

If you need to add a new value to the drop down selector options, in order for the new options to properly pulled through to SFDC correctly, you need to be sure the new drop down value has been added to Allocadia and SFDC. Once that's been done, test the systems and you should be good to go!

Okta

Please login using SSO, so that all marketing budget holders can sign in easily without worrying about yet another login password. Note that we are on Allocadia's eu1 server.

Adaptive

We will be using CSV transfer files to upload plans from Allocadia to Adaptive. Our finance business partner will be the DRI for this.

Marketo

There is no integration with Marketo. However, through the Marketo program/SFDC campaign creation process, Marketo will update the SFDC campaign description with an ID. Allocadia ingests this ID and in return, updates SFDC campaign fields to match.

NetSuite

Expenses are loaded from NetSuite to Allocadia by Marketing Finance, Instructions for Allocadia Admin to upload were prepared by Allocadia. Actual expenses will not be available though until after month end close for AP, so generally at the end of the month. These expenses will automatically map to the line items and show in the Actuals column in the Activity Plan if there was an Allocadia ID set up initially. However, until we have all set up, we will have to work through a manual process to map expenses to the line items. Allocadia will do it's best guess but without the Allocadia ID, we will need to confirm or correct.

Mapping Expenses via Line Item IDs

The huge advantage of having an Allocadia ID tagged throughout the systems is that it can then be used to easily match line item plans/forecasts with actuals. Classifications (aka line item IDs) are no longer required to be created in NetSuite.

Think of each line item ID as its own budget line. Each Allocadia line item ID will represent that particular budgetary item (versus using one main line item ID for all event charges, as was our previous practice).

Example Event in Allocadia:

In this example, you would use your sponsorship line item ID when submitting your sponsorship contract through Zip. You would then use your swag line item ID when submitting your swag order through Zip. If you used your Navan card for shipping charges and additional booth charges, you would enter those individual line item IDs into Navan when submitting your receipts (see below for more information regarding the new Navan field.)

Submitting Expenses

For expenses submitted through Zip/Coupa

- Populate the line item Allocadia ID in the Zip request - this will ensure the PO and invoice are both mapped to the correct Allocadia line item
- Marketing Finance will confirm the Allocadia line item ID is correct and is properly forecasted. Zip/Coupa requests without Allocadia IDs will not be approved until an ID is provided. See screenshot for example.

For expenses submitted through Navan

- Enter the Allocadia line item ID in the Allocadia ID (Marketing Only) field when submitting the expense. This will ensure the expense is mapped to the correct Allocadia line item ID. See screenshot for example.

To find expenses that need to be mapped after the NetSuite actual upload, go to the home page in Allocadia. In the Actuals column, see if your Map column has a Map () in red. If so, click on that link, and it will open a new screen to show you what needs to be mapped. Scroll over to see descriptions, invoice numbers, etc from NetSuite. All you do is select the hierarchy category and then the line item to match each one to. Then hit map. You can also bulk map by shifting /clicking several lines and then hit bulk map for a smaller screen with its own "map" button.

If you accidentally map something incorrectly, it can be corrected. You'll need to go to the Activities grid for the line item where you accidentally mapped it, right click and select Go to Actuals. A new screen will appear where hopefully you see your error line and you can delete by scrolling to the far right.

Field Marketing Expense Mapping

We strive to have all monthly expenses mapped within 3 business days of actuals being loaded by Finance.

Deprecated Handbook Content

This section contains information we are not ready to delete just yet. The functionality is not currently being used, but if we do decide to bring it back in some form we want to have this information handy to reference.

Allocadia integration to Coupa

<details markdown="1">

<summary>We have turned off the functionality to create Coupa purchase requests from the

Allocadia details panel. We are working with Zip, the new procurement tool, to explore an integration between Allocadia & Zip to create similar functionality that is described below.</summary>

Coupa

Via an integration of Allocadia and Coupa, Marketers are able to create a Coupa Request from within Allocadia. This is a one way push of data from Allocadia into Coupa, so if you make any changes within the Coupa request, please note it will not be updated automatically within Allocadia. Video walk through of how to create a Coupa requisition directly from Allocadia can be found [here](#).

Prerequisites and Notes

- The vendor/supplier must be in Coupa in active status to submit a Coupa req through Allocadia. If you need to process a new supplier request, please follow instructions [here](#).
- Coupa reqs are created on the line item level and cannot be created in a category or sub-category.
- Make sure your line item panel details are completed and you have a plan AND forecasted cost associated with your line item.
- There should only be 1 Coupa req per supplier. If you are submitting a multi line item req, you cannot add lines from a different supplier. The line items you create in your req should ultimately match the line items in the invoice the supplier provides.

Steps to Submitting a Coupa Req through Allocadia

- Click into the appropriate activity plan
- Click into the details panel of the line item in the activity for which you are creating the Coupa req
- Scroll to the bottom of the panel and click Create PR in Coupa and your request form will appear. If it does not, the error message will inform you that you are missing required information. Go back to your panel and line item and make sure all required fields have been filled in.
- Created By can be left under your name, unless you would like the requisition to be submitted under someone else's name, in which case, you can pull the person's name in the drop down options in the On Behalf Of field
- Supplier should pull over automatically based on the supplier you have provided in the Allocadia line item. Note: You must have the name of the supplier in your line item listed exactly as Coupa has the supplier listed. If not, the supplier will not pull through automatically, in which case, you can search the drop down for the supplier listing.
- Description of Purchase should provide details of your purchase - Example - Contract for ABC Event
- Vendor has access to red or orange data is a required field, see linked handbook page in the form for more information
- List data and system involved is only a field that should be filled in if you select YES to the above data question
- Vendor's Contact Email is a required field and is generally utilized for contract countersignature requests
- Vendor's Security Contact Email is a field to be filled in if vendor has access to red or orange data

- Attachment is required and this where you would attach the appropriate contract
- Click Next
- Select AMT or QTY based on the type of purchase (generally, you will be submitting a Coupa req based on AMT)
- Item will pull from the line item name you have listed
- Unit Price will pull from your total line item cost
- Need by Date is the due date for the Coupa req
- Service Start, End Date, Chart of Accounts, Subsidiary, Department, and GL Account will all pull from your line item

If submitting a single line item Coupa req

- If you are submitting a single line item request, click Submit
- The system will provide you with the link to your Coupa req (this will also be linked in your Allocadia line item's detail panel)
- PLEASE NOTE - This does NOT mean your Coupa req has been submitted. This is taking you to the actual req in Coupa to review and you will still need to submit the req in Coupa.
- Click on your Coupa req link and review
- At this point you can make any a
