

al events calendar view (above - calendars are not public because they contain secure login for presenters). The purpose of the consolidated view is to help event organizer(s) minimize topic overlap with other GitLab virtual events happening around the same time and to provide executive visibility into ALL virtual events that GitLab is running/participating in.

Glossary of calendar event naming convention {calendar-glossary}

[Hold WC Hosted] Webcast title - GitLab hosted webcast still in planning

[WC Hosted] Webcast title - Confirmed GitLab hosted webcast

[DR WC Hosted] Webcast title - Dry run for GitLab hosted webcast

[Hold WC sponsored] Webcast title - Sponsored webcast still in planning

[WC sponsored] Webcast title - Confirmed sponsored webcast

[Hold VC sponsored] Conference title - Sponsored virtual conference still in planning

[VC sponsored] Conference title - Confirmed sponsored virtual conference

Adding external virtual events into the calendar {calendar-external-virtual-events}

The external virtual events calendar will be used to log all planned and scheduled sponsored webcasts and virtual conferences. The purpose of this calendar is to provide visibility and help the sponsoring team minimize topic overlap with other GitLab virtual events happening around the same time and to provide executive visibility into all GitLab external virtual events.

DRI adding to external virtual events calendar: Sponsor owner

Planned external virtual events {calendar-planned-external-virtual-event}

As soon as you create the epic for the sponsored virtual event, add the event to the external virtual events calendar by creating an event on the day the sponsored virtual event will be live. Make sure to also include the link to the epic in the calendar description.

For sponsored webcast please use the following naming convention [Hold WC sponsored] Event title (e.g: [Hold WC sponsored] Securing your pipeline with GitLab and WhiteSource).

For sponsored virtual conferences, please use the following naming convention [Hold VC sponsored] Event title (e.g: [Hold VC sponsored] Predict 2021).

For executive round tables please use the following naming convention [Hold ER sponsored] Event title (e.g: [Hold ER sponsored] DevOps 101).

For vendor arranged meetings, please use the following naming convention [Hold VA sponsored] Vendor Name Region (e.g: [Hold VA sponsored] Captive Eight APAC).

Confirmed external virtual events {calendar-confirmed-external-virtual-event}

Once the sponsorship has been confirmed, go to your calendar event and remove Hold from the event title. Note: In the spirit of efficiency and to avoid creating multiple calendar invites, please include the epic or issue, add the marketing DRI, any GitLab speakers and/or attendees (SAEs, SAs, etc.), as well as any other team members who would benefit from being included in the calendar invite as this invite will provide a hold for team members participating in the event. The 3rd party sponsor will send out additional event details separately.

For sponsored webcasts, change the event title to [WC sponsored] Event title (e.g: [WC

sponsored] Securing your pipeline with GitLab and WhiteSource).

For sponsored virtual conferences, change the event title to [VC sponsored] Event title (e.g: [VC sponsored] Predict 2021).

For executive round tables, change the event title to [ER sponsored] Event title (e.g: [ER sponsored] DevOps 101).

For sponsored virtual conferences, change the event title to [ER sponsored] Vendor Name Region (e.g: [ER sponsored] Captive Eight APAC).

Rescheduling external virtual events

For the most up-to-date rescheduling instructions, please visit this handbook page.

Cancelling external virtual events

For the most up-to-date rescheduling instructions, please visit this handbook page.

Virtual events decision tree {decision-tree}

We have developed a decision tree on FigJam to help you determine what type of GitLab-hosted virtual event is the best fit for you.

Virtual event types {types}

Webcast {webcast}

This is a GitLab-hosted virtual event with Webcast type configuration, which requires registration to enable Marketo sync. There are two tech platforms used for webcasts (based on the audience/goal):

On24 (Campaigns Team): goal is net new customer acquisition, aligned to campaign motions to drive MQLs in target accounts and broader prospect database. Requires registration on On24.

Zoom (Field Marketing): goal is to increase conversion/velocity of MQLs to SAO, and/or SAO to Closed Won, aligned to campaign motions. Capped registration at 1000 attendee, requires registration on Marketo landing page.

We had a virtual event type called self-service events. This type has been deprecated, but you can run them as a webcast by working with either Marketing Campaigns or Field Marketing.

Webcast handbook

Webcast Subcategory - Virtual Hands-on Workshops {workshops}

Field Marketing runs hands-on workshops virtually. Regardless or not if there will be money spent to advertise these workshops, marketers are to use the webcast event type. A few more points to note:

Our GitLab demo environment cannot support more than 250 people, therefore we need to be able to cap registration at no more than 400-500 people. The Self-Service option does not allow for registration to be capped. You can require approval, but Zoom doesn't allow customization of the rejection email (and it isn't clear if a rejection email is even sent).

By using Zoom webcast for these workshops we are able to more easily track and manage the Q&A

coming in from the larger audience. With the chat feature in the Self Service Zoom offering, the chat runs long and can become confusing.

There is a more professional look and feel of a Webcast run event vs a self-service run event.

For details regarding Virtual Workshops, please visit the Field Marketing Page.

Virtual Conference {virtual-conference}

Please work with the Corporate Marketing Events team on planning these large scale events. Virtual Conference handbook This event type is only intended if you need more tracked attendees than is capable with zoom and/ or you need multiple simultaneous tracks. It also allows for a partner expo hall. The tool we have in place allows for a cleaner experience for the end user than switchign between zoom calls. It more mirrors a physical event experience, with a keynote stage, tracks, expo halls and networking options.

External virtual events {external}

Note: these events are not included in the above decision tree as they are not GitLab-hosted events. External virtual events handbook

Sponsored demand gen webcast: This is webcast hosted on an external partner/vendor platform (e.g: DevOps.com). The partner/vendor is responsible for driving registration, moderating and hosting the webcast on their platform. Mktg-OPs will be responsible for uploading the list to our database and MPMs will be responsible for sending post-event follow-up emails. Link to Marketo program template.

Sponsored Virtual Conference: This is not a webcast but rather a virtual conference where we pay a sponsorship fee to get a virtual booth and sometimes a speaking session slot. Campaigns Team will primarily be responsible for sending the post-event follow-up emails. Link to Marketo program template.

GitLab-hosted Virtual events details by type {detail-by-type}

	Webcast	Virtual Conference
Attendee Size	201-1000	500+
SLA	45 BD	45 BD+
Type	Webcast	Conference
Tracking	Yes	Yes
LP/Registration	Yes	Yes
Mktg Promotion	Yes	Yes
Mktg Moderate	Yes	Yes
Mktg Followup	Yes	Yes
Breakout Rooms	No	Yes
Polls/Q&A	Yes/Yes	Yes
Confirmation/ Reminder	Yes/Yes	Yes

FAQ & Notes:

Breakout rooms CANNOT be selected by attendees. Only the host can add attendees to rooms. Within each breakout room, Co-hosts can record when given permission by the host.

How to go live? {going-live}

Webcasts {go-live-webcast}

Currently, only the Campaigns Team team can run GitLab hosted virtual event with Webcast type configuration in zoom since this configuration requires a special Zoom license and integration with Marketo. To begin a webcast request, visit the webcast page and follow the instructions.

How to promote your virtual event? {promotion}

Webcasts {promotion-webcast}

Below is a summary of the promotion plan for webcasts. MPMs will be responsible for creating all promotion request issues as part of the webcast project management process. The requestor will start with a virtual event request issue and MPMs will create the necessary epic and related issues.

Blog merchandising: 1 post, -30 days prior to live event, DRI = Content team

Organic Social: 1-2 post, -14 to -7 days prior to live event, DRI = Social team (requires image for sharing)

Paid Ads: n/a, -21 days prior to live event, DRI = DMP (requires GitLab owned pages - about.gitlab or pages.gitlab)

Targeted Email: 2-3 sends, -14 and -7 days prior to live event, DRI = MPM (copy provided by requestor)

Newsletter: 1 post, -15 to -1 day prior to live event, DRI = MPM (only support English language)

Virtual event operations {operations}

Zoom capabilities {zoom-capabilities}

When scheduling an event, this table can help guide you towards the right event type to select based on the features you would like to use during the event. GitLab hosted virtual events will need to fit into either: Zoom Webcast type or Zoom Meeting type.

	Zoom Webcast	Zoom Meeting
Screen share	Yes	Yes
Video/Audio sharing	Host/Panelist only	All participants
Participant List	Visible to host/panelist	All participants
Multiple Hosts	Yes	Yes
Attendee Limit	1,000	200
Registration Zoom	Yes (Optional)	Yes (Optional)

Registration Marketo	Yes	No
Marketo Integration	Yes	No
Automated Tracking and Lead Flow	Yes	No
Confirmation Email	Yes (from Zoom)	Yes (from Zoom)
Auto Reminder Email Send	Yes (from Zoom)	No
Practice Session	Yes	Yes (requires activating waiting room)
Breakout Rooms / Max participants	0 / 0	50 / 200
Polls	Yes	Yes
Q&A	Yes	No
Chat	Yes	Yes
Raise Hand	Yes	No
Livestream	Yes	Yes

Participant engagement {participant-engagement}

Resources {zoom-resources}

Managing participants in webcast
Managing participants in a meeting

Chat {zoom-chat}

In-meeting chat / Save in-meeting chat
Webcast chat

Chat announcements

Chat announcements allow specific users to send one-way announcements to everyone in the same account. Account owners and admin can add up to 50 users who can send announcements.

Using chat announcements

Q&A {zoom-questions}

The question & answer (Q&A) feature for webcasts allows attendees to ask questions during the webcast and for the panelists, co-hosts and host to answer their questions. With the public Q&A feature, attendees can answer each other's questions and if enabled, they may also upvote each

others questions.

Getting started with question & answer

Polling {zoom-polling}

You can enable polling in your meeting or virtual event to survey your attendees. See the prerequisites for how to enable polling.

You can also download the results of your poll - see reporting.

Polling for webcasts

Polling for meetings

Networking {zoom-networking}

There are currently no networking features available in Zoom outside of the participation features listed above. However, there are some creative ways to continue the conversation after your event is over:

Create a custom Twitter hashtag for your event and encourage participants to join the conversation

Create a LinkedIn group and invite participants prior to the event

If you're doing a self-service event, use the breakout rooms to create a more intimate setting for discussion and opportunity for 1:1's

Security {zoom-security}

Please follow the prerequisites when setting up your virtual event. The prerequisites include steps for ensuring your virtual event and account are secure.

GDPR and privacy compliance {zoom-compliance}

In order to stay compliant with all regulatory policies as it relates to marketing, please adhere the following guidelines when working with registration or attendee lists and event confirmation emails:

Password protect sheets for lists (use under GitLab ID only, GitLab only access)

Delete info in Zoom after event

Copy of spreadsheet should be deleted after use

Add opt-out link in confirmation email

Please add the following language when creating your Zoom registration landing page:

>By registering for this event, you agree that GitLab may email you about its products, services and events. You may opt-out at anytime by unsubscribing in emails or visit our communication preference center.

If you are creating a self-service partner virtual event, please add the following language when creating your Zoom registration landing page and replace [partner name] with the name of

the partner:

>By registering for this GitLab and [partner name] event, you agree that GitLab and [Partner name] may email you about their products, services and events. You may opt-out at anytime by unsubscribing in emails or visiting the relevant company's preference center.

Reporting {reporting}

Resources {reporting-resources}

Getting started with reporting

There are two types of reports you can export for virtual events from Zoom:

1. Usage: view meetings, participants, and meeting minutes within a specified time range
1. Meeting: view registration reports and poll reports for meetings

For registration lists:

1. Navigate to Reports > Meeting
1. Select your report type. For a registration report, select Registration Report. If you had polling enabled for your virtual event or meeting, you can select Poll Report to download the results of your poll.
1. Select the date of your event. Maximum report duration is one month.
1. Select the checkbox next to your event and click Generate.
1. A pop-up box will appear for you to choose the type of registrants (all, approved, or denied). Choose all and click Continue.
1. After processing, you are redirected to the Report Queue where you can download your results as a .csv file.

For attendee lists:

1. Navigate to Reports > Usage
1. Select the date of your event and click Search. Maximum report duration is one month. The report displays information for meetings that ended at least 30 minutes ago.
1. You can toggle the visible columns you want shown in the results from the Toggle columns drop down on the right-side of the screen (optional).
1. Once your event is shown in results, scroll right to the Participants column to view the number of participants hyperlinked in blue. Click the linked number of participants.
1. A pop-up box will appear called Meeting Participants. From here, you can select the checkbox whether you want to export this list with meeting data or not. Meeting data includes the meeting ID, duration (minutes), of participants, topic, start time, end time, and user email.
1. Click Export. It exports the list as a .csv file.

List uploads {list-uploads}

If you have a minimum of 20 leads to upload from a virtual event, you can utilize the same list upload process through marketing operations. Please create an issue in the marketing operations project using the event-clean-list-upload.md issue template and assign it to @jburton.

Zoom landing page registration source tracking {zoom-registration}

When driving webcast registration to a Zoom landing page, Zoom registration source tracking can be useful for tracking where the registrants are coming from.

Registration source tracking on zoom landing page is only available for MPM run Webcast type and not the self-service virtual events Meeting type set up.

Currently, we do not use Zoom's landing page for webcast registration as MPMs manage the webcast registration process by creating an about.gitlab landing page and integrating form fills to Zoom via Marketo. The Zoom integration tracks sources that drove the registration using UTM parameters. See full documentation on when and how to use utms.

Live streaming {live-streaming}

Due to current security concerns, live streaming to YouTube from Zoom has been temporarily shut down. There is also a security concern regarding Zoom meetings that are recorded to the cloud. If you wish to record your virtual event and upload to YouTube later, record to your local machine (not to the cloud) and open an issue in the digital production project to have the digital production team review your recording prior to being uploaded to YouTube.

Virtual Event Best Practices {best-practices}

You may also want to review the GitLab Video Playbook, which offers guidance on creating engaging video content, much of which also applies to virtual events.

Event Planner Best Practices {best-practices-event-planners}

Choose tech based on your event goals and structure of event/ presentations.

Consider your narrative - people will be more likely to tune in if you are telling a story throughout the day vs. it being one of talks that aren't related.

Have all presenters test their A/V setup in advance of event.

Ask speakers who will be presenting live to test (and if necessary troubleshoot) their wifi connection prior to the event. Especially important for live demos and coding.

If you have time, do speaker run through with all speakers to review slides and give feedback and answer any flow questions.

Have a final check in meeting with MC's, moderators, and speakers. If you can have moderator meet their speaker on video call before the event to build rapport.

Give moderators extensive instructions, especially if coordinating in-person as well as online presenters.

Do the same for the speakers. What do they have access to that's different than the attendees?

Give quick video instructions on how attendees can use the platform. Also provide written instructions.

Have presenters sign in at least 20 min before to retest their audio and setup. Once they are all set, allow them to go off and make the most use of their time and ask that they rejoin 5 mins before starting. This will give proper time to troubleshoot if needed.

Enable live captioning to make the videos more accessible.

Make sure no one other than specific people can close the stream as people might accidentally otherwise.

Prep back up plans for speakers who have technical issues, don't show, or other things that

pop up. Have a back up for all live demos.

If possible make sure people don't need to re-join (i.e. it's one long hangout/zoom) through the day, attrition greatly increases if they keep needing to re join.

Have intermissions/ transition slides with tips for the audience. You've got your audience, make the best use of it!

Keeping the audience engaged:

Survey the audience.

Add a giveaway or chance to get swag - be sure to build the process on the back end on how you can execute this in advance. i.e. if your swag vendor will allow you to ship out 25 items at no cost, then do a raffle for 25 or use a swag platform where people can enter in their own contact information.

Create a Slack channel or something similar for attendees to build community & keep the convo going there -- Remember your CTA?

If possible allow community/ attendees engage with speakers post talk.

Find ways to keep the discussion going- the event shouldn't end with the camera stops. Decide on a CTA. Let folks know next steps and how to continue to engage and educate themselves.

Have a plan for content use and distribution post-event. Be sure to communicate to the audience if they will receive the slides/recording and also a timeframe in which they will receive the content.

For both GitLab-owned and external events, speakers and content DRIs should build in steps for legal approvals from necessary parties on public-facing presentations before materials are due.

Event Planner Best Practices (Virtual Sponsored Conferences/Events) {best-practices-sponsored-events}

Unlike in-person events, there are not usually drink receptions, food and other activities that drive traffic to a virtual booth. If there is gamification, it also is not a guarantee someone will actually talk to someone in the booth. Do not expect to get the same type of traffic you would at an in person event.

To help drive traffic, staff and schedule SDRs and others to attend and network outside of the booth as well, whether that be through direct messages, in sessions, or any other networking features the event provides. Be mindful and encourage SDR's to direct messages strategically, avoiding mass messaging everyone at the conference. This is often not an appreciated outreach and will be disregarded.

In AMER, Solution Architects will not join regional virtual sponsored conferences unless otherwise specified. If technical questions arise during the event, please list the question(s) into the cs-questions slack channel. SA Manager is to be included on the event issue and a heads-up will be given in the cs-questions Slack channel so the SA team knows an event will be occurring and to expect questions.

Have staff reach out to booth leads as soon as they connect with you to help drive engagement and conversations during the event. Aim to set post event appointments.

Create a list of sessions/tracks relevant to GitLab and encourage staff to attend.

Post incremental updates in the internal event slack channel or have a daily sync about progress on the event goals, any updates, what to expect that day such as speaking slots or other relevant sessions.

If you are the event planner, you may want to create an event profile as "GitLab Moderator" so you can create more brand awareness and manage more aspects of the event without being tied to yourself. It also gives another opportunity for people to interact with the brand if they don't know where to start.

If the event is free or inexpensive, you will likely get people who reach out about hiring. Have a script ready for these questions.

Speaker Best Practices {best-practices-speakers}

Test your technology in advance - including any applications you will be using (ex: Zoom, WebEx).

Have backup headphones and a phone available in case you need to dial in.

Have a dedicated microphone (as opposed to using your laptop mic). We recommend a wired microphone (can be connected to your headphones) as many Bluetooth microphones suffer from latency and quality issues.

If you can, have someone fielding questions for you.

Have slides or visuals to supplement your talk if it is just you so that it doesn't feel like just a meeting or lecture.

Share slides in advance when possible and at the beginning of your session. This can help people follow along in the event of any technical difficulties.

Wear camera-ready colors- see doc

Remember your background: this will be recorded and published online.

Recommend using GitLab branded virtual backgrounds.

Slides: use a large clear font. You do not know what device the viewer will be on.

Don't move around a lot.

Look at the camera.

Dress as if you were at an actual conference.

If someone will be introducing you, ensure they know how to pronounce your name, title, and GitLab correctly.

Ask for a copy of the recording and post the recording on the relevant channel.

If there is a chat function on the speaking session:

Have designated staff to attend and show up before the speaking slot starts.

Have staff post in the chat that they are a representative of GitLab and happy to answer any questions.

Know what links or topics are mentioned in the presentation and have UTM links to them ready to post. Good ones to have on hand in addition are the company handbook, our all-remote guide, link to the free trial

If at a sponsored event with a booth- At the end, encourage participants to stop by the virtual booth if they still have questions, with a link to the booth.

Attendees: How to get the most out of attending a virtual event {best-practices-attendees}

Guide and enable people to share on social .

Remind them how they will be able to access content post-event.

Teach them how to use the platform you are doing the event on.

Add "- GitLab" and the end of your name or "- your title" to your event profile depending on what is displayed in the event when in chat rooms or other interactive areas. If the event platform accepts emoji (often possible if there is a mobile app) feel free to use the fox emoji or something else that shows your personality.

Add a profile picture to your virtual profile if you have the option. It adds a more humanistic touch. If you do not feel comfortable using your image, please use one of the company logos instead.

Attendee/Staff Best Practices (Virtual sponsored conferences){best-practices-attendees-staff}

One of the biggest advantages of virtual conferences is that you can often search the attendee list by company and title. Sales should especially take advantage of this as an easy way to find and connect with other attendees from your account. Be mindful to use a custom outreach that is relevant to that contact, as sending a generic message to thousands of attendees does not yield a positive image or create meaningful connections.

Attend and participate in discussions at sessions, in chat rooms, and other areas the event platform provides in topics that are relevant to you. This helps show us as thought leaders beyond just our own speaking slots and helps gain connections across the event.

Treat commitments to virtual events like you would to in-person events. While virtual events offer more flexibility to be able to avoid long flights and always having a quiet place to take a phone call, you should still be devoting your time to working the event like you would at an in person event. Block off a majority of your schedule during the event to really be engaged and participate.

Partners Best Practices {best-practices-partners}

Best practices for managing a virtual booth- suggestions to get the most out of your investment, have the most personable interactions and give best attendee experience.

- Always have a virtual offering, discount or giveaway.

- If you can have a person or multiple people staff the booth and be there to answer questions.

- have a video or digestible slide deck ready for viewing.

SECTION: marketing/virtual-events/external-virtual-events.md

Overview {overview}

<!-- DO NOT CHANGE THIS ANCHOR -->

External virtual events are, by definition, not owned and hosted by GitLab. They are hosted by an external third party (i.e. a partner or paid vendor). The goal of external virtual events is to drive net new leads, and we do not promote to our internal database. The various types of external virtual events are below, and involve epic and issue creation, designation of DRIs, and workback schedule definition within the issue due dates.

Partner-Hosted Webinars: hosted by a channel partner (i.e. WWT), this is an unpaid tactic. The channel partner manages landing page, moderating and hosting the webinar on their platform. GitLab represents as a speaker at the event, sometimes jointly with an alliance partner. A lead list is often not shared after the event, as the channel partner will work the leads. We will sometimes promote, and determine which channels are appropriate.

Sponsored Webinars: hosted on an external vendor platform (i.e. DevOps.com), this is a paid tactic. The vendor is responsible for driving registration, moderating and hosting the webinar on their platform, and delivering a lead list after the event. The goal of a sponsored webinar is net new leads - we do not promote to our existing database as it is a paid activity.

Virtual Conferences: hosted on an external vendor platform, this is a paid tactic. GitLab pays a sponsorship fee to receive a virtual booth and often speaking session or panel presence. The goal of a sponsored virtual conference is net new leads - we do not promote to our existing database as it is a paid activity.

Executive Roundtable: hosted on an external vendor platform, this is a gathering of high level CxO attendees run as an open discussion between the moderator/host, GitLab expert and delegates. There usually aren't any presentations, but instead a discussion where anyone can chime in to speak. The host would prepare questions to lead discussion topics and go around the room asking delegates questions to answer. The goal of an executive roundtable is net new leads - we do not promote to our existing database as it is a paid activity.

Vendor Arranged Meetings: hosted by an external vendor, the vendor organizes one-to-one meetings with prospect or customer accounts. This does not include meetings set internally by GitLab team members. An example would be a "speed dating" style meeting setup where a vendor organizes meetings with prospects of interest to GitLab. The goal of a vendor arranged meeting is to generate meetings with accounts of interest that we are finding challenging to break into directly - we do not promote to our existing database as it is a paid activity.

Partner Webinars {partner-hosted-webinars}

<!-- DO NOT CHANGE THIS ANCHOR -->

A partner-hosted webinar is hosted by the partner, with the goal of driving net new leads. The partner is responsible for driving registration, moderating and hosting the webinar on their platform, and, in some cases, delivering a lead list after the event. The project owner (Partner Marketing) is responsible for creating the epic and related issue creation, and keeping timelines and DRIs up-to-date.

How to request Partner Marketing support {partner-hosted-webinar-requesting-support}

<!-- DO NOT CHANGE THIS ANCHOR -->

CAMs and Alliance Managers should use this issue template to request Channel Marketing support for their planned event or webinar.

How to view triage board of Partner Marketing Requests {partner-hosted-webinar-triage-board}

<!-- DO NOT CHANGE THIS ANCHOR -->

View Board

Process in GitLab to organize epic & issues {partner-hosted-webinar-project-management}

<!-- DO NOT CHANGE THIS ANCHOR -->

The project owner is responsible for following the steps below to create the epic and related issues in GitLab.

1. Project owner creates the epic to house all related issues (code below)
1. Project owner creates the relevant issues required (shortcut links in epic code below)
1. Project owner associates all the relevant issues to the newly created epic, as well as the original issue
1. Project owner sets due dates for each issue, based on agreed upon SLAs between teams for each task, and confirms accurate ownership for each issue

Note: if the date of the tactic changes, the project owner is responsible for changing the due dates of all related issues to match the new date, and alerting the team members involved.

-] [Pathfactory track issue (only open if we receive and can use recording)

Post event tasks

-] [Ordering a swag appreciation gift for speakers
-] [Request add to Resources

Opt in language applicable to all scenarios below and all geographies

By registering for this GitLab and [partner name] event, you agree that GitLab and [Partner name] may email you about their products, services and events. You may opt-out at any time by unsubscribing in future emails or visiting the relevant company's preference center.

In order to mark leads as Opt-in = TRUE, a record of the terms and conditions the leads agreed to upon having their data collected must be recorded. Check the terms of service wording has been recorded in the upload issue before opting in leads to receive marketing communications. No ToS, no Opt-in. Period. To find the appropriate language, refer to Marketing Rules and Consent Language

If there are any records who have opted out of contact for any reason, define that on the spreadsheet by selecting Opt-in = FALSE

Leave Opt-In empty if no other option is available

/label ~"mktg-status::wip" ~"Webinar - Channel Partner" ~"Webinar"

Sponsored Webinars {sponsored-webinars}

<!-- DO NOT CHANGE THIS ANCHOR -->

A sponsored webcast is hosted on an external vendor platform (i.e. DevOps.com); this is a paid tactic. The vendor is responsible for driving registration, moderating and hosting the webinar on their platform, and delivering a lead list after the event. The goal of a sponsored webinar is net new leads - we do not promote to our existing database as it is a paid activity.

Process in GitLab to organize epic & issues {sponsored-webinar-project-management}

<!-- DO NOT CHANGE THIS ANCHOR -->

The project owner is responsible for following the steps below to create the epic and related issues in GitLab.

1. Project owner (FMM) creates the main tactic issue
1. Project owner (FMC) creates the epic to house all related issues (code below)
1. Project owner (FMC) creates the relevant issues required (shortcut links in epic code below)
1. Project owner (FMC) associates all the relevant issues to the newly created epic, as well as the original issue
1. Project owner (FMC) sets due dates for each issue, based on agreed upon SLAs between teams for each task, and confirms accurate ownership for each issue

Note: if the date of the tactic changes, the project owner is responsible for changing the due dates of all related issues to match the new date, and alerting the team members involved.

Project Owner:

FMC/FMS:

Type: Sponsored Webcast

Official Name:

Registration URL:

Persona (choose one): Practitioner, Manager, or Executive

Use Case (choose primary): CI, VC&C, DevSecOps, Other (FY21-22 focus on CI and VC&C)

Sales Segment (choose primary): Large, Mid-Market, or SMB

Sales Region (choose one): AMER, EMEA, APAC

Sales Territory (optional, if specific):

Goal: Please be specific on the metric this is meant to impact.

Budget:

Campaign Tag:

Launch Date: [YYYY-MM-DD]

☐ [main salesforce program

☐ [main marketo campaign

☐ Campaign UTM - Project Owner/FM to fill in (Format: campaign tag - change to all lowercase, no spaces, hyphens, underscores, or special characters)

User Experience

[Project Owner to provide a description of the user journey - from communication plan, to what the user experiences upon receipt, plus triggers on our end like confirmation email and how GitLab fulfills with the vendor, up until receipt by the user and answering whether or not we get confirmation that they received it... what is the anticipated journey after that?]

Additional description and notes about the tactic

[Project Owner/FMM add whatever additional notes are relevant here]

Issue creation

If you are Field Marketer, see next section below for the issues you need to create.

☐ Program Tracking

- If tactic owner is Campaigns Team

☐ [Write copy issue

☐ [Follow up email issue

☐ [List clean and upload issue

☐ [Add to nurture issue

☐ [Pathfactory Upload issue created (optional)

Issue Creation for Field Marketing

Please delete the generic issue creation section above if you are a FMC creating this.

☐ [Program Tracking - FMC creates, assigns to FMC

☐ [Write copy issue - FMC creates, assigns to FMM

☐ [Follow Up Email issue - FMC creates, assigns to FMM (issue will be triaged)

☐ [Add to Nurture - FMC creates, assigns to FMM (issue will be triaged)

☐ [List Clean and Upload - FMC creates, assigns to FMM and MOps

☐ [Optional: FM Pathfactory Asset Upload and Track Creation Issue - FMM creates, assigns to FMC

Add the team label to indicate the team running the event (Example: Field Marketing, Corporate Marketing)

/label ~"mktg-status::wip" ~"Webcast - Sponsored"

.. Note on campaign utm format: we avoid using special characters due to issues in the past

passing UTMs from Bizible to SFDC, the basis for attribution reporting.

Virtual Conferences {virtual-conferences}

<!-- DO NOT CHANGE THIS ANCHOR -->

A virtual conference is hosted on an external vendor platform; this is a paid tactic. GitLab pays a sponsorship fee to receive a virtual booth and often speaking session or panel presence. The goal of a sponsored virtual conference is net new leads - we do not promote to our existing database as it is a paid activity.

This section is the responsibility of Corporate Events to keep up-to-date.

Presence of a virtual booth is a requirement for the virtual event to be considered a Virtual Conference. Link to Marketo program template that will be cloned.

Process in GitLab to organize epic & issues {virtual-conference-project-management}

<!-- DO NOT CHANGE THIS ANCHOR -->

The project owner is responsible for following the steps below to create the epic and related issues in GitLab.

1. Project owner (Corp/FMM) creates the main tactic issue
1. Project owner (Corp/FMC) creates the epic to house all related issues (code below)
1. Project owner (Corp/FMC) creates the relevant issues required (shortcut links in epic code below)
1. Project owner (Corp/FMC) associates all the relevant issues to the newly created epic, as well as the original issue
1. Project owner (Corp/FMC) sets due dates for each issue, based on agreed upon SLAs between teams for each task, and confirms accurate ownership for each issue

Note: if the date of the tactic changes, the project owner is responsible for changing the due dates of all related issues to match the new date, and alerting the team members involved.

-] Activate: [Organic Social Issue - Corp creates, assignment in issue
-] Activate: [Blog Issue - Corp creates, assignment in issue
-] Activate: [PR Announcement Issue - Corp creates, assignment in issue

</details>

Everything with an is optional: create the optional issues only if we plan to use those outbound activation channels

Add the team label to indicate the team running the event (Example: Field Marketing, Corporate Marketing)

/label ~"mktg-status::wip" ~"Virtual Conference"

Event Requirements/ Best Practices

The large conferencing tool is best if:

- You need multiple breakout groups/ stages
- You need an expo hall
- You want more networking options beyond a zoom call
- You have more than 500 people
- The event is more than 3 hours
- The event has multiple breakouts or tracks
- and You need to capture attendee info

Note: Many of the elements included in tool are flexible and can be used for multiple purposes. Discuss with an account admin your options.

Platform and Bandwidth Restrictions

- We can only host one a day/ in a 24 hour period
- You will need at least two full time support staff to run the event
- Only suggested for events 3+ hours or more (due to complexity of setup)
- Suggested for events targeting groups of 500+ or for initiatives that are in line with OKRs
- This event is best executed with more than one person and moderators.
- Your event has a budget of \$5k or more in budgeted spend. You need to budget for support for all live event hours as well as dry run hours.

Steps

Step 1: Start a hosted virtual conference request issue in the digital marketing programs project.

Please use the EventRequest.md issue template

Please put the target LIVE date of the event as the due date

@ mention the Campaign Manager DRI in the issue comment to confirm the requested date is feasible

Campaign Manager will check the requested date against the virtual events calendar to make sure there is no overlapping virtual event that has been pre-scheduled

If the requested date is feasible, the speaker(s) have been secured, and the abstract finalized, the DRI should change the status label from status:plan to status:wip, and add the applicable FY.. label (to make sure this appears on the webcast issue board)
Must complete details on the issue: timeline, budget, audience goals, features needed ...

Step 2: DRI needs to create the Hosted virtual conference EPIC

This step should only be taken once you have confirmed the date with an Campaign Manager. If needed have kick off call with stakeholders.

When "status:wip" is on the issue and necessary elements are documented, and the speakers and webcast dates are secured, the event project is officially in motion. The DRI creates epic for the conference and tags corresponding Campaign Manager.

Naming convention: [Conference Title] - [3-letter Month] [Date], [Year]

DRI copy/pastes code below into the epic

This step should only be taken once you have confirmed the date with an Campaign Manager and have an additional Hopin admin to staff. If needed have kick off call with stakeholders.

When "status:wip" is on the issue and necessary elements are documented, and the speakers and webcast dates are secured, the event project is officially in motion. The DRI creates epic for the conference and tags corresponding Campaign Manager.

Naming convention: [Conference Title] - [3-letter Month] [Date], [Year]

DRI copy/pastes code below into the epic

/label ~"Webcast - GitLab Hosted" ~"Virtual Event" ~"mktg-status::wip"

DRI to create the necessary campaigns team request support issues linked to the virtual conference Campaign Planning Sheet and add to epic.

Project Planning

DRI will immediately:

1. Create the necessary epic and campaigns team request issues as outlined above.
2. Campaign Manager to ensure the webcast Dry Run and Live dates are added to the Virtual Events Google Calendar by sending over a Gcal invite from there to the webcast execution team. Note: This is an important step to make sure no overlapping virtual events are scheduled over the desired date/timeslot resulting in a conflict due to shared licenses and support requirements.
3. If one or more speakers are external, set up a kick off call with the external speakers. Set timelines, due dates and share slide deck templates with the speakers. Add dry runs to their calendar(s).
4. Clone and fill out this Conference GANTT template.

Due dates for each action item and DRIs are outlined on the Conference Planning Template.

Promotion Best Practices

1. Give yourself at least 30 business days of promotion.
2. Send invitation emails 2 weeks out, 1 week out, and if needed 2 hours before event. Sample emails can be found here.
3. Only send promotional emails Tuesday, Wednesday, or Thursday for optimal results.
4. Send reminder emails to registrants the day before, and one hour before the event.
5. Suggested: Host virtual events on a Tuesday, Wednesday or Thursday, see note below about scheduling.
6. Post links to additional, related resources during the event.
7. Include "contact us" information and a clear CTA at the end of the presentation.
8. Video recording from event should be uploaded to YouTube within 24 hours after event has occurred.
9. Send the recording to all registrants, whether they attended or not within 72 hours post event.
10. See more virtual event best practices here

Tips for Speakers

Here are some basic tips to help ensure that you have a good experience preparing for and presenting on a video conference. See speaker preparation best practices.

Before Committing as a Speaker

Ask us any questions you have about the time commitment etc. and what exactly our expectations are. Talk about it with your manager if you're on the fence about your availability, bandwidth, or interest. Make sure you're both on the same page. We want this to be a meaningful professional development exercise for you, not a favor to us that you're lukewarm about · if you feel that way, none of will be able to do our best job. We'll be honest with you, so please do the same for us.

Before the Dry Run

Select and set up your presentation space. Pick a spot with good wifi, and we recommend setting up an external mic for better audio quality, although this is optional. If you will be presenting from your home, alert your spouse/roommates of the time/date & ask them to be out of the house if necessary. Depending on your preferences and comfort level with public speaking, run through the script several times.

Before the Presentation

Try to get a good sleep the night before, and, if the presentation is in the morning, wake up early enough to run through your notes at least once. Review our Positioning FAQ, or keep the page handy in case you are asked in the Q&A about how GitLab compares to our competitors.

Logistical Set up

Adding your talk/ event into the calendar

The virtual event calendar will be used to log all planned and scheduled Marketing Campaigns hosted webcasts and their subsequent dry runs. The purpose of the webcast calendar is to ensure Campaign Managers don't schedule overlapping virtual events.

DRI for adding to webcast calendar: Campaign Manager executing the webcast.

Planned Hosted Virtual Events

1. As soon as an issue is created for a virtual conference request, add the planned event to the virtual event calendar by creating an event on the day you plan to host the event. For events that are still in planning, use the following naming convention [Hold WC Hosted] Webcast title (e.g: [Hold VC Hosted] Mastering CI) and create it as an all-day event (no time slot selected). Make sure to also include the link to the issue in the calendar description.
2. Please also add the planned webcast to the virtual conference planning issue. When adding to the issue, please use :asterisk: emoji prior to the webcast name to indicate this is still in planning.

Confirmed Virtual Hosted Conferences

1. Once the date/time of the conference has been confirmed, go to your calendar event and

remove Hold from the event title [VC Hosted] Webcast title (e.g: [VC Hosted] Mastering CI). Specify the time on the calendar event and swap the issue link in the calendar description with the Epic link. Note: In the spirit of efficiency, please be sure to add all presenters (GitLab team members and external speakers), the epic or issue (if you have one) and your event invite info to the calendar invite so you're not having to create multiple calendar invites.

2. On the planning issue, please also update the webcast as confirmed by switching out the :asterisk: emoji with :whitecheckmark: emoji.

3. Make sure to also add dry runs to the virtual events calendar. When creating the dry run event(s), please use the following naming convention [DR WC Hosted] Event title (e.g: [DR WC Hosted] Mastering CI) and specify the date/time on the calendar event.

Creating the Event Registration page

This depends on the tool being used. Work with corporate events to determine the best process.

Add the conference to the /events page

To add the webcast to the /events page follow this step by step guide.

Set up the event program in Marketo and SFDC

Needs updating to be confernece specific:

1. Create the webcast program in Marketo by cloning the YYYYMMDDWebcastTopicRegion (Single time slot) template.

Select clone to A campaign folder.

Title the webcast in the following format: YYYYMMDD{Webcast Title}[Region - only if applicable]. For example, 20170418MovingToGit.

Save to the GitLab Hosted folder.

Click salesforce campaign sync and select create new to create campaign in SFDC. Make sure to put the landing page url and also the link to the epic in the description.

2. Turn on smart campaigns in Marketo.

Activate the Attended campaign.

Within the Registration from Landing Page smart campaign, on the Fills out Form trigger, add the webcast landing page url without the https (e.g: about.gitlab.com/webcast/securing-serverless/), then activate the campaign.

Activate the Registration From Zoom campaign.

Activate the Interesting Moments campaign.

3. Go to the campaign in salesforce.

Change the campaign owner to your name.

Change the status to in progress.

Edit the Bizible touchpoint field to Include only "Responded" Campaign Members.

4. Return to the Zoom set up window you were working in during step 3. You will now set up Marketo integration within Zoom by clicking on the Integration tab.

Click Edit next to Generate Leads in Marketo section.

Check Send registration information to a Smart Campaign and select the Registration From Zoom smart campaign that you set up in Marketo for this webcast.

Check Send attendee information to a Smart Campaign and select the Zoom Attended smart campaign that you set up in Marketo for this webcast.

In the Gather other information to Marketo (optional) section, select the ZoomWebinarOtherInfo custom object, check the following boxes, and select the corresponding Marketo Custom Object Fields:

- Webinar ID
- Webinar Topic
- Q&A
- Poll

Test your set up

1. Submit a test lead using your GitLab email on the LIVE landing page to make sure the registration is tracked appropriately in the Marketo program and you get a confirmation email from zoom.

Sending follow up emails

1. Go to the No shows smart campaign and click run once to make sure the no shows get dispositioned into the correct status. Currently, no integrated exists between zoom and Marketo to automatically disposition no shows so they remain in Registered status until you run this smart campaign.
2. Update email Outbound -attendees and email Outbound -no shows with content with relevant copies related to the webcast.
3. On the Follow-up - Attendees and Follow up - No Shows email programs, update the {{my.CTA.}} tokens to point to the correct offers and use them in the hyperlinks.
4. Approve copy and send samples to the requestor, and the presenter (if different from requestor).
5. Once you get approval for the sample copy, schedule email sends within follow-up no show and follow-up attended email programs.

Converting the event content to an On-Demand gated asset

1. Upload the recording to our main GitLab channel, fill in the title with the event title, and fill in the description with a short paragraph of what the webcast is about. Make sure the video set as Unlisted so only people with the URL to the video can find it.
2. Once the recording has been uploaded, copy the video link on the right.
3. Login to PathFactory. Add the copied youtube link to Pathfactory as a new content by following the instructions outlined here.
4. Login to Marketo. Create the listening campaign in Marketo by cloning this program template. In the PF - Listening (Triggered) smart campaign nested to the program, modify the PathFactory Content Journey filter to reflect your asset's Pathfactory custom url slug in the following format [your assets custom url slug]. Activate the smart campaign and then set up the Salesforce campaign sync for the listening campaign.
5. Login to Salesforce. Find the subsequent SFDC campaign for the listening campaign. Add the subsequent webcast campaign to the Parent Campaign field. Set the Enable Bizible Touchpoints field to Include only "Responded" Campaign Members.

6. Navigate back to: www-gitlab-com/data/webcast.yml.
7. Click edit and add the following code snippet youtubeurl: "under the url code snippet for your landing page.
8. Change the form: to 2076.
9. Change the successmessage: to Thank you for downloading. Click here to view the on demand webcast. We will also email you a link to the webcast.
10. Add commit message to name your Merge Request using syntax Add PathFactory link for [webcast name] landing page (e.g. Add PathFactory link for Debunking Serverless security myths webcast landing page).
11. Create a name for the target branch - NEVER leave it as the master (i.e. 20191130-Debunking-WC-LP).
12. On the next screen (New Merge Request), add WIP: to the beginning of the title and add a quick description (Add PathFactory link to LP for [webcast name] will suffice).
13. If you have merge access, assign Merge Request to yourself. If you don't have merge access, assign Merge Request to Jackie Gragnola or Agnes Oetama. Scroll down, check the box for Delete source branch when merge request is accepted.
14. Click Submit Merge Request.
15. You've now created the Merge Request.
16. Login to Marketo. Go to the webcast program and update the {{my.ondemandUrl}} token with the webcast PathFactory link.
17. Go to the assets folder within your webcast program and update the On-demand Autoresponder email with relevant copies related to the webcast.
18. Navigate to the Viewed On Demand Smart campaign within your webcast program.
19. Modify the webpage link with the webcast landing page url without the https (e.g: about.gitlab.com/webcast/securing-serverless/), then activate the Viewed On Demand smart campaign.
20. Deactivate the Attended ,Registration from Landing Page, and Registration From Zoom smart campaigns within your webcast program.
21. Go back to your MR. Once the pipeline passes and if everything looks okay in the review app remove WIP and merge (if you have merge access). If you don't have merge access, ping @jgragnola or @aoetama in the MR comment to merge.
22. Add your webcast to the /resources page by following the instructions outlined here.

Executive Roundtables {executive-roundtables}

<!-- DO NOT CHANGE THIS ANCHOR -->

An executive roundtable is a gathering of high level CxO attendees run as an open discussion between the moderator/host, GitLab expert and delegates. There usually aren't any presentations, but instead a discussion where anyone can chime in to speak. The host would prepare questions to lead discussion topics and go around the room asking delegates questions to answer. The project owner (field marketing) is responsible for creating the epic and related issue creation, and keeping timelines and DRIs up-to-date. Marketing Ops is responsible for uploading the list to our database.

Process in GitLab to organize epic & issues {executive-roundtable-project-management}

<!-- DO NOT CHANGE THIS ANCHOR -->

The project owner is responsible for following the steps below to create the epic and related issues in GitLab.

1. Project owner (FMM) creates the main tactic issue
1. Project owner (FMC) creates the epic to house all related issues (code below)
1. Project owner (FMC) creates the relevant issues required (shortcut links in epic code below)
1. Project owner (FMC) associates all the relevant issues to the newly created epic, as well as the original issue
1. Project owner (FMC) sets due dates for each issue, based on agreed upon SLAs between teams for each task, and confirms accurate ownership for each issue

Note: if the date of the tactic changes, the project owner is responsible for changing the due dates of all related issues to match the new date, and alerting the team members involved.
