Vendor Arranged Meetings {vendor-arranged-meetings}

<!-- DO NOT CHANGE THIS ANCHOR -->

A vendor arranged meeting is used for campaigns where a third party vendor is organizing one-to-one meetings with prospect or customer accounts, ideally connecting our team with target accounts that are challenging to set meetings with directly. This does not include meetings set internally by GitLab team members. An example would be a "speed dating" style meeting setup where a vendor organized meetings with prospects of interest to GitLab. The project owner (field marketing commonly) is responsible for creating the epic and related issue creation, and keeping timelines and DRIs up-to-date. Marketing Ops is responsible for uploading the list to our database.

Process in GitLab to organize epic & issues {vendor-arranged-meeting-project-management}

<!-- DO NOT CHANGE THIS ANCHOR -->

The project owner is responsible for following the steps below to create the epic and related issues in GitLab.

1. Project owner (FMM) creates the main tactic issue
1. Project owner (FMC) creates the epic to house all related issues (code below)
1. Project owner (FMC) creates the relevant issues required (shortcut links in epic code below)
1. Project owner (FMC) associates all the relevant issues to the newly created epic, as well as the original issue
1. Project owner (FMC) sets due dates for each issue, based on agreed upon SLAs between teams for each task, and confirms accurate ownership for each issue

Note: if the date of the tactic changes, the project owner is responsible for changing the due dates of all related issues to match the new date, and alerting the team members involved.

Epic code and issue templates {vendor-arranged-meeting-epic-code}

<!-- DO NOT CHANGE THIS ANCHOR -->

markdown

<!-- Name this epic: Vendor Arranged Meeting - [Vendor] - [3-letter Month] [Date], [Year] -->

Main Issue >>

:notepadspiral: Key Details

Project Owner:

FMC/FMS:

Type: Vendor Arranged Meetings

Official Name:

Registration URL:

Sales Segment (choose primary): Large, Mid-Market, or SMB

Sales Region (choose one): AMER, EMEA, APAC

Sales Territory (optional, if specific):

Goal: Please be specific on the metric this is meant to impact.

Budget:

Campaign Tag:

Launch Date: [YYYY-MM-DD]

☐ [main salesforce program

☐ [main marketo campaign

☐ Campaign UTM - Project Owner/FM to fill in (Format: campaign tag - change to all lowercase, no spaces, hyphens, underscores, or special characters)

User Experience

[Project Owner/FMM to provide a description of the user journey - from communication plan, to what the user experiences upon receipt, plus triggers on our end like confirmation email and how GitLab fulfills with the vendor, up until receipt by the user and answering whether or not we get confirmation that they received it... what is the anticipated journey after that?]

Additional description and notes about the tactic

[Project Owner/FMM add whatever additional notes are relevant here]

Issue creation

☐ [Program Tracking - FM - FMC creates, assigns to FMC

☐ [Write copy issue - FMC creates, assigns to FMM

☐ [Follow Up Email issue - FMC creates, assigns to FMM (issue will be triaged)

☐ [Add to Nurture - FMC creates, assigns to FMM (issue will be triaged)

☐ [List Clean and Upload - FMC creates, assigns to FMM and MOps

☐ [Optional: FM Pathfactory Asset Upload and Track Creation Issue - FMM creates, assigns to FMC

Optional: create the optional issues only if we have rights to recording and content is worth gating

/label ~"mktg-status::wip" ~"Field Marketing" ~"Vendor Arranged Meetings"

Actions after the external virtual event {post-external-virtual-event}

<!-- DO NOT CHANGE THIS ANCHOR -->

Posting external virtual event recordings to youtube {post-youtube}

<!-- DO NOT CHANGE THIS ANCHOR -->

Follow this handbook documentation on how to upload external webcast recordings to the GitLab branded YouTube channel.

This process must be completed by the tactic owner.

Note: because these requests move through the Campaign Managers currently and their focus and priority is planning, implementing, and optimizing top-funnel campaign strategies, there is a 5 Business Day SLA.

For immediate follow-up emails, it is recommended to point directly to the GitLab YouTube link (uploaded by the tactic owner) to avoid delays in the send.

If an upload to Pathfactory (an addition to a track), is required, the tactic owner must open a Pathfactory Upload issue and include the GitLab YouTube link, as well as a Pathfactory Track issue to have the asset added to a track.

Gating external webcasts {post-gating}

<!-- DO NOT CHANGE THIS ANCHOR -->

Posting external webcasts WITHOUT a tech/alliance partner {post-gating-non-alliance}

<!-- DO NOT CHANGE THIS ANCHOR -->

The recording meets all of the following criterias:

1. Content solidifies GitLab use case or existing campaign messaging.
2. Future gated page has an omni-channel (min 2, 1 out of the 2 has to be paid) promotion plans. The issue for the promotion plans has to be linked to the gating request.

Posting external webcasts WITH a tech/alliance partner {post-gating-with-alliance}

<!-- DO NOT CHANGE THIS ANCHOR -->

The recording meets all of the following criterias:

1. Select or High priority partner: Listed as high priority on the Alliances Technology Dashboard or is a Select channel partner.
2. Content solidifies GitLab use case or existing campaign messaging.
3. Future gated page has an omni-channel (min 2, 1 out of the 2 has to be paid) promotion plans. The issue for the promotion plans has to be linked to the gating request.

OR

Ungated video garners 550 youtube views within the first 7 days of posting.

Note: The 550 min threshold is based on the avg of top 10 videos on GitLab branded youtube channel between 8/11/20 - 8/18/20.

SECTION: marketing/virtual-events/self-service-virtual-events/index.md

Overview {overview}

The self-service virtual event type has been deprecated and is no longer in use.

If you would like to host a webcast, please work with either Marketing Campaigns or Field Marketing to determine the right set-up and tracking for your event.

Although this event type is no officially available, the details below do provide helpful information related to running an event using Zoom and are provided as a quick reference guide.

Best Practices {best-practices}

This section pulls all the pertinent best practices from the step-by-step instructions into a quickly reviewable format, separated by various stages of the process.

General Best Practices:

Users expect a great experience and have a lot of options to choose from. We need every event to be immersive and pack a punch to keep people attending and coming back for future events. Customers are getting Zoom fatigue so take time to really strategize on the right subject, right speakers and right time. If planning a 2-3 hour virtual event, add some fun, sprinkle some silly questions into the learning to keep people feeling positive.

Deliver a visually strong landing page that provides professional looking graphics, event overview and agenda.

Block calendars for all hosts and panelists starting 30 minutes before the event start time.

Ensure there are 2 co-hosts for a Zoom webcast to avoid any recording disruptions (i.e should one person lose internet connection).

Presenters and Q&A moderators to log in as host so everyone can see them.

If possible, keep sessions to a maximum of 2 hours long to decrease the drop-off rate.

Monitor your registration numbers throughout your promotion. Attendance rates can range from 30-50%, meaning you should not exceed 400 registrants for self-service style events to avoid a large number of people from being blocked.

Identify a strong moderator who is comfortable interrupting speakers to keep them on time or interject questions from the audience. Work within your teams to find engaging speakers who can deliver the content in a clear and exciting manner.

Develop an outline of the content, identify the presenters and create milestone dates for content development. Schedule a practice session for all hosts and panelists in the week prior to the event. Make a copy of the dry run template/script to facilitate and ensure everyone knows the flow and technology being used. Preparation is key, test everything.

Enabling the chat, Q&A and polling features in smaller events to fuel questions, distribute collateral and field questions is a great way to keep engagement high. If there is a large audience, ensure there are dedicated team members monitoring the chat so questions can be answered while speakers are presenting. Schedule adequate time for Q&A.

Have a minimum of 2 Q&A moderators (1 verbalizing questions and the other typing answers) who are efficient, knowledgeable and have an understanding of the most important questions to verbalize during the sessions and the questions to dismiss (inappropriate in nature).

Route questions to the Q&A queue and create an internal google doc to allow the team supporting the event to collaborate on the question to make sure we have the right answers. Then paste the answers from the doc back into the Zoom Q&A queue for the attendees to see.

Suggest shutting down chat during presentation (not labs) for larger events but ensuring that the chat feature is still enabled for the panelists to speak back and forth.

Chat feature could be used to help gamify event.

Provide information (on a slide) on how attendees should use Zoom chat and the Q&A feature.

Provide a slide featuring the team and their contact details.

Add a feedback survey on the last slide when thanking people for coming, capturing them right away may yield more responses.

when planning the feedback survey/form ensure you have clear objectives/goals

limited the amount of questions

the survey should be anonymous

Posting event bundle with prezos, recording and thank you tends to stir up new meetings/conversations.

Download the usage report within 24 hours of event close and deliver to Marketing Ops via list upload issue.

Review GitLab's general virtual events best practices for additional suggestions on how to make your virtual event a success.

Basic Zoom Settings: These settings should be updated in your personal zoom account settings by logging into the Zoom web client

Deactivate play sound when participants join or leave

Activate mute participants upon entry

Enable livestream feature (advanced settings) allow live streaming the meeting and enable YouTube

Activate polling (basic settings)

Activate breakout room (advance setting)

Setting up Zoom event: Basic recommendations when setting up your self-service Zoom event

Mute participants upon entry

Enable join before host option

Enable waiting room

Check record meeting automatically if the event is being recorded

REQUIRE registration for any event that you'd like to add registrants/attendees to Marketo/SFDC after the event

Add alternate hosts to help support your event

Close registration after event date

Check Only authenticated users can join

To allow the ability to run a practice session, check enable waiting room. NOTE: This means you have to accept people into the meeting on the live event date unless you toggle this off after your practice session

Once your event is created, scroll to the bottom of the event and see Polls tab Pro-tip: you should only one question per poll. If you add multiple questions per poll, you must answer all

questions at once

Pre-Event / Live Event / Post-Event

Only the host and co-host can start/stop the recording

Only the host and co-host can mute/unmute participants

Self-service virtual event promotion guide

Using personal channels to self-promote your event comes with many benefits: it's an authentic way for you to build your personal audience, reach people beyond GitLab's corporate channels, and boosts your credibility online. This page outlines everything that you'll need to promote your own virtual event. This checklist should take less than 2 hours.

Please consider reviewing and applying our GitLab Team Member Social Media Guidelines prior to promoting your own event. Specifically, review our GitLab Voice information.

Checklist of deliverables to get your self-service virtual event started (details below)

☐ Copy to promote your event

☐ Designs for creative/images

☐ Getting the word out

How to write copy for your self-service virtual event

1. Gather a list of handles and hashtags to include in your social copy

Your event topic is already a hashtag: DevOps, security, RemoteWork, etc. Integrate these into your sentences naturally.

Do you have a guest speaker? Talking about a company, person, or brand that would have a Twitter or LinkedIn page? Include the handle (@name) in the Twitter post - and tag the appropriate page on LinkedIn.

Do's

DO use 1-3 hashtags in your posts, across social channels

Example: I'm so excited to announce that I'll be speaking about remote DevOps at my webcast later this week! Join me and learn how @GitLab can help.

DO write in your own voice, be creative, and use emoji

Example: ·Everyone is talking about remote DevOps and at @GitLab it's all I work on. · Join me for a webinar to learn how we make it all work.

Don'ts

DON'T hashtag the predicate, object, or complements in a sentence unless it's a direct topic of your event.

Example: So excited to announce our new event on remote DevOps· GitLab Tech Webcast

1. Top-Level messaging to aid in copy

Write 3 sentences answering these questions:

What topic is your virtual event about?

What is something that attendees will walk away with that provides them value? / Why should someone attend your virtual event?

Why are you the person to listen to about this topic? / What makes you the authority?

Use the answer to these three questions to write all copy for your promotions.

A "tweetable" (280 characters or less) event description - add this to your event landing page and use this as your copy for all social promo for your first post on Twitter and LinkedIn

Write actual social copy with your hashtags, handles, and the answers to the questions above. (If there are no handles that's okay. But there is always a hashtaggable topic. Lost? Ask socialmedia on Slack)

How to make images for your self-service virtual event

Because this is a self-service virtual event, you'll also be creating your own image for promotion. Don't worry! We have everything you need.

Here's what you'll need to do:

Use GitLab's Virtual Events Promotional Templates on Canva. Select which of these two styles you'd like to use and follow the instructions in the template.

Follow the directions on the first slide of the template.

Once your image is made, click the "share" button, followed by the "download" button, and you've made your promotional image!

The GitLab Canva Virtual Events Promotional Templates are a small series of "blanks" to use to promote your event! You may choose any or all of these for your virtual events. You will need to learn basic photo editing tactics if you don't know them already, but Canva is user-friendly software. Lost? Ask socialmedia on Slack for assistance.

Getting the word out - Launching your self-service virtual event promotion

Now that you've put together the copy and creative needed to promote your event, it's time to get the word out. Depending on how much time there is until your webcast, you may be able to promote your event more than what we've outlined in this section. There are more details below on a more sustained promotion for events with more than 3 days of time between promotion launch and webcast.

We recommend doing all of the following:

1. Share your event on your social media channels

Promote your event on Twitter and LinkedIn. You may also do this on Facebook or other channels, but know that Twitter and LinkedIn are key. Take the copy + creative you made and send them out to your social followers. Be sure to "convert" your @handles from Twitter to tagging people and companies on LinkedIn. While you start with "@" like all social channels, you'll want to make sure that you select the right person or company on LinkedIn. Here is how to try this out (<https://www.linkedin.com/help/linkedin/answer/a525082/mention-people-in-your-posts>).

2. Share your social media posts on GitLab Slack Channels related to your topic

Ask for team members to amplify your posts.

Building personal credibility and extending reach for your event promotions is a critical part

of success. Team members who work in the same space as your topic would be more likely to share on their channels than others. Here's how to do it while living up to our values around informal communication:

Example: Your webcast is the same from our examples above, about remote DevOps. One of the topics to focus on is remote work. In addition to being a hashtag in your social posts, remote work is also the topic for a GitLab Slack channel, remote. Team members in this channel share stories and opinions on your webcast topic.

After sending out your first social media posts on Twitter and LinkedIn, copy the links to both posts. Here's how to copy a link to your post on LinkedIn (<https://www.linkedin.com/help/linkedin/answer/a1340792/finding-the-url-for-shared-content>). Here's how to copy a link to your tweet on Twitter (<https://help.twitter.com/en/using-twitter/tweet-and-moment-url>).

Take the links to your social media posts and add them to a Slack channel message. Send a variation of this message to the channel:

> Hi Everyone,
>
> I'm hosting a webcast on remote DevOps later this week. I would appreciate your support by retweeting or sharing my social posts.
>
> Retweet My Tweet (make this a clickable link to your tweet)
>
> Share My LinkedIn Post (make this a clickable link to your LinkedIn post)
>
> Please let me know if you have any questions or would like to contribute to the webcast.

While sharing on your social media channels and other digital spaces should occur more than once if time allows, please do not message GitLab Slack channels more than once about your webcast promotion. Please feel free to provide an update to the slack channel about what worked well or how many people attended following the end of your webcast.

3. Consider your other affiliations for promotion

Are you a part of a tech-focused nonprofit? Do you have former coworkers who would be interested in your webcast? Are you a part of group chats, Facebook or LinkedIn groups, or some other channel where members might be interested in your topic? Share it with them as well.

It's important to note that you should be aware of sharing practices in your groups - some groups have a strict "no advertising" policy. For all Facebook and LinkedIn groups, consider reviewing any group rules and don't get in trouble with the moderators.

Extra: Add to the events page

Add your virtual event to about.gitlab events page by following instructions for adding to event master.yml

Extra: Specific Twitter options

While we're not suggesting that you spam your audiences, Twitter is not used in the same way LinkedIn is. On the day of your webcast, consider tweeting a photo of you prepping the webcast, tweeting a "thank you" to everyone that attended, and even consider linking to a recording (if available) for those who could not join live. It's completely acceptable for a list of tweets on the day of your webcast to include 3-5 tweets. Ultimately, if you have something else to say, say it on Twitter.

Extra: Getting the word out - More than one-day of promotion

If you're planning a webcast and have more than 3 days between your first day of promotion and the actual webcast, you have time to add additional posts to your promotion.

Do not promote your event more than once a day, at most. Remember, this is your network, don't spam them.

Consider posting about non-webcast or work-related topics between webcast promotional posts.

Take the same copy you wrote in step 1 and remix it for future posts.

Logistical Set up

Setting up the event in Zoom

Prerequisites

Make sure these settings are enabled in your personal zoom account settings as needed. In your zoom web interface go to Settings.

1. To prevent meeting disruptions when participants join and leave by making sure:
Under In Meeting (Basic section), Play sound when participants join or leave is deactivated
Toggling Mute participants upon entry to active.
2. To enable Livestream feature:
Under In Meeting (Advanced) section, toggle Allow live streaming the meetings and enable YouTube to active
3. To enable Polling feature:
Under In Meeting (Basic) section, toggle Polling to active.
4. To enable Breakout sessions feature:
Under In Meeting (Advanced) section, toggle Breakout room to active.
To enable pre-assigning for zoom users, check Allow host to assign participants to breakout rooms when scheduling.
5. Optional but useful best practice set up from Zoom to prevent Zoom Bombing (hackers hijacking your meeting).

Creating the event in Zoom

1. Login to zoom via the web interface.
2. Click schedule a meeting on the top right navigation.
3. Fill in the Topic in the recommended format (this will be in the subject line for confirmation emails):

For One-time (non-recurring) event: Event title - DD Month, 2020 - Local time (e.g: Deploy AWS Lambda applications with ease - April 9, 2020, 9 am PT).

For Recurring event: Event title (e.g: Deploy AWS Lambda applications with ease).

4. Fill in the Description with a description of what the event is about. Note: this will be in the body for confirmation emails and landing page (if you set registration as required in step 9).
5. Fill in When with the event date and time.
6. Fill in Duration with the duration of the event.
7. Select the Timezone where the event will be held.
8. (Optional) If your event is going to be recurring, click recurring meetings and set up Recurrence and specify the End date of the recurring event.
9. For events where you will need to track registration and attendance, make sure you check the Registration field as Required. Doing this will automatically trigger a landing page to be created for your event.
10. (Optional) If you set the event as recurring in step 8, specify which registration process will work best for your target audience:
 - Attendees register once and can attend any of the occurrences - This will automatically register the registrants to ALL sessions upon form fill.
 - Attendees need to register for each occurrence to attend - This will allow registrants to only select ONE session per form fill.
 - Attendees register once and can choose one or more occurrences to attend - Registrants are presented with checkboxes to select which session they want to attend on the landing page prior to filling out the form.
11. (Optional) You can make the meeting private/ensure only those that registered attend by checking the Require a meeting password option and including the auto generated password in your invite (for events not requiring registration)/confirmation (for events requiring registration). This is useful so only the people you intend to invite attends the meeting and can help prevent hackers from taking over your meeting (Zoom Bombing).
12. Specify if you want the Host and/or Participant's video on or off.
13. Make sure audio is set to BOTH telephone and computer audio.
14. For meeting options configurations:
15. Check Enable join before host option if you want to allow participants to join before the host(s).
16. (Recommended) Check Mute participants upon entry to prevent disruption whenever someone joins mid-presentation.
17. (Recommended) Check the Enable waiting room option if you'd like to choose some participants to join prior to others . This is useful to allow a final dry run between host and the other presenters right before the event. Activating this is recommended by zoom to prevent Zoom Bombing.
18. Check Only authenticated users can join to restrict meeting only to participants that have logged in to zoom using their email address. Activating this is recommended by zoom to prevent Zoom Bombing but may impact registration due to its restrictive nature (forcing registrants to sign up for zoom before completing registration).
19. Check the Breakout room pre-assign if you'd like to pre-assign participants to the breakout sessions prior to the meeting. Please note that only participants/hosts with @gitlab email domain can be pre-assigned via the web interface. Participants with non @gitlab email addresses need to have zoom installed in their machine to be pre-assigned, and pre-assigning for this scenario can only be done through a CSV upload.

20. (Recommended except for meetings that are private in nature) Check Record the meeting automatically either on your local computer or in the cloud to automatically record the meeting when the host join.
21. Add alternate host as needed (need to be a GitLab employee). For presenters that are not a GitLab employee, ask them to register as a regular participant and grant them co-host access during the meeting.
22. SAVE your meeting.
23. Once your event is created, scroll to the bottom of your event, click the registration (if it was selected as required), click edit, under other options, check the box for close registration after event date.
24. :star2: (Optional) Pro tip: If you'd like to save the same set up for a future meeting Save your meeting as a Meeting template.

[Recommended for meetings requiring registration] Customize your registration form

1. In the registration tab for the meeting that you have set up, click edit beside registration options.
2. Click the Questions Tab and select Job Title and Country (Do not select Number of Employees as we will add that as a custom field in the next step.
3. Click Custom Questions tab and click New Question button to add Number of Employees custom field.
 - For Type select Single answer
 - Make sure Required is checked
 - In the Question field, fill in Number of Employees
 - In the answer field, fill in 1-99, 100-499, 500-1,999, 2,000-9,999, 10,000+
 - Click create
4. Click Custom Questions tab and click New Question button to add email opt-in language
 - For Type select Single answer
 - In the Question field, follow this example.
 - In the answer field, fill in Yes or No
 - Click create
5. (Optional) Click New Question and follow the steps outlined previously to add more custom fields. Selecting type Short Answer vs. Single Answer will allow registrants to enter a free text response vs. selecting from a picklist.
6. Click Save All.

[Recommended for meetings requiring registration] Customize your confirmation email & trigger a reminder email

1. In the meeting that you have set up, click the Email settings tab.
2. Beside the Confirmation Email to Registrants section choose the email language (if not the default of English) , click edit and modify the editable Subject, Body, and Footer sections.
Note: Zoom emails are text only and the layout is not editable.
3. (Recommended) Reminder emails have to be triggered manually for this set up. ±1 or 2 hour prior to the event, change the subject line of the Confirmation email to [Meeting Topic] Confirmation/Reminder, then click over to the Registration tab. In the Registration tab click View , select all the registrants on that page by selecting the top left checkbox and click Resend Confirmation Email. If the registration list spans across multiple pages you must repeat this for each page.
4. NOTE: We do not send Marketo reminder emails for self-service with promotion events since

the Zoom registration is not integrated and the registered attendees are not pulled into Marketo until your lead list is uploaded after the event.

[Optional for meetings requiring registration] Customize your landing page and email headers

1. In the meeting that you have set up, click the Branding tab.
2. Upload your custom image to the Banner section or use the basic GitLab image. Image requirements are as follows:
 - GIF, JPG/JPEG or 24-bit PNG
 - The suggested dimensions: 640px by 200px
 - The maximum dimensions: 1280px by 400px

[Optional] Add a poll to your meeting

1. Make sure you have enabled Polling in your account settings.
2. In the meeting that you have set up, click the Poll tab.
3. Click Add.
4. Put a descriptive title for the Poll.
5. Specify whether you want to allow the attendees to remain anonymous when submitting a poll.
6. Enter your poll question.
7. Specify if the answer will be a Single choice or Multiple Choice (allows for participant to select more than one answer).
8. Save.

During the event

[Optional] Starting Livestream for your event

1. Make sure you have enabled Livestream in your account settings.
2. During the virtual event, follow this step by step instructions to start LIVESTREAM.

[Optional] Playing pre-recorded video during the meeting

1. Make sure you have your video pulled up in a video player (quicktime/youtube) on your computer
2. On your Zoom panel, click share screen and select the video you want to share
3. At the bottom left of the pop up screen, select Share computer sound and Optimize Screen Share for Video Clip. Click Share.
4. Play the video.

Note: Although we can leverage this functionality for a semi-live virtual event, the audience will be able to tell that you are playing a video for them so it is good to share that information (be transparent) with them upfront.

Post event

[Optional] Downloading the registration list

1. Login to zoom via the web interface.
2. On the left navigation, click Reports.

3. Click Meeting.
4. For Report Type, select Registration Report.
5. For Search by time range input the date of your event, click Search.
6. Select your event and click Generate
7. For Registration Type select All Registrants, click Continue.
8. Once the report finished processing, click Download.

[Optional] Downloading the attendees list.

1. Login to zoom via the web interface.
2. On the left navigation, click Reports.
3. Click Usage.
4. For From input the date of your event, click Search.
5. Find your event, scroll right to the Participants column, click the number of participants in blue fonts, select Show unique users checkbox on the top left of the pop up page, click Export.

Optional] Upload recording to the [appropriate youtube channel.

Instructions on how to upload.

[Optional] Gating self-service virtual event recording

To maximize the return on time investment spent for creating gated webcasts landing pages, we will only gate post event recording for a self-service virtual event if it garners a min of 550 youtube views within the first 7 days.

If your video meets the gating criteria, please open the following issues for the marketing campaigns team (and provide screenshot of views for clarity):

Please note: requester is responsible for submitting issue details in all issue templates below in order to triage.

] [Pathfactory Upload Issue

] [Pathfactory Track Issue

] [Marketo Landing Page & Automation Issue

Note: The 550 min threshold is based on the avg of top 10 videos on GitLab branded youtube channel between 8/11/20 - 8/18/20.

Results

Responses by month

This SFDC report tracks responses produced by self-service virtual events in real time. We will link full funnel reporting with opportunities and pipeline data as they become available in Sisense.

Goldcast Event Types {Goldcast-types}

<!-- DO NOT CHANGE THIS ANCHOR -->

Live Video (Video and audio with screen share): traditional live webinar with speakers and Q&A.

- Pre-event registration takes place

- The event automatically converts to on-demand upon completion

Goldcast Live Audio (no Screen Share): multiple presenters can present a live webcast using the telephone. Presenters will dial into the Goldcast presenter phone bridge for the live event. Live screen share is not available with this event type.

- Pre-event registration takes place

- The event automatically converts to on-demand upon completion

Simu-live (written Q&A): choose this option if you wish to pre-record entire event and deliver it to a live audience at a designated date and time. Note: Simu-lives must be created in advance. No changes can be made two hours before the scheduled live time.

- Pre-event registration takes place

- At time of webcast, a recording is played.

You can interact with the live audience through written Q&A during playback of the pre-recorded presentation.

The event will end immediately after the pre-recorded playback has ended, therefore it is best to do a mock Q&A and inform attendees that any questions will be individually addressed after the webinar, allowing for seamless follow up by SDRs.

- The event automatically converts to on-demand upon completion

Simu-live (with rollover to live Q&A): also known as Sim-2-live, provides presenters the opportunity to address comments and questions verbally with a live audience once the pre-recorded presentation is done playing. For this event type select, Simu-live then enable the Rollover to Video and Audio toggle under Main Details.

- Pre-event registration takes place

- At time of webcast, a recording is played.

You can interact with the live audience through written Q&A during playback of the pre-recorded presentation and at the end of the webcast addressing questions live.

- The event automatically converts to on-demand upon completion.

Recurring Simu-live: this webcast type provides an efficient option to create one event and

run it multiple times for recurring presentations such as daily demos, weekly campaign presentations, etc. Attendees can choose the date they wish to attend. All registrant and attendee data will roll up into a single report.

On Demand: essentially an on-demand webcast, no interaction with a live audience.

No pre-registration

LIVE webcast registration and tracking - Goldcast

Organizing Goldcast webcast epics and issues {Goldcast-epics-issues}

<!-- DO NOT CHANGE THIS ANCHOR -->

Confirm Date: The webcast idea issue (date request issue) must be complete and confirmed before creation of the epic, issues, and workback.

Campaign Webcast Epic: campaign manager creates webcast epic (using code below)

Related Issues: campaign manager creates the issues as designated in the GANTT sheet, and associates to the campaign webcast epic

Technical Demo Series After the epic for a technical demo is created, add it to the appropriate parent epic. This allows us to see all of the related technical demos at a glance.

Parent epics can be found here and are denoted with Top Level Epic (ex: [FY24 Tech Demo Series] Automated Software Delivery)

View the webcast workback timeline GANTT here

Goldcast Webcast Setup {Goldcast-setup}

<!-- DO NOT CHANGE THIS ANCHOR -->

Step 1: Configure Goldcast {configure-Goldcast}

<!-- DO NOT CHANGE THIS ANCHOR -->

Note: Goldcast Elite license is used for all field marketing and campaigns internally hosted webcasts. Therefore, when a webcast is requested please confirm there is not going to be a conflict between the pre-scheduled sessions - both live and dry-run - using that license by checking the webcast gcal. Schedule no less than 30min between sessions (before & after) so there is less chance of conflict and allows for a buffer.

Setting-up a SEMU-live Goldcast Webcast

<iframe width="560" height="315" src="https://www.youtube.com/embed/TPxiPsTNMzA" title="YouTube video player" frameborder="0" allow="accelerometer; autoplay; clipboard-write; encrypted-media; gyroscope; picture-in-picture" allowfullscreen></iframe>

Setting-up a LIVE Goldcast Webcast

<iframe width="560" height="315" src="https://www.youtube.com/embed/oJIFE9IKWpg" title="YouTube video player" frameborder="0" allow="accelerometer; autoplay; clipboard-write; encrypted-media; gyroscope; picture-in-picture" allowfullscreen></iframe>

1. LOGIN: log into Goldcast Webcast Portal.
2. TEMPLATE: search for a template based on the event type. In the right column under "Actions" select the copy icon to clone a template. When cloning an event, all media files will transfer to the new webcast.

Live Event:

Template (A) - Standard event template - Trial Banner

Template (B) - Standard event template - Trial Tanuki

Simu-Live Event:

Template (A) - XL Media Player (no slide widget) - Trial Banner

Template (B) - XL Media Player (no slide widget) - Trial Tanuki

Note: all the templates are tagged with Template and that after cloning the cloned program should have that tag removed

3. KEY FIELDS: update new program fields: Title, Date, Time, Duration, Timezone. Change event type if needed to Simu-live. Select "Create Event" to save and generate Event ID and Webcast URLs.

4. TIMEZONE: select a drop-down timezone option with city/country instead of a generic GMT+ time zone. Generic time zones do not update with time changes, such as Daylight Savings Time.

5. MEDIA FILE: Replace Media File with new event PPT in the Overview tab, or by following Presenter's URL and logging in as Producer. You can access this by clicking on the menu in the menu icon in the top right corner and choosing Setup).

IMPORTANT! For the Semu-live webcast you'll need to upload and publish your mp4 recording no later than 2 hours before the scheduled start. Please login as producer using the Presenter's URL, click on the Setup at the bottom on the screen and choose Presenter Media, under the Media tab. Upload your video, go back to previous screen and click on Publish button.

6. PANELISTS: panelists and presenters will share Presenters Link (can be found in the Event URLs list). By following this link they'll need to submit their name and email address and login as Presenters into Goldcast console.

7. Optional EMAILS: If applicable, edit the confirmation and reminder emails under the email setting tab.

Make sure the registration confirmation email and the reminder emails are set to send from Goldcast.

8. Optional POLLING: If applicable, add polling questions to the webcast by following the instructions in the video below. Note there is a character limit on poll answer options of 40 characters.

9. ATTENDEE & PRESENTER MAX: All live events and experiences are capped by default at 2,500 live attendees and max of 10 presenters.

Adding poll questions to a webcast

```
<iframe width="560" height="315" src="https://www.youtube.com/embed/Dlo88jv88tA"
title="YouTube video player" frameborder="0" allow="accelerometer; autoplay; clipboard-write;
encrypted-media; gyroscope; picture-in-picture" allowfullscreen></iframe>
```

10. ADDING WEBCAST SURVEY: In the tools manager located in the Goldcast Console choose Take Survey and add it to your event console. You can then set it to appear as post event survey, during the webcast, or both in the Configuration settings tab.

Note. Although there is no standard survey template built into our templates currently, you can copy/paste from this standard post-webcast survey we are using for tech demos.

Step 2: Set up the webcast in Marketo/SFDC and connect to Goldcast {Goldcast-mkto-setup}

<!-- DO NOT CHANGE THIS ANCHOR -->

Create program in Marketo - Goldcast {Goldcast-marketo-program}

<!-- DO NOT CHANGE THIS ANCHOR -->

1. Create the webcast program in Marketo by navigating to the Templates - Goldcast and select between webcast and workshop.
1. Right-click the appropriate template, and select "clone"
1. Next to "Clone To", choose A campaign folder.
1. (non-technical demos) For "Name", add the MKTO program name (this is also the SFDC campaign name). Use the following format: YYYYMMDD{Webcast Title}[Region - only if applicable]. For example, 20170418MovingToGit.
1. (technical demos) For "Name", add the MKTO program name (this is also the SFDC campaign name). Use the following format: YYYYMMDD{gtmcampaign}{Webcast Title}techdemo[Region - only if applicable]. For example, 20220324devopsgtmBuildingMLAppstechdemoAPAC.
1. Under "Folder", choose the appropriate quarter within the GitLab-Hosted Campaign Webcasts or GitLab-Hosted Workshops folders.
1. Click "Create" (note - you will create the SFDC campaign from Marketo in the next step!)

Create campaign in Salesforce - Goldcast {Goldcast-sfdc-campaign}

<!-- DO NOT CHANGE THIS ANCHOR -->

1. In the Marketo program Summary view, you will see Salesforce Campaign Sync: with a link that says "not set".
1. Click on "not set"
1. Where it says "None", click the drop-down and choose "Create New"
1. The Marketo program name will auto-fill for the name (for consistency across both systems)
1. In the "Description", add a link to the epic
1. Click "Save"
1. NOW you will navigate to the Campaign in SFDC to do a quick review - Shortcut to Campaigns
1. Click into the SFDC campaign
1. Change the campaign owner to the webcast DRI
1. Change the status to in progress
1. Edit the Budgeted Cost (required) to cost of webcast, or "1" if there is no cost associated
1. Click save

Connecting Goldcast Web Events to Marketo Programs {Goldcast-marketo-connect}

<!-- DO NOT CHANGE THIS ANCHOR -->

After completing the creation of an Goldcast web event, the next step is to connect the webinar to Marketo. Unlike other tools, the Goldcast room and Marketo program do not need to be connected via the Event Partner field on the Marketo program. All data transfer is done via the Event ID and smart campaigns.

1. From the previous event set up, please be sure to have the Event ID and Audience URL handy.
1. Navigate to the Marketo template folder Templates - Goldcast. Located in this folder are program templates Designed with triggers to work with Goldcast's Marketo custom object. Make a copy of the needed program type template in the appropriate folder.
1. Next step will be to connect the Marketo program to the Goldcast webcast. In the Smart Campaigns folder of the newly cloned program, add the Goldcast Event ID to the following smart campaigns on the Added to Goldcast Attendee trigger filter:

- 04 Goldcast Processing - Attended
- 04 Goldcast Processing - Follow Up Requested
- 04 Goldcast Processing - No Show
- 04 Goldcast Processing - On Demand

1. Next activate the following smart trigger campaigns:

- 01 Registration Flow (choose single or multi)
- 00 Interesting Moments
- 01a Registration flow (single timeslot) or 01b Registration Flow (Multi-timeslot)
- 04 Goldcast Processing - Attended
- 04 Goldcast Processing - Follow Up Requested
- 04 Goldcast Processing - On Demand. Only activate this smart campaign if it is

appropriate for the webinar, such as in the event the webinar will be left available for on-demand viewing.

04 Goldcast Processing - No Show. No Show will not be activated as a trigger, but as a batch campaign scheduled to run 6 hours after the event has completed.

1. Before continuing on, check if it seems appropriate to set any of the local assets to expire. Appropriate items to set an expiration would be, for example, smart campaigns like the 04 Goldcast Processing - Attended campaign, which is no longer needed after the event ends.

1. Update the program tokens as needed within the program. All email assets and landing pages are token dependent.

1. Important tokens to review:

{{my.GoldcastURL}}: This token needs to be updated as upon registration the registrant is sent an automatic email with the Audience URL attached to this token.

{{my.key}}: This token needs to have the correct alphanumerical value taken from the Audience URL for the registration confirmation email to trigger.

{{my.webcastDate}}, {{my.webcastTitle}} etc. are standard to update.

{{my.Goldcastpassword}}: Update this with the webinar password. If no password was set up in the console, completely remove token from registration confirmation email as it is not necessary.

1. Please note, the Registration Flow smart campaigns will send out the Audience URL for the event and have tokens arranged to share event passwords.

1. Operational emails such as Registration Confirmation and Reminder emails will be sent from Goldcast, make sure these are activated in the Goldcast program (all template already have them activated).

Step 3.A: Update all other standard Marketo Tokens {Goldcast-marketo-tokens}

<!-- DO NOT CHANGE THIS ANCHOR -->

{{my.bullet1}}-{{my.bullet4}}- bullet copy with approved character limits

{{my.emailConfirmationButtonCopy}} - copy for the email confirmation (when on demand), leave as Watch now

{{my.formButtonCopy}} - copy for the form button, leave as Register now (when switching to on-demand, this will change to Watch now)

{{my.formHeader}} - copy for header of form, leave as Save your spot today! (when switching to on-demand, this will change to View the webcast today!)

{{my.introParagraph}} - intro paragraph to be used in landing page and nurture email, with approved character limits

{{my.ondemandUrl}} - skip updating in initial registration page setup (update during on-demand switch), Pathfactory link WITHOUT the https:// NOR the email tracking part (lbemail=)

Example of correct link to include: learn.gitlab.com/gartner-voc-aro/gartner-voc-aro - the code in the Marketo template assets will create the URL <https://learn.gitlab.com/gartner-voc-aro/gartner-voc-aro?lbemail={{lead.email address}}&{{my.utm}}>

Note that both parts of this url include custom URL slugs which should be incorporated into all pathfactory links for simplicity of tracking parameters

{{my.socialImage}} - image that would be presented in social, slack, etc. preview when the URL is shared, this image is provided by design/social, leave the default unless presented with webcast specific image.

{{my.speaker1Company}} token with speaker 1's company name

{{my.speaker1ImageURL}} token with speaker 1's image url in marketo design studio

{{my.speaker1JobTitle}} token with speaker 1's job title

{{my.speaker1Name}} token with speaker 1's full name

REPEAT this for speaker 2 and 3. If there are more or less speakers, follow the instructions below at the end of the general webcast setup.

{{my.utm}} - UTM to track traffic to the proper campaign in reporting dashboards (append integrated campaign utm or program name, if webcast is not part of an integrated campaign, to the utm campaign token)

{{my.valueStatement}} token with the short value statement on what the viewer gains from the webcast, this ties into the follow up emails and must meet the max/min requirements of the character limit checker

@@ -883,66 +923,27 @@ PUBLISHING

{{my.webcastTime}} token with the webcast time in local timezone/UTC timezone.

{{my.webcastTitle}} token with the webcast title.

Step 3.B: Create the landing page {Goldcast-marketo-lp}

<!-- DO NOT CHANGE THIS ANCHOR -->

When you cloned the webcast template, and updated the Marketo tokens, your landing page is almost ready to go!

Under "Assets" right-click on Registration Page and hover over URL Tools > Edit URL Settings

Use the format webcast-topic (or webcast-topic-region if region is relevant) - ex. webcast-mastering-cicd or webcast-mastering-cicd-italian

Complete the same steps for the Thank You Page

Use the format webcast-topic-thank-you (or webcast-topic-region-thank-you if region is relevant) - ex. webcast-mastering-cicd-thank-you or webcast-mastering-cicd-italian-thank-you

Schedule your Goldcast practice session (Dry Run) {Goldcast-practice-session}

<!-- DO NOT CHANGE THIS ANCHOR -->

Once an event is created, the presenter link becomes active until the live event. It's unnecessary to schedule an additional dry run event.

Share the Presenter URL (which can be found in your Event URLs list in Goldcast after event is created) to dry run participants.

Roles:

- Producers have the ability to take the event live and have additional admin functionalities such as media player configuration and building poll questions.

- Presenters have limited admin abilities and can all advance slides during the presentation. If screen sharing is part of the presentation, a driver is prompted the first

time a user shares their screen. It's best to test this function in advance, especially for users who are required to VPN into their device. Some VPNs will limit this functionality.

- Q&A: this role is only available for simu-live events; simu-live events will auto-start at the webcast start time, speakers/SMEs can use this role to answer questions via chat.

Monitoring Simu-live Webcasts {monitoring-simu-live-webcasts}

<!-- DO NOT CHANGE THIS ANCHOR -->

Simu-live webcasts are entirely pre-recorded and will play to a live audience at your chosen date and time. While the presentation plays to the live audience, you may have Q&A moderators log in to monitor the event and answer questions in real-time via text using the Q&A tool. Up to 12 people can log in at a time as Q&A Moderators.

Moderators will use the Present URL to log in and have full access to the Q&A, Team Chat, and Attendee Chat and will be able to listen and watch the webcast in the live interface.

The webcast will start automatically at the chosen start time. A Simu-Live in Progress message will appear in the top corner of the live interface for your Q&A moderators so they know when the webcast has begun.

There is no dial-in number or phone bridge for the Q&A moderators while the webinar is live, but they can communicate using the Team Chat. Team Chat messages are not visible to the audience but are captured in the webinar reports.

The webcast will end automatically after the recorded portion has played out. The event archive will be available a few hours later for your audience to watch on-demand.

If you wish for the audience console to remain open after the presentation is complete to allow attendees additional time to submit questions or download certificates, consider extending the event by recording extra silence on the last slide so the console will remain open.

Note: The Block Attendee option in the Attendee List tool WILL NOT be available during standard Simu-live events.

Monitoring Sim-2-Live Webcasts {monitoring-sim-2-live-webcasts}

<!-- DO NOT CHANGE THIS ANCHOR -->

Sim-2-live webcasts are Simu-live webcasts with the Rollover to Live box checked, providing live time at the end of the recording to address questions. Setup and recording will be the same for both, the differences come when the webcast is playing out live to the audience.

Sim-2-live webcasts also start automatically at the chosen start time. And after the pre-recorded portion of the webcast plays out, the system will automatically switch to a live webcast.

While the pre-recorded portion plays to the live audience, Q&A will be text only, but your presenters can address questions from the audience both verbally and via text once the rollover to live occurs.

Your presenting team will be able to log in for the webcast starting 45 minutes before the set start time, using the Present URL.

Up to 10 live presenters (a mix of Producers and Presenter roles) can log in at a time.

Note: Every Sim-2-live event MUST have at least one presentation team member login as a Producer to stop the broadcast after the live portion is complete.

Sim-2-Live Webcasts - roles {sim-2-live-webcasts-roles}

All three roles (listed below) will be available for Sim-2-live webcasts:

Roles:

- Producer. Producers have all the same functionality presenters do, plus the ability to change the webcam layouts in the Media Player and stop the broadcast.
- Presenter. Can speak to the audience during the rollover to the live portion, use the Q&A, Team Chat, Attendee Chat, Whiteboarding Tools, Highlight/Center Engagement Tools, Screen Share, and Pulse Check.
- Q&A Moderator. Can use the Q&A, Team Chat, and Attendee Chat.

Goldcast Webcast Invitations {0n24-email-invitations}

<!-- DO NOT CHANGE THIS ANCHOR -->

1. Update emails Invitation 1 - 2 weeks prior, Invitation 2 - 1 week prior , and if needed Invitation 3 - Day before with relevant copies related to the webcast.

Note: We normally use the same copy for all 3 emails and simply tweak the templated subject lines to sound more like "Reminders".

2. Approve copy and send samples to the requester, and the presenter (if different from requester).

3. Go to the List folder and edit the Target List smart list and input the names of past similar programs and applicable program statuses to the Member of program filter. This will make sure people that have attended programs with similar topics in the past are included in the invite.

Note: We may uplevel this logic to include webcast invitations within active nurture programs to limit the overhead for invitation emails.

Add the webcast to the /events/ and /resources/ pages {Goldcast-webpage-listings}

<!-- DO NOT CHANGE THIS ANCHOR -->

To add the webcast to the /events/ page follow this step by step guide.

To add the webcast to the /resources/ page follow this step by step guide.

Goldcast Webcast Testings / QA {Goldcast-webcast-testing}

<!-- DO NOT CHANGE THIS ANCHOR -->

Submit a test lead using your GitLab email on the LIVE landing page to make sure the registration is tracked appropriately in the Marketo program and you get a confirmation email from Goldcast.

Doing a QA for your Goldcast Webcast Registration Page

<iframe width="560" height="315" src="https://www.youtube.com/embed/3k4FUe6LXw" title="YouTube video player" frameborder="0" allow="accelerometer; autoplay; clipboard-write; encrypted-media; gyroscope; picture-in-picture" allowfullscreen></iframe>

Switching Goldcast Webcasts to On-Demand {Goldcast-ondemand-switch}

<!-- DO NOT CHANGE THIS ANCHOR -->

Goldcast will automatically convert the video to on-demand in the Goldcast platform. The steps below allow us to further leverage the webcast in Pathfactory. If you are going to drive to Goldcast directly for On-demand viewing (such as for large corporate events), skip to the instructions below starting at Using Goldcast for On-Demand Viewing.

1. Vimeo: vimeo provides an ads free user experience, therefore should be primary video platform used for on-demand recording uploads. To request an upload, open an issue with Digital Production Team.

Instructions on uploading Vimeo videos to Pathfactory can be found [here](#)

1. YouTube: upload the recording to our main GitLab channel:

Fill in the title with the webcast title matching the Marketo token ({{my.webcastTitle}})

Fill in the description with the short description matching the Marketo tokens ({{my.contentDescription}})

Make sure the video is set as Unlisted so only people with the URL to the video can find it

1. YouTube: Once the recording has been uploaded, copy the video link on the right

1. Pathfactory: Login to PathFactory and add the YouTube or Vimeo link to Pathfactory as new content by following the instructions outlined [here](#).

Converting the webcast to an On-Demand gated asset - Goldcast {zoom-on-demand-switch}

<!-- DO NOT CHANGE THIS ANCHOR -->

· NEW! In Marketo:

1. Vimeo: Upload the recording to Vimeo

Fill in the title with the webcast title matching the Marketo token ({{my.webcastTitle}})

Fill in the description with the short description matching the Marketo tokens ({{my.contentDescription}})

1. Vimeo: Once the recording has been uploaded, copy the video embed link in Vimeo. Instructions on adjusting the privacy settings of your video to embed in specific domains like Pathfactory can be found [here](#)

1. Pathfactory: Login to PathFactory and add the copied Vimeo link to Pathfactory as new content by following the instructions outlined [here](#).

1. Marketo: Navigate to the webcast program and update the following My Tokens

Update the formButtonCopy token to be Watch now

Update the formHeaderCopy token to be Watch the webcast today

Update the ondemandUrl token with the Pathfactory link

This URL should not contain https:// (it should begin with learn.gitlab.com/)

This URL should not contain any ? question marks (if it does, you did not update the custom URL slug) - WATCH THE EXPLAINER VIDEO

This URL should not contain the Pathfactory tracking parameter lbemail= (this is already incorporated into all assets of the Marketo program template)

1. Marketo: In the Marketo program, right click on the "Registration Page" and choose Edit Draft

On the right side rail, under "Elements" right click on the "Form Custom" element and

choose Edit

The form should currently be set to the Webcast form (FORM 1592: webcast or relevant localized form) - you will change this to be FORM 2076: On-demand Webcast

Change the "Follow-up Type" to be Landing Page

Change the "Follow-up Page" to be the thank you page in your program (begin to type in the Marketo program name and select your thank you page)

1. Marketo: Send sample of the "On-demand Autoresponder" email to your inbox

Right click on the email and choose Send Sample

Expand advanced settings, under "Sample person for tokens" begin to type in your test lead email address. This will pull in the email address to review that the tracking is working properly in your email.

For "Send To:" choose your email address (or type next to the asterisk)

1. Your Inbox: Review the sample email in your inbox

Check all email copy

Click all links and confirm they are not broken

Click the Watch now CTA and confirm that your email address is in the URL displayed (this happens quickly and disappears in the URL, so watch carefully!)

:thumbs-up: If all of the above apply, move on to activating the smart campaigns!

1. Marketo: Update the smart campaigns (activate and deactivate)

Under "Schedule" on the 01a Registration Flow (single timeslot) smart campaign, click Deactivate once the webcast has completed.

On the 04 Goldcast Processing - On Demand - Goldcast smart campaign - Smart List, add your Goldcast eventid. Flow: it's all set! For your first few, feel free to review the flows (but they are all using tokens, so it should be ready to go automatically). Go to schedule and click Activate.

On the 04 Goldcast Processing - On Demand - Pathfactory smart campaign - Smart List:

The second trigger for Fills out Form should be set to Form Name is "Form 2074: PF General". In Referrer contains, enter the Pathfactory asset name slug. For example guide-to-devops.

The third trigger for Fills out Form should be set to Form Name is "Pathfactory Webhook". In Referrer contains, enter the Pathfactory asset name slug. For example guide-to-devops.

Filter 1 - Filled Out Form should already be set properly. This will be Form Name is FORM 2076: On-demand Webcast. Web Page is (the name of your landing page).

Filter 2 - Filled Out Form should be set to Form Name is "Form 2074: PF General". In Referrer contains, enter the Pathfactory asset name slug. For example guide-to-devops.

Filter 3 - Filled out Form should be set to Form Name is "Pathfactory Webhook". In Referrer contains, enter the Pathfactory asset name slug. For example guide-to-devops. Date of Activity should already be set to in the past 1 hour.

Filter 4 - Pathfactory Engagement Time greater than 600 is set as the default. 600 is the Pathfactory view threshold for Webcasts.

Advanced filters will be set to 1 or 2 or (3 and 4)

Flow: it's all set! For your first few, feel free to review the flows (but they are all using tokens, so it should be ready to go automatically)

Under "Schedule" on the 04 Goldcast Processing - On Demand - Pathfactory smart campaign,

click Activate.

Using Goldcast for On-Demand Viewing - Switching to On-Demand {Goldcast-using-Goldcast-on-demand-switch}

<!-- DO NOT CHANGE THIS ANCHOR -->

In most cases, the landing pages for these events are managed by DEX. These instructions assume you are using the same form and the LP is managed by DEX, not in Marketo.

1. Marketo: Navigate to the webcast program and update the following My Tokens

Update the ondemandUrl token with the Goldcast audience URL

This URL should not contain https://

This URL should not contain any ? question marks (if it does, you did not update the custom URL slug)

1. Marketo: Modify the on-demand autoresponder email

Confirm that the URL to view the on-demand webcast is https://{my.ondemandUrl}?{my.utm}

Make any changes to the content that you need.

Since you are driving to Goldcast, you can use language such as "If you are prompted for an email address, please enter: {{lead.Email Address:default=No email found, please re-register using a valid email address}}". This will provide the user with a quick reference of the email address they used when registering.

Update the text version of the email. Then Approve and Close.

Right click on the email and choose Send Sample

Expand advanced settings, under "Sample person for tokens" begin to type in your test lead email address. This will pull in the email address to review that the tracking is working properly in your email.

For "Send To:" choose your email address (or type next to the asterisk)

1. Your Inbox: Review the sample email in your inbox

Check all email copy

Click all links and confirm they are not broken

Click the Watch now CTA and view in a private browser to confirm the utms and links work.

:thumbs-up: If all of the above apply, move on to activating the smart campaigns!

1. Marketo: Update the smart campaigns (activate and deactivate)

Clone the 01a Registration Flow (single timeslot) campaign to a new smart campaign called 04a On-Demand Registration Processing

There will be no change to the Smart List if you are using the form DEX set up on the page originally. If the form is changing, you'll need to update the smart campaign.

On the Smart List: Add a filter for Member of Program is false. Program is name of the program you are working on, Program status is Webcast > Attended. This means that the person needs to fill out the registration form and not all ready be a member of the program with the status of Attended.

On the Flow: Change Step 1 to Change Program Status - Program is name of the program you

are working on New status: Webcast > Attended On-demand

On Schedule: Select Activate. Immediately do the next step.

Under "Schedule" on the 01a Registration Flow (single timeslot) smart campaign, click Deactivate.

On the 04 Goldcast Processing - On Dem
