

and - Goldcast smart campaign - Smart List, add your Goldcast eventid. Flow: it's all set! For your first few, feel free to review the flows (but they are all using tokens, so it should be ready to go automatically). Go to schedule and click Activate.

#### Rescheduling an Goldcast webcast {Goldcast-reschedule}

<!-- DO NOT CHANGE THIS ANCHOR -->

In the event you need to change the date of your webcast, please follow the steps outlined below.

1. Update the date/time of the webcast on the webcast calendar and resend invites to all presenters / panelists.
1. Update the webcast epic so the new date is reflected on the title.
1. Leave a comment on the epic stating the event has been rescheduled and tag all internal panelists and hosts.
1. Update issue due dates based on the new timeline and communicate changes to relevant team members.
1. Update the events page with the new date and time.
1. Update the date in Goldcast

The system will not automatically update registrants, but you can use the Goldcast email notifications to reach out. Step-by-step instructions available on the Goldcast support page - You may need to be logged in to view this documentation.

#### Canceling an Goldcast Webcast {Goldcast-cancel}

<!-- DO NOT CHANGE THIS ANCHOR -->

The process is very similar to rescheduling.

1. Remove the webcast from the Goldcast calendar.
1. Add [Canceled] to the webcast epic title then close it out.
1. Leave a comment on the epic stating the event has been canceled and tag all internal panelists and hosts.
1. Add [Canceled] to the related issues and close them out.
1. If webcast is on the Events Page and Resources Page, remove in a new MR.
1. Go into Goldcast and add [Canceled] to the title since webinars cannot be deleted if they already have registrants.

The system will not automatically update registrants, but you can use the Goldcast email notifications to reach out. Pull up the Email Notifications for the event and set the send date and time.

Then click on the Preview/Edit option to edit the email text.

1. In the Marketo program, deactivate all active smart campaigns and append [Canceled] to the program name.
1. Go to Salesforce, append [Canceled] to the SFDC campaign name.

#### Live Webcasts - Goldcast

Go to Goldcast page for more information.

---

## ## SECTION: marketing/virtual-events/webcasts/webex.md

### LIVE webcast registration and tracking - WebEx

#### Step 1: Configure WebEx

Note: The WebEx license can only be used for a single session at a time. This license is used for all field-marketing-run internally hosted webcasts. Therefore, when a webcast is requested please confirm there is not going to be a conflict between the pre-scheduled sessions - both live and dry-run - using that license by checking the webcast gcal. Schedule no less than 30min between sessions (before & after) so there is less chance of conflict and allows for a buffer. IMPORTANT: You can only use the WebEx account that is not tied to the SSO to schedule webinars. The account to be used is wbxmeet7@gitlab.com, you can find the credentials in the 1Password vault GitLab Webex Marketing Vault

Note: Registration Confirmation and reminder emails will not be sent automatically from WebEx. Those will have to be sent by Marketo. The registration email is integrated in the 01 Registration Flow smart campaign. Reminder emails will have to be scheduled and the tokens edited depending on the timeframe desired to send reminders.

1. LOGIN: log into WebEx, go to the bottom left side and click on WebEx Events(classic). In the left navbar, click on Schedule an Event. It is imperative to use the WebEx classic interface otherwise the integration will not be successful

1. Event Name: add the topic as follows "Webcast title - Month DD, YYYY - HH:MM am/pm PT/HH:MM am/pm UTC" (for example: Debunking Serverless security myths - October 21, 2019 - 8:30 am PT/3:30 pm UTC).

1. DESCRIPTION: add a sentence to describe what the webcast is about at a high-level.

1. WHEN: add the webcast date and time.

1. DURATION: add how long the webcast will be PLUS 45 minutes. You must include an additional 45 minutes for the prep call before the event plus padding for running over, otherwise the Launchpoint integration will fail. Keep the start time as the actual time attendees should join, but increase the duration. For example, if your webcast is from 9:00am-10:00am PT, enter start time of 9:00am, but a duration of 1 hour and 45 minutes.

1. TIMEZONE: select the correct timezone for your webcast.

1. DO NOT change all the other settings that are prepopulated by the template.

1. ALTERNATIVE HOSTS: add webcast DRI, internal speaker(s), and Q&A resource as alternative hosts.

1. PANELISTS: add external GitLab speakers as panelists by following the video instructions below.

1. EMAILS: uncheck email confirmation emails and reminder emails because we will send those from Marketo.

#### Step 2: Set up the webcast in Marketo/SFDC, and integrate to WebEx

##### Create program in Marketo - WebEx

1. Create the webcast program in Marketo by navigating to either the Webcast program template.

1. Right-click the appropriate template, and select "clone"

1. Next to "Clone To", choose A campaign folder.

1. For "Name", add the MKTO program name (this is also the SFDC campaign name). Use the following format: YYYYMMDD{Webcast Title}[Region - only if applicable]. For example, 20170418MovingToGit.
1. Under "Folder", choose the appropriate quarter within the GitLab-Hosted Campaign Webcasts or GitLab-Hosted Workshops folders.
1. Click "Create" (note - you will create the SFDC campaign from Marketo in the next step!)

Connect the Marketo program to WebEx via launchpoint integration

1. In the Marketo program Summary view, you will see Event Partner: with a link that says "not set".
1. Click on "not set"
1. In the Event Partner drop down, select WebEx and in the Login drop down, select WebEx API.
1. In the Event drop-down, select the name of the WebEx webcast you set up in Step 1: Configure WebEx

Create campaign in Salesforce - WebEx

1. In the Marketo program Summary view, you will see Salesforce Campaign Sync: with a link that says "not set".
1. Click on "not set"
1. Where it says "None", click the drop-down and choose "Create New"
1. The Marketo program name will auto-fill for the name (for consistency across both systems)
1. In the "Description", add a link to the epic
1. Click "Save"
1. NOW you will navigate to the Campaign in SFDC to do a quick review - Shortcut to Campaigns
1. Click into the SFDC campaign
1. Change the campaign owner to the webcast DRI
1. Change the status to in progress
1. Edit the Enable Bizible Touchpoints field to Include only "Responded" Campaign Members
1. Edit the Budgeted Cost (required) to cost of webcast, or "1" if there is no cost associated
1. Click save

Step 3.A: Update Marketo Tokens

Buckle up! There are a lot of tokens, but for good reason. This is an advanced practice and best practice within Marketo templates to increase efficiency and speed. Updating these at the top level of the program allows them to cascade through the landing page, emails, automation, and alerts creating a significantly more efficient process of launching new webcasts.

- {{my.bullet1}} - bullet copy with approved character limits
- {{my.bullet2}} - bullet copy with approved character limits
- {{my.bullet3}} - bullet copy with approved character limits
- {{my.bullet4}} - bullet copy with approved character limits
- {{my.emailConfirmationButtonCopy}} - copy for the email confirmation (when on demand), leave as Watch now
- {{my.formButtonCopy}} - copy for the form button, leave as Register now (when switching to on-demand, this will change to Watch now)
- {{my.formHeader}} - copy for header of form, leave as Save your spot today! (when switching to on-demand, this will change to View the webcast today!)

{{my.heroImage}} - image to display above landing page form (options in Marketo here)

{{my.introParagraph}} - intro paragraph to be used in landing page and nurture email, with approved character limits

{{my.mpm owner email address}} - not used in automation, but helpful to know who to go to about setup

{{my.ondemandUrl}} - skip updating in initial registration page setup (update during on-demand switch), Pathfactory link WITHOUT the https:// NOR the email tracking part (lbemail=)

Example of correct link to include: learn.gitlab.com/gartner-voc-aro/gartner-voc-aro - the code in the Marketo template assets will create the URL https://learn.gitlab.com/gartner-voc-aro/gartner-voc-aro?lbemail={{lead.email address}}&{{my.utm}}

Note that both parts of this url include custom URL slugs which should be incorporated into all pathfactory links for simplicity of tracking parameters

{{my.socialImage}} - image that would be presented in social, slack, etc. preview when the URL is shared, this image is provided by design/social, leave the default unless presented with webcast specific image.

{{my.speaker1Company}} token with speaker 1's company name

{{my.speaker1ImageURL}} token with speaker 1's image url in marketo design studio

{{my.speaker1JobTitle}} token with speaker 1's job title

{{my.speaker1Name}} token with speaker 1's full name

REPEAT this for speaker 2 and 3. If there are more or less speakers, follow the instructions below at the end of the general webcast setup.

{{my.utm}} - UTM to track traffic to the proper campaign in reporting dashboards (append integrated campaign utm or program name, if webcast is not part of an integrated campaign, to the utm campaign token)

{{my.valueStatement}} token with the short value statement on what the viewer gains from the webcast, this ties into the follow up emails and must meet the max/min requirements of the character limit checker

{{my.webcastDate}} - the webcast LIVE date.

{{my.webcastDescription}} - 2-3 sentences with approved character limits, this will show up in page previews on social and be used in YouTube and Pathfactory description.

{{my.webcastSubtitle}} token with subtitle for the webcast.

{{my.webcastTime}} token with the webcast time in local timezone/UTC timezone.

{{my.webcastTitle}} token with the webcast title.

{{my.registrationConfirmationButtonCopy}} token with the registration confirmation button message.

{{my.webcastReminder1}}: token with the time reminder value for the first reminder

{{my.webcastReminder2}}: token with the time reminder value for the second reminder

{{my.Add To Calendar}}: token for Add to Calendar open for ICS file. Double click on it and edit the time slot and description

### Step 3.B: Turn on smart campaigns in Marketo

Activate the 00 Interesting Moments campaign.

Activate the 01a Registration Flow (single timeslot) smart campaign.

### Step 3.C: Create the landing page

When you cloned the webcast template, and update the Marketo tokens, your landing page is almost ready to go!

Under "Assets" right-click on Registration Page and hover over URL Tools > Edit URL Settings

Use the format webcast-topic (or webcast-topic-region if region is relevant) - ex. webcast-mastering-cicd or webcast-mastering-cicd-italian

Complete the same steps for the Thank You Page

Use the format webcast-topic-thank-you (or webcast-topic-region-thank-you if region is relevant) - ex. webcast-mastering-cicd-thank-you or webcast-mastering-cicd-italian-thank-you

Adjusting number of speakers in Marketo landing page

### Less Speakers

The speaker module is controlled in the Marketo landing page module. The template is initially set up to support three speakers (note: this is supported in both the My Tokens and the landing page template). If there are less speakers, follow the instructions below:

1. Right click on the Registration Landing Page and click Edit Draft
2. Double click on the Speaker section
3. Click HTML on the toolbar
4. Remove the code below for each speaker you need to remove

html

```
<div><br /></div>
<ul>
<li>{{my.speaker3ImageURL}}</li>
<li>{{my.speaker3Name}}</li>
<li>{{my.speaker3JobTitle}}</li>
<li>{{my.speaker3Company}}</li>
</ul>
```

### Less Speakers

The speaker module is controlled in the Marketo landing page module. The template is initially set up to support three speakers (note: this is supported in both the My Tokens and the landing page template). If there are less speakers, follow the instructions below:

1. Right click on the Registration Landing Page and click Edit Draft
2. Double click on the Speaker section
3. Click HTML on the toolbar
4. Remove the code below for each speaker you need to remove

html

```
<div><br /></div>
<ul>
<li>{{my.speaker3ImageURL}}</li>
<li>{{my.speaker3Name}}</li>
<li>{{my.speaker3JobTitle}}</li>
<li>{{my.speaker3Company}}</li>
</ul>
```

If additional assistance is required, please comment in the marketingprograms slack for assistance if needed.

## Webcast invitation - WebEx

:exclamation: Note from @jgragnola: we are working on further templating these invitations so that copy changes are not needed and tokens take care of these emails. (issue)

1. Update emails invitation 1 - 2 weeks prior, invitation 2 - 1 week prior, and if needed invitation 3 - Day before with relevant copies related to the webcast. Note: We normally use the same copy for all 3 emails and simply tweaked the templated subject lines to sound more like "Reminders".
2. Update email Registration Confirmation, and if desired Reminder 1, and Reminder 3 with relevant copies related to the webcast. Note: We normally use the same copy for all 3 emails and simply tweaked the templated subject lines to sound more like "Reminders".
3. Approve copy and send samples to the requestor, and the presenter (if different from requestor).
4. Go to the List folder and edit the Target List smart list and input the names of past similar programs and applicable program statuses to the Member of program filter. This will make sure people that have attended programs with similar topics in the past are included in the invite.
5. Once you get approval on the sample email copy, schedule the email programs outlined in step 1.

Step 4: Add the webcast to the /events page

To add the webcast to the /events page follow this step by step guide.

Step 5: Test your set up

1. Submit a test lead using your GitLab email on the LIVE landing page to make sure the registration is tracked appropriately in the Marketo program and you get a confirmation email. Check and test the registration confirmation email. Do not forget to update the Add to calendar token and the email values for the Google calendar in the Registration Confirmation, Reminder 1 and Reminder 2.

---

## SECTION: people-group/360-feedback.md

## 360 Feedback

### Overview

360 feedback is a valuable component of our performance review and talent assessment process that gathers input from multiple perspectives to provide a well-rounded view of an employee's performance and development opportunities. This cross-functional feedback approach provides critical insights into strengths and improvement areas to support ongoing performance in role and career development.

### Why 360 Feedback Matters

360 feedback enriches the dialogue between managers and team members by:

- Providing comprehensive insights from peers, stakeholders, and direct reports who observe different aspects of performance
- Identifying blind spots that may not surface in regular one-on-one conversations or be clear through other feedback channels
- Supporting targeted development by highlighting specific strengths to leverage and areas for growth
- Creating more meaningful career conversations grounded in diverse perspectives
- Building self-awareness through feedback from various working relationships
- Uncovering hidden strengths that may not be visible in day-to-day manager interactions

### Is The 360 Process Right For Me?

A 360 can be a very helpful development tool, but it should not be a replacement for regular, ongoing feedback that team members receive throughout the year. There may be situations and points in team member development where a 360 can supplement development and individual growth plans, and times when development areas are clear and 360 feedback may not be needed.

Below are a few key points to think through when determining in which situations the 360 tool may or may not be useful:

- Development Oriented: The 360 process is meant to support the team member's development and to provide feedback supporting individual growth and development. 360s should not be used as performance management tools.
- Ongoing Feedback: Managers and team members should seek cross functional feedback throughout the year to inform performance discussions. A 360 should not serve as a replacement for asking stakeholders and peers how things are going.
- Focused Goals: 360 feedback is most useful when a team member is committed to working towards certain development goals, as the 360 can provide more specific feedback and focus towards those development goals, and also reveal some blind spots or hidden strengths.
- Single Data Point: It is important to remember that the 360 represents a single, anonymous point in time. While it can be helpful to supplement performance conversations, it should not be the core data point.
- Uncover Blind Spots: A 360 is best used when trying to uncover blind spots. If team members and their managers already have a good understanding of the growth areas, direct, transparent feedback is the most productive way to support continued growth and development.

### When 360 Feedback Works Best

- You're committed to working towards specific development goals
- You want to uncover blind spots or hidden strengths
- You're in a leadership position with cross-functional responsibilities
- You're seeking to supplement your existing development efforts
- You want focused feedback to support individual growth plans

### When 360 Feedback May Not Be Needed

- Development areas are already clear and you have an actionable plan underway
- You already have a good understanding of your growth areas through regular feedback
- Direct, transparent feedback would be more productive for continued development

Remember that 360 feedback represents a single, anonymous point in time and should supplement,

not replace, ongoing feedback conversations throughout the year.

## How It Works

### For Team Members

If you'd like to receive 360 feedback as part of your performance conversation:

- Express interest to your manager about receiving multi-perspective feedback
- Suggest feedback providers - recommend 3-5 people who work with you regularly and can provide meaningful insights (peers, stakeholders, direct reports, cross-functional partners)
- Share context with your manager about why these individuals would provide valuable perspective
- Contact your feedback providers to explain your goals for the 360 process - why you're seeking feedback and what you hope to achieve. This helps reviewers provide the right kind of information to support you
- Participate in the conversation - your manager will share themes and patterns from the feedback during your review discussion
- Take action - consider sharing the themes you heard and resulting actions with stakeholders who can support your growth throughout the year

### For Managers

To incorporate 360 feedback into your team member's performance conversation:

- Discuss and select feedback providers - have a conversation with your team member to get their input on potential feedback providers, then choose 3-5 people using your discretion to ensure a balanced mix of perspectives (peers, stakeholders, direct reports, etc.)
- Choose your collection method:
  - Google Form: Use [THIS](#) link to make a copy of a 360 feedback form for each team member. Customize it with your team member's name, indicate your desired response date, and send to your selected feedback providers. Download responses from the form when complete. NOTE: This is an interim solution while we explore alternative platforms to gather feedback.
  - Email or Slack: Gather feedback using the same questions from the Google Form via direct email or Slack messages
- Analyze for themes - look for patterns and common observations across multiple sources
- Integrate insights into your performance conversation, focusing on themes rather than individual comments
- Maintain confidentiality - share feedback anonymously without attributing specific comments to individuals
- Support ongoing development - help your team member create actionable next steps based on the feedback received

### For Feedback Providers

When asked to provide 360 feedback:

- Focus on specific examples and observable behaviors when possible
- Be constructive and balanced in your observations
- Consider the person's stated development goals when framing your feedback

- Respond promptly within the requested timeframe
- Keep feedback confidential between you and the requesting manager

### Key Principles

- Development-focused: The 360 process is meant to support team member development and provide feedback supporting individual growth. 360s should not be used as performance management tools.
- Confidentiality: All feedback is shared anonymously. Managers focus on themes and patterns rather than attributing specific comments to individuals.
- Voluntary participation: Team members can choose whether to request 360 feedback as part of their performance conversation.
- Manager discretion: Managers make final decisions on feedback provider selection to ensure appropriate and valuable perspectives.
- Supplement, don't replace: 360 feedback should supplement ongoing feedback conversations, not serve as a replacement for regular check-ins with stakeholders and peers.

### Eligibility and Timing

360 feedback is available for team members with at least 6 months of tenure who would benefit from multi-perspective insights. The process is typically timed to take place before mid-year and end of year check-ins but managers should continue to check in with cross-functional stakeholders informally.

### Getting Started

Team members interested in 360 feedback should discuss this option with their manager during Mid-Year and end of year performance planning. Managers can help identify the most valuable feedback sources and integrate these insights into meaningful career development conversations. This approach ensures that performance discussions are enriched with diverse perspectives while maintaining a focus on growth, development, and career advancement.

### Managing Feedback Requests

If you feel overwhelmed by the number of team members that have requested feedback from you, keep in mind that you are providing your team members with a gift: the ability to learn and grow from the feedback they receive.

However, you may not have feedback related to each of the questions asked. That is ok. If you don't have anything meaningful to provide, you can put not-applicable. Focus on the team members and the questions for which you have meaningful and helpful feedback. If you feel like you are not in a position to complete a meaningful review in general, please let the team member know, so they can possibly select another reviewer instead. Be mindful of your own bandwidth when providing reviews: Start with your core group, and expand from there as capacity allows.

### Receiving Feedback in 360s

Be open to engaging in the conversation. Your peers have taken the time to provide you with their feedback. And the purpose of this feedback is to help you develop and reach your full potential. The perception they have of you is important information for you to have and to

build into an action plan.

Before going into the conversation and reviewing feedback, check out the page on receiving feedback.

Be accepting of positive feedback. Instead of deflecting compliments, hear and internalise them. They are strong indicators of where you have successfully developed your skills. Remember to maintain a focus on them so you can continue to develop the skill.

During the 360 Feedback meeting:

- Breathe!
- Assume positive intent
- Avoid your first response as chances are it may be defensive
- Ask lots of questions to fully understand the feedback
- Ask for time to process the feedback and come back with any follow up questions & / or action
- Say thank you for their time

The feedback that your team member receives may reinforce excellent or under performance you have already observed, but shouldn't be the only data point you use in evaluating performance. In cases where you've identified your top performer, we should learn from what makes that person successful to share with others. In cases where unsatisfactory performance is identified, you should also address that timely and honestly. The feedback included through the 360 process may help in talking through examples of strengths or improvement areas, but you should not wait for the 360 Feedback process to address performance matters.

### Reviewing the Feedback Received as a Manager

Once you have received and aggregated the 360 feedback from the respondents, managers and team members will be able to review the feedback prior to meeting to discuss. Giving and receiving feedback can be hard for both the manager and the team members. Remember to be open-minded and calm. Be open-minded to the fact that others may see something that you do not. If you disagree with the feedback, others may be seeing something that you are not aware of- we called these blind spots earlier. Allow for the fact that others may be right, and use that possibility to look within yourself. Feedback should never be a surprise! It is meant to guide, mentor, support, enhance, and help the team member grow. Try and maintain the model that feedback is a gift- it is data. More data is always better because it provides us with choices we wouldn't otherwise have.

### 360 Feedback Conversation

This section outlines the conversation for a manager to have with their team members. This discussion should focus on leveraging feedback to accelerate the team member's growth and development goals.

The high level recommended process is as follows:

- Before the meeting: Review the 360 feedback before meeting your team member and summarize the key findings (possible recurring themes, patterns etc.)
- In the meeting:
- - When discussing the feedback, ask open ended questions such as: What do you think of the

feedback? Were there any surprises?

- - Give feedback using the S-B-I- model: situation - behavior - impact
- - Identify 1-2 development opportunities based on the feedback to focus on and identify concrete development actions. Ask open ended questions like "what would success look like?" which also engage the team member to take accountability for their own growth and development
- - If applicable update the IGP in Workday based on the 360 findings and development actions.

- After the meeting: periodically (quarterly) in 1:1s, review progress against the development goals and offer support as needed

Some general guidance and tips for the conversations can be found below:

- - No surprises. Team members should not hear about positive feedback or performance in need of improvement for the first time at the 360 feedback meeting. - Team members should have regular 1:1s where this is discussed. However, if new information is uncovered during the 360 Feedback process, you should discuss that new data.

- - The overall aim is providing meaningful feedback. Don't allow the feedback meeting (document and conversation) to (d)evolve into a "todo" list.

Managers should send the results within 48 hours of the feedback cycle closing so they can prepare and come to the meeting with questions and discussion points.

- - Make sure you (Manager) are also prepared for the discussion, write down some notes and key points you want to make. What are the major themes coming out of the feedback?

- - Make time to talk about the future career development and development opportunities. This should be a conversation - remember to be an active listener. As a manager, you can help your team member process and understand the feedback, helping to avoid over/under reactions or defensiveness. Ask questions such as:

- - Is there is feedback that you received that is surprising or upsetting to you?

- - After receiving your feedback, what are the areas you would like to focus on and how can I help?

- - How can I be a better manager for you?

- - What are you hoping to achieve at GitLab this coming year?

- Follow Up.

- - Did you discuss pathways to career progress, or specific points of attention for improving performance? Make sure you add them to the top of the 1:1 doc so as to remind yourselves to follow up every so often.

- - Managers are encouraged to share their key learnings with their teams. Making yourself open and vulnerable can help the rest of the team understand that it is ok to get hard feedback and we can grow from it. It also enlists the team is helping you grow.

- - Consider asking each team member to share the top 2-3 Themes from their feedback, what they plan to do now, and how the team can help.

If there are areas that were indicated over the 360s that need immediate improvement, are not aligned with our values or go against our Code of Business Conduct and Ethics for Directors, Officers, Employees and Contractors, please reach out to our Team Member Relations Specialist via [teammemberrelations@gitlab.com](mailto:teammemberrelations@gitlab.com).

- Action Plans

Once feedback has been delivered, we recommend the manager and team member agree on a resulting action plan which can be captured in the Individual Growth Plan for ongoing reference and accountability.

---

## SECTION: people-group/\_index.md

## Welcome

Welcome to the People Group handbook! You should be able to find answers to most of your questions here.

## People Group Vision

The People Group works together to establish a high performance and results driven culture where a diverse and inclusive team can experience a meaningful career.

We support a culture that enables people to do their best work and advance their careers while fully contributing to advancing GitLab's business results. We hire, promote, and recognize team members who best live our values.

The People Group strategy is aligned with GitLab's Company Strategy through a focus on supporting GitLab's ability to deliver on our FY26 Plan while setting the foundations to build a generational company.

We've published more information about how this vision translates to strategy and for People Group members and GitLab team members in this internal-only presentation.

## Connect with us

You can also check out pages related to People Group in the section below. If you can not find what you are looking for please do the following:

- The People Group holds several subprojects to organize the people group; please create an issue in the appropriate subproject or general if you're not sure. Please use confidential issues for topics that should only be visible to GitLab team-members. Similarly, if your question can be shared please use a public issue. Tag @gl-people-connect-team or @gl-hiring so the appropriate team members can follow up.
  - Please note that not all People Group projects can be shared in an issue due to confidentiality. When we cannot be completely transparent, we will share what we can in the issue description, and explain why.
  - Employment Issue Tracker: Only Onboarding, Offboarding and Transition Issue Templates are held in this subproject, and they are created by the People Operations Team only. Interview Training Issues, are held in the Training project and created by the Talent Acquisition team. Please see the interviewing page for more info.
- People Operations; Please create a case for the People Operations team with any questions that do not seem appropriate for the issue tracker within HelpLab - choosing the applicable template/category applicable. For access requests regarding Google or Slack groups, please create an issue here: <https://gitlab.com/gitlab-com/team-member-epics/access-requests>. For questions that relate to Payroll, Expenses or Equity, please direct your question to the respective teams in HelpLab. Regarding questions for our recruiting team, including questions relating to access, or anything to do with Greenhouse, referrals, interviewing, or interview training please use the talent-acquisition channel.

- If you need to discuss something that is confidential/private (including sensitive matters surrounding your team), you can open a HelpLab Case the Team Member Relations team. Any team member, regardless of location, can use this form to discuss a private sensitive matter.
- If you need help with any technical items, for example, 2FA, please ask in ithelp. The channel topic explains how to create an issue. For urgent matters you can mention @it-ops-team.

## The People Group: One Team Mosaic Video

### One Team Mosaic Video

In general, the People Group is here to support GitLab's mission by bringing top talent into GitLab, and then enabling team members to make meaningful contributions in alignment with our values. Please don't hesitate to reach out with questions or ask for support!

The People Group works together as one team, made up of five departments: People Operations, Talent and Engagement, Total Rewards, People Business Partners, and Diversity, Inclusion, and Belonging (DIB).

| Department | Teams |  
 | ----- | ---- |  
 | People Operations | People Operations, Employment Solutions, People Compliance, People Tools & Technology |  
 | Talent and Engagement | Talent Acquisition; Candidate Experience, Talent Acquisition Operations and Insights, Sourcing, Talent Brand<br>Engagement; Talent Development, Engagement, Talent Management, People Analytics |  
 | Total Rewards | Global Compensation, Benefits, and Equity Strategy |  
 | People Business Partners | Aligned to Engineering, Product, Sales, Marketing, and G&A, and Team Member Relations|  
 | DIB | |

### Need Help?

### In Case of Emergency

If team members need emergency support from GitLab's People team, please create a case in HelpLab. HelpLab is monitored during most working hours and is the centralized support platform for all people-related queries. Read more about our People Connect methods of engagement.

We trust team members to always use their best judgement when facing any emergency. Team members are encouraged to dial their country's emergency services number for any critical and/or medical emergency. In the case that other team members are aware of a team member's emergency (during a Zoom call for example) and wish to call that country's emergency services on the original team member's behalf, we do not recommend this as only certain People Ops team members have access to team member addresses and we would take on the role of communicating with emergency services, should this extremely rare situation arise.

In the event a team member is in an unsafe situation due to a natural disaster, please see the Disaster Recovery Plan page.

### How to Report Violations

As stated in the Code of Business Conduct and Ethics, we have a section related to reporting violations. GitLab has engaged Navex to provide EthicsPoint, a comprehensive and confidential reporting tool, an anonymous ethics hotline for all team members. The purpose of the service is to insure that any team member wishing to submit a report anonymously about conduct addressed in the Code of Business Conduct and Ethics can do so without the fear of retaliation.

In addition to EthicsPoint, GitLab has engaged Lighthouse Services to provide an anonymous reporting hotline for all team members to submit reports regarding team member relations. Reports may cover but are not limited to the following topics: wrongful discharge or disciplinary action, sexual harassment, discrimination, conduct violations, alcohol and substance abuse, threats, improper conduct, violation of company policy.

Please note that the information provided by you may be the basis for an internal and/or external investigation into the issue you are reporting and your anonymity will be protected by Lighthouse to the extent possible by law. However, your identity may become known during the course of the investigation because of the information you have provided. Reports are submitted by Lighthouse to a company designee for investigation according to our company policies.

Lighthouse has a toll free number and other methods of reporting are available 24 hours a day, 7 days a week for use by team members.

- Fax: (215) 689-3885 (must include company name with report)

In addition to EthicsPoint and Lighthouse, please review the Team Member Relations page. GitLab also offers a Harassment Complaint Form that any team member may use to document any instance of any type of workplace harassment. Simply copy the form, fill it out with your information and send it to our Team Member Relations Specialist at [teammemberrelations@gitlab.com](mailto:teammemberrelations@gitlab.com).

#### How to reach the right member of the People Group

This table lists the aliases to use, when you are looking to reach a specific group in the People Group. It will also ensure you get the right attention, from the right team member, faster.

| Subgroup                  | GitLab handle       | Email                                                                    | Slack Group handle/channel | Greenhouse | Issue tracker |
|---------------------------|---------------------|--------------------------------------------------------------------------|----------------------------|------------|---------------|
| People Business Partners  | @gl-peoplepartners  | <a href="mailto:peoplepartners@gitlab.com">peoplepartners@gitlab.com</a> | #peoplepartners            |            |               |

## People Group Program Calendar for Managers and Team Members

On this page you can find our People Manager Calendar and All Team Member Calendar. The goal of these pages is to ensure that team members and People Managers can plan ahead and have an overview of upcoming programs and timelines.

## Communication on People Programs that require action

Each quarter a Slack reminder will go out in people-manager-and-above channel to review the next quarter calendar events. Each month shows Task, which outlines the people manager responsibility associated with the specific program, and (if applicable) highlights the Key Date. We will also leverage our Manager Newsletter and the Company Newsletter for broadcasting our programs widely.

## Updating calendars

Each month on the first Monday there's a calendar reminder to update the calendars on that date. This calendar reminder includes People Business Partners and the DRI in L&D. Also with sharing the calendars in the news letters People Business Partners and L&D will be tagged.

The goal of the calendar is to include information at least two quarters ahead of the current quarter. For questions about the updates to the calendars you can always reach out to People Connect.

## Support provided by the Legal, Employment team to the People Group

The Legal-Employment team, collaborates with and provides support to the People team in many functional areas.

Email approval from the Senior Director of Legal, Employment is required prior to engagement with external counsel to allow for accurate tracking of costs.

Invoices will be sent to Senior Director of Legal, Employment, for approval.

When support from the People Operations team is required by the Legal, Employment team

The Legal, Employment team may require support from the People Operations team, for communicating a country specific legal requirement to team members, to consult with team members in an entity country if necessary or to arrange legally required contract amendments, to name just a few examples. As these matters may relate to individual team members or groups of team members, they are appropriately managed in a confidential manner.

If the Legal, Employment team makes a request for support or assistance from the People Operations team, the request should be formulated using a template (linked here, though accessible internally only to Legal, Employment and the People Operations team). The request should include all the required detail and explanation to enable people connect to support, including:

- An explanation of what is needed
- Whether there's a timeline on the request (ensuring people connect are provided with as much lead time as possible)
- Whether all the information needed, has been provided, eg contact names, dual language translations if applicable, links to any relevant documents etc
- A note on whether an FAQ to share with team members is needed or whether people connect have enough information to answer any questions which might arise
- Whether there are any follow up actions for legal or for people connect
- A short explanation or summary (if necessary) or courtesy update for the managers of any affected team members
- Whether confirmation of completion is needed

To make a request, a copy of the template should be saved, filled out as above, dated and passed to Alissa Meeks/the People Operations Manager so the request can be assessed and assigned to a member of the people connect team for completion. Once assigned, the member of the People Operations team who will be assisting with the request should touch base with the member of the Legal, Employment team who has made the request, to confirm that the request is being worked on and so it's easy to collaborate on finishing out the task.

Support provided by the People Operations team to the People Business Partner team

Most tasks/requests from the People Business Partners for the People Operations team will be handled via a HelpLab. If a general query/question, the PBP may request guidance in the private pbp-peopleops Slack channel. This is a private channel. The People Operations Team, will self-assign a task, within 24 hours and comment in Slack/HelpLab on the request to confirm.

#### People Operations Responsibilities & Response Timeline

Please note that the source of truth for role responsibilities is the job family for the People Operations Team. The table below is meant to provide a quick overview of some of the core responsibilities for the team.

## People Operations Team

| Responsibility                   | Response Timeline                                                                      |
|----------------------------------|----------------------------------------------------------------------------------------|
| Onboarding                       | 2 weeks prior to start date                                                            |
| Offboarding                      | Immediate action for involuntary & 24 hours for voluntary                              |
| Organizational Changes           | Within 3 days of effective date of change                                              |
| Letters of Employment            | Within 24 hours                                                                        |
| Employment Verification          | Within 24 hours                                                                        |
| Anniversary Emails               | First day of the following month                                                       |
| HelpLab Queries                  | Within 24 hours                                                                        |
| Probation Period Notifications   | Daily (when applicable)                                                                |
| Contract Renewals                | 30 days or more prior to team member's renewal date                                    |
| Exit Interviews                  | During voluntary offboarding team member's last week                                   |
| US Unemployment Claim Management | As Needed and Audited Quarterly                                                        |
| Relocations                      | As requested, usually completed 30 days or more prior to team member's relocation date |

Other listed processes for the People Connect Team can be found [here](#)

## Employment Solutions Team

| Responsibility      | Response Timeline                                                                                       |
|---------------------|---------------------------------------------------------------------------------------------------------|
| Country Conversions | As soon as approval is given by CFO. Conversion turnaround time can vary based on a variety of factors. |

## People Compliance Team

| Responsibility                                                           | Response Timeline     |
|--------------------------------------------------------------------------|-----------------------|
| Administration of the signing of our Code of Business Conduct and Ethics | Annually in Feb/March |

## Frequently Requested

Please review the frequently requested section of the People Handbook before reaching out to the team. The page includes information on accessing a team directory, requesting a letter of employment, mortgage forms, the companies reference request policy, ordering business cards, and changing your name in GitLab systems.

## Addresses

- For the mailing addresses, see our [visiting page](#).
- For the NL office, we use addpost to scan our mail and send it to a physical address upon request.

## Reporting potential inaccurate LinkedIn Profiles

GitLab does not actively search for LinkedIn profiles that have inaccurate information about

being a GitLab Team member. However, there are instances where a profile is identified and there is question on whether the person is truly a GitLab team member. Here is the process for flagging a potentially inaccurate profile and the actions that the People Connect Team will do to confirm and potentially report a profile.

- Team members should first check in Slack and/or on the organizational page to determine if the team member is a current GitLab team member.
- If the team member cannot confirm the profile, team members should reach out to the People Operations Team via HelpLab with the LinkedIn profile in question.
- The People Operations team member will confirm in Workday that they are not/have not been a team member.
- The People Operations team member will confirm with talent acquisition to confirm if they have ever been interviewed, made an offer or were declined.
- The People Operations team member will reach out to the Developer Relations team to confirm if they are an active wider community member via the developer-relations Slack channel, using the @devrel-team tag.
- If they are a confirmed member of the wider community but not a team member, the Developer Relations team will reach out the profile and ask them to change their profile to match their GitLab involvement.
- If they are not a current member of the wider community and talent acquisition has confirmed they do not have a profile in Greenhouse, talent acquisition will create a Do Not Hire profile.
- The People Operations team member will report the account to LinkedIn via the Reporting Inaccurate Information on Another Member's Profile

### Using Workday

We use Workday to maintain team member information. All team members (all contract types) are in Workday.

Workday is managed and maintained by the People Tools and Technology team.

See our Workday Guide to learn more about how to use Workday.

### Using Culture Amp

Administrative access to CultureAmp will be limited based on role and responsibility. There are 3 different levels of access:

- Account Administrator access can manage account setting and team member data, create surveys and has access to all survey results.
- Survey Creator administrator access can create, manage and design surveys, select participants and share results.
- Survey data analyst administrator can export raw data from all surveys enabled for raw data extract.

To request access please open an access request with the type of account access requested and the business need. You can assign the access request to Anesia Chan @anechan and Laura Janssen @Laura-Janssen (as backup) for review and approval. The default admin access will be the Survey Creator administration rights unless other access is specified. Please note that Survey Data Analyst admin rights will not be granted to team members outside of the People group with out permission from the Chief People Officer.

If you need support with a specific CultureAmp Survey, please complete this issue template to alert the People Analytics Team.

## Take Time Out to Learn

At GitLab, we believe that career growth is non-linear. In practice, non-linear career growth is an opportunity for team members to increase efficiency with new skills, develop as leaders with new responsibilities, and grow as an expert in their field.

But growth only happens when we make intentional time and space to learn.

As a People Group, we're embracing this attitude of continuous learning together, with the challenge that, as a team, we can spend a total of 300 hours learning before the end of FY25 Q3! We encourage everyone to participate, spending approx. 2 hours per month learning something new, as a way to prioritize your development and use work time to uplevel and upskill.

At the end of the quarter, we'll ask folks to self-report hours spent learning, and take a tally of total People Group learning hours.

Here are a few ways you might spend time learning this quarter:

1. Create an IGP to track and monitor your growth goals
1. Utilize the Growth and Development Fund to engage in a class or conference
1. Organize a job shadow or internship for learning to increase exposure and collaboration with different roles and teams.
1. Attend an AMA or async Group Conversation, and contribute by asking a question.
1. Organize a discussion on your team about a shared topic (i.e. article, book, or podcast on a topic that is relevant to your team's work)
1. Attend a TMRG career growth event

We encourage everyone to have an ongoing conversation about career growth with their manager during weekly 1:1s. If this isn't already part of your weekly check in, consider adding it to your agenda template now!

Investing in your growth is essential for both your individual success and the success of our entire team. Let's start learning together!

## SECTION: people-group/acceptable-use-policy.md

## Purpose

This policy specifies requirements related to the use of GitLab computing resources and data assets by GitLab Team Members so as to protect our customers, Team Members, contractors, company, and other partners from harm caused by both deliberate and inadvertent misuse. Our intention in publishing this policy is to outline information security guidelines intended to protect GitLab assets.

It is the responsibility of every member of our Community to interact with GitLab computing resources and data in a secure manner and to that end we provide the following acceptable use standards related to computing resources, company and customer data, mobile and tablet devices, and removable and external media storage devices.

## Scope

This policy applies to all GitLab Team Members, contractors, advisors, and contracted parties interacting with GitLab computing resources and accessing company or customer data.

## Roles & Responsibilities

| Role                                        | Responsibility                                                                 |
|---------------------------------------------|--------------------------------------------------------------------------------|
| GitLab Team Members                         | Responsible for following the requirements in this procedure                   |
| Security, Legal and PeopleOps               | Responsible for implementing and executing this procedure                      |
| Security, Legal and PeopleOps (Code Owners) | Responsible for approving significant changes and exceptions to this procedure |

## Procedure

### Acceptable Use and Security Requirements of Computing Resources at GitLab

GitLab-managed assets are provided to conduct GitLab business, with consideration given for limited personal use subject to any conflicting statements contained in any individual employment contracts or agreements. Our company uses global electronic communications and resources as routine parts of our business activities. Personal and professional use of GitLab-managed assets are subject to security monitoring and protection, unless prohibited under the local laws of a respective Team Member's jurisdiction. It is essential that electronic resources used to perform company business are protected to ensure that these resources are accessible for business purposes and operated in a cost-effective manner, that our company's reputation is protected, and that we minimize the potential for legal risk.

Those receiving GitLab-provided assets are responsible for exercising good judgment when using GitLab-managed computers and accessing GitLab-managed data.

As per the onboarding issue procedures outlined in our handbook, evidence of device encryption and device serial number must be provided to IT Ops prior to the completion of onboarding period.

We are currently using Jamf as our endpoint management solution for Mac laptops. All macOS laptops procured by GitLab will come configured with Jamf. GitLab Team Members procuring and expensing Mac Laptops will require Jamf to be installed as part of their Day 1 Security tasks. Upon their discretion, CorpSec may install additional security tools via Jamf.

Linux users must install SentinelOne and DriveStrike as part of their onboarding process during their first week.

## Security and Proprietary Information

All GitLab data is categorized and must be handled in accordance with the Data Classification Standard. All computing assets that connect to any part of the GitLab network, or 3rd party services that are used by GitLab, must comply with the applicable standards.

### Open source libraries

Open Source libraries are allowed under this policy if its use complies with the pre-approved or approval requirements captured in the Product Legal Handbook.

### Freeware, Browser Extensions, Add-ons, and Plugins

Individual Use Software (freeware, add-ons and plugins) is permitted, with the exception of unauthorized Google Workspace Integrations and Chrome Extensions. Individual Use Software is subject to retroactive removal at any time by IT, Legal and Security when it is deemed unsafe or insecure.

Authorized Google Workspace Integrations and other approved Individual Use Software can be found on the Pre-Approved Individual-Use Software list and are permitted for use subject to any "Notes and Restrictions" for each respective Pre-Approved software offering.

To request approval for new Individual Use Software, please follow the Individual Use Software request process.

{{% alert title="Note" %}}

In order to abide by the SAFE Framework, to preempt third party processing of company data under permissive individual use licensing terms, or to prevent Team Member misuse of certain Third Party Software features, IT, Legal, Privacy and Security will generally err on the side of disallowing exceptions to enterprise level software, particularly if there is an enterprise option already in our Tech Stack Applications that achieves a similar purpose.

{{% /alert %}}

### Unacceptable Use

Team Members and contractors may not use GitLab-managed resources for activities that are illegal or prohibited under applicable law, no matter the circumstances.

Security requirements for GitLab production and corporate environments and on GitLab-managed assets must not be disabled without security approval via the Information Security Policy Exception Management Process.

### Unacceptable System and Network Activities

Prohibited system and network activities include, but are not limited to, the following:

- Violations of the rights of any person or company protected by copyright, trade secret, patent or other intellectual property, or similar laws or regulations.
- Unauthorized copying, distribution, or use of copyrighted material.
- Exporting software, technical information, encryption software, or technology in violation of international or national export control laws.
- Intentional introduction of malicious programs into GitLab networks or any GitLab-managed

computing device.

- Intentional misuse of any GitLab-managed computing device or GitLab networks (e.g. for cryptocurrency mining, botnet control, etc.).
- Sharing your credentials for any GitLab-managed computer or 3rd party service that GitLab uses with others, or allowing use of your account or a GitLab-managed computer by others. This prohibition does not apply to single-sign-on or similar technologies, the use of which is approved.
- Using a GitLab computing asset to procure or transmit material that is in violation of sexual harassment policies or that creates a hostile workplace.
- Making fraudulent offers of products, items, or services originating from any GitLab account.
- Intentionally accessing data or logging into a computer or account that the Team Member or contractor is not authorized to access, or disrupting network communication, computer processing, or access.
- Executing any form of network monitoring that intercepts data not intended for the Team Member's or contractor's computer, except when troubleshooting networking issues for the benefit of GitLab.
- Attempting to bypass, modify, disable or tamper with security controls or logs.
- Attempting to uninstall security controls without prior approval from a Security manager
- Circumventing user authentication or security of any computer host, network, or account used by GitLab.
- Tunneling between network segments or security zones (e.g., gprd, gstg, ops, ci, ngrok), except when troubleshooting issues for the benefit of GitLab.
- Given the potential sensitivity of the data contained in screenshot images, the use of tools that capture and share screenshots to hosted sites online is prohibited without the explicit approval of the Security and Legal Departments. Screenshots should be stored locally or within Google drive folders associated with your GitLab.com account. Access to these drives and files should be managed in accordance with our Access Management policy, and handled according to our Data Classification Standard. Tools such as Lightshot, where upload functionality cannot be disabled and could result in inadvertent uploads, should not be used.
- The use of high risk remote administration tools, such as TeamViewer and AnyDesk, which are commonly used by attackers to gain and remotely control systems.
- Tools that emulate another operating system or create compatibility layers such as WINE
- The use of torrent or other P2P software on GitLab computing assets.

### Unacceptable Email and Communications Activities

Forwarding of confidential business emails or documents to personal external email addresses is prohibited. Automated forwarding of emails from a team member account is also prohibited.

> Note: GitLab may retrieve messages from archives and servers without prior notice if GitLab has sufficient reason to do so. If deemed necessary, this investigation will be conducted with the knowledge and approval of the Security, People Business Partners, and Legal Departments.

In addition to following the Team Member Social Media Policy, when utilizing social media think about the effects of statements that you make. Keep in mind that these transmissions are permanent and easily transferable, and can affect our company's reputation and relationships with Team Members and customers. When using social media tools like blogs, Facebook, Twitter or wikis, ensure that you do not make comments on behalf of GitLab without proper authorization. Also, you must not disclose our company's confidential or proprietary information about our business, our suppliers, or our customers.

## Return of GitLab-Owned Assets

All GitLab-owned computing resources must be returned upon separation from the company. Notwithstanding anything contrary in the Laptop Buy Back Policy or the Offboarding Tasks, Team Members must return any GitLab-Owned Assets -- irrespective of their valuation -- if they are specifically requested to do so either during their tenure with GitLab or upon offboarding. In cases of investigation, misconduct, termination for cause or any violation of GitLab's Code of Business Conduct & Ethics, a team member has no right to retain GitLab-owned computing equipment.

## Bring-Your-Own-Device (BYOD)

As a general rule, non-company devices are not permitted to access company assets. While there are some exceptions listed below, access to RED classified data, as defined by the GitLab Data Classification Standard, is still prohibited.

The exceptions are as follows:

### Personal Mobile Phone and Tablet Usage

All personal mobile computing devices used to access GitLab-managed data, including but not limited to email and GitLab.com, must be passcode-enabled. 2FA will be enforced by the Security team for all employee and contractor GitLab.com and Google Workspace accounts. Mobile computing best practices dictate that these devices should be running the latest version of the operating system available, and all new patches applied. For assistance with determining the suitability of your mobile device, please contact the Security Team.

### Unable to Use Company Laptop

For new employees who have not received a company laptop, there are exception processes for using non-company devices.

The same exception processes apply in the case of a corporate laptop being unavailable or unusable due to loss, theft or disrepair. See lost or stolen procedures for additional information. You must open a Policy Exemption Request. While the exception processes are considered a temporary solution, you still need to make sure the non-company system meets basic configuration standards, and a Microsoft Windows system is still not allowed access under any circumstances.

Do not sign in to any GitLab related accounts using public computers, such as library or hotel kiosks.

## Mobile Messaging

All GitLab-related conversations need to take place in Slack. It is strongly recommended that the official Slack application, or Slack web application, are used for mobile messaging. Downloads are available for iOS and Android. While it may be more convenient to use an integrated chat application that puts all of your conversations in one place, the use of these applications can unintentionally lead to work-related conversations crossing platforms, or being sent to external contacts. The use of Slack for all work communications assists with our

security and compliance efforts. For example, in the case of an incident response issue, it may be necessary to review a conversation to understand the order in which events occurred, or to provide evidence that the chain of custody has been maintained for forensic evidence during a handoff.

For video calls, and as a back-up to Slack, we prefer Zoom. Zoom chats are an acceptable alternative to Slack when in a video call. If the conversation is interesting to others or may be needed for a retrospective, consider recording the call.

#### Use of External Media on Company Assets

The use of removable and external storage devices such as USB flash drives and external backup drives on company-managed devices is not allowed and is blocked by default. An exception request may be opened [here](#) if there is a business need for the use of an external storage device. Corporate Security will coordinate with requestors to determine the most suitable encryption-enabled device and configure encryption and password protection.

As a reminder, Red Data may not be transmitted from an approved Red data source to any other systems or solutions without first obtaining approval from the Privacy and Security teams. Please refer to GitLab's Data Classification Standard for further details.

#### Use of file sharing services other than GitLab's Google Drive

Creating an account or using for backup/redundancy purpose a file sharing service other than GitLab's Google Drive is prohibited. For sharing GitLab-related files with those external to
