

ith us and help engage team members so that our culture remains strong.

As we consider the ways in which we will bring our value proposition to life, we've also landed on several design principles to help guide the tactics we choose to deploy within the key areas mentioned above.

Design principles that underpin our strategy

- Do less, but go bigger: We're currently spread too thin given the amount of context shifting across tactics; we'll decide which tactics look most promising and put our focus there.
- Measure & analyze to continually improve over time: We need to choose tactics that can be measured and understood so that we can align on ways to improve.
- Nail the basics: We need to do a better job of getting the basics right (i.e. how we post jobs, what our job ads look like, social media sharing).
- Invite GitLab team members to be a part of the journey: Bring team members along on the journey through storytelling, empower team members to become GitLab ambassadors and seek input from across the company to continually iterate.

How this translates to OKRs and our roadmap

We strive to be as transparent as possible, but this section is only for GitLab team members.

FY26 Talent Brand Go-to-market strategy and roadmap

Talent brand resources

Content library

The life at GitLab content library is a curated list of blog posts, articles, videos, awards, and quick facts that help tell the story of life at GitLab.

GitLab talent ambassadors

Spread the word about life at GitLab by becoming a GitLab talent ambassdor.

1. Share with your social media network when your team is welcoming a new team member and have your new team member share with their networks as well by leveraging this template!
1. Share with your social media network that your team is hiring by posting one of these job ads (don't forget to include a link to the job)!
1. Sales managers, celebrate your sales team's quota achievements by posting one of these Sales Quota Achievement Social Cards to recognize their achievement.
1. Include the LifeatGitLab hashtag and the link to our careers page in your posts.

Whether you're a hiring manager or an individual contributor, this page outlines additional steps you can take to help represent our talent brand and attract more great people to join the team.

Additional talent brand resources

As we create campaigns, post jobs, sponsor events, and attract top talent to GitLab, it's often

the case that we create new resources that are intended to educate candidates about careers with GitLab. Many of the resources we create can be repurposed for other use cases. Use the following dropdowns to discover how to contribute to these resources.

<details><summary>Animated Videos</summary>

Animated short-form video for social media or event usage: Using a google slide deck as a starting point and animating those slides into an .mp4 video is an easy way to create an engaging social media or event asset.

- Start by creating a slide deck that includes high-level info about careers at GitLab. This sample deck is a really simple example using only 4 slides.
- Using the Creator Studio add-on, you can choose to "create video" from the existing slides
- To help with conversion, you can also request a custom QR code be created using QR.io by creating an issue in the talent acquisition project and tagging @cchiodo or @drogozinski
- The final result will look something like this and can be shared through various social media sites or presented in video format at in-person events.

</details>

<details><summary>Team Member Videos</summary>

Whether you're looking to embed video in a job ad, or create an asset to leverage in outreach, team member spotlight videos are an excellent way to provide first-hand perspectives. With a partnership with Cinebody, we're able to build video projects and collect team member sentiment in one central place.

- Send @cchiodo a Slack with more details about your video project including topic, use case, team members to include, and specific questions that featured team members will be answering. The recommended list of questions for a hiring manager video are included below:
 1. Provide a short explanation about the role you're hiring for. What would someone in this role do?
 1. Why is this role impactful to the organization? How is this role helping shape the state of our industry around DevSecOps and engineering/sales/product/G&A etc. (whatever team the role is on)?
 1. Why should candidates apply to this role and to GitLab? What is in it for them?
- @cchiodo will create a project in Cinebody with the provided topic and questions. Once the project is built, @cchiodo will send the project PDF back to the requester to be shared with team members being featured
- Once videos are finalized (as notified by @cchiodo), requester to create a video editing request in GitLab by using this issue template, applying the video-editing-request template, and tagging @cchiodo in the issue
- Asked to participate in a video? Learn more about what you can expect by scrolling to the bottom of this page

</details>

<details><summary>Articles</summary>

Written articles are a great way to provide insight to candidates about a specific team,

project, or exciting aspect of GitLab. There's several different ways to contribute an article including (please slack @cchiodo for further information about each option):

- Builtin, the online community for United States-based startups and national tech companies
- Write your own blog, or have a team member write it, and publish on the GitLab blog. Learn more about how to contribute a blog to GitLab
- Asked to participate in an article? Learn more about what you can expect by scrolling to the bottom of this page

</details>

Digital channels for talent branding

Jobs site

Our GitLab jobs site is where candidates can find information about working at GitLab, along with a link to view our job opportunities.

Social media

We incorporate content about hiring and our culture on GitLab's social media accounts so that there's one central place for candidates and the community to find out more about the company as a whole.

On LinkedIn, we have a specific careers page where candidates can find out more about life at GitLab.

There are a number of videos on our YouTube channel that relate to working here.

Review sites

We want ensure candidates who come across GitLab's profile on employer review sites have an accurate picture of what it's like to work here.

There are some sites where GitLab has a company profile, but we do not own it or pay for additional features. On others, we have a managed presence.

We encourage team members to leave reviews and share their stories on these sites to continue to keep an updated profile. We welcome both positive and negative feedback in these reviews.

Glassdoor

Engaged employer

As an engaged employer with Glassdoor, we're able to customize the branded content, videos, links, and images on our Glassdoor profile. Our contract with Glassdoor includes pages in these countries:

- United States
- United Kingdom
- Germany

- The Netherlands
- India
- Ireland
- Rest of World (all countries where Glassdoor does not have a separate presence)

Responding to Glassdoor reviews

The Talent Brand Manager keeps track of new company reviews and escalates them as needed for an external response and internal action. Here's our process for tracking and escalating reviews.

Profile updates on Glassdoor

To be sure the details on our profile stay up to date, we review these items quarterly and make any needed updates:

- Headcounts and country numbers listed on our profile
- Our status as one of the world's largest all-remote companies
- New awards or recognition
- Photos or videos recently published

Comparably

Comparably is an employer review site that also offers recruitment marketing tools and award programs. We no longer have a paid profile with Comparably (ended in 2020).

Our goal on the site is to maintain our profile and keep the feedback up to date by annually (Q3) sending a link to all team members where they can consider leaving feedback or a review.

Other employer sites

- BuiltIn
- Indeed
- Blind

GitLab blog

To give the most authentic view of life at GitLab, we encourage team members to blog about their experiences.

You can find many of these posts in the culture section of the GitLab blog.

Employer awards and recognition

Our talent brand team evaluates employer awards and recognition to determine if there are particular awards that, if won, will help us to better attract talented people to want to join GitLab. We also see employer awards as a way to benchmark ourselves against our talent competitors, we want to know how credible third-party organizations rate us against our peers to ensure we continue to be a great place to work.

Check out the content library for a list of the latest awards and recognition related to working at GitLab.

How we apply for employer and workplace awards

We partner closely with the Corporate Marketing team to apply for and track employer awards and recognition each year. More details and our process for applying to these awards can be found on this page.

These awards are important to GitLab's talent brand because they raise awareness for why GitLab is such a unique place to work.

How we choose employer and workplace awards to apply for

There are several different reasons why we may choose to apply for a particular employer or workplace award. The top reasons we apply for various awards include:

1. Credibility from a trusted outlet: Establishing GitLab as a great place to work means securing notable awards from outlets that are seen as credible outlets. Outlets like Fortune, Inc., and Quartz are great examples of well-known, trusted outlets.
1. Alignment with our unique operating style: As an all-remote company, we look for awards that will help elevate GitLab within communities that evangelize remote work.
1. Alignment with key markets and talent pools: While we operate as a global company, certain awards associated with markets known for over-indexing on tech talent, and where we have a critical mass of over 100 team members, are often within our consideration set. As a result, we may submit for localized awards in specific cities or countries like the San Francisco Bay Area, the US, the UK, or Germany to show that we are a great place to work in the most competitive talent markets.

Sharing employer awards on social media

We highly encourage team members to share the news about any GitLab employer award wins with their social media networks. Follow these easy steps and you'll be ready to share. If you'd like additional guidance please reach out to the talent-brand slack channel.

1. Grab the link to the employer award listing you're looking to share, drop into the relevant social media platform
1. Add commentary about why that recognition is important or meaningful to you and/or your team
1. If mentioning GitLab, especially on LinkedIn and Instagram, remember to tag the company page and use the hashtags `gitlab` `lifeatgitlab`.
1. Or, if you'd prefer suggested messaging to start with, you can log in to Bambu through Okta, and search for "Best workplaces". You'll find links to share the most recent employer awards available to quickly share with your networks.

External Engagement

Objective & Goals

Our external talent engagement strategy aims to align with the goals and vision of our Talent Brand, Talent Acquisition, and Diversity, Inclusion, and Belonging teams.

For further detail from each sub-group please refer to the links below.

- 1. Talent Brand
- 1. Talent Acquisition
- 1. DIB

Together, we partner to define and select organizations to partner with that allow us to engage with a target audience that includes members from underrepresented groups as defined here.

How We Make Decisions

Engaging externally is a process guided by our evaluation strategy. As mentioned above our aim is to align with the objectives and goals of 3 key People groups, ultimately making it so everyone can contribute.

Our decision-making process involves a comprehensive assessment of potential partners including the following factors:

DIB Alignment

- Does this align with our stated DIB KPIs?
- Does this align with GitLab's definition of an underrepresented group?
- Does this support talent globally?

Relevancy

- Is the intended audience relevant to a GitLab priority/business function?
- Will this partnership contribute to supporting a GitLab priority or business function?

Location and Accessibility

- If this is related to an event, is the location viable for GitLab to attend?
- If applicable - Is this partnership in an entity or an "open for hiring" branch?.
- If this is related to an event, does the location provide an opportunity for GitLab to perform other business-related activities?
- Does this partnership share clear ways that their space is accessible?
- Is there a virtual option?
- Do our talent insights provide data around the location having a diverse population (gender, ethnicity, etc.)

Brand Value

- Will this opportunity offer GitLab exposure and/or the ability to promote careers via a speaking engagement(s), social media presence, or likewise?

Previous GitLab Engagement + Feedback

- If applicable - Have we gathered feedback from previous engagements?
- What are publicly available sentiments regarding the partner?

Cost

- How does the cost of attending this event align with our budget?
- Are there opportunities for cross-department cost sharing?
- Will this partnership impact our ability to fund other partnerships?

Requests and Recommendations

Collaboration from all teams and departments is welcome. To effectively manage requests to partner on a sponsorship or partnership, or recommendations to sponsor or partner with an organization, please open a new issue in the Talent Brand and Engagement Project and select the sponsorship or partnership proposal issue template a minimum of 8 weeks before the start date of the sponsorship or partnership.

How We Define Success

Events

| KPI | Definition and Measurement |

| ----- | ----- |

| Number of Attendees | The total number of attendees that attend an individual event/booth participation.
This is measured by: - Number of Talent Community adds QR scans.
- Number of checked-in attendees.

| Conversion Rate | The percentage of individual event attendees that convert from Prospect to Qualified in Greenhouse. |

| Quality of Candidates | The percentage of attendees that convert from Qualified to Initial Interview. |

| Attendee Likelihood To Recommend | The likelihood that attendees would recommend attending a GitLab-hosted event to family, friends, and/or colleagues.
This is measured by post-event survey responses.
- Scores of 1-2 = Not Likely To Recommend
- Score of 3 = Passive
- Scores of 4-5 = Likely To Recommend. |

| Cost of Engagement | This is calculated as the total event/total of attendees + digital reach. |

Partnerships and Platforms

| KPI | Definition and Measurement |

| ----- | ----- |

| Page Visitors and Viewers | This is measured quarterly and annually for platforms.
Metrics pulled from the platform or provided by the partner. |

| Job Applications | Number of job applications received directly from the platform or partnership.
Metrics pulled from the platform or partner and from Greenhouse reporting. Ensure to include the platform as a source on Greenhouse. |

| Hires | Number of hires made from prospects received directly from the platform or partnership or hires made influenced by the platform or partnership. Influenced hires are those who viewed the GitLab page on the platform or partnership, but applied directly on our jobs page.
Metrics pulled from the platform or provided by the partner and from Greenhouse reporting. Ensure to include the platform/partnership as a source on Greenhouse. |

| Conversion Rate | % applications from the platform or partnership that turned into a hire.
- Applications received from platform or partnership divided by hires. |

| GitLab Team Members Featured | Number and names of GitLab team members featured on the platform or as a result of the partnership. |

| Content | Number of and links to content published on the platform or as a result of the partnership. |

FY26 Roster

- Women of Silicon Roundabout - Event Sponsorship
- Obsidi Tech Talk - Event Sponsorship
- TBD - Event Sponsorship

FY25 Lookback and FY26 Proposal

- FY26 Talent Events Proposal & FY25 Talent Events Look Back

Performance indicators

Here are the definitions for the performance indicators listed in the talent brand job family.

Glassdoor engagement

- Company rating
- Page views
- Followers
- Apply starts on jobs

LinkedIn Talent Brand metrics

- Career page impressions
- Percentage of page visitors who view jobs
- Percentage of new hires who visit our page

Team member engagement score

Our team member engagement or net promoter ("I would recommend GitLab as a great place to work.") score is measured annually in the Culture Amp survey.

Here are samples of the statements team members were asked to consider:

- I would recommend GitLab as a great place to work
- GitLab motivates me to go beyond what I would in a similar role elsewhere
- I am proud to work for GitLab
- I rarely think about looking for a job at another company
- I see myself still working at GitLab in two years' time

Team member turnover

Defined on the People Success Performance Indicators page.

Team member referrals

Overall number of job candidate referrals from GitLab team members.

SECTION: people-group/employment-branding/awards-process.md

Employer (or "workplace") awards and lists recognize GitLab's unique culture and help us spread the word about why this is such a great place to work. This page outlines the process to apply for and manage these award programs.

Overview of employer awards process

The Talent Brand Manager works closely with the Corporate Communications team and the Highwire PR team (external-comms Slack channel) on the employer/workplace awards process.

Employer awards definition: Any external award program focused on recognizing best workplaces, company culture, or team member experience.

Some awards and recognition lists are determined by the program organizers without input from GitLab, but many require an application and sometimes a team member survey. There is often a cost associated with applying for larger award programs. The Talent Acquisition team does not currently have designated budget for these costs for FY22, so the Talent Brand Manager will work with the Corporate Communications team to determine what will fit in the overall awards budget for each quarter.

Awards we've won

Here's a list of the awards we've recently won. The Talent Brand Manager maintains this list.

Determining which awards to apply for

This epic tracks issues for the awards we've applied for in the past, as well as the main awards we consider annually. This epic also includes Diversity, Inclusion, and Belonging (DIB) awards, which are managed by the DIB team.

We focus our efforts on awards that are either global or regionally focused. We avoid local (e.g. Best Workplaces in the New York Metro Area) because we're a global company and do not want our talent brand to be associated with one city or metro area.

Application process

Steps for the Talent Brand Manager:

1. When an award application deadline is upcoming, the Highwire PR team typically opens an issue for the Corporate Communications team about the upcoming deadlines, as well as any "early bird" pricing options. They will tag you in the issue (or via Slack) if this is a workplace award or has a culture component.
1. Review the application (typically in a Google Doc in the issue), draft responses where possible, and tag any other team members who will need to have input to the responses (e.g. Tag the DIB team for a DIB-related question).
1. If the application requires demographic (e.g. headcounts) or detailed benefits information: Create a Google Sheet with the info needed and clear instructions, and send a message to the

total-rewards Slack channel to request the info. It's best to allow a 2-week turnaround time for most awards when possible, and at least 4 weeks for extensive applications (like Great Place to Work).

1. If the application requires information that you don't know and that's not in the handbook:

Tag the appropriate team to ask for input on the Google Doc application. Note: Lots of typical application answers can be found in the handbook. See the 'helpful links' section below.

1. When the application Google Doc is fully completed, tag Jenn for review before submitting.

1. If GitLab is recognized, share with the VP of Talent Acquisition and Chief People Officer, and work with the Corporate Communications team to open the appropriate issues in the Corporate Marketing project for promoting the win both internally and externally.

1. Once wins are public, be sure to equip the Talent Acquisition team with any suggested candidate messaging to promote the win. Also update the awards list in the content library.

Awards that require a survey of team members

Steps for the Talent Brand Manager:

1. Open an issue for the survey administration in the Corporate Marketing project, including all details and due dates.

1. Work with the Corporate Communications team (external-comms Slack channel) and the People Group to determine a good date range to run the survey (taking into consideration other internal surveys, events, end of quarter/year, etc. to ensure maximum response rate). Note: We've experienced "survey fatigue" and low response rates when two surveys are run within the same month.

1. To get a list of emails to set up the survey, send a request in the total-rewards Slack channel with an overview of the request. They will respond with a spreadsheet, so be sure to include the format you need the emails in (e.g. First name, last name, email address).

1. When you're setting up the survey, if the email invite subject line is editable, consider changing it to "Take the survey: [award name]" or something more actionable so that team members will recognize it in their inbox. Change the "From" field to "GitLab" if possible.

1. If the survey audience is the entire company, give the IT team advanced notice (in the ithelp Slack channel) to ensure no issues with the email going through.

1. Create a second issue for team members about the survey, explaining the details about the award, instructions for the survey, etc. Here's an issue that can be replicated for future surveys.

1. On the day of the survey launch, send out a message in Slack (typically whats-happening-at-gitlab, but this depends on survey audience) letting the team know the survey is launching that day, and include the link to the associated issue where they can ask questions.

1. If needed to encourage higher participation, send follow-up reminders until the survey closes. Consider asking the Corporate Communications team send a follow-up reminder so that the message comes from multiple voices.

Helpful links for applications

Content for award applications can often be found in the GitLab handbook, including:

- General benefits information
- Our culture
- Company history
- Company values

- Job FAQs
- DIB programs
- All-remote work
- GitLab's press kit

SECTION: people-group/employment-branding/content-library.md

How to use the content library

Whether you're on the Talent Acquisition team or another team at GitLab, we want all team members to have the information they need to spread the word about GitLab and what it's like to work here.

Use this content library as a resource whenever you're acting as a talent ambassador for GitLab: When you're sharing on social media, having conversations with people in your network, speaking at an event, etc.

Life at GitLab at a glance

Quick facts

Fact	To date 2022-09-28
Headcount	2,000+
Countries	62
Remote team members	100%
Pets	330+

Source: GitLab team page

The current headcount number will be updated each quarter following our quarterly earnings call using the GitLab team page as our source of current team members and rounding that number down to the nearest hundred. This number will then be used across all careers sites that reference a specific number of team members.

Key messages about life at GitLab

- We're one of the largest all-remote companies in the world, and we've intentionally built our culture this way from our founding year.
- As a GitLab team member, you can work from anywhere with good internet. You'll have the freedom to contribute when and where you do your best work.
- Our mission makes it clear that we believe in a world where everyone can contribute. We make that possible at GitLab by running our operations on our product and staying aligned with our values in everything we do.

- More about life at GitLab and our culture.

Key messages about diversity, inclusion, and belonging (DIB) at GitLab

- Diversity, inclusion, and belonging (DIB) are fundamental to the success of GitLab. We infuse DIB in every way possible in all that we do.
- At GitLab, everyone has a voice and is empowered to contribute. This means that team members have the opportunity to speak openly about their experiences and provide suggestions to leadership in order to create a more diverse and inclusive culture.
- Through Team Member Resource Groups, event sponsorships, mentorship opportunities, and partnerships with HBCU's, we strive to create a transparent environment where people can and feel comfortable to show up as their full selves each and every day.
- More about DIB at GitLab.

Awards and lists recognizing GitLab as a great place to work

SECTION: people-group/employment-branding/glassdoor-escalation.md

The Talent Acquisition Operations and Insights team tracks Glassdoor reviews on a regular basis. We share this info regularly through:

- People Group Key Review monthly
- Direct escalations of negative reviews - require immediate action or response
- Talent Acquisition team meeting - sharing hiring-related themes that have come up

Responding to reviews

We respond to ~50% of positive "company" reviews, and we respond to most negative "company" reviews (see "when we do not respond" list). The reason we don't respond to every review is because this becomes very redundant, can appear inauthentic, and does not align with our efficiency value. We also do not respond to "interview" reviews.

When we do not respond

- When there is not enough content in the review (whether it is positive or negative) to respond in a meaningful way.
- When there is sensitive company information or personal details of team members (names, details about a personnel issue, etc.). In these cases, the Talent Brand Manager will consult with the PBP and Legal teams to determine whether a review warrants a review.
- When the review is a duplicate of a recent review that we responded to.

Who should respond

- Positive reviews related to a specific team OR GitLab in general: The Talent Brand Manager will respond.
- Negative reviews related to a specific team: A leader or manager from that team or department will respond.

- Negative reviews about GitLab or our culture in general, at the company level: A People Business Partner or member of the People Group (in rare cases, CPO)
- Reviews about our hiring or interview process: A member of the Talent Acquisition team will respond (in rare cases, VP of Talent Acquisition)

Escalation and response process

Escalating and responding to company reviews

The Talent Brand Manager monitors reviews on a weekly basis, and responds directly to ~50% of positive reviews on a bi-weekly basis. When the Talent Brand Manager sees a negative review posted, here is the process to ensure the review is escalated and responded to as soon as possible:

1. Open an issue in the Talent Brand project using the "Glassdoor" issue template.
1. Determine the team or department the review is talking about, the status of the poster (current team member or former team member), and where the person is located.
1. Draft a proposed response for review.
1. Based on the department, tag the appropriate People Business Partner or talent acquisition lead in the issue to offer additional context and review the response draft.
1. Determine the right escalation path within that specific department so that the leaders can be tagged and made aware.
1. Tag the Chief People Officer, VP of Talent Acquisition, and Senior Director of People Success for awareness.
1. Get feedback and approval from the impacted department, and work with the People Business Partner or talent acquisition lead to determine who is going to respond on behalf of the team. See Who Should Respond section below.

Escalating and responding to interview reviews

1. We do not currently respond to interview reviews unless there is negative feedback that can be addressed with a response. If necessary, use the same issue template and process we use for company reviews.
1. When there is an interview review that contains feedback that may be helpful for iterating on our internal processes, the Talent Brand Manager will escalate this feedback by tagging the appropriate hiring team, Talent Acquisition team (CES), or People Business Partner via the issue.

How to post a response

After we've determined who will respond to the review and the response draft has been approved:

1. Talent Brand Manager: Grant admin access to the responder via Glassdoor (this will generate an email invite). The responder should have an account with their GitLab email.
1. Responder: Accept the invite and login to the Employer Center on Glassdoor.
1. Responder: Navigate to the review (via the direct link in the associated issue) and you should now see a "response" box below the review. Paste the response in this box. The job title associated with your account will show up on the response, but not your name. If you'd like to show your name, be sure to include it in the text box of your response.
1. Responder: Comment in the issue to confirm the response has been posted.

1. Talent Brand Manager or PBP: If there is no further internal action needed, close the issue.

More about our presence on Glassdoor

For more details about how we manage our Glassdoor presence, return to the main Talent Brand page.

SECTION: people-group/employment-branding/people-communications.md

Introduction

"Internal communication" is the connective tissue that keeps everything and everyone in the company moving forward in the same direction. It's a broad term and is an aspect of our culture that every team contributes to in some form.

The People Communications & Engagement team aims to keep team members informed and engaged through compelling internal storytelling and timely information sharing to empower team members to become GitLab ambassadors.

This page defines how our People Communications & Engagement team operates to support GitLab team members and various cross-functional teams within GitLab.

Guiding principles

- · Be credible, transparent, open, and honest
- · Provide context, reason, and a call to action.
- · Be consistent on delivery, cadence, and tone.
- · Respect people's time and attention.

People Communications & Engagement Objectives

- Increase team member engagement and company advocacy through compelling storytelling and timely information sharing
- Empower team members to become advocates for our talent brand by connecting business updates with our values, mission, and purpose
- Drive team member engagement by creating a variety of touchpoints to meet team members where they look for information
- Instill operational rigor into our cross-functional change management processes
- Increase trust and connection between leaders and team members

GitLab team members can better understand how communication and engagement work together by reviewing our Engagement Strategy presentation.

Working with People Communications & Engagement

Given the amount of information we need to communicate with GitLab team members around the world it's important that we have a structured approach to communication & engagement so team members are provided a full view of things happening across GitLab.

There are several different ways our People Communications & Engagement team can support cross-functional projects depending on the need. These include:

| Type of involvement | What this type of involvement entails | How People Comms & Engagement can support |

| ----- | ----- | ----- |

| Review of communications | The most basic level of support provided is a review of planned communications, typical lead time is 48 hours | This means reviewing a single message or series of messages for tone and format, alignment with communication principles, cascade of information, and appropriate channel use |

| Collaborative communications planning | This is a partnered approach on the creation of a message or a communications plan anticipated to impact a significant amount of team members or have a high impact to a select amount of team members, typical lead time is 1-2 weeks depending on bandwidth | For projects with a defined DRI outside of the People Communications & Engagement team, we will often work together on a collaborative comms plan by reviewing and editing copy, recommending channels, cascade of information, and communications best practices |

| Accountable for communications | For project with change management complexity or a large communications component, we look to establish a comms DRI to be accountable for communications, typical lead time is 3+ weeks to understand the project and advise | This means writing communications, getting necessary stakeholder input, aligning to our typical template for leadership review, plus everything we would typically do for a review of communications |

| DRI for communication-based projects | Often times an entire project may sit with People Comms & Engagement (i.e. a large cultural shift like a Value change, changes to a major policy)

| In these cases someone from the People Communications & Engagement team leads a cross-functional project team to deliver a defined piece of work |

Depending on the level of support needed for a given project, the person assigned to that work from the People Communications & Engagement team can advise on process, standard templates and practices used, and suggest best practices for communicating at GitLab.

If asking for communications to lead communications when preparing key messages to be shared with all team members, we ask all departments to follow the process below:

1. Share the need for communications support by completing a request for internal communications support template as completely as possible and share the need with a member of our People Communications & Engagement team.

- These requests can be shared on Slack using the internal-communications-requests channel, or if confidentiality is a concern, please connect directly with:

- Devin Rogozinski, Senior Director, People Strategy & Engagement

1. Upon receiving the project brief, our People Communications & Engagement team will socialize the need with the comms-asks channel to determine who will be a DRI or partner from the People Communications & Engagement team or the broader talent & engagement team assigned to the project.

1. A communications plan including release timing, cadence, and appropriate channels will be developed.

1. At least ~48 hours advance notice is needed to plan a single message being shared

1. For more complex internal communications requests, we request at least ~7-10 business days advance notice to effectively collaborate together on a communications plan. We will opt to move more methodically depending on the scope and timeliness of the communication.

1. To expedite this process, you can create an initial communications plan using this template.

1. Once you have created the initial communications plan, share it with the People Communications & Engagement team on Slack using the internal-communications-requests channel, or if confidentiality is a concern, please connect directly with:

- Devin Rogozinski, Senior Director, People Strategy & Engagement

People Communications & Engagement channels

We use a variety of channels to communicate with various audiences within GitLab. The top channels we use, the purpose of each of these channels, and how everyone can contribute to each is as follows.

1. "While You Were Iterating" Newsletter... Communicating new updates that are important for all team members to be aware of on a twice a month basis.

- To contribute: Write a comment in the most current newsletter GitLab issue and tag @cmotes. Things to note when sending over content:

- Is it globally relevant to more than 75% of GitLab team members?
- Is this something all team members should know about and/or action?
- Does it align with our GitLab values?
- Make sure there is a team member action included
- Send over a 1-2 sentence draft description of your content. If necessary, include

additional context for internal comms team's background and knowledge - this is helpful when reviewing and finalizing the messaging.

1. Manager README Monthly Newsletter: Monthly proactive communication to people managers containing: what's coming up, reminders of what's important, guidance on team member talking points and what actions to take

- To contribute: Write a comment in the most current manager comms GitLab issue and tag @cmotes. Things to note when sending over content:

- Is it globally relevant to more than 75% of GitLab People Managers?
- Is this something all people managers should know about and/or action?
- Does it align with our GitLab values?
- Make sure there is a people manager action included
- Send over a 1-2 sentence draft description of your content. If necessary, include

additional context for internal comms team's background and knowledge - this is helpful when reviewing and finalizing the messaging.

1. All-team-member Slack channels (company-fyi and company-fyi-private): Timely important and action-oriented important updates to all team members

- To contribute: Read the Internal Comms Tiered System to determine if your message falls into Tier 1a/1b which would signal a company-fyi or company-fyi-private message. If that's the case, create a copy of and complete the request for internal communications support template and share on Slack using the internal-communications-requests channel, or if confidentiality is a concern, please connect directly with @devinrogo.

1. GitLab Handbook: For permanent and non-confidential updates, we consider how information should live in the GitLab Handbook.

1. GitLab Assembly: All-company synchronous time to hear from GitLab leaders and answer team member questions

- To contribute: Content creation is determined by the People Comms & Engagement Team with review by members of the E-Group.

GitLab Assembly

GitLab Assembly is our quarterly all-company meeting and is an opportunity for team members to hear from leaders and teams across the company. Assembly provides a holistic view of top priorities, customer stories and data, cross-collaboration, department deep dives, and other team member stories to bolster team member engagement, shared visibility, and company connectedness. Assembly is a 50-minute meeting consisting of ~35 minutes of content and ~15 minutes of Q&A and is scheduled to take place late in the second month or early in the third month of each quarter. To give global team members an opportunity to join live, there will be two live-hosted Assembly events each quarter, with the first event at usually scheduled 5pm PT (12am UTC) and the second event the next day at 8am PT (3pm UTC). However some quarters both sessions will take place on the same day.

The FY25 Assembly dates are:

FY25-Q1: No Assembly due to GitLab Summit

FY25-Q2: Tuesday, 2024-06-18, at 8am PT and 5pm PT

FY25-Q3: Thursday, 2024-10-03, at 8am PT and 5pm PT

FY25-Q4: Tuesday, 2024-12-17, at 5pm PT and Wednesday, 2024-12-18 at 8am PT

The tentative FY26 Assembly dates are:

FY26-Q1: Tuesday, 2025-03-18, at 5pm PT and Wednesday, 2024-03-19, at 8am PT

FY26-Q2: TBD

FY26-Q3: TBD

FY26-Q4: TBD

To produce each quarterly Assembly, the People Communications & Engagement DRI:

1. Works with the EBA team to schedule a date six to eight weeks in advance
1. Engages a production partner for the live event production
 - Collaborates with the production partner on run of show
 - Coordinates with the production partner on pre-records
 - Meets weekly with the production partner for the 6 weeks leading up to Assembly
1. Creates the agenda and sends out the Assembly calendar invites to all team members three to four weeks in advance of Assembly
1. Creates the event in Slido to open question submissions prior to both Assembly events
1. Partners with Functional Leaders on top-of-mind topics, and proposes a host, speakers, and segments
1. Facilitates and secures People Leadership reviews and approvals of proposed host and topics
1. Works with the CoS and CoS team to:
 - Determine CEO presentation specifics
 - Align on CEO key messages and themes to present
 - Schedule and attend feedback sessions with the CEO
1. Partners with the host and additional speakers on their presentations
 - Determines presentation specifics
 - Drafts content or delegates additional team members to draft content as needed
1. Partners with the production partner on the Assembly presentation deck and secures:
 - People Leadership review
 - Marketing and Design review
1. Engages with the internal Digital Production team and the production partner to secure resources for editing pre-recorded video content
1. Records the CEO presentation and facilitates the recording of any additional pre-recorded content

- Uploads to Google Drive for the Digital Production team to access as needed
 - Adds video timestamp transitions for the Digital Production team
1. Facilitates and secures final review and approval of video content and Assembly presentation deck by:
 - Host and speakers
 - People Leadership
 - Legal
 1. Facilitates a final technical check/dress rehearsal for the production company, host, and live speakers

On the day of Assembly:

1. Assembly host, speakers, and E-Group join a separate speaker Zoom that is broadcasted to the all-team-member Zoom 15 minutes prior to the event start time for event one and 5 minutes prior to the event start time for event two.
 - Speakers are asked to keep their camera on and microphone muted (until time to speak) for the entire duration of the meeting. They will not be shown at all times, but toggling on and off cameras in the speaker Zoom can impact the live production.
 - Speakers and production team will be joined in the speaker Zoom by one member of the People Communications & Engagement team.
1. The People Comms & Engagement DRI joins the all-team-member Zoom to facilitate any team member needs. The production company broadcasts the event countdown and facilitates the waiting room.
 - The chat from this Zoom will be backed up for reference.
1. At each event start, the host begins leading the meeting once the countdown is complete, and moves through the event run of show.
1. Team members are encouraged to submit questions to the Slido event and upvote questions they would like to see answered.
1. At Q&A, the Host reads questions aloud in up-voted order.
1. E-Group works collaboratively on a Q&A document to facilitate who will respond to each question.
1. An assigned scribe tracks Q&A directly in the agenda document.

After the second Assembly event:

1. The production partner shares the recording for both Assembly events with the People Comms & Engagement DRI.
1. The People Comms & Engagement DRI shares the Assembly recording with the Learning and Development team to upload to Level Up.
1. Once uploaded to Level Up, the People Comms & Engagement DRI shares final recording and any needed follow-ups with all team members in the next issue of the all-company newsletter, *While You Were Iterating*.
1. The People Comms & Engagement DRI/team requests feedback from team members, People Leadership, and E-Group post-Assembly.

People Communications & Engagement Planning

We operate an internal communications editorial calendar (confidential to a small internal group) with key company-wide announcements, campaigns, and events. To get added to this list, please review the Internal Comms Tiered System to determine if your message falls into Tier

1a/1b which would signal a company-fyi or company-fyi-private message. If that's the case, create a copy of and complete the request for internal communications support template and share on Slack using the internal-communications-requests channel, or if confidentiality is a concern, please connect directly with @kaylagolden.

Planning large-scale communications & engagement efforts across multiple channels

Timing of various messages and internal campaigns, and having a solid plan is a key to successful communication. As a company that's in growth mode, change is constant and we have a lot that needs to be shared with team members.

We operate as a lean team and due to limited bandwidth, we are unable to service all communications fully. Please review the Internal Comms Tiered System to understand how and what type of communications we can assist with.

Content topic	Percentage of Internal Share of Voice
-----	-----
Team member total rewards and program updates (Primarily Finance & People Group)	~30% share of voice
Values, culture, and team-building content	~20% share of voice
Leadership updates about key projects and functional changes	~20% share of voice
Business outlook / Product updates	~20% share of voice
Reactive, unplanned messaging (we know it happens!)	~10% share of voice

Your role in keeping GitLab team members engaged & informed

Everyone plays a role in keeping GitLab team members engaged and informed. If you're partnering with the People Communications & Engagement team, please keep these best practices in mind:

- · Take ownership of your subject matter expertise: If you're requesting something be communicated to team members, it's likely that your expertise on the change will be key, sharing as much as possible about a given change will be helpful.
- · Give feedback effectively and assume positive intent: Collaborating asynchronously can require a few back and forths before there's alignment, that's expected.
- · Set a due date and embrace iteration: Understanding when something is needed or if there's a different priority for a given piece of work helps us to prioritize.
- · Say why, not just what: Whether giving feedback or briefing in a need, add as much "why" as possible.

Cascading information to various groups within GitLab

It's important that we consider how information will be received by various sub-groups within GitLab before sharing a piece of information with all team members. A typical cascade of information may end up crossing through various channels in cases where a significant change is being introduced.

For example, if we were announcing a big, exciting new program we might cascade information as follows:

1. E-group provides input and feedback

1. People Group provided visibility to plan for team members questions
1. Managers receive information to ensure there is time to digest (people-managers-and-above and Manager README)
1. All Team members receive the information with their managers and leaders already well-versed on the change (company-fyi or company-fyi-private and "While You Were Iterating..." newsletter)

It's important to note that information cascading could be seen as lacking transparency. That's not the case, rather it allows for managers and leaders to keep people more informed as they will have a chance to understand key changes with enough time to then answer questions to their teams.

Runbook for contentious internal announcements

We have a runbook for internal announcements that could lead to heated conversation or disagreement among team members. It includes these steps:

1. A DRI will inform @devinrogo that there is a need for a company-wide communication. The DRI will be responsible for drafting the communications using this internal communications announcement template. This will include, at a minimum:
 1. Who is responsible for posting
 1. Where the message will be shared
 1. When the message will be optimally be shared
 1. Main messages to be communicated and message content
 1. An activity and communications timeline that includes key participants and their responsibilities. It will specify any planned follow up in the minutes, hours, and weeks after the initial communications. This should include:
 1. Who will be on call to respond in Slack or other channels immediately after an announcement, including coordinated leadership participation. Key leaders, including members of E-Group and often members of VP-Directs Group, should be aware of when an announcement will happen and the response expectations for them. For example, if there is a contentious Slack announcement, a designated group of people should be monitoring the thread and responding immediately after the announcement.
 1. Any AMAs or other designated plans for discussion or follow up communications
 1. Who is required to sign-off on the message and plan
 1. The desired timeline for sign-off
1. The DRI will share the draft communication with the Executive Sponsor and any other key senior stakeholders. If there are any questions around what can SAFELY be shared, the CLO or another legal representative should be included in the review.
1. Both legal and corporate comms should review planned communications of this nature as well with the appropriate stakeholders from each team identified in the comms plan.
1. Once the Executive Sponsors and Key Stakeholders are in agreement on the comms and plan, it should be shared with all of E-Group in e-group-confidential or in the E-Group Weekly as a discussion item. Plan feedback should be incorporated.
1. If applicable, once the plan has gone through E-Group review, it should be shared with the B.V. Netherlands Works Council and any other councils that have review rights. When possible, this should be done at least two weeks before a planned announcement to allow adequate time for review and feedback.
1. When possible, share with managers in advance (1-2 days before a broader announcement) and ask for their support in following up with their teams. We should be clear on how we expect them to support (answer questions, cascade info, manager mention, etc.)

1. When sharing announcements with the manager community, MR's may be staged in document form to allow for changes and clarification prior to sharing the MR with the broader team member community.

1. If the post includes a merge request (MR), we should ensure that we are following MR best practice before we post.

1. If discussion is happening in an issue, we can ask for manager mentions.

1. MRs should not already be merged. Team members should be invited to share feedback on a change and be clear on the intended merge timeline.

1. We shouldn't use separate MRs for removing and adding content. This makes it harder for team members to track changes.

1. After a communication is shared, there should be a placeholder for the Executive Sponsor and designated team to connect synchronously to review feedback and (if agreed upon) respond. A calendar hold should be placed on the calendar for 25 to 50 minutes after the communication.

1. A similar Executive Sponsor and designated team check in should be scheduled for the following day. This meeting can be canceled if it is agreed that it is not needed.

1. If there will be an AMA or other synchronous touchpoint with team members, the Executive Sponsor or designated team member can choose to schedule a meeting shortly before the session (optimally 1-2 hours before), so participants can align on their roles and their plan for communication.

This runbook outlines key steps to be followed. Additional steps may be added based on the communication and level of coordination required.

More to come

As we continue to grow our People Communications & Engagement function, we'll continue to add more detailed information to this page. Please offer feedback by suggesting edits to this page or reaching out in the talent-brand-engagement channel on slack.

SECTION: people-group/engineering/_index.md

Overview

As GitLab continues to scale, our need for tools and automation to manage our growth expands along with it. To help the People Group, we have a People Group Engineering team, that consists out of People Group Fullstack Engineers to make our team more efficient and improve the effectiveness of our core People Group.

Responsibilities include (but are not limited to):

- Automation and API integrations in talent acquisition
- Employment issues automation

- Integrations to assure SSoT
- Manage the code that runs the Employment Bot

Quick Links

Quick navigation to some of our other pages.

Page	Description
Organization Change	Our automation flow on how we streamline on processes.
Employment Issues	Information regarding our onboarding and offboarding issue automations.
Nominator Bot	Information regarding our custom Slack app, how to use it, FAQ's, and engineer guides.
Offboarding	Our offboarding automation flow and everything you may need to know regarding this.
Onboarding	Our onboarding automation flow and everything you may need to know regarding this.
Internal Handbook	Our People Group Engineering internal handbook.
Slack Integrations	Information on some of our slack integrations like birthday announcements, PTO, etc.
Miscellaneous	Some extra information regarding PTO, sensitive data, accruals, and more.

Working with us

If you'd like to request engineering assistance with an issue, bug fixes, urgent requests related to People Group processes or tools (like Workday) or anything relating to People Group Engineering, please start by creating an issue in the People Group Engineering project. All issues are reviewed and prioritized to a specific team through our kanban board. If you require general support with MR's, kindly collaborate with all of GitLab team members in mr-buddies in slack.

If you are looking for help regarding general inquiries such as: payroll, paid time off, benefits, etc. Please reach out to our People Connect team via HelpLab.

If you are looking to bring the People Group Engineering team into a discussion/issue/merge request on GitLab, please utilize our group tag: @gl-people-engineering to ping the appropriate team members.

Report bugs

If you want to report bugs about existing integrations, you can use any of the following templates:

- Bug with a /pops command
- Bug with Nominations

Urgent attention

We have monitoring setup in case some of our applications are no longer accessible. This is the

case for all of our integrations. This will trigger notifications to the People Group Engineer(s). If you need our immediate attention, feel free to use our peopleops-eng Slack channel. Avoid pinging people directly unless there is a real urgency to the matter.

Our workflow

The People Group Engineering board serves as the single source of truth on the engineering team's priorities. Issues follow a linear sequence, with a Workflow:: label indicating an issue's current status:

1. Workflow::Triage: Issues start here. Issues in triage must be further defined before they're able to be made ready for development. Once the problem and a proposal for solving it is defined to the point where an engineer can begin work, it can be moved to Workflow::Ready for Development.
1. Workflow::Ready for Development: Issues that are groomed and are ready for an engineer to begin work. They're well defined in terms of the problem, and have a proposal that's defined enough for us to begin work; not every detail needs to have been defined, but an engineer should be able to start work on this issue by reading the issue description alone.
1. Workflow::Next Up: These issues are determined as the next ones that we should work on. We try to keep this list to about 4 / engineer in the team.
1. Workflow::In Progress: Issues that are actively being worked on by a developer.
1. Workflow::Verification: Issues that have engineering work complete and ready for evaluation. At this point, the developed solution should be evaluated (by the issue reporter or another stakeholder) to verify that it solves the original problem.
1. Workflow::Complete: Once signed off, the issue should be closed and Workflow::Complete should be applied to signal the work is verified and complete.

There are three more states an issue can be placed in:

- Workflow::Waiting: Issues that are waiting from input from someone or are waiting on a dependency. These are issues that need input or progress from others before they can progress.
- Workflow::Blocked: These issues are either blocked by another issue or by missing API endpoints. The People Ops Engineer always adds the reason why an issue is moved to blocked.
- Workflow::On Hold: These issues are currently on hold and the requester has been informed about this. It is still an important idea but there may not be capacity or resources to move the request forward. When a change in capacity and/or resources happens, we will re-evaluate the status of the ticket.

Triaging new tickets

We have a performance indicator set to having new tickets being triaged within 7 working days. Everyone in the People

Engineering team can triage new tickets. What we do when a new ticket comes in:

- check if everything in the template is filled in, if not ask the author to fill it in and add the label Workflow::Waiting
- check if we have any follow up questions for the creator, if we do, ping the author of the issue and ask them the questions, add the label Workflow::Waiting
- determine the project labels (for example ~p-compensation-calculator, ~p-employment-automation, etc)
- determine the priority label (see priorities)
- determine the team label PopsEng::Team::Tech, PopsEng::Team::Engineering, etc). You can also find a GitLab board, with the issues sorted by team here.
- determine if it is a new project ~PopsEng::New Project or a bug ~PopsEng::Bug or an addition to an existing project or integration ~PopsEng::Addition
- when we have all the information needed to start working on the ticket, label it with either Workflow::Ready for Development or Workflow::Next Up

Note: for bugs, we have another performance indicator that requires us to take action within one working day. This is because often a bug in any of the integrations would lead to inefficiencies and manual work for the People Group.

Priorities

Before we state a ticket as fully triaged, we need to have the following information:

- is it compliance related?
- how often does the problem occur? Daily, weekly, monthly, annually?
- how many team members are affected by this?
- what is the manual effort (in time) currently required to accomplish this work today?

With that knowledge in mind we determine the priority of
