

s, for voluntary offboarding, the team member can work with their manager on messaging to share a company-wide message about their departure.

Once the news has been shared with the team member's team and other stakeholders, and messaging is agreed upon between the departing team members and their manager, the departure message should be shared in the team-member-updates Slack channel.

Managers and team members can optionally leverage this template as a guide on how to communicate a team member's upcoming departure:

text

I want to share that [team member's name] ([group] [role]) will be leaving GitLab, and [his/her/their] last day is (date of their last day). (Context to add about the team member's time at GitLab - examples: their favorite contribution to the handbook or they can use the update to express gratitude towards teams and individuals that have made their experience at GitLab positive.) I would like to take this opportunity to thank (team member's name) for their contributions and wish them all the best for the future. If you have questions about tasks or projects that need to be picked up, please let me know. If you have concerns, please bring them up with your manager. To keep in touch with (team member's name) he/she/they can be reached at (contact info - e.g. LinkedIn, email, etc.)

There will be situations in which team members prefer to share their offboarding message, and situations in which managers prefer to do so. Either is ok, so long as team member and manager have reviewed the messaging together prior to posting.

If someone is let go involuntarily, this generally cannot be shared since it affects the individual's privacy and job performance is intentionally kept between an individual and their manager.

If you are not close to an employee's offboarding, it may seem unnecessarily swift. Please remember that these decisions are never made without following the above process to come to a positive resolution first - we need to protect the interests of the individual as well as the company, and offboarding is a last resort. According to our values negative feedback is 1-1 between you and your manager and we are limited in what we can share about private employee issues. Please discuss any concerns you have about another employee's offboarding with your manager or your People Business Partner.

Given the expectations and responsibility that come with a VP and above position, when there is an involuntary offboarding for one of these positions, additional context for the personnel change can be provided to the organization.

4. Inform The Department

Managers should consider cross-posting the message in team-member-updates to inform the wider Department of the departing team member.

What Do We Share?

We strive to maintain personal information regarding all team members private, this includes

information regarding a team members voluntary or involuntary departure from GitLab. However, a manager with the consent and approval of the departing team member can share more details with the GitLab team regarding the decision to leave GitLab. If the departing team member gives their manager permission to share that information then the manager will share while making the departure announcement on the team call.

Regarding involuntary offboarding, certain information can also be shared with the GitLab team regarding the departure.

The departing team member may work with their manager to author a goodbye message for voluntary offboarding:

1. Work with your manager on the message that your manager will share in team-member-updates on Slack.
1. Send it to your manager for approval. If, as a manager, you are in doubt about the message - please reach out to your manager or aligned People Business Partner for additional review.
1. Managers are encouraged to use the suggested template (above link) and have the space to add more color wherever they see fit.

In some instances there will be no further clarification on why a team member has departed, if there are concerns you can address those with your manager. Different levels of transparency will exist based on maintaining respectful treatment for all departures. Having team members leave may be a learning opportunity for some, but should not be a point of gossip for anyone. Managers will need to balance the opportunity for learning with the expectation of privacy and consult their People Business Partner should they have questions.

Transparency is one of our values. In the case of offboarding, we opt to share the feedback only with peers and direct reports as needed, since we balance transparency with our value of collaboration and constructive guidance shared 1-1.

Turnover Data

GitLab's turnover data is only viewable internally.

Managing the Offboarding Tasks

Offboarding Issue

To track all tool deprovisioning, please open an offboarding issue following the offboarding standards.

Returning Property to GitLab

As part of offboarding, any GitLab property valued above 1,000 USD needs to be returned to GitLab.

For laptops, please check and refer to the Laptop Buyback Policy which states that team members may, at GitLab's discretion, have the option to keep or buy back their existing laptops either when it gets refreshed for a new one, or when the team member is offboarding. However, the

option to purchase or keep a laptop at no cost may be voided where the team member is involved in cases of investigation, misconduct, termination for cause of any violation of GitLab's Code of Business Conduct & Ethics, or other legal or security related inquiries.

To return your laptop to GitLab, please contact gitlab-laptop-recovery@gitlab.com immediately upon offboarding.

Navan Expense

This section of the Accounting Department.

To remove someone from Navan Expense Log in to Navan Expense and go to "Settings" in the left sidebar.

Select the right policy based upon the entity that employs the team member. Select "People" in the left menu.

Select the individual's name and click "Remove".

If the person has a Corporate Credit Card assigned to them, please notify Accounts Payable before un-assigning it.

Retrospective for Managers

For involuntary offboardings it is optional to do a retrospective on the hiring, onboarding and coaching/communication of the departing team member. As a manager, you can use this template for a retrospective. Please share the filled out template with your manager as well as the People Business Partner for your group.

Within the Engineering division this is a required process because it causes hiring managers to reflect on what led to the ultimate decision of parting ways with the team member, and how that might be prevented during future hiring processes.

Evaluation Framework

1. How could this outcome have been avoided?

1. Were there early signs that were missed?

1. In retrospect, what questions should have been asked to bring awareness and ownership to performance issues e.g. "How would you compare yourself relative to your peers"? - people are surprisingly honest here.

Unemployment Claims

Unemployment Claims in the US

In the United States, Unemployment Insurance provides benefits to GitLab team members who have lost their jobs through no fault of their own. The purpose is to provide temporary financial assistance to employees who meet certain requirements.

Unemployment insurance is administered at a state level and in compliance with Federal Law. Each state establishes its own eligibility criteria and regulations surrounding Unemployment Insurance with respect to the amount allocated, duration and eligibility for Unemployment Insurance.

Eligibility criteria include meeting the state specified requirements in terms of both earnings and time worked during the base period. In some instances the state may require additional supporting information particularly more extensive wage related details surrounding a claim.

Unemployment Insurance is funded through employer contributions and most states will have State Unemployment Taxes that apply however many employers typically pay the State Unemployment Taxes too.

Reporting a False Unemployment Claim

If you are a full-time team member and you are contacted by your state's Unemployment Commission to discuss your request for Unemployment Benefits, you may be a victim of Unemployment Claim Fraud.

Before giving out any information to the caller, please confirm that you are speaking with an agency employee. If you confirm with your state's Unemployment Commission that there is a fraudulent claim, please report it via HelpLab to the People Connect team.

Additionally here is a link to the U.S Department of Labor Contact Particulars to report Unemployment Insurance Fraud.

SECTION: people-group/offboarding/faq.md

Timing

When will my offboarding issue be created?

Offboarding issues are used for de-provisioning purposes so you, as the team member, do not need to do anything to get it opened or will have any action items within the issue.

The People Connect Team member assigned to your offboarding will ensure the automation triggers to create the offboarding issue on the last working day by 4pm (local time) Monday-Friday.

When will my access be deactivated?

Your access will be deactivated on your last day at 4pm (local time) on Monday-Friday

Can I provide my own update in the Team Member Updates Slack Channel?

Departing team members are encouraged to work with their Manager to compile and release an announcement in the team-member-updates channel. This should only take place once there is complete alignment with your leadership around the timelines involved and the impacted team/stakeholders have been informed.

A guideline and template for managers has been provided in the Communicating Departures Company-Wide section of the Offboarding Guidelines which highlights options to add a little color to the announcement e.g. favourite contribution to the handbook in addition to outlining what information should and should not.

When will I receive access to the Slack Channel gitlab-alumni?

If you are eligible for the Alumni channel, you will receive an email within 3 business days after offboarding.

Is there anything I need to do before my last day?

The following can be used as a guide on what actions could be taken before your last day:

- Prepare a handover document for your team / manager.
- Notify customers and introduce them to the team member that will be assisting them going forward (if applicable).
- If you feel comfortable, send a message in the team-member-updates Slack channel notifying everyone of your departure.
- If you are a team member located in France, please send your resignation email to the legal department, legal-employment@gitlab.com
-

Your Laptop and Account steps

GitLab.com

- Unassign yourself and re-assign any open projects, issues or merge requests to other team members or your manager.
- Transfer ownership of any scheduled pipelines to other team members or your manager. For example Deployment project scheduled pipelines.

1Password

- Copy over any personal passwords currently stored in 1Password (this will be disabled once offboarding is processed and you will no longer have any access to any of your personal passwords).

Google Drive

- Move any important Google Docs from your personal My Drive to a Shared Drive so that they will be available to your team and manager after you exit.

Google Calendar

- Delete any recurring meeting entries hosted by you and ask someone from your team to create new ones moving forward if needed. This is best practice as your Zoom account will no longer be licensed after your last day, any Zoom recordings will not be saved.

Other accounts

Set up accounts that you'll need access to after your last day. Ensure your personal email address is up to date with these accounts. They may include:

- Fidelity (US 401(k)): <https://www.fidelity.com>
- E-Trade (RSU): <https://www.etrade.com>
- Carta (Stock options): <https://login.app.carta.com/credentials/login/>

Laptop Wipe

It is required that your laptop is wiped on your last day. Please book an appointment with an IT Ops team member for your last day.

Under no circumstance should you be wiping your own laptop. Laptop wipes must be done from an IT Ops team member for logs. Reach out to ithelp if you have any other questions.

Can I keep my laptop?

If you are returning your laptop to IT please purchase a cardboard box and packing foam before your last day and expense it in Navan under Office supplies & consumables. IT will be sending a prepaid shipping label to return the laptop.

Please refer to the Laptop Buy Back Policy [here](#).

Compensation - Payroll

CXC & GitLab Contractors (only)

Please reach out to the Payroll team nonuspayroll@gitlab.com before your last day (ideally one week before) to get your final pay computation in order to submit your invoice before access is deprovisioned.

When will I receive my final pay?

This will vary depending on location and entity. Please refer to Payroll Pay Date Handbook Page. If you have any additional questions please contact NONuspayroll@gitlab.com or USpayroll@gitlab.com (depending on your location).

When will I receive (if applicable) commission payment(s)?

Any final commissions earned up until your last working day will be paid (directly deposited) in the next month's commission payroll cycle based on your location. Commissions are paid one month in arrears, so for example, if your last day is January 7, any January commissions would be paid in February. If you have any questions on this payment, please contact Sales Commissions at sales-comp@gitlab.com.

When do I submit my final reimbursable expenses?

Please create your final expense report in Navan (for employees), OR, please file any outstanding expenses with your final invoice (for contractors), so these can be reimbursed to you in a timely manner. We ask that you submit these at least one week before your departure date.

How do I submit reimbursable expenses if I don't have a GitLab access to Navan?

Please follow the process as listed on the Expense Handbook page. For any queries regarding final expenses, please send an email to ap@gitlab.com

Other Reimbursements, Refunds or Repurchases

- Please review our Loan Policy in the GitLab Code of Business Conduct and Ethics if it applies to you. Please also note that in the event that a loan is approved, a legal contract, in accordance to the team member's state, local or federal laws regarding loans and repayment of loans during employment, will be created by the Legal team. It will lay out the complete loan terms, repayment and refunding policy if applicable. If you leave GitLab with any loan balance not yet repaid, it will be refunded to GitLab, if applicable and legally allowed, as laid out in the terms of the original contract and with support from the Payroll team.
- Please review our Unpaid Leave section regarding payments in error.
- Please review our policy regarding Repurchasing Unvested Shares.

Total Rewards - Benefits

When will my benefits coverage end?

Typically, benefits coverage ends your last day with GitLab. In the US, medical, dental, and vision coverage will end of the month during which you leave, all other benefits end on your last day.

How will my stock options be managed? What if I have been at GitLab less than a year?

All information is on the Stock Options handbook page, specifically the Exercise Window after Termination section.

What if I am a designated Insider?

Reminder: If you are a Designated Insider, while employed by GitLab, each team member is required to comply with the Insider Trading Policy, which among things, prohibits team members who are in possession of material non-public information (MNPI) from (i) trading in GitLab's stock or other securities on the basis of that MNPI or (ii) disclosing MNPI to someone else who trades on the basis of such MNPI. The Insider Trading Policy also applies to a team member's immediate family members and household members. In addition, as a Designated Insider and while employed at GitLab you are required to have pre-clearance before making any transactions in GitLab's stock or other securities.

After you are officially no longer employed by GitLab, your trading account should be unrestricted. However, we recommend that you consider a 90 day "cooling off" period prior to trading in order to avoid any intentional or accidental violation of applicable securities laws. If, however, you are aware of or in possession of any MNPI when your employment or service relationship with GitLab ends, you may not trade (whether directly or indirectly) in GitLab's stock or other securities until that MNPI has become public or is no longer material. It is a violation of applicable securities laws to trade on MNPI.

If you decide to trade in GitLab's stock or other securities prior to the 90th day following the end of your employment or service relationship with GitLab, we suggest that you evaluate whether you have MNPI prior to trading.

Will my ESPP contributions be reimbursed?

Yes. Payroll processes ESPP reimbursements during payroll cycles with termination reports. You may receive your reimbursement on the pay period after your termination. Please make sure you unenroll from ESPP in ETrade as well.

What happens to my Growth and Development Benefit?

More information can be found in the Growth and Development Reimbursement section, which states that if you voluntarily terminate employment with GitLab, any expenses or reimbursement related to this benefit will be refunded to GitLab.

USA

If you are a US-based team member, your medical, dental, and vision benefits will cease on last day of the month of your departure, all other benefits will cease on your last day. You are eligible for Consolidated Omnibus Budget Reconciliation Act ("COBRA"), the COBRA administrator has been notified and will send out the paperwork to your home address on file. You will have 60 days from the time you receive the COBRA packet to enroll either through the mail or online, your COBRA coverage date will be backdated to the first day you are without cover. More information on timelines and contact information for our COBRA administrator can be found in the COBRA section.

You may also be eligible under the Patient Protection and Affordable Care Act ("PPACA") for subsidized health care options via the marketplace. If you are interested it is important that you sign up with the market place well before the 15th of the month to have coverage for the following month.

Under the Health Insurance Portability and Accountability Act of 1996 (HIPAA), if you need a certificate of credible coverage please download it from your current carrier's online portal or request it from the Compensation & Benefits team by emailing total-rewards@gitlab.com. If you move, please email people-connect@gitlab.com so that we can keep your address up to date in Workday.

Where can I find my pay stubs?

Former team members will retain access to ADP for three years after they leave so they can access pay stubs and W-2s. Former team members will need to access ADP portal directly since Okta has been deprovisioned. If you experience login issues, please send an e-mail to uspayroll@gitlab.com so the team can assist.

How do I roll over my retirement account and funds?

Contact our 401(k) administrative vendor directly to get more information about this process. More information can be found on the 401(k) section and 401(k) Rollover section of the US Benefits handbook page.

What about my HSA/FSA Account(s)?

Please see the Offbarding FSA Section of the US Benefits Handbook page for details on how your

Medical/Health or Dependent Care FSA will be treated when you leave GitLab.

Please see the Offboarding HSA Section of the US Benefits Handbook page for details on how your Health Savings Account will be treated when you leave GitLab.

What about my Supplemental Life Insurance?

Please review our Cigna Supplemental Life Insurance/AD&D section.

Canada

If you are a Canada-based team member, your benefits will cease on your last day of work. There may be options to convert elements of your benefit plan to individual coverage, without medical questions. Please see the Offboarding Section of the Canada Benefits Handbook page for more information.

Spain

See the Spain Benefits page of the Handbook for details on the possibility of converting your benefits to individual coverage.

Other

What if I move?

If you move, please email people-connect@gitlab.com so that the People Connect team can keep your address up to date in Workday.

Do I need to return previously expensed Home Office Items?

Please read about the laptop guidelines [here](#). Home Office Items under \$1000 USD per item don't need to get returned and are okay for you to keep. If you make a purchase that will cost GitLab \$1000 USD per item (or over), this is classed as company property and you will be required to return the item(s) if you leave the company.

SECTION: people-group/offboarding/offboarding_standards.md

Purpose

These standards specify requirements related to the offboarding of GitLab team members from all GitLab related computing resources and data assets so as to protect our customers, team members, contractors, company, and other partners from harm caused by both deliberate and inadvertent misuse. Our intention in publishing these standards is to outline information security standards intended to protect GitLab assets.

Scope

These standards apply to all GitLab team-members, contractors, advisors, and contracted parties

interacting with GitLab computing resources and accessing company or customer data.

Roles & Responsibilities

Role	Responsibility
-----	-----
GitLab Team Members	Responsible for following the requirements in this document
People Connect	Responsible for implementing and executing this document
People Connect (Code Owners)	Responsible for approving significant changes and exceptions to this document

Offboarding Procedure

Notice of Offboarding

Once the termination process has been approved and completed in Workday either by the departing team member's Direct Manager (Voluntary) or by Team Member Relations (Involuntary), automations in place will detect the new offboarding and attempt to open the issue, if within a valid offboarding window for the specified day. In the instance of a Voluntary Termination, this process will follow the resignation process initiated by the team member directly in Workday.

In alignment with the needs of both People Connect and IT Operations, scheduled offboardings will be opened between 4:00 - 5:00pm of the team members' local timezone in Slack Monday-Friday.

Note: In instances where team members require deprovisioning initiated outside of these times, team members or their manager should reach out to IT Operations to arrange an alternate time.

Should the effective date fall on a day which People Connect is unable to support e.g. a Family and Friends Day or Global Holiday, People Connect will reach out to the People Business Partner to discuss alternate offboarding options.

Offboarding Assignments

Per the People Connect Rotation, the offboarding will be assigned directly in the Offboarding Issue.

Creating the Offboarding Issue

Offboarding issues are created automatically using the data that is populated by Workday. The assigned People Connect team member will be automatically added to the list of assignees once the offboarding issue is created.

Many teams work to deprovision access including the IT Operations, this should be regarded as urgent and all tasks expected to be completed within 5 working days, with the exception of laptop returns, which can take 2-4 weeks.

Note: If the team member is temporarily transitioning to a contractor or consultant role, please proceed with the full offboarding process and create a separate onboarding issue to grant only specific temporary access for what they would need to fulfill their contractual

obligations.

Creating the Offboarding Issue Manually

In the event that the offboarding issue is not automatically opened or an urgent issue is needed to be opened, the People Connect member can open the offboarding issue manually, by following the steps below:

1. In Slack, go to your profile as if you were going to send a Slack message to yourself. Type the command /pops run offboarding <EMPLOYEEENNUMBER>.
1. You will be pinged in Slack once the offboarding issue is created, which usually takes 30 seconds or so. The ping will include a link to the offboarding issue and merge request removing from team page.
1. You will need to check the Department, GitLab Email Address and GitLab Handle within the issue are correct.

Offboarding Tools

Google Workspace

IT Ops will follow the below steps to set up an auto-response that notifies the sender that the team member they are trying to reach is no longer with GitLab and who to contact.

1. Navigate to the Google admin portal and search for the email account.
1. Unsuspend the account, reset sign in cookies, reset password, do not email the password.
1. Move account into the Former Team Memembers Organizational Unit.
1. Use GAM to set a Out of Office Message on the account
1. Add the appropriate template per team member's department under the Customize rejection notice

The Out of Office message will stay on the account for 90 days, afterwards ITOPs will follow up and archive the account in the G-Suite vault.

Slack

- Bots

IT Ops check if the team member has created any bots before disabling the account. Go to Slack or on your admin Slack profile click Menu >> Configure Apps >> Custom Integrations >> Bots and search through the bots' list for the team member. If a bot exists, please DM the manager to confirm if the bot should be removed.

Team Page

As per the automation in place, a merge request is automatically created to remove the team member from the team page. This will update the following:

- Removing the individual file from the data/teammembers/person directory
- Removing the picture used in the previous file
- Adjusting the reportsto in case the offboarded team member had reports

- Removing the pet picture in case the team member had any
- Removing the pet page entry
- Update the CODEOWNERS file: change to the manager or remove if the manager is already a codeowner for that file

The People Connect Team member will need to complete:

- Remove the team members ReadMe
 - If the ReadMe is in a private project, request assistance from the IT Ops team to delete (you can tag them in the team page MR and private Slack channel)
- Check for hardcoded references
 - The People Connect team member handling the offboarding should check to see whether the offboarded team members name is listed on any other public Handbook pages. This can be done by doing a Google search for the team members name and "GitLab" - this should pull up results that reflect any association with the team members name and GitLab (including a ReadMe).

Offboarding Compliance

The People Connect Team ensures all offboarding issues are opened within each week of the offboarding effective date (the last day worked).

All offboarding tasks by all Departments need to be completed within 5 days of the offboarding date. For systems that are more critical and time sensitive, these will be completed within the first 24 hours (example 1Password, Slack) by the relevant Departments. Information about application & system deprovisioners can be found on the Tech Stack Applications handbook page.

To ensure a successful completion of the offboarding issue, it is important that all tasks are checked off, whether the system/tool is applicable to the offboarding team member or not. Checking the box indicates one of the following:

- I have revoked team member access to this particular system/tool
- I have checked and this team member was not given access to this particular the system/tool

Exceptions

Exceptions to this policy must be approved by People Connect.

SECTION: people-group/people-business-partners/_index.md

Vision

The People Business Partners are trusted and strategic advisors, coaches, and change agents to senior leadership, providing data driven insights and expertise on people-related matters, to inform and support a tightly aligned business and talent strategy.

Our Team

Each People Business Partner (PBP) at GitLab is aligned to one or more specific departments or divisions and partner with the leaders of those teams to provide consultation on a range of talent matters. PBPs provide leadership coaching, talent program execution, and drive relevant people-focused initiatives that foster a high performance culture within our teams.

How we work

PBPs become embedded within their client group in order to ensure a deep understanding of their teams' business goals and priorities, how they work, and how best to align the People Group goals with the business goals to ensure we are driving a high performance culture in each division. PBPs attend leadership staff meetings and offsites, get to know team members, and are the DRI for talent programs and initiatives within the team.

PBPs collaborate across the People Group to ensure people and business strategy are tightly aligned. PBPs are responsible for the execution of many people group driven programs within their aligned division including our talent management programs, total rewards programs, engagement survey action planning, and specific organizational health initiatives driven by the unique needs of each team. We do this by collaborating closely with the DRIs on these programs, as well as the leadership team of each division.

People Business Partner Alignments

Please reach out to your aligned People Business Partner (PBP) to engage in the following areas:

Contact	Division or Departments
-----	-----
Carolyn Bednarz	People Group
Carolyn Bednarz	Legal and Corporate Affairs
Carlie Russell	Sales - Partners, CSM & Renewals, Solutions Architecture, Professional Services
Tracy Lu	Sales - APJ
Giuliana Lucchesi	Finance
Giuliana Lucchesi	Product
Giuliana Lucchesi	CISO (E-Group)
Aurelia Akpan	Security
Jenny Burns	Sales - EMEA
Jess Durbin	Engineering - Core Development, Expansion
Kristina Bullock	Chief of Staff to the CEO
Kristina Bullock	Engineering - Customer Support, Infrastructure, Quality
Lauren Tepper	Sales - AMER, Public Sector, Global Digital, Field Operations
Brandi McDonald	Sales & Marketing

How to partner with PBPs to foster high performance in your team

Team Structure and Organizational Health

People Business Partners partner with senior leadership to drive organizational design initiatives in each division that drive results and enable a culture of belonging and career growth. Please reach out to your PBP to discuss new organizational structures or re-alignment of team members.

Additionally, PBPs support team member engagement in each division using sentiment data from our engagement surveys and driving action planning in the divisions. You can also talk to your PBP about specific retention concerns or strategies as needed.

For more information

- 1. Organizational Design
- 1. GitLab Job Frameworks
- 1. Team Member Engagement: Engagement Survey analysis and action planning

Talent Program Execution in your division

PBPs collaborate with Talent Management, Talent Development, Total Rewards, and all People Group teams to execute talent programs in each division. Where appropriate, PBPs contribute to project teams to ensure talent programs meet specific business needs.

For more information

- 1. Talent Assessment programs including promotion and career development
- 1. Succession planning

Leadership coaching and development

PBPs can provide invaluable leadership coaching on a range of issues such as team cohesion, team member development, team performance challenges, retention, and more. When needed, PBPs can act as an unbiased third party to discuss issues or problems and possible ideas for next steps.

For more information

- 1. Support in leveraging leadership development tools for specific growth opportunities such as 360s for people leaders and external coaching
- 1. For direct manager support on underperformance, please refer to Team Member Relations

Collaborating with the PBP team on projects

People Business Partners often collaborate with others in People Group or other teams on talent programs where the DRI sits outside the PBP team. PBP's can provide business context, needs analysis, championship of new programs in our aligned client groups, and support change management related to new initiatives. To clarify the PBP's role in a project, we have provided the following framework to help ensure the goals of the collaboration are met. The PBP team works together to assign the appropriate PBPs to cross-functional projects to ensure a diverse view of the business is included. PBPs play a key role in bringing talent programs to life in

each division. A framework for how collaborate in project teams is below.

| PBP Role in a Project | What to expect | Program examples |

|-----|-----|-----|

| Accountable | PBP is not the enterprise program DRI, but is responsible for the execution in their client group. The program requires significant lift by team members/managers. In this type of project, a PBP is part of the core project team to bring business perspective to the build phase, helps develop a communication/change mgmt plan, and executes the program in their aligned client group, including any bespoke enablement needed. The PBP is often the face of this program for their client group, and recipient of team member feedback | Talent Assessment, Promotion, ACR |

| Consulted | PBP provides input on how the program can be most effectively communicated or embedded in their division, but may not have a direct role in execution. Engaging the assigned PBP in reviewing comms or supporting change management can help drive adoption deeper in the organization | Elevate |

| Informed | PBPs should be made aware of the project as it will impact team members and questions may be directed toward the PBP team. If PBPs are given a preview of comms for final feedback and visibility before launch, they can help ensure the comms will meet the needs of their client group | Policy or benefit changes that impact team members |

PBP Talent Program DRI

The PBP team assigns specific PBPs and/or a PBP Program Manager to cross-functional projects to ensure participation from the PBP team in a scalable and efficient way. If you are the PBP DRI for a talent program, you play an important role in bringing business insights to the wider project team, and in enabling the rest of the PBPs to prepare and execute the program successfully with their client groups. Below are ways to do this effectively:

- Ensure PBPs have regular updates on the program including project timeline, any changes to prepare for, and what information is appropriate to be sharing with our client groups to successfully prepare.
- Stay informed on the details of the program in order to answer PBP questions as much as possible to assist the program DRI
- Collect feedback from PBPs in advance of key program decisions so that PBP DRI can accurately represent a well rounded view of the PBP team feedback
- When appropriate conduct tool testing (ex/ Workday)
- Carefully review communication and training materials with the lens of the business in mind to help proactively address questions that might arise
- Help PBPs stay accountable to any milestones or deliverables by keep due dates and actions top of mind for the team

Global People Compliance

The Global People Compliance team safeguards GitLab's most valuable asset·our people·by implementing robust compliance frameworks that protect team member data while enabling our innovative all-remote culture to thrive across global jurisdictions.

We collaborate strategically with the entire People Group, Legal, Payroll, and other organizational teams to develop compliant processes throughout the team member lifecycle·from sourcing and screening to offboarding. Our work ensures GitLab meets both regulatory requirements and stakeholder expectations in an increasingly complex global landscape.

We proactively identify, assess, and mitigate compliance risks that could impact GitLab's operations. Our team develops policies that protect GitLab from potential regulatory penalties, and ensures adherence to all applicable employment laws across multiple jurisdictions. Our compliance expertise directly supports GitLab's strategic priorities by:

- Enabling confident expansion into new markets with clear regulatory guidance
- Streamlining compliant hiring processes to secure top talent globally
- Providing decision-making frameworks that balance innovation with compliance

<i class="fa-brands fa-slack"></i> HelpLab

Introduction

People Connect is GitLab's centralized team member support model that provides a single point of contact (SPOC) for all people-related questions and requests - taking the guesswork out of finding answers that may not be immediately apparent in the handbook, while creating space for team members to remain productive and focused on what they do best.

Moving away from a multi-channel support model team members can now route all people-centric questions and requests directly to the People Connect team.

Areas of Support

Team Members are encouraged to reach out to People Connect around any topic that could be considered 'employment related' such as compensation and benefits; leave accruals; onboarding processes; bonus nominations; country hiring; relocations; name changes etc.

People Connect provides team member support for all of the functional areas within the People Group including Total Rewards; Diversity Inclusion and Belonging; People Operations; the People Business Partners and Global Workforce Management.

Additionally our team of generalists are equally able to support queries and requests that are external but in many ways still related to the People Group such as Expense Reporting (Accounts Payable) and Payroll.

Interacting with People Connect

Our Team

People Connect is comprised of both generalists and specialists from within the People Operations fold - all of whom have a broad knowledge of all things people within the context of our unique all-remote environment.

The team collaborates intensively with various internal and external stakeholders to ensure that the GitLab Handbook is consistently maintained, working to ensure that all employment-related information is easily accessible to all whether entity-based or through a PEO.

People Connect Manifesto

- Every team member interaction is an opportunity to empower and educate.
- A spirit of learning and a commitment to service are the heartbeat of People Connect.
- We share knowledge and grow together - working to keep one another accountable and informed.
- Service Desk centricity means in-issue interactions only always being mindful of team member privacy and data protection.
- Label and Enable.

Service Desk

HelpLab is a GitLab's branding of the ServiceNow Platform.

ServiceNow is a SaaS Enterprise Service Management Platform that enables organizations to gain operational efficiencies by centralizing and automating Service Life Cycle Management. Simply put, it's a Support Ticketing System that will allow us to provide faster and more accurate

help so that we maximize the Productivity of our Teammates.

Methods of Engagement

| Interaction Type | Communication Mechanism |

| ----- | ----- |

| Internal: Inquiry is from a current GitLab team member | HelpLab. |

| External: Inquiry is from a former GitLab team member or External party | people-connect@gitlab.com |

GitLab remains a Handbook First organization. However, in instances where the answer to a people-related question is not apparent, the next port of call would be People Connect.

The People Connect email alias is restricted and active GitLab team members will NOT be able to email this alias, and should be utilizing HelpLab instead. Former team members or External parties should use the People Connect email for queries or requests.

What to Expect (SLA)

Once a team member has submitted a question or request using HelpLab, they can anticipate acknowledgement in the thread of their case within 24 hours.

People Connect rests on a tiered model which categorizes inbound queries and requests according to nature and complexity this in turn should guide the anticipated resolution time unless otherwise specified by the responding generalist.

On occasion team member interactions i.e. · 1% require the direct input of a Subject Matter Expert (SME), calling for complete hand-off to a Center of Expertise (COE) - in such instances the interaction will be categorized as a Tier 03 with the responding generalist initiating the hand-off in a period · 24 hours.

| Tier | Query Type | Resolution Time |

| --- | --- | --- |

| Tier 01 | First Line Resolution e.g. Administrative Support or Transactional Requests | · 24 Hours |

| Tier 02 | Semi-Complex Resolution e.g. Root Cause Analysis or Solution Finding | · 72 Hours |

| Tier 03 | Center of Expertise Hand-Off e.g. Policy Exception or Significant Process Change | · 24 Hours |

Team Member Satisfaction

The People Connect model was compiled with our team members and their experience of GitLabs all-remote workplace in mind - making feedback an important element in ensuring our efforts and iterations are consistently aligned to the broader company values.

Metrics

- Team Member Satisfaction
- Ticket Volume by Category
- Tickets Opened vs Tickets Resolved

- Ticket Distribution
- Ticket Resolution per Tier
- Average Ticket Resolution Time

Welcome to the People Operations Team Handbook

- Our Mission is to provide extraordinary People support by developing and implementing policies, programs, and services that contribute to our team members' healthy, safe, and productive work environment.

People Operations Teams at GitLab

Here are how the team members divide their work to ensure the best results:

- The People Connect Team is responsible for onboarding, career mobility, offboarding, bonus processing, People Connect, personal information oversight, new hire/anniversary swag, and more. This team is also responsible for job changes (promotions and transfers), relocations, basic People data reporting, and process liaisons during new policy and program implementations.
- The Employment Solutions Team is responsible for our country and location roadmap as we consider which countries to hire in, and which employment solution is best. The team participates in the 'Business Expansion Committee' to develop a plan of country conversions, new country creations and changes in employment solutions to reduce risk and improve the team member experience. This team also supports relocations and visa/sponsorship inquiries and needs.
- The People Compliance Team works collaboratively to partner, manage and protect our Team Members personal and professional information, ensuring documentation confidentiality, and implements global compliance requirements to help meet internal stakeholder expectations.
- The People Tools & Technology Team
- The People Analytics Team is responsible for working with stakeholders to develop and report various People Metrics and KPIs for the business. Additional insight is also providing using statistical analysis or experimental design to help understand effects of different People related initiatives.
- The People Engineering Team

Connect With Us

How We Work

Responsibilities

People Operations is a Department under the People Division.

HelpLab

The People Operations Department primarily uses HelpLab as the primary tool for all GitLab's People Operations-related queries. This is where folks from other teams can ask for help, direction, and receive answers or direction to the correct team from the People Connect team.

You can also tag subsets of the People Operations Team in other slack channels using:

- @peopleanalyticstriage - this should be used in the data channel when there are questions or concerns about people data in dashboards or Snowflake

GitLab Groups and Projects

The People Operations, Technology & Analytics Team primarily uses these sub-groups and projects within the main People-Group public GitLab Group:

- People Operations is the primary public Group for the GitLab People Operations Team. This group contains 4 public and 1 private project:
 - General is the public Project containing issues related to the People Operations team. This project is where any team member can create People Ops-related issues for the team to review.
 - Employment Templates is the public Project which manages templates for the entire team member life cycle (onboarding, career mobility, offboarding, etc). Issues cannot be created in this project, only MRs to the templates and files.
 - People Ops Team Training Issues is a private Project which houses training issues for new People Operations hires.
- People Operations is the private Group for the People Operations team. This group contains two private Projects.
 - Internal handbook is the private Project which contains the content for the internal People Ops internal handbook.
- People Analytics is the private Group for the People Analytics team. It contains 3 private projects.
- People Analytics is also a private, confidential Group for a small set of GitLab Team Members. This group is used to collaborate on sensitive projects and issues. There are 2 private projects in this Group.
- People Tools and Technology is the public Group for the People Tools and Technology team. It contains one public project.
 - General is the public Project where any team member can create an issue related to People Tools and Technology.
- peoplegroup-eng is the public Group for the GitLab People Engineering team. This group contains one public sub-group, 10 public projects and 4 private projects.
 - People Group Engineering is the main public Project for any team member to create issues related to People Engineering.
- People Engineering this is the group that contains all of the People Engineering projects.
- People Compliance is the private Project for GitLab team members to create People Compliance-related issues.
- People Compliance is also a private confidential Group for a small set of GitLab team members to collaborate on sensitive projects and issues. This group contains 5 private Projects.

You can tag the People Operations in GitLab using:

- '@gl-people-connect-team' - this notifies the entire People Connect team

One Team, One Goal

- CREDIT

- We listen to each other's ideas and are open & honest with each other
- We treat everyone with dignity and respect
- We assume positive intent towards GitLab's success
- We can agree to disagree, but we move forward as one team committed to our common goal
- We don't hide from difficult conversations
- We critique our process, tackle mistakes as a team, and seek to get better
- We are invested in our team members development
- We honor our commitments
- We have fun!

We Deliver Results

- We know how our work aligns with strategic initiatives and how it will help the People Group deliver impactful results
- We maximize the capabilities and services of our vendor-partners
- We actively look for ways to improve existing processes

Confidentiality is Critical

- We all have a responsibility for People Data Security, Compliance and Confidentiality
- The confidential information we have access to must always be processed fairly and lawfully, and limited to only what is necessary
- Confidential information is never shared other than strict and specific guidelines and processes, according to our Privacy Policy

Additional beliefs held by the People Ops, Tech & Analytics Team include

Overview

People Analytics uses data-driven insights to improve talent decisions and workforce processes at GitLab. We're part of the People Strategy team, helping inform People Group decisions at all organizational levels through reporting, data solutions, and statistical analysis.

People Analytics Team Members

- Adrian Perez: Sr. Manager, People Analytics
- Shane McCormack: Staff Analyst, People Analytics

What We Do

Our Mission: Provide data insights to inform People decisions across GitLab by collecting and analyzing organizational, people, and talent data to improve business outcomes.

Key Objectives:

- Reporting Solutions - Work with stakeholders to develop automated reporting solutions that deliver relevant People metrics efficiently and accurately
- Data Solutions - Collaborate with the Data Team to build scalable data models to support reporting and analytics
- Analytical Solutions - Apply advanced statistical techniques (clustering, regression, survival analysis) to generate actionable insights and data-informed decisions for People Group and leadership throughout GitLab

Tools & Resources

Primary Tools

- Tableau - Data visualization, dashboards, and ad-hoc analysis
- RStudio/R - Statistical modeling and data cleaning. Learn more in our [Rstudio handbook page](#)
- Snowflake - Data warehouse and SQL exploration
- Culture Amp - Employee surveys and assessments
- Google Sheets - Stakeholder-specific solutions when needed

People Analytics Handbook Contents

- People Analytics Data Guide - Data models and metric definitions
- People Data Governance - Data quality and compliance
- People Analytics Tableau Dashboard Overview - Common dashboards and usage
- People Analytics Survey Support - Culture Amp survey administration

External Resources

- Wharton People Analytics - Annual conference and research
- AIHR People Analytics - HR and analytics resources
- HR Predictive Analytics - Textbook with practical examples
- Google re:Work - Introductory resources
- Handbook of Regression Modeling in People Analytics - Keith McNulty's open-source book of regression modeling with examples in R and Python
- Handbook of Graphs and Networks in People Analytics - Keith McNulty's open-source book for Organizational Network Analysis
- The Fundamentals of People Analytics - Craig Starbuck's open-source book with examples of statistical analyses commonly used by People Analytics teams with examples in R

Data Governance & Security

GitLab's commitment to transparency and efficiency extends to our data governance framework. The People Analytics team collaborates closely with People and Legal teams to ensure we only access data we are authorized to use. Our process includes access verification and stakeholder approval for all data requests, maintaining strict compliance with applicable laws and regulations.

Core Governance Principles:

- Source System Priority - People Group daily operations remain in their source systems to maintain data integrity and workflow efficiency
- Strategic Data Warehousing - Our data warehouse, built on technologies like dbt and Snowflake is reserved for "up and out" organizational reporting and analytics
- Data Minimization - We only bring in the data needed in reporting and anonymize information whenever possible to protect individual privacy
- Comprehensive Tracking - We track data from source system to all downstream systems to understand and mitigate risk throughout the data lifecycle

This governance framework ensures that data remains consistent, reliable, and easy to work with while protecting sensitive information. For detailed information about our data governance processes, see our Data Governance handbook page.

Working With Us

Submit requests and ideas using issue templates in the People Analytics project.

SECTION: people-group/people-ops-tech-analytics/people-analytics/data-governance.md

As data becomes more central to decision-making, it is essential to establish a robust data governance framework to ensure the accuracy, completeness, and confidentiality of data.

Importance of Data Governance in People Analytics

Data governance in people analytics is essential for several reasons. First, it ensures that data is accurate and reliable. Accurate data is critical to making informed decisions about hiring planning, recruitment, retention, and engagement. Second, data governance ensures that data is consistent across different systems and platforms, making it easier to analyze and compare data. Third, data governance ensures that data is secure and confidential, protecting the privacy of team members.

Data Governance Elements

Data Quality

Data quality is critical to the success of people analytics. It involves ensuring that data is accurate, complete, consistent, and timely.

Data Security

Data security is essential to protect the privacy and confidentiality of team member data. It involves implementing measures such as access controls, data encryption, and data masking to prevent unauthorized access to personal and sensitive data.

Data Ownership

Data ownership involves defining roles and responsibilities for managing data. It includes identifying data stewards and data custodians and defining their responsibilities for managing data. At GitLab, we use the hub and spoke model as a way to share data ownership between the Functional Teams, in this case the People Analytics team, and the central Data Team.

Data Retention

Data retention involve defining policies for storing and preserving data. It includes defining retention periods for different types of data and ensuring that data is securely archived when it is no longer needed.

Data Governance at GitLab

At GitLab, access to all data in our warehouse is restricted to the Data Platform Team as the data custodians. Besides the data platform team, only Analytics Engineers and Data Analysts who have a business reason and are approved by the People Team, as the data owners, can access the People Data.

Access to people data is processed through an access request, which is approved by the VP, People Operations and Technology before being provisioned.

Conditions to process People Data

Here are some guidelines that the GitLab Data and other functional teams follow for management of people data:

1. Only collect data that is necessary for the intended purpose. Avoid collecting excessive data that is not needed. You can read more about this topic in our [Data Minimization page](#)
1. Ensure that the data collected is accurate and up-to-date. Outdated or inaccurate data should be deleted or updated.
1. Limit access to personal data to only those who have a business need-to-know.
1. Retain personal data for only as long as necessary for the intended purpose. Personal data should be deleted or anonymized when it is no longer needed.

By following these guidelines, we can ensure that we are only collecting and processing personal data that is necessary for our business needs, and that we are protecting the privacy and security of our team members.

When collecting and processing personal data related to people data analytics at GitLab, it is important to determine the lawful basis for processing. You can read more about this topic in GitLab's [Employee Privacy Policy](#). In the data team, we use Slowly Changing Dimensions to cover both the current and historical view of the data in the warehouse. Depending on the type of People Data collected, we use different slowly changing dimensions.

- Where consent is the lawful basis

Where Team Members have given clear consent to process their personal data for a specific purpose. Examples include: Gender, nationality, ethnicity, gender dropdown, pronouns, political affiliation, sexual orientation, religion, medical or health related info, trade union info, among others.

When these fields are loaded into the warehouse, the Data Team uses a type 1 Slowly Changing Dimension because any change to the field is a withdrawal of consent for the use of that old value.

- Where Strong Legitimate Interest is the Lawful Basis

All fields where the Team Member can edit/change the field's info in the source system. Examples include: Home address, mobile or home phone, personal email, emergency contact information, among others.

When these fields are loaded into the warehouse, the Data Team uses a type 1 Slowly Changing Dimension because processing old historical values runs up against their Right to Correct data under privacy laws. If we need to keep history of these fields, a strong business justification that outweighs the Team Member's Right to Correct Data needs to be provided.

- Where Legal Obligation or Legitimate Interest is the Lawful Basis

All fields where the Team Member cannot edit the field in the source system. These fields are usually required to run the company or to satisfy regulations. Examples include: Information we have to collect related to job title, bonuses, salary, turnover, department changes, among others.

When these fields are loaded into the warehouse, the Data Team uses a type 1 or a type 2 Slowly Changing Dimension, depending on whether we have a business justification to keep the history of the fields in the warehouse.

Access to People Data in Business Intelligence Software

As part of our data program, GitLab team members can have access to pre-built dashboards in Sisense. People Data is considered sensitive and it is therefore not readily available in Tableau by default. You can read more about this topic in our Data Storage section.

However, in the current business landscape, data is the key to unlock insights and make informed decisions. The same principle applies to people data, where people analytics plays a critical role in driving organizational success.

GitLab recognizes the importance of privacy and security. As such, Sisense has access to mostly aggregated personal data, which means that individual team members remain anonymous. By aggregating personal data, we can make data-driven decisions that benefit both the team members and the company. This data can be used to identify patterns and trends, measure employee engagement, and make predictions about future team member behavior. It also allows HR professionals to monitor and improve diversity and inclusion efforts and identify areas for training and development.

In addition to protecting team member's privacy, aggregating personal data can also provide valuable insights into team member's behavior and trends. This can help us make informed decisions about how to improve workplace productivity and satisfaction.

SECTION: people-group/people-ops-tech-analytics/people-analytics/data-guide.md

Objectives for this page

This handbook page provides an overview of data definitions and data models used by the People Analytics team. Use this page for clarification on terminology, calculations, or models that use People data. If you have any questions please don't hesitate to reach out to someone from the team for help.

Helpful places to start

- DBT Docs - This resource contains comprehensive documentation on all available dbt models. This is a great starting point to understanding our models. For specific People Models, please reference the Commonly Used Data Models section below for a starting point.
- Definitive guides to data subject areas managed by the Data team.
- Documentation on data pipelines for the technically curious analyst. This page goes into each data source and extraction details.
- People Group Tech Stack Guide for overview of all the integrations that go into and out of our HR systems and all the tools we use.

People Group Data Dictionary

Employment Data

Data pertaining to the worker and employment at GitLab once hired

<details><summary>Click to expand</summary>

Name	Description	Calculation	Is Sensitive
Team Member	A person that worked for GitLab at any point in time, has an employee id in one of our Human Resource Management Systems (HRMS), and is not a temporary (contingent) worker or intern		
Employee ID	Unique ID assigned in our HRMS upon hire to track team member's employment with GitLab		Yes
Hire Date	The first day of employment with GitLab as a team member		
Termination Date	The first day a team member is no longer employed with GitLab as a team member termination effective date in HRMS + 1 day Yes, if future-dated		
Employee Type	The employment type for a team member's primary position. We typically exclude "Consultants" and "Interns" from reporting		
Company / Entity	Company used to employ or contract team members that is location-specific. These can be in the form of entities or professional Employer Organizations (PEO)		
Termination Type	Business process reason category associated with the termination business process. Can be either Voluntary or Involuntary		Yes
Exit Impact	If worker is specified as regrettable termination on the termination transaction they are considered a "regrettable" termination. Otherwise they are considered a "non-regrettable" termination		Yes
Headcount	The total number of team members employed at GitLab on a particular date		
Begin Headcount	Used for Average Headcount calculation. The number of team members active at the beginning of each period in a date range. This is usually the first day of the month		
End Headcount	Used for Average Headcount calculation. The number of team members active at the end of each period in date range. This is usually the last day of the month		
Average Headcount	The average number of team members in a specified date range. This is used to standardize rates across business areas. $(\text{sum of all Begin Counts in period} / \text{of periods observed} + \text{sum of all End Counts in period} / \text{of periods observed}) / 2$		
Net Growth	Metric to show growth based only on the difference between hires and terminations in a selected period $\text{of Hires in period} - \text{of Terminations in period}$		
Turnover / Attrition	The percentage of team members who leave an organisation over a specific period, typically on a rolling 12 month basis $\text{of Terminations} / \text{Average Headcount}$		Yes, Internal Only
Retention	The percentage of team members that remain with an organisation over a given period. $1 - \text{Turnover}$		Yes, Internal Only
Voluntary Turnover	Portion of turnover that is Voluntary termination type $\text{of Voluntary Terminations} / \text{Average Headcount}$		Yes, Internal Only
Involuntary Turnover	Portion of turnover that is Involuntary termination type $\text{of Involuntary Terminations} / \text{Average Headcount}$		Yes, Internal Only
Regrettable Turnover	Portion of turnover that is regrettable terminations $\text{of Regrettable Terminations} / \text{Average Headcount}$		Yes, Internal Only
Non-Regrettable Turnover	Portion of turnover that is non-regrettable terminations $\text{of Non-Regrettable Terminations} / \text{Average Headcount}$		Yes, Internal Only

</details>

Diversity, Inclusion, and Belonging (DIB)

Data pertaining to the demographics of a worker and how they choose to identify

<details><summary>C
