

lick to expand</summary>

Name	Description	Calculation	Is Sensitive
Underrepresented Group (URG)	While there are many types of underrepresented groups (URGs), in reporting URGs are based on ethnicity and we consider any ethnicity that is not White, Asian, or Did Not Identify as URG. This metric is now measured globally instead of country-specific.		Yes
Non-URG	In reporting, Non-URG is considered White or Asian ethnicities		Yes
Gender	The gender of the worker which is used in reporting. Can currently be marked as Male, Female or left unindentified		Yes
Gender Identity	The gender identification of the individual. Examples include transgender, cisgender, genderfluid, genderqueer, non-binary		Yes

</details>

Position

Information related to the position a team member holds at GitLab

<details><summary>Click to Expand</summary>

Name	Description	Calculation	Is Sensitive
Management Level	The management level for the job profile.		
Leadership	A grouping of management levels that are director or higher (Director, Vice President, Leader, Chief Executive Officer)		
Management	A grouping of management levels that are manager or higher (Manager, Director, Vice President, Leader, Chief Executive Officer)		
Job Grade	The job level for the job profile.		Yes
People Managers	Any team members that have direct reports assigned to them in Workday		
Layers	The number of layers between a team member and the CEO where layer 1 is the CEO		
Direct Reports	The group of team members that report to a people manager		
Span of Control	The number of direct reports that are assigned to a people manager		
Average Span of Control	The number of direct reports on average assigned to people managers		
Location Factor	Location Factor is calculated using multiple data sources to conduct a market analysis of compensation rates globally: Economic Research Institute (ERI), Comptryx, Radford. This is not a cost of living analysis, but instead a cost of labor market evaluation compared to San Francisco		Yes
Compa-Ratio	Compa-ratio is a measurement of pay that compares an team member's salary to the median compensation for similar positions within a company or a target market. Divide the team member's salary by the market rate compensation midpoint		Yes
Discretionary Bonus	An additional bonus amount that is awarded at the discretion of the company management. It is separate from standard bonus plans and is not based on specific performance metrics. Discretionary bonuses allow companies flexibility to reward standout team members.		
Discretionary Bonus Rate	Percentage of Team members that receive a discretionary bonus from		

the population. For KPIs this is reported as a rolling 3 month average. | of Discretionary Bonuses / Average Headcount | |
Promotion	A promotion is counted if the business process type submitted in our HRMS is "Promote Employee Inbound"		
Lateral Transfer	A lateral move is counted if the business process category submitted in our HRMS is "Lateral Move" and there was a change in job title		
Internal Mobility Rate	Internal Mobility Rate refers to the frequency at which team members change positions within an organization, indicating the internal movement and career progression opportunities available to staff, as well as the company's ability to retain talent by offering growth paths.	Lateral Transfers and Promotions / Average Headcount	

</details>

Paid Time Off and Absence

Information related to Paid Time Off and Absence

<details><summary>Click to expand</summary>

Name	Description	Calculation	Is Sensitive	
Paid Time Off (PTO)	Time off that is submitted and approved in the Absence Management System, does not fall on a weekend, does not exceed 25 days in a single request, and excludes PTO types like Extended Leave, CEO Shadow Program, and Conference.			
Out Sick - Extended PTO Type	PTO submission that is listed as "Out Sick" but is for 5+ days so is reclassified in reporting			
Average PTO Days	Average number of days in period that are PTO days. This calculation normalizes PTO usage for all team members to account for those who have not worked all days in the reporting period.	$(\text{PTO Days Used} / \text{Days Worked}) \times \text{Days in Period}$		
Full-Cycle Tenure Group	Team members who have worked all days in a reporting period so normalized PTO matches actual PTO used			
In/Out Tenure Group	Team members who have not worked all days in a reporting period so normalized PTO will reflect number of days used for the full period based on actual usage in that period			

</details>

Recruiting and Onboarding

Data pertaining to the Onboarding process and Recruiting metrics used by Talent Acquisition

<details><summary>Click to expand</summary>

Name	Description	Calculation	Is Sensitive	
Onboarding Satisfaction (OSAT) Score	Average rating on a 1-5 scale for all questions in the Week One onboarding survey in Culture Amp. Usually calculated as a rolling 3-month average.	$(\text{Average of All Month 1 Onboarding Responses} + \text{Average of All Month 2 Onboarding Responses} + \text{Average of All Month 3 Onboarding Responses}) / 3$		
Starts	External applicants who have accepted an offer with GitLab and have a start date			

scheduled in the HRMS | | |

| External Applicants | Applicants whose source is not "Internal Applicant". They are not employed through GitLab at the time when the application is submitted | | |

| Internal Applicants | Applicants whose source is "Internal Applicant". They are employed through GitLab at the time when the application is submitted | | |

| Time to Hire / Candidate Throughput | Days between the application submitted date and the date an application moved in the "Hire" stage if they also have an accepted offer. | | |

| Verbal Accepted Offer % | Applications that moved into the Offer stage and accepted / Moved into the Offer stage and resolved | of Applications moved into Offer Stage and Accepted Offers / of Applications moved into the Offer Stage and Accepted or Rejected Offers | |

| Written Offer Accept % | Offers that resolved in a date range. of accepted offers / of resolved offers. | of Applications that Accepted Offers / of Applications that Accepted or Rejected Offers | |

| Internal Mobility Rate % | Offers that resolved in a date range. of accepted offers from internal applicants / of accepted offers | of Internal Applications that Accepted Offers / of Applications that Accepted Offers | |

| Source Rate | % of applications submitted in a date range that were sourced (Sourcing Strategy is "Prospecting" and Source is not "SocialReferral") and candidate was from a diverse source (based on candidate tags) as a percentage of all sourced applications | of Sourced Applications submitted with Diverse Candidate Tags / of Sourced Applications | |

| Source Mix | % of accepted offers by external sourcing strategies (not internal applicants or acquisitions) with a resolved date in date range | of External Applications with Accepted Offers in Specific Sourcing Strategy / of External Applications with Accepted Offers | |

| Conversion Rate | of Applications submitted in a date range and what stages of the recruiting process that have gone through. It is the flow of applications between stages of the recruiting process showing what percent of applications from the previous step move into the next step (ex- if 10 applications were in Initial Interview and 2 made it to Team Interview phase, conversion rate for the Initial Interview would be 20%) | of Applications in Second Stage / of Applications in First Stage | |

| Pending Offers | Offers that have been sent but not accepted or rejected | | |

| Time to Fill | Days between an Opening opened date and closed date for Openings that closed in a specified date range and list a hired application | | |

| Time to Start | Days between an Opening opened date and the expected start date for a hired application | | |

| Requisition Aging | Average days that Openings were open at any point in a date range. This calculation averages days open for all days in the reporting period. | | |

</details>

Systems

Systems used by the People Group

<details><summary>Click to expand</summary>

| Name | Description | Calculation | Is Sensitive |

|---|---|---|---|

| R (Language) | A programming language and software environment used for statistical analysis, graphical representation, and reporting, popular in data analysis and scientific research. | | |

| Tableau | Primary data visualization tool at GitLab | | |
| Workday | Current Human Resource Management Systems (HRMS) and the SSoT for all team member related data on or after 2022-06-16 and SSoT for all Absence data on or after 2024-09-01 | |
|
Greenhouse	Current Applicant Tracking System (ATS) at GitLab and the SSOT for all recruiting metrics		
Time Off by Deel	Current absence management support tool at GitLab integrated with Workday which is the SSoT for Absence.		
Sisense (formerly Periscope)	Former data visualization tool at GitLab		
FiveTran	Fivetran is the automated data movement platform moving data out of Workday and into Snowflake		
SnowFlake	Snowflake is our Enterprise Data Warehouse (EDW) and is the core technology in our Enterprise Data Platform.		
Level Up / GitLab University	Training platform created by Thought Industries for continuing education and career development		

</details>

Data Models

The Data Team is working with the People Analytics team to build data marts that allow users to explore our different people data sources

- "mart" models are a combination of dimensions and facts that are joined together to enable easy analysis.
- "rpt" ("report") models are built with specific business logic for a specific use case.

Underneath each model is a clean lineage of dimensions and facts that can also be used for analysis. This list included all the prep tables, dimensions and facts that have been created for people analysis as well as the ones that we are planning to build in the upcoming quarters based on the Team Member Common ERD

Prep, dimension and fact tables

Model Name	Table Type	Grain	Source	Status	Documentation
-----	-----	-----	-----	-----	-----
prepteammember	Staging	One row per Team Member ID per event	Workday	Completed	DBT docs
dimteam	Dimension	One row per Team ID per event	Workday	Completed	DBT docs
dimteammember	Dimension	One row per Team Member ID per event	Workday	Completed	DBT docs
fctteammemberposition	Fact	One row per employeeid, teamid, effective date and datetime initiated combination	Workday	Completed	DBT docs
fctteammemberstatus	Fact	One row per employeeid, employment status and status effective date combination	Workday	Completed	DBT docs
fctteamstatus	Fact	One row per employeeid and valid from combination	Workday	Completed	DBT docs
fctteammemberabsence	Fact	One row per Team Member ID, ptouuid and absencedate combination	Time Off By Deel	Completed	DBT docs
fctteammemberhistory	Fact	One row per Team Member ID and hired date	Workday	Completed	DBT docs
fctteammemberjobhistory	Fact	One row per Team Member ID and jobprofileworkdayid			

Workday Completed DBT docs
fctteammemberlocality Fact Workday Planned DBT docs
fctteamdemographic Fact Workday Planned DBT docs

Marts

Model Name Table Type Grain Status Documentation
----- ----- ----- ----- -----
martteammemberdirectory Mart One row per employee ID Completed DBT docs
martteammemberabsence Mart One row per Team Member ID, ptouuid and absencedate combination Completed DBT docs

Model usage

dimteammember

This table contains team members work and personal information. Sensitive columns are masked using dynamic masking and the fields are only visible by team members with the analystpeople role assigned in Snowflake. This table is a hybrid SCD (Type 1 + Type 2).

The table includes information regarding current team members, new hires who have records created in Workday before their start date and team members who were terminated in 2021 onwards. Team members who were terminated before 2021 are not captured in this model at this time. The grain of this table is one row per employeeid per validto/validfrom combination.

<details>

<summary markdown="span">Query - Team members count per region</summary>

```
sql
SELECT
  region,
  COUNT(DISTINCT employeeid)
FROM
  PROD.COMMON.DIMTEAMMEMBER
WHERE
  iscurrent = TRUE AND iscurrentteammember = TRUE
GROUP BY
  region
```

</details>

<details>

<summary markdown="span">Query - Current team members total count</summary>

```
sql
SELECT
  COUNT(DISTINCT employeeid)
FROM
  PROD.COMMON.DIMTEAMMEMBER
```

WHERE
iscurrent = TRUE AND iscurrentteammember = TRUE

</details>

<details>
<summary markdown="span">Query - Percentage of key talent in the team member population</summary>

keytalentstatus is a masked field, only team members with the analystpeople role in Snowflake can query it

```
sql
SELECT
  keytalentstatus,
  COUNT() 100 / SUM(COUNT()) OVER() AS keytalentpercentage
FROM
  PROD.COMMON.DIMTEAMMEMBER
WHERE
  iscurrent = TRUE AND iscurrentteammember = TRUE
GROUP BY 1
```

</details>

dimteam

dimteam contains team (organizations) information. It includes information regarding teams and their hierarchy. It is a Type 2 SCD.

The goal of this table is to determine the team superior organization and the hierarchy of every organization in Workday. Additionally, this table provides team data such as team name, manager, team member count and date of inactivation for each organization.

The grain of this table is one row per Team ID per event.

<details>
<summary markdown="span">Query - Total count of active organizations</summary>

```
sql
SELECT
  COUNT()
FROM
  PREP.SENSITIVE.DIMTEAM
WHERE
  iscurrent = TRUE AND isteamactive = TRUE
```

</details>

<details>

<summary markdown="span">Query - Count of current team members </summary>

sql

```
SELECT
  SUM(teammemberscount)
FROM
  PREP.SENSITIVE.DIMTEAM
WHERE
  iscurrent = TRUE AND isteamactive = TRUE
```

</details>

fctteammemberposition

fctteammemberposition contains team members' job history, including any changes in their job profile or team. It provides a history of the team member's job profile in detail. The grain of this table is one row per employeeid, teamid, effective date and datetimeinitiated combination. It includes all team members, regardless of their current employment status.

<details>

<summary markdown="span">Query - Number of team members per entity</summary>

Entity is a masked field, only team members with the analystpeople role in Snowflake can query it

sql

```
SELECT
  entity,
  COUNT()
FROM
  PROD.COMMON.FCTTEAMMEMBERPOSITION
WHERE
  iscurrent = true
GROUP BY 1
```

</details>

<details>

<summary markdown="span">Query - Number of team members per position/role </summary>

sql

```
SELECT
  position,
  COUNT()
FROM
  PROD.COMMON.FCTTEAMMEMBERPOSITION
WHERE
```

```
ispositionactive
AND iscurrent
GROUP BY 1
```

</details>

<details>
<summary markdown="span">Query - Number of team members with a specific job specialty
</summary>

```
sql
SELECT
  COUNT()
FROM
  PROD.COMMON.FCTTEAMMEMBERPOSITION
WHERE
  (jobspecialtysingle LIKE '%ModelOps%' OR jobspecialtymulti LIKE '%ModelOps%')
  AND iscurrent;
```

</details>

<details>
<summary markdown="span">Query - Team members with position = backend engineers in France
</summary>

Entity is a masked field, only team members with the analystpeople role in Snowflake can query it

```
sql
SELECT

FROM
  PROD.COMMON.FCTTEAMMEMBERPOSITION
WHERE
  position LIKE '%Backend Engineer%'
  AND entity = 'GitLab France S.A.S.'
  AND iscurrent
```

</details>

fctteammemberstatus

This table contains termination reason, type, exit impact and employment status. Sensitive columns are masked and only visible by team members with the analystpeople role assigned in Snowflake. This table contains only past terminations.

The grain of this table is one row per employeeid, employmentstatus and statuseffectivedate

combination.

<details>

<summary markdown="span"> Number of team members whose departure caused an impact to the company </summary>

Exit impact is a masked field, only team members with the analystpeople role in Snowflake can query it

sql

```
SELECT
  COUNT()
FROM
  PROD.COMMON.fctteammemberstatus
WHERE
  exitimpact = 'Yes';
```

</details>

<details>

<summary markdown="span"> Number of team members whose departure was voluntary </summary>

Termination type is a masked field, only team members with the analystpeople role in Snowflake can query it

sql

```
SELECT
  COUNT()
FROM
  PROD.COMMON.fctteammemberstatus
WHERE
  terminationtype = 'Resignation (Voluntary)';
```

</details>

<details>

<summary markdown="span"> Termination reason provided by team members whose departure was voluntary and caused an exit impact </summary>

Termination type, termination reason and exit impact are masked fields, only team members with the analystpeople role in Snowflake can query it

sql

```
SELECT
  DISTINCT terminationreason
FROM
  PROD.COMMON.fctteammemberstatus
WHERE
```

```
terminationtype = 'Resignation (Voluntary)'
AND exitimpact = 'Yes';
```

</details>

fctteamstatus

This table is a derived fact from fctteammemberstatus and fctteammemberposition. Sensitive columns are masked and only visible by team members with the analystpeople role assigned in Snowflake. This table only contains one change in the team member's position per effective date, as opposed to the fctteammemberposition table which contains all changes to a team member's position profile, regardless of whether they became effective or not. This table doesn't include future hires, only people working at GitLab as of today's date.

<details>

<summary markdown="span">Query - Active team members with position = backend engineers in France </summary>

Entity is a masked field, only team members with the analystpeople role in Snowflake can query it

sql

```
SELECT
```

```
FROM
```

```
  PROD.COMMON.fctteamstatus
```

```
WHERE
```

```
  position LIKE '%Backend Engineer%'
```

```
  AND entity = 'GitLab France S.A.S.'
```

```
  AND employmentstatus = 'Active'
```

```
  AND iscurrent
```

</details>

<details>

<summary markdown="span">Query - Number of resignations (voluntary) per team </summary>

Termination type and termination reason are masked fields, only team members with the analystpeople role in Snowflake can query it

sql

```
SELECT
```

```
  teamid,
```

```
  COUNT()
```

```
FROM
```

```
  PROD.COMMON.fctteamstatus
```

```
WHERE
```

```
employmentstatus = 'Terminated'
AND terminationtype = 'Resignation (Voluntary)'
AND iscurrent
GROUP BY 1;
```

</details>

<summary markdown="span">Query - Number of resignations (voluntary vs involuntary) per management level </summary>

Termination type and termination reason are masked fields, only team members with the analystpeople role in Snowflake can query it

```
sql
SELECT
  managementlevel, COUNT()
FROM
  PROD.COMMON.fctteamstatus
WHERE
  employmentstatus = 'Terminated'
  AND terminationtype = 'Resignation (Voluntary)'
  AND managementlevel != 'Individual Contributor'
  AND iscurrent
GROUP BY 1;
```

</details>

fctteammemberhistory

This table contains team members' employment history, details such as when they were hired and left the organisation. This table is a Type 2 SCD).

The grain of this table is one row per team member ID and hired date combination.

<details>

<summary markdown="span">Query - Team Roster with Tenure Information </summary>

Shows all current team members with their length of service, helping managers understand their team composition and recognize long-term employees.

```
sql
SELECT
  t.employeeid,
  e.fullname,
  e.position,
  e.teammanagername,
  t.hiredate,
  DATEDIFF('month', t.hiredate, CURRENTDATE()) AS tenuremonths,
```

```

ROUND(DATEDIFF('year', t.hiredate, CURRENTDATE()), 1) AS tenureyears
FROM "PROD".common.fctteammemberhistory t
JOIN PROD.COMMONMARTPEOPLE.MARTTEAMMEMBERDIRECTORY e
  ON t.employeeid = e.employeeid AND iscurrent= TRUE -- Team member's current information
WHERE e.teammanagername = 'MANAGERFULLNAME' -- Replace with preferred full name of
the people manager
AND t.termdate IS NULL -- Only current team members
ORDER BY tenureyears DESC

```

</details>

fctteammemberjobhistory

This table contains team members' job history. Sensitive columns like jobgrade are masked using dynamic masking and the fields are only visible to team members with the analystpeople role assigned in Snowflake. This table is a hybrid SCD (Type 0 + Type 2).

The table includes information from Workday, . The grain of this table is one row per team member ID and workday job profile id combination.

<details>

<summary markdown="span">Query - Career Progression Path Analysis (Most common job transitions)</summary>

sql

```

WITH jobsequences AS (
  SELECT
    dimteammembersk,
    jobtitle AS currentjob,
    LEAD(jobtitle) OVER(PARTITION BY dimteammembersk ORDER BY jobstartdate) AS nextjob
  FROM "PROD".COMMON.fctteammemberjobhistory
)
SELECT
  currentjob,
  nextjob,
  COUNT() AS transitioncount
FROM jobsequences
WHERE nextjob IS NOT NULL
AND NOT currentjob = nextjob
GROUP BY currentjob, nextjob
ORDER BY transitioncount DESC;

</details>

<details>

<summary markdown="span">Query - Team Member Retention by Job Family</summary>

sql

```

WITH retentionbyjobfamily AS (
SELECT
    jobfamily,
    COUNT(DISTINCT dimteammembersk) AS totalteammembers,
    COUNT(DISTINCT CASE WHEN isactiveteammember = TRUE THEN dimteammembersk END) AS
activeteammembers,
    ROUND((COUNT(DISTINCT CASE WHEN isactiveteammember = TRUE THEN dimteammembersk END)
COUNT(DISTINCT dimteammembersk)::FLOAT) 100) AS retentionrate
FROM "PROD".common.fctteammemberjobhistory
GROUP BY jobfamily
ORDER BY retentionrate DESC
)
SELECT
FROM retentionbyjobfamily
WHERE NOT activeteammembers = 0 --Excluded deprecated job families

```

</details>

fctteammemberabsence

This table contains team members' absence information. Sensitive columns are masked using dynamic masking and the fields are only visible by team members with the analystpeople role assigned in Snowflake. This table is a Type 0 SCD

The table includes information from Time Off By Deel, . The grain of this table is one row per team member ID per ptouuid and absencedate combination.

martteammemberabsence

This table is a derived mart from fctteammemberabsence and dimteammember. Sensitive columns are masked and only visible by team members with the analystpeople role assigned in Snowflake. This table will be a replacement of the workspace table wkpto. This table is a hybrid SCD (Type 0 + Type 2).

The grain of this table is one row per team member ID per ptouuid and absencedate combination.

<details>

<summary markdown="span">Query - Absence days for an team member by quarter for the year 2024</summary>

sql

```

WITH final AS (
SELECT
    ,
    DATEDIFF(DAY, absencestart, absenceend) + 1 AS ptodayrequested,
    ROWNUMBER() OVER (
        PARTITION BY
            employeeid,
            absencedate

```

```

ORDER BY
  absenceend DESC,
  ptouuid DESC
)

</details>

Legacy and Other Data Models

Legacy models are models we will be transitioning from at some point but are still being used for reporting.

Legacy Workday Data Models

<details>

<summary markdown="span">Click to expand</summary>

Database	Schema	Table Name	Data Grain	Description	Notes
prod	legacy	employeedirectoryanalysis	employeeid by dateactual	Gives the current state of the team members at GitLab at any point of time. This is the model to use for headcount, team size, or any people-related analysis for team members. This has current and past team members, as well as their department, division, and cost center and hire/termination dates.	
prep	sensitive	employeedirectoryintermediate	employeeid by dateactual	INCLUDES SENSITIVE INFORMATION. The master collection of all info about GitLab team members for their latest position.	
prep	sensitive	workdayterminations	employeeid	Provides the termination reason, and	

exit impact to allow the People Analytics team to accurately report on termination data | |
| prep | workday | blendeddirectorysource | employeeid by uploadedat and sourcesystem | Daily
upload of team member data used for downstream models. | Helpful source for auditing any data
issues in Snowflake |

</details>

Greenhouse Data Models

<details>

<summary markdown="span">Click to expand</summary>

Database	Schema	Table Name	Data Grain	Description	Notes
---	---	---	---	---	---
prod	workspacepeople	rpthires	applicationid	This is a report specifically for talent acquisition and counts accepted offers as hires.	
prep	greenhouse	greenhouseapplicationstages	source applicationid by stageid and stageenteredon	This table is Historical activity of all stages an application can be in Each row represents a stage that an application can be in, and the timestamp that the application entered and exited the stage Things to note: This table contains a row for each stage that an application can be in (taken from the job that the application is on). Thus, there may be rows for stages that an application has yet to reach, or will not reach (if the application was rejected).	
prep	sensitive	greenhouserecruitingxf	applicationid	This is shows all applications submitted and ties in offer data, greenhouse department (the associated division), and source data to be in 1 place.

SECTION: people-group/people-ops-tech-analytics/people-analytics/people-tableau.md

Helpful places to start

- Tableau Handbook Page - This is the SSOT for all Tableau usage and is managed by the Data Team. This will give an overview of the most up to date roadmap and workflows regarding Tableau at GitLab.
- Tableau People Folder - This is the main folder to find all People Dashboards. This is currently in our Development project but will be moving to our Production location in the future.
- Tableau Workshops - Held by the People Analytics team as an introduction to using Tableau and navigating the current dashboards available.

People Group Dashboard Inventory

Several dashboards have been published to the People project in the Tableau environment. Below is a brief overview of some of the dashboards created and where you can find them:

General project

These dashboards are safe for general use by the Tableau User population here at GitLab.

- Attrition Dashboard - This dashboard gives turnover metrics for the organization. Rates can be filtered by Rolling 12 Months, Fiscal Year to Date, Month to Date, or Quarter to Date and different time periods can be selected. Dimensional breakouts of the data that result in small counts are hidden to protect Team Member identity.
- DIB Identity Dashboard - This dashboard shows diversity metrics as a percentage compared to the same date in the prior year. This dashboard is used for handbook embedding on this page.
- Discretionary Bonus Dashboard- This dashboard tracks discretionary bonuses over time showing bonus counts, bonus rates as a percentage of headcount, or bonus rates as a rolling 3 month average relative to headcount.
- Elevate Completions Dashboard - This dashboard tracks the percentage of leaders assigned to the Elevate training program and completion progress of participants.
- Headcount Dashboard - This dashboard is used to get headcount metrics by different categories in the company. The user can filter to specific dates and time periods to evaluate changes in headcount.
- People Group Dashboard Activity - This dashboard tracks usage of all dashboards owned by the People Group over the last 90 days.
- People KPIs - This dashboard shows key performance indicators that are tracked by the People Group to determine organizational health. These are the same metrics tracked on this handbook page.
- PTO Dashboard - This dashboard tracks PTO activity for team members (excluding extended leaves) over a selected date range.
- Span of Control Dashboard - This dashboard allows for users to identify the current (and past) span of control by different departments, divisions, etc.
- Talent Acquisition Productivity Dashboard - This dashboard is used by the Talent Acquisition department to track internal team metrics by recruiting teams and business area relative to quarterly goals.

People Restricted project

This project contains sensitive dashboards that only a small subset of users can view.

- Attrition Dashboard - Same use case as the one in General without hiding results for small groups and includes additional filters.
- Span of Control - Same uses as the one in General but with a detail tab showing a list of leaders and their direct span of control.
- DIB Dashboard - This dashboard gives views and metrics of starts, turnover, and representation by different DIB categories.
- People Dashboard - Intended for our People Business Partners, this dashboard is meant to be a way for PBPs to drill into the People Data for their stakeholders and identify various trends around group proportion sizes, URG representation, and metrics like turnover in one place.
- Talent Flow Dashboard - This is a tableau version of the People Weekly Overview Report shared with leaders. This version has sensitive data and is only available in the Restricted folder for now.

SECTION: people-group/people-ops-tech-analytics/people-analytics/survey-support.md

Employee Surveys

Here at GitLab we use Culture Amp to conduct our employee sentiment surveys. The People Technology team manages administrative access to the tool and information about getting access can be found [here](#). If you are in need of support for a survey then this page will cover the best way to work with the People Analytics team for survey design, creation in Culture Amp, and review of results.

People Analytics and Surveys

The People Analytics team can provide support with surveys that are needed by stakeholders. The purpose of the survey should be decided by the requester and the People Analytics team will support the administration (survey creation, design and reporting) in Culture Amp. Below is an overview of the decisions that will need to be made when setting up the survey.

Participants

The requester is to provide a list of participants to receive the survey. This can be a file with the participants or it can be criteria that is used to create a list. Since we have an integration between Workday and Culture Amp ([handbook page](#)), only employees in Workday whose information is sent to Culture Amp can be selected to participate in our employee surveys. At the moment, this will exclude contractors who are not in Workday.

An example of criteria is hiredate. We often filter our engagement surveys by date of hire, so if an employee is hired after a specified date, they would be excluded from the survey.

Question Review

As part of the survey creation process, questions to be asked will be provided to the People Analytics team. The team can provide additional review of the questions to ensure they are designed according to best practices.

Only a few types of questions are available within Culture Amp. Below are the types available:

- Rating Scale - This is the most common type of question participants answer with employee surveys. They are typically asking your level of agreement with a given statement. There are several scale options available to choose from.
- Select - This is a multiple choice question where a user can make only 1 or multiple selections from the list of possible answers.
- Free Text - This is an open-ended question where the respondent can give as much or as little feedback as they'd like for a response.

Constructs and/or Factors

When creating a survey, the creator typically wants to understand sentiment around specific constructs, or factors. These factors are often things like Engagement or Happiness. To measure these, several questions pertaining to each topic will be developed for the given survey. These factors are then used to get aggregate scores of sentiment from the respondents as opposed to reviewing each question in isolation. Culture Amp has survey questions available which are designed to measure some common constructs in employee surveys, but the requester can also

provide their own. The People Analytics team can help with the development of these constructs as well.

Communications Language

There are standard communications that are provided by Culture Amp for their survey notifications. These communications can be modified and, if this is to be done, it is best if the survey requesters submit the language they would like used along with their request.

When thinking about the language it may be helpful to note the types of communications (listed below) to be sent from Culture Amp:

Email Communications

- Email Invitation - Initial invitation with unique link to survey.
- Email Reminder 1 - First reminder sent to those who have not completed the survey.
- Email Reminder 2 - Final reminder sent to those who have not completed the survey.

Slack Communications

- Slack Invitation - Similar to email, but much shorter message using Slack formatting.
- Slack Reminder 1 - First reminder in Slack to those who have not completed the survey.
- Slack Reminder 2 - Final reminder in Slack to those who have not completed the survey.

Reports

A list of reports that will be needed can also be identified at the time of the request. If this is not known at the time of request then reports can be generated and shared after launch of the survey.

Reporting Rules/Confidentiality

Confidentiality is of extreme importance when administering surveys. We keep all responses confidential and at time completely anonymous. The confidentiality setting are shared (per Culture Amp communication) with every participant in their Welcome Screen for the survey. To better understand the confidentiality setting available for each survey please visit the documentation from Culture Amp [here](#).

Demographics

Demographics are used to filter reports for surveys or to build the criteria for who should receive a survey response request. These demographics (Division, Department, etc.) are sent over from Workday as part of the integration with Culture Amp and if the requestor knows they will want to filter reporting by certain demographics they can specify this in the request. If there are demographics that they would like to filter by that are not present in the Workday integration then they can work with the People Analytics team to gather this information using the survey itself. Culture Amp allows for requesting "self-reported" demographics in the survey.

Launch Plan

Every survey in Culture Amp comes with a Launch Plan that needs to be set up. The Launch Plan has a summary of all the above items for additional review and also has a Launch Schedule. The Launch Schedule consists of the dates the survey will open and close. The open date is also the date the survey will be sent to the participants. The additional items to schedule are the first and final reminders. These will be sent only to those who have not completed the survey on the given date and will be sent via email and Slack, with the pre-determined communication language. The requester will be asked to give a Launch Plan schedule in the issue request.

Requesting Report Access

There are times when a leader moves into a new role or responsibilities may change for a People Business Partner and access to specific survey reports in Culture Amp need to be granted. For example: A new director joins and would like to review the engagement survey results for their org under the previous leader. In this example the new director (or their People Business Partner) would need to submit an Access Request to view the report with the results. Once the proper approvals are obtained, a team member from the People Technology team or People Analytics team with admin access to Culture Amp will share the requested report. Following the Access Request process ensures we have proper approvals before access is granted.

- Cassiana's LinkedIn profile

About Me

- I was born and raised in Montréal, Québec, Canada ··
- I'm a lifelong learner who loves to get lost in subjects that interest me

- I'm enthusiastic and empathetic
- I joined GitLab in Feb 2019
- I love British comedy and rom coms
- My favorite GitLab value is Iteration
- My 5 favorite sub-values are:
 - Don't wait
 - Family and friends first, work second
 - Embracing Neurodiversity
 - Freedom and Responsibility over Rigidity
 - Assume Positive Intent

Myers-Briggs / 16 Personalities

·INFP: Mediator

A Mediator (INFP) is someone who possesses the Introverted, Intuitive, Feeling, and Prospecting personality traits. These personality types tend to be "quiet, open-minded, and imaginative, and they apply a caring and creative approach to everything they do".

DiSC Profile

·S: The Supporter

People with the S (Supporter) personality type tend to be "calm, patient and respectful". I also connect with the IS (Harmonizer) type as someone who is often described as "warm, even-tempered, accepting, positive and joyful".

Strengths

- Solving problems and responding to questions with patience and understanding.
- Being attentive to the needs and concerns of others, and considering impact when making decisions.
- Asking for and taking constructive, direct feedback.
- Taking ownership and following up.
- Collaborating across teams.
- Driven by efficiency and results.
- Taking metrics and OKRs very seriously, and finding healthy ways to achieve them.
- Measuring the capabilities of others in an positive, encouraging, and optimistic way.
- Reminding others to stop working, taking time off, and encouraging others to remain healthy (mentally and physically) and family and friends-first.

Growth Opportunities

- Sharing negative feedback in a clear, direct way as soon as there's an issue that needs to be addressed.
- Understanding that some decisions may be unpopular, but are ultimately necessary for the growth of everyone involved. Many times difficult decisions are necessary and beneficial, overall.

My Working Style

- I prefer long, uninterrupted windows of time for deep work. I disable all- notifications on my Mac and on my phone. This allows me to focus deeply on one task at a time, which is a more efficient way of working than attempting to multitask. In return, I will devote my full attention to your request and respond thoughtfully, with context and passion.
- Unless specifically mentioned, I don't expect immediate responses from anyone. I respect others' time and want you to have the space for a thoughtful response.
- I embrace asynchronous workflows. I prefer variety in my workday as opposed to routine. I work best when leveraging a non-linear workday, maximizing daylight hours for being outdoors (if weather permits), hopefully traveling and exploring a new place.
- I have many strong opinions, but they're weakly held. I love finding a new perspective that makes me change my opinion, because it means that I've gotten a chance to learn something substantive and new. This also means that I expect my working style will evolve over time.
- When scheduling a meeting, please share an agenda beforehand (unless it is a coffee chat). I like to be able to come prepared to discuss the topics and have issues/MRs or announcements pulled up for reference.
- If I have a recommendation backed up by experience or people ops/compliance knowledge, I am happy to speak up.
- I want to earn your trust. I want to allow you the space to take risks, be vulnerable with me, and also tell me when I could be doing something better. Psychological safety is extremely important to me.
- Partnerships are invaluable. Life is more fun with community, working together to achieve common goals.

My Availability

- My calendar is viewable to anyone at GitLab, so feel free to schedule a call without asking, as I will move if I cannot accommodate your original time/date.
- My Slack is always updated with what I'm doing, and my daily and long-term availabilities are up to date in my calendar.
- I sometimes work weird hours, to accommodate my needs, but I try not to work long hours.
- Feel free to schedule a coffee chat · with me. I love talking about all things relating to movies, travel, cooking, neurodiversity and people ops!

What I am Working on

- I'm also working on continuously improving GitLab's People Compliance, if you would like us to work on something specific or have a problem we can help resolve, please open an issue in the People Compliance Issue Tracker.

What I Assume about Others

- Positive intent. ·
- You'll ask for my input and help if it's needed.
- You have more going on than the one thing we're discussing.
- Work is absolutely not the most important thing in your life. I assume that there are cherished relationships and personal interests that are more important to your happiness, and it's hard to be happy with your job when work detracts from those things.
- Everyone is likely fighting a battle we know nothing about. ·

About Me

<i class="fa-brands fa-gitlab fa-2xl -text-primary"></i>

Hello Hello! :wave: I'm Tre (short for [Government First Name] - pronouced like "Tray"). I'm genuinely enthusiastic and it can get annoying, but I am facinated by people, places, projects, and food. I believe in approaching work with both purpose and JOY, finding a decent enough balance between getting things done and enjoying the journey along the way. As someone passionate about the art & science of real life experiences, I love creating meaningful growth moments with real world results (informed with data, and aimed for impact). I value authentic connections and strive to create positive experiences in all my interactions. While I maintain a lighthearted approach to most things, I'm serious about investing in people and aligning human-first people strategy to business strategy and helping people AND organizations THRIVE.

<hr style="width:50%;">

My Job

At GitLab, I lead our Talent Management & Development function within the People Group division. This role focuses on creating an environment where our team members can thrive professionally while also driving business outcomes. I'm passionate about designing systems and experiences that help people grow while strengthening our organization.

Talent Management: Strategic People Practices and the "Team Member Life Cycle"

Talent Management encompasses the strategic practices that help us identify, assess, and optimize our talent:

<div style="margin-left: 20px;">

Talent Management: Strategic People Practices

Talent Management encompasses the strategic practices that help us identify, assess, and optimize our talent:

| Talent Management Examples | Description |

|-----|-----|

| Performance Management | Creating frameworks that clarify expectations, provide meaningful feedback, and recognize achievement |

| Succession Planning | Identifying and preparing future leaders to ensure business continuity |

|

| Talent Assessment | Facilitating structured discussions about our team members' strengths, growth areas, and potential |

| Retention Strategies | Developing approaches to keep our top performers engaged, challenged, and committed |

| Talent Analytics | Using data to make informed decisions about our people practices |

| Coaching | Transforming potential into performance through personalized development experiences |

Talent Development: Growing Our People

Talent Development ("L&D - Learning & Development) focuses on creating growth opportunities and learning experiences for our team members:

Talent Development Examples	Description
Learning Experiences	Designing and delivering effective learning experiences that build critical skills
Leadership Development	Nurturing leadership capabilities at all levels of the organization
Career Frameworks	Providing guidance on growth paths and progression opportunities
Coaching & Mentoring	Supporting individual growth journeys through personalized guidance
Knowledge Management	Building systems that enable information sharing and collective learning

The Powerful Intersection

The true power of my role emerges at the intersection of Talent Management and Talent Development. When these disciplines work in harmony, we create a continuous cycle of growth and performance that benefits both our team members and GitLab as a whole.

Some of the most impactful work happens in these blended spaces:

Integrated Approach Examples	How It Works
Performance & Development Planning	Using performance insights to create targeted growth opportunities that help team members advance
Leadership Assessment & Development	Identifying leadership potential and creating customized development paths for future leaders
Career Experience Design	Creating meaningful work experiences that simultaneously deliver business results and provide growth opportunities
Mobility	Enabling internal growth that addresses organizational needs while supporting individual career aspirations
Skills-Based Workforce Planning	Aligning our future capability needs with strategic development investments

This integrated approach helps us avoid the common pitfall of treating performance management and development as separate activities. Instead, we create a holistic talent ecosystem where assessment informs development, and development drives performance creating a virtuous cycle of growth.

</div>

{{% alert title="Quick Note" color="primary" %}}

Sorry, I went off trail a bit. I am passionate about type work, so I get carried away at times. To get back on track, I'll pivot back to more about working with me.

{{% /alert %}}

Location, Location, Location

I live in San Francisco, California. ·

Since joining GitLab, I've been able to travel home (Saraland, AL) more often. I may be in San Francisco, Saraland, or on some plane depending on the day; but I always make it work no matter the timezone.

<div style="margin-left: 20px;">

Availability

I pride myself on my flexibility and balanced boundaries. Every day is different! Every week is different! I am generally up very early and wind down in the late afternoon and evenings. I prefer to get my critical thinking work done earlier in the day. I love GitLab's philosophy on the nonlinear work day and I think it is the way to make global team operations a success. I live by my calendar and keep it up to date (mostly).

</div>

Communication Situation

{{% alert title="How to reach me effectively" color="primary" %}}

I value clear, organized communication and am generally responsive across multiple channels. If you haven't heard back from me, a gentle nudge is always welcome!

{{% /alert %}}

| Channel | Preferences (No Strict Rules) |

|-----|:-----|

| GitLab | I manage my work and my team's work in GitLab. Still getting the hang of things, but I'm generally responsive when the conversation is directly related to a work stream, project, or program. |

| Slack | Quick/instant messaging and brief discussions are for Slack. I'm flexible on this. There are times where longer form comms via Slack are appropriate as well. Note: While I try to organize Slack as best I can, messages do get lost in the shuffle. I'm typically very responsive, so if a lot of time has elapsed it's not because I don't love you, it's likely I missed it. Nudges are welcomed! |

| Email | All day every day, and I check email almost as often as Slack. Long form communication and communication with external folks. |

| ZOOM | I am always good to connect live. I do believe in having an agenda for live connections/meetings. Coffee Chat agendas are optional, but totally welcomed if that works well for you. I've also been leaning into "Coffee Chat+" where we do a bit of connecting and learning more about each other, AND maybe some quick discussion on active work. |

| Text or Calls | Only in urgent cases - Unless you let me know you want to do a walking meeting or something like that. I typically keep my phone in a separate room from where I'm working. |

| Smoke Signals and Pigeons | Look, whatever works for you, I'm typically pretty accommodating by default so I'll figure it out. |

{{% alert title="Long Slack Messages" color="info" %}}

Just my two cents! > Organize it! Subheaders, Bullets, Tables. If it's more than 1500 characters or multiple paragraphs, give a little TL;DR and highlight ACTIONS if there are any. Use the rest for additional context and share in sections. If it's related to an active

project, be sure to link the GitLab work item. If we need to collab on wording, put it in a Google Doc. Still flexible; it's all circumstantial.

{{% /alert %}}

Meeting Mantra

Recurring meetings must be continuously optimized and frequently evaluated if they need to be recurring.

Ad-hoc is great and I'm always open to ad-hoc connections. Have that agenda in the invite.

My Values

...more to come

Work in Progress

Coming Soon: My Values, My Leadership Style, More on Meetings, "Stronger, Better, Faster, Sleepy", My Dream Team, Cross-FUNCTIONAL Collabs, What I'm working on professionally, and My Soundtrack!

SECTION: people-policies/_index.md

Purpose

All of the policies listed below are important for GitLab team members to read and understand as they deal with people benefits, entity specific issues, and procedures and requirements of the company. If you have any questions around the internal policies, please reach out to People Operations via HelpLab.

Scope

These policies apply to all GitLab team members, contractors, advisors, and contracted parties interacting with GitLab computing resources and accessing company or customer data.

Roles and Responsibilities

| Role | Responsibility |

|-----|-----|

| GitLab Team Members | Responsible for following the requirements in these policies |

| PeopleOps | Responsible for implementing and executing these policies |

| Legal & PeopleOps Management (Code Owners) | Responsible for approving significant changes and exceptions to these policies |

Translations

There are translations available of many of our policies, for reference purposes, currently in Dutch, French, German and Spanish, with further additions planned. They can be accessed [here](#).

General Employment Practices

Open Door Policy

We encourage communication between team members at all levels of the organization. This is an important part of our culture. Whenever problems or concerns arise, it is expected that they will be addressed as quickly as possible. Your immediate manager is the person on the management team who is closest to you and your work. When you need help or have questions, concerns, problems, or suggestions, please contact your manager first. It is your manager's responsibility to assist you - so please ask, and be willing to work the issue out with your manager. They are interested in your success, the success of every team member in their department, and the overall success of GitLab.

If your manager cannot help you or answer your questions, your questions will be referred to someone who can. If you feel your particular question, concern, or suggestion cannot be discussed with your manager, you are encouraged to contact your manager's manager, your assigned People Business Partner or Team Member Relations. It is important to remember that a team member who takes these steps will not be subject to retaliation. You can expect to be treated fairly and with respect.

Romantic and Family Relationships at Work

Hiring Significant Others or Family Members

GitLab is committed to a policy of opportunities based on qualifications and merit and does not discriminate in favor of or in opposition to the employment or affiliation of significant others or family members. Due to the potential for perceived or actual conflicts, such as favoritism or personal conflicts from outside the work environment, which can be carried into the daily working relationship, GitLab will hire or consider for hire significant others and/or family members of persons currently serving as team members only if all points below are true:

- Candidates for open roles or current team members will not be working directly for or supervising a significant other or family member.
- Candidates for open roles or current team members will not occupy a position in the same line of authority in which team members can initiate or participate in decisions involving a direct benefit to the significant other or family member. Such decisions include hiring, retention, transfer, promotion, wages, talent assessment, and leave requests.
- The team member does not have access to sensitive company and/or personal information including payroll, compensation, personnel reviews/files, job performance, etc., unless the team member's job duties require access to such information. If the position in question requires access to such information, the team member in that position shall comply with the duty to maintain confidentiality as governed by applicable law and policy, and must seek approval from the team member's direct manager for any decisions affecting the significant other or family member's personnel information.

This policy applies to all current team members and candidates for open roles. In the spirit of our Transparency value, we ask the team member and the candidate to disclose the family relationship to the recruiter at the beginning of the hiring process. For purposes of this policy, a significant other or family member is any person who has a relation by blood, marriage, adoption, or domestic partnership within the third degree of our team member. If the

candidate progresses through the process as a final candidate, and prior to any offer, the recruiter should notify the hiring manager and the People Business Partner of the family relationship to ensure there is not a conflict of interest. In addition, the GitLab team member should not be part of their family member's interview process. If there is a concern that either the team member or the candidate may progress to a position that would trigger one of the conditions above, a waiver will be signed by both parties acknowledging that future work assignments, promotions, etc may be impacted by enforcement of this policy.

Active Team Member Relationships (Significant Other or Family Members)

Please report any relationship with a significant other or family member to your People Business Partner, if you find yourself in a reporting relationship with the significant other or family member. Furthermore, if two team members who are in a reporting relationship become significant others or family members in the course of their employment, they should also report the relationship to the People Business Partner. Transfers, promotions, and future work assignments will be made in accordance with all applicable anti-discrimination laws and policies.

Individuals with Disabilities Policy

GitLab (·The Company·) complies with all applicable laws, which make it unlawful to discriminate in employment against a qualified individual with a disability. The Company prohibits discrimination against team members and applicants with disabilities in all aspects of employment. Our company's commitment to this policy includes making reasonable accommodations to otherwise qualified persons with disabilities to enable them to perform the essential functions of their jobs, unless doing so would pose an undue hardship on our business, would pose a direct threat of substantial harm to the team member or others or is otherwise not required by applicable law.

Team Members Requesting Accommodations

Please submit your request for an accommodation by submitting a ticket in HelpLab. Your answers will be viewed only by the Team Member Relations Team (TMR), and only the requested accommodation(s) will be shared with your Manager/PBP as needed.

Team Members are under no obligation to provide GitLab with a diagnosis, but you may be asked questions related to how your condition impacts your ability to perform the essential functions of your job, in accordance with applicable law. The TMR will provide you with any necessary paperwork, and assist you with your request.

- U.S. Specific Policy

Applicants Requesting Accommodations

The Talent Aquisition team should contact the Team Member Relations team (TMR) if a candidate requests an accommodation during the interview process. The TMR team will reach out to the candidate directly if more information is needed. Applicants are under no obligation to provide GitLab with a diagnosis, but you may be asked questions related to how your condition impacts your ability to interview for the role, in accordance with applicable law.

Workplace Conduct

Confidentiality

As stated in the Confidentiality and Corporate Assets and Corporate Opportunities section of the Code of Business Conduct and Ethics, team members are, on occasion, entrusted with confidential GitLab information and with the confidential information of GitLab suppliers, customers, or other business partners. This information may include:

1. technical or scientific information about current and future services or research;
1. business or marketing plans or projections;
1. earnings and other internal financial data;
1. personnel information;
1. supply and customer lists; and
1. other non-public information

This information, if disclosed, might be of use to competitors, or harmful to GitLab's suppliers, customers or other business partners. This information is the property of GitLab, or the property of its suppliers, customers, or business partners, and in many cases was developed at great expense. All team members, upon commencement of their role with GitLab, shall sign offer letters or contractor agreements that contain confidentiality provisions (the "Confidentiality Agreement") provided by GitLab. Strict adherence to the Confidentiality Agreement is required of each team member.

Team members shall not take for themselves, or for family members, or any other entities with which they are affiliated, any opportunity of which they become aware through the use of GitLab property or information, or through their position with GitLab, and shall not use GitLab property or information, or their position with GitLab, for personal gain other than actions taken for the overall advancement of the interests of GitLab.

Team members also have obligations to protect the personal and sensitive information of our fellow team members. Therefore, you may not access and/or disseminate any team member's personal information (i.e. address, personal phone number, salary, etc.) that the team member has not made publicly available, unless the team member has provided written permission to share this information. An exception to this restriction would be when access is a necessary function of your job duties. A violation of this obligation is considered severe and could result in disciplinary action, up to and including termination.

Exceptions

Exceptions to the above procedures will be tracked as per the Information Security Policy Exception Management Process.

Anti-Harassment

Please see the Anti-Harassment Policy.

Anti-Retaliation

Please see the Anti-Retaliation Policy.

Complaint Procedure

Please see the Complaint Procedure.

Social Responsibility

Please see our Environmental, Social, and Governance page.

Personal Appearance

The image GitLab projects to the public is reflected in the appearance of our team members. Simply stated, team members should be dressed and groomed appropriately for their specific duties. Team members are expected to use good judgment in their appearance and grooming. Please read our GitLab Events Code of Conduct for more information regarding team member responsibility during attendance at company-sponsored events.

Job Abandonment

When a team member is absent from work for three consecutive workdays, there is no entry on the availability calendar for time off, and fails to contact their supervisor, they may be terminated for job abandonment unless otherwise required by law. If a manager is unable to reach a team member via email or Slack within a 24 hour period they should contact their People Business Partner. The People Business partner will access the team member's information to obtain additional contact methods and numbers. The manager and People Business Partner will create an action plan to make all attempts to contact the team member.

Throughout this process, managers and People Business Partners must maintain detailed records of: dates and times of all contact attempts, methods used for each attempt, any responses or information received, consultation with other GitLab teams (if applicable), and jurisdiction-specific considerations.

Exceptions to the Job Abandonment Policy

GitLab understands there are extenuating circumstances that can occur. In the instance that a team member is absent from work for three consecutive workdays due to an emergency outside of the team members' control (see examples below), the recommendation is:

- The team member should notify their manager about the situation, should a period of unavailability be a foreseen possibility.
- The team member and manager should consider exchanging cell phone numbers to stay in contact as much as possible in the case that the situation should escalate. If you are bas
