

anced opportunities for customers new to GitLab. The customer must be on the First Order customer target list, which is available from the GitLab Channel Sales team members. This incentive is only available for GitLab Select Partners.

- Service Attached Rebate · Partners can receive an incentive paid as a rebate for Partner-delivered services provided to end customers related to their use of their Premium and Ultimate GitLab software licenses. The Service Attached incentive is based on a percentage of the customer's net annual recurring revenue (net ARR) from the linked software sale. To reward Partners that have made an investment in developing GitLab expertise, this incentive is only available to GitLab Professional Services and/or Select Partners.

- Referral Fees · Referral fees are paid to Partners for identifying new GitLab software sales opportunities that are not being resold by a Partner. To qualify for a referral fee, Partners must enter a referral fee deal registration in the GitLab Partner Portal. Each registration received by GitLab is considered a "Qualified Referral," provided that the referral is a GitLab sales opportunity that is new to GitLab, and the customer/prospect is willing to enter into a binding written agreement with GitLab to use GitLab products and services.

- Opportunities identified by a Channel Partner but transacted through a Cloud Marketplace qualify for the referral fee.

- All referral deal registrations must be in Vartopia prior to quarter end to qualify for a rebate.

- All referral deal registrations must be approved by GitLab before becoming eligible for a referral fee. Referral fees are paid out no later than 45 days after the end of each quarter, if you have connected with GitLab in Coupa and provided your banking information.

- To ensure fairness and maintain a streamlined process for all parties involved, we have established a specific timeframe for disputing rebates. Partners are entitled to submit disputes regarding their rebate payouts within a 15-day window. This dispute period begins immediately following the conclusion of the 45-day payout window. It is crucial for partners to adhere to this timeframe, as disputes submitted outside of the 15-day window will not be eligible for consideration. We encourage all partners to review their rebate details promptly and reach out to us within the designated period should any discrepancies arise.

- Services Resale · Partners can earn discounts on Partner-sold services delivered by the GitLab Professional Services team. Partners are able to resell complete GitLab services offerings or include GitLab services as part of their own customer statement of work.

- Subscription Renewals · At the end of their GitLab license subscription, customers must be renewed to continue with the program subscription. At renewal, Partners can earn a renewal discount for licenses renewed at the same subscription level, although no discounts are available for Starter/Bronze product tier renewals. If a customer adds additional licenses, those new licenses are discounted at the standard Partner-sourced discount levels. If a customer upgrades their subscription level (e.g., Premium to Ultimate), the entire deal qualifies for the standard Partner-sourced discount.

For customers whose most recent GitLab purchase was through a reseller Partner, the incumbent reseller can earn a discount on the resale based on their program track, unless 1. the incumbent Partner is no longer in compliance or 2. the customer provides a written request to GitLab to renew with a different partner. A deal registration on the original opportunity is not required for a Partner to earn incumbent status.

Most customers grow their GitLab deployment over time. As such, renewals create additional opportunities for growth through:

- Upsell and expansion opportunities

- New integration, operational, and other professional services opportunities
- The sale and integration of GitLab Alliance Partner solutions
- Add-on sales of other non-GitLab products
- Subscription renewal discounts on future renewals

Working with GitLab - Marketing

Partner Lead Sharing Overview

Channel Partners are equipped with a partner lead sharing and deal registration system designed to maximize the value of GitLab partner program. With the partner lead sharing module, GitLab Prospects, channel partners can access and manage their leads, generated by a GitLab co-marketing campaign in the GitLab Partner Portal. You can also easily convert these leads to deal registrations and submit them to GitLab for approval.

Partner SLAs: In the final phase of the partner recall process, GitLab Channel Partners will have 5 days to accept the lead and 10 days to action the lead.

How to Accessing Your Prospects

You will receive an email notification when a lead is generated. Best practice is to respond within 24 hours.

When leads have been shared with you, you will see an additional tab, "Prospects", in the GitLab Registration portal. Note, the "Prospects" tab will not appear in the partner portal until you receive your first lead.

1. Once you click on the "Prospects" tab, you will be able to see and manage all your GitLab Prospects. In the "Pending" status, click the three dots on the left side of the prospect itself to:

- Accept
- Reject
- Assign to another salesperson
- View prospect details

2. View the standard "Default Reports" for the statuses of your prospects. See definitions:

- Pending
- Accepted
- Qualifying
- Qualified
- Disqualified

3. Use the Custom Reports to configure the specific data parameters you require.

Managing an Accepted Prospect

To begin managing a prospect you must first accept the prospect. When you accept or reject, a prospect the status will be updated in GitLab as well.

Click on the accepted prospect to:

1. View the prospect details

2. Update the status of your prospect
3. Convert a qualified prospect to a deal registration
4. Updating a prospect to "Qualified" will unlock the "Convert to Registration" button and allow you to submit a linked registration using the standard process

Custom Reports

1. Set specific filters
2. Set specific time intervals
3. Modify the data elements
4. Schedule and Save Report to be emailed

Converting Prospects to Deal Registrations

The GitLab Deal Registration System User Guide will guide you on how to use the Deal Registration module. It will show you how to submit a new registration as well as show you how to view and customize deal registration reports so you can track the status of your deal registrations and their performance.

For additional support, click on:

- "Contact Support" and the top right-hand corner to submit a ticket
- "Help" at the bottom right-hand corner for self-guide tutorials

Designate More than One Person to View Prospect Leads in Prospects Module

Your organization's GitLab prospect admin for the partner portal has the ability to designate multiple people to view prospects within the partner portal. To do so use the free trial adding prospect user guide to learn how to access the settings in Prospects module and set any user to a prospect admin.

Channel Partner Lead Recall

In the event the GitLab Channel Partner is unable to action or move a lead to close that is owned by GitLab, GitLab Inc. reserves the right to recall unactioned leads after certain period of time.

GitLab owned leads are acquired from fully paid initiatives generated by GitLab Inc. through joint events are subject for recall.

Phase 1 - Unactioned Leads Over 30 Days Old

These are GitLab owned leads that are stuck in "Prospect Share Status" = "Pending" for over 30 days. Their status have not been updated to either "Accepted" or "Rejected." Additionally, these leads are not "Qualified" or have not been converted to a deal.

Recall Process Overview

- Phase 1 - recall leads created over 30 days ago (not accepted nor qualified)
- Phase 2 - recall leads that have not been accepted after 15 days (not accepted nor qualified)

- Phase 3 - recall leads accepted after 5 days, and not actioned after 10 days. (not qualified)

Once a lead is recalled, it will be reassigned to GitLab Inc. for internal follow up.

Video walk-through of the process outlined above

See video ·

Definitions

Prospect Share Status

Prospect Share Status or Share Status governs the sharing of the lead and the receipt of the lead by the partner. The prospect share status has statuses that are set by both the manufacturer and the partner.

1. Sending to Partner: This is the initial status set when sharing a lead to a partner. This status is set by GitLab.
2. Pending: This is an automated status, set when the lead is synced to the partner facing system.
3. Accepted: Indicates the reseller has accepted the lead and intends to work the opportunity.
4. Rejected: Indicates the reseller has refused the lead.
5. Recall: Indicates the prospect is being recalled by the MFG.

Partner Prospect Status

Partner Prospect Status or Status is updated by the partner and identifies the status of the lead as the partner works through the sales process.

1. Qualifying: This is a default status that indicates the reseller is working on the lead.
2. Qualified: Indicates the reseller has engaged the prospect and determined there is a valid opportunity.
3. Disqualified: Indicates the reseller has determined the prospect is not a valid opportunity.
4. Converted to DR: Indicates the reseller has converted the prospect to a deal.

Welcome to the GitLab Marketing Handbook

Channel Partner Field Team Enablement

Working with GitLab - Technical

Not-for-Resale (NFR) Program and Policy

The GitLab Not-for-Resale (NFR) Program offers qualified GitLab Partners access to our solutions at no cost. The NFR Program provides Partners with an opportunity to develop greater expertise on the GitLab platform. We encourage all GitLab Partners to participate in the

program and set up GitLab solutions. Consider using your environment to create integrations with GitLab Technology Solution Partners. This way your staff can fully understand the benefits and features of GitLab products and be better prepared to demonstrate products to customers.

Partners can receive Self-Managed and Software-as-a-Service (SaaS) NFR Ultimate licenses for a 12-month period.

- Select Partners can request 25 Ultimate users per license type. Additional licenses may be available with business justification.
- Open and Technology Alliance Partners can request 10 Ultimate NFR licenses per license type.
- Select, PSP, and Technology Alliance Partners may also request a total of 5 Duo Enterprise users.
- Any GitLab partner who holds the AWS DevOps competency and is an authorized GitLab Channel Partner Private Offer (CPPO) partner can request 25 GitLab Duo with Amazon Q licenses. It is also recommended partners hold the AWS Generative AI and Security competencies.

Requesting a GitLab NFR (Not-for-Resale) License

Authorized GitLab Partners can request NFR licenses by filling out the NFR License Request Form which can be found on the 'Common Requests' page in the GitLab Partner Portal. Submissions will route to Ecosystem Operations team for provisioning. Please allow two (2) business days for processing. Once provisioned, the requestor will receive a license key via email for Self-Managed, or via their customer portal for SaaS.

NFR Program Eligibility

To be eligible for the NFR Program, Partners must be an Open or Select Partner in good standing or a Technology Alliance Partner with an executed partner agreement. Open and Select Requirements can be found [here](#).

NFR Program Terms and Conditions

1. NFR software and services may be used solely and exclusively by the Partner for the following purposes:
 - Internal employee training
 - Integration testing with related DevOps products and platforms
 - Partner-led product demonstrations to prospective customers
2. Partner in-house production use for customer engagements or internal development efforts requires purchased GitLab licenses, which are available to Partners at a discount. Use of NFR licenses in a customer environment, including for managed services, is strictly prohibited. GitLab Channel Partners in compliance with the GitLab Partner Program are eligible for the NFR Program, but they must have at least one employee that has successfully completed the Solution Architect certification or Professional Services Engineer certification training, lab, and exam (with a passing score).
3. Select Partners may request a license for up to 25 users. Additional licenses may be available with business justification and Open Partners can request a license for up to 10 users without additional approval.
4. All software purchased under the NFR Program is subject to the terms and conditions of the GitLab End-User License Agreement at <https://about.gitlab.com/terms/>.
5. GitLab reserves the right to audit the use of NFR licenses to ensure they are in compliance

with the NFR Program and reduce the number of licenses to a Partner if they are not in compliance with the program.

6. GitLab reserves the right to change or cancel the NFR Program at any time and for any or no reason.

7. Partners can receive one Self-Managed and one SaaS NFR license at the Ultimate level for a 12-month period.

NFR Renewals

NFR licenses expire after a 12-month subscription period, unless they are add-on licenses, in which case they will co-term with the base NFR subscription. Partners can resubmit the NFR Request Form within two weeks of their NFR subscription's end date to request new NFR licenses annually. Partners will need to take action to setup their new licenses before the old ones expire to ensure no downtime. Please use the following guides to complete this step:

- Self Managed
- GitLab.com

Add-ons to NFR Subscriptions

If you would like to request any add-on to your NFR license (CI minutes, Storage, etc), please submit the NFR Request Form or reach out to partnersupport@gitlab.com for assistance. If partners attempt to purchase NFR add-ons through their customer portal, their subscription will be downgraded to free. If you have been downgraded to free already, please contact GitLab Support for assistance.

NFR Support

NFR Support will be provided by the GitLab Support team. GitLab Solution Architects may also be available to help Partners build out training, testing, and lab environments.

Technical Support

For pre-sales technical issues, please contact your local GitLab Sales Team.

For technical and solution enablement see [Channel Partners: Developing your GitLab Practice](#) as well as our [Channel Partner Technical Presales Enablement page](#).

Working with GitLab - Distributors

Transacting Through Distribution

Transacting Through Distribution

Why Does GitLab Leverage Distribution?

GitLab is building out a global Authorized Distributor network similar to many other tier-one software companies. Distributors bring GitLab, our partners, and our customers several valuable offerings:

- Accelerate market reach with joint growth plans and execution including:
 - recruiting GitLab partners and driving completion of their GitLab sales and technical training
 - generating in-market customer awareness and passing qualified leads
- Augment GitLab sales capacity and coverage. Distributor sales teams:
 - work with partners and GitLab sales teams to aid in co-selling
 - are often in-market and speak local languages
- Offload transaction administration from GitLab sales, freeing time for more valuable selling activities
 - Distributor e-Marketplaces allow GitLab orders to be placed by customers and partners that are delivered in minutes, with zero touch by GitLab teams
 - Provide a single point of contact that is an expert in the GitLab Quote to Cash process, driving efficiencies throughout the sales cycle
 - Enable GitLab to scale our operations to allow for increased transaction volume without significant headcount additions (e.g., Deal Desk, Order Management, Billing)
- Credit management
 - Reduce credit management cost and risk for GitLab
 - Offer an array of financing options including the ability for our partners/customers to transact in local currency, which reduces their risk
- Extend GitLab technical services, training capacity, and coverage, both pre and post-sale

Contact Us

All authorized GitLab resellers are invited to the GitLab resellers Slack channel. This slack channel allows you to reach out to our Sales and Marketing Teams in a timely manner, as well as other resellers. Additionally, you can reach the GitLab channel team at PartnerSupport@GitLab.com and the GitLab Partner Marketing Team at Partner-Marketing@GitLab.com.

SECTION: resellers/partner-champions-program/_index.md

<link rel="stylesheet" type="text/css" href="/stylesheets/biztech.css" />

The GitLab Partner Champions Program will empower, support, reward, and recognize members of the GitLab Partner community who champion great customer outcomes based on the GitLab DevSecOps platform.

GitLab Champions: Advocating for Shared Success

GitLab Champions enlists, supports, rewards, and recognizes members of the GitLab Partner community who make outstanding contributions to GitLab and our community around the globe . Become a GitLab Champion

GitLab Partner Champions Program Key Features

- Themed and Sponsored Community: Designed with a distinctive GitLab theme and is financially supported by GitLab. It is led by Channels SAs in each region.
- Regional Leadership: Channels SAs take on a leadership role within their respective regions to guide and oversee the GitLab Champions community and relationships with Field SA Managers.
- Community Liaison: Nominated Solutions Architects / Consultants from each partner serve as Champions. They act as vital liaisons between GitLab Partner SAs and the broader partner community.
- Information Hub: The GitLab Champions serve as a centralized hub for the dissemination of GitLab-related updates, ensuring effective communication and reducing the risk of information loss.
- Ownership and Accountability: The program instills a sense of ownership within partner organizations by empowering GitLab Champions to take responsibility for conveying information accurately and promptly.
- Community Building: The program actively fosters a collaborative and supportive community environment, encouraging interaction and knowledge-sharing among GitLab Champions and the wider partner community.
- Continuous Engagement: Regular engagement activities, such as meetings, workshops, and collaborative initiatives, ensure the continuous involvement of GitLab Champions and strengthen the overall program.

Why to become a GitLab Partner Champion?

- Sales Opportunities: Get promoted within the GitLab Field Sales organization as a GitLab SME for your organization possibly generating sales leads and new oppty's.
- Exclusive Access: Gain exclusive access via GitLab Beta Program when launched, Partner SA exclusive roadmap updates, and access to GitLab's internal Stack Overflow instance.
- Community Influence: Have the opportunity to influence GitLab's product development by providing feedback and insights to GitLab Product Managers invited to Champions calls.
- Networking Opportunities: Connect with fellow GitLab Champions, GitLab Partner SAs, GitLab field sales teams, and other key stakeholders in the community.
- Recognition: Receive public recognition and visibility as a GitLab Champion, both within the partner community and on GitLab's official channels. This recognition can enhance your professional profile.
- GitLab Swag and Merchandise: Enjoy exclusive GitLab-branded merchandise and swag items as a token of appreciation for your efforts in GitLab practice development
- Training and Certification Opportunities: Benefit from training and certification programs that can enhance your expertise in GitLab, making you become more valuable asset to your partner organization, GitLab certifications vouchers will be provided to the champions so that

they can keep their technical knowledge updated in GitLab with no extra cost

Who is the Right Candidate for the Program?

- Adhere to GitLab Values: Aspire to GitLab mission, uphold our values, and adhere to our Code of Conduct.
- Passion for GitLab: Genuine passion for GitLab and a desire to drive practice building within the partner organization.
- GitLab Knowledge: Demonstrated expertise in GitLab, including proficiency in version control, CI/CD processes, and familiarity with GitLab features and functionalities.
- Presales Background: Ideally, the candidate should have presales experience, specifically as a Solutions Engineer actively participating in the partner sales cycle.
- Endorsement from Partner Organization: Support and endorsement from their leadership, showcasing a commitment to the GitLab Champions Program at an organizational level.
- Community Contribution: Consider candidates who have already made contributions to the GitLab community, whether through forums, events, or collaborative projects.

How to Join the GitLab Partner Champions Program?

Expected GitLab Partner Champions Outputs

- Maintain active participation: Engage in and attend regular regional meetings (webinars) offered to GitLab Champions
- Maintain technical proficiency: Acquire GitLab professional certification and consistently update knowledge in line with the latest developments in GitLab.
- Partner Team Enablement: Function as SME for GitLab within the partner organization, and deliver a GitLab enablement session at least once a quarter.
- GitLab Product Strategy: Offer feedback from practical field experiences regarding new or modified features within GitLab to the GitLab Product team.
- Participate in Training: Engage in training sessions organized by GitLab to enhance technical skills and stay updated on the latest GitLab advancements.
- GitLab Publications: Participate in the GitLab community by contributing at least two artifacts annually, such as blogs, videos, or whitepapers.
- GitLab Community Support: When possible attend GitLab Champions regional social events (dinners, meetups, gatherings).

Internal Champion Program Processes

Champions Candidate Nomination and Onboarding

Champions Program Manager and Ecosystem Specialists

1. The Champions Nomination form will email the Champions Program Manager (Manager) and Partner Support for new nominees.
1. A partner support case will automatically open for an Ecosystem Specialist to follow up on the status of the Nominee Approval with the Manager.
1. The Manager will communicate internally to determine approval. If granted, the Manager will request Partner Support set the "GitLab Champion" user field in the Partner Portal to "Approved"
1. Once approval is set in the Partner Portal, the Manager will notify the Sponsor GitLab SA to begin onboarding the new Champion.

Sponsor GitLab SA

1. Invite the new Champion via email address to be a Developer member of the <https://gitlab.com/gitlab-partners-public/gitlab-champions> group.
1. Create an onboarding issue in the champions project for the new Champion with the NewChampionOnboarding template.
1. Complete the GitLab Sponsoring SA Tasks section of the issue
1. Work with the new gitLab Champion to complete the Partner Champion Tasks section of the issue

Posting Champions Call Recordings and Presentation

- 1- After the regional Champions call, the GitLab ESA DRI for the session will download the video file from zoom, and upload it to the Team Spot: Global Ecosystems spot in Highspot.
- 2- "Resolve the Violates Policy warning by setting the following properties:
 - Description: YYYY-MM-DD - Region - Champions - Title of the session
 - Author: Yourself
 - Feedback owner: Yourself
 - Must be in these list groups:
 - Field Motion: "Know"
 - Region: Region where the session was hosted
 - Asset Type: "Technical Webinar / Podcast"
- 3- Edit the Partner Portal Page GitLab Champions Digital Room in Highspot and add the newly uploaded content item(s) in the section called "Meeting Archive".
- 4- Send a message to the Champions slack channel notifying everyone of the new asset.

SECTION: resellers/partner-enablement/_index.md

<link rel="stylesheet" type="text/css" href="/stylesheets/biztech.css" />

In this section of the Partner Programs Handbook we review assets and enablement from the perspective of GitLab Partners' Technical constituencies.

Beyond our Partners Handbook pages you will find sales guides, use cases, training materials, and program guides reviewed below. Additional partner-specific content is hosted in our GitLab Partner Portal. The materials should be a great place to start effectively selling, serving and hitting your number with GitLab.

Remember that some of the links below require you to login to GitLab's Partner Portal first. If you haven't already, here is where you register for portal access.

Topical Articles on DevSecOps Concepts

- What is DevOps
 - This extensive article goes into detail about DevOps, the culture, tools, and methods for success. It's worth 15 minutes.
- What is a DevOps Platform?
 - Great overview article with 10 primary must-have features and 7 things to consider to get the most out of the platform
- DevSecOps Defined
 - Can your existing governance practices keep pace with modern development methods? Learn how next-generation software requires a new approach to application security.

1. GitLab Product Overview

Learn what GitLab is, what it offers, and what it does

Customer Facing Resources

- GitLab Promo Page (Web Page)
 - This is a Why GitLab Page . It's actually a good elevator pitch! Check it out.
- GitLab Promo DEMO (Video)
 - This video is a bit longer demo video and shows more about using GitLab (3 min)
- Platform Page (Web Page)
 - Get to know the basic capability set of GitLab here. Be sure to scroll down to the Solutions GitLab enables and drill into them for more information (20 min read)
- Solutions Page (Web Page)
 - offers a wide variety of ways customers leverage GitLab (20 min read)

Additional References for You

- GitLab internal Sales Training Resources (Handbook)
 - Review this page for all of the sales related training that internal GitLab sellers go through.

2. Pitching GitLab and Showcasing a Solution

Learn how to identify the most valuable challenges and leverage the GitLab DevSecOps Platform to create a valuable solution

Customer Facing Resources

- Build a Business Case for GitLab (Web Page)
 - Guidance for building a business case for GitLab DevSecOps Platform for a customer buying decision maker (20 min)
- Online ROI calculators (Interactive Tool)
 - Leverage the online ROI calculators, or contact your Partner Account Manager for more sophisticated analysis tools (20 min)
- Why GitLab (Web Page)
 - Get to know the top reasons customers choose GitLab (10 min)
- Customer Case Studies (Web Page)
 - Our case studies will give you ideas of why enterprises are choosing GitLab. Bookmark this for customer justification in deals later. (10 min)

Pitching GitLab and Technical Discovery

- Positioning GitLab - Handbook Page (Handbook)
 - Review this page to learn about how to position GitLab in the market. (10 min)
- GitLab Technical Discovery Guide (Handbook)
 - Discovery is a crucial skill for any Solutions Architect (SA). Here is how GitLab SA's do their Discovery (10 min)
- User Personas (Handbook)
 - These are the persona types that are the primary users of GitLab inside your customer.
- Buyer Personas (Handbook)
 - There are different buyer personas to understand when selling a Platform like GitLab. Which do you value more? (20 min)

Competitive Information

- GitLab Maturity Page (Web Page)
 - A very transparent self-assessment of the maturity of each GitLab feature. No direct comparisons with other vendors here.
- GitLab Competitive Overviews (Portal Assets)
 - Have a look at competitive positioning material in the assets library of the Partner site. (login required)

Demo resources to help you showcase the Platform

- Product tours (Interactive demos)
 - A great collection of self-guided, hands-on, interactive exercises for (potential) customers, powered by Navattic. They can also serve as substitutes or safe fallbacks for live demos.
- Start a Free Trial (Web Page)
 - Here is the generic link to start a free trial of GitLab SaaS on GitLab.com. This is an increasingly popular option.
- GitLab Partner Demo Delivery Guide (GitLab Project)
 - A GitLab Project containing all the resources for partners to successfully deliver a 1-hour-long, high-level, technical overview demo of GitLab. Check out the README for further info.
- GitLab Learn Labs - Tanuki Racing (GitLab Project)
 - A collection of always up-to-date workshops. These can be used either individually for self-learning, delivered for customers as hands-on workshops or serve as a basis for in-depth demos. Check out the README for further info.
- Building Pipelines Episode 011 (Video)
 - "Effective GitLab Demos." (40:16) More resources and helpful hints are provided.
- GitLab Partner Demos (Project Catalog)
 - Public group containing demo projects developed by the GitLab Partner SA team for use with and by our partners
- GitLab Proof of Value Handbook Page
 - This handbook page is a great resource and link aggregation point for resources to conduct Proof Of Values (POVs).
- The GitLab Demo Page (Handbook)
 - Good reference material for general purpose demos the same way GitLab SA's do it.
- Ultimate GitOps Workshop (Workshop Guide)
 - Leverage GitLab K8s agent to deploy to EKS.
- Guided Explorations (Project Catalog)
 - Contains Joint Reference Architectures, Patterns and Working Examples for integrating GitLab with Alliance and Technology solutions.
- CI Samples Demo
 - CI functions samples for quick demos

3. Closing the Deal

Learn how to construct and transact a GitLab deal

Customer Facing Resources

- Customer Pricing Page (Web Page)
 - This is the public price of the subscription. Pricing is a simple per-user subscription

that is the same whether you are using SaaS or Self Hosted instance.

- Customer Case Studies (Web Page)
 - Leverage these for customer justification in deals. (10 min)

Additional References for You

GitLab Channel Service Packages

The following Services are examples that you can take, modify and use to provide your own branded professional consultative services that involve GitLab.

- Readiness Assessment - Data Sheet, Statement of Work (SOW), Project Plan, Delivery Kit, System Readiness Report (Health Check) TEMPLATE.
- Partner Led GitLab Optimization - Data Sheet, Delivery Kit.
- Dedicated Implementation Services - Data Sheet, Delivery Kit.
- Migration QuickStart - Data Sheet, Statement of Work (SOW), Project Plan, Delivery Kit, Service Description.
- Self-Managed Rapid Results Consulting - Data Sheet, Statement of Work (SOW), Project Plan, Delivery Kit.
- GitLab.com Rapid Results Consulting - Data Sheet, Statement of Work (SOW), Project Plan, Delivery Kit.
- Delivery Kits
 - These delivery kits are what our internal GitLab Professional Services teams use for customer projects. You are encouraged to take, modify and use to provide your own branded professional consultative services that involve GitLab.
- Professional Services Full Catalog
 - This is a full public listing of services offered by GitLab's Professional Services Team. Use this as a starting place to add additional integrations, add-on services, remix bundles of these service offerings as your own.

Professional Services Team Handbook Quick links

Here are links to the most popular Professional Services topics from the Professional Services Team Handbook page.

- Marketed Offerings
- Offerings Framework & Delivery Kits
- Positioning
- Professional Services Methodology
- Selling
- Working with PS
- SKUs
- Education Services
- GitLab Technical Certifications
- Partner Collaboration
- Sales enablement
- Professional Services Operations
- Escalation Process

Additional Resources

1. Official GitLab Training on Level Up

- Access GitLab Training from the Partner Portal
 - Please login through the Partner Portal to access training in GitLab University. This will ensure that the training you take will be associated with your company partnership with GitLab!

2. Additional Enablement Resources at GitLab

- GitLab Unfiltered Partner Enablement Playlist
 - This is an SA curated playlist of the most informative technical videos on GitLab Unfiltered channel. Some videos here are unlisted and hard to discover otherwise. Bookmark this link!
- GitLab Security Capabilities
 - Also periodically browse the main GitLab Unfiltered channel. This video tour of GitLab Security capabilities is excellent, but for technical reasons can't be added to the playlist above. (50:16)
- Partner Enablement Presentation
 - This deck has some great links associa

3. Technical References

- GitLab Documentation
 - The best starting point for technical questions. It lists feature descriptions, excellent tutorials, and troubleshooting tips.
- GitLab Blog
 - Various content about GitLab. Mostly technical stuff, but not exclusively. Subscribing to the newsletter can be useful.
- Release Overview Website
 - A fairly unknown tool that can help with understanding the changes in each GitLab version. (Source code of the website.) Important features of this website to pay extra attention to:
 - CVEs by version: easily keep track of security vulnerabilities in each GitLab version.
 - Upgrade path: a handy tool which can list the steps of upgrading self-managed GitLab from version X to version Y.
- Deprecations by version
 - same data as this Deprecations by Version page of the Release Overview website, just in a different format.
- GitLab Releases Blog
 - The same information as the Release Overview website, but in nicely formatted blog posts, ready to share with customers.
- The GitLab Project
 - The source code of the GitLab software itself. The most useful part is the Issues page, where everybody can check the state of a feature or a bug and see if it's planned or being worked on.

4. Third-Party & Community Tutorials

- GitLab for Beginners:

Implementing a GitLab instance

- Decide between GitLab Community and Enterprise Editions
 - First, you need to decide which edition of GitLab to install for your customer. You can find plenty of information about this below.
- Reference Architectures
 - Read, understand, and follow the guidance given in this reference architecture page. It's crucially important for long term maintainability of a GitLab instance.
- GitLab Environment Toolkit (GET)
 - Getting started video
 - This is the Way... to install GitLab. The GitLab Environment Toolkit (GET) is a set of opinionated Terraform and Ansible scripts to assist with deploying scaled self-managed GitLab environments following the Reference Architectures. Built and actively maintained by the Quality Enablement team.
- Other Installation Methods
 - Make sure any automation you provide that automatically installs GitLab is installing the Enterprise Edition, and leverages at the core one of these installation methodologies to have a supported configuration.
- Unsupported Designs
 - Also review these unsupported configurations to make sure you are in compliance with our support requirements.
- Next Implementation Steps After Installation
 - Once you have the product installed, here are additional steps to make the installation operationally successful (like backups).
- GitLab Performance Tool (GPT)
 - After installation, to tests the server performance of GitLab environments.
- Upgrading GitLab
 - Upgrades are important to become good at. GitLab schedules major releases for May each year, by default. GitLab releases a minor update on the 3rd Thursday of every month, and has released monthly consistently for more than a decade. Security patches are released more frequently. GitLab.com has updates multiple times per day.
- Upgrade Path Tool
 - Plan upgrades with ease. This website generates supported upgrade paths to assist with updating GitLab.
- Deprecations and removals by version and What's new since?

- Use these resources to understand what is there and what isn't anymore in a given GitLab version.

Implementing GitLab Runners

- GitLab Runner Overview
 - GitLab Runners represent the largest workload the system generates. The Runner is the software that executes all of the CI pipelines. It's possible to deploy them on fixed infrastructure, or autoscale them (up and down) in a cloud provider.
- GitLab Runner Installation
- GitLab Runner Advanced Configuration
- GitLab Runner Fleet Scaling
- GitLab Runner Monitoring and GitLab Runner Fleet Dashboards

Deciding between GitLab Community and Enterprise Editions

GitLab has two distributions:

- Enterprise Edition (EE): built from the official GitLab repository. It contains the code of all license tiers, including the open-source code of Free and the proprietary code of Premium and Ultimate.
- Community Edition (CE): built from the open source fork of GitLab. It contains only the MIT licensed code from the EE repository above, synced with that one automatically on each push.

This means that both editions contain the exact same version of our Free features, but only EE contains Premium and Ultimate features.

Which one should I install for my customer?

Premium or Ultimate customers

No choice: you need to install EE.

Free customers

Rule of thumb: always go with EE, except when you can't.

Upsides of installing EE:

1. No need to do a migration when your customer decides to upgrade to Premium or Ultimate.
2. Optionally get access to free Premium or Ultimate features through our Registration Features Program. You can find the list of those features [here](#).

Then why would anybody go with CE?

There are some customers who are mandated to use open source tools that has a license compatible with their internal policies. Since CE is licensed under the extremely permissive MIT license, it can generally satisfy any of those requirements. Thus, the only reason to

install CE is if the customer explicitly asks for it. Otherwise, start with EE: even if the customer decides not to share usage statistics with us, it'll still be just a flick of a switch for them to upgrade to Premium or Ultimate later.

I've made a mistake and installed the wrong edition

Fear not, follow one of these guides instead.

<link rel="stylesheet" type="text/css" href="/stylesheets/biztech.css" />

GitLab encourages our GitLab Partners to engage in and lead technical services such as migrating to GitLab. This page overviews different data sources that can be transferred to various GitLab destinations. For deeper technical understanding, engineers should enroll and learn from the GitLab University GitLab Certified Migration Services Specialist Learning Path.

If you prefer consuming content in an audiovisual format, and you are a GitLab Partner at the same time, you can watch the following videos in what a bunch of GitLab Ecosystem Solutions Architects discuss the content of this Handbook page and more: For the links in this section, login to our GitLab Partner Portal first, then click the links:

1. GitLab Partner Migration Services Knowledge Transfer 1/2
2. GitLab Partner Migration Services Knowledge Transfer 2/2

Common migration steps for GitLab Partners

For the links in this section, login to our GitLab Partner Portal first, then click the links:

GitLab Partners who are successful at performing customer-facing migrations often take this example path in client engagement:

1. Scope/size of the migration: How many users? How many code repositories? Will the group structure remain intact, or is the migration an opportunity to 'clean up unused projects' within GitLab? Consider running GitLab Evaluate, an open source a script that can be run to gather information about all projects of a GitLab Instance and/or Group (including subgroups). Also consider running Project storage report to create a CSV report for project storage usage. Reports for a single group as well as all projects on a self-managed instance are supported.
1. Understand the customer's business: What artifacts are needed to be migrated? Is an audit-compliance history of users, issues, and merge requests important to the company? Or is migrating just the git code repository sufficient? What data is your customer sensitive to migrating? Would a GitLab Partner Led Optimization Service be a better first step?
1. Health check: Is the import data source healthy, or would a Readiness Assessment help provide the health of the GitLab source? Are some git repositories unable to be cloned, or require cleaning up? Are there any large code repositories with a long-lived history?
1. Post-migration needs: Are there other consultative considerations like access control, and Single-Sign-On (SSO) that need to be configured as part of the migration and adoption towards GitLab or GitLab.com?

After having a technical scoping/sizing conversation with your customer, GitLab Partners find our GitLab Channel Service Packages helpful. These contain template Data Sheets, Statements of Work (SOWs), and Project Plans. GitLab Partners are welcome to take and use these GitLab Channel Service Packages as templates for your customer work. Rebranding and rewording towards your unique technical service offering is encouraged. The table also outlines the GitLab expectations for the certifications held by our partners under the Aligned Partner Certification column.

The Migration Readiness Checklist, provided by GitLab Professional Services, provides a helpful example for you to use. It includes technical asks for Access, Communication, User migration planning, Migration Preparation, Wave Planning, Post Migration Checks, Post Migration Considerations, and Getting the most out of your investment. This document assumes the usage of Congregate, an open-source command line interface (CLI) migration tool from GitLab. Congregate is the preferred method used by GitLab Professional Services.

Communicating clearly What are a customer's obligations and responsibilities prior to, during, and after a migration and What level of instance access and permission are needed for migrating with your customer will also ensure a smooth migration.

Similarly, the Migration group of our GitLab Professional Services Delivery Kits can be very helpful, because these projects "provide step-by-step instructions on delivering everything from a single activity to an entire statement of work (SOW)"

From other DevOps platforms to GitLab

To migrate projects from systems other than GitLab, please review the list of Supported import sources and Other Import Sources ([anchor link on the same page](#)).

Migrating pipelines from other systems, like Jenkins, is a value-added manual development process. There are automated tools for such migrations out there, but there's none officially supported by GitLab. We encourage our partners to scope by understanding the number of pipelines, current pipeline performance, environmental variables, and secrets used. Partners find a time and materials style contract helpful when consulting on developing pipelines between other source systems and GitLab's pipeline syntax.

From GitLab self-managed to GitLab self-managed

The best way to migrate from one self-managed GitLab server to another is to perform a full backup at the source instance and then a restore at the target instance. Step-by-step directions are available on our [Migrate to a new server docs page](#).

Please note that this migration method only works if the source and target instances have the exact same version. If it's not the case for your customer's environments (typically it's the source system which lags behind), then our Upgrade Path tool can help with planning the necessary upgrades on the source system. (Make sure to do a full backup BEFORE the upgrades!)

Air-gapped environments

GitLab can be installed and operated in offline environments. This setup makes migration projects more complex.

- Congregate, an open-source command line interface (CLI) migration tool from GitLab, does support Air-gapped environments. See [Support air-gapped environment migrations and Migrating data in an air-gapped environment](#)

- Direct transfer doesn't support this. Project/export import is a workaround. See the [GitLab issue titled Direct transfer - Support for air-gapped solutions and maintain project and group file-based import/export as a workaround for migrations over air-gapped networks and to serve other use cases for nuanced technical details on performing this.](#)

From GitLab self-managed to GitLab SaaS or the other way around

Choosing from the three different options for a customer migration depends on understanding your customer's needs post-migration. A full technical page comparing in a table format the pros and cons of each method is outlined in [Migration features](#). While Congregate supports most Features to be migrated, migrating to/from GitLab.com with Congregate requires the GitLab Professional Services team due to restricted access to the GitLab.com SaaS (multi-tenant) data. Your migration service may be achieved using one of the other methods.

There are three different options for these migrations.

1. File exports

For cases that direct transfer can't or won't cover. A good example would be air-gapped environments - see above.

- Migrating projects using file exports
- Items that are exported via file exports
- Items that are not exported via file exports
- Project import and export API
- Group import and export API

2. Direct transfer (Beta)

This feature was recently released and is the direction our product team is moving toward for migrating GitLab projects from instance to instance or SaaS. Please review the following resources:

- [Migrated group items \(direct transfer\)](#)
- [Migrated project items \(direct transfer\)](#)

GitLab Log Analysis Tool

This tool could come in handy when one needs to debug a failed Direct Transfer migration.

It spins up a complete ELK Stack (Elasticsearch, Logstash, Kibana) environment specifically

tailored for GitLab logs.

Clone the repo and then with just a single command, the environment is ready to go! Customer's logs will automatically get indexed, and Kibana will launch with pre-configured dashboards, giving you an immediate visual analysis of GitLabSOS, KubeSOS, or GDK logs.

3. Congregate

Congregate - used by GitLab Professional Services - is GitLab's most mature migration solution and supports many options. Note that migrations to SaaS require the involvement of GitLab PS due to restricted access to GitLab SaaS (multi-tenant) data. More information about the latter can be found [here](#).

Important to note about Congregate:

- Congregate Migration Features Matrix
- Migration Readiness Checklist
- Customer's obligations and responsibilities - Congregate FAMQ
- Limitations of Self-Managed to SaaS migrations via Congregate - Congregate FAMQ

Migrating package/container registries

Recommendation (regardless of the use of Congregate): "We typically suggest customers establish pipeline jobs in GitLab after source code migration to publish these containers/packages to the GitLab registry as desired. For customers who are interested in maintaining audit history, we suggest keeping the legacy package/container registry tool around with a reduced license spend until the audit window expires."

If you are migrating from a self-managed GitLab instance and you need to maintain audit history, a good option is to keep a backup of the old instance, since it includes package data.

In case the migration of old packages is also required, the packages importer tool can be used. Documentation is [here](#).

GitLab Professional Migration Services

The GitLab Professional Services team has a full-service catalog of offerings available for direct customers. Partners may review the offerings for inspiration towards delivering similar Professional (consultative) Service offerings.

The GitLab Professional Services Migration Package is one popular offering.

Developing your GitLab Practice

Intro

We're only just getting going at capturing our mutual piece of the \$40bn DevSecOps platform[^1] market, and one of the keys to success is a focus on customer success. One of our programmatic goals is to make it as simple as possible for you to develop a GitLab practice that meets and supports customers and prospects at all phases of their customer journey.

To that end, we've mapped out our Partner Capabilities Journey that aligns types of capabilities with the customer journey, and we've layered on three levels of maturity (Walk, Run, and Fly) for each of those capabilities. Please check back periodically as we will continue to mature that journey as new best practices, enablement paths, or tools are available.

Partner Capabilities Journey

Walk

Walk	Partner Guidance
-----	-----
-----	-----
-----	-----
-----	-----
-----	-----
Sales & Marketing Alignment	\- Partner profile live
Sales & Pre-Sales Capabilities	\- Partner can register deals or referrals & drive renewals \- Relevant team members have Partner Portal Access \- Partner can qualify opportunities \- Partner knows how to get licensing support & program support
Transaction & Implementation Capabilities	\- Partner knows about GitLab Professional Services offerings they can resell \- Partner knows how to manage deals and deal registrations
Adoption & Enablement offerings they can resell	\- Partner knows about GitLab Education Services
Partner Evangelism	\- Partner has a sales motion promoting GitLab by meeting - Open requirements met

Run

Run	Partner Guidance
-----	-----
-----	-----
-----	-----

----- |
| Sales & Marketing Alignment | \- GitLab incorporated into partner brand presence (incl Free Trial)
\- Enhanced partner profile (locations & solutions)
\- Solution briefs for presales, professional, and adoption services live (example: GitLab Demo)
\- Partner marketing to existing customers
|
| Sales & Pre-Sales Capabilities | \- Select requirements met
\- Partner can architect GitLab solution
\- Partner team can pitch GitLab platform value
\- Partner team can align GitLab platform with their solutions
\- Presales solutions
\- Demo
\- Partner led Value Discovery

For more resources see the Basic Presales Knowledge section of the Partner Enablement page.
|
| Transaction & Implementation Capabilities | Reselling path
\- At-scale transaction capability
\- Partner knows how to leverage Cloud marketplaces for referrals
Professional services path
\- Professional Services Partner designation
\- Partner knows how to leverage/buy partner advisory services from GitLab
\- Solution briefs &/or packages for services:
\- Implementation
\- Migration
Managed services path
\- Solution briefs &/or packaging for managed services |
| Adoption & Enablement | \- Solutions &/or packaged adoption services
\- GitLab feature adoption
\- Tool Consolidation services onto GitLab DevSecOps
\- Onboarding new customer Apps onto GitLab platform
\- Partner renewal process is designed to drive adoption and identify growth
|
| Partner Evangelism | \- GitLab is important for Partner sales and marketing success across teams/regions
\- Market solutions around GitLab
|

Fly

| Fly | Partner Guidance

|
| ----- | -----

----- |
| Sales & Marketing Alignment | \- Partner marketing extends to prospects
\- Partner runs quarterly campaigns driving GitLab related solutions
|
| Sales & Pre-Sales Capabilities | \- Proof of Value leveraging free trial
\- Demo of key integrations
\- Clouds (AWS, Google, Azure)
\- Jira
\- Extended catalog of GitLab use cases
\- GitOps
\- AI/ML

For more resources see the Advanced Presales Technical Knowledge section of the Partner Enablement page.|
| Transaction & Implementation Capabilities | \- Solution briefs &/or packages for multi-faceted solutions (Cloud + GitLab + Jira + Terraform)
|

| Adoption & Enablement outcomes | \- DevSecOps platform is core to all customer outcomes

|

| Partner Evangelism | \- GitLab is integral for Partner sales and marketing success
\- GitLab is the default platform for DevSecOps offers

|

Training and Accreditation Program and Requirements

GitLab has developed core training, accreditation, and certification for sales, solution architects (pre-sales engineers), and post-sales engineers and consultants. The GitLab Partner Enablement Program strives to provide our partners with training similar to that of GitLab employees. For details on available training resources visit the [Channel Training, Certifications and Enablement](#) page.

SECTION: resellers/services/services-catalog.md

The GitLab Partner Services Offering Review

To help frame the partner opportunity we would suggest partners think about services in one of four key areas that make up a robust service catalog

1. Strategic Assessments & Planning Services
2. Migration & Implementation Services
3. Training & Enablement Services
4. Optimization & Transformation Services

Offered together these services create a virtuous cycle and create the foundation for an ongoing relationship with customers of those services.

Building Your Service Catalog

The GitLab channel team has worked closely with GitLab Professional Services teams to create and publish some Channel Service Packages to help partners get started with building their own service offerings.

These packages are a work in progress and will be updated frequently. Partners who use these packages, should evaluate each element for applicability to their individual service business, and adjust as needed for the specific customer use cases of their service deals.

Please review the contribution process and adhere to the instructions for each package.

Note: while we have numbered the phases to align with projects where partners are beginning their relationship with a customer, there is no fixed starting point in this virtuous cycle. For your existing customers, it is actually likely that you might be starting elsewhere in the

cycle, the key is working to make sure your relationships are leading you towards a continuous level of engagement with your customers so that you can lead them through the cycle over and over again driving
