

be engaged.

Use Cases: Major process changes impacting the Field's day-to-day work and/or selling activities, CRO/CEO/e-group calls-to-action, major pricing and packaging changes, significant new product offerings, company initiatives and/or priorities that affect how GitLab is sold or how the Field interacts with customers.

Considerations:

1. Due to the complexity, all Tier 1 announcements require at least 1-2 months notice to the Field Communications team. As a general best practice, there should only be 2-3 Tier 1 updates per quarter to keep the Field focused on driving revenue.

1. Field Communications will enforce a quiet period in the final two weeks of each quarter to limit distractions and allow the Field to focus on closing business.

Tier 2 Update

This update moderately impacts the Field's current priorities and/or day-to-day work, is relevant to at least two segments of the Field and is highly urgent (requiring immediate action and/or focus by a particular date). Enablement may or may not be required.

Use Cases: Important process changes, CRO/CEO/e-group announcements, important product marketing updates and/or initiatives, important company initiatives and/or priorities, required Field trainings or enablement often attached to a major Field or company initiative.

Considerations:

1. Due to the complexity, all Tier 2 announcements require at least 1 month notice to the Field Communications team.

1. Field Communications will enforce a quiet period in the final two weeks of each quarter to limit distractions and allow the Field to focus on closing business.

Tier 3 Update

This update highly impacts the Field's current priorities and/or day-to-day work, is highly relevant to all segments of the Field organization and is moderately urgent and requires action in the future. Enablement is typically not required.

Use Cases: Process changes that require reps to change a behavior, major competitive intelligence that impacts GitLab's position in the market, major Channel & Alliance partner updates, major Field organization changes, training or enablement.

Considerations:

1. Field Communications will enforce a quiet period in the final two weeks of each quarter to limit distractions and allow the Field to focus on closing business.

Tier 4 Update

This update moderately impacts the Field's current priorities and/or day-to-day work, is

relevant to at least two segments of the Field and is moderately urgent and requires action in the future. Enablement is not required.

Use cases: General updates not related to selling, general requests/survey for feedback, company/organization announcements

Considerations:

1. Field Communications will limit the number of Field survey requests to one per month. Survey requests will be assessed and scheduled based on this cadence, and exceptions will be made on a case-by-case basis.

1. Field Communications will enforce a quiet period in the final two weeks of each quarter to limit distractions and allow the Field to focus on closing business.

Tier 5 Update

This update highly impacts the Field's current priorities and/or day-to-day work, is highly relevant to all segments of the Field organization but does not require immediate attention or focus. This update is considered to be "nice know information" vs. "need to know".

Use cases: Minor process changes, new resources and/or Highspot pages to enhance selling activities, customer case studies, GitLab release information

Tier 6 Update

This update minimally impacts the Field's current priorities and/or day-to-day work, is minimally relevant to all segments of the Field organization or at least two segments of the Field but is not time-bound and does not require immediate attention or focus. This update is typically operational in nature and does not require additional enablement.

Use cases: Operational updates that do not impact day to day workflows (i.e. system field changes, future downtime, etc.).

Requesting Field Announcements

Once you've reviewed the playbook above and would like to request Field Communications support for a field-related announcement, please follow this process:

1. Submit an issue using this issue template.

1. In an effort to reduce overwhelm and to effectively prioritize information sent to the Field, we require that you complete a Field Announcement request at least three business days prior to your requested send date.

1. If your request is urgent and requires immediate action from the Field (i.e system outage, something with an immediate customer impact, etc.), please complete a Field Announcement request as soon as possible and notify a member of the Field Communications team via Slack.

1. Provide as much context about your announcement as possible, specifically around the urgency, relevancy and what actions are needed from the Field. Requesters must complete their required sections in full before Field Communications will triage.

1. You are not required to include complete copy in your request, but you must provide draft

messaging (bullet points are fine). The Field Communications team will work with you to refine your message as appropriate.

1. Field Communications will triage the request and apply a placeholder tag Field Announcement::Triage to the issue as quickly as possible. Upon examining the request, they will assign it to a communication tier using one of three tags:

- Field Announcement::Tier 1
- Field Announcement::Tier 2
- Field Announcement::Tier 3
- Field Announcement::Tier 4
- Field Announcement::Tier 5
- Field Announcement::Tier 6

1. Note: If the announcement request includes a request to survey some or all Field team members, the Field Survey tag will be applied to the issue and Field Communications will work with the requestor to determine if request fits within the survey limits set each month or if plans should be adjusted.

1. Field Communications will collaborate with the requester on the announcement details and copy directly in the issue to finalize the roll-out plan and timeline.

Field Comms Quiet Periods

Field Communications will enforce a quiet period in the final two weeks of each quarter to limit distractions and allow the Field to focus on closing business. Exceptions will be made on a case-by-case basis for urgent announcements that require the Field's immediate attention (system outage, critical update affecting customers and/or closing business). The quiet periods for FY26 are as follows:

- Q1-FY26: 2025-04-18 - 2025-04-30
- Q2-FY26: 2025-07-18 - 2025-07-31
- Q3-FY26: 2025-10-17 - 2025-10-31
- Q4-FY26: 2026-01-16 - 2026-01-31

Announcements to External Channel/Alliances Partners

If you have an internal announcement that is also relevant to GitLab's external Channel/Alliances Partner audience, please use the Field Announcement Request process outlined above and add the appropriate details in the Enablement Scope section of the issue. Also select the GitLab Partners (external) audience in addition to the relevant internal audiences. By selecting this audience, the Field Communications team will engage the appropriate team members in Partner Communications to disseminate the announcement to partners.

If you have an announcement that is relevant only for the external partner audience, please open a Channel Partner Communication Request issue so the Ecosystems Operations team can assist you.

Sharing Feedback

Ongoing feedback and participation from the Field is imperative to the success of the Field Communications team and its programs. Field Communications incorporates surveys and other opportunities for feedback directly into primary communication programs. Team members are encouraged to provide ongoing feedback via these avenues.

In addition, Field Communications provides team members an opportunity to provide feedback about their Field Communications experience in annual Field and/or company surveys.

SECTION: sales/field-communications/field-alerts.md

Overview

Field Alerts are an as-needed Field communication channel used to capture the Field team's quick attention on urgent matters that involve a time-sensitive CTA and/or immediate impact on customers. Field Alerts allow the communications team to cut through the noise in Slack (where urgent updates can sometimes be lost or delayed) and reach team members directly in email with a format and template that is direct and easy to consume. Field Alerts also allow the communications team to track engagement to determine where follow-ups are required.

Scoping

Field Alerts are used exclusively for Tier 1 Field Communications updates. These updates often necessitate the GTM Enablement Process, which also scopes out Field and Partner enablement needs, content requirements and more. Exceptions can be made at the Field Communication team's discretion for non-Tier 1 topics or announcements that involve a time-sensitive CTA and/or immediate impact on customers.

Examples of initiatives that warrant a Field Alert include:

- Customer communication
- Major compete events
- Time-sensitive, event-based communications
- Leadership messages/CTAs
- Major product updates
- Major pricing and packaging changes

Process and Delivery Mechanism

1. The Field Communications team will advise DRIs on whether or not a Field Alert is necessary via the Field Announcement Request process and/or the GTM Enablement Process.
1. Field Alerts are sent via a plain-text email in Staffbase, the Field Communication team's internal newsletter tool. The email includes a maximum of one paragraph, with CTA at the top.
1. The alert is sent from the CRO or a member of the Field Communications team.

Field Alert Template

SUBJ: Field Alert: [Topic]

[Banner Image]

The below update is being shared via Field Alert because it requires a time-sensitive review and/or call to action. Read more about Field Alerts [here](#).

[The headline/call to action, 1-2 sentences bolded]

Details: [2-3 sentences, including links to related Highspot resources]

More information: [Slack channel and/or DRIs]

What's next: [If relevant, include information about what the Field should plan to see or do next]

SECTION: sales/field-communications/field-update-tickers.md

Overview

The Field Update Tickers serve as a weekly summary of news that is relevant to the Field. Each region receives a Ticker that includes updates that are relevant to their region (AMER, EMEA, and APJ). The information is prioritized based on required action and high customer/business impact. The purpose of each Update Ticker is to provide targeted, focused and action-based communications to team members in each region. The Update Ticker is not inclusive of all internal communications and team members should continue to use company-wide Slack channels (company-fyi, whats-happening-at-gitlab and other Slack channels as appropriate) to stay informed.

Target Audience

The updates and any associated actions included in each Update Ticker are geared toward all Field roles within each region. Cross functional team members in Marketing, Product and People Business Partners also receive the Ticker for visibility. The information contained in each Update Ticker is confidential and is, therefore, intended for internal audiences only unless otherwise stated.

Delivery Mechanism

Each Update Ticker is created and maintained in Workshop and sent via email each Thursday. In the spirit of Iteration and Efficiency, Field Communications will continue to explore new ways to improve the delivery method of the Update Tickers.

Individual Contributors: How to Use the Update Ticker

How to use the Update Ticker:

1. Review the information included in the ticker on a weekly basis. The information is structured and prioritized for you to read quickly and efficiently. However, you should schedule time to read and synthesize any supporting links (Slack messages, Highspot pages, Handbook pages, etc.) when appropriate. Members of the Target Audience (listed above) can expect to receive the Update Ticker via email on Thursdays.
2. Complete action items as required. Items that require your action are categorized as 'Leadership Priorities' or 'Take action' for efficiency. Please complete these items by the associated due date.

3. Note any key dates and resources. Included at the bottom of each Update Ticker is a summary of key dates and resources that you should be aware of. Note that this information is subject to change so we recommend that you check this information often.

Managers+: How to Use the Update Ticker

In the current iteration, the Update Tickers contain information and updates targeted to each region within the Field org (AMER, EMEA, and APJ). The Update Tickers are an asynchronous communication channel and are not meant to replace synchronous meetings with your teams. You can use the relevant Update Ticker in the following ways:

1. Add the link to the relevant Ticker in your team meeting agenda for easy reference and access.
2. Pull the information from the Ticker and highlight where appropriate in your team meetings, Slack channels and/or 1:1 meetings. You know your team best so you can add any additional considerations or additional directives.

Format

This is the current iteration of the Update Ticker:

1. Survey
1. "Skip to" anchor links
1. Content categories
 - Leadership Priorities: High customer or business impact topics that you are expected to be aware of and action on
 - Take Action: Action that you are required to complete by a certain date
 - Need to Know: Customer or business critical information or updates that you are required to know in your role (i.e. pricing updates, updates directly related to selling, etc.)
 - Nice to Know: Information or updates that are not business critical but are still relevant to your role (i.e. upcoming events, new cross-functional processes not related to selling, etc.)
 - Key Field Dates & Resources: Upcoming dates that you should be aware of and resources that are particularly applicable to the Field org (evergreen Highspot pages, timely resources, Field Enablement session recordings, etc.)

Process

1. During the Field Communications triage process, each Field Announcement Request is evaluated to determine if the update should be included in the relevant Update Ticker.
 - Contributions should be submitted by 12 pm PT each Wednesday to be included in the Update Ticker going out the following day (on Thursday).
 - When possible, we advocate for using the Update Ticker (as opposed to field-fyi) to reduce pings to the field and deliver news in a consolidated, predictable, and digestible format.

Reach out in the field-enablement-team Slack channel for questions/feedback, or share feedback in the survey at the top of each Update Ticker.

SECTION: sales/field-communications/monthly-release-sales-email.md

Overview

Following each GitLab release every month, Product Marketing creates a pitch template in Highspot that members of the Field organization can repurpose to send to their customers and prospects. The purpose of this pitch template is to make it easy for team members to quickly share the technical details of the latest release and create a meaningful touch-point with their customer or prospect.

Format

The quick format includes:

1. An overview of GitLab's value drivers
1. 3-4 main/noteworthy features of the release
1. Release blog post and the GitLab Releases page.

Process

1. Product Marketing creates a pitch template on the release date every month and houses the template in the Company Pitch (Email) Templates Spot in Highspot.
1. Product Marketing uploads the latest release blog post to the Customer Outreach spot in Highspot and then adds that piece of content to the pitch template along with the releases page.
1. Product Marketing adds the pitch template and the latest release blog post to the GitLab Releases Overview page in the coordinating sections.
1. Product Marketing notifies Field Communications in the release post highlights issue with a link to the pitch template once the steps above are complete.
1. Field Communications shares the pitch template in sales and adds to the Field Update Tickers & Field Flash.

Helpful Resources

- External Shares (Pitching and Digital Rooms) in Highspot
- Send an Email Pitch from Highspot
- Highspot Pitching - Deep Dive Training
- GitLab Releases Overview page

Questions? Please reach out to field-enablement-team

SECTION: sales/field-communications/field-flash-newsletter/_index.md

Overview

Field Flash is a monthly newsletter that recaps all important Sales/CS-related information from the month and highlights important upcoming information. The main goal of this communication is

to help the field sell better, faster, and smarter.

Ongoing feedback and participation from the field is imperative to the success of this program. If you have feedback on the current process or would like to request a certain type of content or update for future newsletters:

- Capture it using this quick process
- Reach out in the field-enablement-team Slack channel

Target Audience

The newsletter is sent to members of the field (sales + customer success) and stakeholders (i.e. SDRs). Please note that this email is considered confidential and is, therefore, intended for internal audiences only. Please do not forward externally.

Newsletter Tool

The newsletter is sent using the internal comms newsletter platform Workshop. This tool allows GitLab internal communications professionals to send targeted email newsletters to team members based on department, region, manager, location, start date and more.

Access to this tool is shared amongst internal comms teams such as Field Communications, GitLab corporate internal comms and others. The benefit of this tool is that it is internal comms-specific, meaning that the newsletter can only be sent to team members with a GitLab email domain.

Opportunities/Requirements

After interviewing GitLab team members from across the org and surveying the Field, we identified the following as key requirements of the Field Flash newsletter:

The newsletter will...

Uphold our values of transparency

- The newsletter is for communication, the Handbook is for documentation. This means that the newsletter disseminates updates but leans on the Handbook (and other relevant resources) as the main source of documentation, linking back to it wherever possible.
- Note: A tangential benefit of this approach is that it allows us to improve the Sales Handbook during this process.

Prioritize repetition, brevity, user-friendliness and added value

- The newsletter focuses on short lists and bullet points and links out to more robust resources (e.g. Slack and Highspot).
- Repetition is key to adoption. We do not focus on a single channel, but rather notify the field of a new newsletter via Slack.
- We don't want the team to see the newsletter as more noise. A key to adoption will be successfully positioning it as THE resource to learn what's new and recap important information. Everything will be tied back to the payoff to the seller when possible.

- We must reconcile the fact that this newsletter is yet another increase in communication. We leverage it to cut down on other communications when possible.

Be fun to look at and read

- A focus on multimedia is important in order to help the newsletter break the monotony of text we sift through each day.
- We use images, GIFs, emoji, and video where possible. For example, instead of doing a written win-wire, we will interview the individual and embed that 30-60 second video in the newsletter.

Help the Field operationalize key messages

- We organize information around our 3 main value drivers when possible.
- We frequently reiterate SKO messages through video clips and use-case examples.

Be an opportunity for the Field to "learn themselves"

- A peripheral goal of the newsletter is to advertise helpful resources to the Field. We will provide helpful information in hopes that it will encourage team members to seek out the source of that information and look for additional information once there.

Highlight all aspects that make a big win possible

- There are a lot of new reps who are still ramping, and they want to learn from others. We will spotlight everything that went into winning a deal, including any customer-facing presentations, RFPs, whitepapers, etc. Other team members can reference these later, and it may save them cycles by not having to duplicate work.
- We will include context around partners and alliances when they play a role in a deal.

Keep the onus on individuals to stay informed

- GitLab is asynchronous, and this update is no exception. The onus remains on individual team members to stay informed and connected. The newsletter is not a substitute for the Handbook or other resources salespeople should be leveraging on the day-to-day.

Be general enough to allow us to remain segment-agnostic

- The newsletter will include general updates and resources that are applicable to most, if not all, team members. Future field communications programs will enable individual field segments (CS, ENT, COMM, PubSec, etc.) with more frequent updates that are tailored to their teams (e.g. [Field Update Tickers] (/handbook/sales/field-communications/field-update-tickers/)).

Be built out in the open

- The newsletter content will be compiled in an issue each month within the Enablement project. Any team member is welcome to contribute or make requests. See more information in the Process section below.

Uphold our value of "everyone can contribute" · we will measure success and gather feedback often

- We will measure success using a combination of quantitative and qualitative success metrics. See Measurement section below.
- Giving feedback or making requests will be easy, and all input will be considered and addressed.
- The team is committed to upholding the value of the newsletter · information should be relevant, feedback should be actioned on, and leadership should help reiterate by pointing to it as a useful resource for their teams.

Format

Based on the requirements above, this is the current iteration of the newsletter format:

1. Featured

- The announcement we think is most impactful to the Field. We will try to communicate this in an image with 1-2 lines of text + 1-2 links to references. Note that not all issues will have a featured article.

1. Deal of the month

- Video of sales/CS team member(s) overviewing the opportunity and/or customer and explaining how they won the deal + links to any customer-facing collateral they used (that can be publicly shared).

1. New and noteworthy resources

- New skills and tools like competitive intel, customer case studies, or a customer proof point highlight.

1. Did you know?

- Updates from sales ops and other stakeholders related to changes in the way we work or interact with other teams.

1. Upcoming events

- Where GitLab will be over the next two months, divided by region. What webinars and other virtual events we will participate in.

1. Enablement corner (space permitting)

- Updates from Field Enablement regarding new or updated trainings + opportunities to reinforce Field learning objectives. (i.e. Did you know...?/Did you remember that...?)

1. Channel corner

- Updates from Field Enablement/Channel & Alliances team regarding new or updated trainings, opportunities or news about Channel and/or Alliances. (i.e. Did you know...?/Did you remember that...?)

Process

The newsletter is typically sent out on the first Monday of each month at 9 am PT.

We build the newsletter in an issue in the Enablement project. The process for the issue includes:

- The issue for the upcoming newsletter is opened at least three weeks before first Monday of the next month.
- Relevant stakeholders/contributors are tagged in the issue each month to provide content or review suggested content in the outline.
- Contributed content is due no later than one week before the planned send date (first Monday of each month) to allow time for drafting, design, and reviews. Exceptions can be made in

special cases · please reach out to the Field Communications team in the field-flash-contributors channel to discuss.

- Once the outline is complete, Field Communications drafts the newsletter in a Google document linked to in the issue and then imports the content into the newsletter template in Staffbase.
- Field Communications sends the newsletter test email to relevant leaders and stakeholders for review no more than two business days before planned send date.
- Reviewers provide feedback no later than 3 pm CT on the business day before the planned send date to allow time for revisions and scheduling.
- Field Communications schedules the newsletter to send at 9 am PT on the planned send date.
- Once the newsletter goes live, Field Communications sends a reminder to the field in the sales, customer-success and sdrglobal Slack channels
- On the Monday following the newsletter send, Field Communications captures the newsletter performance data in the issue and then closes it.

To be added to the newsletter distribution list, please reach out in the field-enablement-team Slack channel.

Deal of the Month Nominations

Deals that qualify for the Deal of the Month video meet most of the criteria below.

While submissions often come from Sales leadership, nominations can and should be made by any GitLab team member - everyone can contribute! To make a Deal of the Month nomination, please reach out directly to the Field Communications Specialist (Shannon Thompson). Nominations close 7 business days prior to the target publish date (first Monday of each month). Any nominations received after this date will be considered for the following month's edition. Note that, in an effort to feature recent deals, nominations are only valid for one edition cycle, i.e. nominations do not carry over to a future month if not selected.

Deal of the Month Criteria

- This deal is a shining example of what great looks like. New and tenured team members would benefit from learning about all of the work and various components that went into it.
- The deal is a good example of "landing with vision and expanding with purpose."
- The team member articulated a defensible "Why do Anything."
- Team member and/or account team successfully formed a meaningful relationship with the customer/prospect, earning their trust as a part of this deal.
- The Close Plan for high fidelity line items includes dates with actions/outcomes.
- Team member and/or account team used the value framework to guide the conversation with the customer/prospect.
- Team member and/or account team successfully used the MEDDPICC methodology for opportunity management.
- Team member and/or account team exhibited GitLab's values in this process.
- Team member and/or account team received positive feedback from the customer/prospect or from another GitLab team member as a part of this deal. (Please share if possible.)

Measurement

Quantitative Success Metrics

- Total email open rate (including original send and follow-up send)- Average open rate of 80% in FY24.
- Click rate - Average click rate of 20% in FY24.
- Increased sentiment around information flow - 10% increase in "agree/strongly agree" responses to this survey question: "As a sales/CS team member, I feel informed on all critical information related to my role." in FY25 P

Past Newsletters

All past editions of the Field Flash are accessible through Highspot, our go-to-market (GTM) content portal / asset management system.

SECTION: sales/field-communications/field-flash-newsletter/edition-2020-04-02.md

This email newsletter was originally sent to the GitLab Field Team and stakeholders on 2020-04-02.

We're Live! Time to Level Up with Field Flash. ..

Welcome to the Field Flash newsletter! This monthly newsletter recaps important field-related updates from the month prior and highlights important information for the months ahead. The main goal is to help you do your job better, faster, and smarter. For more information, see this handbook page. Now, without further ado...

The GitLab Partner Program is here

This program will help us create partner-initiated sales opportunities and partner services that ultimately drive greater value for our customers and GitLab. To take full advantage of the program, you need to understand how it impacts you (i.e. new fields and processes in SFDC) and how you can best engage the channel & alliances team for partner opportunities. Check out:

- New and improved Channel handbook page - An overview of the program and all of the latest and greatest updates.
- Channel Operations Update slides, video, and handbook page - Existing and new channel processes that impact day-to-day work.

Questions? Slack:

- channel-sales: Sales questions
- alliances: Alliances team
- channel-ops: Operational/systems questions

Deal of the Month ·

Joe Miklos walks us through a large deal he's working through.

New and Noteworthy Resources ·

COVID-19 has shaken up the way that many companies work, and we are in a unique position to help. Pick from the list of resources below, share with those who can benefit from it, lend a helping hand.

- GitLab's Guide to All-Remote - A comprehensive resource that highlights what "all-remote" really means and how we put it to practice.
- Need something shorter? Darren Murph's blog, Resources for Companies Embracing Remote Work, is a quicker share.
- Video content? Here's LinkedIn's interview with Sid about his tips for a productive all-remote workforce.

ICYMI, check out McB's message to the team for his thoughts on COVID-19, the economy, and some actions we are taking as we continue to grow and invest during a challenging time. Watch Now -->

We have passed our SOC2 Type 1 audit and now have a report available to share with customers and any prospects covered under NDA. This may satisfy the need for some customers/prospects regarding information security questionnaires. See Handbook for Details -->

New case study alert for a company that we all know and love · Chorus. Read for some great referenceable tidbits, like how we've helped them reduce some production cycles from 6 weeks to 1 week. Read More Here -->

Ever wonder what happens to the command plan after the deal is signed? Check out this model success plan from Jamie Reid (CSM), Ken KcKnight (SA), and Joe Miklos (SAE) to see how that data lives on post-sale to determine a customer's positive business outcomes and the plan for how GitLab will help them get there. Check it Out -->

There's a notable update to the GitHub comparison page that highlights GitHub Enterprise challenges in scaling, HA, and ZeroDowntime upgrades and contrasts how GitLab delivers those requirements. Also, check out these shiny new comparison pages:

- Buildkite: A continuous integration tool that's main value proposition is the ability to run multiple parallel tests that shorten time to deployment.
- LaunchDarkly: A feature delivery and feature management service offering.

Did You Know? ·

New sales processes are in place that will allow us to standardize messaging around COVID-19 and the impact it's having on customers/prospects. Read the new handbook section for full details on process changes including:

- Add the string covid in the SFDC Opportunity field [CP] Close Plan
- Assess and flag each SFDC Deal using the "COVID-19 Risk Scale" field

GitLab just released a new COVID-19 Medical Leave Policy that offers up to 12 weeks of leave with full pay to GitLab team members who are impacted.

- See the full policy or reach out to the Total Rewards team with questions.

What's New in GitLab ·

The GitLab 12.9 release just went live! Here are the takeaways for customers and prospects:

- Reduce Security and Compliance Risk: Organizations storing secrets (anything they want to tightly control access to, such as API keys, passwords, certificates, or tokens) for infrastructure and applications centrally in Hashicorp Vault can now install it as a managed app at the project level - giving them enhanced security functionality.
- Increase Operational Efficiencies: Companies can now customize the stages in the Value Stream Analytics in order to visualize and manage their end-to-end workstreams in a way that makes sense to them and aligns with the right metrics for their business. Previously, the lifecycle stages were fixed to the DevOps loop, which may not be suitable for everyone.
- Deliver Better Products Faster: Organizations can now manage deploy tokens in bulk at the group level as well as create, list, and revoke deploy tokens via APIs - helping administrators manage authentication to the registry more efficiently.

Visit the 12.9 Release Post for more details

Upcoming Events ·

Note that all in-person regional events are still tentative due to risks surrounding COVID-19. Please refer to the specific linked issue for each event for details as they unfold.

Virtual

- LeadDev Virtual Conference, April 7 & 8

New and Noteworthy Resources ·

ICYMI, check out the FY21-Q2 GTM Field Update, which includes brief overviews from Sales, Product, Marketing, CS, Channel and Field Ops. Watch Now -->

The Women in Sales Mentorship pilot program has launched! Interested in being a mentor or mentee to advance opportunities for women in sales? Apply by May 8. [See Handbook for Details -->]

The new "How to Deploy on AWS from GitLab" whitepaper provides screenshots and instructions for using GitLab with five popular AWS services: Lambda/SAM, EKS, ECS, EC2, and Fargate. Check it Out -->

The Channel Program was announced externally on April 21 and generated a lot of positive media

coverage, including a featured article in CRN. Read and Share -->

We have added a new section to clarify reporter user pricing in our Pricing Handbook Page. Learn More -->

Did You Know? ·

ABM campaigns are now being launched on an ongoing basis. Accounts that are in our ABM strategy will include the 'GTM strategy' field in Salesforce. And, you can check out the new Demandbase section in Salesforce to view intent data for accounts. For more information:

- ABM Handbook Page
- Nominating an account
- When will an account move?

A new Partner Information section has been added to all opportunities in SFDC to ensure proper tracking for all channel opportunities. If you are working a deal with a GTM route of Channel, ensure this section properly reflects the partners involved in the deal. In the case of a Partner Initiated Opportunity from the partner portal, these sections should already be populated, but please double check before closing your deal.

Questions? Reach out to channel-ops or visit the Handbook.

GitLab's user conference, Commit, is coming soon (virtual and in-person) and our Call For Papers is open. Have a contact that should apply? Let them know! Deadline is June 1.

See the main epic for full details.

What's New in GitLab ·

The GitLab 12.10 release just went live! Here are the takeaways for customers and prospects:

- Reduce Security and Compliance Risk: GitLab 12.10 included the first MVC of Requirements Management, the first step towards full-blown requirements management with traceability from requirements all the way through to code. We also delivered key compliance features such as Compliance Framework Labels for projects, HIPAA audit project template, and improvements to the compliance dashboard · all of which help customers deliver faster, more efficiently, without sacrificing compliance.
- Increase Operational Efficiencies: Companies can more easily manage multiple projects by tracking and sharing the health status of issues, and they can spend less time switching between tools and more time focused on building great software by leveraging our Jira issue importer.
- Deliver Better Products Faster: Organizations can use GitLab's autoscaling ability on AWS Fargate to auto-scale runners, accelerating delivery and allowing pipelines to efficiently scale to meet demand.

Visit the 12.10 Release Post for more details

Upcoming Events ·

Note that all in-person regional events are still tentative due to risks surrounding COVID-19. Please refer to the specific linked issue for each event for details as they unfold.

Virtual

- GitLab for Education Virtual Meetup - May 6
- Apex Virtual Thought Leadership Roundtable - May 12
- Spring IT Virtual Summit - May 27
- Agile + DevOps Virtual Conference - June 8-11
- Digital DevOps Series: How to Reduce DevOps Cost - June 18
- Fintech Developer Forum: Past, Present, Future - June 25

AMER

- GitLab DevOps Automation Workshop, East/Central (Virtual) - June 26
- Automation DevOps Virtual Workshop, West Coast (Virtual) - June 17

APAC

- Cloud Strategy & DevOps Summit NZ 2020 - June 17

This email newsletter was originally sent to the GitLab Field Team and stakeholders on 2020-06-02.

GitLab Field Flash: Your Top Field Highlights from May ··

Thanks to everyone who participated in Q2 QBRs! In this month's Field Flash, you'll learn about how Sales Ops is responding to your QBR asks in record time. You'll find new pricing resources, more info about how the Field Security team is self-serving the answers to more than 90% of customers' security questions, and more. Also, Sophie Pouliquen explains the importance of building customer trust, and we learn some fun facts about Matt Beadle in his Team Member Spotlight.

Pricing Overview

There are multiple resources available to help you learn more about GitLab pricing. Check out:

1. Field FAQ - Sales and CS-specific questions.
1. Company FAQ - General company document.
1. Customer FAQ - External-facing FAQs.
1. Sales Enablement Webinar recording - Product marketing walks through pricing for the field team. See the deck here.
1. Pricing AMA recording - Xiaohe Li's, Principal Pricing Manager, company-wide AMA.

Questions? Feedback? Contribute in this issue.

Deal of the Month ·

Sophie Pouliquen explains how she and other members of this Top Account Team from SKO 2020 use a multi-dimensional and consultative approach to support that has helped build strong customer trust and fostered significant growth opportunities.

```

We recently added a Cross-Culture Collaboration Guide to the Handbook to help GitLab team members practice effective and inclusive communication and cross-cultural collaboration globally; irrespective of culture or background. See the Handbook for Details -->

The Field team is piloting Focus Fridays through the Summer. Consider adopting Focus Fridays in your schedule to allow time for focused work and reduce potential burnout. See the Handbook for Details -->

Did You Know? ·

Effective immediately, we will follow a revised SPIFF payout for GitLab-delivered and partner-delivered services. Highlights include larger deal size support, more opportunities for SPIFF, and added availability for CSMs for growth service opportunities over \$25k. Plus, we have lowered the minimum engagement amounts for our Partner Services incentive to drive greater partner interest in delivering services around GitLab deployments.

For the full details, please see the updated compensation deck and updated Channel Partner Handbook page.

The Deal Desk team used your feedback from the recent Quote to Cash survey to uncover valuable insights about the most challenging and time consuming aspects of the quote to cash process at GitLab and the top-requested areas of improvement. Immediate changes include:

1. A new quote validation rule that will prevent order forms from being created without complete addresses.
1. A new channel quote approval process to alleviate the current pain points surrounding

channel quotes. (On track for completion at the beginning of Q3.)

Check out this issue for a full breakdown of the survey results and steps Deal Desk is taking to action your feedback.

The Customer Reference Team is actively managing our presence on Peer Review sites such as Gartner Peer Insights and G2. These sites also give us active Customer Quote Assets that can serve as helpful resources for you to help demonstrate the value of GitLab to your customers and prospects. For more information:

1. Learn more about how we manage Peer Reviews on this Handbook page
1. View assets you can drop into your slide deck
1. Find out how to make a Peer Review Request if you don't see what you need

What's New in GitLab ·

The GitLab 13.1 release is live! Here are the takeaways for customers and prospects:

- Reduce Security and Compliance Risk: Enhanced and extended security and compliance features including a policy management UI for network container policies, group-level vulnerability exports for audits or internal reviews, and helpful UX improvements to the Security Dashboard make it easier for customers to achieve a fully secure, compliant SDLC.
- Increase Operational Efficiencies: GitLab's Alert Management aggregates and ranks IT alerts from all of customers' services to simplify assessment and remediation, helping them increase productivity and research and address critical issues right away.
- Deliver Better Products Faster: Organizations can boost the speed and accuracy of their code reviews and address errors in recently-modified code immediately with new features to improve code quality that include code coverage tracking over time and native code intelligence.

Visit the 13.1 Release Post for more details

To see what's ahead in 13.2, watch the kickoff videos or check out the kickoff review page.

Archive: Edition 4, Description: June 2020 Field Flash

SECTION: sales/field-communications/field-flash-newsletter/edition-2020-08-06.md

This email newsletter was originally sent to the GitLab Field Team and stakeholders on 2020-08-06.

.. GitLab Field Flash: Your Top Field Highlights from July ..

Congratulations on the close of a successful quarter, and welcome to Q3! In this month's Field Flash, you'll find new Enablement resources, updates on pricing change timelines, new Channel processes to help assist in your deals, and more. Plus, Mark Bell and Timo Schuit highlight what went into closing the largest deal in GitLab history (hint: a huge cross-functional effort!) and we learn more about Cherry Han's many talents in her Team Member Spotlight. (Pro Tip: Don't forget to click the "View entire message" link at the bottom of this email when viewing in Gmail to see the full newsletter each month!)

Start the Quarter Off Strong

July was filled with helpful trainings and exciting announcements from Field Enablement. ICYMI, check out:

1. Forrester TEI Report Enablement Session - Learn more about how to leverage this report as a tool in customer conversations in this special session with Forrester reps. (Don't forget to share the blog with your connections on social media!)
1. Demystifying the Metrics Conversation - Find helpful tips, tricks, and guidance in this robust Handbook page meant to help you successfully navigate one of the toughest customer conversations.
1. Q3 Level Up Sales Enablement Webinars - The Q3 calendar is now posted! Check out the great enablement sessions scheduled for this quarter and find recordings.
 1. For CS team members and those looking for more technical content, check out the CS Skills Exchange sessions.

Questions? Slack [field-enablement-team](#)

Deal of the Month ·

Curious about what went into closing the largest deal in GitLab history? Mark Bell and Timo Schuit walk us through their deal and share helpful insights they learned along the way.

New and Noteworthy Resources ·

ICYMI, check out the FY21-Q3 GTM Field Update, which includes brief overviews from Sales, Product, Marketing, CS, Channel and Field Ops. Watch Now -->

Learn more about how Chicago's Cook County Assessor's Office adopted GitLab to power 1.8 million property assessments while battling challenges due to COVID-19. And, learn how Jasper Solutions offers its dynamic "DevSecOps in a box" to customers with the help of GitLab SCM, CI, & CD. Read More - Cook County --> Read More - Jasper -->

Discounts for GitLab Groundworks (part of Commit Virtual on 2020-08-26) are available for you to give to customers and prospects to help them get trained and expand their use of GitLab. Learn More -->

MEDDPICCC has been expanded to include "Partner!" Learn more about the new qualification step in the Sales Handbook, and watch this 5-minute video to hear more from Michelle Hodges about the change. Learn More -->

We recently signed a global agreement with Contino (a Cognizant company) to partner on consulting engagements. Check out this video from the Channel team for more information on how you can engage this partner to assist in your deals. Watch Now -->

Did You Know? ·

FY21-Q3 QBRs are taking place from August 3-20. Find links to schedules, deck templates, and notes docs in this issue. For a full overview of the QBR planning and execution process, QBR request tracking, best-practices for organizers and attendees, and where to find past QBR content, see here.

For more information, join the qbr-ent-q3fy21, qbr-comm-q3fy21, and qbr-channel-q3fy21 Slack channels.

We now have 40+ partners who have completed GitLab's Services Bootcamp! Check out the attendee list and Partner Services Matrix along with a summary outcome from the project. These should be your go-to partners when you need assistance on Customer Opportunities.

Chorus has launched a new UI that GitLab will transition to on August 6th. Chorus has made small but impactful improvements to improve efficiency and functionality, but the way you use the platform will not change drastically. For a full list of updated features, see this issue and check out this quick video overview from Chorus.

Questions? Please reach out to sales-support.

What's New in GitLab ·

The GitLab 13.2 release is live! Here are the takeaways for customers and prospects:

- Reduce Security and Compliance Risk: The first release of Container Host Security gives security administrators confidence and peace of mind by allowing them to secure their running containers at the host level through monitoring and optionally blocking unexpected activity.
- Increase Operational Efficiencies: 13.2 delivers new updates to improve teams' efficiency and performance. This includes advanced global search on GitLab.com, which improves search relevancy, performance, and allows for group-wide searches across all projects directly in the UI. It also includes load performance testing directly in GitLab, allowing customers to better understand how their application performs under stress by easily running custom load tests as part of their CI/CD pipelines.
- Deliver Better Products Faster: Managing workflows and planning tasks for different teams can cause a significant amount of development disruption. Organizations can now lessen this disruption and streamline agile project planning/management with our MVC release of Iterations, which allows teams to break down work into smaller, more manageable chunks. Customers can also leverage enhancements to our Jira integration and epics (confidential epics and bulk edits) to make project management easier in GitLab.

Visit the [13.2 Release Post](#) for more details

To see what's ahead in 13.3, watch the kickoff videos or check out the [kickoff review page](#).
