Archive: Edition 15, Description: June 2021 Field Flash

SECTION: sales/field-communications/field-flash-newsletter/edition-2021-07-06.md

This email newsletter was originally sent to the GitLab Field Team and stakeholders on 2021-07-06.

NEW · GitLab Field Flash: July 2021 Edition ·

In this month's Field Flash, you'll find new GitHub and Jenkins competitive content, a 3-year product vision video, the latest Sales Play and more. Plus, learn more about Susannah Reed's selling best-practices in her Team Member Spotlight.

Deal of the Month ·

Rahim Abdullayev explains how co-selling and collaboration both internally and with his champion led to an expansion from Premium to Ultimate SaaS with a financial services customer.

<https://gitlab.edcast.com/insights/rahim> (GitLab internal only)

New and Noteworthy Resources ·

ICYMI, check out this 6-min video from our Product team demonstrating where the GitLab product is headed over the next 3 years and why a single DevOps Platform approach is the key to current and future success. Watch Now -->

The Competitive Intelligence team has created two brand new resources to help you compete against Microsoft. See the DevOps Tools Page -->

1. GitLab vs. Microsoft for Agile Planning
1. Microsoft Competitive Overview

GitHub and Jenkins displacement customer story! Learn why tech company Zebra adopted GitLab to consolidate from three tools to one for code repository, CI/CD, and security. Your input is needed to create more great customer stories like this! Contribute by nominating your customer as a reference. Learn More -->

Did You Know? ·

Field Ops recently completed their Q2-FY22 Cannonball Run! The objective of the Cannonball Run (CBR) initiative is to quickly identify and address high-priority, Field Operations-specific QBR asks. The improvements made based on your feedback include:

- 1. Sales Ops: ROE Updates, SFDC Reporting Improvements, SFDC Hygiene & Process Improvements
- 1. Deal Desk: Discount Approval Matrix Update
- 1. CS Ops: Gainsight Dashboard Efficiency and Clarity improvements, Product Analytics dashboard improvements, Launch of NPS and Slack integration

See the CBR Primary Issue for a full overview of changes.

What's New in GitLab ·

The GitLab 14 launch represents the next iteration of GitLab. It is a milestone for both our company and our community, allowing us to advance the adoption of modern DevOps practices on behalf of practitioners everywhere through enabling development velocity and confidence, delivering DevSecOps capabilities with built-in security, providing measurement and visualization of key metrics.

Take the time to look through the resources below for full context on how to effectively position the value of GitLab 14 with customers and prospects:

- 1. GitLab 14 Field Team Summary - see the highlights
- 1. GitLab 14 Launch Blog Post - value-based messaging
- 1. GitLab 14.0 Release Post - feature-based messaging
- 1. GitLab 14 Launch Press Release
- 1. Sales Enablement LevelUp Webcast recording - highlighting breaking changes in 14.0

To see what's ahead in 14.1, watch the kickoff video or check out the kickoff review page.

Upcoming Events ·

Corporate/Regional Event Spotlights

- AMER PubSec: Advanced CI/CD Workshop for PubSec - July 13
- AMER West: Pies in July - Virtual Pizza Event - July 15
- AMER East: GitLab Summer Fun Family BBQ Cooking Event with Celebrity Chef Chad Rosenthal - July 22
- APAC: Jenkins Migration Workshop - July 28

For a full list of virtual events, see a convenient calendar view in the Marketing Handbook.

Channel Webinars

- EMEA Partner Webcast - July 8
- AMER Partner Webcast - July 8
- PubSec Partner Webcast - July 8
- APAC Partner Webcast - July 8

Want the latest on Partner webinars? Subscribe to our GitLab Partner Channel.

Enablement Corner ·

The latest Sales Play is now available related to the Atlassian Server EOL announcement! This lightweight Sales Play is broken into four phases, providing detailed guidance for your discovery call, POV & evaluation and negotiation.

Team Member Spotlight ·

Susannah Reed - Federal SAE, Civilian

Where did you grow up, and where are you based now?

I grew up in Houston, TX where I worked at my family's restaurant Bubba's Texas Burger Shack. I've now lived in Gaithersburg, MD for the last 15 years.

What is your favorite thing about your job?

I love how much GitLab's CREDIT values are embedded into everything we do. Even my customers know them and recognize how much it differentiates us.

Which of GitLab's Values resonates most with you?

Collaboration. I have always been amazed by how kind and helpful all GitLab team members are and how much that contributes to all of our success.

Do you have a helpful tip for working at GitLab and/or in the Field org to share?

We have a weekly touch point for my territory where we always review upcoming meetings, follow-up items, overall account strategy and marketing, and how the channel can help. The extended team can collaborate live or async, but it helps keep us focused and organized both tactically and strategically. (See more of Susannah's selling tips in her video [here](#).)

What is a hobby or skill you have that the team might not know about?

I was a Scottish Highland dancer and can still do a highland fling and sword dance.

What's the most random thing in your purse/wallet?

A Funchop chopstick helper for my daughter.

Questions or feedback? We want to hear it! Reach out to the field-enablement-team Slack channel or capture it using this process.

See the Field Flash Newsletter handbook page for more information about this newsletter.

Archive: Edition 16, Description: July 2021 Field Flash

SECTION: sales/field-communications/field-flash-newsletter/edition-2021-08-02.md

This email newsletter was originally sent to the GitLab Field Team and stakeholders on 2021-08-02.

NEW · GitLab Field Flash: August 2021 Edition ·

In this month's Field Flash, you'll find all enablement resources for Project Super Sonics, multiple Partner Program and System changes that will impact workflows and much more.

Now Live: Project Super Sonics

The improvements to our billing and subscription management experience (Project Super Sonics) are now effective for all new customers and any existing customers at their next renewal, assuming they are running GitLab 14.1 and have opted-in to the new terms. Please review the below resources to get up-to-speed on the announcement details and answer customer questions.

- 1. Field Team FAQ: For a helpful summary and in-depth details of the changes.
- 1. Sales Order Processing page: For details about changes to Sales-Assisted transactions.
- 1. Customer Blog: For more information on what we have communicated to customers.
- 1. Objection Handling Deck: For guidance on responding to anticipated questions.
- 1. Customer Experience Overview and Rep Flow Overview videos: For insight into updated processes and experience for both you and your customers.

You can check your knowledge of these changes in our enablement course. Our next AMA will be held on 2021-08-17. Please add questions in advance to the agenda doc. Reach out in pnp-changes-field-questions with async queries.

Deal of the Month ·

Hear from Sean Billow, Cherry Han, Vick Kelkar and a guest from IBM about a joint deal with IBM.

- Blog: How to stand-up a GitLab instance in AWS Marketplace

Did You Know? ·

On 2021-08-03, we are implementing multiple Partner Program and System changes to greatly simplify the quote to cash process and add significant sales value.

These changes have a material impact on Channel Operations and QTC processes, which you must familiarize yourself with in order to avoid disruption to your workflows. See the Document Library for more information and enablement resources including:

- 1. Channel Attribution Changes in SFDC deck
- 1. Channel Attribution Use Cases for Sales & Channel deck
- 1. Field Team FAQ
- 1. Discount sheet, screenshots and more

Watch the LevelUp Enablement Webinar recording for more details about the operational changes and a Q&A session. Reach out in channel-sales with questions.

We have expanded Digital Programs content to < \$50K ARR, non-CSM assigned accounts in the Enterprise segment! In addition, we have expanded the scope of eligible customers and will now require that a GitLab Admin be added to New - First Order, New - Connected and Growth deals at the time of Opportunity approval submission for non-CSM assigned customers below \$50K ARR in the Commercial and Enterprise segments.

This means that Digital Programs are now officially available to our entire customer-base of < \$50K ARR, non-CSM assigned accounts! See the technical documentation and quick demo video. Reach out in cs-questions.

Questions or feedback? We want to hear it! Reach out to the field-enablement-team Slack channel or capture it using this process.

See the Field Flash Newsletter handbook page for more information about this newsletter.

Archive: Edition 17, Description: August 2021 Field Flash

SECTION: sales/field-communications/gitlab-highspot/index.md

Highspot at GitLab

Highspot is a field enablement tool we use to gather, categorize, and share content within GitLab - and externally to our customers, prospects, and partners. It collates native content and guidance, training and coaching, and engagement intelligence · all supported by actionable analytics. GitLab uses Highspot as a sales content portal to:

1. Provide a single repository in which GitLab's go-to-market (GTM) team members can find all of the resources they need.
1. Enable more efficient discovery of new resources and content.
1. Drive consistency in GitLab collateral including the branding and messaging across assets.
1. Attribute influenced revenue to GitLab content to discover ROI and enable a tighter feedback loop between Sales and Marketing.

To learn more about Highspot's features, check out this Highspot in Action video.

Why Highspot?

Because of the pace of business and rapid growth of the GitLab team, efficiently organizing and distributing content are key pain points for the GitLab GTM organization.

Upon surveying members of the Field team in 2020, we found that 92% of the Field organization felt that finding the resources they needed to do their jobs was moderate-difficult (source). Furthermore, we found that 85% of the organization only finds the resources they are looking for some of the time (source). Lastly, we found that Enterprise SAEs spend an average of two hours per week simply searching for Sales content, which equates to 200 hours per week across the entire Enterprise team that could be used for revenue-generating activities instead (source).

GitLab ultimately chose to onboard Highspot as a sales asset management system to increase the efficiency of marketing spend, improve sales productivity and drive more visibility around content adoption and performance.

Highspot Optimization

In 2024, the Field Enablement team recognized the need for platform optimization. This transformation addressed evolving organizational needs and field challenges around content sprawl, version control, and findability. As we shifted from segment to region-focused operations and expanded our product portfolio, our content infrastructure needed to evolve. The reimagined Highspot experience delivers three key improvements:

1. Three streamlined, region-specific homepages that make AMER-, EMEA, and APJ-specific content interface and discovery intuitive and efficient.
1. Enhanced content governance to ensure materials stay current and relevant.
1. Advanced sharing capabilities through pitches and digital rooms, paired with robust analytics.

Users now have:

1. Faster access to region-relevant content.
1. Clearer 3-click pathways to frequently used materials.
1. Real-time insights into content performance and buyer engagement.
1. Customizable digital rooms for ongoing customer collaboration.

This updates matures Highspot from a traditional content management to an intelligent platform that actively supports sales success. Watch the optimization launch announcement to the field in this Field Spotlight session.

Communicating with the Highspot Team

Highspot is managed by the Field Enablement organization, specifically, the Field Communications & Content team. Episodically, the team leverages a contract agency, Arnic Business Solutions, to help manage the day-to-day administration of our Highspot environment.

There are two primary Slack channels to communicate with platform DRIs and other content owners / contributors about Highspot at GitLab:

1. highspot-help-center: Public channel for team members to ask questions and get updates regarding Highspot.

1. highspot-content-owners: Public channel for content contributors to ask questions and collaborate on ongoing upkeep and growth of Highspot instance.

Highspot Access Requests & Content Requests

The Highspot team manages several issue templates within the Enablement Project for common requests:

1. Looking to add content or a new page to Highspot? Share and align the scope of your project in this issue request to get started.

1. Looking for access to Highspot? Access to the tool is provisioned via SSO in Okta. To access Highspot, please navigate through the Highspot tile in your Okta dashboard. If you do not see Highspot on your dashboard, follow the typical Access Request process to submit your request. Tech stack provisioners to review and approve your request can be found [here](#).

1. The following teams' access is provisioned automatically: Sales; Customer Success; Renewals; Professional Services; Global Ecosystem; Revenue Strategy, Operations & Enablement (RSOE); Sales Development; Strategy Marketing (Product Marketing, Customer Reference, Analyst Relations, Competitive Intelligence); Field Marketing; Developer Relations; Corporate Communications.

1. Additional insights on User Governance [here](#).

Highspot Trainings

There are two training courses for Highspot available in the GitLab University / Level Up platform. These courses can also be found in the Highspot User Guide & Reporting Spot for later reference:

1. Highspot User Training - Foundational knowledge that all Highspot users should possess to get the most out of the platform. This includes a brief tour of the tool, how to search and discover content, how to share content for buyer engagement and how to leverage Highspot for personal organization and efficiency. All new Field team members should complete this course as a part of the Sales Quick Start training program in onboarding. Non-Field team members who gain access to Highspot via an access request are required to complete this training within one quarter of their provisioned platform access.

1. Highspot Content Contributor Training - All Content Owners and Content Contributors in Highspot are required to complete this training prior to being provisioned edit access to any spot. This ensures that all contributors are trained to uphold GitLab's Highspot governance best-practices to support the best end user experience. This training is a required prerequisite to Editor permissions being provisioned; failure to follow these directives with

compliance will result in a revocation of Editor permissions.

More on Highspot user governance can be found in the Highspot Governance Playbook (G-Drive version available for non-Highspot users).

Highspot Principles

Key Features & Definitions

1. Spots - Spots are like an asset folder. We use Spots to organize content by topic, product, or initiative for specific groups or purposes. Spots are the basic building blocks of Highspot. User access to content is determined at the Spot level. See GitLab Spots for a full list of Spots.
1. SmartPage - SmartPages are like landing pages. Content Owners can create SmartPages to display curated content and provide instructions and CTAs for field members. Examples of SmartPages include Revenue Plays, resource Hubs, Tool User Guides, and even the homepage!
1. Lists & List Groups - Lists function as filters, and make it easier to find the content you need. Lists can then be collected under List Groups for parent-level organization.
1. Search - everything in Highspot can be found through the search bar. The broader the search, the more promoted content and high-level results; the more specific the search (for example, using "AND", "OR", or posing a question with "?" at the end of the query), the finer the results. More advanced search term tactics can be found [here](#)
1. 3-click rule - to complement the search motion, the most frequented Highspot items can also be found in three-clicks from your homepage. If you find an asset exclusive to this rule, please let your Highspot Admin know!

Key Roles

1. Field User - Field users, or Contributors, have the ability to view all Official content, pitch external items to prospects and customers, and view pitch performance analytics. This is the access level many GitLab GTM team members will have.
1. Content Contributors aka Spot Editors - Content Contributors have the ability to add and manage Official content, design and build SmartPages, and create and manage lists and Spots. Content Contributors are responsible for the management of content in Highspot at least two Spots: the Tier 3 Team Spot, and a Tier 2 Official Spot. They can also make high-level changes to the search structure as needed. Note that all Content Contributors are required to complete the Content Contributor Training prior to being provisioned Editor access.
1. Spot Owners - Spot Owners are the Directly Responsible Individual (DRI) for a Spot, and oversee content governance and usage performance for the Spot and its users. Note that all spot owners are required to complete the Content Contributor Training prior to being provisioned access to own a Team or Official Spot.
 1. The key difference between Spot Owners/Co-Owners and Spot Editors is that Owners/Co-Owners can delete a Spot, and receive Spot-wide content governance notifications while Editors cannot delete the Spot and only receive individualized content governance notifications.
1. Analyst - Analysts have the ability to create reports within the Analytics section of Highspot and view reports in the Analytics Spot. All Field Managers and above have Analyst permissions so they can view team-level reporting.

Official GitLab Spots

All Spots are categorized by the following: Product, Team, and Go-to-Market (GTM).

Spot Title	Description	Spot Type	Spot Owners
GitLab	This Spot will house all GitLab core product (Premium & Ultimate) content and customer-facing resources	Product	Product Marketing
Duo	This Spot will house all Duo product (Pro and Enterprise) content and customer-facing resources	Product	Product Marketing
Enterprise Agile Planning	This Spot will house all Enterprise Agile Planning product content and customer-facing resources	Product	Product Marketing
Dedicated	This Spot will house all Dedicated product content and customer-facing resources	Product	Product Marketing
Global Ecosystem	This Spot will contain all GE-specific materials, enablement, and projects exclusively owned and primarily viewed by the GE programs and field team.	Team	Partner Enablement
Customer Success	Technical post-sales; This Spot will contain all CSM-, CSE-, CSA-, and RM-specific materials, enablement, and projects exclusively owned & leveraged and primarily viewed by the CS + RM team.	Team	CS Enablement
Solutions Architect	Technical pre-sales; This Spot will contain all role-specific materials, enablement, and projects exclusively owned, leveraged by, and primarily viewed by the Solutions Architect and Field CTO teams.	Team	SA Enablement
Public Sector	This Spot will contain all industry-specific materials, enablement, and projects exclusively owned and leveraged by the Public Sector team, and primarily viewed by the Public Sector team.	Team	Public Sector Product Marketing
Competitive & Marketing Intelligence	This Spot will house Market proof points and references related to competition, customer value and third-party reports + articles	GTM	Product Marketing; Analyst Relations; Corporate Comms
Customer Stories	This Spot will collate all customer stories, proof points, and references to share with prospects how GitLab is delivering secure software, faster	GTM	Customer Advocacy
Pipeline Acceleration	This Spot will contain all internal and external-facing content related to curated pipeline-generating initiatives, including GTM Rev Plays, evergreen plays, sprints, and industry-specific guidance.	GTM	Product Marketing; Field Enablement; RSOE
Selling Skills	This Spot will house primarily internal-facing content that enables the Field to effectively position and sell GitLab to customers and prospects.	GTM	Product Marketing; Field Enablement; RSOE
Services	This Spot will contain all content aimed to help Field reps position and sell GitLab Services - either Professional Services program or Education Services.	GTM	Professional Services
Field & Corporate Events	This Spot will coordinate and organize all field marketing, industry, and corporate event content at which GitLab will have a presence virtually or in person.	GTM	Field Marketing; Corporate Marketing
Tools Enablement	This Spot will contain all user guides and related content that aim to enable the Field team with the skills needed to successfully understand and utilize the revenue tech stack by use case. This also includes Highspot onboarding training.	GTM	RSOE
Highspot User Guide & Reporting	This Spot will be the user guide for all Highspot-related activity, including setting up your account, user and content contributor training, role-specific coaching, reporting templates and more Highspot Analytics recommendations. It also includes HUG and Highspot Reporting.	GTM	Highspot Administrators
Personal Spot	Each team member with a Highspot account will have their own personal spot		

that they can use to upload content of their own. Naming convention is [Your Account First Name] Spot. | Personal | User |

Key Content Properties

Content properties allow content to be organized and discovered via the search bar, side navigation bar, and other platform features, like related or promoted content. By setting policies and requirements around this content metadata, we standardize our content (e.g., titles, labels, and lists) and set clearer ownership motions to keep content up to date (e.g., author, feedback owner, and expiration date).

1. Internal & External Content - All content in Highspot will be marked as either internal or external:

1. Internal - This content is for internal consumption/enabement only. Under NO circumstances should this content be shared with external audiences - customers, prospects, partners, etc. You should not download this content onto your local device. (You can always bookmark content to your personal spot to revisit later.) All items marked as internal cannot be pitched (the pitch function is disabled).

1. External - This content has been reviewed and approved for distribution to external audiences in a small forum (customer/partner call, etc.). You should always consult GitLab Legal before distributing content to a large audience (ex. conference or GitLab event), regardless of its distinction in Highspot. All items marked as external can be pitched to prospects and customers.

Key Functionality

1. External Share - External sharing allows you to easily and flexibly share external content with your customers, partners, and prospects. External sharing gives you the ability to customize, personalize, and send content from Highspot through virtually any channel, and receive real-time, actionable notifications when recipients interact with your content. These analytics help sales and marketing teams understand what works best to drive buyer engagement so they can better optimize their sales processes and sales content. There are two ways to share content

1. Digital Rooms - a customizable microsite accessible from one link that allow multiple contributors to curate content in a page, and add or adjust that content as the recipient's interests evolve. All engagements are tracked. (Training & analytics overview available at 27:24 here)

1. Pitch - through links or email pitches, you can curate a static collection of content to send to your recipient of choice either via existing email thread, LinkedIn, text, or even QR code. All engagements are tracked.

1. Integrations - Maximize your sales efficiency with strategic Highspot integrations.

1. Salesforce connection links content directly to pipeline activity, revealing shared content influence at the account and opportunity levels.

1. Google Drive integration ensures documents automatically update from source files

1. Upcoming Gong integration will display Highspot activities on customer timelines.

1. Remix - empowers you to craft tailored presentations by seamlessly combining slides from various approved decks. This dynamic tool allows you to customize content directly within the platform, ensuring each pitch precisely addresses your prospect's specific needs and challenges. Learn how to create personalized, targeted presentations in minutes while maintaining brand integrity-delivering exactly what your customers want to see at every stage

of their journey.

Learn more about critical functionality to enhance your workflows, and more fundamental features to set-up your account in the Getting Started section of the Highspot User Guide & Reporting Spot.

Highspot FAQs

Who has access to Highspot?

At this time, the entire GitLab GTM organization, which includes the global Field team, Sales Dev (SDR/BDR) and Strategic Marketing.

How do I get access to Highspot?

All members of GitLab's GTM organization have access to the tool via their Okta dashboard. For a full list of teams with Highspot access, see the Highspot Access section above. If you are on one of these teams and still do not have Highspot access via Okta, please open an access request.

Who can upload content to Highspot? If I have a recommendation for a piece of content that should be in Highspot for all to access, how do I contribute?

Contributing to Highspot is easy, and we encourage all team members to contribute resources that you think the entire GTM org or specific teams could benefit from. This could be anything from a Marketing resource you found that isn't already in Highspot or a presentation/document you created or found that would be helpful for team members to reference as an example of "what good looks like." If it's helpful for the team, we want to include it in Highspot!

To submit content, please open a Content Intake Request Issue and indicate your level of support needed. If "low" to "medium," complete the Content Contributor Training.

What is the best way to save a piece of content that I want to come back to later?

You can do this by selecting Bookmark on the piece of content and bookmarking it into your Personal Spot.

Can partners or other external audiences access Highspot?

Not at this time. GitLab's Highspot instance is only accessible by internal team members via SSO. External audiences can only see external content that is pitched to them via External Share.

We are exploring the option of a Highspot instance for GitLab partners and will share more details when available.

Can I find industry- or segment-specific content in Highspot?

Yes! You can quickly find industry- or segment-specific content by using Highspot's tag lists, which allow you to filter search results as well as content found within individual Spots. When

you enter a keyword in the Highspot search field and hit return, all available filter lists will appear in the left-side navigation pane. Simply filter this navigation bar according to your search specifications.

When browsing through a specific Spot (e.g. the Competitive & Marketing Intelligence Spot), simply click into the Spot and then select the appropriate filter list that appears in the left-side navigation pane. For more information about browsing and filtering content, check out the Highspot Help Center.

How can I find content that is trending or popular among GitLab's field team?

You can quickly find trending/popular content by using the Sort functionality within each Spot. When you visit a specific Spot, toggle into the "Content" view and use the sorting options (found under the Spot title) to arrange your display by popularity. Content will then be grouped by trending (popular items for the last two weeks) and most popular (most popular for all time). For more information about sorting and browsing Spots, check out the Highspot Help Center.

How does search work in Highspot?

Highspot's search algorithm is designed to get users in contact with the right content in a quick and effective way. Highspot identifies items that match your search term - looking in many places to detect a match, including the title, description, the content of the item, the name of the Spot it is in, the name of any tag lists it is in, a word spoken in the transcription (if it is audio or video), a word that appears in an image or in a snapshot of the video - and then ranks them.

Advanced search techniques are also supported, including exact match quoting, "AND", "OR", "NOT", and combining terms () to increase specificity.

Can I download content found in Highspot?

Generally, no. To help us maintain GitLab's SAFE framework and cultivate Highspot as a single source of truth, most content found in Highspot is not available for download. Please reach out to the Highspot admins in [highspot-help-center](#) if you have any questions about a specific piece of content.

Can teams have an area where they can post content specific to their team?

Yes! Within our optimized Spot framework, a new, private Spot type - meant exclusively for our content creating and contributing teams - is supported for Team-specific needs. Access to these Spots require completion of the Content Contributor training to understand the proper function and utilization of these Spots.

How does Highspot differ from the Handbook?

The Handbook is still our SSOT at GitLab. If you're a content creator and wanting to document information, processes, etc., you should still use the GitLab Handbook as the place to do this. The added benefit is that you can then add a link to that Handbook page within Highspot and add it to the appropriate Spot/lists so that the Handbook page is more easily discoverable by the

Field team. A great way to think of Highspot is like a search engine across the documents/resources that the Field uses often, and a virtual briefcase for all sales and marketing materials.

What is the difference between Highspot and Thought Industries (LevelUp)?

Thought Industries (GitLab University in LevelUp) is the main hub for all training content, courses, etc. Think of Highspot like a search engine put across all of the tools and platforms we use - Google Drive, YouTube, Handbook, etc. So, we might upload a link to a training course or a video recording that's housed in another location so that it's more discoverable and served up with related content within Highspot.

What are the differing goals of Highspot and PathFactory?

Similar to PathFactory, Highspot is a tool that can point customers to a set of relevant assets. In Highspot, users can create Pitch Templates with Pitch Styles (sometimes called Digital Sales Rooms) that curate a series of content into a customized experience for customers. Once sent, users can update DSRs for their customers and prospects for a customized, personalized experience. In general, the high-level goals for the two platforms are:

1. Highspot: To connect with customers 1:1 as part of a campaign, initiative, event, general outreach, other CTA. Can support lead gen/outreach, but primarily used once a lead has become an SAO.

1. PathFactory: To increase consumption/engagement with GitLab content in order to move prospects through the marketing funnel.

Can Highspot users send PathFactory content to customers?

Yes. PathFactory tracks are a type of asset that can be shared using Highspot. Content owners can "upload" (point to) PathFactory tracks within Highspot, and send those tracks to customers and prospects via a Highspot Pitch activity.

Can I use Highspot to mass-send a pitch to multiple customers and prospects?

Not from within Highspot. The Highspot pitch function and analytics are currently designed for a 1:1 or 1:few experience. The tool is optimized to provide tracking and insights into what customers are opening and viewing (i.e. what content they value) through the 1:1 motion.

Use Groove to send messaging en masse - and better yet, pull Highspot Email Templates into Groove to leverage Marketing-validated messaging in your Groove flows.

Is Highspot a tool for Marketing automation and email nurture?

Highspot is not a replacement for marketing automation or email nurture tools such as Marketo. All email pitches are sent by a member of the Field team, who can then view insights.

SECTION: sales/field-operations/_index.md

Welcome to the Field Operations Handbook

"Manage field business processes, systems, architecture, enablement, champion data integrity, provide insights and predictability through analytics"

The term "sales" refers to the Sales Team and "field" includes the Customer Success, Channel, and Alliances Teams.

Key Tenets

Clarity: for definitions, processes and events

Predictability: of the business by leveraging data and systems

Scalability: for processes and systems that allows for growth

Teams

- Sales Operations
 - Deal Desk
 - Order Management
 - Sales Commissions
 - Data Intelligence
- Sales Systems
- Sales Strategy
- Field Enablement
- Channel Operations
- Customer Success Operations
- Customer Success Strategy & Analytics

RSOE Growth & Development

- For guidance and resources on RSOE Career Growth & Development

Field Operations Calendar

- Field Operations utilizes a team calendar to communicate team member availability as well as office hour meetings.

How to add the Field Operations Calendar

- To add the Field Operations Calendar to your Google Calendar click on the + Next to Other Calendars on the bottom left hand side of you Google Calendar.
- From there type in Field Operations into the search box and the Field Operation calendar should be the only calendar available to select.

What are Office Hours?

- Office hours is a weekly meeting that is set up where the hosting team is available to field questions from individuals who they may not generally sync with. The goal is to offer wider availability and support to the greater operations teams and to GitLab as a whole. Office hours are NOT a dedicated time for team members to join to check in on the status of a project or to

be used as a recurring project meeting.

Current Office Hours

- Sales Systems currently holds office hours every Wednesday at 10:30 AM PST

Field Operations Releases and Changelog

Field Operations works to deliver Field Ops changes related to Sales Ops, CS Ops, Channel Ops & Deal Desk (QTC) in a batched, bi-weekly release cadence. To learn more, see the [Field Ops Release Schedule](#) page.

For a running log of Field Ops changes related to Sales Ops, CS Ops, Channel Ops & Deal Desk since Q3-FY22, see the [Field Ops Changelog](#) page.

SECTION: sales/field-operations/finding-seat-counts.md

Finding Customer Seat Counts

Seat expansion is at the heart of our revenue growth. This has a strong impact on IACV and both Net and Gross Retention. There are various ways to determine the seat counts for a subscription:

GitLab.com

The best way to view Seat Counts for a GitLab.com customer is to access the Customers Portal admin section.

1. Go to <https://customers.gitlab.com/admins/signin>
1. Sign in with Okta
 1. If you don't have access, open an Access Request
1. Once logged in, go to the Customers option in the left-hand menu
1. In the Filter text field, enter in the company name or email address associated with the subscription
1. Once the results are loaded, select the "i" icon from the right-hand section
1. On the Details page that loads, go to GitLab Groups
1. Here is where you should see the Namespace and corresponding subscription with seat counts
 1. Seats in Subscription is what was paid for
 1. Seats Currently in Use is what is active

It's important to note that ultimately the Customer Portal admin will have the most accurate and up-to-date view of this information.

Self-managed

License Usage App

The best way to understand seat utilization for self-managed customers is by using the License

Usage Salesforce App

Version App

An alternative to License Usage Salesforce App is the Version App. You will need developer access to this application to log in. Once logged in navigate to the Hosts tab. There you will be able to filter by license tier and see active user counts, historical max user counts, and other important information including last usage ping and version.

Communicating Number of Seats Owed / Helping Customers Find Information - GitLab.com

Sometimes customers can get confused as to what they owe because they have both a personal subscription and a group subscription. To make it easy for them to find the correct group billing information, you can send them a link with a URL in this format:

[https://gitlab.com/groups/\[group-path-name\]/-/billings](https://gitlab.com/groups/[group-path-name]/-/billings)

To find the group-path-name, go to the GitLab Groups page in the Customers Portal admin (see instructions above) and copy the value under the Path column.

Creating Accounts and Contacts

How to Create an Account

1. Click on the Accounts tab in Salesforce.
2. Click the "New" button.
3. Select either "Standard" or "Partner" record type. Each record type will have a different account layout.
 - "Standard" = all non-reseller/distributor accounts
 - "Partner" - only reseller/distributor/MSP accounts (note: sales should not create partner accounts, see point 6)
 - Note: Partners who are also customers must have two separate accounts - one Partner type account, and one Standard type account.
4. On the Create Account screen, do the following:
 - Complete all mandatory fields.
 - Be sure to enter the correct URL under "Domain" as this impacts the identification of the customer and related sales segment.
 - Click Save.
5. Be sure to enter detailed information regarding the customer or partner, including full legal name, full billing address, and other pertinent details.
6. If the account is a Partner account, it should be created via the partner creating an account in Impartner or manually via Partner Operations. Sales should not create Partner accounts and should Slack partner-programs-ops.

How to Create/Edit a Contact

1. Click the "New Contact" button.
2. Add the full first name, last name, title, phone number, email address, and full address for all contacts.
 - Salesforce requires that all contacts entered on a quote as "Sold To," "Bill To," or "Invoice Owner Contact" have a full and complete address. A quote object containing contacts without full and complete addresses will not save.

Quote Configuration

The following is a high level guide to quote types and important quote information to note before processing an order. Review the Go To Market Handbook for opportunity creation instructions, and opportunity management guidelines. Review the Deal Desk Quote Configuration

Guide for written instructions and video tutorials specific to each quote type.

Reference Link: Starter/Bronze End of Availability + Tier Re-naming Quoting Guide

Standard Quote Types

There are 4 different types of quotes - New Subscription, Amend Existing, Renew Existing, Cancel Existing. Quote type will typically align to opportunity type. The correct quote type must be used for each opportunity.

Quote Type	When to Use
------------	-------------

-----	-----
-------	-------

New Subscription	Any New Subscription Term OR Renewal where customer is changing term length
------------------	---

Amend Subscription	Use this quote type to add users, true up, or change product tier during the current subscription term. (NOTE: True-ups added before renewal date will not eliminate true-up requirement for the same term which will be charged at renewal. True-up is a backward looking one-time fee that is always recognized at renewal. License add-ons during the term will eliminate the future true-ups to be charged at renewal.)
--------------------	---

Renew Existing Subscription	Customer is at the end of their current term and wants to renew for the same term length
-----------------------------	--

Cancel Existing Subscription	This is used for a Contract Reset - please open a support case via opportunity button for assistance with contract resets
------------------------------	---

Quote Template Types

GitLab uses 5 quote templates to support each type of transaction. The following quote templates are available on all quotes (New Subscription, Amendment, Renewal). The correct quote template must be used for the deal as there is acceptance language specific to each route to market.

Template	Use For
----------	---------

-----	-----
-------	-------

-----	-----
-------	-------

Standard Order Form	Most quotes, including alliance marketplace transactions, EDU/OSS/YC, or Customers with an Existing Agreement (MSA) in place
---------------------	--

Standard Order Form (Hide Discount)	Hide the Discount and List Price Column for Direct Deals. Otherwise Identical to the Standard Order Form
-------------------------------------	--

Authorized Reseller Order Form	Authorized Reseller Transactions
--------------------------------	----------------------------------

-----	-----
-------	-------

MSP Order Form	Managed Service Provider Transactions
----------------	---------------------------------------

-----	-----
-------	-------

Distributor Order Form	Distributor Transactions
------------------------	--------------------------

-----	-----
-------	-------

Pre-Approved Legal Language can be added to each quote. Selections are listed as Toggle Fields on the quote object.

Toggle Field	Output
--------------	--------

----- -----	
Annual Payments	Annual Payment Language will populate in Payment Details on the Order Form PDF
Customer Reference Language	Customer Reference Language will populate in Notes Section of the order form
Add Quarterly True Up Language	Standard Quarterly True Up Language will populate in the Notes section of the Order Form This language permits manual quarterly add-ons, and can only be used when SuperSonics Quarterly Reconciliations do not apply
Remove Signature Block	Signature Block will be removed. Use for customers with Existing Agreements (MSA)

Quotes run through an automated logic check to ensure that the selected Legal Language can be added to the order form. This logic check reviews characteristics of the quote, including populated fields, route to market, and products being sold to ensure added language does not conflict with the deal structure.

In some instances, you will make a selection that will require additional review and approval before an order form can be sent out. This is typically for complex/non standard deals. If you make a selection that cannot be accommodated, you will see an error message. Remove the selection and move forward with the quote. If you are confused, or need assistance, open a Deal Desk support case and provide a screenshot of the error you're experiencing.

Known Quote Template Issues

Additional Line Items Displaying on the Quote: If you construct a quote and notice that there is an additional line item displaying on your quote, know that this is the result of a known Zuora bug. The only current workaround in place is to recreate the quote from scratch by clicking the New Quote button and follow the New Quote creation flow.

Quote Assistance

If your quote requires any special, non-standard edits, or if you have questions regarding standard quotes, you are encouraged to open a Deal Desk support case via the SFDC Opportunity record for assistance.

Please provide as much detail as possible, including links to relevant records, dates, user counts, and other applicable information. It is the Opportunity Owner's responsibility to create all standard quotes, unless they are complex custom deals or one of the scenarios listed below.

What quotes can Deal Desk assist me with?

Deal Desk will review any quote to ensure accuracy and completion. Standard Quotes are expected to be created and managed by the opportunity owner or ISR.

For Non-Standard/Complex Quote requests, the Deal Desk team will assist the opportunity owner in creating the quote correctly. Some examples of these complex scenarios include:

- Contract Resets: If the customer wishes to reset their subscription term in the middle of their term (for example, they want to upgrade, but want to reset their term for 12 months starting on the date of upgrade), you will need create a new subscription. In this case, the Subscription Type will be 'New' while the Opportunity Type will be 'Renewal'. Deal Desk will assist you with the credit portion for the remainder of the existing subscription, which in this case would be cancelled.
- Co-term of multiple subscriptions: If the customer has multiple groups and wishes to consolidate their subscriptions, an "Amendment" may be created against a "Renewal Business" opportunity.
- Splitting out a single subscription. Conversely, there may be times when a customer needs to split their single subscription into multiple subscriptions. When this occurs, the Subscription Type and Opportunity Type will be 'Renewal'.
- Ramped Pricing: If the prospect or customer would like to employ a ramped pricing schedule where they may want to increase their user count over time. Two examples of ramped schedules include:
 - Year 1 will be for 100 users and Year 2 will be for 200 users.
 - Year 1 will be \$45 per user per year and Year 2 will be \$48 per user per year

Please review the Deal Desk Quote Configuration Guide for more information. Note that the above list of non-standard quote elements is not exhaustive. If you encounter a non-standard need that is not listed on this page, request internal support to create a case for Deal Desk on the SFDC Opportunity in question for evaluation and assistance.

Quote Tax Information

If a customer requests Tax removed from the quote, they need to provide a Valid Tax Exemption Certificate. Please attach this to the opportunity.

1. Tax Exempt - Need to check with client to make sure they are tax exempt and load tax exempt certificate into their account in SFDC.
1. Tax Exempt - If tax exempt click yes on drop down menu and add additional notes if needed.
1. Tax/VAT ID field - adding a valid VAT ID is required for tax compliance of cross-country transactions to European Union countries. These are when we bill from GitLab Inc to any EU country, from GitLab BV to any other EU country except the Netherlands, from GitLab Ltd to any other EU country except the UK, from GitLab GmbH to any other EU country except Germany. Note there is an automation rule in Salesforce that automatically populates the contents of a Quotes VAT ID from a quotes VAT/Tax ID - If you attempt to update the VAT ID and it is overwritten please open a case for support on the related opportunity
1. Special Terms and Notes - Enter any additional notes that is not specified by the above settings.

How to Create a Draft Proposal

Follow the standard process for quote creation. The Quote Object does not need to be approved before generating a Draft proposal.

1. Click Edit Quote.
2. Select the Draft Quote Template. Save.
3. Click Generate PDF. A Draft Proposal PDF will be attached to the opportunity in the Notes & Attachments section.

Important Notes

- A Draft Proposal PDF is not an Order Form. All quotes must go through the applicable approval process before you can generate an Order Form. Draft Proposals are not guaranteed approval.
- A Draft Proposal PDF will not be accepted in place of an Order Form under any circumstance.

Billing and Subscription Management ("SuperSonics")

GitLab's Cloud Licensing experience allows for the activation and provisioning of Quarterly Subscription Reconciliation and Auto-Renewals, which apply to both SaaS and Self-Managed Subscription plans. In addition, the Cloud Licensing experience introduces Operational Data.

Auto-Renewal, Quarterly Subscription Reconciliation, and Operational Data: Eligibility

The SuperSonics Billing and Subscription Management Experience applies to all eligible new customers and any eligible existing customers at their next renewal, assuming they are running GitLab 14.1 and have opted into the new terms. To determine whether your customer is eligible for Auto-Renewal, Quarterly Subscription Reconciliation, and Operational Data, review the Availability Matrix and read the Customer Availability Summary Table section of the Field Team FAQ. Please direct any questions regarding SuperSonics eligibility to the pnp-changes-field-questions Slack channel.

Auto-Renewal, Quarterly Subscription Reconciliation, and Operational Data: Sales Assisted Transactions

Specific fields have been added to the Quote object to support SuperSonics Functionality. These fields will appear on two sections of the quote object.

Zuora Fields

This section contains a number of fields that show the current state of each SuperSonics feature (Auto-Renewal, Quarterly Subscription Reconciliation, Operational Data). The "Contract" fields show whether the customer is contractually eligible for the related feature. The "Turn On" fields show whether that feature is actually enabled on the subscription.

For customers who are not exempt, the default values will be "Yes" for all fields. For customers who are exempt based on the Availability Matrix, the default values will be "No" for all fields.

- Note: If a customer is exempt from SuperSonics, or has opted out, Legal Language will populate on the Order Form noting that SuperSonics does not apply. In these cases, such language can only be removed or edited by the GitLab Legal Team.

- For exemptions related to MSAs or partner deals, legal opt-out language will not populate on the Order Form.

| Field Name | Field Description |

| - | - |

| Contract Auto-Renewal | (Yes/No) Shows whether customer is contractually eligible for Auto-Renewal |

| Contract Quarterly Reconciliation | (Yes/No) Shows whether customer is contractually eligible

for Quarterly Subscription Reconciliation |
Contract Operational Data	(Yes/No) Shows whether customer is contractually eligible for Operational Data
Turn On Auto-Renewal	(Yes/No) Shows whether Auto-Renewal is enabled for the subscription
Turn On Quarterly Reconciliation	(Yes/No) Shows whether Quarterly Subscription Reconciliation is enabled for the subscription
Turn On Operational Data	(Yes/No) Shows whether Operational Data is enabled for the subscription
Turn On Cloud Licensing	(Yes/Offline/No) Shows whether a customer activated with Cloud Licensing, Offline Cloud Licensing or a Legacy License File

Note: there is no contractual field for Cloud Licensing as sending Cloud License Subscription Data is part of the standard GitLab's standard Subscription Agreement.

Cloud Licensing Fields

The fields in this section enable contractual opt-outs for each SuperSonics feature. If you wish to request an opt-out of Auto-Renewal, Quarterly Subscription Reconciliation, or Operational Data, you must check the applicable box on the quote object. Checking these boxes will trigger an approval workflow, and will ultimately insert legal language onto the Order Form that opts the customer out of the related feature. If any of these boxes are checked, and the opt-out is approved, the related Zuora Fields will reset to "No."

Field Name	Field Description
[Cloud Lic] Add Reconciliation Opt Out	(Checkbox) Opts customer out of Quarterly Subscription Reconciliation
[Cloud Lic] Add Auto-Renewal Opt-Out	(Checkbox) Opts customer out of Auto-Renewal
[Cloud Lic] Add Operational Data Opt Out	(Checkbox) Opts customer out of Operational Data
License Type	(Picklist) SaaS: Default = Cloud License; Self-Managed: A selection is required. Selecting Offline Cloud License or Legacy License will trigger approvals per the Deal Approval Matrix.

Quarterly Subscription Reconciliation (QSR): How It Works

The below process applies to any existing customers with an active subscription who have QSR enabled, and who exceed their billable user count during the subscription term.

Criteria

- Existing customer has an active subscription with QSR enabled.
- Customer exceeds their subscription amount (Max Users > Seats in Subscription) at any point during the quarter. This amount is "locked in" as the overage quantity for the quarter, "previewed" as invoice amount in Zuora, and stored in the CustomersDot database.

Timeline

- A reconciliation occurs at the end of the first, second, and third quarter of the customer's subscription.
 - For SaaS, group owners receive an email on the reconciliation date. The email communicates

the overage seat quantity and expected invoice amount.

- For Self-Managed, administrators receive an email six days after the reconciliation date. This email communicates the overage seat quantity and expected invoice amount.

Opportunity Creation

- On the date the reconciliation email is sent to the customer warning them of the planned QSR, an open Opportunity is created in Salesforce with the title: "[Account Name] - QSR - [Effective Date]"
 - Amount = Invoice Amount
 - Net ARR = Estimated Based on Invoice Amount
 - Stage = 6-Awaiting Signature
 - Close Date = Date of planned closure (7 days from opportunity creation)

Opportunity Closure

- 7 days after opportunity creation, we perform the reconciliation by committing an amendment to the subscription in Zuora and generating an invoice which is sent to the customer. At this time, in Salesforce:
 - The opportunity becomes Closed Won automatically
 - The night after the opportunity becomes Closed Won, a nightly job will run to create the underlying quote and populate opportunity data fields accurately.
- Note: If the opportunity does not become Closed Won after the close date, please close the opportunity as Closed Lost.

Important: If a QSR is refunded, max user count must be reset by opening a ticket with Support. Deal Desk will support this process. Internal process guide [here-Refunds](#)).

How To Opt-Out of Auto-Renewal, QSR, Cloud Licensing and Operational Data

During the Sales process, a customer who would not otherwise be exempt from Auto-Renewal, Quarterly Subscription Reconciliation, Cloud Licensing and/or Operational Data may request to disable one or more of these features. Every opt-out will require approvals, as noted in the Deal Approval Matrix. If an opt-out is requested and approved, upon Closed Won the related feature will be disabled for the subscription in question.

Steps to Request an Opt-Out

1. Navigate to the Cloud Licensing Fields section of the quote, and check the box next to the applicable SuperSonics Feature (i.e. Add Auto-Renewal Opt-Out). Click Save.

- This action updates the related Zuora fields to "No." The quote now shows a red "Approvals Required" message.

2. Click "Submit for Approval" to request the necessary approvals for the opt-out.

3. Once approved, generate a PDF. That PDF will include legal language in the "Notes" section that opts the customer out of the applicable SuperSonics Feature.

- Any subsequent Add-Ons will maintain the contractual opt-out.

How To Temporarily Pause Auto-Renewal, Quarterly Subscription Reconciliation, and Operational Data

During the Sales process, there may be a need for Sales to "pause" an upcoming Auto-Renewal or Quarterly Subscription Reconciliation while negotiating with the customer. Every pause will require approvals, as noted in the Deal Approval Matrix. If a pause is requested and approved, that feature will be temporarily disabled for the subscription in question until the next renewal occurs. A pause is not possible for Cloud Licensing.

Steps to Request a Pause

1. Navigate to the applicable opportunity in SFDC.
2. Open a Deal Desk support case, and explain why you'd like to pause Auto-Renewal or Quarterly Reconciliation for the subscription. Request internal support to create a case for Deal Desk. Note that justification will be required.

- Example: Request internal support to create a case for Deal Desk: "I'd like to request that Auto-Renewal be paused for this subscription. I'm working with the customer on an upsell, and I'd like to ensure we do not auto-renew the subscription at the current user count if negotiations do not end before the renewal date. Please let me know if you have any questions. Thank you!"

3. If approved, Deal Desk will navigate to the Customer Subscription object in SFDC to temporarily disable the related feature. To pause auto-renewal, Deal Desk will check the "Pause Auto-Renewal" box. To pause QSR, Deal Desk will check the "Pause Seat Reconciliation" box. The feature will remain disabled until the next renewal occurs, at which time it will revert to its previous state.

Auto-Renewal, Quarterly Subscription Reconciliation, and Operational Data: Frequently Asked Questions

1. I'm working on a deal. How can I tell if SuperSonics features apply to that deal?

- First, create a quote. After you've saved your quote, check the Zuora Fields. If you see "Yes" next to "Turn On Auto-Renewal", "Turn On Quarterly Reconciliation", or "Turn On Operational Data", then that feature applies to your customer. If you see "No" next to these fields, SuperSonics features do not apply to your customer, and Legal opt-out language will be automatically populated on the Order Form.

1. I created a quote and legal language has automatically populated in the Notes section of the Order Form. Why did that happen?

- This means that your customer is exempt from one or more SuperSonics features. These SuperSonics features are not available for the deal, and we must place legal opt-out language on the Order Form to make it clear that these features do not apply. Review the Availability Matrix for more information on exemptions.

- Note: This language is not optional and cannot be removed unless the customer opts into SuperSonics. If you would like to discuss such a scenario, request internal support to create a case for Deal Desk.

1. My customer is exempt from SuperSonics, and they have requested edits to the opt-out language on the Order Form. What do I do?

- Please open a Legal Request case to discuss potential edits to the language with the Legal Team.

1. How can I tell if Auto-Renewal or Quarterly Subscription Reconciliation are enabled on a subscription?

- Navigate to the SFDC Account, and click on the "Subscriptions" related list. Select the subscription in question, and review the "Auto-Renewal" and "Quarterly Reconciliation" fields. If these are marked "Yes," then these processes apply to the subscription. If these fields are marked "No" or are blank, these processes will not occur for this subscription.

1. A QSR opportunity was opened automatically, but my customer was never charged, and the opportunity never closed. What do I do?

- In most cases, if a QSR opportunity is opened but is not closed within 14 days after creation, that means the QSR failed and the opportunity should be closed as Closed Lost.

1. My customer did not opt out of Cloud Licensing during the sales process, but now they need a Legacy/Offline license file. How do I get my customer a Legacy/Offline license?

- To provide the customer with a legacy or offline license file, Sales should first collect the necessary approvals as noted in the Deal Approval Matrix. Sales should then work with Support Engineering to request that a legacy or offline license be sent to the customer.

- To open a Support ticket, [click here](#).

- To review the Support process, [click here](#).

Resources

The following resources pertaining to the SuperSonics Billing and Subscription Management Experience are for internal purposes only.

- Deal Approval Matrix

Working with Legal

There are several scenarios where you might need Legal assistance on an opportunity. Thoroughly review the information below. You can also learn more about the team and their scope by visiting their handbook page or by checking out these best practices on how to Collaborate with Legal.

Contact Legal

For general questions related to the customer, please open a case with legal.

Within the Customer Opportunity:

1. Click "Legal Request" (located at the top of Opportunity SFDC layout)
1. Provide the question in the "NOTES" Section and hit "SAVE"
1. The information provided will open a "Case", which will automatically be assigned to a Contract Manager / Legal Member
1. The Contract Manager / Legal Member will review the question and provide an answer in the case comments and tag the requesting Sales Team Member via SFDC Chatter
1. Once the question is addressed, the Case will be closed by the Contract Manager.
1. NOTE: If not Opportunity exists yet, please create a \$0 to open the Legal Request.

<details>

<summary markdown="span">Customer Vendor Setup Forms and Obtaining Signatures</summary>

How to process Customer requested "Vendor Setup Forms"

- From time to time a Customer may request that GitLab complete a Vendor Setup document. This is generally required for procurement groups to add a new vendor to their system(s).
- The Sales Team member is responsible for completing such forms by following the below steps:
 1. Complete as much of the form as possible. Much of this information is publicly available in the GitLab handbook. Helpful information can be found on the Company Information page and on the final page of any direct order form generated via a Zuora quote;
 1. Engage deal desk (via support case in SFDC) only for any information that is not available in the GitLab handbook. The Deal Desk team can help point you to the relevant handbook information or team who can assist with the question, but please note that it is the sales rep's responsibility to populate and manage these forms from end to end.
 1. With respect to any legal terms or questions, open a legal case
