

for review and approval;

Note: GitLab will not agree to any additional terms in a Vendor Setup Form. The parties will have all the applicable terms related to the products and services we offer in, (a) the Order Form agreed to between the parties, and/or (b) a definitive agreement that is executed by GitLab and the prospect/customer.

1. Vendor Setup Forms that require signature must follow the standard Signature Process (See Obtain Signature process below).

Note: Sales Team Members are NOT authorized to sign any document, contract and/or Agreement.

How to Obtain Signatures for any external Contract or Agreement (including Vendor Forms)

All contracts / Agreements that require GitLab countersignature will be digitally stamped by a GitLab Contract Manager or legal representative. This is done to ensure and signify that the document has been reviewed and vetted by GitLab legal, and may be signed.

Receiving a stamped contract / Agreement

- Once GitLab and the customer / prospect reach executable terms, the Contract Manager or legal representative will provide a final "Clean" version. This will be in PDF format and include a digital stamp below the GitLab signature line/block which indicates, (i) the name of the GitLab legal member that approved, and (ii) the date of approval.
- If a final agreement has been reached, the Sales Team Member should ensure the contract / Agreement includes the stamp (mentioned above). If a stamp is not included, please contact the contract manager or legal representative involved on the negotiation. Upon being notified of the need for a digital stamp, the Contract Manager or legal representative will respond and attach promptly.
- Contracts / Agreement without a digital stamp indicating approval by a GitLab Contract Manager or legal representative will be rejected and not signed.

NOTE: In very few circumstances, a Customer may refuse to use a PDF with GitLab Legal stamp for signature, due to their electronic signature tool(s). If this is the case, please supply the Agreement to be signed, and notify the individual(s) with signatory authority with the following information: (I) Overview that the Customer toolset prohibits the use of our GitLab Legal stamp, and (II) A link to the SFDC Case where the Contract / Agreement was negotiated. With this information, the GitLab individuals with signatory authority will be able to compare the requested version for execution, and the latest version approved by Legal in the case.

The signatory Authorization Matrix can be found here: </handbook/finance/authorization-matrix/>

Process for Signature

Once negotiations are completed, and the digital stamp has been affixed to the final version of the contract / Agreement:

1. Change the status of the contract, in SFDC, to 'Approved to Sign'; and
1. stage the contract in DocuSign for signatures;
1. Send to the Customer and cc' our CFO (Brian Robins).

<summary markdown="span">Export Compliance</summary>

Trade Compliance (Export / Import) and Visual Compliance Tool in Salesforce

1. Why is Trade Compliance (Export / Import) important

1. Not complying could be detrimental to the United States and other countries GitLab operates in

1. IT'S THE LAW!

1. Not complying could result in fines or penalties for GitLab and/or GitLab team members

1. Non-compliance could result in the inability to sell to federal customers, lose the trust of our customers, partners and investors and result in fines or jail time for officers and offenders

1. For more information see the Trade Compliance handbook page and the Code of Business Conduct & Ethics page.

1. GitLab uses a third party tool called "Visual Compliance" that is connected to our GitLab Salesforce account

1. This tool checks Account information against various databases to ensure no matches, Accounts are checked repeatedly to ensure GitLab's continued compliance

1. VISUAL COMPLIANCE STEPS

1. The Account information is pulled into Visual Compliance when an Opportunity, or other action, is requested for that Account.

1. The information is automatically reviewed for non-compliance / issues with the Account

1. If the Account information provides NO MATCHES, Visual Compliance will CLEAR the Account

1. NOTE: Visual Compliance will update SFDC every 15 minutes

1. If the Account information provides a 'hit', meaning it matches some element of information from a regulation or restriction, a GitLab legal member will manually review the Account

NOTE: GitLab legal reviews these accounts at 09:00, 12:00, 5:00 (CENTRAL TIME)

1. If the Account is approved, the GitLab legal member will CLEAR the Account, and Visual Compliance will update (every 15 minutes)

NOTE: If GitLab legal finds an issue with the Account they will alert the Sales Team to the Account being 'locked' and will work to verify next steps.

1. My Account has been flagged for Export Compliance Review!

1. Tag Legal in chatter on the associated account. Accounts are reviewed and validated periodically throughout the day. Only the Legal team can unlock accounts flagged for EC review!!

1. WHAT SHOULD SALES DO?

1. The more accurate information in the Account--THE BETTER! Meaning, provide the full company name, company address, and contact name(s). Partial information will result in 'hits'

and delay the process

1. If you receive the below error when attempting to update an Account:

(i) Check if the Visual Compliance Section [of the Account] says "Pending"-- Wait 15-30 minutes for the system to run its initial check and update. However, if Visual Compliance finds a potential 'hit' it will be cleared per the below

(ii) If the Visual Compliance Section [of the Account] says "Yellow" or "Red"-- The legal team is manually reviewing the Account to ensure compliance. This is done three (3) times a day and will automatically update the Account--check back in on the Account during the same day

(iii) If the Account requires immediate action (i.e., to close a deal), open a Chatter message in the Account and message "@legal"--upon receipt the Legal team will immediately review and update in Visual Compliance--change should update in 15-30 minutes

1. Once the Visual Compliance Section is updated, all Account functionality will return and you may proceed

<summary markdown="span">Creating custom contracts or adding custom terms to quotes</summary>

Process for Agreement Terms Negotiations (when applicable) and Contacting Legal

If the Opportunity meets the dollar thresholds:

- Greater than \$25,000 ARR (USD) Opportunity to review edits on GitLab Agreement template(s)
- Greater than \$100,000 ARR (USD) Opportunity to review Customer template / agreement version(s)

The Sales Team Member will follow the below workflows to make requests for, (i) editable version(s) of GitLab Templates, (ii) engagement of contract negotiations, and (iii) assistance on general questions related to a Customer / Opportunity.

A presentation overview of the process to engage GitLab Legal can be found [HERE](#)

A video tutorial can be found [HERE](#)

You may contact Legal directly in Slack via Legal

Request editable version of GitLab Template

Within the Customer Opportunity:

1. Click "Legal Request" (located at the top of the Opportunity SFDC layout)
1. For "Type of Legal Request" select "Request for GitLab Agreement Template"
1. For "Type of Contract" select the Template desired. For example, for a Non-Disclosure Agreement request, select "NDA"
1. For "Contract Source" select "GitLab Contract Template"
1. Add any additional notes that may be helpful for GitLab Contract Manager / Legal and hit "SAVE"

1. The information provided will open a "Case", which will automatically be assigned to a Contract Manager / Legal Member
1. The Contract Manager / Legal Member will attach the requested template and tag the requesting Sales Team Member
1. The Sales Team Member will take the template version and provide to the Customer

- NOTE: Sales Team Members are responsible for communication(s) with Customers. This includes providing back GitLab templates and negotiated terms.

1. NOTE: If not Opportunity exists yet, please create a \$0 to open the Legal Request.

At this time, the Contract Request Case will be marked as "Closed". Follow the below steps to initiate "Contract Review" of the Customer edits.

Request for GitLab Review: Customer edits to GitLab Template OR Customer Agreement Template

Within the Customer Opportunity:

1. Click "Legal Request" (located at the top of the Opportunity SFDC layout)
1. For "Type of Legal Request" select "Contract Review"
1. For "Type of Contract" select the type of Agreement / Template being negotiated. For example, for a Non-Disclosure Agreement request, select "NDA"
1. For "Contract Source" select the applicable Agreement / Template Source
- For edits to a GitLab Agreement / Template select "GitLab Contract Template". NOTE: Be sure the Opportunity size is above \$25,000 (USD)
- To request GitLab to edit a Customer Agreement / Template select "Customer Contract Template". NOTE: Be sure the Opportunity size is above \$100,000 (USD)

1. Add any additional notes that may be helpful for GitLab Contract Manager / Legal and hit "SAVE"
1. The information provided will open a "Case", which will automatically be assigned to a Contract Manager / Legal Member
1. The Contract Manager / Legal Member will review the Agreement / Template and attach updated red-lines
- The Sales Team member will be alerted (via SFDC Chatter) to the Agreement being updated and ready to be sent to customer

1. If another round of edits are necessary, the Sales Team member will attach the Customer provided red-lines and tag (via SFDC Chatter) the Contract Manager / Legal Member assigned
1. The same steps will repeat until an executable version is reached. At which point, the Contract Request Case will be closed.
1. The Sales Team Member will follow the steps found at "Obtain Signatures" and attach the fully executed version to the Customer Account.
- NOTE: The above process may be used to also engage Contract Managers / Legal Members to add non-standard language to Order Forms
1. NOTE: If not Opportunity exists yet, please create a \$0 to open the Legal Request.

All communications, and versions of Agreements, should be kept in the Contract Request Case

Request GitLab Partner Agreement

Within the Customer Opportunity:

1. Click "Legal Request" (located at the top of the Opportunity SFDC layout)
1. For "Type of Legal Request" select "Request for GitLab Agreement Template"
1. For "Type of Contract" select "Other Agreement"
1. For "Contract Source" select "GitLab Contract Template"
1. Add into the Notes section the, (i) Partner Name, and (ii) Type of Partner (Referral, Reseller, or Distributor) and hit "SAVE"
1. The information provided will open a "Case", which will automatically be assigned to a Contract Manager / Legal Member
1. The Contract Manager / Legal Member will attach the requested template and tag the requesting Sales Team Member
1. The Sales Team Member will update the cover page of the Partner Agreement to include the Partner Information (i.e., Territory, Partner Address...etc)
1. The Sales Team Member should send (AS A PDF) the Agreement to the Partner. If they require an editable version, they may send the "WORD" form originally provided.

- NOTE: Sales Team Members are responsible for communication(s) with Partners. This includes providing back GitLab templates and negotiated terms.

1. NOTE: If not Opportunity exists yet, please create a \$0 to open the Legal Request.

At this time, the Contract Request Case will be marked as "Closed". Follow the below steps to initiate "Contract Review" of the Partner edits. Please note, ANY DOCUMENT THAT REQUIRES GITLAB SIGNATURE MUST HAVE A GITLAB LEGAL STAMP (SEE OBTAIN SIGNATURE)

</details>

<details>

<summary markdown="span">Creating legal dashboards or filing executed contracts</summary>

Creating your own Legal Request Dashboard

1. Creating your own Legal Request Dashboard will enable you to see all Open and Closed Legal Requests that have been created.

1. The steps to do so are highlighted below, and also found in the recording located here

- Step 1: Search Dashboards and open "Sales RepLegal Requests Data Template" and click on "Clone"
- Step 2: Click on "Dashboard Properties", title this Dashboard using "Your NameLegal Request Dashboard, hit SAVE and CLOSE
- Step 3: While viewing the Dashboard, click on the "Open Legal Request" report
- Step 4: Once Within the report, click "Customize"
- Step 5: Change the third filter to include ONLY your name
- Step 6: Click "Save As" and rename the Report to "Your NameOpen Legal Requests", Click SAVE AND CLOSE
- Step 7: Click "Dashboards" to go back to the Dashboard

- Step 8: While viewing the Dashboard, click on the "Closed Legal Request" report
- Step 9: Once Within the report, click "Customize"
- Step 10: Change the third filter to include ONLY your name
- Step 11: Click "Save As" and rename the Report to "Your NameClosed Legal Requests", Click SAVE AND CLOSE
- Step 12: Click "Dashboards" to go back to the Dashboard
- Step 13: Click on "Edit Dashboard"
- Step 14: Click on Data Sources and search for "Your NameOpen Legal Requests"
- Step 15: Click and drag this report over to the "Open Legal Request" Component
- Step 16: Click on Data Sources and search for "Your NameClosed Legal Requests"
- Step 17: Click and drag this report over to the "Closed Legal Request" Component
- Step 18: Click "Save" and Close.
- Step 19: Refresh SFDC and your browser and you're done!

Filing the Executed Contract

After both parties have signed the contract, complete these steps:

1. Upload the fully executed pdf to the contract page;
1. Edit the Contract Status field to show "Active";
1. Input the Contract Start Date and fill in the Contract Term (months) field, if applicable. The End Date will auto-fill based on the number you enter. Do not put the end date in the Termination Date field.
1. Copy and paste the terms that have capture fields from the executed contract into the fields. Then, change the drop-down named "Term Capture" to "Complete". If you run into problems, you can change the field to "Started" and then request help by sending a chatter message at @Contracts.

</details>

<summary markdown="span">Custom Agreements and Negotiating GitLab's Standard Agreement</summary>

Using Customer Form Agreements and Negotiating GitLab's Standard Agreement

Our experience shows that using a prospect's form agreement is expensive and, more importantly, time consuming. Deals in which we use the customer agreement take on average 60 days longer to close than if completing using our standard subscription agreement with changes as requested by customer counsel. The arguments in favor of using our agreement are as follows:

1. Our agreement is an annual subscription agreement with a true-up whereas customer form agreements typically are based on paid up licenses.
1. We are an open source company and our agreement provides licenses for both the CE version of the product and the EE version as well as dealing with contributions of code from our customer.
1. We have non-standard but customer favorable warranty and acceptance provisions.

Despite the overwhelming arguments in favor of using the GitLab form some prospects insist on using their form agreement. GitLab will accommodate such requests with the following assumptions:

1. GitLab must have been selected as the solution of choice by the customer.
 1. The deal must be in excess of \$100,000.
 1. The primary decision maker must indicate their willingness to facilitate the internal process in a manner that brings issues to closure within 30 days of negotiations. The decision maker must also acknowledge that they understand that the form agreement may require significant revisions based on what is described in the above section.
- Items 1 and 3 above must be acknowledged in writing prior to proceeding with the contract markup.

GitLab will not accommodate changes to our standard forms for deals under \$25,000.

Referencing Customized Customer Agreements in Quote

If GitLab agrees to customized subscription terms with a customer, all quotes, SOWs, POs, etc. must reference those customized terms and not the GitLab standard terms listed on our website.

To update the terms of a quote, follow these steps:

1. Delete the reference in the quote to GitLab's URL terms.
1. Replace the reference with the following language - "By accepting this Quote, you and the entity that you represent (collectively, "Customer") unconditionally agree to be bound by and a party to the GitLab Subscription Agreement signed by Customer and GitLab with an effective date of mm/dd/yyyy."
1. Insert the effective date of the customized agreement signed by both parties. The effective date should be set forth in the agreement, but if not specifically set forth, use the date the last party signed.

Adding Custom Terms to a Quote

If custom terms need to be added to a quote, notify the Deal Desk team. The team will review and determine if we can fulfill the request or if we will need to work with Legal. Please check out the Legal handbook page for more information on how to open Legal cases, responding to Vendor Set Up forms, or questions on GitLab's Standard Agreement.

</details>

<details>

<summary markdown="span">Subscription Transfer Agreements</summary>

For assistance with a Subscription Transfer Agreement please open a Legal Request. Please provide details as to the Account which purchased the Subscription--Including the original Opportunity--and the updated Account that is requesting to be assigned ownership.

</details>

Open Source, Education, and Startup Application Opportunities

GitLab provides free licenses to qualifying entities through the Community Programs: GitLab for Education Program, GitLab for Open Source Program and GitLab for Startups Program. All applications to these programs are routed through the Community Programs applications automated

workflows. Only Developer Relations team members should handle these applications and opportunities because the team verifies program requirements before issuing/renewing licenses and these opportunities are handled differently since the opportunities are free.

Inquiry and Application Process (Leads or Contacts)

1. If an existing contact or new lead is interested in applying to one of the programs, use the Community Programs lead routing matrix to determine how best to assist. If the lead has specific questions, direct them to send an email to education@gitlab.com, startups@gitlab.com, or opensource@gitlab.com. Then reassign the lead to the appropriate program manager.
1. In the situation that you need direct assistance with the lead/contact, chatter the program manager in Salesforce with a note about the requested action.

Assigning Opportunities and Renewal Opportunities

1. All Education opportunities should be owned by the Manager, Education Programs and all open source or startup opportunities should be owned by Sr. Open Source Program Manager.
1. If you need to assign an opportunity or a renewal opportunity to the Manager, Education Programs or the Sr. Open Source Program Manager, please chatter the program manager in Salesforce.

How to Submit a Quote for Discount and Payment Term Approval

The following is intended as a guide for Opportunity Owners who need to submit a quote for approval for discount or payment terms. If the quote requires approvals before sending to a customer, there will be a red stop sign flagged with "Additional Approvals Required".

Standard Quote Approval

Prior to generating a standard (non-draft) quote to deliver to a client or prospect in PDF format, any non-standard deal elements (discounts, unique payment terms, and other items found in the matrix) must be approved. The following steps outline the process for how to correctly submit a quote for approval. This approval flow follows the criteria in our approval matrix for approvers.

1. Navigate to the quote that you would like to submit for approval. Ensure that all of the relevant information is filled out on the quote.
1. Populate Submitter Comments on the quote before submission. This field must be populated on any quote that requires approval. Please provide detail as to why you are requesting discounts or other terms that require approval, following the below format:

text

Executive Summary

Deal Summary (including compelling event to transact) (1-2 bullets)

Previous discount (if renewal/add-on)

Ramp details (if applicable)

Rationale for Discount Request (1-2 bullets) (ex. Services included)

Strategy to increase price over time

What are we getting in return?

Is this deal competitive? (Y/N)

If Yes, against whom?

Logo Rights? (Y/N)

1. CRO/Finance Deal Approval: If you are applying discounts that require CRO and/or Finance approval per the current Deal Approval Matrix and the deal is $\geq$ \$500k Booked ARR (Net ARR + ARR Basis), you must fill out the CRO/CFO Deal Approval Template and provide a link in the Submitter Comments quote field prior to approval submission. Please ensure Ashley Kramer and Brian Robins have permission to access your document prior to submitting the quote for approval.

1. Click "Submit for Approval" to initiate the approval process. The quote will be routed to the appropriate approvers based on the approval matrix. You can track the status of your approval request in the "Approval History" related list on the quote.

1. Once all required approvals have been obtained, you will receive a notification and the quote status will change to "Approved". You can now generate the PDF and send the approved quote to the customer.

Note: If any changes are made to the quote after approval, you will need to resubmit it for approval before generating a new PDF.

Contractual Discounts

If a discount has been applied to a quote pursuant to a signed agreement between GitLab and the customer, additional approvals are not required. Create a case for Deal Desk following this process, and provide a link to the signed agreement to request that the quote approvals be overridden.

Channel Quote Approval

Under the GitLab Partner Program, signed Channel Partners are granted specific, contractual discounts depending on the product, Partner Deal Type, and the Partner Engagement type. This information is automatically captured at the opportunity level. For more information, review the SFDC Field Definitions and the Partner Program Discount Tables.

Only GitLab-authorized partners who have completed one sales certification may transact a GitLab order.

Quote Approvals: The Quote Approval module identifies channel deals (subscription deals only) and manages the necessary approvals automatically. If the discount applied to the quote is less than the GitLab Partner Program discount, discount approval is required by the regional Channel Approver listed in the Approval Matrix. If the discount applied is more than the GitLab Partner Program discount, the added discount portion is subject to standard approvals listed in the Approval Matrix. Effective FY24 Q2, only the portion of the discount that exceeds the GitLab Partner Program discount will be subject to approvals.

To request approval on a quote, follow the steps above: Standard Quote Approval

Channel Approvers: More information regarding regional Channel Approvers can be found [here](#).

In the event that you require escalation for an approval request, please reach out to Deal Desk. Deal Desk will override the approvals as applicable or help seek approvals from necessary parties.

The quote approval module and approval workflow outlined above does not apply to Public Sector opportunities. For more information on opportunity requirements for Public Sector, check out the Public Sector Opportunity requirements.

Where do I find the partner's contractual discount?

The quoting system will provide visibility into the correct programmatic partner discount. On the quote object, each line will be stamped with the "Partner Programmatic Discount." This field is populated by the system, but does not provide any actual discount to the quote. In order to apply the discount to the quote, this amount should be entered into the "Discount %" field on the edit products page. To confirm that the discount is correct, go to the opportunity and look at the Partner Deal Type, and then look at the Partner Engagement. Next, reference the appropriate Partner Program Discount Table. The product, Engagement, and Deal Type will allow you to find the proper discount in the matrix..

Service Attach Quote Approval

Required EDU Attach (All Segments/Geos)

IF:

1. Opportunity Record Type = Standard
2. Type = New Business OR Add-on
3. Stamped Opp Owner User Geo = AMER, EMEA, PubSec
4. Booked ARR BETWEEN 50,000 AND 250,000

THEN:

Require 1 AND 2 below

1. Include at least qty 12 GitLab Certification Exam Voucher
2. Include qty 1 Private Instructor Led Trainings.

Required EDU Attach (Commercial Segment)

IF:

1. User Segment = Mid-Market
2. Stamped Opp Owner User Geo = AMER, EMEA, PubSec
3. Booked ARR BETWEEN 20,000 AND 50,000

THEN:

Require 1 OR 2 below

1. Include at least qty 12 GitLab Certification Exam Voucher

2. Include qty 1 Private Instructor Led Trainings.

Enterprise Service Attach Opportunity Criteria (All Products)

IF:

1. Order Type 2.0 = 1. New - First Order
2. Net ARR >= \$20,000
3. Stamped Sales Segment = Large, PUBSEC
4. Stamped Opp Owner User Region = AMER, EMEA

THEN:

1. Minimum Professional Services Amount to Attach: \$15,000

Enterprise Service Attach Opportunity Criteria (Ultimate Only)

Note: If the below criteria are met, this requirement will supersede the above "All Products" requirement.

IF:

1. Opportunity Type = New Business or Add-On Business
2. Net ARR >= \$100,000
3. Stamped Sales Segment = Large
4. Stamped Opp Owner User Region = AMER
5. Product Sold = SaaS - Ultimate, Self-Managed - Ultimate, or Dedicated - Ultimate

THEN:

1. Minimum Professional Services Amount to Attach: \$20,000

Success Tiers Attach

In FY26, we implemented a sales policy around the attachment of Success Tiers. For policy details, please read more on the dedicated Success Tiers HighSpot page [here](#).

Have questions? Please ping the success-tiers Slack channel.

Service Attach Quoting Process

If an opportunity meets the criteria listed above, the Minimum Professional Services Amount must be attached to the opportunity. Services can be attached using one of two methods:

1. Add standard SKU professional services (i.e. Admin Training) totaling or exceeding the Minimum Professional Services Amount to the quote. Note: Custom services requiring a signed SOW must be quoted separately on a standalone opportunity - see below.
2. Link a separate, standalone professional services opportunity with services totaling or exceeding the Minimum Professional Services Amount via the "PS Opportunity" field.

Service Attach Exceptions/Approval Requirements

If an opportunity meets the criteria listed above, but does not meet the Minimum Professional Services Amount, or does not have a linked opportunity that meets the Minimum Professional Services Amount, the quote will require approval to sell the subscription deal without the minimum Service Attach.

Service Attach Quote Approval Process

1. Populate the "ProServ Exception Approval Notes" field on the quote with the following information:

- What use cases are they adopting?
- What specific services were positioned?
- Was PS services engagement manager engaged (y/n)?
- What was the customer's reason why they didn't agree to services?
- Other supporting reasons?

1. Submit the quote for approval by clicking "Submit for Approval" on the quote object.

1. Approval is required per the Deal Approval Matrix.

1. If the approvals noted above are obtained, and no other approvals are required, the quote will be approved. If the approvals noted above are obtained, and other approvals are required (discount approvals, payment term approvals, etc.), the quote approval module will automatically enter the existing approval process.

Other services quote approvals

EM Approval on Consulting Block quotes

For quotes that contain the Professional Services SKU consulting block, the quote will require an approval from an Engagement Manager on the Professional Services team. If you are unsure of who your assigned engagement manager is, check out the PS to Sales Mapping doc (Internal Team Mmembers only).

Waived True-Ups: Policy and Approval Requirements

Summary: Waived True-Ups require executive approvals and may negatively impact Net ARR.

1. Waived True-Ups require written approvals per the approval matrix. Approvals should be sought in SFDC via the quote approval automation.

1. After approval is obtained, Sales should create the appropriate opportunity and quote.

Typically, true up waivers are required after renewal, and thus require an Add-On opportunity with an amend subscription quote. The true up SKU must be added to the same subscription that incurred the overage. On the quote, Sales should apply the appropriate true up SKU and quantity approved to be waived, at a 100% discount. After saving the quote, Sales should request internal support to create a case for Deal Desk to override the quote approval requirement.

1. Like all GitLab deals, waived true up orders must meet booking requirements as described here. In most cases, that means that the customer must sign a \$0 Order Form, or issue a \$0 PO.

1. Upon booking the true up waiver opportunity, Order Management will notify @Revenue of the waiver in SFDC chatter.

1. After being notified, the Revenue team will review the case, and will calculate the amount of the ARR allocation. The Revenue team will then add it to the ARR Allocations Tracker.
1. After calculating the ARR allocation, the Revenue team will communicate the impact in Chatter. This ARR allocation will be communicated within 3-5 days of the initial notification to the Revenue Team.
1. When the ARR allocation is communicated in Chatter, Deal Desk will adjust the Net ARR and Booked ARR of the opportunity in accordance with the ARR allocation provided by the Revenue Team.
1. Please note: L&R Support do not have the ability to waive True-Ups, further information on L&R Support responsibilities regarding True-Ups can be found in the working with sales support handbook page

How to Request Quote Approval via Chatter

Rarely, certain urgent or complex deals may require expedited approval via chatter. Use the applicable template below to request approvals. You will need to tag the approvers outlined in the Deal Approval Matrix. For standard quotes please submit the quote for approval, do not request additional approval in chatter.

How to Approve a Quote

The following is intended as a guide for quote approvers who receive approval requests per the Deal Approval Matrix

Where do I approve?

Quote Approval requests will originate from one of two sources: The quote, or Salesforce Chatter.

If the request originates from the quote, you will receive an email alert and a Slack alert. If the request originates from SFDC Chatter, you will receive an email alert. [Click here to learn more about which requests should go through the quote vs. SFDC Chatter.](#)

Approval Requests Submitted via Quote "Submit for Approval" Button

Approval requests submitted via this process can be approved one of three ways: (1) via email alert, (2) via Slack alert, or (3) directly in Salesforce.

Once a user submits a quote for approval, it will follow the order of approvers as stated on the quote and in the Deal Approval Matrix. You will be notified by an email and a Slack alert, both of which contain information about the request, and a link to the quote.

Approve Directly in Salesforce

- To review how you can approve or reject quotes via email or directly in Salesforce, sign into the GitLab Unfiltered YouTube account and watch this video.
- You can approve or reject a quote directly within Salesforce by accessing the quote and scrolling to the bottom of the page under Approval History. Click Approve or Reject next to your name to take action.

Approve via Email

- To review how you can approve or reject quotes via email or directly in Salesforce, sign into the GitLab Unfiltered YouTube account and watch this video.
- Once you have reviewed the quote, you can reply directly to the email. Valid responses are:
 - APPROVE
 - APPROVED
 - YES
 - REJECT
 - REJECTED
 - NO

Approve via Slack

How It Works

- Slack Approvals sends quote approval requests from Salesforce right to your Slack via the "Quote Approval Bot." As soon as a submitter clicks "Submit for Approval" on the quote object, the first approver will receive the request. After an approver actions their step, any subsequent approver(s) will receive their request in sequence until the quote is fully approved, or until a user rejects the quote. When it's your turn to approve, you'll be able to approve, reject, add comments, and monitor progression - all right in Slack. Each action writes back to Salesforce and leaves a timestamp - just like we're used to.
- The Quote Approval Bot's Approval Dashboard conveniently lists all pending approval requests in one location. No more worrying you missed one!
 - On the dashboard, click "Slack Approval Request Link" to navigate to the original approval request (where you can approve or reject within Slack), or click on the Quote URL to open Salesforce and review the quote there.
 - This dashboard updates every 15 minutes.

Alert Types

Both submitters and approvers will receive alerts via the Quote Approval Bot as each quote navigates the approval workflow.

Approvers will receive an Approval Request with key information about the opp and quote, links to Salesforce, and Approve/Reject buttons with comment functionality that writes back to Salesforce. Approvers will also receive Approval Alerts confirming they've approved, Rejection Alerts confirming they've rejected and Recall alerts notifying them when a quote pending their approval has been recalled in Salesforce.

Submitters will receive Approval Alerts notifying them when each Approver has approved, Rejection Alerts notifying them that a quote has been rejected, and Final Approval Alerts notifying them when a quote has been fully approved and an Order Form can be generated.

FAQ

1. Will I still receive email notifications for quote approvals?

Yes, you will still receive email notifications. You may use either email or Slack.

2. Does this work for chatter approval requests?

No, chatter approval requests will not be routed through Slack. As of FY25 Q4, all quote-level approvals should be routed through the quote approval tool.

3. Can I still approve quotes directly in Salesforce?

Yes! If you approve directly in Salesforce, or if another user approves on your behalf, the original Slack approval request will update to reflect the "approved" status so that it is clear you don't need to action anything.

4. Does this require any change in rep behavior?

No! Submitters will click Submit for Approval on the quote object just as they do today.

5. Does this work on both the desktop app and the mobile app?

Yes!

6. Do I have to do anything to set it up? Do new hires need to request access?

No! All Salesforce users will automatically receive this functionality upon go-live, including new users added to Salesforce in the future.

7. Is there any functionality that enables deal-specific discussion directly in Slack?

At this time, there is no functionality that enables deal-specific discussion directly within the Quote Approval Bot. We've custom built this integration, and will consider such functionality for future iterations.

Additional resources are available in Highspot. Review the Slack Approvals slide deck for step-by-step instructions, or check out this video announcement to see Slack Approvals in action!

Approval Requests Submitted via Salesforce Chatter

If you have been tagged to approve a quote via Salesforce Chatter, please clearly communicate your Approval or Rejection, as well as exactly what you are approving or rejecting, in the same Chatter thread where your approval was sought.

Reassign Quote Approvals

If you are a quote approver and will be out of office, please take action to delegate your quote approvals while you are away. To reroute your approvals, follow the below steps:

1. In Salesforce, navigate to your Profile feed. At the top right of your screen click Your Name > My Profile.

1. Open a Deal Desk support case to notify the Deal Desk team that you will be out of office and tag the individual to whom approvals should be rerouted to, along with the dates that you

will be out of office.

1. Navigate to your personal settings in SFDC. At the top right corner of your screen, Click on your name. In the drop down, click "My Settings".

1. Enter Approver Settings in the Quick Find box, then select Approver Settings. No results? Enter Personal Information in the Quick Find box, then select Personal Information.

1. Assign your Delegated Approver (the individual to whom your quotes should be rerouted).

1. Verify with your Delegated Approver that they have set their SFDC Approval Settings to "If I am an approver" or "Delegated Approver".

Note: If you are a Delegated Approver and are not receiving approval alerts, contact sales-support for assistance.

Approving Multiple Product Tiers on One Quote

If a quote has multiple product tier SKUs (ex. Premium AND Ultimate), this requires additional approvals per our matrix.

1. If fair value must be allocated differently than what will be on the invoice that value will be assigned on an order form and used for the entry to be pushed to Zuora. The fair value will also be used for assigning booking value (i.e. ARR, iACV, PCV, etc).

How to Send an Order Form to a Customer

If a quote has a green circle at the top of the page, flagged with "Approved", it's ready to send to the customer! Note, a PDF of a quote cannot be generated until the quote has been approved.

How to Generate an Order Form as a PDF

1. Once a quote has been approved, review the Quote Template to ensure you have selected the correct form for the transaction. The default template for all transaction types (new, amendment, or renewals) will be the Standard Order Form. If you want to select a different template, click the search icon next to the Order Form Template field and select the desired template. A description of each template will be visible next to each template.

1. On the quote, click Generate PDF Doc. The document will be saved as an attachment in the Notes and Attachments section in the opportunity record.

1. Pre-approved Legal Language can be added to some order forms through Toggle Field selections available on the quote object. To edit these fields, Click "Edit Quote Details".

1. Non-standard Legal Language needs to be reviewed, approved, and added manually by Legal. Please open a Legal Request case if non-standard contract terms need to be included on your Order Form.

Setting Up DocuSign for the First Time

The first time you login to DocuSign from SFDC, you will be required to Authorize access and log in. Please follow these steps when prompted:

1. After clicking on the "Send with DocuSign" button, you will be prompted with this screen. Select "Authorize" to continue.

2. On the next screen, login to your DocuSign account. Enter your GitLab email address and click continue. This will automatically log you in with OKTA.

3. Once logged in, click "Accept" to grant access to DocuSign.

4. On the next screen, click "Allow" to grant DocuSign access to Salesforce.

5. On the final screen, you may be asked to login to Salesforce again. After this access will be granted going forward.

How to Send an Order Form to the Customer for Signature via DocuSign

To send a digital copy of an Order Form to the customer via DocuSign:

1. On the Approved quote, Click "Generate Quote PDF", near the top of the page.

1. Proceed to the related opportunity.

1. Confirm the PDF has been generated under the "Google Docs, Notes & Attachments" section on the opportunity.

1. From the Opportunity, select the "Send with DocuSign" button.

1. Here, a DocuSign window appears with the most recent file selected by default.

- Preview the document by clicking on the document name.

- If this is the correct document, click Next.

- If this is NOT the correct document, uncheck the box next to the document, and add the correct file.

1. To add one or multiple files, select "Add from Salesforce" or "Upload" from your computer:

- "Add from Salesforce" will allow you to select any Order Form PDF that has been attached to the opportunity.

- When selecting a document from "Add from Salesforce" make sure the box is checked to the left of the document so it is added to the envelope.

- "Upload" will allow you to select any PDF from your computer. NOTE that any document not generated from a quote will require signature tags to be placed manually.

- Note: Order Form PDFs generated prior to 2021-06-03 will require the manual placement of signature tags.

- Make sure to hit "Next" once all the documents have been selected!

1. Now you must add a Recipient:

- At minimum, you must add:

- A Signer

- Additional Recipients Options:

- Viewer
- Receives a Copy
- Needs to View

1. Use one of two recommended methods of adding a Recipient:

- "From Salesforce" - Simply type in the name of a contact in Salesforce. Click Select.
- Note: If a contact on the related SFDC opportunity has the "DocuSign Signer" contact role selected, that contact will automatically display as the signer upon arriving to this step.
- "By Name & Email" - Enter Full name and email address. Click Select.
- Note: When using this option to add a signer, leave "Role" blank.

1. To add a second signer, add a second recipient. Ensure the second signer is marked as "Signer 2."

1. Recipient Messaging

- After specifying the envelope recipient, modify the email subject line and enter an optional email message.
- By default, the email subject line is prefixed with the words "Please DocuSign:" and will automatically include the name(s) of the file(s) you upload to your envelope.
- For example, if you upload a file named "Confidentiality Agreement.docx," your subject line defaults to "Please DocuSign: Confidentiality Agreement.docx."
- You can change the subject line to anything you like. Keep in mind that the subject line is also the envelope title that will display when you view your sent envelopes on the Manage page.
- You can also add an email message to the envelope
- You can add reminder options if the envelope has not been opened, signed, or view.
- You can set an envelope expiration date when needed

1. Click Next.

1. Send Page

- If you are sending the document to one signer: Review the document to ensure the Signer 1 signature tags are visible on the signature block. These tags are automatically applied to any Order Form PDF generated from the SFDC quote (generated on or after 2021-06-03). When ready, click "Send."

- Note: Order Forms generated before 2021-06-03 will have legacy signature tags, and will require manual placement of signature tags via the DocuSign tool. Only Order Forms generated with the new DocuSign templates (available starting 2021-06-03) will automatically place the signature tags.

- To manually add signature tags on a PDF within the DocuSign tool, select the appropriate signer in the drop down menu on the top left of the screen. Drag and drop the appropriate signature tags from the "Standard Fields" section onto the signature block on the order form.

- For each signer, GitLab requires:

- Signature
- Date Signed
- Full Name
- Title

- Note: Signature fields can only be added for recipients who need to take action on the document.

- If you are sending the document to two signers: Select the appropriate signer in the drop

down menu on the top left of the screen. Drag and drop the appropriate signature tags from the "Standard Fields" section onto the signature block on the order form. Repeat for the second signer.

- For each signer, GitLab requires:

- Signature
- Date Signed
- Full Name
- Title

- Note: Signature fields can only be added for recipients who need to take action on the document. Fields are not added for recipients who only need to view or receive a copy of the document.

1. When Complete, click "Send."

How do I check if the customer has signed the Order Form via DocuSign?

1. From the Opportunity level in our Salesforce instance, you can view the status of a document by hovering over the "DocuSign Envelope Status."

- Once the document has been sent the status will state "Sent."
- Once the document has been signed the status will update to "Completed."
- You will receive email notifications to your GitLab email address when the document has been viewed, and when it has been signed.

2. When the document has been fully signed, it will automatically be attached to the opportunity.

Learning Resources

Internal Resources:

- For a visual demo of GitLab's DocuSign instance, review this LevelUP Webinar from 2021-05-13
- Note: If you cannot view the video, make sure you are logged in to GitLab Unfiltered. You can learn more about how to log in or request access to GitLab Unfiltered [here!](#)

DocuSign University:

- Send Your First Envelope
- Configure Envelopes for Sending
- DocuSign Support Page

Note: You must log in with your DocuSign credentials to access these educational resources.

PO Remittance

All Purchase Orders should be remitted to the Sales Rep / Opportunity Owner / ISR.

Exceptions for this process are for customers who remit POs to procurement software, such as

Ariba. POs sent through Ariba will be attached to the opportunity by the Billing team.

Once the PO has been received, upload to the Google, Notes and Attachment section of the opportunity before submitting the opportunity for booking.

Submit an Opportunity for Booking

You've created the quote, received all necessary approvals, and the customer has signed the Order Form. Awesome! Time to submit the opportunity for booking. Hold up! Be sure to review all required fields listed below before submitting the opportunity for approval.

All opportunities must meet all requirements outlined below to be processed. Exceptions are rare and not made lightly and often require several approvals. Your opportunity will be rejected if it does not meet booking requirements.

Opportunity Booking Requirements

There are unique requirements for different methods of selling GitLab.
Please see the general summary presentation of our booking requirements [here](#).

IMPORTANT NOTE: At this time, we cannot accept Direct Deals through India. All sales assisted opportunities with customers based in India must go through a reseller or partner. Customers based in India can still purchase online via the customer portal directly.

Review the drop down below related to your order type.

<td class="tg-0pky">PO document in pdf is required if the customer previously provided a PO document for any purchase.

If the customer won't provide a signed Order Form (see details above), the PO must contain the following details and we need to generate an Order Form without signature

block:
 - correct GitLab entity,
 - the Quote No. found within the applicable Order Form,

 - payment terms matching the Order Form,
 - currency: USD,
 - line item descriptions that match the Order Form (without

signature block)
- visible PO number
- matching subscription term

If the customer signs our Order

Form but previously they provided a PO doc as well but now they don't want to issue an PO document, they need to also provide an email confirmation that they will accept our invoice without a PO number.</td>

</tr>

</tbody>

</table>

A Direct Deal is a deal between GitLab and the Customer. There are no Distributors/Partners/Resellers involved at any stage of the process. IMPORTANT NOTE: At this time, we cannot accept Direct Deals through India. All opportunities with customers based in India must go through a reseller or partner.

For all Direct Deals (Sales Assisted Opportunities) the customer must sign the Approved Order Form. Order Forms without a full customer signature (Name, Title, Company, Date) will be rejected by Deal Desk.

GITLAB FIRMLY REQUIRES ORDER FORMS TO BE FULLY EXECUTED. [CLICK HERE IF CUSTOMER F](#)
ORDER FORM

1. Prospect/Client paid via Credit Card through the web portal- In this scenario the applicable GitLab terms are agreed upon at the time of the purchase.

1. An Order Form (which includes a Quote No.) is required in order to confirm products purchased, of seats, term, and pricing. An Order Form is also needed to confirm the Prospect/Client agrees to the terms and conditions referenced in the Order Form.

- Discuss with customers / prospects, from on the onset, that signature will be required.

- If the parties agreed to non-standard, negotiated terms, the URL to our standard terms and privacy policy should be deleted and replaced with the following: "This Order Form is governed by the terms and conditions of the [NAME OF AGREEMENT] dated [MM/DD/YYYY] between the parties ("Agreement"). Customer has been deemed to have "Accepted" the terms of this Agreement upon the earlier of, (i) executing this Order Form, (ii) reference of this Order Form Quote No within a purchase order or similar document, or (iii) the use of any GitLab software.

- If an Order Form is executed by the Customer, GitLab review of a submitted purchase order will be minimal, the purchase order must include: a) the correct GitLab entity, b) the Quote No. found within the applicable Order Form, c) payment terms matching the Order Form, and d) line item descriptions that match the Order Form.

1. In rare circumstances, where a Prospect/Client is unwilling to sign the Order Form, approvals are required from Legal and PAO and the Sales Team Member must attach to the Opportunity:

- Reason(s) why the Customer is refusing to execute the Order Form; and
- Documentation (i.e., email thread) of the customer refusal

1. If the Customer's purchase order DOES NOT include any legal or finance terms, as determined and approved by GitLab finance and legal, and includes a) the correct GitLab entity, b) the Quote No. found within the applicable Order Form, c) payment terms matching the Order Form, and d) line item descriptions that match the Order Form (without signature block), GitLab may accept the Order Form and purchase order without changes.

1. If the Customer's purchase order DOES include any legal or finance terms, as determined and approved by GitLab finance and legal, the Sales Team Member will be guided to direct the customer to either:

- Remove all references to such terms found within the purchase order; and/or

- Insert the following language into the supplied PO: "Notwithstanding any of purchaser's standard terms and conditions set forth or referenced herein, this PO is governed by the GitLab Subscription Agreement, GitLab Professional Services Terms (as applicable) or other such software license and/or services agreement negotiated by the parties"

- The purchase order in either instance (3&4) must also include: a) the correct GitLab entity, b) the Quote No. found within the applicable Order Form, c) payment terms matching the Order Form, d) line item descriptions that match the Order Form (without signature block)

1. Direct Deals without an executed Order Form that do not meet the standards listed above (Sections 2-4) will be rejected.

<summary markdown="span">Overview Booking Requirements for Authorized Reseller, Authorized Distributor, and Managed Service Provider (MSP) opportunities</summary>

<table class="tg">

<thead>

<tr>

<th class="tg-baqh" colspan="3">RESELLER Subscription Purchase Requirements</th>

</tr>

</thead>

<tbody>

<tr>

<td class="tg-0lax">Signed Order Form</td>

<td class="tg-0lax">Not required</td>

<td class="tg-0lax">Exception: if the reseller cannot provide a PO document and wants to sign our Order Form, the reseller Order Form with signature block can be selected in the quote template section of the quote object.</td>

</tr>

<tr>

<td class="tg-0lax">Signature</td>

<td class="tg-0lax">Not required</td>

<td class="tg-0lax">If the reseller chooses to sign our reseller Order Form, signature with full name and signature date are required.</td>

</tr>

<tr>

<td class="tg-0lax">Correct Order Form Attachment Format</td>

<td class="tg-0lax">Not required</td>

<td class="tg-0lax"><span style="font-weight:400;font-style:normal;text-

decoration:none">Complete pdf document with all the pages without manual edits (only PO nr, VAT ID manual edits can be accepted)</td>
<td class="tg-0lax">PO</td> <td class="tg-0lax">Required
(however reseller can sign the Order Form and in that case we don't need a PO document)</td> <td class="tg-0lax">If the reseller won't provide a signed Order Form, the
PO document in pdf must contain the following details and we need to generate a reseller Order Form without signature block:
 - correct GitLab entity,
 - the Quote No. found within the applicable Order Form,
 - currency: USD,
 - payment terms matching the Order Form,
 - line item descriptions that match the Order Form (without signature block),
 - matching subscription term,
 - visible PO number</td>

An Authorized Reseller, Distributor, or MSP is an approved partner with an active contract with GitLab in place. For opportunities where an any of these partners will purchase and resell to an End User:

1. Authorized Reseller or Distributor must issue a PO that references the GitLab Order Form Quote No. The Authorized Reseller Order Form template OR the Distributor Order Form template must be attached to the opportunity and DOES NOT require Signature from the reseller. The template includes reference to the executed Agreement between the parties, and in the event there is no executed Agreement, then the Fulfillment Reseller Agreement will govern.
1. GitLab will accept the Authorized Reseller or Distributor Order Form without signature, and the Reseller PO, PROVIDED THAT:
 - The Order Form includes the correct reference to the Master Partner Agreement or Authorized Reseller Agreement and other terms; and
 - The PO received is issued to the correct GitLab entity and references the applicable Order Form Quote No. which includes, Quote ID, products, of users, term, and pricing of the subscription(s).
1. Clickthrough EULA must be delivered and accepted by the End User. Please attach a Note to the Notes and Attachments section with a confirmation link or email.
1. The correct quote template must be selected for the relevant route to market. Authorized Reseller, Authorized Distributor, and Managed Service Provider (MSP) templates.
1. If the End User has previously accepted a EULA, then we can use it as the governing terms with respect to the End User for this purchase. In such a case go to our EULA Request Server

and find the Token and Accepted At from the customer's previous EULA. Then insert the following into the quote: "By accepting this quote, you, and the entity that you represent (collectively, "Customer") unconditionally agree to be bound by the terms agreed to in EULA Token previously accepted on Accepted At."

</details>

<details>

<summary markdown="span">Booking Requirements for opportunities sold via Amazon Web Services (AWS) Private Offer</summary>

AWS Private Offer Transactions have a unique process flow, from quoting to opportunity approval. If your customer has chosen to transact via AWS, please note the following:

Quoting:

1. Create a quote object per standard practice, and enter "Amazon Web Services, Inc." as the Invoice Owner. The Invoice Owner Contact field should reflect "Accounts Payable (AWS)". The "Resale Partner" is "Amazon Web Services." The Sold To contact must be the individual who will receive the license. Use the Standard Order Form quote template.

1. Any additional discounts, non-standard payment terms, or other deviation from standard terms will require approval per the approval matrix. Such approvals must be obtained BEFORE applicable terms are relayed to the customer.

1. Once Order Form PDF is generated, request internal support to create a case for Deal Desk to create Private Offer.

All Private offer requests must include the following details:

- AWS Billing ID
- Customer details- Contact name and email who can accept the private offer
- AWS Margin

1. Order form need not be signed by the customer for AWS deals. By accepting the private offer customer agrees to GitLab's subscription terms.

1. Note that Net ARR will reflect the net price on the opportunity, after the margin to AWS is taken into account upon booking. Compensation for AWS deals will be channel neutral specifically for the margin to AWS.

1. Deal desk will send the private offer after it is created and opportunity owner along with ABDM will be notified.

Requirements to Close Deal:

1. A Private Offer must have been created, accepted by the customer, and must match the deal elements as approved on the SFDC quote object / Order Form. The Private Offer will include the AWS Private Offer Order Form and the standard GitLab Subscription Agreement (as provided by Legal). Note that the Order Form's purpose is to highlight what is being sold, and will not be signed by the end customer.

1. Once the Private Offer has been accepted by the customer, Deal Desk will chatter on the opportunity to submit for processing by attaching offer acceptance email. Then sales rep needs to submit the opportunity for approval.

Closing the Deal:

1. At the time of deal closure, Order Management will adjust the Start Date on the Quote and Opportunity as per the Bookings Policy applicable to new subscriptions. Order Management will also update the price to reflect the margin taken by AWS. This WILL reduce final Net ARR. More information regarding this margin can be found [here](#).

1. Note that the AWS account is permanently set to silent, and no invoices created will go to AWS.

1. If the customer purchases Self-Managed, the license key file will automatically be sent to the 'Sold To' contact from the quote. If the customer purchases SaaS, the
