

subscription will automatically be sent/updated for use at time of booking. Note: SaaS subscriptions purchased through AWS (or any reseller) will typically require support intervention because end-users do not have access to the customer portal. GitLab support includes a message in the purchase email that instructs users to contact support via a ticket for assistance.

ACTION: Opportunity Owner: Confirm the customer receives the license within 2 days of oppty closed-won. If the customer has not received license details, open an issue: GitLab Support Request and use either the GitLab Support Internal Requests for Global customers or GitLab Support Internal Requests for Federal customers request option, then select the appropriate internal request type, either for SaaS or Self-Managed.

1. Billing will create the invoice in Zuora and apply cash once received.

</details>

<details>

<summary markdown="span">Booking Requirements for opportunities sold via Google Cloud Marketplace (GCP) Private Offer</summary>

GCP Private Offer Transactions have a unique process flow, from quoting to opportunity approval. If your customer has chosen to transact via GCP, please note the following:

Quoting:

1. Create a quote object per standard practice, and enter "Google Cloud Marketplace" as the Invoice Owner, and "Cloud Marketplace Payments" as the Invoice Owner Contact. The "Resale Partner" is "Google Cloud (Partner)". The Sold To contact must be the individual who will receive the license. Use the Standard Order Form quote template.

1. Any additional discounts, non-standard payment terms, or other deviation from standard terms will require approval per the approval matrix. Such approvals must be obtained BEFORE applicable terms are relayed to the customer.

1. Once order form is generated request internal support to create a case for Deal Desk for private offer creation

1. All Private offer request must include the following details:

GCP Billing ID

Customer details - Contact name and email of who can accept the private offer

GCP Margin

Mode of Payment -Prepay or PostPay

1. Note that Net ARR will reflect the net price on the opportunity, after the margin to GCP is taken into account upon booking. Compensation for GCP deals will be channel neutral specifically for the margin to GCP.

1. Add on's through GCP can be done as amendment for both prepaid and post pay deals. GCP Add on's start date must always be in future and acceptance deadline prior to that.

For example :start date will be 6/26 with offer acceptance deadline as 6/25. We cannot backdate amendments through GCP

1. Any mid-term updates would require a contract reset and a new Private Offer needs to be created to replace the existing offer.

1. Multi Year / Annual Payment GCP Opportunities require a custom order form. Product lines must be broken out by year. The order form must be reviewed by Legal. The Order Form MUST be signed for these GCP scenarios only

Requirements to Close Deal:

1. After the Private Offer has been accepted by the customer, Deal Desk will chatter on the opportunity to submit for processing by attaching offer acceptance email. Then sales rep needs to submit the opportunity for approval.

1. The Order Form's purpose is to highlight what is being sold, and will not be signed by the end customer. The Private Offer must match the deal elements as approved on the SFDC quote object / Order Form. Customer's acceptance of the Private Offer signifies their acceptance of GitLab's subscription terms.

Closing the Deal:

1. At the time of deal closure, Order Management will adjust the Start Date on the Quote and Opportunity to match the transaction date (date of transaction email receipt). Order Management will also update your price to reflect the margin taken by GCP. This WILL reduce final Net ARR. More information regarding this margin can be found [here](#).

1. Note that the GCP account is permanently set to silent, and no invoices created will go to GCP.

1. If the customer purchases Self-Managed, the license key file will automatically be sent to the 'Sold To' contact from the quote. If the customer purchases SaaS, the subscription will automatically be sent/updated for use at time of booking. Note: SaaS subscriptions purchased through GCP (or any reseller) will typically require support intervention because end-users do not have access to the customer portal. GitLab support includes a message in the purchase email that instructs users to contact support via a ticket for assistance.

ACTION: Opportunity Owner: Confirm the customer receives the license within 2 days of opportunity closed-won. If the customer has not received license details, open an issue: GitLab Support Request and use either the GitLab Support Internal Requests for Global customers or GitLab Support Internal Requests for Federal customers request option, then select the appropriate internal request type, either for SaaS or Self-Managed.

1. Billing will create the invoice in Zuora and apply cash once received.

<details>

<summary markdown="span">Booking Requirements for IBM OEM Opportunities</summary>

IBM OEM Transactions have a unique process flow, from quoting to opportunity approval. If your customer has chosen to transact via IBM, please note the following:

Opportunity Management (DRI = Sales):

1. Once informed by IBM of a potential deal, Sales should create an opportunity under the customer account in SFDC.

- The opportunity name should include "(IBM OEM)."

- Add "IBM (OEM)" to the DR - Partner field. Partner Track = Technology, DR - Partner Deal Type = Resale, DR - Partner Engagement = Partner Sourced.

Example Opportunity

Notification, Quoting, and Requirements to Close Deal (DRI = Alliance Operations):

1. When IBM have closed the deal, an IBM contact will send order confirmation and details to Partnersupport@gitlab. The Alliance Operations team monitors this email alias.
2. For a step by step process, please follow the IBM (OEM) Partner Requests & QTC Process.

Closing the Deal:

1. At the time of deal closure, Deal Desk will adjust the Start Date on the Quote and Opportunity to match the transaction date, as evidenced by the date of the IBM email notification.
2. Note that the IBM (OEM) account is permanently set to silent, and no invoices created will go to IBM.
3. License keys will NOT be sent automatically upon deal Closure. Instead, a Customer Support Issue must be opened to ensure the license for the deal is delivered to IBM Ecosystem Project Office immediately after deal closure.

- Closed Won notifications will be made in the ibm-oem-closed-won Slack channel.
- After receiving the Closed Won notification, Alliance Operations should open a GitLab Support Request and use either the GitLab Support Internal Requests for Global customers or GitLab Support Internal Requests for Federal customers request option, then select the appropriate internal request type, either for SaaS or Self-Managed, to ensure license key delivery.

4. Billing will create the invoice in Zuora and apply cash once received.

</details>

<details>

<summary markdown="span">Booking Requirements for Public Sector opportunities</summary>

Public Sector opportunities have specific requirements that fall outside of the standard opportunity booking process.

A copy of the Distributor PO to GitLab must be attached to the opportunity. The Account Manager or ISR will confirm that all details on the PO match the Quote before submitting the Opportunity for approval.

1. The Distributor PO should be signed.
2. Period of Performance (POP) dates should align with the existing subscription (if applicable).
3. The Distributor PO DOES NOT NEED TO REFERENCE THE GITLAB QUOTE NUMBER.
4. The Distributor Sold To contact must match the contact used on the Quote Object of the opportunity. The Sold To Contact can be listed at the top of the PO OR in the Additional Information Section. ISRs will confirm the correct Sold To if necessary.
5. Distributor's have pre approved Payment terms and do not require additional approval provided the PO does not deviate from standard contract terms.

After the ISR or Account manager confirms the Distributor PO is correct, a quote object will be created on the opportunity to match the Distributor PO to GitLab.

1. A quote object will be created to match the Distributor PO to GitLab. Most public sector quotes will follow the standard quote creation process.
2. The Distributor PO Number must be entered on the Quote Object Prior to submitting for approval.
3. The Sold To and Bill To Contact on the quote object must have a complete address that matches the address used on the Distributor PO to GitLab.
4. The Distributor PO to GitLab must be within \$1.00 (USD) of the Quote object in order to be accepted.
5. Select the Distributor Template.

</details>

<details>

<summary markdown="span">Booking Requirements for Professional Services opportunities</summary>

Review the Professional Services handbook page for in-depth information on Professional Services and the Deal Desk handbook page for the details of PS quote creation.

1. If a Professional Services Opportunity only includes any of these off-the-shelf SKUs
 - Note: Professional Services must be sold on standalone opportunity with the Opportunity Record Type set to Professional Services Only. They must not be sold on the same opportunity as subscription products. The opportunity should be created by going to the Open or Closed Won license opportunity and clicking on the New PS Opportunity button. This will generate a related PS opp.
 - A signed copy of the standard SOW is not required, but we can accept it if the customer insists (we love autographs!). The customer will only need to sign the Order Form.
 - Ensure that you have reviewed the standard SOW with your customer PRIOR to booking the opportunity. Everything listed in the SOW is what will be provided, no more, no less, no customizations.

1. If a Professional Services Opportunity will include a custom Statement of Work (SOW) or Change Order (CO) with unique deliverables
 - Note: Professional Services must be sold on standalone opportunity with the Opportunity Record Type set to Professional Services Only. They must not be sold on the same opportunity as subscription products. The opportunity should be created by going to the Open or Closed Won license opportunity and clicking on the New PS Opportunity button. This will generate a related PS opp.
 - A fully signed copy of the SOW or CO is required. Please review the process on obtaining signatures, as the SOW will also need to be counter-signed by an authorized signer at GitLab.
 - Account owners are not approved signers! ALL signatures must go through Legal and/or Finance.
 - A quote needs to be generated, but only for backend billing automation purposes. Do not share quote with customer or reselling partner!
 - For Time and Material (T&M) services, the GitLab Service Package must be added with the T&M Value from the SOW match the value in the quote line item.
 - For Fixed Price (FP) services in the SOW, there must be matching SKUs (usually training or certification) in the quote. Review prices to ensure they match between quote and SOW.
 - If the SOW contains T&M and FP services, two quotes need to be created. T&M should use the GitLab Service Package SKU and match the T&M value in the SOW. The FP Quote should use the

matching SKUs in the catalog.

- DISREGARD ANY DISCOUNT APPROVAL REQUIREMENTS. ALL DISCOUNT REQUESTS FOR PROFESSIONAL SERVICES HAPPEN IN SFDC CHATTER.

- The order form generated does not require a customer signature. The customer will only sign CO/SOW.

- Cost of Goods Sold (COGS) spreadsheet must be attached to the opportunity to book. This outlines project costs and expected margins.

Professional Services Opportunities Only - If the SOW outlines a split payment schedule, only one opp is needed to book the order. We do not use multiple opps with PS opps requiring separate payments.

</details>

Opportunity Approval Process

When your deal has met all opportunity booking requirements, please submit the opportunity for approval.

1. To submit the opportunity for approval and closure, first ensure Stage = 6-Awaiting Signature, and then click on the "Submit for Approval" button on the opportunity.

1. After clicking "Submit for Approval," a pop-up page will display with a series of required fields. First, enter Closed Won Reason and Closed Won Details, then click Next. Second, select Competitors. Third, select Executed Agreement Type.

- "Executed Agreement Type" refers to the documentation that you are submitting in support of the deal. The options are as follows:

- Signed Order Form
- Purchase Order
- Signed Order Form + Purchase Order
- Client/Prospect Form
- AWS Private Offer
- GCP Private Offer
- IBM OEM
- SOW
- Other

- Note: Client/Prospect Form means that the signed document (whether Order Form or MSA) is on the customer's paper rather than a standard GitLab Order Form or Subscription Agreement template.

- Note: If Client/Prospect Form or Other are selected, you will subsequently be required to paste a link to the document on the next page ("Executed Agreement Link")

1. After the above steps have been completed, no further action is required from the Account Team. You will be notified by the Order Management team if further information is needed or if the opportunity is missing required information.

NOTE - Orders will be processed as long as the Quote Start Date is within 15 calendar days from date of submission. If the Quote Start Date is more than 15 days in the future, Order

Management will approve and update the close date to the earliest date that the opportunity can be booked. Only on or after that date will the Billing team review the opportunity for final booking. For more information, review the Bookings Policy.

What happens when you Submit an Opportunity for approval?

Scenario A: Standard Documentation

If Executed Agreement Type = Signed Order Form, Purchase Order, Signed Order Form + Purchase Order, AWS Private Offer, GCP Private Offer, IBM OEM, or SOW, the below process applies:

mermaid

graph LR;

A[Executed Agreement
attached to Opportunity] --> |Submit for Approval|B[Order Mgmt Reviews

D --> |Submit Opp
For Approval|B

C --> F[Opportunity
Closed Won!
Congrats!];

F --> G[License Fulfillment
Order Mgmt Ensures License Delivery
];

Scenario B: Non-Standard Documentation

If Executed Agreement Type = Client/Prospect Form or Other, additional review is required by the following users before the Deal Desk and Billing teams can book the opportunity:

1. Senior Director, Deal Desk
2. Revenue (Manager level or above)
3. Senior Director, Legal (Commercial)

Per the Deal Approval Matrix, these reviewers will review the non-standard documentation to ensure that it is acceptable to book the deal per GitLab's internal Legal and Revenue Recognition requirements. Their approval does not constitute final approval to book the opportunity. An opportunity can only be booked after both Deal Desk and Billing have approved.

To view the status of an opportunity after it has been submitted for approval, review the 7-Closing Stage Dashboard.

Common errors when submitting an opportunity for approval

- Be sure to submit an opportunity for approval on the opportunity level, not the quote level.
- Once submitted, the opportunity's stage will update to "7- Closing," the opportunity record will become locked, and the Approval Status will read "In Progress." No further edits can be made to the opportunity by the field at this time.
- Recalling Approval: To unlock the opportunity to make changes, recall the approval submission by scrolling down to Approval History and clicking "Recall Approval Request." Once you've made your changes, resubmit the opportunity for approval. You will receive a confirmation email once the opportunity has been submitted for approval.

Bookings Policy

This policy dictates the timing of opportunity closure for all sales-assisted deals. The purpose of this policy is to ensure forecast predictability and proper revenue recognition.

New Business/Add-On Opportunities

- <ins>New Business and Add-On opportunities</ins> will be Closed Won no more than 15 days prior to the Quote Start Date as reflected on the opportunity.
 - New Business and Add-On opportunities submitted for approval after the Quote Start Date will be Closed Won on the date of approval submission.
 - New Business Example: A customer would like to purchase a new subscription starting on May 1, 2021. The deal is worked out early, and all necessary booking documents are received on March 1, 2021. Sales submits the opportunity for approval on March 2, 2021. The deal is then reviewed by Deal Desk, but the close date is updated to April 16, 2021 upon Deal Desk approval. The opportunity is held in stage 7-Closing until April 16, 2021, when Billing approves the opportunity and sends an invoice to the customer.
 - Ramp Deals: All future-year ramp opportunities will be Closed Won at the same time as the first-year ramp opportunity. Post-closure, any out-year ramp opportunity close dates will be updated to match the start date of the ramp. See: ARR in Practice
 - Ramp Deal Example: A customer would like to purchase a new three-year ramped subscription starting on May 1, 2021. Three opportunities are built for this deal - one for Year 1 (2021-05-01 to 2022-04-30), one for Year 2 (2022-05-01 to 2023-04-30), and one for Year 3 (2023-05-01 to 2024-04-30). The deal is worked out early, and all necessary booking documents are received on March 1, 2021. Sales submits the opportunities for approval on March 2, 2021. The opportunities are then reviewed by Deal Desk. Upon Deal Desk Approval, the Year 1 close date is updated to April 16, 2021. The Year 2 close date is updated to April 16, 2022. The Year 3 close date is updated to April 16, 2023. The opportunities are held in stage 7-Closing until April 16, 2021, when Billing approves the opportunities and sends an invoice to the customer.

Renewal Opportunities

- Renewal opportunities will be Closed Won no more than 15 days prior to the Quote Start Date (i.e. the Renewal Date) as reflected on the opportunity.
 - Renewal opportunities submitted for approval after the Quote Start Date (i.e. Renewal Date) will be Closed Won on the date of approval submission.
 - Renewal Example: A customer's subscription has a renewal date of May 1, 2021. The renewal is worked out early, and all necessary booking documents are received on March 1, 2021. Sales submits the opportunity for approval on March 2, 2021. The deal is then reviewed by Deal Desk, but the close date is updated to April 16, 2021 upon Deal Desk approval. The opportunity is held in stage 7-Closing until April 16, 2021, when Billing approves the opportunity and sends an invoice to the customer.
 - Ramp Deals: All future-year ramp opportunities will be Closed Won on the same date as the first-year ramp opportunity, but the close date will be updated after closure to match the Quote Start Date. See: ARR in Practice

Late Renewals

- If a renewal is achieved within 15 days after the Subscription Renewal Date (Renewal Date), the opportunity will be Closed Won on the date of approval submission.
- Renewal opportunities must be Closed Lost if the renewal is not achieved within 15 days after the Subscription Renewal Date (Renewal Date).
 - See the Late Renewal Notification & Auto Close Processes section of the handbook for details on how the system automatically supports the 15 day late renewal policy.
- If a renewal is achieved more than 15 days after the Renewal Date, but less than 180 days after the Renewal Date:
 - The renewal should be recorded on a newly created renewal opportunity. The renewal should be quoted using a New Subscription quote. See: Opportunity Requirements for Return Customers
 - The original Closed Lost opportunity will remain as is. A second Closed Lost opportunity will be created and closed with the inverse values of the original, to effectively cancel the original Closed Lost opportunity. This new Closed Lost opportunity will have the same close date as the new Closed Won renewal opportunity. See: Opportunity Requirements for Return Customers
- If a renewal is achieved more than 180 days after the Renewal Date:
 - The transaction should be recorded as a New Business opportunity, using a New Subscription quote. The original Closed Lost opportunity will not be reversed.

Exceptions:

- Any exceptions to the Late Renewal Policy must be documented in SFDC Chatter and include the following details:
 - Relevant details about the account/opp seeking a late renewal extension / early booking
 - Why an exception is needed (justification)
 - Impact to the business (Net ARR or Renewal ARR loss)
 - Approval from both Sales VP and Revenue Manager (Please tag Revenue in chatter)
 - Anticipated (revised) Renewal Close Date
- Once all of the above have been documented, request internal support to create a case for Deal Desk on the associated opportunity so that Sales Operations can take the appropriate actions to exclude the opportunity from auto closure.

- See the Late Renewal Notification & Auto Close Processes section of the handbook for details on how the system automatically supports late renewal exceptions.

- Any exceptions to the 15-day booking policy must be documented in SFDC Chatter and include the following details:

- Relevant details about the account/opp seeking early booking
- Why an exception is needed (justification)
- Impact to the business (Net ARR or Renewal ARR loss)
- Approval from both CRO and CFO (or Chief Accounting Officer, if CFO is not available)
- Anticipated (revised) Renewal Close Date
- Request internal support to create a case for Deal Desk and tag the Sr. Dir., Deal Desk for visibility

- Note: Opportunities approved for invoicing outside of the 15-day booking policy will be booked and invoiced as approved, but the booking will then be moved so that the close date falls within the 15-day bookings policy. For clarity, quota credit and commission will align to the 15 day booking policy even if approvals are obtained to invoice the transaction earlier than 15 days prior to the Quote Start Date.

Do I have to wait to submit my opportunity for approval?

- All opportunities that meet the Opportunity Booking Requirements listed above should be submitted for approval at the time that the requirements are met. In order to submit the opportunity for approval, the opportunity stage needs to be changed to 6 - Awaiting Signatures, then the Submit for Approval button should be clicked. After that, the opportunity stage changes automatically to 7 - Closing and it will be changed to Closed Won once both Order Management and Billing Ops Teams approved the opportunity.

My customer is waiting for their license key (self-managed) or provisioning email (SaaS). When will they receive their entitlements?

- See How do I know if a License Key was sent to the Customer? below.

End of Quarter Bookings

Under the Bookings Policy, opportunities must be submitted for approval by 11:59 PM Pacific Time on the last calendar day of the fiscal quarter to be booked within that same quarter. At the time of opportunity approval submission, such opportunities must meet all documented booking requirements to be booked within the quarter (including an enforceable agreement). If an opportunity is submitted for approval by 11:59 Pacific Time on the last calendar day of the fiscal quarter, but upon review the Order Management and/or Billing Teams conclude that the opportunity does not meet all booking requirements and is rejected, that opportunity will not be booked within the quarter that has just ended.

In the event that a deal meets all booking requirements and is submitted for approval by 11:59 Pacific Time on the last calendar day of a fiscal quarter, but is not reviewed by the Order Management and Billing Teams until the next day, that opportunity's close date will be backdated to the previous quarter upon final approval.

Subscription Start Date

Deal Desk will review the start date on all opportunities at time of booking. The following scenarios are firm guidelines for accepting orders where the Subscription Start Date is in the past.

New Business Opportunity

Customer procurement cycles can take time. A start date on a quote may be in the past if the procurement cycle took longer than expected.

1. If the Start Date is in the past, Deal Desk will update the Start Date on the quote object to the date of processing. This will not require a newly signed order form.
2. The opportunity must meet all booking requirements and is still subject to the Bookings Policy.

Add-On Opportunity

1. If the Start Date on an Add-On is < 2 weeks in the past, the order will be booked as is.
2. Add on opportunities with a Start Date > 2 weeks in the past will require a chatter confirmation from the sales team confirming that the customer has had support/access to these users since the Start Date. Deal Desk will tag the opportunity owner directly to confirm the Start Date prior to booking.
3. The opportunity must meet all booking requirements and is still subject to the Bookings Policy.
4. Add On Opportunities must be processed in order based on Start Date. The add on opp needs to be "Closed-Won" prior to submitting any future amendments or renewal opportunities for approval.

Renewal Opportunity

1. Renewal opportunities where the Start Date < 2 weeks in the past will be booked as is, without additional confirmation or intervention from the sales team.
2. On renewal opportunities where the Start Date is > 2 weeks in the past the Order Management team will check the customer portal for any trial licenses (self-managed deals) or ask the opportunity owner in SFDC Chatter to provide the link the ZenDesk support ticket where trial subscription was requested (SaaS deals).

If customer has lost access for any reason / period of time after the end of the renewal grace period, the opportunity owner/ISR should create a new subscription quote object on the late renewal opportunity.

3. The opportunity must meet all booking requirements and is still subject to the Bookings Policy.

Locked Bookings

All Closed Won and Closed Lost opportunities closed in a given month will become locked for editing on the fifth day of the next month. Any requested edits to opportunities closed in a locked accounting period will require review and action by the Manager and Sr. Manager, Sales Operations, Sr. Manager of Deal Desk or the Senior Director, Sales Operations.

Purchase Order (PO) Policy

Certain customers require that invoices submitted to them include a Purchase Order (PO) number.

For these customers, a PO is required for opportunity closure, with limited exceptions. This policy is supplemental to the other booking requirements listed on this page. It does not replace any other booking requirements.

If there is a PO document and customer wants GitLab to add the PO nr to the invoice, we cannot do that without reviewing the PO document (unless there is no PO document issued)

Customer POs should be remitted to PO @ gitlab.com (Direct Deals Only)

How can I determine whether a customer requires POs?

For new customers:

New business transactions for net new customers will require validation from the customer. Prior to closing a new business deal, Sales should validate with the customer whether they will issue a PO for the transaction and provide this information upon submitting the opportunity for approval. In addition, Sales should confirm with the customer whether there are any related special billing requirements prior to deal closure.

For existing customers:

This information can be reviewed in several places within Salesforce:

1. Review the Billing Account object in Salesforce. First, navigate to the customer's Salesforce Account. Next, click on Billing Accounts. Click on the appropriate Billing Account Name, and then review the "PO Required" field. If the field is marked "YES," the customer requires a PO. If the field is marked as "NO" or if the field is blank, the customer does not require a PO.
2. Review the relevant quote object. Unique quotes created and tied to existing billing accounts will display the "PO Required?" field from that relevant billing account.
3. Review the opportunity. If a quote has been created and marked primary, the "PO Required" field from the primary quote's billing account will display on the opportunity as "PO Required (Quote Billing Account)."

How does GitLab know that a customer requires POs?

If a PO is not provided during the booking process, customers who require POs will typically notify the Billing team of their requirement once an invoice has been issued. In many of these cases, the invoice is rejected and Billing works with the customer to obtain their PO and manually reissue the invoice with the PO number included. The Billing team then updates Zuora to denote the customer's PO requirement.

Why does the customer PO requirement matter?

If a customer requires POs, they will typically reject any invoice sent to them that does not include a PO number. Additional billing and collection efforts become required to engage with the customer, to obtain the PO, and to manually issue a new invoice once the PO has ultimately been received. In addition, this scenario often produces significant delays to cash collection.

What if "PO Required" = "YES," but the customer states that they do not require a PO?

1. If the customer does not require a PO for a specific transaction, on the opportunity please attach the customer's written confirmation stating that they will accept the invoice without PO number reference. If all other booking requirements are met, the opportunity will be closed without a PO attached and the invoice won't contain a customer PO number.

2. If the customer does not require a PO for any transaction, attach the customer's written confirmation to the opportunity. If all other booking requirements are met, the opportunity will be closed without a PO attached. In addition, the Billing team will update "PO Required" to "NO."

What if "PO Required" = "YES," and the customer has provided a PO number but not a PO document?

1. If the customer provides a PO number, but not a PO document, please attach the confirmation email (containing the PO number and stating that there will be no PO document issued) to the opportunity. If all other booking requirements are met, the opportunity will be closed. If the customer intends to issue a PO document, see the question and answer below.

What if the customer requires a PO and the PO is delayed, but all other booking requirements are met?

If "PO Required" = "YES" and the customer's PO will be provided to GitLab at a future date, the opportunity will be held for booking until the PO is provided by the customer. Exceptions will only be made at quarter end (see below).

What if the customer requires a PO and the PO is delayed, but all other booking requirements are met and the customer's license grace period is about to end?

If the customer's license has expired, and the customer's grace period is nearing its end, please open an Issue to request a grace period extension for the related license. A grace period extension will prevent the customer from losing functionality while the opportunity is pending approval due to a delayed PO.

End of Quarter Exceptions

If "PO Required" = "YES" and the customer's PO will be provided to GitLab at a future date, exceptions will be considered at quarter end if the following requirements are met:

1. The opportunity is submitted for approval no more than 5 days before the last day of the quarter, and all other booking requirements have been met.
2. The customer provides written confirmation that the PO will be issued to GitLab within 10 days. This written confirmation is attached to the opportunity.
3. Approval is obtained in chatter from both the Senior Director, Deal Desk and Senior Manager, Billing & AR.

Note: If an exception is granted and the PO is not received within 10 days, on the 11th day the opportunity will be decommissioned, reversing all credit given for the booking.

Post Sale Information

The opportunity closed! Congrats! Wait... my customer still has questions! Here are some of the

most common questions that come up after an opportunity has closed... and how to resolve them.

[CustomersDot Access and Use handbook page](#)

How do I know if a License Key was sent to the Customer?

Licenses (Self-Managed) and Provisioning Details (SaaS) are automatically emailed to the Sold To contact entered on the quote.

Notes on License Timing:

- Self-Managed:
 - For self-managed deals, the license is sent to the customer immediately upon opportunity closure, but the system will not activate until the Quote Start Date.
- SaaS:
 - For SaaS deals, the entitlement will be provisioned and made available to the customer on the Quote Start Date.

Licensing emails sent to customers are captured and stored in Salesforce as an Activity against the Contact record. This activity will also be related to the Account record, and can be found under "Activity History" list on the Account level.

Look for Task title: Email: Your GitLab License File or Email: Your GitLab Activation Code

My customer didn't receive the License File or Activation Code! Help

[Check out our License & Renewal Workflows page](#)

On this page you can find answers to some of the most common questions/errors:

- The License file was sent to the wrong contact - you'll need to open an issue for this here and use either the GitLab Support Internal Requests for Global customers or GitLab Support Internal Requests for Federal customers request option, then select the appropriate internal request type, either for SaaS or Self-Managed
- The license file does cover the right number of users, or there were trueups that were unaccounted for
- How to resend a License File

Where is the Invoice?

As soon as an invoice is generated, the sales rep can view and download it as a PDF in Salesforce on the Account page. Navigate to the "Invoices" section. Click on the relevant invoice number. On the bottom of the invoice view, click "Invoice PDF".

You can also view the "Invoices" tab at the top of the account page, under the chatter feed. A paid invoice will have a zeroed Balance and positive Payment Amount.

If an opportunity was sold through channel or MSP, the Invoice will be located on the Partner or MSP Account page, not the Customer Account page. You can send a copy of this invoice PDF if the customer requests.

How to Handle Duplicate Accounts and Opportunities from Web Direct Purchases

In some cases, a prospect or customer that is currently engaged with an AE on an opportunity might be proactive and sign up online via the web portal. If this occurs, then a duplicate Account, Opportunity, and Contact could be created. In the event that a duplicate record is created, please do the following to resolve as we want to keep the original lead source, activity history, and other information from the original opportunity:

1. Go to the original opportunity owned by the sales rep.
1. In Chatter, send a note to the SDR Manager and @sales-ops that this opportunity should be updated to Closed Won. Also, provide a link to the web direct opportunity.
1. Sales Ops or the SDR Manager will do the following on the web direct opportunity:
 - Remove the Sales Accepted Date and Sales Qualified Date, but only if these dates are for the current month. Please do not update if this is in the past since this opportunity was already counted as an SAO or SQO for a previous period. If either the Close Date, Sales Accepted Date or Sales Qualified Date are from a previous month, we must create a refund opportunity, which is described below.
 - Change the Stage from Closed Won to 10-Duplicate (if you do not perform the first step, you will run into a validation rule).
1. Now go to the original opportunity worked by the Sales Rep.
 - Change the Stage to Closed Won.
 - Change the Start Date, End Date, and Opportunity Term to match the values from the web direct opportunity.
 - Make sure the Net ARR, IACV, ACV, and Amount values are the same.
 - Save the record.
1. If the web direct opportunity resulted in a duplicate accounts, please do the following:
 - Open both accounts in multiple tabs.
 - Make sure the account name is the same for both opps.
 - Go to the Account Home tab in Salesforce and merge the accounts.
 - When selecting the values on the final account, make sure to select the values for MRR, count of active subscriptions, support level, and other subscription related values from the account associated to the web direct opportunity. This information is being pulled from the Subscriptions, which only exist on the account from the web direct opp.
 - Merge the accounts.
 - Open a Deal Desk support case to update the CRM ID in Zuora so that the connection between these systems remains in tact.

If the prospect is still a Lead record that has not converted into an Account, please complete the following steps:

1. Go to the Lead record and convert it into an account, contact, and opportunity as you normally would any qualified opportunity.
1. Then follow Steps 1-4 in the previous section.

Renewal Notification Emails

Customer will receive a Renewal notification email for every subscription that they have active - this not only includes subscriptions with recurring charges, but also subscriptions with one-time charges only (like Professional Services and compute minutes). It can be very confusing to

the customer, so please assure them that this type of subscription will not renew and it does not impact their recurring GitLab plan subscription. You can see a current list of these emails [here](#).

This is a current system limitation. Renewal emails are sent by Zuora - they are very generic and are not customizable based on subscription state, products purchased or customer account settings. Ideally we would not send a renewal email for a subscription with non-renewable products. The work to improve these emails is being explored in this Epic.

Post-Booking Issues

The deal has closed, but the customer has questions, or worse, problems. You don't know who to go to, your palms are sweating. Reading this probably isn't helping.

Go to the right team who can support you with your request. NOTE It is so important to go directly to the correct team, they are often the only ones who can resolve the issue!

When to contact Sales-Support

Be sure to review the common questions after a deal has closed section. If you still have questions, tag Sales-Support on the relevant Closed Won opportunity.

Out of Scope for Sales-Support

We love to help, but even our powers are limited.

Sales-support does not have the ability to:

- Resolve Zendesk tickets or open Support issues
- Access the LicenseApp - we can't send trials, new licenses, or activation codes

When to contact Customer Support

The customer support team is here to resolve technical errors related to the customers subscription. **DO NOT GO TO CUSTOMER SUPPORT** for License issues until you have read this page

Please check out the support page </handbook/support/gitlab-support-service-levels> for indepth information on how to contact the team. Spoiler alert, you will need to open an issue or the customer needs to open a Support ticket.

Out of Scope for Customer Support

The support team cannot assist you with:

- Salesforce updates/Account/Opportunity Management
- Quoting - Whether it's a new quote or fixing a true up error, they cannot build quotes
- Questions regarding the LicenseApp

SECTION: sales/field-operations/release-schedule.md

How Spekit is Leveraged for Operations/Process/Tools Updates

GitLab leverages Spekit as a just-in-time enablement platform to embed custom resources and process details directly in the tools and systems where Field team members are working.

The Field Communications team leverages Spekit to support changes and updates related to operations, processes and tools. This allows team members to understand what and when tools and process changes happen through notifications that appear directly in the tools in which they are relevant (versus communicating about these changes out of context via Slack or other communication channels where they are likely to be missed or forgotten).

Spekit Approach by Announcement Type

Field Communications assesses each update based on scope of impact and applies a defined approach to the Spekit notification based on this announcement type.

1. High-Impact Change (typically aligns with Field Comms tiers 1-3): This change impacts key processes that are customer- or revenue-impacting in nature for the audience (ex. New SKU, system downtime, tier 1/tier 2 launch like Sales Stages).

1. Spekit Comms Treatment · Loudest: Spotlight appears on the homepage of the most relevant URL (tool homepage) sharing a spek with details about the change. Field Comms reserves the right to reinforce in Update Tickers if deemed necessary. Example: Tool deprecation notice appears on the tool homepage when a user logs in.

1. Medium-Impact Change (typically aligns with Field Comms tiers 4-5): This change impacts processes that are key to audience's efficiency and important for them to be aware of to reduce confusion/drive the right behaviors (ex. Quoting change, new high-priority fields, new resource like a dashboard/report).

1. Spekit Comms Treatment · Quieter: Spotlight appears on a specific page within a tool/system sharing a spek with details about the change. Example: Quoting change appears in SFDC the next time a user opens the quote module.

1. Low-Impact Change (typically aligns with Field Comms tier 6): This change is nice for the audience to know about but is not a major efficiency driver for them.

1. Spekit Comms Treatment · Quietest: User is informed of a new spek with the update in their notification pane of the Spekit plugin. Example: A user receives a notification bell in their Spekit side panel sharing a spek that outlines a new field on the Opportunity page.

Note: Depending on the scope of the change, different impact levels can apply to different audiences for the same change. For example, a quoting change may be medium-impact for Sales reps but low-impact for CSMs/SAs. The team can customize how the notification is surfaced for various audiences based on this scoping.

Requesting Support for Operations/Process/Tools Updates via Spekit

Requesters should follow the same Field Announcement Request Process used for all updates that need to be announced to the Field team.

1. Once issue is opened, requester should select System Changes/System Updates and/or Process Change as the announcement type, depending on the change.

1. Requester should provide all information needed to satisfy the [Spekit template].

1. Field Comms will triage the request and, upon identifying it as a tools/systems or

operations/process update, ask that the requester provide the needed information to complete the Spek in Spekit.

1. At this time, Field Comms will also advise and gain consensus on the comms approach based on announcement type.

1. Once the change is ready to be announced, Field Comms will assist with moving the associated Spek into public view and creating a Spotlight or Notification to support the announcement (based on what approach was defined in step above).

1. Field Comms will provide a snapshot of Spotlight or Notification performance in Spekit one-week following the announcement.

Field Communications Guidelines for Spekit

1. All Spotlights will be set to expire in two weeks from the announcement date unless otherwise specified to avoid system clutter.

1. All Speks will be set to expire in six months from the announcement date unless otherwise specified to avoid system clutter.

1. Spek author should add the Spek expiration date in the custom field within the Spek in the GitLab YYYY-MM-DD format.

1. Email notification feature will not be leveraged at this time to avoid creating too much noise for the Field team. This can be reevaluated at a later date.

1. Spotlights should incorporate GitLab-branded imagery to ensure they are not ignored or mistaken for native tool notifications.

1. No more than 1-2 Spotlights should be sent in Spekit in a given week to avoid overloading the Field team. If we have hit our cap for the week, Field Comms will advise pushing to the following week. No spotlights should be sent during the End-of-Quarter Quiet Period. Exceptions will be considered based on priority but are not encouraged.

1. If an update relates to a specific part of a page (ex. new field), the default should be to embed the spek to increase visibility unless it overrides something existing.

Operations/Process/Tools Updates Template in Spekit

If you have Spekit access, you can find the template here. For those without access, please review the update template below and ensure you are providing all the necessary information to complete this template when creating your Field Announcement Request issue.

> - Title: Descriptive title that explains what the change is

> - Summary: Summary of change. Ensure you address WHAT is changing and WHY.

> - ..Action Needed:.. If action/CTA is needed, clearly outline that here and include a due date.

> - · Resources: · Provide a list of supporting resources/links. Examples include handbook pages or issue links.

> - Who: Outline audience/teams that this change impacts. Be as specific as possible.

> - DRI: Provide name(s)

> - Timeline: Is there a time limit/end date/etc. associated with this change, or is it evergreen moving forward? --> Time-bound / Evergreen

> - If time-bound --> Provide ending date/time-range

GitLab-Branded Imagery in Spekit

Creators have six custom images to choose from to use when building Spotlights in Spekit. Those

images can be found in this Drive file and consist of:

- 1. 3 - Generic GitLab images
- 1. 3 - Text-based images to call out
 - 1. Process Update
 - 1. Tool Update
 - 1. Incident Report

In addition, a Canva template is available to custom-create a text-based image that is inline with our Brand guidelines if one of the three pre-existing images is not applicable. If you do not have access to Canva, please open an Access Request.

Phase 2: GitLab Spekit Experts for Field Updates

In a future state, we will identify 1-2 team members from each of the primary RSOE + extension teams that contribute to tools/systems and operations/process updates. These team members will be trained on Spekit and given 'expert' user permissions (via 'RSOE Experts' group) to contribute to the Changes/Announcements Drafts topic. When an announcement request is made relating to an update in one of these areas, those team members will be pinged to create the spekit following the template format.

Career Development at GitLab & RSOE

Career development is the non-linear, lifelong growth process integrating learning, work, leisure, and change. It happens in all directions, including subject matter expertise, lateral growth to new teams, and linear growth through a job family.

At GitLab, Career Development and Mobility is a top priority, offering various resources and programs to help employees grow their skills and progress their careers. GitLab's growth and development opportunities include internal training, mentorship programs, and certifications, empowering team members to build on their strengths and explore new areas of interest. GitLab encourages a culture of continuous learning, and employees have access to a range of learning resources, including the Learning and Development section of the GitLab handbook. This commitment to growth ensures employees can pursue new challenges and advance within the company.

Career Pathing within the Revenue, Strategy, Operations, and Enablement (RSOE) Team

The Revenue, Strategy, Operations, and Enablement (RSOE) team at GitLab provides numerous pathways for career progression, allowing employees to explore different roles within the team. The RSOE team encourages internal mobility, professional development, and cross-functional collaboration, ensuring a dynamic work environment.

When considering a move into a new role, it's essential to assess your current knowledge, skills, and competencies to identify areas for development. Start by reviewing the job requirements for your desired role shown in the chart below. Then, conduct a self-assessment by

reflecting on your current skill set, seeking feedback from managers or peers, and utilizing tools such as GitLab's self-paced courses and personal development plans. Use the RSOE Individual Growth Plan & Career tracker template to create an action plan to address gaps through targeted learning, mentorship, or hands-on projects.

The chart below demonstrates the roles within the RSOE team, along with links to the relevant job families that outline the responsibilities and requirements for each role:

```
<div style="width: 640px; height: 480px; margin: 10px; position: relative;">
  <iframe allowfullscreen frameborder="0" style="width:640px; height:480px"
src="https://lucid.app/documents/embedded/09d696fb-4c88-447a-9e01-30524f55cdd0"
id="PSUe4CHRXUyN"></iframe>
</div>
```

These job families within the RSOE team at GitLab offer employees a variety of career development opportunities, supporting both lateral movements and upward growth, allowing for a tailored career path suited to individual skills and aspirations.

Remember! In addition to opportunities within the RSOE team, GitLab offers a variety of roles across other departments such as Go-to-Market (GTM) teams, Product, Data, Support, Systems and more! These areas provide employees with chances to explore different aspects of the business, whether in product management, data analysis, customer support, or system administration. Exploring these paths enables employees to broaden their experience, diversify their skill set, and find the best fit for their career aspirations within GitLab.

Ready to start the conversation? Use the Career Conversation Meeting template to help you and your manager get aligned.

Your leadership team is here to cheer you on and guide you toward your next big move! They'll provide helpful feedback, spot growth opportunities, and point you toward resources. But the real magic? That's up to you! Owning your career path means taking the initiative, setting goals, and exploring new skills. Managers are here to support you, but it's your enthusiasm and drive that will light the way to success. So dream big, take action, and make it happen!

Career Development Resources for RSOE Managers

As a manager, you play a crucial role in helping your team members grow and progress in their careers. It's your responsibility to provide guidance, support, and the resources they need to identify their strengths and areas for improvement so you can help them develop the skills and experiences necessary to advance in their roles within and outside your team. You also act as an advocate, offering mentorship, networking opportunities, and aligning their career aspirations with the goals of the organization. Ultimately, your commitment to their development is key to their success, the overall performance of the team and GitLab! Have a look at the RSOE Career Development Best Practices Guide to get started!

Welcome to the Ecosystem Operations Page

Vision

To build, operate, and advise a world-class partner business.

Mission

Listen to the needs of GitLab teams, partners, and customers, and respond with innovative and streamlined processes, tools, and resources to operate a scalable and highly profitable business for GitLab and our partners.

Key Tenets

Efficiency and Productivity:

Streamline partner systems, processes, and workflows to improve ease of doing business and drive mutual profitability and positive experience for GitLab and our Partners.

Scalability:

Build, deploy, and manage reliable and effective operational practices that are foundational to how we go to market and adaptable to support our growing and evolving partner business.

Advisory:

Trusted subject matter experts for GitLab's internal and partner teams, providing daily operational support and guiding best practices and business decisions regarding our partner models.

How to Contact Us

The global-ecosystem-programs-ops Slack channel can be leveraged for inquiries. Both the Ecosystem Operations Team and the Ecosystem Programs Team monitor this slack channel. If you are reporting a problem, have suggestions, or changes requests, please open an issue on the Ecosystem Operations Issue Board for operational issues, or the Channel Team's Issue Board for program issues.

The Ecosystem Operations Issue Board

On the Ecosystem Operations Issue Board, each column represents a type of request (feature request, alliances, data & reporting, etc.). When you submit a request to the Ecosystem Operations board, the team will assign the issue and add the corresponding tags. The Ecosystem Operations Board also uses progress tags on issues to show the status of open issues. Each issue is updated regularly with notes and progress tags and should be checked before reaching out to the team for status updates.

To open an issue with Ecosystem Operations and select New Issue.

Issue Templates

Utilizing Issue Templates: In an effort to have a standard way of taking in requests from the cross-functional teams and help guide users through providing the right information to diagnose issues, the Ecosystem Operations team has created issue templates.

How to get started

1. Create New Issue

When you create a new issue, you get the option to "Choose a template"

2. Choose a template

Once a template has been selected, the description box will be populated with the content of the template ready for completion.

- Select Ad hoc Reporting for custom reporting requests.
- Select Data Upload Request for bulk updates to data.
- Select Feature Request for requesting enhancements to current systems.
- Select Partner M&A and Name Changes when requesting a partner account change related to mergers and acquisitions, merging duplicate accounts or moving them into an account hierarchy, or to change a partner account name.
- Select Procedures & HB Updates to request edits or reviews for certain procedures/processes or handbook updates managed by Ecosystem Operations, especially if more discussion is needed prior to submitting a MR for a page.
- Select Partner Funding Request to request non-MDF funding for partner events, MOUs, funded heads, SPIFFS, etc.

3. Before you submit

Please ensure you have followed the prompts to fill in the selected issue template and that your issue is unassigned. Our team will be assigning issues based on team bandwidth.

Issue Templates Video

```

External Partner Support and Communication

Email partnersupport@gitlab.com to include a partner or other external stakeholder for help with partner-related requests. Ecosystem Operations team members monitor the queue and email inbox throughout the day in all time zones.

Reaching Out to Ecosystem Operations in Salesforce

As of November 25, 2024 the chatter handle @Partner Operations has been deprecated. You can reach out to the Ecosystem Operations team by Requesting Internal Support in Salesforce. Please continue to refer to our respective handbooks for in-depth information before opening a new case.

Here is a general list of items you can create a case for assistance within Salesforce:

Deal Registration

- General Questions
- Unable to Approve/Error Message
- Update Customer Account
- Link Reg to a Closed Opportunity
- Linked Customer Account Employee Count/Segment Update
- Extension Requestion > 30 Days
- Link Reg to a Different Open Opportunity

Partner Account

- Training and Certification
- Partner Program Administration
- Partner Payments
- Post-Sale Support
- Update Account Owner
- Partner Account Merges, Name Changes, and Acquisitions

Opportunities

- Quote to Order/Discounts
- SQS/Opp Splits Questions
- CPPO
- Link Reg to a Closed Opportunity

Labra Referral

- General Questions

Communicating with the Partner Teams via Slack

There are a number of different slack channels to serve the different needs of the organization. Below is a list of the most common channels, as well as their uses, intended audience, and posting permissions. Please refer to this list often to ensure you're posting information and asking questions to the appropriate channel.

Slack Channel	Description	Topic	Audience	Posting Permissions
---------------	-------------	-------	----------	---------------------

global-ecosystem-programs-ops	Questions and comments about ecosystem programs and operations	https://handbook.gitlab.com/handbook/resellers/	and	
-------------------------------	--	---	-----	--

<https://handbook.gitlab.com/handbook/sales/field-operations/channel-operations/> | any | any |
| global-ecosystem-sales | Questions and comments about opportunities, partner connections,
field engagement, and other ecosystem sales questions | | any | any |
| channels-emea | A channel for the EMEA channels team and stakeholders to collaborate | | any
| any |
| channels-amer | A channel for the AMER channels team and stakeholders can collaborate | |
any | any |
| pub-sec-channels | A channel for the Pubsec channels team and stakeholders to collaborate |
| any | any |
| apacpartners | A channel for the APAC channels team and stakeholders can collaborate | | any
| any |
| channel-services | Questions and comments about channel services program, enablement and
field engagement | | any | any |
| cloud-aws and cloud-gcp | A channel for collaboration with the alliances Team |
<https://handbook.gitlab.com/handbook/alliances/> | any | any |

Standard Channel Practices

For detailed information on GitLab's Channel Partner Program, visit the Channel Partner Handbook. Partners must be an Authorized GitLab Partner and have completed one sales certification to transact any GitLab products or services. To achieve authorization, partners must have an executed agreement and meet the requirements of the GitLab Partner Program. Only GitLab partners in good standing may sell GitLab products and services unless specifically approved on a case-by-case basis by the GitLab partner program team. Partners must sign up to be authorized.

Policy and Process

All Partner Co-Sell opportunities require an authorized GitLab Partner(s) to transact the deal. Deal Registration is not applicable for Partner Co-Sell opportunities. Partner Sourced Deal Registration opportunities also require an authorized GitLab Partner to transact, and must also be found/created and registered in the GitLab Partner Portal (excludes Alliances and GSIs). The applicable GitLab Channel Managers must approve the registered opportunity to qualify for partner program discounts and incentives. Partner Sourced Deal Registration opportunities are either:

1. Net-new to GitLab
2. An upsell/add-on for an existing GitLab customer

An approved Partner Sourced Deal Registration results in Sales Qualified Source = Partner Generated on the opportunity.

For more information: Deal Registration Program Overview.

Billing Account and Billing Account Contact on Partner Account Record

Partner Billing Record Creation

Billing Account and billing account Contact records must be created when onboarding a new partner that will be purchasing directly from GitLab. The Partner Manager should take the

following action when a new partner has signed the click-through agreement or agreed to a customer MPA:

1. Create a contact record on the partner account that represents the partners accounts payable contact information with naming convention "[Partner Account Name] - Accounts Payable". Ensure the address on the contact record matches the address on the partner account.
2. Chatter @Billing Ops on the Partner Account to request a new billing account. Include the following information:
 - Billing Account Company Name
 - Billing Account Contact Name and Email
 - VAT if applicable

Partner accounts that will transact via distribution do not need a Billing Account or billing account Contact.

More information on billing accounts can be found on the Billing Operations Handbook Page.

How to Find Partner Billing Records in SFDC and Use for Quoting

The Invoice Owner and Invoice Owner Contact on a partner quote represent the partner's Billing Account and billing account Contact records, respectively.

Distributors - GitLab sellers can access the Billing Account and billing account Contact records for our distributors here.

Note, partners that transact via distribution do not need billing records, as the distributor information will be used on the quote.

Resellers and MSPs - To find Billing Account and billing account Contact records in SFDC for partners that transact directly with GitLab, first navigate to the Partner Account record.

1. Billing Account - Refer to "Billing Account" in the related list quick links section at the top of the Partner Account record
2. Billing Account Contact - Open the partner's Billing Account and locate the Sold To Work Email (i.e., their Accounts Payable email address). Search for this email in SFDC to determine if a contact record already exists under the Partner Account record
 - If there is an existing contact record for this email on the partner account, use it as the Invoice Owner Contact for your quote
 - If there is not an existing contact record for this email on the partner account, create a new contact record for this email address called "[Partner Name] - Accounts Payable" which you can then use as Invoice Owner Contact on the quote

Quoting Partner Deals

Partner Quoting Requirements

When a deal is being transacted via a Partner, and a discount other than the defined Program discount is being offered, a GitLab quote is required. At a minimum, a Draft Proposal needs to be created and provided to the Partner. Discounted quotes not in SFDC and sent to a Partner are not permitted within any GEO or Sales Segment. This includes providing product and discounted

pricing quote details in an email.

Partner Quoting Responsibilities

Sales Reps and/or Renewal Managers are responsible for quoting and PO remittance on all standard GitLab direct and partner opportunities.

Partner Quoting Overview and Resources

Creating a partner quote is very similar to the process of creating a direct customer quote. There are only a few minor differences when quoting via partners, which are documented in the following Deal Desk handbook sections:

- One-Tier Reseller Direct quotes
- Two-Tier Distributor quotes
- MSP quotes

Refer to the Quote Studio Highspot page for quoting walkthroughs, including the following step-by-step guides specific to partner deals:

- Quoting Reseller and Distributor Deals
- Quoting MSP Deals

Refer to the partner billing information section of this handbook for guidance on how to create or find partner billing records in SFDC and then use them for quoting.

Transacting Through Distribution

Why Does GitLab Leverage Distribution?

GitLab is building out a global Authorized Distributor network similar to many other tier-one software companies. Distributors bring GitLab, our partners, and our customers several valuable offerings:

- Accelerate market reach with joint growth plans and execution including:
 - recruiting GitLab partners and driving completion of their GitLab sales and technical training
 - generating in-market customer awareness and passing qualified leads
- Augment GitLab sales capacity and coverage. Distributor sales teams:
 - work with partners and GitLab sales teams to aid in co-selling
 - are of
