

tration (DR) program for (i) Resale, (ii) MSP, and (iii) Referral opportunities. You should submit a Partner Sourced DR for an opportunity where you are sourcing net-new business for GitLab, which can apply to opportunities for new logo, co-term add-on/upsell, or add-on/upsell as part of a renewal. Note, there can only be one Partner Sourced DR approved for an opportunity, as only one partner can source a deal. You should not submit a Partner Sourced DR if you did not source the opportunity, and you will generally receive Co-Sell discounts for these deals. Partner Sourced and Co-Sell opportunities are discussed further in the Partner handbook.

GitLab also has a Service Attach DR program which applies to opportunities where partners are selling their own professional services into a customer environment at the time of a GitLab product sale.

</details>

<details>

<summary markdown="span">

I am unable to log into the Partner Portal to submit a Deal Registration (DR). How can I get access and submit a DR?

</summary>

If you have a Partner Portal account but are unable to login, please select "Forgot Password" to reset your password. If you do not have a Partner Portal account, please select "Request Portal Access" to set up an account. Please contact partnersupport@gitlab.com for assistance ·if you have followed the directions but are still having issues.

Note, to submit a Deal Registration, you must first be an authorized GitLab partner as well as have completed the required training in order to be granted access to submit a DR.

</details>

<details>

<summary markdown="span">

What does it mean when the status of a Deal Registration is "Returned"?

</summary>

The Channel Account Manager (CAM) assigned to the Deal Registration (DR) has reviewed and sent it back to the resale partner for additional information/context. Once the resale partner reviews and responds to the CAM's feedback, the CAM will be notified to review and action the updated DR.

</details>

Sales Process

Partner Discounts and Incentives

<details>

<summary markdown="span">

Where can I find information on GitLab's partner discounts, incentives, and rebate programs?

</summary>

Please review the GitLab Program Discounts and Incentive Guide in the GitLab Partner Portal which contains information on our partner discounts, incentives, rebate programs and more. You can also refer to the Partner handbook for an overview.

</details>

<details>

<summary markdown="span">

What discount do I receive on GitLab products and services?

</summary>

Please refer to our GitLab Partner Price List which includes the current pricing for all of our products and services along with our discount guidelines in the GitLab Program Discounts and Incentive Guide.

</details>

<details>

<summary markdown="span">

When do I receive Partner Sourced vs Co-Sell discounts?

</summary>

If the opportunity is for new or add-on/upsell business:

- sourced by the partner (including adding licenses as part of a renewal opportunity), the partner should submit a Partner Sourced Deal Registration (DR) for the opportunity. If the DR is approved, GitLab will provide Partner Sourced discounts for the new or add-on/upsell portion of the deal.
- not sourced by the partner, the partner will generally receive co-sell discounts.

If the opportunity is a flat renewal, please refer to the Partner Operations handbook for rules on partner incumbency.

Please refer to the GitLab Program Discounts Incentive Guide for more information regarding our partner program discounts.

</details>

General Quoting Process

<details>

<summary markdown="span">

Do I transact via distribution or directly with GitLab?

</summary>

Open Partners located in regions/countries:

- with Authorized GitLab Distributors are required to purchase GitLab via those distributors.

- without Authorized GitLab Distributors may purchase directly from GitLab

Select Partners may choose to transact directly with GitLab (excluding certain regions) or via the region's authorized distributor(s).

Refer to the Partner Operations handbook for more information on distribution coverage, requirements, and contact information.

</details>

<details>

<summary markdown="span">

How do I determine which distributor covers my region?

</summary>

Please refer to the Partner Operations handbook for details on distribution coverage, requirements, and contact information.

</details>

<details>

<summary markdown="span">

How can I request a GitLab quote for my customer?

</summary>

- Open partners with an Authorized Distributor in region should contact their distributor.
- Select partners that transact directly with GitLab and/or Open partners without an Authorized Distributor in region should contact the GitLab sales representative for the customer account.
Please contact your Channel Account Manager or partnersupport@gitlab.com if you are unsure of which GitLab sales representative to contact for your quote request

</details>

<details>

<summary markdown="span">

Can we include different product tiers (premium and ultimate), deployment types (SaaS and Self-Managed), and/or term lengths (e.g., 12 and 24 months) on the same quote?

</summary>

No, we cannot mix product tiers, deployment types, and/or term lengths on the same quote.
Please refer to the Deal Desk handbook for more information.

Please note that Education Services are required for certain deals in order to improve product adoption and minimize security risks.

</details>

<details>

<summary markdown="span">

Our customer has an offline/air-gapped environment, what must be done to ensure they receive a

license they are able to use post-sale?
</summary>

Please let the GitLab Sales team know your customer has an offline/air-gapped environment when requesting a quote so they are able to request necessary approvals for the applicable license during the quoting process.

</details>

Renewal Quotes

<details>

<summary markdown="span">

My customer's renewal quote includes true-up seats. What are true-ups and why is the customer charged for these seats at renewal?

</summary>

The customer purchased a specific number of seats in their original subscription. If the customer adds more users to their GitLab instance than the number they are licensed for during the subscription period, payment for the additional/overage users is required at time of renewal.

Note, "Users over subscription (Self-Managed) / "Seats owed" (SaaS) in the customer's admin dashboard represent the number of overage users the customer incurred during the subscription term. Please refer the customer to these guides for how to locate their admin dashboard for Self-Managed and SaaS subscriptions.

</details>

<details>

<summary markdown="span">

How can my customer find their admin usage dashboard to take a screenshot to facilitate their upcoming renewal?

</summary>

Please refer the customer to these guides on how to locate their admin dashboard for Self Managed and SaaS subscriptions.

</details>

<details>

<summary markdown="span">

Our customer has blocked/deactivated/removed users from their subscription. Will these users count towards billable users/seats currently in use at renewal? How will these users be reflected/charged?

</summary>

Deactivated, blocked, and removed users don't count as "Billable Users (Self-Managed) / "Seats currently in use" (SaaS) in the current subscription. However, they may count toward overages in the subscribed seat count which will be charged as true-ups at renewal. Refer to Self-

Managed and SaaS subscription documentation for more information.

</details>

<details>

<summary markdown="span">

My customer would like to renew their subscription, but reduce their total license count. What is the minimum quantity required for renewal?

</summary>

The minimum quantity required to be renewed is the customers "Billable users" (Self-Managed) or "Seats currently in use" (SaaS) in order to have an active instance post renewal. If the customer wants to renew fewer users than those currently active, they will need to remove the excess users from their instance. Refer to the following guides for details on where a customer can view their usage and/or instructions on how to block, deactivate, or remove users: Self-Managed, SaaS.

</details>

<details>

<summary markdown="span">

My customer worked with a different reseller for their previous order. Are you able to transfer incumbency (i.e., incumbent partner discounts) to my organization for the customer's renewal?

</summary>

Yes, if the customer provides formal communication through email to confirm they would like to work with you for this renewal (i.e., the new reseller), we are able to transfer incumbency discounts. Refer to the Partner Operations handbook for further details.

</details>

<details>

<summary markdown="span">

If my customer wants to add seats to their instance before their renewal, does the add-on need to be processed before I can request a renewal quote for the entire subscription?

</summary>

Yes, for the customer's overall license count to be accurate during the renewal, add-on licenses need to be fully processed before GitLab can generate a renewal quote. Refer to the Deal Desk handbook for further guidance.

</details>

<details>

<summary markdown="span">

My customer is concerned they won't be able to renew their instance before their grace period expires and they lose access. Can a temp license extension be granted to have additional time to process the renewal?

</summary>

On a case-by-case basis, your GitLab sales representative can request a temporary license extension in order to prevent loss of access to a subscription. Please contact your sales team for more information.

</details>

Purchase Orders (POs)

<details>

<summary markdown="span">

Does GitLab have an Order Requirements Checklist that details the PO requirements for order acceptance and booking?

</summary>

Please refer to the Sales Order Processing handbook for opportunity booking requirements.

</details>

<details>

<summary markdown="span">

Can I submit a signed GitLab quote/order form instead of submitting a PO to purchase a subscription?

</summary>

A signed GitLab quote/order form is acceptable in place of a PO as long as the details meet our opportunity booking requirements. Please ensure a signature, full name, title and date are all listed on the GitLab quote/order form.

</details>

<details>

<summary markdown="span">

How do I ensure my PO submission will count toward GitLab's current fiscal quarter?

</summary>

Please refer to the guidelines listed in the Sales Order Processing handbook regarding end-of-quarter bookings.

</details>

<details>

<summary markdown="span">

I submitted a renewal PO in advance of the renewal date, when will the PO be booked?

</summary>

New business, add-on, and renewal orders are processed no more than 15 days prior to an opportunity's close date. Note, the start date for renewals is the last day of the customers current subscription term.

</details>

<details>
<summary markdown="span">
What is GitLab's ECCN?
</summary>

You can find our ECCN in our Trade Compliance handbook.

</details>

Post-Sale

<details>
<summary markdown="span">
When can we expect the invoice for an order?
</summary>

Invoices are sent 24 - 48 hours after the opportunity closes.

</details>

<details>
<summary markdown="span">
Our customer purchased the wrong deployment type (SaaS vs. Self-Managed). Can I switch deployment type post-sale?
</summary>

Yes, this change can generally be made by processing a new zero dollar order to facilitate the switch. Please contact the sales representative you worked with on the opportunity so that they may facilitate next steps.

</details>

<details>
<summary markdown="span">
Our customer notified us that their new license does not work as they have an offline or air-gapped environment. How can we request an updated license?
</summary>

Please contact the sales representative you worked with on the opportunity to request an updated license. Note, the sales representative will need to request and receive executive approvals before our support team can process the request.

</details>

<details>
<summary markdown="span">
How can we obtain proof of delivery (POD) for our recent Self-Managed / SaaS order?
</summary>

The partner contact that receives the GitLab invoice will also receive a copy of the customer

purchase confirmation email (i.e., copy of the Self-Managed license activation or SaaS notification email sent to the customer). Please connect with this contact to obtain the POD.

Note, on a two-tier deal, the distributor is invoiced by GitLab and thus the distributor receives the POD. Please connect with the distributor to obtain the POD if you have purchased through distribution.

</details>

<details>

<summary markdown="span">

My customer is asking that the purchase confirmation email with license/activation code be resent to the same end user contact that was listed on the PO/Quote. How can we request that the purchase confirmation email be resent?

</summary>

The partner that received the GitLab invoice (i.e., Distributor for two-tier deal, Reseller for one-tier deal) needs to submit the support ticket with the GitLab invoice attached to request the purchase confirmation email be resent to the same end user contact.

</details>

<details>

<summary markdown="span">

My customer did not receive the purchase confirmation email with license/activation code due to the PO/Quote listing the wrong end user contact. How can we request that the purchase confirmation email be sent to the new/updated end user contact?

</summary>

The partner that received the GitLab invoice (i.e., Distributor for two-tier deal, Reseller for one-tier deal) needs to submit the support ticket with the GitLab invoice attached to request the purchase confirmation email be sent to a new end user contact.

Important to note, the GitLab Sales Rep cannot change the end user contact post-sale on behalf of the partner or customer. The request to change the end user contact must either be submitted by the (i) partner that received the GitLab invoice as outlined above or (ii) customer contact listed on the final GitLab quote (i.e., the person that received the license).

</details>

<details>

<summary markdown="span">

The customer received an error stating they are out of Compute Minutes so their instance has stopped working. How can I quickly resolve this?

</summary>

The customer must add Compute Minutes via the same procurement path as the original order (i.e., if they purchased the original subscription through a partner, they must purchase the additional minutes through the same partner). Please take the following steps:

1. Work with your GitLab Sales Rep to obtain a quote for additional Compute Minutes.
2. Request that the GitLab Sales Rep submit an internal support ticket to provide additional Compute Minutes so the customer can get back online while the quote and order process is being completed.

For additional information, the Support team's process can be found [here](#).

</details>

SECTION: sales/field-operations/channel-operations/sales-faq.md

<link rel="stylesheet" type="text/css" href="/stylesheets/biztech.css" />

This page documents frequently asked questions from our GitLab Sellers on how to collaborate with partners throughout the sales process. Please contact us at partner-programs-ops in slack or @Partner Operations in SFDC chatter if you have any questions or would like to see another question/answer documented on this page.

Deal Registration

<details>

<summary markdown="span">

When should my partner submit a Deal Registration? What opportunities are they able to register?

</summary>

GitLab has a Partner Sourced Deal Registration (DR) program for Resale, MSP, and Referral opportunities. The partner should submit a Partner Sourced DR for an opportunity where they are bringing net-new business to GitLab, which can apply to opportunities for new logo, co-term add-on/upsell, or add-on/upsell as part of a renewal. Note, we can only approve one Partner Sourced DR for an opportunity, as only one partner can source a deal. Partners should not submit a Partner Sourced DR if they did not source the opportunity, and will generally receive Co-Sell discounts for these deals. Please refer to GitLab's Internal Incentive Guide for more information on partner program discounts.

GitLab also has a Service Attach DR program which applies to opportunities where partners are selling their own professional services into a customer environment at the time of a GitLab product sale.

</details>

<details>

<summary markdown="span">

My partner is unable to log into the Partner Portal to submit a Deal Registration (DR). How can they get access to submit a DR?

</summary>

If the partner contact has a Partner Portal account but is unable to login, they can select

"Forgot Password" to reset their password. If they do not have a Partner Portal account, they can select "Request Portal Access" to set up an account. Please have the partner contact partnersupport@gitlab.com for assistance ··if they have followed the directions but are still having issues.

Note, to submit a Deal Registration, the partner must first be an authorized GitLab partner as well as have completed the required training in order to be granted access to submit a DR.

</details>

<details>

<summary markdown="span">

I am working with a partner on an opportunity but their Deal Registration (DR) has expired. Can the DR be extended?

</summary>

Yes, the expired DR can be extended for 30 days by the Channel Account Manager. Please chatter the Channel Account Manager to request that they extend the DR. If you need an extension longer than 30 days, please chatter @Partner Operations and provide the new date the registration should expire.

</details>

<details>

<summary markdown="span">

What does it mean when the status of a Deal Registration (DR) is "Returned"?

</summary>

The Channel Account Manager (CAM) assigned to the DR has reviewed and sent it back to the resale partner for additional information/context. Once the resale partner reviews and responds to the CAM's feedback, the CAM will be notified to review and action the updated DR.

</details>

SFDC Opportunity

<details>

<summary markdown="span">

Where can I find Deal Registration (DR) information on an opportunity?

</summary>

DR information can be found in two areas on the opportunity:

- "Registrations" section in the related list quick links section at the top of the opportunity. This section contains all DRs attached to an opportunity, including approved, expired, rejected, and pending Partner Sourced DRs as well as Service Attach DRs.

- "Partner Sourced Deal Registration" section in the body of the opportunity which contains the

approved Partner Sourced DR.

</details>

<details>

<summary markdown="span">

Where can I find information on the partner we quoted on an opportunity?

</summary>

Please refer to the "Primary Quote Partner Details" section of the opportunity which displays the partner information from the Primary Quote.

</details>

<details>

<summary markdown="span">

What causes Sales Qualified Source (SQS) to be "Partner Generated" on an opportunity?

</summary>

SQS on the opportunity will be "Partner Generated" if (i) there is an approved Partner Sourced Deal Registration or the Initial Source is Partner Qualified Lead. Refer to the Partner Operations handbook for further details.

</details>

Sales Process

Partner Discounts and Incentives

<details>

<summary markdown="span">

Where can I find information on GitLab's partner discounts, incentives, and rebate programs?

</summary>

Please refer to the Internal Incentive Guide which contains information on our partner discounts, incentives, rebate programs and more.

</details>

<details>

<summary markdown="span">

How do we discount our products and/or services for partners (Distributor, Reseller, MSP)?

</summary>

Please refer to the Internal Incentive Guide to obtain partner program discounts for our products and services.

</details>

<details>

<summary markdown="span">

When should I provide Partner Sourced vs Co-Sell partner discounts?

</summary>

If the opportunity is for new or add-on/upsell business:

- sourced by the partner (including adding licenses as part of a renewal opportunity), the partner should submit a Partner Sourced Deal Registration (DR) for the opportunity. The GitLab CAM and ASM will approve the DR and then you can provide Partner Sourced discounts to the DR partner for the new or add-on portion of the deal.
- not sourced by the partner, the partner will generally receive co-sell discounts.

If the opportunity is a flat renewal, refer to the Partner Operations handbook for rules on partner incumbency.

Refer to the Internal Incentive Guide for information regarding our partner program discounts for your quote.

</details>

<details>

<summary markdown="span">

How do partner discounts impact my compensation?

</summary>

Please refer to GitLab's channel neutral compensation policy. Please contact the Sales Compensation team if you have any questions on a specific opportunity after reviewing the policy.

</details>

Quoting

<details>

<summary markdown="span">

What are my options in quoting/selling via partners?

</summary>

- Reseller - GitLab quotes (i.e., sells to) the reseller, and reseller quotes the end customer. This is commonly referred to as a one-tier or reseller-direct deal
- Distributor - GitLab quotes (i.e., sells to) the distributor, distributor quotes the reseller, and reseller quotes the end customer. This is commonly referred to as a two-tier distribution deal
- MSP - GitLab quotes the MSP partner. The MSP partner purchases, holds title to, and manages the licenses that are used by their end customer, the MSP End User

</details>

<details>

<summary markdown="span">

What are the benefits of quoting via a distributor rather than reseller-direct?

</summary>

Please refer to the Partner Operations handbook for details on the benefits of leveraging distribution.

</details>

<details>

<summary markdown="span">

When should I quote via a distributor rather than directly through a reseller?

</summary>

Please refer to the Partner Operations handbook for details on distributor requirements and coverage by Geo and Market.

</details>

<details>

<summary markdown="span">

How do I create a reseller-direct, distributor, or MSP quote?

</summary>

Please refer to the Partner Operations handbook for an overview of the partner quoting process and links to key resources including step-by-step quoting guides.

</details>

<details>

<summary markdown="span">

Where do I send the quote when I have a reseller-direct or two-tier distribution opportunity?

</summary>

The quote needs to be sent to the partner, not the customer. Specifically, if your quote is:

- reseller-direct, send the quote to your reseller contact only (ensure you do not copy the customer)
- via distribution, send the quote to your distributor contact only (ensure you do not copy the reseller or the customer). Please refer to the Partner Operations handbook for distribution contact information

</details>

<details>

<summary markdown="span">

My partner does not have, and/or has provided new or updated, Billing Account (i.e., Invoice Owner) and billing account Contact (i.e., Invoice Owner Contact) information. How do I add this information to the partner's account so that I can generate a quote?

</summary>

Please refer to the Partner Operations handbook for details on how to add or update billing information on the Partner Account record.

</details>

<details>

<summary markdown="span">

How do I find the Invoice Owner and Invoice Owner Contact for my partner quote?

</summary>

The Invoice Owner and Invoice Owner Contact on a partner quote represent the partner's Billing Account and billing account Contact records, respectively. Please refer to the Partner Operations handbook for details on how to find these records in SFDC and use them for quoting.

</details>

<details>

<summary markdown="span">

A prospect/unauthorized reseller is requesting a quote from GitLab. Are we able to provide them a quote either directly or indirectly via distribution?

</summary>

We are not able to quote an unauthorized reseller. Please encourage the reseller to sign up as a partner so you can provide a GitLab quote. If this is not possible, the opportunity owner and/or Channel Account Manager (CAM) can create a legal case on the opportunity to request a one-time authorization for the partner to transact with GitLab. If the request is reviewed and approved, Legal will work with the opportunity owner, CAM, and Sales Support to take the necessary steps to provide a one-time authorization.

</details>

<details>

<summary markdown="span">

I am unable to quote a partner as their Partner Status is "Prospect"? Why does this partner account have "Prospect" status and how do we update them to Authorized/Active?

</summary>

The partner account is in "Prospect" status because they have not yet signed our partner agreement and/or completed their required sales training. Please contact the Channel Account Manager that owns the partner account in SFDC to request that they work with the partner to get them authorized.

</details>

<details>

<summary markdown="span">

The partner informed me that the customer has an air-gapped or offline environment and thus requires a legacy/offline license key. What adjustments are needed on the quote to ensure we

provide the correct license key post-sale?

</summary>

Please follow the instructions in the Cloud Licensing guide to request approval for a legacy/offline at the time of quoting.

</details>

<details>

<summary markdown="span">

The partner requested non-standard payment terms for this opportunity. How can I apply non-standard payment terms on a quote?

</summary>

Please refer to the Deal Desk handbook and approval matrix for details on applying non-standard payment terms.

</details>

<details>

<summary markdown="span">

The partner has asked for multiple versions of the quote with different configurations. How can I duplicate the quote so I can change certain details on each to present multiple versions to the partner?

</summary>

Please refer to the Deal Desk handbook for details on how to clone a quote.

</details>

<details>

<summary markdown="span">

The partner requested an update to their quote, but I already submitted for approval so the record is now locked. Can I recall approvals to make an update?

</summary>

Yes, please refer to the Deal Desk Handbook for guidance on recalling a quote from approvals.

</details>

<details>

<summary markdown="span">

I understand we cannot change route to market through an amendment quote (e.g., change from one partner to another on a reseller-direct deal). However, can we amend a subscription to add licenses via a different reseller when the active subscription was sold through distribution (i.e., two-tier deal)?

</summary>

Yes, our contract/subscription record is with the distributor on a two-tier deal, not the reseller. If the customer, distributor, and account team need to change the reseller for a co-

term add-on on a two-tier deal, GitLab is able to accommodate the change.

</details>

<details>

<summary markdown="span">

The customer would like to work with a different reseller for their renewal. Are we able to quote the new reseller at the incumbent partner discount?

</summary>

Yes, if the customer provides formal communication through email to confirm they would like to work with the new reseller for their renewal, we are able to transfer incumbency discounts. Refer to the Partner Operations handbook for further details.

</details>

<details>

<summary markdown="span">

The partner requested to add seats to their customer's instance before the renewal. Does the add-on need to be processed before we can create a renewal quote for the entire subscription?

</summary>

Yes, for the customer's overall license count to be accurate during the renewal, add-on licenses need to be fully processed before GitLab can generate a renewal quote. Please refer to the Deal Desk handbook for further guidance.

</details>

<details>

<summary markdown="span">

The partner is concerned their customer may not be able to renew their instance before their grace period expires and they lose access. Can a temp license extension be granted to have additional time to process the renewal?

</summary>

Yes, you can submit an internal support ticket to request a temp license to prevent the customer from losing access while the renewal is processed.

</details>

Purchase Orders (POs)

<details>

<summary markdown="span">

What are the requirements to submit a partner opportunity for booking?

</summary>

Please refer to the Sales Order Processing handbook for partner opportunity booking requirements.

</details>

<details>

<summary markdown="span">

I received a PO from the partner but the quote is now expired. How do I extend the expiration date of the existing quote?

</summary>

Please refer to the Deal Desk handbook for guidance on extending the expiration date of an existing quote.

</details>

<details>

<summary markdown="span">

I am expecting a PO from the partner on the last day of the quarter. How do I ensure my PO/opportunity submission will count toward GitLab's current fiscal quarter?

</summary>

Please refer to the guidelines listed in the Sales Order Processing handbook regarding end-of-quarter bookings.

</details>

<details>

<summary markdown="span">

My partner asked for GitLab's ECCN. Where can I find this information?

</summary>

You can find our ECCN in our Trade Compliance handbook.

</details>

Post-Sale

<details>

<summary markdown="span">

When can the partner expect the invoice for a closed won order?

</summary>

Invoices are sent 24 - 48 hours after the opportunity closes.

</details>

<details>

<summary markdown="span">

The partner contacted me requesting the GitLab invoice and/or customer purchase confirmation proof of delivery (POD) for a closed-won order. Who from the partner receives the GitLab invoice and/or POD post-sale?

</summary>

The Invoice Owner Contact from the Primary Quote receives the GitLab invoice, while the Sold To Work Email of the Invoice Owner receives the POD (i.e., copy of the customer provisioning email from fulfillment). Note, these two contacts should be aligned on your quote, as the Invoice Owner Contact (i.e., billing account Contact) should be created from and thus match the details of the Invoice Owner (i.e., Billing Account). Please refer to the Partner Operations handbook for details on partner billing records and how they apply to quoting a partner deal.

Note, on a two-tier deal, the distributor is invoiced by GitLab and thus the distributor receives the POD. Please connect the reseller with the distributor to obtain the POD if the reseller purchased through distribution.

</details>

<details>

<summary markdown="span">

The partner requested that the purchase confirmation email with license/activation code be resent to the same end user contact that was listed on the PO/Quote. How can we resend the purchase confirmation email?

</summary>

This can be actioned by either the GitLab Sales Rep or the partner:

- The GitLab Sales Rep can submit an internal support ticket to request that the support team send the purchase confirmation email to the same end user contact.
- The partner that received the GitLab invoice (i.e., Distributor for two-tier deal, Reseller for one-tier deal) can submit a support ticket with the GitLab invoice attached to request the purchase confirmation email be resent to the same end user contact.

</details>

<details>

<summary markdown="span">

The partner contacted me saying their customer did not receive the purchase confirmation email with license/activation code due to the PO/Quote listing the wrong end user contact. How can we send the purchase confirmation email to a different end user contact?

</summary>

The partner that received the GitLab invoice (i.e., Distributor for two-tier deal, Reseller for one-tier deal) needs to submit a support ticket with the GitLab invoice attached to request the purchase confirmation email be sent to a new end user contact.

Important to note, the GitLab Sales Rep cannot change the end user contact post-sale on behalf of the partner or customer. The request to change the end user contact must either be submitted by the (i) partner that received our invoice as outlined above or (ii) customer contact listed as Sold To Contact on our final quote (i.e., the person that received the license).

</details>

<details>

<summary markdown="span">

The partner notified us that the customer is unable to use their GitLab Self-Managed activation code as they have an offline or air-gapped environment. How can we provide a legacy or offline license post-sale?

</summary>

Request approval from your VP via SFDC chatter to provide an offline or legacy license key for a closed-won opportunity. If/when VP approval is granted, submit an internal support ticket to request an updated license be issued to the customer.

</details>

<details>

<summary markdown="span">

The customer received an error stating they are out of Compute Minutes so their instance has stopped working. How can I quickly resolve this?

</summary>

The customer must add Compute Minutes via the same procurement path as the original order (i.e., if they purchased the original subscription through a partner, they must purchase the additional minutes through the same partner). Please take the following steps:

1. Initiate the procurement process. For channel deals, GitLab Sales to provide the partner a quote for additional Compute Minutes. For AWS/GCP deals, GitLab Sales to generate a private offer to the customer for additional Compute Minutes
2. GitLab Sales to submit an internal support ticket to request that the support team add minutes to the customer's instance to get the customer back online while the GitLab procurement cycle is completed. To submit an internal support ticket, use the Other> Other License & Renewals Related Issue request type, and provide as much information as possible in the request to help drive quick review and approval (e.g., customer is locked out and required to wait on our procurement cycle since they purchase via partner, needs additional minutes to get back online)

Important to Note, The Support Team will not keep track nor remove any compute minutes, therefore GitLab Sales should request a modest amount of minutes to cover the time period necessary while waiting for the sale to process.

</details>

Mission

To empower GitLab and customers to mutually reach their strategic outcomes and revenue goals across aligned customer journeys.

Strategy

Develop and operationalize Customer strategies leveraging analytics and insights for key expansion and renewal initiatives, resulting in increased net ARR.

1. Refine cohesive Customer Success motion

1. Operationalize usage reporting in post-sales customer journeys

1. Expand Digital motion through multiple channels and across customer lifecycle

1. Stand up Renewal operations motion for a more predictable and scalable revenue motion

1. Operational excellence resulting in scalable vision, KPIs, operational processes, and documentation

1. Increase Sales and CS effectiveness through systems and tools

What we do

Customer Success Operations creates and updates existing processes for the Customer Success organization. CS Operations oversees:

- Systems implementation and maintenance
- Operational reporting
- Systems enablement
- Product analytics and renewal strategies
- Fiscal Year planning and strategy
- Operationalizing Customer Success Journeys

The CS Ops team also provides support for customer programs, renewals, and Gainsight.

<div class="flex-row" markdown="0" style="height:80px">

Customer Success Programs

Gainsight Management
 and Support

</div>

Who we work with

Customer Success Operations provides support, content, and data analysis for all Customer Success teams.

CS Ops Request Process

Process Flow

Instructions for new request intake and execution for following along with the flowchart above

(definitions further down on the page). Once assigned, the Issue Assignee moves the issue through each label.

- Workstream Lead: the individual who has oversight for a given topic, product, or section (e.g., Digital, Gainsight, Scale, ROPS)

- Issue Assignee: the assignee for the issue who will execute and will own the issue through to completion

- 1. New Request only has ~CSOps label - The Workstream Lead (Gainsight, Scale, Digital, ROPS, etc.) will review requests on a weekly basis to assign, mark as Need more info, mark as won't do, transfer them to a different team, or defer to a later date

- 1. CSOps::Triage - The Workstream Lead will move the issue here when after review and ready for prioritization

- 1. CSOps::Monitoring - Apply this label for issues that have been transferred to another team ex: systems, SOPS, etc or when CSOps opens an issue for completion by another team and would like to monitor progress on said issue to completion

- 1. CSOps::NeedMoreInfo - Issue Assignee to apply label if additional information or clarity is needed from the business stakeholder

- 1. CSOps::Unassigned - Workstream Lead to apply the label when we've agreed the work should be done, but lack prioritization and/or capacity

- 1. CSOps::In Process - Issue Assignee is actively working the issue; if you are working an issue, it must have this label

- 1. CSOps::Awaiting Feedback - Issue Assignee to add Peer Reviewer and add label

- 1. CSOps::Blocked - Issue Assignee applies the label when the issue cannot be worked (technical problem or decision to be made)

- 1. CSOps::Won't Do - Workstream Lead selects this when the decision has been made that it will not be worked, then close the issue

- 1. CSOps::Backlog - Workstream Lead applies label when we've agreed it's helpful and reasonable, but is either a lower priority or cannot achieve in the next 90 days

- 1. Issue closing - Issue Assignee to:

- 1. Ensure any handbook sections have been updated

- 1. Add to the Gainsight changelog

- 1. Ensure the peer review process has been followed

- 1. Communicate with stakeholders (in the issue, and possibly using other mediums such as Slack or a team call) as the last step, ensuring awareness and follow-through of the completion of the request

- 1. Ensure the Workstream Lead is made aware, along with a summary of the work and any next steps

- 1. Issue Assignee to add the CSOps::Completed label

- 1. Close the issue!

CS Ops Board, Groups, Projects, and Labels

CS Operations Board

The CS Ops team uses issues and issue boards to track our projects and tasks. If you need help with a project, please open an issue and add the ~CSOps label anywhere within the GitLab repo.

CS Operations uses a global issue board to capture and track issues in any group or sub-group in the repo.

See the global issue board for CS Ops Technical Writing.

Groups

- Use the gitlab.com group for epics that may include issues within and outside the Sales Team group.
- Use the GitLab Sales Team group for epics that may include issues within and outside the Field Operations group.

Projects

Create issues in the CS Operations project.

Issue Weighting

- Weight = 1: 0-1 hours of work
- Weight = 3: 1-3 hours of work
- Weight = 5: 3-5 hours of work
- Weight = 7: 5-7 hours of work

Anything that takes longer than a day of work should be captured in an epic/multiple issues

Labels

Labels to use when creating new issues or MRs for CS Ops:

Team Specific or System Labels

- CSOps - Use to track and manage all CS Operations-related issues and MRs
- CS Programs - For the Digital Programs team to track and manage content requests, improvements, and other means of digital customer marketing
- CS Product Usage Reporting - Issues related to Customer Success product usage data
- CS Analytics - Used to track Customer Success Analytics issues
- CS RenewalOps - Label to designate issues for the Renewal Ops team to improve our customer renewal process and experience
- CS Ops Technical Writing - Assigned to the CS Ops technical writers for review or creation of copy
- Gainsight- Label to designate the issue is related to Gainsight.
- Gainsight: Bug- This label is used to track bugs exclusive to Gainsight
- Gainsight: Feature Request - This label is used to track feature requests for our installation of Gainsight (not for Gainsight the product)

Scoped Labels - used for tracking SDLC progress

- CSOps::NeedMoreInfo - Requires additional information from the requester, or lacks information to complete the request
- CSOps::Triage - Issue that is in the triage stage
- CSOps::ReadyforAssignment - Ready to be assigned and prioritized by CS Ops
- CSOps::Awaiting Feedback - Used for peer review and when analysis is needed before closing the issue

- CSOps::InProgress - Actively being worked on in the current week or milestone
- CSOps::Blocked - Currently blocked by an internal or external prerequisite
- CSOps::Backlog - Issues that are not currently being evaluated or worked on
- CSOps - Interrupt - Issue that was submitted after the current milestone started and prioritized ahead of the original milestone scope
- CSOps::Triage- Issue that is in the triage stage
- CSOps::Won't Do - Indicates that the issue is not going to be worked/completed, although scoping of solution might have already been concluded
- CSOps::Completed - Used to show that the work associated with the issue has been delivered/completed and the issue is being closed

Segment and Team Support Labels - for tracking where the request(s) came from

- CSOps - CSM- Ops - Request opened by the CS Ops team that benefits the CSM team
- CSOps - CSM - Request originating from the CSM team
- CSOps - PS - Request originating from, or to benefit the PS team
- CSOps - SA - Request originating from, or to benefit the SA team
- CSOps - Ops - Request to benefit the CSOps team
- CSOps - PubSec - Requests that are specific to the Pub Sec CSM Team
- CSOps - Strategic - Requests that are specific to the Strategic CSM Team
- CSOps - Scale - Requests the are for the Scale Segment
- CSOps - All Segments - Request that cover all CS Segments
- CSOps - Growth - Requests that are specific to the Growth CSM Team
- CSOpsSlack-Questions - Indicates that the request/issue came in via Slack (gainsight-users Slack channel being the largest contributor to it)
- CSOPs-Priority - This is for initiative/issues tied to Top Priority Initiatives

Peer Review

The peer review process (currently for issues related to Gainsight) allows CS Ops team members to have another member of the team review their work.

The issue owner is responsible for making sure the issue is completed in timely manner, including communicating to the peer reviewer when the issue needs to be completed. The peer reviewer is responsible for completing the review in the timeframe given by the issue owner.

- Issues MUST be peer reviewed by the Gainsight Admin if it is a change, addition, or removal in a rule or data object (e.g. creating a new rule or connector job, removing fields from an object, combining multiple rules into one)
- For changes to reports or dashboards, strongly consider a peer review.

Feel free to ask for a peer review for other any updates if you feel it would be helpful to have a second opinion.

To start the peer review process:

1. Provide a Summary of the work you have completed in the Resolution section on the GitLab issue
2. Change the issue status to CS Ops::Awaiting Feedback
3. Tag the teammate completing the peer review and comment on the issue that it is ready for

peer review

4. The issue owner will remain an assignee as they are ultimately responsible for the issue completion.

SECTION: sales/field-operations/customer-success-operations/cs-rep-assignment-process.md

<link rel="stylesheet" type="text/css" href="/stylesheets/biztech.css" />

Purpose

Document how, why, when, and where CSMs and SAs are populated in Gainsight and Salesforce for the end result of tracking ownership and tracking for compensation and President's Club.

GitLab issue for tracking.

CSMs

CSM Managers add their CSMs to the appropriate account in Gainsight. From there, a real-time (immediate) rule pushes this data to Salesforce to the Customer Success Manager field (API field is TechnicalAccountManagerLUc). Salesforce then takes the CSM on the account and stamps it on the opportunity's Customer Success Manager field (API field is TechnicalAccountManagerc).

Impact

This results in ability to track account ownership, CSM workload for load balancing, compensation payout, and President's Club tracking.

Automations

1. CSM on the Gainsight account is synced to Salesforce account

1. This is a real-time rule ("Push CSM change to SFDC") in Gainsight so Gainsight will attempt to sync the new value to Salesforce immediately

1. We also have a daily catch rule ("Load to SFDC: Catch for non-synced CSM") that compares the CSM value in SFDC and GS and should update any values in SFDC that do not match GS

1. CSM on the Salesforce Account is stamped on the opportunity at from open to close, during every stage using a Salesforce Flow. When the CSM is updated in the account, it pushes out to all open opportunities using that Flow. Each update is instantaneous and not a part of a batch. See issue for details.

1. Override: The CSM can be overridden in Open Opps directly by certain profiles (sales comp, finance, SOPS, integration user, and sys admin). Each

1. The CSM gets locked on the opp on opp close

SAs

SAs add themselves as the Solutions Architect on the Account object in Salesforce. For compensation and President's Club, the SA must be listed as the Primary Solution Architect on the Opportunity to be paid. This is a manual process and is done by individual SAs in Salesforce. SAs have edit access for both fields (on the account and Oppy). An SA can only

edit the Oppty field while it is open; once it is closed, only certain profiles can edit it (sales comp, finance, SOPS, integration user, and sys admin).

Impact

The end result is knowing average SA workload, compensation payout, and President's Club tracking.

Automations

1. When a new Oppty is created, the SA on the account gets copied onto the new opportunity.
Impact: it is the interest of the SA to add their name to the account!

Limitations/Challenges

Note: all limitations below have to do with the SA as the Primary SA and the activities logged (Salesforce tasks).

1. Primary versus supporting SAs: When there are multiple SAs involved on a single opportunity this can be a problem. For example, you will have SA 1 listed as the Primary SA, SA 1 will have activities logged to this opp, but then you will also have SA 2 logging activities to the same opp. This is especially common for SAs on Brian Wald's team (SFO Team)

1. When SA Activities are logged to an opportunity that is either merged to another opportunity and/or marked as a duplicate opportunity. Making sure that all the tasks logged to these previous opportunities (merged/duplicate) get mapped to the newer "primary" opportunity is complex and handled by custom SQL for the SA dashboards.

1. When SA Activities are logged to an account rather than an opportunity. Some of these Salesforce tasks are valid since the SA may be working with a prospect/customer before there is an opportunity created but other times it is mostly due to troops UI making it difficult to select the correct opportunity. We currently have some custom SQL logic that ties these SA Activities to opportunities based on the SFDC Account ID and a specific timeframe of when the activity occurred with respect to the opportunity close date but it is certainly not 100% accurate.

<link rel="stylesheet" type="text/css" href="/stylesheets/biztech.css" />

Vision

The Renewal Operations team is responsible for building, maintaining and optimizing the operational framework that supports GitLab Account Teams to effectively manage customer Renewals in an effort to increase Net Revenue Retention. The Renewal Operations team enables and supports Account Teams to:

- Ensure a consistent, seamless and positive Customer Renewal experience
- Identify and manage churn and contraction risk effectively
- Accurately forecast churn and contraction with a high degree of confidence

- Analyze drivers of Churn and Contraction and provide strategic recommendations to mitigate risk
- Ensure an exceptional level of data quality within tools and systems
- Identify, build and iterate process improvements to improve account management effectiveness

Find more information about how we drive the above initiatives on the Renewals Managers - What we Do page

Below is a breakdown of the 4-part Renewal Operations Strategy.

- Measure

1. Create continuous workflow that accurately measures and analyzes the main areas of churn and contraction

1. Define Renewal Metrics to assist in forecasting based on Usage, Engagement, and Predictive Models

- Improve Workflows

1. Identify and focus on areas of improvement in the customer lifecycle to prevent further churn and contraction and iterate on scalable solutions

- Mitigate Risk - Customer Segmentation

1. Create a scalable risk management system, to allow Account Teams to monitor, investigate, and intervene on upcoming opportunities at risk.

1. Establish an Early Warning System (EWS) to segment customers based on Customer Health and Growth metrics.

- Growth & Engagement

1. Iterate through automated & manual engagement strategies and campaigns based on segmentation. Work with Renewals, Product, Digital CS, CSM, Sales Ops, and Sales Enablement to provide creative time & cost saving solutions.

Meet the Team

| Person | Role |

| ----- | ----- |

| John Budreski | Senior Manager, CS Strategy & Operations |

| Heather Kacmarski | Customer Success Operations Analyst |

| Laura Simmons | Customer Success Operations Analyst |

Get in Touch

Head over to renewal-ops on Slack to get in touch with us. We use this channel for general Renewal Operations support, and key system status updates. We attempt to avoid direct messages where possible as it discourages collaboration.

Who We Work With

Renewal Operations supports the Renewals, Success and Sales Teams: Directors & Area Sales Managers, Renewals Managers, Account Executives, Strategic Account Executives and collaborates with Customer Success Operations, Sales Operations and Sales Strategy.

Renewals Team is Renewal Operations' direct focus, our primary customers are Renewals leaders; the insights, strategies, and actionable campaigns are built to assist the Renewal Managers and

Account Executives with the renewal process. Renewals Operations provides intelligent insights for the large amount of upcoming renewals managed by Account Teams to allow a more focused approach.

Customer Success Operations helps organize and collect pertinent product usage, and customer health data that the Renewal Operations Team uses to identify insights and engagement strategies. For example, creating automated one-to-many campaigns in Gainsight to support product adoption.

Sales Operations supports Renewal Operations by maintaining our systems that process the renewals and opportunity management. As we progress, it can also improve risk management and forecasting.

How We Work

The Renewal Operations team primary focus is to support the Global Renewals team through a number of channels and activities. For guidance on when and how to engage Renewal Operations see below:

Renewal Manager Account & Opportunity Management

To reach out to Renewal Operations within Salesforce, follow the process to request internal support outlined [here](#)

Renewal Operations can assist with:

- Territory Assignment Questions or Corrections (for a Territory Change Request please follow the instructions [here](#))
- Renewal Manager Opportunity Assignment
- Renewal Ownership (Tier) Re-assignment
- Renewal Forecast field updates
- Closed Details updates
- Renewal Forecast guidance
- Complex Opportunity management guidance
- Renewal Manager Opportunity Split
- Merged Opportunities
- Churn Exception Review for Renewals Managers

Quoting, Approvals and Bookings

For questions on Quoting, Approvals, Opportunity Booking or Opportunity data quality refer to the [Sales Order Processing Handbook Page](#) or reach out to Deal Desk via an Internal Support Request

Compensation

For Compensation related questions please reach out to Sales Comp via the internal support request. Renewal Operations does not approve Churn exception requests, to request a Churn exception please follow the process outlined [here](#).

Renewal Operations Process Cadences

Weekly

- Renewal Forecast Template Update
- Forecast Data Quality Review
- Loss/Downgrade Reason Review
- Renewal Opportunity - Customer Subscription Reconciliation

Monthly

- Top Churn & Contraction Opportunity Review
- Debook-Rebook Renewal Reconciliation
- Churn Exception Review
- SMB Churn & Contraction Readout
- MM Churn & Contraction Readout
- Customer Success Forum

Renewal Operations Projects

Renewal Operations uses issues and issue boards to track our projects and tasks. If your expertise can assist in any of our projects or if you simply want to share an idea you believe could assist the Renewals process, please open an issue and add the ~CS RenewalOps label anywhere within the GitLab repo.

See the Renewal Operations issue board to track progress.

Projects

Create Issues in the CS Operations project using the RenewalOpsRequest Issue template.

Labels

Labels to use when creating new Issues or MRs for Renewal Ops:

- CS RenewalOps - Catch all label to designate Renewal Operations involvement in the Issue. Use this label to bring an Issue to the Renewal Ops teams attention.
- ROPS::InProgress - Renewal Ops actively working Issue
- ROPS::Monitoring - Renewal Ops is a stakeholder but not the DRI for the Issue and is tracking progress
- ROPS::Priority - Renewal Ops has made this Issue a top priority to resolve ASAP
- ROPS::Blocked - Renewal Ops unable to resolve Issue due to technical or business limitation
- ROPS::Backlog - Renewal Ops has deprioritized this Issue and will be addressed at a later time
- ROPS::Completed - Renewal Ops resolved the Issue and is now Closed

Contact Us

Send any questions to the slack channel renewal-ops

SECTION: sales/field-operations/customer-success-operations/troops-administration.md

<link rel="stylesheet" type="text/css" href="/stylesheets/biztech.css" />

Overview

Rattle is primarily used by our Solutions Architects for activity capture to capture customer calls, efficiently log them, and run reporting in Salesforce and our BI tool. Rattle replaced Troops.ai in January of 2024.

Rattle training

For SA end-users, see Rattle Setup page.

For Rattle administrators:

1. How to Set Up a User. Three steps:

1. Create user in Rattle

1. Add user to the Okta Rattle Group (<https://groups.google.com/a/gitlab.com/g/okta-rattle-users/members>)

1. Ensure the user has integrated their Salesforce account

1. Add user to their respective regional slack channel notification (rattle-activities-region)

1. Add user to rattle-users in Slack

1. All workflows in Rattle are based on Salesforce Role, not the user's name, so there is no action needed on workflows when a new hire starts.

1. How to Set Up a New Workflow

1. Additional Rattle How-To Documentation

<link rel="stylesheet" type="text/css" href="/stylesheets/biztech.css" />

What we do

Customer Programs creates communication paths using Gainsight to inform, educate, and learn from our customers.

You can see more information about what we do and our strategy in the following decks:

- Strategy
- Overview

Team Members

Meet the Team

Person	Role
Brittney Sinq	Sr. Director, CS Strategy & Operations
Michelle Harris	Sr. Program Manager, Customer Programs
Raluca Gorbanescu	Sr. Program Manager, Scale
John Gamboa	Program Manager, Customer Programs

Related Content

- Available Programs
- Getting Help from Digital Customer Success
- NPS/CSAT Surveys
- CS Content Guide
- Customer Newsletter

Who we support

We support all customers with our programs but primarily serve customers that do not have one-to-one Customer Success relationships or are supported by the Scale Team. We manage time-based and/or data-driven email programs via Gainsight to further enable customers in their journey with GitLab.

Programs lifecycle

Programs follow the lifecycle of the customer, from onboarding to enablement to retention.

Segment specific journey - Tech Touch | Scale | CSM-Managed

Programs Overview

Please refer to the Available Programs page for a list of active DCS Programs. A program can be any of the following:

- Email, either single or a series, sent automatically or manually through Gainsight
- Webinar invitations and promotion through Zoom and Gainsight
- Monthly newsletters
- Surveys sent through Gainsight

Available program metrics and data and timelines

When an email program is sent, Gainsight collects data about the following points:

- To whom the program was sent
- Open, bounce, and click rates

If an email contains a survey, Gainsight will collect information about who opens and responds to the survey (unless the survey is stated to be anonymous). For more information about surveys, visit Customer NPS/CSAT surveys.

New programs typically take 30 to 60 days to show meaningful data.

If the information requested is already available in Gainsight, please expect 1-3 business days beyond 30 days to respond to the request.

If a new dashboard or report must be created, CS Ops will provide more accurate time expectations.

Program Recipients

GitLab Admin contacts

The GitLab Admin contact user is the primary recipient of communication sent by the Digital Customer Success (DCS) Team. This contact receives all primary communication regarding onboarding, enablement, and overall customer health from DCS. More than one GitLab Admin may be configured on an account.

Configuring the GitLab Admin contact is a required step in the Sales process. GitLab Admin contacts can be changed or added at any point in the customer journey in Gainsight or Salesforce.

Learn more about the GitLab Admin contact role requirement on the [Gainsight Go-To-Market Technical Documentation page](#).

Owner and Maintainer users (SaaS Customers Only)

On accounts using the GitLab SaaS product, individual users with Owner and Maintainer permissions in an organization may receive email programs from the DCS Team.

Targeting individual users at the account level enables the DCS Team to ensure customer enablement programs reach contacts most likely to take action on individual features of GitLab.

Sold-To Contacts

If a customer purchases GitLab without the assistance of the Sales team directly from GitLab's website, there may be no GitLab Admin user configured to the account. If so, communications normally designed for the GitLab Admin contacts will be sent to the contact that directly purchased GitLab products and services (the Sold-To contact). These contacts do not receive NPS or CSAT communication.

How to configure a GitLab Admin

Add a contact by using Gainsight:

1. Navigate to the Gainsight Customer360 page.
1. Under Contacts, find the contact name to enroll.
1. Click the ... icon.
1. Click View Details.
1. Edit the GitLab Role field.
1. Select GitLab Admin from the picklist.

1. Click Save.

Add a contact by using Salesforce:

1. Find the contact in Salesforce.
1. Edit the Role field.
1. Select GitLab Admin from the picklist.
1. Click Save.

SECTION: sales/field-operations/customer-success-operations/cs-ops-programs/all-customer-csat-cs.md

What is the "All-Customer CSAT Survey?"

Administered by the Customer Success team via Gainsight to a larger audience, these surveys assess customer satisfaction with GitLab's overall support, service levels, and customer experience. Further, this survey represents a macro-level baseline for Customer Satisfaction Scoring, not drive customer-level interactions and escalation.

Send Schedules

CSAT Survey	Send Schedule	Follow-up Date	Close Schedule
:----	:----	:----	:----
All-Customer CSAT Survey	May 27, 2025	June 3, 2025	Jun 20, 2025

About

Subject line

Starting May 27, 2025, customers will receive an email with the subject line: "We're listening. What do you REALLY think?". The survey should take no more than 8 min to complete, and the feedback will be a direct input into new internal initiatives and product roadmap recommendations.

Questions

1. How satisfied are you with GitLab?
2. How satisfied are you with your teams' adoption of GitLab?
3. How satisfied are you with your experience working with the GitLab team?
4. How satisfied are you with the business value provided by GitLab?
5. What could we be doing better?

Note: Open text field

6. Select a role that you most closely identify with:

Developer or Engineer
Administrator
Team Lead or Manager
Security
Product Manager

Billing or Procurement
Executive Sponsor

7. Contributions like yours directly shape the future of our product. Are you open to a brief chat with our team to learn more about your GitLab experience?

Yes / No

Recipients

In order to target leaders and decision-makers on accounts, the following customer personas will receive an invitation to a survey:

GitLab admin contacts
Sold-To Billing Contact (if no GitLab Admin exists)
GitLab.com Owner role
Executive Sponsor

Process

1. Email: An email containing the CSAT survey is sent to an identified contact within the customer's organization.
2. Reminders: If the customer hasn't responded within 3 days, a gentle reminder email is sent. If there's still no response after 10 days, a final reminder email is sent. Additionally, the Success teams will directly contact their assigned customers to drive engagement, if there is a lack of response from the automated email.
3. Survey Closure: The survey remains open for 30 days to allow for any account teams to encourage customers to complete it.

Results

Survey results are analyzed and made available in the following formats:

Tableau Dashboards: Created from Snowflake data, these dashboards provide a visual representation of overall CSAT trends, key metrics, and actionable insights.

Gainsight: CSAT scores are comprehensively tracked in the Customer 360, providing a detailed view of customer satisfaction over time. Additionally, a universal dashboard offers a consolidated overview of all CSAT surveys sent, enabling easy monitoring and analysis.

Salesforce: Survey responses can also be found in the embedded Gainsight widget on any account page in Salesforce.

Scoring Methodology

Each question is scored by dividing the total number of customers who select 'Very Satisfied' (5) or 'Satisfied' (4) by the total number of responses, then multiplied by 100\.

Tableau Dashboards

The CSSO team is creating a dashboard to be available in Tableau by EO FY25Q4.

Gainsight, SalesForce

Gainsight: CSAT scores are written to a scorecard in the Customer 360\.. For an overview of how CSMs use Customer360 (or C360), please refer to the Gainsight CSM C360 Overview Page

SalesForce: Survey responses can also be found in the embedded Gainsight widget on any account page in Salesforce.

Actioning Feedback

In customer success, the primary teams in Customer Success who action survey feedback are Customer Success Managers (CSM) and Customer Success Engineers (CSE).

Customer Success Managers:

Pre-send: Proactively create awareness of the survey through ongoing customer conversations, emphasizing the importance of their feedback.

Post-send: Follow up on survey responses, address any concerns or issues raised by customers, and ensure that their needs are met. Automated CTAs (calls to action) will be created in Gainsight to guide Customer Success Managers (CSMs) in their follow-up efforts.

Customer Success Engineers:

Pre-send: Create awareness of the survey through one-to-many event invites and targeted conversations with customers.

Post-send: Automati
