

d procedures for our data. Compliance, transparency, quality are all drivers for data governance, and continue to be the focus of our team.

Data Stewardship

Data stewardship formalizes the accountability for managing the day-to-day procedures. As we implement a flexible data governance structure and aligning with GitLab's mission that everyone can contribute.

Information on Data Governance and Quality can be found on the Data Intelligence Page in the internal handbook.

SECTION: sales/field-operations/field-enablement/_index.md

Overview

Field Enablement Team Vision

To be a recognized partner who contributes to field & partner business outcomes. We inspire our field and partners to achieve high levels of success through the acquisition and application of knowledge, skills and behaviors - at scale - that improve productivity and accelerate customer outcomes & growth.

We envision a Field organization that has easy and intuitive access to the information and resources needed to sell effectively, and that is inspired and motivated to be a part of the GitLab team through experiences that drive meaningful connections and engagement.

Key Tenets of Field Enablement in FY24 (our ways of working)

1. Operate with Efficiency & Scale

1. Minimize FE team task redundancy, improve program processes & rhythm, and build shared enablement services.

1. Field Alignment

1. Establish a field rhythm of business, build feedback loops, build with the field, and respect our global teams.

1. GTM Enablement

1. Deliver route-agnostic enablement programs, uniformly upskill field & partners, drive operational rigor and strengthen strategic selling.

1. Transparent and Efficient Field Communications

1. Take the guesswork and ambiguity out of staying up-to-date with programs that focus on aligning to segments and supporting a manager cascading motion.

1. Results-Driven Field Content

1. Support a field content experience that provides relevant, easily-accessible & role-based resources to support the GTM motion with a strong feedback loop across stakeholders.

Field Enablement Strategy & Deliverables

Review the Field Enablement FY24 Quarterly Deliverables deck.

1. View our FY24 Enablement Framework on slide 13
1. View our Deliverables by segment and quarter on slides 14-21
1. View the Rhythm of Enablement, Comms, Content and Events (our operating cadence) on slides 8-10
1. View our team org chart on slide 23

Field Enablement Team

Name	Title	Role
Ali Shahrazad	Sr. Director, Field Enablement	Mgr
Kelley Shirazi	Director, Global Sales and Customer Success Enablement	Mgr
Monica Gomez	Director, Enablement Operations	Mgr
Steve Wilson	Sr. Manager, Product Enablement	IC
Emelie Rodriguez	Staff Program Manager, GTM Enablement	IC
Shannon Thompson	Sr. Field Communications Manager	IC
Pallavi Daliparthi	Staff Program Manager, Customer Success / Solutions Architect Enablement	IC
Cristian Enache	Staff Program Manager, EMEA Field Enablement	IC
Jess Stetson	Staff Program Manager, AMER Field Enablement	IC
John Blevins	Sr. Program Manager, Onboarding & Continuing Education	IC
Joshua Jones	Sr. Program Manager, Partner Enablement	IC
Omnia Radwan	Associate Program Manager, Customer Success / Solutions Architect Enablement	IC
Tess Dutton	Program Manager, Field Enablement Content	IC
Emily Hiett	Field Communications Manager	IC

How We Measure Success

The Field Enablement and Communications teams track and measure success in three main areas:

1. Quarterly OKRs: The Field Enablement Leadership Team prioritizes quarterly OKRs that support the goals of the CRO organization. Status on current progress of Field Enablement OKRs can be found within the GitLab Objective and Key Results Project.
1. Quarterly Readouts: We collate the key results of each quarter in executive summary decks that include overall team achievements and program-specific accomplishments. Current fiscal year readouts can be found below.
 1. Q1 FY24 Field Enablement Results
 1. Q2 FY 24 Field Enablement Results (TBA)
 1. Q3 FY24 Field Enablement Results (TBA)
 1. Q4 FY 24 Field Enablement Results (TBA)
1. Program Analytics and Impact of Business Outcomes: We measure the success of our efforts based on the material impact that they have had on the field and our business outcomes. We inspect and assess 4 levels of measurement:
 1. Did the intended audience complete or engage with the Enablement? Examples: completions, quiz scores, content/page views.
 1. How did the audience think and feel about the Enablement? Examples: satisfaction scores, confidence scores, quality ratings.
 1. Were we able to observe an intended behavior? Examples: successful completion of operational tasks, effective message articulation.

1. Were we able to attain an intended business outcome? Examples: lower ramp time, accelerated deal cycle time, higher volume or quality of pipeline, lower churn/contraction, improved productivity.

How to Work With Us

When considering how to engage with the Field Enablement team, stakeholders should take into account the following questions:

1. Does the Field need to know something? (Field Comms-only motion)

1. A Field Comms motion seeks to inform the Field team of important updates/information via the communication channels outlined on the Field Communications page.

1. Does the Field need to know AND do something? (Field Comms and Enablement motion)

1. A Field Enablement motion seeks to enable the Field team on a particular skill via trainings or accreditations.

The answer to the above questions will dictate how the Enablement team triages requests across three primary issue templates:

Field Announcement Request Issue

The Field Announcement request issue gathers requests from DRIs/stakeholders across the business to launch or announce something to the Field team · either the full team or a large segment of it. Segment-specific communications are currently out of scope and will require an Field Enablement request flow. Requesters / DRIs should open an issue using this template to track:

1. Upcoming projects or initiatives that will impact the Field team's processes or workflows

1. Announcements that teams would like the Field to be aware of (organizational or otherwise)

1. New resources or tools the Field should know about

1. Requests for feedback (i.e. surveys) from the Field team

The issue template includes questions and instructions to assist the Enablement team in determining if the announcement requires a Field Comms-only or Field Comms and Enablement motion. Please complete the required sections of the issue template in full, providing as much detail as possible. Note that ALL questions must be answered prior to Field Enablement triaging your request.

Once the request has been triaged by Field Communications, the team will collaborate with you to clarify any outstanding details and define a launch plan. If a Field Comms and Enablement motion is required, Field Enablement will open a Field Enablement issue (below) to scope enablement-related activities and deliverables.

Field Enablement Request Issue

The Field Enablement request issue gathers ad-hoc enablement requests from DRIs/stakeholders across the business. Requesters / DRIs should open an issue using this template to track:

1. Net-new or refreshed trainings for the Field team

1. Net-new or refreshed accreditations for the Field team

1. Changes, updates, announcements that only impact one segment (ENT, COMM, CS, etc.)

The issue template includes questions and instructions to scope the intended audience(s) for the enablement activities, learning objectives and priority. It also includes questions to determine if Field Communications activities are also required. Please complete the required sections of the issue template in full, providing as much detail as possible. Note that ALL questions must be answered prior to Field Enablement triaging your request.

Once the request has been triaged by Field Enablement program managers (PM), the PM will conduct any additional exploration with the requester/DRI to determine a workback plan.

GTM Enablement Process

For larger, more complex initiatives that involve go-to-market (GTM), cross-functional alignment, Field Enablement has created the GTM Enablement Process.

This process outlines a prescriptive process, timeline, bill of materials and DRIs for Field Enablement, Partner Enablement, Field Comms and Partner Comms for high-, medium- and low-complexity initiatives.

If Field Enablement determines that your initiative requires a GTM Enablement Process, the Field Enablement team will open an issue and populate the appropriate deliverables and due dates. DRIs/Stakeholders will be added to the issue to provide input, answer questions and review.

Connect in Slack

To reach the Field Enablement team on Slack, use `field-enablement-team`

Key Programs

1. Sales Enablement
 - Enterprise Enablement
 - Commercial Enablement
1. Customer Success Enablement
 - Customer Success Manager (CSM) Enablement
1. Partner Enablement
 - Channel Partner Training, Accreditations and Enablement
1. Field Onboarding & Ramp
 - Sales & Customer Success Onboarding and Sales Quick Start (SQS)
1. Field Communications
 - field-fyi Slack channel
 - Field Update Tickers
 - Field Flash Newsletter
 - Field team All-Hands meetings
 - Monthly GitLab Release Email to Sales
 - Field Team Recognition Programs
1. Field Content
 - Highspot at GitLab
1. Field Manager Development Program

- Sales Manager Best Practices
- CRO Development Day

1. Selling Excellence

- Command of the Message (value-based sales messaging methodology) and MEDDPIC (strategic opportunity qualification)
- Field Functional Competencies
- Field Accreditation Program
- Effective Discovery
- Continuous Learning
 - Customer Success Skills Exchange
 - Field Enablement Spotlight Sessions
 - Sales Training Resources
 - Technical Questions for Sales
 - Level Up: Learning & Development Platform
- Executive Sponsorship Program

Field Enablement groups, projects, and labels

- Groups
 - Use the GitLab.com group for epics that may include issues within and outside the Sales Team group
 - Use the GitLab Sales Team group for epics that may include issues within and outside the Field Operations group
- Projects
 - Create issues under the "Enablement" project
- Labels
 - Team labels
 - field enablement - issue initially created, used in templates, the starting point for any label that involved Field Enablement
 - FieldOps - label for issues that we want to expose to the VP of Field Operations; these will often mirror issues with the FE priority::1 label
 - Stakeholder/Customer labels
 - FE:CS enablement - label for Field Enablement issues related to enabling Customer Success (CS) roles
 - FE:sales enablement - label for Field Enablement issues related to enabling Sales roles
 - FE:partner enablement - label for Field Enablement issues related to enabling Partners
 - Initiative labels
 - field accreditation - label for issues related to /handbook/sales/training/field-certification/
 - field communications - label for items that include work by/with the Field Communications team within Field Enablement
 - field events - label for Field Enablement-supported events (e.g. QBRs, SKO, President's Club, etc.)
 - force management - label for issues related to Force Management engagement
 - vff - label for Value Framework Feedback
 - vff::new - starting point for Value Framework feedback
 - vff::accepted - Value Framework feedback that will be actioned on
 - vff::deferred - Value Framework feedback that will be deferred until more information is gathered
 - vff::declined - Value Framework feedback that is declined (no action will be taken)

- lxp - label for GitLab Learning Experience Platform
- sales onboarding - label for issues related to sales/field onboarding
- QBR - requests from Sales QBRs
- FE: Revenue Programs - label for issues related to Field Enablement-led pipeline growth & acceleration programs
 - sales enablement sessions - label for weekly virtual sales enablement series
 - sko - label for issues related to Sales Kickoff
 - status:plan - used in conjunction with sales enablement sessions to indicate when a session topic has been prioritized but not yet scheduled
 - status:scheduled - used in conjunction with sales enablement sessions to indicate when a session topic has been prioritized and scheduled
 - strategy - plans, methods, or series of maneuvers or stratagems for obtaining specific goals or results
- Status labels
 - FE status::triage - assigned to new requests before priority status is determined
 - FE status::wip - work in progress that has been accepted and assigned to a DRI
 - FE status::backlog - things in the queue not currently being worked
- Priority labels
 - FE priority::new request - label for new requests that have not yet been prioritized
 - FE priority::1 - work that directly supports an OKR
 - FE priority::2 - work that does not directly support an OKR but has a large impact on the field team
 - FE priority::3 - work that does not directly support an OKR and has a low to medium impact on the field

Field Enablement Issue Boards

Primary

- Field Enablement Prioritization Board

Other

- Field Enablement Programs Board
- Value Framework Feedback (VFF) Board
- Sales Enablement Sessions Board
- Customer Success Skills Exchange Board
- Sales & CS Onboarding Board
- Partner Enablement Board
- Commercial Sales Enablement Board

SECTION: sales/field-operations/field-enablement/executive-sponsor-program.md

The Executive Sponsorship Program aims to grow our relationships with senior-level buyers and champions at our top customers, expand engagement to promote enterprise-wide platform adoption, and take a customer-centric approach to solving our customers' most challenging business problems

Executive Sponsorship Program Vision & Goals

This program presents a real opportunity to make customer centricity a habit

Build Deeper Relationships

By thoughtfully mapping our Executive Sponsors, Field Leaders, and Account team members to key customer personas and engaging regularly.

Continuously learn from our customers

By engaging in cooperative account planning, success planning, and disciplined opportunity management and Executive Sponsor advocacy.

Make our customers successful

By systematically removing roadblocks and activating all GitLab functions to deliver measurable customer business outcomes.

Success goals and measurement

We have three main areas of focus (1) relationship strength, (2) net promoter score, (3) platform adoption.

Our KPI(s) are relationship score, which is based on the influence, sentiment, strength and engagement activity of the account; net promoter score based on satisfaction and likelihood to recommend, the number of roadblock removed and 2 public customer references annually; platform adoption through number use cases fully adopted, time to value and net ARR Growth.

We will measure the success of our KPIs through relationship mapping and account planning (monthly), NPS and qualitative survey feedback (quarterly) and product usage as well as account health and SFDC data.

Account & Sponsor Selection Process

Account selection for the Executive Sponsorship Program will happen annually and focuses on accounts with a combination of high customer strategic value to GitLab, GitLab's ability to provide high strategic value to the account, as well as account health and propensity to churn.

Sponsor selection takes into account the accounts' strategic, long term needs and pairs them with our sponsors' capabilities and areas of expertise. We also consider executive compatibility, cultural fit, and pre-existing relationships.

Ultimately our aim is to identify the best fit for both parties, and allow our sponsors to really focus on their relationships with their accounts. To that end, we target a maximum of four assigned accounts per Sponsor on an annual basis.

Once selected, Sponsors are to be engaged for a minimum 1 year commitment to their assigned accounts.

Short listed accounts and sponsor pairings are presented to the CRO Leadership team for review prior to the accounts being confirmed and onboarded to the program.

Roles & Responsibilities

CEO & CRO

Validate and reinforce the program expectations. Drive accountability for Executive Sponsors and Account Team Leadership in support of the program goals.

ESP Program Manager

Own and execute the operating cadence, facilitate Account Team and Sponsor engagement, measure success, iterate on the program, and ensure that the goals are exceeded.

Account Team

Own and execute all account planning, customer success planning, and related customer activities on the operating cadence.

Executive Sponsor

Act as an advocate and amplify the voice of the customer and Account Team throughout GitLab. Regularly engage senior-level customer contacts (formally and informally) to deliver industry and business strategy insights.

Operating Cadence

Weekly

1. Action Planning execution and reviews (asynch)
2. Customer engagement (account teams)

Monthly

1. Account team and Exec Sponsor account planning session
2. E-Group and CRO LT program update

Quarterly

1. ESP Forums
2. Program scorecard update
3. NPS and qualitative survey feedback
4. Customer EBRs (as necessary)
5. Minimum of 1 informal virtual or in-person touchpoint between Sponsor and key Customer contacts

Annually

1. Review program impact and funding model
2. Reassess tier 1 accounts and sponsor mapping
3. Consider additional tiers or creation of a self-service ESP model
4. Minimum of 1 face-to-face Sponsor & Customer meeting

How to work with us

Engage with the Executive Sponsorship program team by connecting with us on Slack, use

SECTION: sales/field-operations/field-enablement/field-team-recognition.md

Why Recognition?

Why is recognition so important? Research shows that gratitude fundamentally alters our brain chemistry and primes us for more compassion and happiness.

When it comes to work, Harvard Business Review shares that gratitude can help improve coworker relationships, increase perseverance through difficult tasks, and make teams more collaborative. Specifically:

- 1. Improved mental wellness
- 1. Resilience to stress
- 1. Helps with team bonding
- 1. Positively impacts our ability to make hard decisions and express self-control
- 1. Increased retention
 - 63% of employees who are recognized are very unlikely to look for a new job (source)
- 1. Increased trust
 - 50% of employees believe being thanked by managers not only improved their relationship but also built trust with their managers/executives (source)

It's important to note that these results rely on a steady gratitude practice over a longer period, which means we must make recognition a daily practice for our teams.

Quarterly MVPs

The Quarterly MVP (most valuable person) program recognizes Field team members who have excelled in a given quarter · not only in revenue-generating activities like closing big deals, but also in exhibiting great behaviors and setting a positive example for other team members.

The program recognizes one MVP per team (10 total) each quarter.

- 1. AMER/PubSec Sales MVP
- 1. APJ Sales MVP
- 1. Customer Success Manager / Renewal Manager MVP
- 1. EMEA Sales MVP
- 1. Enablement MVP
 - 1. Eligible teams: Field Enablement AND enablement as a motion (GitLab team members who are enabling the Field and/or customers)
- 1. Global Ecosystem & Professional Services MVP
- 1. High-Velocity Sales (SMB + FO) MVP
- 1. Revenue Strategy and Operations (RSO) MVP
- 1. Solution Architect MVP
- 1. Cross-Functional MVP
 - 1. Eligible teams: Any team outside of the Sales division (ex. Product, Marketing, Legal, Finance, etc.)

MVPs are recognized by the CRO on the WW Field Org Call (and/or in an asynchronous Slack post based on meeting scheduling) and they can enjoy a recognition dinner to celebrate their accomplishments with family and friends.

Team members can only win the MVP title once in a fiscal year. We reserve one of the six MVP seats at President's Club for this program, meaning CRO LT will select one Quarterly MVP from the pool of all Quarterly MVPs in a fiscal year to fill a Club seat each year.

Selection Criteria

MVPs are selected by their associated CRO leaders. There is no set criteria to qualify, but leadership teams are provided quantitative and qualitative sample criteria to assist in making their selection. The nomination must tie the team member's accomplishments back to at least one of the three FY26 company objectives.

Quantitative

- 1. Net ARR - Recognize a big deal and how we got there
- 1. New Logo - Highlight the steps that were taken to land a new win
- 1. Pipe Gen / Forecast Accuracy - Recognize someone who is excelling in operational rigor

Qualitative

- 1. Effort - Recognize someone who went above and beyond on a project
- 1. Collaboration - Recognize someone who brought a team together to achieve strong results
- 1. Values - Recognize someone who truly lived GitLab's CREDIT values

Quarterly MVP Process and Timeline

- 1. [2 weeks before quarter close] Field Comms opens an issue reminding CRO leaders of the due date to select MVPs and sample criteria.
- 1. [3 weeks after quarter close] Segment leaders' directs provide the names of their MVPs in the issue along with a brief (3-4 sentence) description of why this individual was selected.
- 1. [4 weeks after quarter close] CRO leaders to work directly with their leadership teams to identify one winner from their org along with a brief (3-4 sentence) description of why this individual was selected.
 - 1. Sales Strategy can be tapped to provide data if applicable.
 - 1. Note: Can be done as a part of the Leadership QBRs.
- 1. [4 weeks after quarter close] CRO LT identifies the cross-functional MVP. A delegate from the CRO LT provides a brief (3-4 sentence) description of why this team member was chosen.
 - 1. Note: This can be done as a part of the CRO QBR.
- 1. 5 weeks after quarter close] CRO recognizes Quarterly MVPs on the [WW Field Org Call.
- 1. [5 weeks after quarter close] e-Cards send from CRO including details about recognition dinner
- 1. 5-6 weeks after quarter close] MVPs recognized in the next-available [Field Flash

Quarterly MVP Recognition Dinner

As part of this initiative, Quarterly MVPs are able to expense a meal up to \$250.00 USD within the same quarter they were selected in. For example, if a team member is selected as a

Quarterly MVP in November, they must expense their meal before the end of Q4 (the last day in January). Please submit your meal expense in Navan and in the description field link to this section of the handbook for approval.

The \$250.00 USD is reimbursable for a meal only, other items do not qualify.

Additional Resources for Recognition

You can find more guidance on recognition and what is "recognition worthy" at GitLab in this handbook page.

Some additional resources include:

1. The Positive Power of Gratitude for Remote Teams - Kona Blog

SECTION: sales/field-operations/field-enablement/gtm-enablement.md

This page defines the GTM Enablement motion and how it aligns to current processes here at GitLab. The GTM Enablement function is designed to ensure that new products, SKUs, and offers are supported effectively and efficiently as they launch to field teams and ultimately go to market. This framework outlines the processes and standards necessary for successful GTM enablement launches, aligning and integrating closely with both the New Product Introduction (NPI) process and the Field Enablement team.

This framework standardizes the approach to GTM enablement across different product launches and offerings and reconciles related frameworks, including:

- New Product Introduction (NPI) Process Criteria
- Field Enablement High-Complexity to Low-Complexity GTM framework
- Field Communications Tier 1-5 model
- Product Marketing Tier 1-3 model
- GTM Revenue Play criteria

Roles & responsibilities across GTM motion

The New Product Introduction (NPI) SteerCo: Assesses and approves the launch of the NPI process based on business cases presented by DRIs. These business cases must address product functionality, target market, value proposition, and financial opportunity. Once the SteerCo decides to proceed, they commit to a scope & launch timeframe (Step 4 in NPI Process: Planning Phase).

The NPI DRI drives the feature or service strategy and is the primary business owner. This is the person requesting a new product, service, or SKU. The person is responsible for delivering the initial business plan, and ensuring that the launch meets business goals.

The NPI Program Manager coordinates and directs the multiple parallel work streams required by the NPI process. In some cases, the DRI and the Program Manager may be the same person.

GTM Enablement: Generally, GTM Enablement leads the land and adopt strategy for net-new product

and initiative launches at GitLab. This function works closely with the Field Communications team to land initiatives in the field. This team is responsible for creating effective, timely, and easily consumable communications with the Field team (Sales, Customer Success, Channel, Alliances, Revenue Strategy, Operations & Enablement).

Key initiative areas are limited to:

- New product introductions
- New major SKU launches
- GTM Revenue Plays & Sprints
- Sales Offers
- Major Feature GAs & Product Updates
- CRO Annual Fiscal Year Launch

For this reason, GTM Enablement is one input into the NPI process. They provide guidance to the NPI SteerCo leads on what enablement considerations should be addressed when considering a launch timeline, including: potential enablement requirements, risks, and impact to field & partner teams. They also raise requirements from downstream workstreams as the main liaison between the field and launch teams. For launches that do not require the NPI process, GTM Enablement supports according to a tiered structure of effort.

Field Enablement: Focuses on the "Reinforce & Sustain" motion, cascading information and training to field sales and customer success teams around new launches and initiatives to ensure long-term adoption, sustainment, and integration of new products and initiatives. For more information about the Field Enablement team, visit the team handbook page.

GTM Enablement coordination goals

View list of cross-functional stakeholders with which this function collaborates. The GTM Enablement function adopts the same goals as the New Product Introduction team in orchestrating downstream:

Empower teams: Provide teams with a way to identify when & how we need to fix problems or adjust course.

Include all relevant expertise: Teams participate in decisions that need to incorporate their requirements. We create more robust & efficient solutions by leveraging teams' expertise.

Provide clarity and certainty: We document decisions, and communicate them widely and as early as possible. We lock down decisions at various points in the process so that teams have a shared understanding and can move forward.

Introduce process without being overly prescriptive: Provide process to address coordination gaps. Balance this with empowering individual team members with expertise to make decisions.

GTM Enablement Briefing Requirements

To launch the GTM Enablement process, a requester should fill out the intake form to determine level of effort and support.

The GTM Enablement DRI must be able to understand the following

1. Anticipated Impact to the field: How much does this change for them, how many does this

affect, relevancy to segments and partners, level of attention needed, and time needed from the field to reach the desired outcome. Additionally, what is the actual projected impact (revenue, strategic importance, and geographic relevance) so we can understand the scope and level of behavior change needed.

2. Level of leadership buy-in: The requester should provide a list of leaders who have reviewed and signed off on the project
3. Timeline confidence: The requester should present dates that have already been confirmed by initiative leads as non-MNPI and with high confidence
4. Related materials & cadences: Project issue or epic, Key project milestones, Draft Program tracker, Plan for recurring async updates

Based on this information, the GTM Enablement DRI will assign a Support Tier: The GTM Enablement DRI will determine level of support that will be provided and anticipated outcome. Timelines associated with each Tier cannot be adjusted; instead the outcome will need to change to reflect the available timeline.

Downstream teams, in turn, should raise

1. Any internal factors (Field quiet periods, month/quarter/year end financial close, etc.) that create timing requirements
2. Any bandwidth constraints or gaps in support

For reference, in order to launch the NPI process, the NPI DRI must communicate

1. What we're launching: product features & functionality, service entitlements, or something else
2. Why we're launching: value proposition, strategic value, and scale of financial opportunity (understand that finance will not have built detailed models, but some financial justification must exist)
3. Who we're targeting: Ideal Customer Profile (ICP) and target market
4. When we need to launch: any internal (e.g. Field blackout periods, month/quarter/year end financial close, quiet periods, etc.) or external factors that create timing requirements
5. That we're able to launch: product development is sufficiently far along that it makes sense to start the process, and GTM teams have sufficient bandwidth to do the work in the required timeframe

GTM Enablement Operating Rhythm Overview

Phase 1: Briefing & planning

Phase 2: Project execution & launch

Phase 3: Feedback & initial results

Phase 1: Briefing & planning

1. GTM DRI briefed and determines tiered support based on initiative and field impact
2. Builds workback plan in collaboration with workstream leads for confirmation (NPI, PMM, and/or Sales Strategy)
3. Identifies cross-functional working group and aligns to open cadences set by initiative DRI (NPI, PMM, Sales Strategy)
4. Provides clear briefing to downstream teams for input and collaboration. Surfaces concerns

or requirements back to upstream teams.

5. Downstream teams inform their leadership and plan their reinforce & sustain motions by audience and desired impact

Phase 2: Project execution & launch

1. GTM DRI orchestrates launch and drives process
2. Maintains close coordination on decisions & steps that affect others
3. Delivers updates on progress & results to stakeholder groups upstream and downstream
4. FE DRIs collaborate on reinforcement & cascades. Raise concerns and create open feedback loop with downstream teams.

Phase 3: Feedback & initial results

1. GTM DRI delivers wrap-up & final results reporting
2. GTM DRI creates retro with FE teams. Participates in retros upstream & raises feedback from downstream
3. FE DRIs reinforce & sustain motions begin

Integration with the NPI & Field Enablement teams, activities, and processes

In this process, GTM Enablement is integrated as main liaison to field enablement for land & adopt motion.

NPI Planning:

1. Based on the process within the New Product Introduction (NPI) Handbook page. The NPI Program Manager communicates the plan & organizes logistics with the wider working group. This includes two key meetings:

Stakeholder kickoff (process-focused): Meeting with all NPI stakeholders to launch the process: share overview of timeline, milestones, what success looks like, expected challenges.

Product review (product-focused): Product Manager to present overview to all stakeholder teams. This is a deeper dive than stakeholder kickoff, and more focused on the product. GTM teams use this information for additional due diligence & clarity, and as an input to start developing their own strategies and roadmaps. (e.g. Deal Desk may have questions around usage boundaries, approval processes for non-standard steps, etc.)

These meetings are a chance for the various stakeholders and Subject Matter Experts (SMEs) in the organization to raise risks/issues sooner rather than later. The SMEs may ask questions that can't be answered yet; that's an opportunity for further discussion later in the project. For stakeholders this is a chance to understand what will be expected of them in the coming weeks/months.

2. NPI Program Manager completes GTM Enablement intake issue to begin the briefing process. The intake issue reflects the briefing requirements outlined in the NPI process alongside GTM Enablement requirements. Enablement DRI schedules a briefing session depending on the contents of the issue.

3. GTM Enablement DRI is briefed and determines tiered support based on initiative and field impact. Provides initial feedback or considerations to NPI lead that may affect timeline or impact.

4. GTM Enablement DRI and Product/Product Marketing Lead align on approach & launch timeline as well as MNPI restrictions. (NPI-s might be limited access in which case, details would not be

open to all team members only those that need-to-know).

GTM Briefing & Planning:

1. GTM Enablement lead participates in topical deep dives, and builds a workback plan in collaboration with NPI workstream leads for confirmation. They also identify the downstream cross-functional working group that needs to be informed.
2. GTM Enablement DRI aligns to open cadences set by initiative DRI and workstream leads (NPI lead, PMM lead, Sales Strategy, FE leads)
3. GTM Enablement lead schedules and provides a briefing to FE leads once any MNPI restrictions are lifted.
4. FE leads inform their leadership and plan their reinforce & sustain motions by audience and desired impact.
 1. This action reflects the NPI process approach where workstream leads are empowered to deliver and manage their work accordingly. A framework will be provided that allows flexibility for these SMEs to determine the best path for reinforcement & sustainment.
 2. FE leads and the GTM FE DRI check-in async or in established team cadences to ensure that work is on track against the defined timeline. The GTM FE DRI should partner with teams to facilitate decision making and problem solving where needed. NPI projects can be highly complex and the teams will need to discuss challenges regularly.
5. The GTM FE DRI will surface challenges covered with FE leads to the NPI team for consideration, action, or as part of the retrospective process.

GTM Execution and Launch:

1. GTM FE DRI orchestrates the launch and drives process, using packaged enablement templates defined by cross-functional teams and collaborating closely with Field Enablement to ensure a seamless transition.
2. Similar to NPI process: Both workstreams maintain close coordination on decisions & steps that affect others
3. GTM FE DRI Delivers updates on progress & results to stakeholder groups upstream and downstream
4. FE DRIs collaborate on reinforcement & cascades. Raise concerns and create open feedback loop with downstream teams.

Post-Launch Evaluation:

1. GTM Enablement delivers closed-loop reporting on all enablement activities and engagement aligned to the GTM Enablement Framework.
2. GTM Enablement participates in retrospectives upstream and downstream (merging where possible) with various working groups and engages in feedback loops to assess the launch's success and identify areas for improvement, ensuring continuous enhancement of the NPI and enablement processes.
3. Field Enablement reinforce & sustain motions begin.

Onboarding New Team Members

- Successful onboarding plays a critical role in getting your team member on the path to success! Before a new team member joins, please review the onboarding process so you know what to expect and can help set expectations with your new hire! The onboarding page has a lot of great resources including links to the Sales specific onboarding issue.
- For more information on the onboarding process, please feel free to check out the Onboarding Education Session and AMA we had with Sales leaders on June 3, 2020:

Review Account Plans

- Regularly review account plans with your team. Quarterly reviews of the account plan(s) are recommended. For more information, review the Account Planning Coaching page.

Review Command Plans

- Regularly review an aggregate of your team's Command Plans in this Salesforce Report. This will allow you to scan your team's progress on both a macro and micro level and identify possible information gaps or obstacles that can hinder an opportunity.

Opportunity Coaching

- Check out the Opportunity Consults Handbook page
- Regularly leverage the Command of the Message and MEDDPICC Sales Manager Materials (internal only).

Strategic Coaching

- Celebrate your wins and socialize success stories to help with motivation across teams
- Continue to leverage your fellow managers for feedback and input on what is working well
- Lead with "Why" in team and 1:1 rep discussions (GitLab has done a good job of explaining "Why" for GitLab organizationally, but managers will want to ensure that daily interactions lead with "Why" for teams and individual reps)
- Enable partner sellers to jointly run deals leveraging Command of the Message and MEDDPICC
- Conduct Command of the Message and MEDDPICC refresh sessions covering 1-2 slides/tools per week

Career Development

- Leverage GitLab's Career Development resources

Performance Management

- Performance Assessment and Succession Planning
- Performance Management Overview for Sales Managers (May 2020, 18 minutes, private)

Leadership Handbook

- For additional leadership resources, check out the Leadership handbook

SECTION: sales/field-operations/gtm-resources/_index.md

Reaching the Teams (internally)

Issues and Projects

- Sales - general sales related needs & issues
- Marketing - all issues related to website, product, design, events, webcasts, lead routing, social media and Developer Relations
- Customer Success SA Triage - technical pre-sales requests
- Requesting Internal Support in Salesforce
- HelpLab (through Okta) - Salesforce bug fixes and feature requests (IT)

Slack: A short list of the helpful Slack channels

- customer-success
- sales-support
- sdrglobal
- smb
- mktgops
- ithelp
- marketingprograms
- marketing
- community-programs

Glossary

| Term | Definition |

| ---- | ----- |

| Accepted Lead | A lead a Business Development Rep or Sales Development Rep agrees to work until qualified in or qualified out |

| Account | An organization tracked in salesforce.com. An account can be a prospect, customer, former customer, integrator, reseller, or prospective reseller |

| AM | Account Manager |

| AE | Account Executive |

- | APAC | Asia-Pacific |
- | BDR | Business Development Representative |
- | CAM | Channel Account Manager |
- | CS | Customer Success |
- | BDR | Business Development Representative - focused on outbound |
- | EMEA | Europe, Middle East and Africa |
- | EULA | End User Licence Agreement |
- | High intent | an event, webcast, demo that is a strong indicator of purchase or evaluation |
- | Inquiry | an Inbound request or response to an outbound marketing effort |
- | IQM | Initial Qualifying Meeting |
- | LATAM | Latin America (includes all of Central & South America) |
- | MQL | Marketo Qualified Lead - an inquiry that has been qualified through systematic means (e.g. through demographic/firmographic/behavior lead scoring) |
- | MVC | Minimal Valuable Change (not Model View Controller) |
- | NCSA | North, Central, South America (legacy region being phased out) |
- | NORAM | North America |
- | Qualified Lead | A lead a Business Development Rep or Sales Development Rep has qualified, converted to an opportunity and assigned to a Sales Representative (Stage 0-Pending Acceptance) |
- |
- | RD | Regional Director |
- | ROW | Rest of World |
- | SAE | Strategic Account Executive |
- | Sales Admin | Sales Administrator |
- | Sales Serve | A sales method where a quota bearing member of the sales team closes the deal |
- | SAO | Sales Accepted Opportunity - an opportunity Sales agrees to pursue following an Initial Qualifying Meeting |
- | SDR | Sales Development Representative - inbound focused |
- | Self Serve | A sales method where a customer purchases online through our web store |
- | SLA | Service Level Agreement |
- | SQO | Sales Qualified Opportunity |
- | CSM | Customer Success Manager |
- | TEDD | Technology, Engineering, Development and Design - used to estimate the maximum potential users of GitLab at a company |
- | UPA | Ultimate Parent Account |
- | Won Opportunity | Contract signed to Purchase GitLab |

Customer Lifecycle

A customer lifecycle is a term used to track the different milestones prospective customers go through as they learn about GitLab and interact with our sales and marketing teams. Each subsequent milestone is a subset of the previous milestone, and represents a progression from not knowing GitLab to being a customer (and fan) of GitLab.

At the highest level of abstraction, we use the terms lead, opportunity, and customer to represent a person's progression towards becoming a customer of GitLab. Those three terms also correspond to record types in salesforce.com.

Lead => Opportunity => Customer

Please see below for a high-level overview of the Customer Lifecycle at GitLab. This lifecycle

is created through the lens of Salesforce data, and it is cross-functional - covering inputs from Sales, Marketing, and Finance.

In addition, these are the more granular steps within the above milestones that are used to track the above process with more precision.

They are tracked as follows:

Funnel stage	Record Type	Status or Stage
Raw	Lead or Contact	Raw
Inquiry	Lead or Contact	Inquiry
Marketo Qualified Lead	Lead or Contact	MQL
Accepted Lead	Lead or Contact	Accepted
Qualifying	Lead or Contact	Qualifying
Qualified	Lead or Contact	Qualified (converted)
Pending Acceptance	Opportunity	0 - Pending Acceptance
Sales Accepted Opportunity	Opportunity	1 - Discovery
Sales Qualified Opportunity	Opportunity	2 Scoping - 6 Awaiting Signature
Customer	Opportunity	Closed Won

When going from Qualifying to Qualified Lead the lead is duplicated to an opportunity, and the lead is set to qualified and not being used anymore.

Lead or Contact: lead--contact-statuses

Opportunity: opportunity-stages

Sales Accepted Opportunity: criteria-for-sales-accepted-opportunity-sao

AE Sales Capacity

The following calculation is used to measure/plan for sales capacity.

This is a calculation only and should be used to set goals and plan.

Sales capacity is an individual metric that is based on several factors (lead source, tenure of salesperson, competitive landscape, geographic location, rep productivity) not included in the formula below:

- Days to close - 180 days
- Months to close - 6 months
- Win rate - 33%
- Months to lose - 3 months (half of months to close, expecting constant fallout)
- Months on average - 4 (33.3% times 6 and 66.7% of 3)
- Capacity Goal (active opportunities in Stage 1-6) - 40 opportunities
- SCLAU per month - 10 (40 opportunities / 4 months)

How Tos & Setup

Events

Conferences, Field Events, Owned Events

Event details are owned by the Field Marketing Team with execution of system tracking, landing pages, reminders, and follow up completed by Marketing Program Managers. See the events handbook page for more details.

How to do Step 1 cleanup of lead lists before passing to MktgOPS

List cleaning instructions

Record Management

MQL Definition and Scoring

A breakdown of MQLs and lead scoring can be found in the marketing operations handbook.

Segmentation

Sales Segmentation is based on Account Demographics: Max Family Employees, which is the maximum of all Account Demographics: Employee Count values from the accounts within this hierarchy.

- The Account Demographics: Employee Count can differ from one account to another within a hierarchy, but the Account Demographics: Max Family Employees value will be the same for all accounts within a hierarchy.
- If the employee count is unknown or blank and manual research cannot confirm, Sales Operations will mark the account as SMB with a placeholder of -1 employees in the Number of Employees: Manual - Admin field in order to get a Territory to populate and assign the account to an account rep.

We use a hierarchy structure to determine what the number of employees is for the account. The hierarchy of our data tools on Accounts as they relate to the Account Demographic Max Family Employees count is shown below.

1. Number of Employees: Manual - Admin
2. [ZI] Employees (ZoomInfo)

LinkedIn/Websites are not designated data sources.

If a prospect communicates a different employee size from Zoominfo that conflicts with segmentation of what is determined by Zoominfo then SalesOPS should be notified via chatter on the record with documented proof from the prospect. Admins have the ability to override the Employees and bypass this hierarchy but only during our sales segment review process.

Mid-Market accounts can be managed either as a MM Key Account or belong to a MM Territory AE.

Sales Segment and Hierarchy Review Process

In order to address issues when it is believed that the employee count, account address and/or account ownership is incorrect follow the Sales Operations process to have the Account Demographics fields updated and the account will be reviewed per the Rules of Engagement.

Provide the URL to validate the request. Examples of valid sources include but are not limited to financial filings, newspaper articles, reports directly from the company. During the Sales Ops review period it is at the discretion of the Sales Ops team to have the Total Employee count updated or to have it remain the same.

If the number of employees, according to our sources based on our hierarchy as described in Segmentation has changed, the Sales Ops team will automatically update the accounts segment and follow the Rules of Engagement account review process.

Territories

Territory tables are maintained within the Sales Handbook.
Both maps & written tables are kept up to date with all pairings and territory assignments.
Our Traction Complete routing workflows and SFDC reports are based on these tables.

The Location of each account used to determine its Sales Territory is determined by a combination of 3rd party data systems (Zoominfo, Zuora Billing Accounts) and manual overrides. This address is stored in "Account Address (fka Billing Address)" on the Account object in Salesforce. This field inherits data from other fields in the following priority:

1. Admin Manual Override (if present)
1. Zoominfo
1. Zuora Billing Account

Industries & Sub-Industries

GitLab recognizes the grouping of companies that are related based on their primary business activities in the following ways:

1. Account Hierarchy Industry
 - This field is the chosen industry value for an entire account hierarchy. It is the industry value that shows up on the most account records within the hierarchy.
 - All accounts within a hierarchy will share the same Account Hierarchy Industry value.
 - This field is used for account routing and for LAM calculations.
1. Industry
 - This is the account level of classification of industry
 - A list of GitLab's Industry values can be found [HERE](#)
1. Sub-Industry
 - Sub-Industry is a more granular/detailed classification of Industry.
 - A list of GitLab's Sub-Industry values can be found [HERE](#). This list aligns with the industries used by DemandBase

The Industry and Sub-Industry of each account is determined by a combination of 3rd party data and manual overrides. The information is stored in the Industry and Sub-Industry fields on the Account object in Salesforce and inherit data in the following priority:

1. Admin Manual Override
1. Zoominfo mapping to Industry and Sub-Industry

Industry & Sub-Industry Enrichment Cadence

The Industry and Sub-Industry data on an Account is enriched and updated automatically on a daily cadence.

Account Ranking for Enterprise Sales

Account Ranking in SFDC allows sales to focus and prioritize activities for their target customers, easily nominate or flag accounts for both marketing support and ABM campaigns. Account ranking would also be leveraged to drive discussions during QBRs.

In order to rank accounts each Enterprise Sales rep would update the 'Account Rank' field located in Account Rank Information section and can also add the Account Rank Notes. The Account rank should be added at the Ultimate Parent Account level and to not more than 50 Accounts.

The Account Ranking Guide can be used to help the Strategic Account Executive focus on a cadence to target each Account Rank.

Definitions for Enterprise Account Ranking

- Rank 1 highest priority accounts that require both sales focus, sales development, and marketing support in the next quarter. These are the accounts reviewed in QBR's each quarter by sales and include both Land and Expand accounts.
- Rank 2 accounts that match our ICP and should be a focus for sales and marketing in the current FY but are not a Rank 1 account. Should include both Land and Expand.
- Rank 3 don't match our current ICP but are strategic for sales & GitLab in the region. Should include both Land and Expand

Account Ranking for Commercial Sales

It is a requirement for the Commercial Sales Team to tier their accounts using the fields on the Account Object. This helps prioritize the accounts to go after when prospecting for new or expansion. Please see the Account Ranking section of the Commercial Sales handbook for definitions specific to SMB and Mid-Market AEs.

Account Ownership, Opportunity Ownership & Order Type Rules of Engagement

Go to Market Rules of Engagement

Account Sources, Routing and Other Requirements

Website

Since an accounts Website is a key data point in determining the accounts segment and the accounts address and thus the resulting territory and ownership, the website on an account in salesforce is a required field on the layout.

In the event that the account is linked to an individual that uses a free email domain (or other similar cases) than the value of [Blank] should be used as the value for the accounts website.

Initial Source

A breakdown of Initial Source can be found in the marketing operations handbook.

Lead & Contact Statuses

A breakdown of lead and contact statuses can be found in the marketing operations handbook.

Routing

Routing is determined by Sales Segmentation, Region, and Global Account Ownership. Routing through Lean Data when a record has no less than 30 points, this means that they have engaged with at least one piece of content or visited a high value page.

Routing & Traction Complete

Traction works within the Salesforce ecosystem and is the primary tool leveraged to manage all routing workflows.

The Marketing Operations team is responsible for ongoing management and customizations within Traction.

For more information see the dedicated Traction Complete page.

Contact Requests

All Contact Us requests must be followed up within one (1) business day Service Level Agreement (SLA) and follow up must be tracked as an activity on the record within Salesforce.

U.S. Public Sector: Routed to the U.S. Public Sector Inside Sales team.

- GitLab Public Sector Rules of Engagement

Professional Service Requests

Professional Service Requests are treated like a Contact Us request and followed up within one (1) business day Service Level Agreement (SLA).

Follow up must be tracked as an activity on the record within SFDC.

Requests submitted through the professional services page will be routed following Global Account Ownership rules.

Notification of form submission will be sent to the Strategic Account Executive (SAE) and Sales Development Representative (SDR) as well as Customer Success manager.

Initial response to form submission is the responsibility of the Account Owner (i.e. SAE).

Trial Requests

Trials can be requested through web form or within product UI for both self-managed or SaaS.

Default trial length is thirty (30) days, but can be manually extended by the GitLab team for both the SaaS and self-managed products. Trial extensions for the SaaS product use the planchangerequest issue template found in the dotcom Group, internal-requests project.

Extending self-managed trials requires access to the internal Licensing App.

Universities

United States

- Public University = Public Sector team
- Private University = Public Sector team

Rest of the World

- Any University = appropriate regional Business Development Representative

Lead and Contact Record Ownership

Contact Ownership follows the rules as laid out below. Contact ownership cannot be updated as it is maintained by an automated process in Salesforce which means that the ownership will revert in the nightly run.

- Large Accounts
 - BDR (If present, otherwise AE)
 - If AE, should own all contact follow up then the BDR Prospecting Status needs to be in Restricted.
- MM Accounts (Sales Segment = MM)
 - Customer Accounts and BDR Prospecting Status not equal to Actively Working
 - AE, (Actively Working, BDR)
 - Non-Customer Accounts
 - BDR (If present otherwise AE)
- SMB Accounts (Sales Segment = SMB)
 - AE

AE's should use the following views to manage their contacts:

- My MQLs(showcases any contacts in your name that are in MQL status. You should move these to accepted when you're working them. Other statuses can be used to showcase you've seen the MQL and dispositioned accordingly. These should not stay in MQL status)
- My Contacts w/ new LIM(showcases contacts in other statuses -not MQL - with a new Last Interesting Moment)
- My Contacts in Qualifying(showcases contacts who have been in sequence and then engaged, should help with follow up)

When an BDR is assigned to an Account to support and assist with outreach, the BDR will be added in the BDR Assigned lookup field to the account in Salesforce.

This field then populates down to the related Contact records.

Only BDR team members are able to edit the BDR Assigned field. They are enabled to mass update the BDR assigned field based on public account views, enablement and support from their manager.

Records, both LEAD and CONTACT, need to be synced to Outreach to ensure email activity is properly mapped back to Activity History in SFDC.

The owner of the record in SFDC does not need to match the owner in Outreach.

Record Ownership and Record Visibility

In order to meet compliance standards our SFDC instance uses a private model. This private model allows for some records to be visible by all GitLab team members who use Salesforce, while other records may not be visible to them. Currently this is in place as it pertains to records owned by the Public Sector team. All salesforce records (leads, contacts, accounts, opportunities etc.) owned by the Public Sector team are only visible to other members of the public sector team and a group of supporting staff who have been reviewed and permitted to view these records. All other records (owned by non-public sector team members) maintain their standard visibility levels.

This is important as it relates to inbound records or accounts in a sales rep's name. If you believe you have been incorrectly assigned a record that should belong to the public sector team member please coordinate with your manager, the sales-ops team or a member of the public sector team to review the record.

Changing Ownership in Salesforce

Changing Account Ownership in Salesforce

Only Sales Systems, Sales Operations and Channel Operations have the ability to change the account owner in Salesforce. This is to ensure that the Rules of Engagement are followed and to ensure that the account is assigned to the correct account owner based on Account Demographic outputs and parent/child association. If there is an issue with account assignment, follow the exception process outlined in the Account Ownership Rules of Engagement.

To request an update to the account owner, please tag @sales-support in Salesforce Chatter on the account record you are attempting to update.

- Note: Only approved Profiles (those noted above) will have the appropriate buttons on their layouts in SFDC to change owners. The buttons auto-select the correct default behaviors when clicked.

Changing Opportunity Ownership in Salesforce

Only Sales Systems, Sales Operations, Channel Operations, Deal Desk, and Finance have the ability to change the opportunity owner in Salesforce. This is to ensure the Rules of Engagement are followed and opportunity assignment to the correct owner based on the corresponding Account Owner (see Opportunity Ownership for exceptions), Account Demographic outputs, parent/child association, and compensation plan. If there is an issue with opportunity assignment, follow the exception process outlined in the Opportunity Ownership Rules of Engagement.

To request an update to the opportunity owner, please tag @sales-support in Salesforce Chatter on the opportunity record you are attempting to update.

- Note: Only approved Profiles (those noted above) will have the appropriate buttons on their layouts in SFDC to change owners. The buttons auto-select the correct default behaviors when clicked.

Changing Contact Ownership in Salesforce

Contact Ownership follows the rules as laid out below. This contact ownership cannot be updated as it is maintained by an automated process in Salesforce

- Large Accounts
 - BDR (If present otherwise AE)
- MM & SMB Accounts
 - Customer Accounts
 - AE
 - Non-Customer Accounts
 - BDR (If present otherwise AE)

Changing Lead Ownership in Salesforce

Lead ownership is set by Traction Complete due to specific rules based on lead status, segment and by region/territory which may include round robin. Lead ownership changes are based on role permissions. Currently a lead owner can change the lead to a new owner. If the lead is owned by a queue, ownership can be changed by all SDRs and BDRs but should only be done if activity is going to be immediately placed on the lead and should be done as part of a specific account strategy. SDR/BDR Team Leads as well as SDR/BDR Leadership have expanded privileges that allow them to change ownership of leads not owned by queues (ex. a lead owned by an incorrect BDR).

The majority of leads are owned by the related status queue or the sales development team.

Default Ownership

- In the event that Ops encounters that there is not enough information to assign a record to a specific user in Salesforce it is to be assigned to the default user: Sales Admin. This user should only be used by ADMINS. Non-Admins should not be reassigning records to this user.

Before assigning to this user, admins should do their best to assign records to the actual users within Salesforce.

If you are unsure of who to assign it to please coordinate with the SalesOps Team.

This is also only a temporary solution until we have a more scalable solution in place that will reassign records to individuals who can and will actually be able to work records.

Record Creation in Salesforce

ACCOUNT records in Salesforce are created in a number of ways - list imports, mass creation screen flows, field event booth scans, research, networking, webcasts, content downloads. Ideally all ACCOUNTS exist in Salesforce and team members are only creating CONTACT records; however, if a connection is made at an event and follow up needs to be done prior to official event list upload occurs team members should do the following:

- Search Salesforce to be sure ACCOUNT does not already exist AND search using the person's email address to ensure duplicate record is not created
- Record does not exist:
 - Create Standard ACCOUNT type - required fields are Account Name & Account Type
 - Create Standard CONTACT type - required fields are Last Name, Account Name (use lookup tool to find ACCOUNT just created) & Initial Source (i.e. where is this name coming from Conference = Field Event, SDR Generated or AE Generated = regular networking event, etc)

- Be accurate where the name is collected from, Unknown is not acceptable.
- The Initial Source on a CONTACT record does not equal Source on an opportunity. Refer to Initial Source for guidance on why this is important.
- Record does exist:
 - If LEAD or CONTACT is unowned or "owned by Sales Admin, James Harrison or Chad Malchow", this record is adoptable by anyone - change Record Owner to your name
 - If LEAD or CONTACT is owned by a Sales Development team member, before reaching out Chatter on the record asking BDR/SDR to transfer ownership. Ownership must be transferred before reaching out to avoid confusion, cross-communication and/or multiple people reaching out to same contact.

When official event list import is completed the created ACCOUNT or CONTACT record will be appended with the additional data collected at the event.

If there are any questions or you need assistance, please ping Marketing or Sales OPS in Slack sfdc-users channel.

Best practices

1. Be as accurate with your data as possible.
If you do not have a Contact Phone do not substitute the Account Phone - Leave it blank on the Contact record.
1. Search the database for duplicates before creating new records.
1. When merging records, retain the Initial Source of the record that was created first.

Mass create contacts on opportunities with contact roles

This process is specific for the unique cases of creating totally new contacts for an account that also have to be associated with an opportunity.

An example of when to use this process is when you meet a number of new contacts at an account during a demo for a specific opportunity.

The process to create these contacts for that account and to have them related with that opportunity would be through the steps listed below or as demonstrated in this video:

1. Navigate to the Opportunity record in Salesforce that these contacts should be associated with
 1. Click on the button New Contacts & Opp Contact Roles
 1. Follow the screen flow and instructions for creating all contacts and associating them with the opportunity, providing all required and known information
 1. If there is additional information for any of the contacts that you have but you were not able to input the information via the screen flow, navigate to the contact(s) once the operation is complete and fill in any additional information you have for the contact(s)

It is important to note that by following this process that all contacts must meet the following criteria:

1. All of the contacts that are created are to be associated with both the account and opportunity for that opportunity record.
 1. All of the contacts are net new and do not exist within Salesforce already - as either contacts or leads.
 1. All of the contacts will be assigned a contact role on the opportunity.

1. There already is a primary contact, or one of the new contacts will be the primary contact on the opportunity.

Territories are assigned based on Sales Segmentation and routing for each type of inbound request is through Traction Complete.

LEAD/CONTACT Records with the Initial Source of GitLab.com are not to be engaged, prospected or targeted unless they have taken a handraising 'active' activity, such as Trial - Enterprise, Trial - GitLab.com, Contact Us, Demo, 'Webcast', 'Content' and/or engaged in Web Chat.

For information about GitLab's email policy and the types and number of emails we send, please see our Email Communication Policy.

Active vs. Passive

Initial Source cannot be used to determine if a lead is 'active' or 'passive' since the Initial Source is set upon first touch attribution; therefore, looking at the Last Interesting Moment field is the primary field used to begin determining if a record is actively being worked. Reviewing the Activity History in Salesforce is another factor considered when evaluating 'active' or 'passive'.

A LEAD or CONTACT is considered 'Active' if they have taken an Trial - Enterprise, Trial - GitLab.com, attended a high intent live webcast or demo and/or engaged Web Chat, these are all handraising 'active' activities.

These types of records are considered 'Active' for a minimum of 60 days from the date of the handraising activity.

For examp
