

icated regional team of Order Management Specialists.

During holidays, or when team members are on PTO, individuals located in a different region may step in to support and ensure appropriate coverage. This is reserved for End of Month/End of Quarter, or other times when the team is short-staffed.

Support will be provided based on the following business hours in the respective region. However, complex/non-standard opportunities that are submitted after 4:30PM local time may be reserved for the following business day.

Region	Standard Support Hours
APAC	9:00AM to 6:00PM (PST - Philippine Standard Time)
EMEA	8:00AM to 5:00PM (GMT)
AMER / LATAM	7:00AM to 5:00PM (PT)

Our regional teams do not operate on a 24/7 support model. If your opportunity or request is submitted after 4:30PM local time, or outside of standard support hours, it may not be reviewed until the following business day. The only exceptions for this are End of Month/End of Quarter. Support hours and availability will be shared in advance of high volume periods through field-fyi.

Regional Structure

As noted above, the GitLab Order Management team is supported by several key internal teams, including Deal Desk, Billing, and Fulfillment. For more information on the regional structure of each of those teams, please refer to their respective Handbook pages.

Communicating with the Order Management Team

- If support for an Opportunity or a Quote is required prior to submitting for Approval, always use the 'Request Support' workflow on the Opportunity Object to create a Case for the team you require support from (e.g. Deal Desk, Billing Ops, etc.) For general questions, please use the sales-support Slack channel.
- Please note that Cases are not required when submitting an Opportunity or a Quote for Approval. Once an Opportunity or Quote is submitted for Approval, the approving team is notified and an Approval Queue is managed by the team to support processing the Approval.
- If a Quote or an Opportunity is submitted for approval and additional information or action is required by the Order Management team, the supporting team will Chatter the rep on the Opportunity and leave any necessary notes in the Approval Comment.

If support for an Opportunity or a Quote is required prior to submitting for Approval, this can be requested on the Opportunity Object in SFDC, by clicking on the 'Request Support' button in the top right hand side of the page layout. Please reference the Requesting Internal Support section in the Handbook for detailed instructions.

For enablement on how to request support by creating a SFDC Case for Deal Desk or Billing, please reference the New Internal Support Request + Quote Approval Processes - 2024-11-21 in HighSpot.

Communication Best Practices

- Only @mention someone directly on a SFDC Case where they are the Case Owner. This ensures our team is working as efficiently as possible and that you are covered in Case the DD team member who replied first is unavailable.
- Direct Chatters on Account or Opportunities to team members will not create a Case in the Order Management teams' Queues, and therefore will not be prioritized. You may experience a significant delay in response, or no response at all. Please always use the 'Request Support' workflow on the Opportunity Object to create a Case for the team you require support from when a Case is required.
- If someone is working on a Case, they will continue to support until the Case is closed. If a Case has been resolved but needs further support from the supporting team, use the 'Request Support' workflow on the Opportunity Object to create a new Case. The owning team will determine if the resolved Case should be reopened, or if the newly created Case will be used instead.
- If you add any @ mention tag on an existing Chatter post on a Case by editing it, that action may not generate a notification. If you fail to @ mention someone in your comment, just @ them in the thread instead of editing the comment. Please always use the 'Request Support' workflow on the Opportunity Object to create a new Case when your request is not related to an existing open Case.
- Order Management team members monitor their respective Case Queues throughout the day.

Key Performance Indicators

1. Standard Opportunity Approval SLA

Opportunities will be reviewed for all booking requirements within 12 business hours of being Submitted for Approval (Stage 7 - Closing). Your opportunity will be Approved or Rejected by Order Management within 12 business hours of submission. Please note, ultimate closure of a deal is facilitated by the Billing team.

If there are missing booking requirements, or further confirmation is required from the Sales team, the Order Management specialist will tag you directly in Chatter to resolve any outstanding issues.

Please review our Sales Order Processing page for Opportunity Booking Requirements.

2. Regional Support Satisfaction

All regions will receive a Quarterly Customer Satisfaction survey at the beginning of each new quarter. Our team aims for a 92% satisfaction rating for their supported region. This survey is a valuable tool to provide feedback on areas of improvement related to the Quote to Cash lifecycle.

Results from the survey will be used to evaluate team member performance and to identify areas for improvement.

Measuring Regional Support Satisfaction:

- A positive satisfaction rating is determined by measuring the ratio of positive responses to

the question: "How would you describe the level of support you received from Deal Desk during Q1?"

- Available responses include:

- Excellent
- Good
- Neutral
- Poor
- Very Poor

- Satisfaction rating is determined by the percentage of Excellent, Good, and Neutral responses, as compared to the total number of responses. The outcome in percentage form is the Regional Support Satisfaction rating.

3. Opportunity Approval Accuracy and Efficiency

Our team aims for an Approval Accuracy of 95% or greater. Meaning, of all opportunities that we submit to Billing for final review / approval, 5% or less will be rejected for missing booking requirements.

Order Management Specialists will be responsible for taking action on feedback received in Quarterly CSAT surveys, as well as improving processes related to common opportunity rejections, whether it be through documentation, training, or system improvements. The goal is to reduce time to approval, improve efficiency and maintain a high level of accuracy for all approvals.

Key Performance Indicators: Results

To review quarterly KPI results, see: Deal Desk & Order Management KPI - Results

Opportunity Approval Process

Order Management reviews every Sales Assisted opportunity prior to booking. All opportunities must meet our standard opportunity booking requirements. An opportunity will be rejected if it is missing components necessary for booking.

Opportunity Prioritization

All opportunities in the Approval Queue are prioritized based on the following:

1. Start Date
2. Revenue Generation
3. Order of Submission

The Order Management team will make every effort to ensure all opportunities submitted at Month End and Quarter End are reviewed and approved in the same month. Please do not tag for urgent review during End of Month or End of Quarter.

Escalation Path for Opportunity Review

Approvals that are urgent, customer impacting, or critical to business may be prioritized upon request. If the opportunity has been submitted after Standard Support hours, you may escalate

the opp for a different regional team to review in the sales-support Slack channel. You may also tag regional Deal Desk Managers for review and assist in delegating the case.

Opportunities raised for urgent review must be business critical. Opportunities that are routinely escalated out of individual convenience instead of legitimate urgency will be addressed with Sales Management.

License Delivery Review Process

As of FY23, the Order Management team confirms license delivery on all newly Closed Won self-managed deals.

Background

The License Delivery Review Process is a new process created to ensure that all self-managed deals result in license fulfillment. The goals of this process are to (1) Improve customer satisfaction by ensuring licenses are delivered in a timely manner, (2) Improve Sales efficiency by reducing time spent by sellers to chase license delivery, and (3) Prevent revenue recognition issues caused by delayed license delivery to customers.

In Scope:

- The Order Management team will review each Closed Won, sales-assisted self-managed deal to ensure initial license delivery after opportunity closure.
- If the Order Management team determines that the license was not delivered after initial opportunity closure, the team will open a ticket with Support Engineering to request manual delivery of the license to the customer.

Out of Scope:

- The Order Management team is not customer facing, and will not speak directly to the customer regarding order or license issues.
- The goal of this review is to ensure initial delivery is correct. The Order Management team will not handle requests relating to:
 - SaaS entitlements

- Self-Managed licenses that fail when applied to the customer's instance
- Self-Managed licenses that were delivered, but are not accepted by the GitLab instance
- Self-Managed license split requests
- Self-Managed license re-send requests
- Self-Managed additional license send requests

For assistance with Out of Scope license requests, please open an Issue with the Support Engineering Team.

Process Workflow

1. Order Management team member approves opportunity
2. Billing team member approves opportunity, resulting in Closed Won stage.
3. Each day, Order Management team members review regional self-managed opportunity report. For each newly closed self-managed opportunity, Order Management reviews license inbox to determine whether license was delivered via automation.
4. If a license has been delivered, Order Management populates delivery date into "License Delivery Date" opportunity field.
5. If a license has not been delivered, Order Management opens a ticket with Support Engineering to request manual delivery of the license to the Sold To contact from the opportunity's primary quote.

(For full process documentation, visit the internal License Delivery Review Wiki)

Subscription/Renewal Management Process

As of FY23, the Order Management team proactively reviews and corrects bad renewal data.

Background

It is important to have clean, correct renewal data - both for forecasting purposes, ATR (Available to Renew, aka ARR Basis) analysis, and general data cleanliness.

Our goal is to maintain 1:1 ratio of Renewal Opportunity to Customer Subscription:

- Every Customer Subscription should link to one open or closed Renewal Opportunity
 - This would not be the case for: Legacy/bad data, automation failures, manual renewal opportunity creation, etc.
 - Every Renewal Opportunity should be linked to a Customer Subscription object
 - This would not be the case for: Legacy/bad data, opportunities created prior to this automation's creation, manual renewal opportunity creation, etc.
 - Every Renewal opportunity's ARR Basis should match the linked Customer Subscription's Current Subscription CARR (Unless there is a known exception - i.e. Contract Resets)
 - Every Renewal opportunity's Start Date should match the linked Customer Subscription's Current Term End Date (Unless there is a known exception - i.e. Contract Resets)
- Duplicate renewal opportunities should be marked as such and disconnected from any Customer Subscription.

Process Overview

On an ongoing basis, the Order Management team will review discrepancy reports to correct bad data as described above. (For full process documentation, visit the internal Subscription Management Wiki)

SECTION: sales/field-operations/sales-operations/po-acceptance-policy.md

PO Acceptance Policy

If a customer requires a Purchase Order to accept our invoice, the following information is required on the PO and match the signed order form before we can book the order.

Direct Customers with signed order form:

- 1. Currency (USD only) - No exceptions
- 1. Product Description matches Order Form
- 1. Subtotal matches Order Form
- 1. Payment Terms matches Order form OR is less than the Order Form
- 1. GitLab entity name and address matches Order Form (top right corner of Page 1)
- 1. Sold To contact name, email, and address
- 1. Bill To contact name, email and address

Partners / MSA customers without signed order form:

- 1. Currency (USD only) - No exceptions
- 1. Product Description matches Order Form
- 1. Subtotal matches Order Form
- 1. Payment Terms matches Order form OR is less than the Order Form
- 1. GitLab entity name and address matches Order Form (top right corner of Page 1)
- 1. Sold To contact name, email, and address
- 1. Bill To contact name, email and address
- 1. Quote number reference, must match related Order Form (required)
- 1. End customer name, email, and address (partner only)

Exceptions:

1. When the payment terms listed on the PO is less than the agreed terms on signed order form, we can accept and book per the PO terms.

1. When the Sold To contact name/email differs for direct customers it is often due to the procurement person being listed on PO v.s. actual end user, we book as is with a confirmation from the Customer on the correct Sold To contact / end user address.

1. For partner POs, when end customer name/email differ from order form, chatter confirmation from the rep on the correct end user is required to book.

1. A revised PO or order form is required when there is mismatched information between the two documents. PO exceptions outside of EOQ will be reviewed on a case by case basis. Approvals will be at the discretion of the Sales Operations team with acceptance language/reason

validated in Finance Notes of the opportunity record.

1. If a customer is switching between SaaS & Self-Managed on the same product tier, that results in no change to the total contract value, no PO is required. A signed order form is required at minimum to book the order. If transacting through a partner, a 0.00 PO must be issued to complete the order.

Exception Email Requirements

If a customer is listed as PO Required , they must issue a PO following the guidelines above OR they must provide the following email confirmation (attached to the opportunity):

"We will accept the invoice for [QUOTE NUMBER] without issuing a Purchase Order".

SECTION: sales/field-operations/sales-operations/sales-operations-owned-provisioning.md

Instructions

Below are instructions on how to provision new users within various Sales-owned systems and the process we follow.

Sales Operations Access Request Board

Sales Operations Access Request Labeling System

- 1. SalesOpsAR::Action Needed - Sales Ops action item is immediate or within current FQ.
- 1. SalesOpsAR::In Progress - Sales Ops action item is presently being worked on.
- 1. SalesOpsAR::On Hold - SalesOps AR that is blocked or not presently w/in scope of work.
 - 1. SalesOPS: Waiting on SFDC License - a reason an AR might be on hold.
- 1. SalesOpsAR::Completed - Sales Ops has completed their task on this issue although the issue may not be closed.

Sales Operations Provisioning Workflow

Baseline Templates | New Hires

- 1. The onboarding issue will auto create the AR on day 2
- 1. The templates will automatically:
 - Add the SalesOpsAR::Action Needed label
 - Leave the assignee blank
 - CC Amber and Meri as the Provisioning DRIs
- 1. The DRIs will receive an email when a new AR is created
- 1. All will be able to monitor the Sales Ops Access Request Board proactively.
- 1. When the AR is picked up by the Sales Operations team member, the team member will:
 - assign the issue to themselves
 - add the label SalesOpsAR::In Progress
- 1. The Assignee should be responsible for working the AR to completion by completing all Sales Operations task items and working the label system accordingly.
- 1. If Assignee is out of office, the rest of the team is responsible for moving the AR forward

in a timely fashion and can see ARs in flight by looking at the Sales Ops Access Request Board proactively.

Single Person or Bulk Access Request

1. The user will manually create a single person or bulk AR
1. In the instructions, they are directed to the Tech Stack doc with the following tasks:
 - Add the SalesOpsAR::Action Needed label
 - Leave the assignee blank
 - CC Amber and Meri as the Provisioning DRIs
1. The DRIs will receive an email when a new AR is created
1. All will be able to monitor the Sales Ops Access Request Board proactively.
1. When the AR is picked up by the Sales Operations team member, the team member will:
 - assign the issue to themselves
 - add the label SalesOpsAR::In Progress
1. The Assignee should be responsible for working the AR to completion by completing all Sales Operations task items and working the label system accordingly.
1. If Assignee is out of office, the rest of the team is responsible for moving the AR forward in a timely fashion and can see ARs in flight by looking at the Sales Ops Access Request Board proactively.

Chorus

1. From the Settings Page in Chorus, click in User Management and then on the Invite New User button.
1. To invite users to Chorus, enter their emails in the designated field separated by commas and click the Add To List button.
1. Updated the Role, Team and License Type. These will be based off of the users job role/region and should be listed and or approved in the Access Request. If questionable, look at other provisioned users of the same title/role.
1. Click the Send Invites button to invite the user to Chorus.

DataFox

1. From the [Settings Page] (<https://app.datafox.com/settings/general-information>) in DataFox located in the top right under your name, click on Team Management located on the left.
1. From Team Management, click the Invite Your Team button, enter the email addresses of the users to be provisioned, click Send Invitations.
1. Most users will have a Status of Member, unless otherwise stated in the Access Request.
1. Most users will also have the permission to Bulk Sync Accounts unless otherwise noted in the Access Request

SECTION: sales/field-operations/sales-operations/go-to-market/_index.md

Welcome to The Sales Operations GTM Page

The purpose of this page is to centralize and document all key Go To Market policies & links for ease of use.

Account Ownership Rules of Engagement

- Account Ownership Rules of Engagement Handbook

Territory Tables

- Account Ownership Territory Tables Handbook

Territory Success Planning (TSP)

TSP is an automated process workflow intended to properly segment & route Salesforce accounts to the correct Sales territory & respective owner. This clarifies who should own which accounts & reduces current Ops overhead to manage manually. TSP fields are designed to be real time reflections of the best data we have, not necessarily the current Go To Market approach. Requests to override the TSP information can also be submitted in the Account Review section of the account.

Primary TSP Workflow Components

1. Account Routing (Next Owner recommendation process):

- Sales Segment (i.e. max employee count of the account hierarchy)
- Primary Account HQ Address (of top Parent Account in the hierarchy)
- Inputs for both are formulated via our standardized account enrichment tools (in order):

- Manual Override > DataFox > DiscoverOrg > Ship-To > Bill-To
- LeadData then compares these TSP Input Values against our SSoT Territory Mapping File & automatically outputs an Approved Next Owner and Territory.

1. Account Assignment (Account Transfer Process):

- (Re)Assignment of an account to the correct owner
- Updating of Account Territory, Sales Segment, Employees fields

Firmographic TSP Fields

- [TSP] Sales Segment: Segment of the account based on the MAX employee count in that account's hierarchy (regardless if MAX is parent or child).
- [TSP] Account Employees: Number of employees for this specific account
- [TSP] MAX Family Employees: MAX employee count (number) in hierarchy
- [TSP] Address (Street, City, State, Post Code, Country): Location of Ultimate Parent Account based on the TSP data hierarchy
- [TSP] Geo Story: Source of address data from TSP Data Hierarchy

Ownership TSP Fields

- [TSP] Next Approved Owner: Owner of territory as determined by [SSoT Territory Mapping File

- [TSP] Transfer Date: Date when account ownership will change to TSP Next Approved Owner

Territory TSP Fields

- [TSP] Territory: Territory account falls under, as per the [SSoT Territory Mapping File]
- [TSP] Region: Sales territory region the account falls under
- [TSP] Subregion: Sales territory sub-region the account falls under
- [TSP] Area: Sales territory area the account falls under

Account Exclusions

The current TSP design supports our Geo sales accounts & territories.

- It does not currently support Named Accounts, PubSec Accounts, or Channel Accounts - as these require manual assignment.
- These accounts are intentionally filtered out of the TSP automation process, and will not be impacted by automated reassignment assuming.

Process for Requesting TSP Changes

In the event our data enrichment tools are outdated or incorrect (primary address or employee count), you can submit a request to override this information.

1. Request:

- Enter desired TSP information into the following fields (this can be either Account, Employee Count, or both).
- Be sure to include source of correct data (ROE must still be followed)
 - [User Input] Employee Count
 - [User Input] Employee Source
 - [User Input] Address Street
 - [User Input] Address City
 - [User Input] Address State
 - [User Input] Address Post Code
 - [User Input] Address Country
 - [User Input] Address Source

1. Operations Review:

Ops will review these requests on a periodic basis, and provide a response in the [TSP] Override Status field:

- Approved - Account changes accepted, & [TSP] Effective Date populated by Ops.
- Rejected - Reason added to [TSP] Decision Rationale field.
- Needs Approval/More Info - Info needed added to [TSP] Decision Rationale field.<p/>

1. Execution:

- Turnaround time for Approved TSP changes to re-populate typically takes 24-48 hours.
- Accounts with a [TSP] Effective Date populated will be re-routed each night to the [TSP] Next Approved Owner.
- Account Territory, Sales Segment & Employees fields will also be updated upon TSP transfer, to continually align accounts.

Primary Quote System

The Primary Quote system is a 1:1 relationship in SFDC that connects the total transaction amount on a quote with the amount on its related opportunity. This is to ensure we are forecasting the same amount that we will book and enables further automation as the quote is sent to Zuora billing. To support sales situations that require multiple quotes (for instance: a small deal option and a big deal option), sales reps can identify which one of their quote is "Primary".

Primary Quote technical documentation here:

SECTION: sales/field-operations/sales-operations/go-to-market/chorus/index.md

Confused about how to use Chorus? Check out the instructions and links below for more information on how to get the most out of this important sales tool.

What is Chorus?

Chorus is a call and demo recording software for customer-facing team members. This tool tracks keywords, provides analytics, and transcribes calls into both Salesforce and Outreach. Chorus is used to onboard new team members, provide ongoing training and development for existing team members, provide non-sales employees with access to sales calls, and allow customer-facing team members to recall certain points of a call or demo.

Logging into Chorus

Log into Chorus by clicking on the Chorus SSO tile in your Okta dashboard. If you are not able to login, please post in the chorus-users Slack channel for further assistance.

Chorus Training & Enablement

- Please familiarize yourself with GitLab's SAFE Framework before utilizing Chorus.
- All ROW team members are required to complete the Chorus GDPR Training in order to be granted Recorder access. SalesOps will provide team members with the link to the EdCast Chorus training once their Baseline Role-Based Entitlement is submitted by their manager.
- Once the team member has completed training, they will notify SalesOps to have their license updated to a Recorder license in Chorus.
- SalesOps will verify course completion via an EdCast report.

Chorus Scheduler

To comply with GDPR and similar privacy laws, all team members with a Recorder license in Chorus are required to use a feature called Chorus Scheduler when organizing meetings with customers. Chorus Scheduler creates a Go-Link, which routes attendees to a designated landing page for location-based compliance capture so that a meeting host can obtain explicit consent from the participants to record meetings. If meeting hosts do not use Chorus Scheduler for customer meetings, Chorus will not record the meeting. For step-by-step instructions on using Chorus Scheduler, please watch this 3-minute demo and refer to the Call Compliance with Chorus

Schedulers deck for additional information.

- If you are required by a customer to use a different conference platform than Zoom or Google Meet, please follow the instructions on the Static Link Flow slide of the Call Compliance with Chorus Schedulers deck.

- For situations where you are a participant in a meeting and are seeking to record, you may download the Chorus App for Zoom. This app allows you to add Chorus to a live call to record the meeting and take notes without leaving Zoom. In order to comply with local privacy laws, you will need to verbally obtain consent from your customer to record before doing so. If the customer does not consent to recording, you may not record the meeting.

For troubleshooting regarding the Chorus App for Zoom, please follow the steps below:

1. Open Zoom SSO via Okta
2. Click on Settings then Zoom Apps
3. Make sure "Zoom Apps Quick Launch Button" is turned on
4. Open a Zoom meeting on your desktop app
5. You should now be able to see Chorus App and utilize the tool

Security & Privacy Controls

The data retention policy for recorded calls in Chorus is 365 days as of September 27, 2022.

Any action that would result in bypassing the 365 day data retention policy will need to be approved by GitLab's Legal team, including, but not limited to:

- Preserving snippets of recordings in LevelUp indefinitely
- Downloading recordings
- Retaining recordings past the 365 day data retention period

If you have a unique circumstance that will require you to preserve a recording past 365-days, please submit a Legal Issue - ChorusApproval template and follow the instructions. You will not receive automatic reminders regarding calls that will be purged after 365 days so it would be a best practice to submit a Legal Issue for preservation at your earliest convenience.

When requesting approval, please note the following:

- A request to retain a recording must be received by Legal no later than 15-days prior to the end of the 365-day retention window. For example, the request to retain a recording created on May 1st that will automatically be deleted 365-days later must be received by Legal no later than April 15th. Please note that any request submitted within 14-days of the end of the retention window may not be reviewed in time or approved.
- Snippets saved to any playlists will be preserved
- Snippets saved on the call itself will be deleted according to the retention policy

Other notable items:

- Any time a Chorus link is shared, a password should be required or the link should be set to expire. Each user must complete this action individually.

- As a best practice, if you need to include a Chorus recording or any type of customer information in an issue, please first mark the issue as Confidential.
- For additional details, please see this issue.
- Chorus Compliance Resources

What is a Chorus Tracker and How do I Create One?

Trackers can be keywords or phrases that you are interested in highlighting across sales conversations. These can be used to track competitor mentions or client feedback, for example.

Managers can submit an issue in the Sales Operations project using the Chorus Tracker Request template to have a Chorus Tracker created. Individual contributors who would like a Chorus Tracker created can sync with their manager and have them submit the request.

Swim Lanes

Recorder Access

- US SAEs and AEs
- US CSM and SAs
- ROW SAEs, AEs, CSM, and SAs upon completion of Chorus GDPR Training

Listener Access

- All SDR/BDR team members
- All Public Sector team members
- All GitLab team members in non-customer facing roles including, but not limited to, those in Operations roles and all Managers regardless of their org
- GitLab team members may request Listener access through an Access Request which may be granted on a case by case basis

Why is My Meeting "Livestreamed"?

The banner "Live on Zoom with Chorus.ai" is controlled and set by Zoom, therefore neither Chorus nor GitLab can make changes to the text.

- This banner means that your meeting is being actively recorded by Chorus.ai and will be stored within the Chorus.ai platform for a period of 90 days, in accordance with GitLab's data retention policy for Chorus.ai.
- To stop recording your meeting at any point, click on the dropdown next to "Live on Zoom with Chorus.ai" and choose "Stop Live Stream". Then click on the square stop symbol to completely stop recording.

Recording with Breakout Rooms

- Chorus will not capture the breakout rooms, only the main Zoom meeting will be captured.
- Please note: By default Chorus has rules around silence on a call. If participants are put into breakout rooms for longer than 5 minutes in the middle of the call, Chorus will drop out

of the call due to silence thinking the meeting is over.

Chorus.ai Basics

- Update Email Communication Preferences in your Chorus Personal Settings

Rosetta Stone

The purpose of the Rosetta Stone project is to ensure that we have clean, standardized reporting by segment, geo, region, and area that can be used to slice and dice all company metrics. This project is a collaborative, cross-functional effort involving many teams across GitLab, including Sales Strategy, Sales Ops, Sales Systems, Finance, Marketing, and the Data Team.

Background

Prior to FY22, sales managers were comped based on who owned the ACCOUNT at the time of opportunity close. We therefore based our top level business reporting by sales team on the accountowner team stamped field on the Opportunity object in Salesforce. However, there were also various other Salesforce fields that were used in certain reporting, which led to a lot of confusion and discrepancies between reports. For more details on historical reporting, please see this slide deck.

Starting in FY22, we made a change to our comp plans. We began paying both reps and managers based on who owns the OPPORTUNITY at the time of close. With this change, we also needed to change our reporting from being based on account ownership to being based on opportunity ownership. Thus the Rosetta Stone project was born, with the goal of not only building correct reporting based on opportunity ownership but also of cleaning up the Salesforce fields used for reporting so that we can all easily get the same correct answer.

Key Salesforce Fields for Reporting by Sales Team

In order to achieve clean reporting by sales team based on opportunity ownership, in Dec 2020 we created 4 new fields on the User object in Salesforce:

- User Segment
- User Geo
- User Region
- User Area

These fields are used to identify on which Sales team a Salesforce user works. If the user is not on the Enterprise or Commercial Sales teams (such as Channel reps, ISRs, BDRs, Community Advocates, or members of Sales Ops or Sales Strategy), the fields will default to "Other."

These fields are populated manually by Sales Ops on the user record as part of normal Salesforce license provisioning. Sales Ops populates the fields for every new user added to SFDC and updates the fields every time a user changes Sales teams.

We stamp the values from these fields onto our opportunity records at various points during the sales cycle, and we use these fields to tell us which sales team worked on each opportunity.

For more info on user hierarchy, please see this page.

Key Salesforce Fields for Reporting by Account Characteristics

We also have segment/geo/region/area fields on the Account object in Salesforce that mirror those on the User object. The Account fields sometimes share the same values as the User fields but are based on characteristics of the Account rather than characteristics of the sales rep

who worked on the Account.

For example, a stamped opp owner user segment of "Large" indicates that a sales rep from our Enterprise Sales Team worked on that Account whereas an account sales segment of "Large" indicates that the account has a certain number of employees. In some cases the user segment and account segment can differ, such as if a sales rep from our Mid-Market Sales Team works on an Account that is in the "Large" sales segment based on its number of employees.

While most of our sales performance reporting is based on the sales team that worked on a particular opportunity, there are use cases in which we want to report on Account characteristics as well. It's important that we have clean, standardized reporting on both ends and that everyone understands the differences in these two types of reporting.

Project Plan

The project plan for Rosetta Stone and all of the associated issues can be found [here](#). To summarize, our steps are:

- Phase I: Reporting by Sales Team
 - align teams on key SFDC fields and account vs. opportunity ownership in reporting
 - fill in user segment/geo/region/area fields on all user records
 - ensure that we are correctly stamping user record values onto Opportunities
 - backfill the stamped Opportunity fields with accurate historical data
 - ensure that we have no blank or impossible combinations of segment/geo/region/area in our stamped fields
 - update existing reporting to use the new user segment/geo/region/area fields
- Phase II: Reporting by Account Characteristics
 - align teams on key SFDC fields
 - ensure that segment/geo/region/area fields on the Account object are working
 - create exception reporting and reconciliation process for mismatches between sales team and Account segment/geo/region/area
- Clean up
 - audit existing fields on User, Opportunity, and Account objects. Deprecate any competing fields.

The ideal end state for this project would be that:

- we have ONLY 4 fields in SFDC that you could possibly use to answer any and all questions about sales team performance by segment/geo/region/area, which would align cleanly with our sales management structure (rep --> ASM --> RD --> CRO); and
- we have ONLY 4 fields that you could possibly use to answer any and all questions about account characteristics by segment/geo/region/area.

These fields would serve as key dimensions used to slice all reporting and would flow from SFDC into our trusted data framework in the data warehouse to be used for standardized reporting across the company.

Sales Headcount Change Management

All headcount records have been locked down as of 2021-03-18 (post board approval). Any changes after this date must follow the processes below depending on impact to budget.

If requesting to:

1. Push out a hire date.
1. Remove a role from the plan.
1. Move an employee to another role (similar level).
1. Promote a team member to an existing role.

Then: Inform your VP and Sales Analytics of the change and business case for the change, there is no need for approval as this positively impacts budget. The Sales Analytics team will inform finance of the change to maintain accurate headcount records.

If requesting to:

1. Pull a hire date forward to an earlier date.
1. Add a new employee to the plan.
1. Create a new role.
1. Upgrade a role position level (i.e. Manager to Sr. Manager).
1. Exceed the standard OTE (base + variable) range for a given role.
1. Promote an employee (level or OTE; please loop in People Ops also).

Then: Inform your VP of the requested change and reasons. If approved by your VP, inform Sales Analytics. The Sales Analytics team will facilitate requests and approval through the CRO and Finance.

NOTE: Please use email for confidential changes.

<i class="fas fa-users" id="biz-tech-icons"></i> Mission

CRM Systems exists to support the GitLab field organization by providing reliable, scalable, and intuitive technology platforms for everyday use. Primarily working on SalesforceCRM and its related Revenue Systems, our goal is to constantly deliver value in the form of features to our end users. We also act as the connective tissue between business and technology, gathering requirements from our internal customers, designing the technical specifications and executing on the delivery of the solution.

Salesforce.com Change Management Processes and SDLC (Software Development Life Cycle)

Changes to Salesforce.com come in a variety of formats but all of them will feature the following change management controls:

1. All changes will start with an GitLab Issue defining the ask or problem, and capturing additional decisions and business requirements.
1. All changes will be developed and tested in a Salesforce Sandbox environment before being deployed or replicated in production.
1. All changes will be require Business DRI (the requestor) to sign off on the related GitLab Issue once ready and determine a deploy window.
1. All changes will be reviewed by the Business DRI once deployed or replicated in production.

We have defined the following ending Label stages for the Sales Systems workflow. Please see the label name as well as SDLC expectations:

No Changes to Salesforce.com

Label: SalesSystems::Deployed - 0 - No Changes

Description: This issue is completed. There was no setting, configuration or code change to SFDC. No Sign-off Needed, No Change Set Used.

1. These issues resulted in no Setting, Configuration or Code changes to SFDC.

1. The most common use case are question or research issues.
1. Data changes as part of a backfill for another operations team fall into this category.

Changes that cannot or are impractical to use a Change Sets

For example: Field Level Security, Sharing Rules, Layout Changes, Picklist Value Changes, Approval Processes, Role Creation and Assignments

Label: SalesSystems::Deployed - 1 - Settings Change

Description: This issue is completed. There was a setting change. Sign-off is required, No Change Set Used.

1. These changes will need a special deploy window for the changes to be made by hand. Please coordinate with the Business DRI.

Changes that contain Salesforce.com Fields, Workflows, Validation Rules, or other non-code Configuration

Label: SalesSystems::Deployed - 2 - Configuration Change

Description: This issue is completed. There was a configuration change. Sign-off Required, Change Set screenshot required.

1. These changes will always use a Salesforce.com Changeset that will be linked to the related issue.
1. The team member who uploads the change set shall ask a different team member to review and deploy the change. (No Self Deploys).

Changes that contain Salesforce.com Apex Code, Apex Triggers, or Visualforce Pages

Label: SalesSystems::Deployed - 3 - Code Change

Description: This issue is completed. There was a code change. Sign-off Required, Change Set Screenshot required, Approved and attached MR required.

1. These changes will require the creation of a Merge Request to our SFDC source repository as instructed below.
1. These changes will require a code review by at least 1 other Business Systems Engineer before being marked as ready to merge.
1. These changes will always use a Salesforce.com Changeset to deploy that will be linked to the related issue.
1. The team member who uploads the change set shall ask a different team member to review and deploy the change. (No Self Deploys).

Destructive Changes to Salesforce Fields Configuration

1. These should follow our Field and Process deprecation outlined below.

Destructive Changes to Salesforce Code

1. These changes require sign off from the Senior Director of Sales Systems.
1. These changes will be done via a Salesforce.com Workbench as a destructive deploy.

Milestone Compliance Check Process

Before a Milestone is closed perform the following steps:

1. All non-closed issues, must be removed or pushed to the next milestone.
1. All closed issues that bear the SalesSystems label must end in on of the 4 deployment stages.
1. All Issues must have their neccessary artifacts and approvals related to their deployment stage.
1. Any problems found must be raised to a Sales Systems scrum-master immediately to not delay close.

Special Approvals

Please seek explicite and documented approval from the Senior Director of Sales Systems for any of the non-standard situations:

1. A deploy during a designated block out period.
1. The need to self deploy a non-invasive change.
1. The need to create a non-invasive formula field in production for time sensitive triage of a critical issue.

These changes would be classified as a CMT: Emergency Change. Any issue where this occurs should be flagged with this label for future compliance review.

Critical Field Approvals

Any changes related to the following fields must have direct approval from the Senior Director of Sales Systems:

1. Opportunity.NetARRc

Approval for Proposed Changes related to Quoting

1. All changes that will impact Quoting (ex. creating quotes, creating validation rules, generating quote PDFs, Quote Templates, Approval Module updates) will require approval from Deal Desk and Channel Ops before being pushed to production. The goal is to prevent changes from being pushed to production that could delay the quoting process or create a bottleneck in the quote to cash lifecycle.
1. Approval should be secured in the comments section of the related issue from the Designated Approver outlined below.
1. Additionally, if a change is proposed that could materially impact the quoting experience for Sales teams and is not listed below, please request review from Sr. Manager, Deal Desk in the comments section of the issue.

	Change	
	Designated Approver	Back Up Approver
	:-----	
-----	:	-----:

-----:|

| Approval Module Updates (Discounts, Payment Terms, Approval Structure/Hierarchy, Approval Notifications, Override Functions) | Sr. Manager, Deal Desk |
Manager, Deal Desk |

| Channel Quote Approval Module Updates (Validation Rule changes, Discount Thresholds, Approval Structure/Hierarchy, Notifications) | Manager, Channel Operations | Manager, Deal Desk | Sr. Manager, Deal Desk | Partner Ops/Alliances |

| SuperSonics Logic Updates

| Sr. Manager, Deal Desk | Manager, Deal Desk

|

| Smart Templates Gate Logic

| Manager, Deal Desk | Sr. Manager, Deal Desk

|

| Proposed Validation Rules (Ex. "X" Field is Mandatory on all quote objects, if "X" is blank, user cannot move forward with quote. | Sr. Manager, Deal Desk & Manager, Deal Desk |
Manager, Deal Desk |

| Quote Templates / Docusign Order Forms

| Manager, Deal Desk | Sr. Manager, Deal Desk

|

| Quoting Workflow Changes (Ex. Updating Button Behavior (Edit Quote vs Maintain Quote), removing fields or permissions) | Sr. Manager, Deal Desk |
Manager, Deal Desk |

1. If approval is pending Deal Desk review, Deal Desk::Pending Approval Label will be added to the issue by the DRI.

1. Once Approval is secured, Deal Desk will add Deal Desk::Approved Label to the issue. If no other approval is required, systems can move forward with work.

1. If the proposed change will negatively impact the quoting cycle, Deal Desk will add Deal Desk::Need More Information Label to the issue. Deal Desk will partner with Issue DRI to identify alternative solutions.

1. If the proposed change is not approved, Deal Desk will add Deal Desk::Rejected Label to the issue. An alternative solution must be presented.

Channel Operations and Deal Desk will work closely on all updates related to the quoting process. The purpose is to ensure that a proposed change does not contradict with an existing process that a team member may not be aware of.

1. If approval is pending Channel Ops review, Channel Ops::Pending Approval Label will be added to the issue by the DRI.

1. Once Approval is secured, Channel Ops will add Channel Ops::Approved Label to issue. If no other approval is required, systems can move forward with work.

1. If the proposed change will negatively impact Channel priorities, Channel Operations will add Channel Ops::Need More Information Label to the issue. Channel Ops will partner with Issue DRI to identify alternative solution.

1. If the proposed change is not approved, Channel Ops will add Channel Ops::Rejected Label to the issue. An alternative solution must be presented.

SLA for Channel Operations & Deal Desk Approvals related to Quoting

Channel Operations and Deal Desk will review each issue with the labels above within 1 business

day.

Salesforce Specific Processes, Policies and Controls

Change classifications

Due to the nature of changes in Salesforce, all the changes above are classified as a CMT: Comprehensive Change for auditing and compliance purposes, unless otherwise noted. In order to not overload this tag with all issues which are addressed by the Systems team, we do not tag issues with this tag at this time.

Salesforce Password Policies

Persuant with GitLab's best practices for password security, our Salesforce environment requires that users use passwords with at least 12 characters, and that they must not re-use any of their last 24 passwords when resetting their password.

Sandbox Refreshes

How to request a sandbox refresh for a personal sandbox

1. Create an issue for the Sales Systems team by following the instructions above.
2. In the issue description, include the name of the sandbox and the names of any users who need to be granted access to the sandbox.
3. Link the issue to any other issues which are blocked pending the refresh of this environment.

Refresh process for Sandboxes maintained as part of the SDLC process

1. The Sales Systems team will have an issue tracked in GitLab with a label of SalesSystems and Sandbox Refresh Checklist for the refresh of each environment with a due date of the refresh date.
 1. The Sales Systems team has moved to the usage of a standard Template for each major Sandbox refresh. All steps will be outlined on each template and updated as necessary.
 2. On the date of the refresh, the assigned Sales Systems team member will kick off the refresh in production. Note: A sandbox refresh can take up to 72 hours to complete.
 3. After the refresh completes, the Sales Systems team will complete the following steps to set the environment.

Pre-Refresh Steps

Pre-Refresh step	Owner	To be completed by	Environments	Action steps
------------------	-------	--------------------	--------------	--------------

-----	-----	-----	-----	-----
-------	-------	-------	-------	-------

Date Alignment	Systems	Systems	Developer, Test1, Test2	Align the date of the refresh within the team
----------------	---------	---------	-------------------------	---

Date Publicization	Systems	@ana-moreno	Developer, Test1, Test2	Publicize the date of the refresh ahead of time so affected business stakeholders are aware and ready for post-refresh date steps.
--------------------	---------	-------------	-------------------------	--

Sandbox Access Group Access	@ana-moreno	@ana-moreno (or User Management)		Review recent login access to relevant sandbox and add any missing or new users to relevant Sandbox Access group.
-----------------------------	-------------	----------------------------------	--	---

|Disable Marketo sync|Marketing Operations|Marketing Operations|Test1|Contact MOPs to disable the SFDC sync (before refresh).|

Post-Refresh Steps

|Post-Refresh step|Owner|To be completed by|Environments|Action steps|

|-----|-----|-----|-----|-----|

|Get the new Sandbox Org ID and instance Id if required|@ana-moreno|@ana-moreno||Find and update the Org ID/Instance ID on the Refresh issue|

|Backup & Anonymize Data|@ana-moreno|@ana-moreno (Or Admin user with Own access)|Developer, Test1, Test2|Create a backup of the sandbox and anonymize the data when backup is complete.|

|Reconnect RingLead user|@rrosue|@rrosu|Test1|After the RingLead Integration user has been reset and updated in 1Password, proceed with the following:
 1. Login to RingLead.
2. Locate the SFDC connections page.
3. Authenticate with the RingLead Integration user using the user password for this account in the production org (stored in 1Password).|

|Reconnect CustomerDot|@ebaquet|@ebaquet & team||Follow instructions on the relevant Refresh template for which user to reset.
1. Reset the CustomerDot user for the org and retrieve the Security Token and update in 1Password.
2. Retrieve the Subscription Customer Portal Consumer Key & Consumer Secret and update the 1Pass user as well.
 3. Provide the login to the Fulfillment team for reconnection.|

|Reset User Passwords|@monalibhide
 @xliawang
 @bienrcb |@sheelaviswanathan ||Reset user passwords where requested/needed. If users are frozen, unfreeze and reset.|

|Regenerate API Tokens/Keys|@sheelaviswanathan |@sheelaviswanathan ||If you have managed packages with API keys, ask the System team to regenerate the keys and update the user in 1Password|

|If you have "power users" that will coordinate User Acceptance Testing - create entries in Delegated Administration area so they can "login as"|@sheelaviswanathan |@sheelaviswanathan |||

|Reestablish Marketo Sync|Marketing Operations|Marketing Operations|Marketing Sandbox/Staging|Must create new field for Marketo Sync (Boolean) on Leads and Contacts in staging before reconnecting.
This box should be unchecked, but editable by Mops profile and added to page layout for Mops. Mops will need to request Marketo support to set up custom sync before reconnecting. |

|Re-authenticate Marketo Sync (Systems Tasks)|Sales Systems|Sales Systems|Staging|Configure connected OAuth App, provide consumer secret, key and new OrgID to Mops. |

|Re-authenticate Marketo Sync (Mops Tasks)|Marketing Operations|Marketing Operations|Marketo Sandbox| Create support ticket to re-map. Once re-map is completed, connect by updating OAuth information. Then, click Login with salesforce > use custom domain > gitlab--staging and login with Marketo Integration details in 1pw vault. Systems may need to provide verification code sent to admin email. Confirm mappings and sync.|

|Setup new DKIM key and add to gitlab.com DNS|Sales Systems|Sales Systems|Test1| Setup a new DKIM key following the instructions here. Once the key has been published, provide the CNAME and Alternate CNAME values to the GitLab IT team to add to the DNS for gitlab.com. Once this is done, confirm an email can be sent to an external email address from a Case using the 'Send an Email' feature, and the email is delivered without issue.|

How to access a Sandbox after a Refresh

When a lower-level environment (Sandbox) has been refreshed, depending on your level of access to Production, you may or may not have access.

Active Production License

If you have an active license to Production, and you were found to have been logged into a lower-level environment prior to refresh, you will have been included in the Sandbox Access - Business Users Public Group. This Salesforce feature allows us to grant easy access to users after a refresh without having to update their email. To regain access, the Salesforce User Management team will provide Password Resets to anyone who requests. In case you have forgotten your username/password, please see the Refresh Cadence table for standard username stylization.

Inactive Production License (Previous Access)

If you do not currently have access to Production, but previously had access, it is possible that your user was included in the Sandbox Access - Business Users Public Group. Please contact the Salesforce User Management team for renewed access by creating an Access Request issue and adding label entapps access requests.

Refresh cadence

Sandboxes which are managed as part of our team's SDLC process will follow a regular refresh schedule, as detailed below.

Sandbox name	URL	Sandbox type	Standard Username	Used for	Refresh cadence	Last refresh date	Next refresh issue	Zuora Billing Sandbox	Zuora Billing Sandbox Tenant ID	Critical Connected Integrations
Developer	https://gitlab--developer.sandbox.my.salesforce.com	Partial	<email>.developer	Developer integration and testing org.	As needed, up to once per month, minimum once per quarter	12/26/2024	10002574			
Test1	https://gitlab--test1.sandbox.my.salesforce.com	Full	<email>.test1	Pre-production org. Used for UAT of Systems issues prior to release to production. Also used for troubleshooting.	As needed, up to once per month, minimum once per quarter	06/10/24	TBD Early 2025	Central Sandbox 2	10000796	CustomerDot Marketo Vartopia RingLead Traction PSQuote
Test2	https://gitlab--test2.sandbox.my.salesforce.com	Full	<email>.test2	Used for UAT of Systems . Also used for troubleshooting.	As needed, up to once per month, minimum once per quarter	1/9/25	TBD	Central Sandbox 1 (i.e. "Staging Sandbox")	10000719	CustomerDot

How we Operate

Technical Documentation

- Go-To-Market Technical Documentation
- Go-To-Market Integrated Environments
- License Usage App Documentation
- Salesforce Configuration Documentation
- Lead Source Master Data Set
- Salesforce Dataloader Install/Uninstall/Upgrade Instructions

Working with us

- Sales System Agile Board
- Sales Systems Project
- Salesforce.com APEX repository

How We Work

- The Sales Systems team works in two week sprints/iterations which are tracked as Milestones at the GitLab.com level. This aligns the Sales Systems team with how many of our business partners operate but also takes advantage of one of the solutions that GitLab provides
- The Systems team strives to emulate the principles below in planning and executing on our milestones as we believe it most effectively aligns our team with GitLab's Values
 - "Start less, finish more"
 - "Reduce Issue Churn"

Steps to getting help from Sales Systems

1. Create an issue in our project, making sure to provide detailed business requirements for the ask or problem. Please leave assignee blank
 - If this issue removes any existing functionality, or requires any components to be deprecated, please include the technical debt label on the issue.
2. In order to align our working style with the Labels, the Systems team prioritizes working on issues in the order as they get added & the issues get labeled accordingly
3. The Systems Label Workflow and Label Description are as follows
 - New Issues that are created in the systems board are automatically tagged and any existing issues related to sales systems are tagged with this label
 - Issues awaiting for information from the requester, needs more clarity in requirements may or may not be assigned to milestone and assigned to the DRI and/or systems team member
 - Issues that are outside the parameters of an initiative, cannot be combined with current functionality and this issue will be closed
 - Issues that have completed requirements gathering and been accepted, no milestone and not assigned to systems team member
 - Issues that are ready to move forward to be worked on, slotted to a milestone & assigned to systems team member's queue
 - Issues that are in the current milestone, assigned to systems team member that are actively worked on
 - Issues in current milestone that are near the finish line, needs to be reviewed and demoed to the business owner(s) to sign-off
 - Issues in current milestones, sign-offs given by the business owner that are ready to be deployed by systems team member
 - Issues in the current milestone which are assigned to systems team member which are stalled due to technical difficulties and/or assigned to business owner pending to provide information to the systems member to move forward
4. Please review the status of any issue on our agile board.
5. If there is a severity impacting the flow of business (i.e. No one can make a quote, No accounts are being created, Opportunities cannot be closed Won) follow the process as described above as well as share the issues in the Sales-Support Slack Channel

Sales Systems Issue Deployment & Compliance Steps

In order to deploy & close an issue the checklist below has to be signed off :

- [] 1. [Business DRI] Business User Acceptance Testing Complete with Evidence
- [] 2. [Business Program Owner] Business Process Owner sign-off.
- [] 3. [Systems Owner] Systems Owner Sign-off.
- [] 4. [Systems DRI] Add the correct SalesSystems::Deployed - GitLab Label
- [] 5. [Systems DRI] Screenshot of Completed Change Set Attached and MR Attached (if Code)

[Business DRI] Business User Acceptance Testing Complete with Evidence

The Business DRI should sign off after validating the provided solution works as expected as definition of done. The Business DRI will add evidence in the issue or in few scenarios the systems team member will be providing the evidence for the business DRI to confirm in the issue

[Business Program Owner] Business Process Owner sign-off

Business Process Owner pertaining to the team should provide signoff. The signoff matrix is below pertaining to the Team / Department

Team / Lane	Main Approver
Backup Approver	
----- -----	----- -----
Quote To Cash	Director, Quote to Cash
Senior Director, Sales Operations	
Territory Management	Director, Sales Operations
Senior Director, Sales Operations	
Ecosystems	Director, Sales Operations
Senior Manager, Global Ecosystem Specialists	
Customer Success Operations	Senior Director, CS Strategy & Operations
VP, Field Operations	
Sales Operations	Director, Sales Operations
Senior Director, Sales Operations	
Deal Desk	Sr. Director, Deal Desk
Senior Director, Sales Operations	
Professional Services	Director, Professional Services
VP, Professional Services & Education	
Marketing Operations	Director, Marketing Operations
